At a minimum, the Developer shall submit the following to the Department for Information, Acceptance, or Approval in accordance with the specified timeframes:

Table 6-3 Deliverables

Deliverable	Information, Acceptance, or Approval	Schedule
Supplemental geotechnical investigation report – I-70 Mainline	Information	Submitted with Pavement Design Report
Supplemental geotechnical investigation report –CDOT Roadways	Information	Concurrent with Preliminary (30%) Level Plan Package
Supplemental geotechnical investigation report –Local Agency Roadways	Information	Submitted with Pavement Design Report
I-70 Mainline Pavement Design Report	Information	Concurrent with Preliminary (30%) Level Plan Package
Local Agency Roadways Pavement Design Report	Information	Concurrent with Preliminary (30%) Level Plan Package
Paving Quality Control Plan	Information	At the pre-paving conference
SMA & HMA mix designs – I-70 Mainline	Information	Condition to the initiation of paving Construction Work
SMA & HMA mix designs – CDOT Roadways and Local Agency Roadways	Acceptance	Condition to the initiation of paving Construction Work
PCCP mix designs – I-70 Mainline	Information	Condition to the initiation of paving Construction Work
PCCP mix designs – CDOT Roadways and Local Agency Roadways	Acceptance	Condition to the initiation of paving Construction Work
Detour pavement mix design	Information	At the pre-paving conference
PCCP Jointing Plan – I-70 Mainline	Acceptance	Condition to the initiation of paving Construction Work
PCCP Jointing Plan – CDOT Roadways and Local Agency Roadways	Acceptance	Condition to the initiation of paving Construction Work

6.8 Appendices

Appendix A Project Special Provisions

Appendix A
Project Special Provisions

The following special provisions supplement or modify and take precedence over the Standard Specifications. The provisions of Appendix A to Schedule 10A Applicable Standards and Specifications apply to these Project Special Provisions.

PROJECT SPECIAL PROVISIONS

	<u>Page</u>
Index	6-5
Revision of Section 105 – Conformity to Roadway Smoothness Category of HMA/SMA	6-6
Revision of Section 105 – Conformity to Roadway Smoothness Category of Portland Cement Concrete Pavement	6-7
Revision of Section 304 – Aggregate Base Course Class 6	6-8
Revision of Section 403 – Hot Mix Asphalt	6-9 to 6-10
Revision of Section 401 and 703 – Stone Matrix Asphalt Pavement	6-11 to 6-15
Revision of Section 412 – Portland Cement Concrete Pavement	6-16
Revision of Section 621 – Detours	6-17

**REVISION OF SECTION 105
CONFORMITY TO ROADWAY SMOOTHNESS CATEGORY OF HMA/SMA**

Subsection 105.07 of the Standard Specifications is hereby revised as follows:

The incentive/disincentive provision adjustments included in this subsection for pavement smoothness are not applicable.

Delete Table 105-6 and replace with the following table:

**Table 105-6A
HMA Pavement Smoothness (Inches/Mile) Half-Car Roughness Index**

Pavement Smoothness Category	Corrective Work Required
I (Overlay)	When HRI > 72.0
II (Full Depth)	When HRI > 67.0

**REVISION OF SECTION 105
CONFORMITY TO ROADWAY SMOOTHNESS CATEGORY OF PORTLAND CEMENT CONCRETE
PAVEMENT**

Subsection 105.08 of the Standard Specifications is hereby revised as follows:

The incentive/disincentive provision adjustments included in this subsection for pavement smoothness are not applicable.

Delete Table 105-10 and replace with the following table:

**Table 105-10A
PCCP Pavement Smoothness (Inches/Mile) Half-Car Roughness Index**

Pavement Smoothness Category	Corrective Work Required
II	When HRI > 67.0

**REVISION OF SECTION 304
AGGREGATE BASE COURSE CLASS 6**

Section 304 of the Standard Specifications is hereby revised for this Project as follows:

Subsection 304.02 shall include the following:

Materials for the base course shall be ABC Class 6 as shown in Subsection 703.03.

The ABC Class 6 must meet the gradation requirements and have a resistance value of at least 78 when tested by the Hveem Stabilometer method.

When ABC Class 6 consists of a mixture of reclaimed asphalt and other aggregates, the maximum density shall be determined in accordance with AASHTO T-180, Method A. The field moisture determination for correction to dry density shall be determined by oven or microwave drying. Moisture determination using a nuclear gauge will not be permitted.

**REVISION OF SECTION 403
 HOT MIX ASPHALT**

Section 403 of the Standard Specifications is hereby revised for CDOT Roadways on this Project as follows:

Subsection 403.02 shall include the following:

The design mix for HMA shall conform to the following:

Table 403-1

Property	Test Method	Value for Grading		
		S (100)	SX (100)	Patching
Air Voids, percent at: N (initial) [for information only] N (design)	CPL 5115	3.5 – 4.5	3.5 – 4.5	3.5 – 4.5
Lab Compaction (Revolutions): N (initial) [for information only] N (design)	CPL 5115	8 100	8 100	8 100
Stability, minimum	CPL 5106	30	30	30
Aggregate Retained on the 4.75 mm (No. 4) Sieve with at least 2 Mechanically Induced fractured faces, % minimum	CP 45	70	70	70
Accelerated Moisture Susceptibility Tensile Strength Ratio (Lottman), minimum	CPL 5109 Method B	80	80	80
Minimum Dry Split Tensile Strength, kPa (psi)	CPL 5109 Method B	205 (30)	205 (30)	205 (30)
Grade of Asphalt Cement, Top Layer			PG 76-28	PG 76-28
Grade of Asphalt Cement, Layers below Top		PG 64-22		PG 64-22
Voids in the Mineral Aggregate (VMA) % minimum	CP 48	See Table 403-2	See Table 403-2	See Table 403-2
Voids Filled with Asphalt (VFA), %	AI MS-2	65-75	65-75	65-75
Dust to Asphalt Ratio Fine	CP 50	0.6 – 1.2	0.6 – 1.2	0.6 – 1.2
Gradation Coarse Gradation		0.8 – 1.6	0.8 – 1.6	0.8 – 1.6

Notes:

- AI MS-2 = Asphalt Institute Manual Series 2.
- The current version of CPL 5115 is available from the Department.
- Mixes with gradations having less than 40% passing the 4.75 mm (No. 4) sieve shall be approached with caution because of constructability problems.
- Gradations for mixes with a nominal maximum aggregate size of one-inch or larger are considered a coarse gradation if they pass below the maximum density line at the #4 screen.
- Gradations for mixes with a nominal maximum aggregate size of ¾ inch or smaller are considered a coarse gradation if they pass below the maximum density line at the #8 screen.

-2-
**REVISION OF SECTION 403
 HOT MIX ASPHALT**

All Mix Designs shall be run with a gyratory compaction angle of 1.25 degrees and properties must satisfy Table 403-1. Form 43 will establish construction targets for Asphalt Cement and all mix properties at Air Voids up to 1.0% below the Mix Design optimum.

For CDOT Roadways, the Department will establish the production asphalt cement and volumetric targets based on the Contractor's mix design and the relationships shown between the hot mix asphalt mixture volumetric properties and asphalt cement contents on the Form 429. The Department may select a different AC content other than the one shown at optimum on the Contractor's mix design in order to establish the production targets as contained on the Form 43. Historically, Air Voids adjustments typically result in asphalt cement increases from 0.1 to 0.5 percent.

Table 403-2

Nominal Maximum Size*, mm (inches)	Minimum Voids in the Mineral Aggregate (VMA)			
	***Design Air Voids **			
	3.5%	4.0%	4.5%	5.0%
37.5 (1½)	11.6	11.7	11.8	N/A
25.0 (1)	12.6	12.7	12.8	
19.0 (¾)	13.6	13.7	13.8	
12.5 (½)	14.6	14.7	14.8	
9.5 (⅜)	15.6	15.7	15.8	
4.75 (No. 4)	16.6	16.7	16.8	16.9
- * The Nominal Maximum Size is defined as one sieve larger than the first sieve to retain more than 10%. - ** Interpolate specified VMA values for design air voids between those listed. - *** Extrapolate specified VMA values for production air voids beyond those listed.				

As a part of the Contractor's Quality Management Plan, the Contractor shall outline the steps taken to minimize segregation of HMA. The Quality Management Plan shall define a process by which the Contractor shall address unacceptable segregation, but, at a minimum, the paving shall stop and the cause of segregation shall be corrected before paving operations will be allowed to resume.

Department approved Warm Mix Asphalt (WMA) may be allowed on this project for all other roadways in accordance with CP 59. Unique requirements for WMA design, production and acceptance testing as documented during Department WMA approval shall be submitted and approved prior to creation of the Form 43 and before any WMA production on the project. Delays to the project due to WMA submittal and review will be considered within the Contractor's control and will be non-excusable HMA for patching shall conform to the requirements of the lift being patched. All patching determinations shall be the responsibility of the Contractor with consultation with the Department.

