

Draft for Consideration

TRAC VISION:

To preserve and enhance in an environmentally and economically sensitive manner the mobility of people and goods throughout and beyond Colorado through the development of safe, reliable transit and rail networks.

To implement this vision, we suggest TRAC apply the following strategies as we develop work plans and policy guidance:

Seamless connectivity throughout and beyond Colorado

- Create passenger-friendly environment
- Provide transit opportunities for all populations
- Thoughtful Inter-modalism
- State-wide & nation-wide connections
- Local transit connectivity (ie last mile)
- Integrate regional connectivity in all transportation projects.

Economic Development and Vitality

- Economic & energy efficiency
- Consider marketing strategies
- Reduce auto dependency
- Travel-time, cost, frequency, competitiveness and reliability of modes

Preserve existing infrastructure and prepare for network expansion

- Preserving potential intermodal hubs
- Consider freight and possibility of freight rail expansion

Incorporate financial overlay

- Leverage work from other states
- Incorporate financial, engineering, political realities

In order to achieve these strategies and implement work plans the TRAC will consider incremental approaches as we move forward.
