

## Memorandum

**Date:** December 12, 2024  
**To:** All Holders of Standard Plans  
**From:** Bill Cornelius, Standards and Specifications Unit Manager  
**Subject:** Issuance of new M Standard: M-400-1 - SafetyEdge for Pavement

Effective this date, the Construction Engineering Services Branch has issued the new CDOT M Standard, “M-400-1 - SafetyEdge for Pavement”, with 1 sheet, and dated December 12, 2024.

This new standard was the Project Special Detail “D-614-1 - SafetyEdge for Pavement”, but is now “M-400-1 - SafetyEdge for Pavement”. Revisions included five new detail drawings, a table for SafetyEdge quantities, and revised General Notes.

We have included a document called the “Standard Plan M-400-1 Safety Edge Information Sheet”. It describes the SafetyEdge, plus has other important information. This shouldn’t be included in your plan set. It is only to be used as a reference.

Please use this new standard on all applicable projects advertised after January 9, 2025. Earlier use is also permissible.

For those of you who keep a record of all M&S Standards, please include this standard in it.

PDF copies of this and all other current M standards are available on CDOT’s [2019 M Standard Plans and Project Special drawings](#) web site.

Note: Any new or revised M&S Standards to be used on highway projects must have their corresponding boxes filled in on the [Standard Plans List sheet](#), and be inserted into the highway plan set, along with the new or revised sheets.

If you have any questions or comments, please contact this office.