A minimum of 1% hydrated lime by weight of the combined aggregate shall be added to the aggregate for all HMA.

**REVISION OF SECTION 401 AND 703
STONE MATRIX ASPHALT PAVEMENT**

Sections 401 and 703 of the Standard Specifications are hereby revised for CDOT Roadways on this Project as follows:

Subsection 401.02 shall include the following:

Recycled Asphalt Pavement (RAP) shall not be used in Stone Matrix Asphalt (SMA) mix.

Subsection 401.09 shall include the following:

Each SMA load shall be completely covered and securely fastened with a full tarp.

Subsection 401.16 shall include the following:

The SMA mixture shall be transported and placed on the roadway without drain-down or flushing. All flushed areas behind the paver shall be removed immediately upon discovery. If more than 50 square feet of flushed SMA pavement is ordered removed and replaced in any continuous 500 linear feet of paver width laydown, operations shall be discontinued until the source of the flushing has been found and corrected. The Department shall designate the depth and area of all flushed areas requiring removal and replacement. All costs associated with the removal and replacement of the flushed areas shall be at the Contractor's expense.

Subsection 401.17 shall include the following:

Rollers shall not be used in a vibratory mode on SMA unless they are first used successfully in the demonstration control strip specified in subsection 403.03. Pneumatic wheel rollers shall not be used on SMA mix.

SMA pavement shall be placed and compacted in accordance with the temperatures listed in subsection 401.07 as revised for this Project.

The relative compaction for all SMA mixtures will be measured from roadway cores in accordance with CP 44, Method B, unless the SMA mixture is being placed on a structure (bridge deck) in which case the Department may specify that nuclear gauge measurements be used.

When cores are used, the Contractor shall provide all labor and equipment for the coring operation and filling the core holes. When nuclear density gauges are used, the tests will be performed in accordance with CP 81 and CP 82.

In-place density for SMA shall be 93 to 97% of the SMA mix maximum specific gravity as measured according to CP 51.

Subsection 401.22 shall include the following:

Acceptance, testing, and pay factors for SMA shall be in accordance with subsections 105.05 and 106.05 as revised for this Project for HMA. The specifications for gradation acceptance shall be applied for all SMA placed on the project.

Subsection 703.06 shall include the following:

-2-

**REVISION OF SECTION 401 AND 703
STONE MATRIX ASPHALT PAVEMENT**

Mineral filler for the SMA pavement shall be limestone dust and shall meet the requirements of this subsection and the following:

Plasticity Index (AASHTO T90) 4% Maximum

The Contractor shall submit hydrometer analysis (AASHTO T88) for the mineral filler used in the SMA mix.

Section 403 of the Standard Specifications is hereby revised for this project as follows:

Subsection 403.01 shall include the following:

This work includes placing a Stone Matrix Asphalt (SMA) pavement as shown on the plans.

Subsection 403.02 shall include the following:

The SMA gradation for this project shall be ½ inch

Mixture design and field control testing of SMA shall be performed using either the SuperPave (CPL 5115, 100 Gyration) or the Marshall Method (AASHTO T245, 50 Blow).

A minimum of two weeks prior to the proposed use of any Stone Matrix Asphalt pavement on the project, a pre-paving conference will be conducted. At that time, the Contractor shall submit to the Department, a mix design meeting the appropriate specification requirements for one of the following:

The SuperPave SMA mix design shall conform to the requirements of Table 403-1a:

-3-
**REVISION OF SECTION 401 AND 703
 STONE MATRIX ASPHALT PAVEMENT**

Table 403-1a

Property	Test Method	Value for SMA
Air Voids, percent at: N(Design)	CPL 5115	3.0 – 4.0
Lab compaction (Revolutions) N(Design)	CPL 5115	100
Accelerated Moisture Susceptibility, tensile strength Ratio, (Lottman), minimum	CPL 5109, Method B	70
Minimum Dry Split Tensile Strength, psi	CPL 5109, Method B	30
Grade of Asphalt Cement		PG 76-28
Voids in the Mineral Aggregate (VMA) %, minimum	CP 48	17
Draindown at Production Temperature	AASHTO T305	0.3 maximum
% VCA ¹ _{MIX}	AASHTO R 46	Less than VCA _{DRC} ²
Note: The current version of CPL 5115 is available from the Region Materials Engineer Note: Copies of AASHTO R 46 and M 325 can be obtained from the Region Materials Engineer Note: ¹ Voids in the Coarse Aggregate Note: ² Dry-rodded condition		

For CDOT Roadways the Form 43 will establish construction targets for asphalt cement and all mix properties at air voids up to 1.0 percent below the mix design optimum. The Department will establish the production asphalt cement and volumetric targets based on the Contractor's mix design and the relationships shown between the Stone Matrix Asphalt mixture volumetric properties and asphalt cement contents on the Form 429. The Department may select a different AC content other than the one shown at optimum on the Contractor's mix design in order to establish the production targets as contained on the Form 43. Historically, Air Voids adjustments typically result in asphalt cement increases from 0.1 to 0.5 percent. Contractors bidding the project should anticipate this change and factor it into their unit price bid.

The Marshall SMA mix design shall conform to the following:

Mix Properties	Value
Stability, Marshall Compactor	1400 lbs., min
% Voids in Total Mix	3 – 4%
VMA (% Voids in the Mineral Aggregate)	17 min.
Lottman, CPL 5109, Method B	70% min
Dry Tensile Strength, (CPL 5109)	30 psi, min.

-4-

**REVISION OF SECTION 401 AND 703
 STONE MATRIX ASPHALT PAVEMENT**

Regardless of mix design method, a minimum of 1 percent hydrated lime by weight of the combined aggregate shall be added to the aggregate for all Stone Matrix Asphalt.

For CDOT Roadways, the SMA Mix design must be Accepted by the Department before any pavement is placed on the project. In addition, the Contractor shall provide field control testing during production of the SMA mix and for the demonstration control strip. The Contractor shall perform the following tests and provide the results to the Department during production:

If a SuperPave SMA mix design is used, the Contractor shall perform the following tests and provide the results to the Department during production:

Superpave Mix Property	Frequency
Draindown (AASHTO T 305)	1/1000 tons or fraction thereof
Percent Voids in the total mix @ $N_{(design)}$	1/1000 tons or fraction thereof
VMA (Percent Voids in the Mineral Aggregate) @ $N_{(design)}$	1/1000 tons or fraction thereof
Lottman, CPL 5109, Method B	1/5000 tons or fraction thereof
Dry Tensile Strength, CPL 5109	1/5000 tons or fraction thereof
Percent AC & Aggregate Gradation CP 5120	1/1000 tons or fraction thereof

If a Marshall SMA mix design is used, the Contractor shall perform the following tests and provide the results to the Department during production:

Marshall Mix Property	Frequency
Draindown (AASHTO T 305)	1/1000 tons or fraction thereof
Stability (Marshall)	1/1000 tons or fraction thereof
Percent Voids in the total mix	1/1000 tons or fraction thereof
VMA (Percent Voids in the Mineral Aggregate)	1/1000 tons or fraction thereof
Lottman, CPL 5109, Method B	1/5000 tons or fraction thereof
Dry Tensile Strength, CPL 5109	1/5000 tons or fraction thereof
Percent AC & Aggregate Gradation CP 5120	1/1000 tons or fraction thereof

Subsection 403.03 shall include the following:

The mineral filler for SMA shall be stored in a separate silo and added automatically in the correct proportion. The mineral filler addition equipment shall be electronically or mechanically interlocked to the aggregate feed sensors so that the proper amount of mineral filler is added whenever SMA is produced.

The SMA mineral filler shall be added at the same point the asphalt cement is added to the aggregate.

Tack coat between the existing pavement and Stone Matrix Asphalt pavement shall be placed at a rate between 0.03 and 0.05 gallons per square yard.

-5-

**REVISION OF SECTION 401 AND 703
STONE MATRIX ASPHALT PAVEMENT**

For CDOT Roadways, and before proceeding with SMA placement, the Contractor shall demonstrate the ability to produce and place a satisfactory mix in a Demonstration Control Strip (DCS). The Contractor will coordinate with the Department on the proposed location of the DCS. The DCS shall consist of a minimum quantity of 500 tons placed in one lane, full width. Within the last 200 tons of SMA placed in the DCS, the Contractor and Department shall determine properties (VMA, Voids, in-place density, AC content, gradation, and Marshall Stability, if required) of the project produced SMA mix used in the DCS and provide the results to the Department. The Contractor may proceed with full production if all mixture properties are within the specified tolerances.

To determine the in-place density and roller pattern, one core shall be taken at three random locations within the last 200 tons of the DCS. The Department will determine the coring locations using a stratified random sampling process. The cores shall be immediately submitted to the Department and will be used for determining acceptance of the DCS. Densities of the random samples will be determined by cores according to CP 44. Coring shall be performed by the Contractor under Department observation. Coring will not be measured and paid for separately but shall be included in the work.

The DCS will be designated as a separate process.

**REVISION OF SECTION 412
PORTLAND CEMENT CONCRETE PAVEMENT**

Section 412 of the Standard Specifications is hereby revised for this project as follows:

Subsection 412.13(b) 1 shall include the following:

If tie bars are inserted into plastic concrete with a tie bar insertion machine, tie bar location and concrete consolidation shall be subject to the following additional requirements:

Each 2500 linear feet of longitudinal weakened plane joint resulting from the procedure shall have one random location cored where the core intercepts an inserted tie bar. The core shall be six-inch diameter taken in the presence of the Engineer.

If non-consolidated concrete is evident above the inserted tie bar, the Contractor shall cease paving operations and submit a corrective action plan in writing for approval. Correction of the joint and further paving shall take place only after written approval of the corrective action plan has been provided by the Engineer. Additional coring may be required, as directed by the Department. Coring operations, including patching, shall be at the Contractor's expense.

Further failure to consolidate the concrete over the tie-bars will be justification to preclude the use of automatic tie-bar insertion for the remainder of the project.

REVISION OF SECTION 621 DETOURS

Section 621 is hereby added to the Standard Specifications for this Project and shall include:

This work consists of designing and constructing detours for all phases of construction on I-70 Mainline and all applicable side streets; maintenance of the detours; removal of the detours; and removal and replacement of appurtenances required to construct and operate the detours including but not limited to guardrail, curb and gutter, detour pavement, embankment material and unclassified excavations.

The Contractor shall provide a paved surface for all detours. The Contractor shall determine the type and thickness of pavement that shall be used to accommodate the traffic loadings. All materials required for detour shall comply with project standard specifications and special provisions.

The Contractor shall maintain the detour pavement for the entire period that it is open to the traveling public, including all temporary approaches, accesses, crossings, and intersections with adjacent roads and streets. Detour pavements shall be maintained in good operating condition devoid of potholes, uneven surfaces, and rutting. The Department may direct the Contractor to repair or replace detour pavements if, in the Department's sole discretion, detour pavements are determined to be a safety hazard.

The Contractor shall be responsible for quality control required to assure adequate quality of embankment material, aggregate base course, HMA used in the construction of the detour.

The detour locations and dimensions for all phases of construction shall be as shown on the Contractor's plans.

If the materials and thickness furnished for the detour pavement result in an inadequate detour structure, the Contractor will provide additional thickness, materials, or other measures necessary to provide a satisfactory pavement for the life of the detour. These additional improvements shall be furnished at no additional cost. All necessary signs, pavement markings and other traffic control devices shall be provided in accordance with the Contractor's Traffic Control Plan.

The finished transverse and longitudinal surface elevation of any detour or patch shall be measured using a 10 foot straightedge. Areas to be measured will be directed by the Department. The Contractor shall furnish an approved 10 foot straightedge, depth gauge and operator to aid the Department in testing the pavement surface. Areas showing high spots of more than 1/2 inch in 10 feet shall be marked and diamond ground until the high spot does not exceed 1/2 inch in 10 feet.

The Contractor shall maintain the detour for the entire period that it is open to traffic. Any distress, in the Department's opinion, that affects the ride, safety, or serviceability of the detour roadway shall be corrected to the satisfaction of the Department at the expense of the Contractor.

The Contractor shall be responsible for the complete removal and disposal of all temporary detour pavement prior to Substantial Completion.

7. EARTHWORK

7.1 Applicable Standards

All Construction Work required to be performed by the Developer pursuant to this Section shall comply with the Construction Standards, the relevant requirements listed in this Section, and Good Industry Practice.

7.2 Clearing and Grubbing

7.2.1 The Developer shall be responsible for all clearing and grubbing and earthwork requirements for the Construction Work.

7.2.2 The Developer shall be responsible for clearing and grubbing including, without limitation, the removal of trees, logs, stumps, brush, trash, etc. from the Site prior to the start of any Construction Work and shall comply with any additional requirements for the affected area in accordance with Schedule 17 Environmental Requirements.

7.2.3 The Developer shall conduct a pre-clear and grub meeting with the Department prior to the start of any Construction Work to agree to the limits of clearing and grubbing, removal, replacement, or transplanting of any trees and shrubs.

7.2.4 The Developer shall include clearing and grubbing limits as part of each design submittal for all Construction Work in that area. Such submittals shall include provisions for the removal, replacement or transplanting of any trees.

7.3 Material Requirements

7.3.1 All Construction Work shall be conducted in accordance with the CDOT *Pavement Design Manual* and the CDOT *Field Materials Manual*.

7.3.2 Unless otherwise specified in this Section, the Developer may use on-Site materials for subgrade on the Project provided that it can be demonstrated by tests that they comply with the material property requirements included in Section 203 of the CDOT Standard Specifications. Such test data shall be submitted to the Department for Information prior to use of the material on the Project.

7.3.3 The R-Value of materials acquired from on-Site excavations and subsequently used in embankments on the Project shall have a minimum R-Value of 20 when placed within the Ultimate configuration roadway prism. All compaction shall be in accordance with Section 203 of the CDOT Standard Specifications.

7.3.4 Preliminary subsurface investigations are included in the Reference Documents. The Developer shall conduct a supplemental soil survey to confirm/ascertain whether the existing roadway soil satisfies the material requirements of this Section if it is desired to re-use this soil in the roadway prism. If the existing roadway soils are re-used, the material will be tested as stated in the CDOT *Field Materials Manual* during construction. This supplemental soil survey shall conform to the requirements as stated in the 2016 CDOT *Field Materials Manual*. Test holes are required at a minimum of 1,000 feet. The Developer shall provide any additional mitigation required as a result of the supplemental soil survey.

7.3.5 The results of any supplemental soil surveys conducted by the Developer together with any proposed mitigation measures to address matters identified in the surveys shall be submitted to the Department for Information before any pavement and pavement-related work commences. Such information shall be submitted in a report format that clearly and concisely describes the existing soil conditions, delineates areas needing mitigation, and defines the mitigation measures. The report shall include a soil profile, boring log, and the test results.

7.3.6 Alternative subgrade treatment proposals shall be submitted to the Department for Acceptance prior to incorporation into the Construction Work. Locations where any alternative subgrade treatments are utilized on the Project shall be shown on the As-Built documents.

7.3.7 The Developer shall be responsible for identifying sources of material required for the Project.

- 7.3.8 The Developer shall be responsible for disposing of all surplus material off-Site. The Developer may dispose of some surplus material at locations near the Project as identified by CCD. Refer to Section 4.D of the Denver IGA and the Guidance for Third Party Reuse of Excess Soil from City Projects document provided in the Reference Documents for additional requirements for the disposing of surplus material.

7.4 CDOT Roadways

- 7.4.1 The subgrade on the CDOT Roadways shall consist of a minimum of six inches of Aggregate Base Course (ABC) Class 6 and be underlain by at least 24 inches of material with an R-value greater than or equal to 20. Soil in the zone one foot beneath the R-20 material shall be treated in accordance with Section 203 of the CDOT Standards Specifications.

- 7.4.2 Subgrade on CDOT Roadways shall have a percent swell less than or equal to one to a depth of three feet below the bottom of the proposed ABC Class 6 as determined by ASTM D-4546. A percent swell less than or equal to one corresponds to a low probable swell damage risk. Swell tests are required on A-4, A-5, A-6 and A-7-6 soils to verify the percent swell of the existing soil is less than or equal to one percent. If the swell index is greater than one percent, mitigation is required to a minimum depth of three feet below the base of the proposed ABC Class 6. The Developer shall demonstrate that any proposed mitigation measures will result in one percent swell less than or equal to one percent when tested with a 200 psf surcharge pursuant to ASTM D-4546.

7.5 Local Agency Roadways

The subgrade on Local Agency Roadways shall meet the minimum resistance values (R-value, k-value, classification) as specified by the Local Agency.

7.6 Compaction Requirements

Depth of moisture-density control shall be as follows:

- a. Full depth of all embankments;
- b. Six inches for bases of cuts and fills; and
- c. 12 inches underneath the proposed pavement section (pavement/base course).

7.7 Reuse of Materials

- 7.7.1 Aggregate Base Course (Class 6) may include broken, crushed or milled asphalt and shall meet the material and gradation requirements of Subsection 703.03. No more than 80% of the material, by weight, may be reclaimed asphalt pavement (RAP) meeting the requirements of Aggregate Base Course (RAP) as specified in Schedule 10A Applicable Standards and Specifications (Revision of Sections 304 and 703). When ABC (RAP) is used as base course it shall not be allowed under HMA.

- 7.7.2 The existing subgrade will be allowed to remain in-place if it meets the requirements listed previously.

- 7.7.3 The Developer shall not excavate or remove any material from within the roadway, which is not within the grading limits, as indicated by the slope and grade lines.

7.8 Geotextiles

- 7.8.1 The Developer shall include as part of its pavement design submittals the locations where geotextile installation is proposed. The geotextile shall be installed in accordance with manufacturer's recommendations.

- 7.8.2 Geotextiles shall meet the requirements for Geotextile Class I (per American Association of State and Highway Officials (AASHTO) M 288) and be approved for stabilization and separation applications.

7.9 Deliverables

7.9.1 At a minimum, the Developer shall submit the following to the Department for Information, Acceptance, or Approval in accordance with the specified timeframes:

Table 7-1 Deliverables

Deliverable	Information, Acceptance, or Approval	Schedule
Results of supplemental soil survey along with any proposed mitigation measures	Information	Before any embankment, aggregate base course, pavement and pavement-related Construction Work commences
Alternative subgrade treatments	Acceptance	Before any embankment, aggregate base course, pavement and pavement-related Construction Work commences
Locations requiring geotextile installation	Information	Submitted with pavement mix designs

8. DRAINAGE

8.1. General

- 8.1.1. The Developer shall be responsible for the design, installation and construction of all drainage systems and outfalls required for the Construction Work. The Construction Work shall comply with the CDOT and Local Agency Municipal Separate Storm Sewer System (MS4) Permits where applicable.
- 8.1.2. The Developer shall obtain necessary Temporary Easements, Permits and Additional ROW Parcels prior to the Construction Work and shall not adversely impact property owners outside the Site.
- 8.1.3. The Developer shall:
- a. Design, install, and construct a complete storm drainage system to intercept and remove surface runoff from the I-70 Mainline, CDOT Roadways and Local Agency Roadways;
 - b. Maintain surface, channel, and conduit flow through the Right-of-Way and Additional Right-of-Way; and
 - c. Be responsible for drainage-related hazards within and outside the Site, public inconvenience, flood damages, and water quality impacts caused by Construction Work during the Construction Period.
- 8.1.4. For reference only and subject always to Section 3 of the Project Agreement, the Draft Master Plan Drainage Report and Draft Master Plan Water Quality Report are provided as Reference Documents. The reports provide concepts for Offsite and Onsite drainage design, detention and general location for permanent water quality features.

8.2. Applicable Standards

All Construction Work required to be performed by the Developer pursuant to this Section shall comply with the Construction Standards, the relevant requirements listed in this Section 8, and Good Industry Practice.

8.2.1. Software

The Developer shall use the following software in performing drainage design calculations:

- a. CUHP/EPA-SWMM;
- b. USACE, HEC-RAS;
- c. FHWA, HY-8;
- d. InRoads Storm and Sanitary; and
- e. FLO-2D.

8.3. Administrative Requirements

8.3.1. Local Agency Roadways

The Developer shall submit plans, reports and applicable Governmental Approvals directly to the Local Agencies as part of the deliverable process. Design, construction and installation shall conform to Local Agency requirements and standards for areas of the Project outside CDOT Right-of-Way.

8.3.2. Coordination with Other Agencies

- a. The Department has coordinated with City of Denver (CCD) and Urban Drainage and Flood Control District (UDFCD) for design flows from the Montclair and Park Hill Basins. For reference only and subject always to Section 3 of the Project Agreement, these reports are provided as Reference Documents.

- b. The Developer shall coordinate all drainage related issues with affected Governmental Authorities. The Developer shall include the Department in all correspondence with the appropriate Governmental Authorities.
- c. The Developer shall coordinate all drainage related issues, as related to Construction Work on Railroad right-of-way, with the affected Railroad. The Developer shall obtain all required Permits, as described in Schedule 18 Right-of-Way and Section 8.4 of the Project Agreement.

8.3.3. Permits

Pursuant to Section 8.4.1.a of the Project Agreement, the Developer shall obtain and comply with the requirements of the Environmental Approvals and other Permits, including stormwater Permits, that are necessary for the Construction Work. Without limiting its obligations under such Section 8.4.1.a, the Developer is obligated to adhere to the following requirements as they may be amended or superseded pursuant to Law:

- a. Colorado Discharge Permit System-Stormwater Construction Permit
The Developer shall be responsible for obtaining the Colorado Discharge Permit System-Stormwater Construction Permit (CDPS-SCP) and shall comply with all stormwater Permit requirements until final stabilization has been achieved and until the CDPS-SCP Permit can be closed. This includes the maintenance of all Best Management Practices (BMPs), maintenance of all seeded/landscaped areas, and removal of all Best Management Practices (BMPs) once all erosion potential has been eliminated.
- b. Storm Water Management Plan
The Developer's Stormwater Management Plan (SWMP) is required to fulfill the requirements of the CDPS-SCP and shall follow the format of the CDOT SWMP template.
- c. Best Management Practices
BMPs are required to fulfill the requirements of the SWMP. The Developer shall design, install and maintain construction BMPs for the Construction Work in accordance with the CDOT *Erosion Control and Stormwater Quality Guide*.
- d. CDOT New Development Redevelopment Interim Program Guidance
The New Development Redevelopment Program (NDRD), also referred to as the CDOT Permanent Water Quality (PWQ) Program, is required under CDOT's MS4 Permit. The Developer shall comply with the most current version of the NDRD Interim Program Guidance at the time of the Setting Date for areas within the CDOT MS4 boundary.
 - i. The Developer shall install Permanent Stormwater Quality Facilities (PSQFs) in accordance with the CDOT *Erosion Control and Stormwater Quality Guide* and the UDFCD *Urban Storm Drainage Criteria Manual*;
 - ii. Storm runoff from the Site is tributary to the South Platte River which is classified as a 303d impaired stream. A figure is included in the Draft Master Plan Water Quality Report that describes each stream segment;
 - iii. Runoff from impervious areas outside ROW shall follow the Local Agency MS4 Permit for any required PSQFs; and
 - iv. The use of equivalent areas within the CDOT MS4 boundary shall be submitted to the Department for Approval.
- e. US Army Corps of Engineers Permit
The Developer shall be responsible for portions of the storm drainage system that are subject to Permitting under Section 404 of the Clean Water Act. Refer to Schedule 17 Environmental Requirements for additional requirements.

- f. Colorado Senate Bill 40 Permit
The Developer shall be responsible for portions of the storm drainage system that are subject to Permitting under Colorado Senate Bill (SB) 40. Refer to Schedule 17 Environmental Requirements for additional requirements.
- g. Groundwater Permits
The Developer shall be responsible for Permit requirements associated with dewatering for both the Construction Period and the Operating Period. Permits required may include construction dewatering discharge permits, remediation activities discharge permits, or subterranean groundwater permits or well development permits. The Permits shall remain the responsibility of the Developer following Substantial Completion. Refer to Schedule 17 Environmental Requirements for additional requirements.
- h. City and County of Denver Permit Requirements
The Developer shall comply with the most current version of the Denver MS4 Permit at the time of the Setting Date. The Denver MS4 Permit applies only to areas within the Denver MS4 boundary. The Developer shall
 - i. Comply with the CCD *Ultra-Urban Green Infrastructure Guidelines* for areas inside CCD Right of Way within the Project. The use of these guidelines shall be approved by CCD for applicability with Denver MS4 requirements;
 - ii. Comply with the CCD Storm Criteria Manual for water quality; and
 - iii. Restore existing water quality facilities impacted by Construction Work per CCD Storm Criteria Manual and CCD Construction Activities Stormwater Discharge Permit requirements.

8.4. Design Requirements

8.4.1. Data Collection

- a. The Developer is solely responsible for obtaining all relevant storm drainage improvement plans, drainage planning studies, and drainage reports for the Construction Work;
- b. The Developer is solely responsible for obtaining existing and future land use information from all Local Agencies and shall design facilities to be compatible with drainage systems, existing or proposed, on adjacent properties with no adverse impacts. The Developer shall utilize the most current land use information at the time of the Setting Date;
- c. For reference only and subject always to Section 3 of the Project Agreement, certain drainage structure surveys are provided the Reference Documents; and
- d. The Developer shall perform such detailed mapping and surveys as it determines necessary to verify locations of existing drainage and Utility features necessary for the proposed drainage design. The Developer shall verify or identify boundaries, flow patterns, and land use of drainage basins based on field observations.

8.4.2. Ultimate Design

The Developer shall design and construct all drainage facilities to the Ultimate design from Brighton Boulevard to Sand Creek. The Developer shall design and construct all ponds for the Ultimate design from Sand Creek to Chambers Road. All other drainage facilities, between Sand Creek and Chambers Road, shall be designed and constructed to accommodate the Project.

8.4.3. Surface Hydrology

The Developer shall perform hydrologic analyses for all Onsite and Offsite drainage basins that are adjacent to and contribute runoff to the Site. The analysis shall be based on future land use

information and the Ultimate design. The hydrologic analyses shall not adversely impact the existing drainage systems outside the Site area

a. Design Frequencies

For the I-70 Mainline and CDOT Roadways, the design frequency for the minor and major storm shall be the 10 and 100 year event, respectively.

b. Precipitation

The Developer shall design all drainage elements using the precipitation data given in Tables 8-1, 8-2 and 8-3 provided that such data establishes the minimum design criteria for such elements and the use thereof does not relieve the Developer of any risks, responsibilities or liabilities that it otherwise assumes pursuant to the Project Agreement (including in relation to the risk of flooding).

- c. Hydrologic Methods
 - i. The Developer shall perform the necessary hydrologic analyses using the following methods:
 - A. Areas less than 90 acres shall be evaluated using the rational method. The minimum time of concentration shall be 5 minutes;

- B. Areas between 90 and 160 acres shall be analyzed using the Colorado Urban Hydrograph Procedure/Environmental Protection Agency Storm Water Management Model (CUHP/EPA-SWMM) procedure for peak flow only;
 - C. Areas greater than 160 acres shall be evaluated using the CUHP/EPA-SWMM procedure; and
 - D. The area draining to the Lowered Section shall use the CUHP/EPA-SWMM procedure for peak flow only.
- ii. The hydrologic analyses shall be based on fully developed conditions and the Ultimate design.

8.4.4. Hydraulic Structures

a. Roadways

- i. Roadway component geometric configurations shall be designed to provide positive drainage to prevent hydroplaning and roadway icing. Cross slopes shall be designed and constructed in accordance with the requirements of Schedule 10, Section 9 Roadway.

A. Roadway Profile

Longitudinal grades shall be designed and constructed in accordance with the requirements of Schedule 10, Section 9 Roadway.

B. Allowable Flow Spreads

The Developer shall design all required Storm Drain systems to meet the allowable spread criteria given in Table 8-4.

Table 8-4 Roadway Storm Drain Design Frequency and Allowable Spread Criteria

Road Classification		Design Frequency	Allowable Spread into Travel Lane
I-70 Mainline		10 year	0 feet
		100 year	4 feet
I-70 Mainline Entrance/Exit Ramps and CDOT Roadways	< or = 45 mph	10 year	3 feet
	< or = 45 mph	100 year	Half of adjacent travel lane
	> 45 mph	10 year	0 feet
	> 45 mph	100 year	4 feet
Local Agency Roadway		Local Agency Criteria	

C. Edge Treatment

In areas where the roadway pavement discharges runoff to Type 7 Guardrail, Type 3 Guardrail with curb, or at the end of curb returns, flows shall be collected and piped to the toe of the embankment slope. CDOT

standard Type 3 Embankment Protectors or inlets shall be used at these locations. Erosion protection shall be constructed at all outfalls.

D. Roadside Ditches and Open Channels

- (I) For roadside ditches along all existing and proposed roadways, the water surface profile shall have a minimum of one foot of freeboard for the 10 year return frequency peak discharge and shall not exceed edge of pavement for the 100 year return frequency peak discharge;
- (II) All open channels within the Site shall be designed to capture and convey the 100 year return frequency with a minimum one foot of freeboard. Capacity shall be determined using manning's equation;
- (III) All ditches and open channels with a grade exceeding two percent shall be constructed with a turf reinforcement mat or other means. Concrete or asphalt lining shall be considered in areas determined by the Developer as difficult to maintain regardless of slope or capacity; and
- (IV) Flexible channel linings shall be designed in accordance with Federal Highway Administration (FHWA) *HEC-15, Design of Roadside Channels with Flexible Linings*. Riprap channel lining shall be designed in accordance with FHWA *HEC-23, Bridge Scour and Stream Instability Countermeasures*.

ii. Removals and Abandonments

Existing Cross Drains, Storm Drains, embankment protectors and drainage appurtenances between Brighton Boulevard and Sand Creek shall be removed in their entirety and replaced with drainage features designed for the Project. The limits of removal shall be limited to I-70 Mainline, CDOT Roadways, 46th Avenue North, 46th Avenue South, Stapleton Drive North and Stapleton Drive South.

Drains abandoned by the Developer outside the aforementioned removal limits shall be plugged and flow filled per CDOT Standard Specifications and submitted to the Department for Approval prior to abandonment.

The Developer shall:

- A. Maintain historic flow patterns; and
- B. Design and construct for the Ultimate design, as described in the Section.

iii. Cross Drains

- A. Cross Drains are pipes or culverts that convey water from one side of the road to the other without interruption. Pipes connected to manholes or inlets placed in line with a Cross Drain will be referred to as a Storm Drain for the purposes of the Project Agreement. Unintended detention storage shall not be used to reduce the size of a Cross Drain;
- B. Horizontal and vertical alignment of Cross Drains shall be straight with no grade breaks or bends;
- C. The Cross Drain system shall be designed to not worsen the existing conditions for properties outside the Site. The Developer shall provide positive drainage to Cross Drain locations;

- D. The use of sag pipes or inverted siphons shall not be allowed to convey stormwater;
 - E. All Cross Drains shall be designed for the 100 year return frequency peak discharge with no overtopping of the I-70 Mainline. The Developer shall refer to this Section in regards to Ultimate design. Hydraulic design of Cross Drains shall be based on the procedures included in FHWA *HDS No. 5, Hydraulic Design of Highway Culverts*;
 - F. The minimum allowable pipe size for Cross Drains shall be 18 inches. End sections, or headwalls with beveled edges and wingwalls, shall be provided for all Cross Drains regardless of size. To reduce sizes improved inlets may be utilized. Improved inlets shall be designed based on FHWA *HDS-5, Hydraulic Design of Highway Culverts*;
 - G. Allowable headwater elevation for the 100 year return frequency peak discharge shall be designed as described in the CDOT *Drainage Design Manual*; and
 - H. The Developer shall account for the effects of seepage velocity and erosion along Cross Drains installed in areas of high or fluctuating groundwater tables as described in the CDOT *Drainage Design Manual*.
- iv. Storm Drains
- A. Storm Drains shall be defined as a network of pipes that connects inlets, manholes, and other drainage features to an outfall. Cross Drains connected to a Storm Drain system are considered Storm Drains for the purposes of the Project Agreement. Unintended detention storage shall not be used to reduce the size of a Storm Drain;
 - B. Horizontal and vertical alignment of Storm Drains shall be straight with no grade breaks or bends;
 - C. The Storm Drain system shall be designed to not worsen the existing conditions for properties outside the Site. The Developer shall provide positive drainage to Storm Drain locations;
 - D. At locations where 100 year detention is to be provided, the Storm Drain system shall capture and convey the 100 year flows to the detention pond. Hydraulic analyses and plans for Storm Drains that are connected to existing systems upstream or downstream of the Project shall be coordinated with affected Local Agencies. The hydraulic analyses shall cause no adverse impacts to the existing Storm Drain systems caused by the connections and proposed combined peak-design discharges for the overall systems: and
 - E. The Developer shall account for the effects of seepage velocity and erosion along Storm Drains installed in areas of high or fluctuating groundwater tables as described in the CDOT *Drainage Design Manual*.
- v. The minimum allowable diameter for any pipe in a Storm Drain system shall be 18 inches. The Developer shall not decrease Storm Drain size in the downstream direction.
- A. Hydraulic Design of Storm Drains
 - (I) Storm Drain design shall be performed using hydraulic gradient analysis to account for all friction and minor losses. Friction losses shall be calculated using manning's equation. Minor losses at junctions, manholes, bends, and other appurtenances

shall be calculated based on design procedures in the FHWA *HEC-22, Urban Drainage Design Manual*;

- (II) Storm Drains under the I-70 Mainline shall be designed under free flow conditions for the 10 year return frequency peak discharge for Ultimate design. The hydraulic gradient for the 100 year return frequency shall be below top of pavement, inlet, grate, or manhole lid for the Ultimate design; and
- (III) The velocity of flow for Storm Drains shall not be less than three feet per second for the minor storm discharge (10 year) return frequency peak discharge and shall not be greater than 22 feet per second for the major storm discharge (100 year).

B. Inlets

- (I) Inlets are required at locations to collect runoff within the design controls specified in this Section. In addition, there are a number of locations where inlets may be necessary with little regard to contributing drainage area. These locations shall be designated on the plans prior to computations regarding discharge, water spread, inlet capacity, or bypass. Examples of such locations can be found in Chapter 13.4.2 of the CDOT *Drainage Design Manual*;
- (II) CDOT *M & S Standard Plans* inlets shall be used on all CDOT Roadways.
- (III) The following criteria apply to inlets
 - (aa) Type C and Type D inlets shall not be allowed within the roadway pavement limits unless used in conjunction with embankment protectors;
 - (bb) Vane grate inlets shall be used in the shoulders of I-70 Mainline and shall not extend into adjacent travel lanes;
 - (cc) Close mesh grates shall be used for Type C and D inlets near pedestrian areas;
 - (dd) Concrete aprons shall be installed on Type C and D inlets; and
 - (ee) Type 13 or Type C inlets shall be used in conjunction with valley pans;
- (IV) Inlet hydraulic efficiency and spacing shall be determined based on design procedures in the FHWA *HEC-22, Urban Drainage Design Manual*. One hundred percent of the bypass flow shall be added to the next downstream inlet;
- (V) For a continuous Storm Drain system, maximum inlet spacing shall be designed based on allowable flow spread or the manhole spacing criteria, whichever is less;
- (VI) The sag vertical curve or sump area on a roadway requires an inlet at the lowest point and flanking inlets on each side of the lowest inlet to provide relief from debris clogging. Inlets shall be located such that the design criteria for spread are maintained;
- (VII) Inlets are required 10 feet upstream from the point where the street cross slope begins to super-elevate toward the opposite

side to minimize cross street flow. Bypass flow across the I-70 Mainline shall be limited to 0.1 cfs or less. Sump inlets shall not be placed at the zero point of the superelevation transition;

- (VIII) Trench drains will not be allowed in the traveled way or transverse to traffic flow on the I-70 Mainline;
- (IX) Inlets and inlet aprons shall not be located in the travel lanes of the I-70 Mainline or CDOT Roadways; and
- (X) A clogging factor of 50 percent shall be used for sizing single-unit inlet grates. A clogging factor of 10 percent shall be used for sizing single-unit curb opening inlets. For multiple-unit inlets, the clogging factor may be reduced as recommended in the UDFCD *Urban Storm Drainage Criteria Manual, Volume I*, Chapter 6, Section 3.

C. Manholes and Junction Structures

- (I) Manholes shall be incorporated into the Storm Drain system to provide access for inspection, cleaning, and other maintenance activities. Manholes shall be constructed at all junctions, changes in pipe size, drops, and grade changes. Manholes shall be provided at any change in horizontal alignment greater than two degrees. Manholes shall not be located in the wheel path of CDOT Roadways or travel lanes of the I-70 Mainline;
- (II) A lateral that is less than half inside diameter of the trunkline and no more than 75 feet long may be connected to the trunkline with a prefabricated pipe wye, tee connection, or by penetration in conjunction with a concrete collar. Larger laterals shall be connected to the trunkline with a manhole;
- (III) The spacing of manholes shall be in accordance with the criteria identified in the CDOT *Drainage Design Manual*;
- (IV) Manhole and junction structure floors shall be shaped to fit the pipe inverts; and
- (V) Pipe connections to manholes with material other than concrete shall be submitted to the Department for Information.

b. Drain Outfalls

- i. Cross Drain and Storm Drain outfalls shall be designed such that the outlet elevation matches the receiving drainageway flowline. Outfalls shall be oriented in a downstream direction and designed to minimize existing habitat disturbances during construction;
- ii. Permanent erosion protection shall be provided at all outfalls and along the drainage flowlines where needed. Energy dissipaters shall be designed in accordance with the FHWA *HEC-14 Hydraulic Design of Energy Dissipaters for Culverts and Channels*, or UDFCD *Design of Low Tailwater Riprap Basins for Storm Sewer Pipe Outlets*;
- iii. All drain outfalls require either a headwall or end section. End sections or headwalls shall be used for drains 48 inches and smaller. A headwall shall be used for any drain 54 inches and larger. A concrete apron shall be required when wingwalls are utilized with a headwall. Saddle headwalls shall not be used. Concrete pipe joint fasteners for end sections shall be installed so that a minimum of 15 linear feet of the outlet end of the pipe are mechanically locked together;

- iv. The effect of tailwater in the receiving drainageway on the hydraulics of the outfall shall be evaluated. The design frequency of the tailwater of the receiving drainageway shall be based on the comparison of design discharge frequencies for coincidental occurrence included in the FHWA *HEC-22, Urban Drainage Design Manual*; and
 - v. The Developer shall design and be responsible for obtaining maintenance eligibility from the UDFCD for drain outfalls to major drainageways.
- c. Scour and Erosion Control
- i. All existing scour, rill or erosion issues within the Site shall be repaired by the Developer;
 - ii. The Developer shall analyze the I-270 over I-70 proposed structure (E-17-AFS) for erosion and scour potential of Sand Creek and design and construct appropriate protection or mitigation per, HEC-18, *Evaluating Scour at Bridges*, HEC-20, *Stream Stability at Highway Structures* and HEC-23, *Bridge Scour and Stream Instability Countermeasures Experience, Selection, and Design Guidance, Volume 1 and 2*;
 - iii. The following criteria apply to riprap layer thickness:
 - A. Thickness shall not be less than the spherical diameter of the D100 stone or less than two times the spherical diameter of the D50 stone, whichever results in the greater thickness;
 - B. Thickness shall not be less than 12 inches for practical placement;
 - C. The thickness determined by either criteria A or B shall be increased by 50 percent where the riprap is placed underwater; and
 - D. Oversized stones not meeting the required D50 gradation shall not be used to achieve required riprap thickness;
 - iv. Geotextile (Erosion Control Class 1) shall be used under all riprap per CDOT *M & S Standard Plans*.
- d. Temporary Drainage during Construction
- i. The Developer shall be responsible for the design and construction of temporary drainage of the Site during the Construction Period. Temporary drainage shall comply with Project clear zone requirements. Temporary drainage shall be designed to minimize hydroplaning and icing for each phase or stage of construction;
 - ii. The minimum size for temporary Storm Drains and Cross Drains shall be 12 inches. The minimum size of temporary underdrains shall be 4 inches. The Developer shall be responsible for selection of material type for temporary drainage features; and
 - iii. The Developer shall submit Temporary Drainage Plans to the Department for Acceptance in accordance with this Section.
- e. Sub-Drainage Systems
- i. Sub-drainage systems (e.g., underdrains) shall be designed in accordance with the CDOT *Drainage Design Manual*. Sub-drainage systems may be discharged to the stormwater system in compliance with regulations for groundwater discharge and control of water quality. The Developer shall preserve the capacities and functionality of existing underdrains encountered during construction;

- ii. Groundwater is anticipated to be encountered during the Construction Period. For reference only and subject always to Section 3 of the Project Agreement, the Preliminary Subsurface Investigation is provided in the Reference Documents;
 - iii. The Developer shall be responsible for determining the effects of buoyancy for any roadway or drain under the groundwater table and providing the necessary analysis and design to mitigate its effect for both the Construction Period and the Operating Period;
 - iv. The Developer shall be responsible for the design, construction (or, as otherwise applicable with respect to moveable equipment, supply and installation), operations and maintenance of temporary and permanent dewatering systems to prevent groundwater from infiltrating to the Lowered Section and all other areas of the Site during both the Construction Period and the Operating Period.
 - v. Wells and springs may exist within the Construction Work. The Developer shall protect and maintain the flow quantity, water quality, access, and availability of the wells and springs.
- f. Groundwater Treatment Facilities
- As part of or in addition to the dewatering system required pursuant to Section 8.4.4.e.iv of this Schedule, Developer shall be responsible for the design, construction (or, as otherwise applicable with respect to moveable equipment, supply and installation), operations and maintenance of a groundwater treatment facility during both the Construction Period and the Operating Period. Without limiting its obligations under Section 23.1.2 and 23.4.2 of Schedule 17 Environmental Requirements, such groundwater treatment facility shall, at a minimum, be capable of treating any substance identified in the column headed "Chemical Name" in Appendix C of Schedule 17 Environmental Requirements (which include substances documented in the Reference Documents as existing in the groundwater prior to the Setting Date) at concentration levels equal to or less than that indicated in the "Value" column in such Appendix. Developer's design and construction (or, as applicable, supply and installation) of such facility shall take into account, at a minimum:
- i. Developer's obligations under Section 23.1 of Schedule 17 Environmental Requirements;
 - ii. Developer's obligations under Sections 8.1, 9.1 and 10 of the Project Agreement; and
 - iii. the effect, if any, of the following on the obligations referred to in i. and ii. above as they relate to groundwater contamination of:
 - A. Developer's use of the Reference Design or any differences between the Developer's design and the Reference Design;
 - B. any differences between the design, construction, supply, installation, operations and/or maintenance means and methods Developer selects for any portion of the Project and those set out, referred to or contemplated in any Department Provided Approval;
 - C. the incorporation of any ATC (as defined in the ITP) into this Agreement; and
 - D. the acquisition of any Additional ROW Parcel, Developer-risk Permit Area or Temporary Property Rights.
- g. Ponds
- i. The Developer shall design, construct and locate all ponds to the Ultimate design;

- ii. The Developer shall coordinate with the applicable owner the design and construction of access roads to ponds;
- iii. All ponds shall adhere to the extended detention basins (EDB) design guidance as defined in the UDFCD *Urban Storm Drainage Criteria Manual*;
- iv. The Developer shall adhere to the requirements of Section 37-92-602(8) of the Colorado Revised Statutes for ponds and infiltration facilities. The Developer shall submit to the Department all information required for the statewide notification compliance portal for Acceptance;

Table 8-5 Water Quality and Detention Ponds

Pond Name	I-70 Mainline Station	Facility Type
Brighton West	2000+00	Flood Control Pond
Brighton East	2012+00	Flood Control Pond
York East	2028+00	Flood Control Pond
Steele West	2050+00	Flood Control Pond
Steele East	2055+00	Flood Control Pond
Steele North	2055+00	Flood Control Pond
Colorado North	2080+00	Flood Control Pond
Colorado South	2080+00	Flood Control Pond
Quebec North	2185+00	Water Quality Pond
Havana North #1	2292+00	Water Quality Pond
Havana North #2	2292+00	Detention Pond
Havana South	2292+00	Water Quality and Detention Pond
Onsite North	Race Court and Brighton Boulevard	Water Quality and Detention Pond

- v. All ponds shall include the following:
 - A. A six foot minimum width concrete trickle channel with mountable curb to convey nuisance flows from inflow locations to the primary low-level outlet and shall be designed for maintenance equipment loads;
 - B. Pre-sedimentation forebay and micro pool;
 - C. Outlet structure shall be flush with the side slope with trash rack;
 - D. Grades within the basin shall not be less than 0.5 percent unless otherwise Accepted by the Department;
 - E. Outfalls flowing into a pond shall be placed no less than 6 inches above the bottom of pond; and
 - F. Emergency spillway;
- vi. The Developer shall design and construct flood control ponds adjacent to the Lowered Section to capture and convey the 100 year flood before entering the I-70 Mainline. Flood Control Ponds shall not include the pre-sedimentation forebay and micro pool;
- vii. The Developer shall design and construct water quality and detention ponds to provide for the full WQCV plus the 10 year detention volume for the minor storm,

- and one-half of the WQCV plus the 100 year detention volume for the major storm event;
- viii. The Developer shall design and construct water quality ponds to provide for the full WQCV. Alternate PSQFs for water quality ponds, as shown in CDOT *Erosion Control and Stormwater Quality Guide*, may be used with Acceptance from the Department;
 - ix. The Developer shall provide the following:
 - A. 12 foot minimum width access road for maintenance equipment to the inlet and outlet structure;
 - B. 12 foot minimum width access road around the top of the pond, or turn around area suitable for maintenance equipment;
 - C. A staging area suitable for maintenance Activities; and
 - D. Fall protection, where required;
 - x. The elevation of the emergency spillway or overflow structure shall be at or above the elevation of the routed 100 year water surface or at or above the elevation of the WQCV for water quality ponds. The emergency spillway or overflow structure shall have the capacity to convey the routed 100 year peak discharge. Embankments shall provide a minimum of one foot of freeboard above the routed 100 year water surface elevation through the emergency spillway;
 - xi. All ponds shall be installed outside the 100 year floodplain boundary;
 - xii. The low-level outlet of the outlet structure shall include a debris rack with a total opening area at least twice the area of the low-level outlet;
 - xiii. Detention basin slopes and bottom shall be protected against erosion from inflows and circulation within the basin;
 - xiv. Slopes of earth embankments for detention facilities steeper than 4:1 will not be allowed unless Approved by the Department. Slopes in ponds shall be planted with a seed mix and protected by a soil retention covering per CDOT Standard Specifications;
 - xv. Groundwater elevation plans shall be created by the Developer at all pond locations and submitted to the Department for Information. The plans shall show the pond, location of borehole, existing and proposed contours, groundwater elevation, and depth to groundwater. If groundwater is encountered, measures shall be taken (e.g., perimeter underdrain system or impermeable liner) to prevent groundwater seepage into the pond. Groundwater shall not pass through the forebay, trickle channel or micropool; and
 - xvi. All pond design calculations, geometry, and details shall be provided to the Department as part of the Drainage Report.
- h. Bridges and Deck Drainage
- The Developer shall provide deck drainage systems for bridges when the maximum allowable flow spread for the design storm is exceeded. Inlets shall limit flow across the expansion device to less than one cubic feet per second (cfs) for the 10 year storm. Bridge deck drainage systems shall be designed in accordance with the FHWA HEC-21 *Design of Bridge Deck Drainage*. See Schedule 10, Section 13 Structures for more information regarding bridge deck drainage requirements.

8.4.5. Stormwater Pump Stations

- a. The use of pump stations shall be permitted where stormwater removal by gravity is not economically feasible, as Approved by the Department; and
- b. The Developer shall comply with the following requirements in relation to the design of permitted pump stations:
 - i. The pump stations shall be designed for the 100 year, two hour event and shall be designed with an inflow hydrograph hydraulically routed through the pump station to ensure adequacy of the pump station and connecting Storm Drain;
 - ii. The design shall comply with the HEC-24, Highway Stormwater Pump Station Design;
 - iii. The extent of the 100 year storm shall be determined and safeguards against flooding shall be provided to verify no adverse impacts to the surrounding area;
 - iv. A wet well shall be incorporated with the pump station design. The maximum water level in the wet well shall be more than one foot below the lowest pavement elevation to prevent surface ponding upstream of the pump station. The pump stations shall be designed with an inflow hydrograph hydraulically routed through the pump station to verify the minimum required cycle time for each pump;
 - v. The configuration shall provide for screening out debris and a minimum of three pumps, all of which are equal in size and type for operating flexibility. The Developer shall provide one extra pump of equal size and type for future pump maintenance and replacement. The extra pump shall be properly stored and protected from damage in a separate area inside the pump station;
 - vi. Pump equipment and controls shall be explosion proof, corrosion resistant and appropriate for the application;
 - vii. A backup system for power shall be provided to maintain a fully operational facility with capacity to run all pumps for the design flow;
 - viii. The design shall include access for ordinary maintenance, provisions for replacing pumps, and a minimum of two parking spaces;
 - ix. The pump house shall have locked doors, fence and gate for security, and an adequate ventilation system;
 - x. The design shall minimize the need for confined space entry as defined by Occupational Safety and Health Administration (OSHA) and National Institute for Occupational Safety and Health (NIOSH);
 - xi. The site layout shall adhere to the aesthetic requirements, as provided in Schedule 10, Section 14 Landscaping and Aesthetics;
 - xii. Noise levels from the pump station under normal operations shall be in compliance with the Local Agency noise ordinances;
 - xiii. The installed equipment shall be certified by the manufacturer and fully tested and commissioned prior to being placed in service;
 - xiv. The design shall include operation and maintenance manuals for the facility; and
 - xv. Utility service for the pump stations or backup system shall be as required by Schedule 10, Section 4 Utilities.

8.4.6. Irrigation Facilities

The Developer shall coordinate all modifications, crossings and connections to irrigation ditches and shall adhere to ditch company standards and requirements.

8.4.7. Floodplains

- a. The Developer shall coordinate all impacts to Federal Emergency Management Agency (FEMA) regulated floodplains and changes to bridges and Cross Drains located in FEMA regulated floodplains with the Department, FEMA, UDFCD, and the Local Agency floodplain administrator;
- b. The Developer shall comply with local floodplain development Permits as well as applicable National Flood Insurance Program requirements;
- c. As required by the FEMA or Local Agency floodplain administrators, the Developer shall develop hydraulic models of the waterways and crossing structures to demonstrate hydraulic performance of new structures and existing structures;
- d. The Developer shall apply for, obtain, and submit Conditional Letters of Map Revision (CLOMR) and Letters of Map Revision (LOMR) to the Department, for Acceptance and appropriate owner signatures, if required;
- e. The Developer shall be responsible for all FEMA and other agency fees;
- f. The Developer shall obtain floodplain development Permits as required by the Local Agencies; and
- g. The Developer shall be responsible for and comply with submittal schedules as required by all reviewing agencies.

8.4.8. Storm Water Management Plan Updates

- a. The SWMP shall be updated and submitted to the Department to document changes to design and construction Activities;
- b. To verify compliance with 208.04(e) of the CDOT Standard Specifications, the Developer shall submit plan drawings and electronic files of the SWMP Site Map which show the current areas of erodible earth material exposed at one time by clearing and grubbing, and earthwork operations once per month. The format of the electronic files must allow for the area to be calculated and verified (for example MicroStation or Adobe Pro with appropriate polygon shapes);
- c. The Developer shall submit updates to the SWMP Site Map monthly, revising to incorporate the progress of the Construction Work; and
- d. The surface area of erodible earth material exposed at one time by clearing and grubbing and earthwork operations shall not exceed 34 acres as required by Section 208.04(e) of the CDOT Standard Specifications. The Developer may request permission in writing to exceed the 34 acre maximum. This request must include information on the Developers plan and the resources that will be utilized to ensure compliance with the requirements of the CDPS-SPC and Section 208 of the CDOT Standard Specifications. Permission to exceed the 34 acre maximum will be given at the Department's discretion and may be withdrawn at any time if the Developer fails to meet the requirements of Section 208 of the CDOT Standard Specifications.

8.4.9. Area Specific Drainage Requirements and/or Information

a. Offsite Outfall System

The Developer shall design, construct and install the necessary drainage infrastructure required to protect the Lowered Section from the 100 year event. No Offsite flow shall be allowed to drain into the Lowered Section. The Developer shall include connection to the Globeville Landing Outfall (GLO) system as part of the design for the Offsite Outfall. The maximum flow to the GLO system in Brighton Boulevard shall not exceed 463 cfs. The remaining flow shall be diverted and connected to the outfall channel in Globeville Landing Park prior to being released to the South Platte River. The water surface

elevation at the overflow weir within Globeville Landing Park shall remain below the five year event with the total combined flow at this location.

b. Onsite Outfall System

The Developer shall design, construct and install the necessary drainage infrastructure required to drain the Lowered Section. The only tributary area allowed to drain to the low point will be the roadway and associated ramps located within the Lowered Section. Underground detention shall be utilized to maintain the site layout needed for G&K Services if the design of the outfall system is consistent with the Reference Design.

c. 46th Avenue Drainage Design - Brighton Boulevard to Dahlia Street

The Developer shall design, construct and install the necessary drainage infrastructure required to meet CCD criteria and prevent Offsite flow from draining into the Lowered Section.

d. I-70 Mainline Restriping - I-25 to Brighton Boulevard

The segment of I-70 Mainline between I-25 and Brighton Boulevard will consist of restriping that substantially reduces the shoulder of the I-70 Mainline. The inlets required to meet spread criteria shall be incorporated by the Developer into the drainage design.

e. Colorado South Pond and Safeway

Subject to Schedule 18 Section 1.3.2.d, the Developer shall design, construct, install, and coordinate with Safeway to replace the existing detention and containment ponds that will be removed with the widening of the I-70 Mainline to the southeast of Colorado Boulevard.

f. Storm Drain over the Lowered Section near York Street

The Developer shall continue to utilize the historic flow capacity in the existing storm drain in York Street, north of the I-70 Mainline, with a structure over the Lowered Section.

g. Sand Creek

The Developer shall design and reconstruct the overflow channel for Sand Creek adjacent to the south side of the I-270 flyover, if proposed improvements negatively impact the existing overflow channel. The Developer shall coordinate with CCD, UDFCD and Local Agency floodplain administrator.

h. Quebec and Peoria Interchanges

The Developer shall provide permanent slope stabilization at each of the Quebec Street and Peoria Street interchanges to mitigate ongoing erosion issues due to sandy soils. The Developer shall provide curb with rundowns to the toe of slope at the end of proposed guardrail locations and reseed eroded areas.

i. I-225 interchange

The Developer shall provide permanent slope stabilization at the I-225 interchange to mitigate ongoing erosion issues due to sandy soils. The Developer shall extend the existing downspouts from the flyover ramps to within one foot above the existing ground surface, provide erosion protection at the outlet and reseed eroded areas.

j. Groundwater

In performing its obligations under Sections 8.4.4.e.iv and 8.4.4.f of this Schedule, Developer shall provide the necessary analysis and design for temporary dewatering during construction and permanent treatment of groundwater for the Site. Additional information regarding groundwater conditions and requirements, including treatment, is included in Section 8.4.4.f of this Schedule and in Schedule 17 Environmental Requirements.

k. Cover

The Developer shall design, construct and install the necessary drainage infrastructure required to drain the Cover and protect the Lowered Section between Columbine Street to Clayton Street from the 100 year event. The minimum allowable pipe size within the Cover structure shall be 8 inches. CCD approval is required for all inlets and grates, as well as material type for all elements of the drainage system for the Cover. Additional information and requirements regarding the Cover are included in Schedule 10, Section 12 Cover MEP System.

l. Micro Tunneling and Pipe Jacking

Micro tunneling or pipe jacking shall be permitted in areas where open cut installation of Storm Drains and Cross Drains is prohibitive. The use of rectangular pipe is prohibited. The Developer shall:

- i. Consider the use of steel, concrete, or centrifugally cast fiberglass-reinforced polymer mortar pipe. Pipe material shall be submitted by the Developer to the Department for Approval;
- ii. Submit to the Department, for Acceptance, the materials, means, and methods of installation, including but not limited to the following:
 - A. Plan and profile with all Utilities shown and labeled with appropriate Utility ID number. All clearances between Storm Drains or Cross Drains and Utilities shall be clearly labeled;
 - B. Jack and boring pit locations;
 - C. Excavation Material Management Plan;
 - D. Traffic Control Plan;
 - E. Dewatering Plan; and
 - F. Quality Control Plan.

8.5. Construction Requirements

8.5.1. The Developer shall be aware that the Project is within two large existing flood-prone basins; the Montclair Basin and Park Hill Basin. The Developer shall be responsible for protecting and preserving public and private property from damage resulting directly or indirectly from stormwater runoff along or adjacent to the Site during construction of all improvements, including upstream and downstream properties.

8.5.2. The Developer is advised to coordinate with Local Agencies, including but not limited to the UDFCD, for flows that affect drainage within the Site. The Developer shall evaluate construction methods and staging during the design phase and include provisions to maintain positive drainage at all times during construction.

8.5.3. The Developer shall:

- a. Store materials in areas where damage from flood waters is not likely to occur;
- b. Not place fill or decrease conveyance capacity of stormwater flow paths without first installing conveyance, either temporary or permanent, to adequately perpetuate the flows in a historical manner and condition consistent with historical flows;
- c. Maintain such conveyance for all existing flow areas and temporary and permanent conveyance facilities constructed as part of the Project;
- d. Include necessary upstream collection facilities and extend the conveyance system downstream to a reasonable outfall location; and

- e. Not divert flows from historical patterns until downstream facilities, either temporary or permanent, are in place to safely convey flows to an acceptable outfall location.
- 8.5.4. The Developer shall sequence construction of drainage features, including but not limited to inlets, lateral connections, storm drains, channels, and reinforced concrete boxes, so they can be connected to their appropriate outfall to convey flows as designed. If construction of the outfall cannot be completed before direct connection of upstream drainage features, the Developer shall provide temporary flow conveyance.
- 8.5.5. The Developer shall clean all existing drains prior to the start of Construction Work in accordance with Section 202 of the CDOT Standard Specifications.
- 8.5.6. The Developer shall construct temporary drainage in accordance with the Accepted Temporary Drainage Plans for each phase or stage of construction, as described in Schedule 10, Section 2 Maintenance of Traffic. Temporary drainage proposed to be abandoned shall be plugged and flow filled per CDOT Standard Specifications and submitted to the Department for Approval prior to abandonment.
- 8.5.7. The Developer shall survey PSQFs according to Section 6.1.3 of the CDOT *Survey Manual* to confirm the design volume has been provided during construction and documented in the As-Built plans. The Developer shall also submit a Pond Certification Letter stamped by a professional engineer that summarizes all pertinent information. This form shall be submitted prior to final seeding of the facility. The Developer shall map for inclusion into CDOT's Geographic Information System, all new and existing (remaining) outfalls.
- 8.5.8. Pipe Material Selection Guide
- a. The Developer shall comply with the CDOT *Pipe Material Selection Guide*; and
 - b. Clarifications of the CDOT *Pipe Material Selection Guide* are as follows:
 - i. Trial installations are not allowed on the Construction Work;
 - ii. The Developer shall sample soil and water;
 - iii. References to "Project Manager" in the Guide shall be the Developer;
 - iv. The Developer shall provide a sampling schedule for pipe selection to the Department, for Information, 30 Calendar Days after issuance of NTP 1;
 - v. Pipe material selection shall be submitted as part of the Drainage Reports;
 - vi. Aluminum alloy pipe shall not be used; and
 - vii. Storm Drains that are both parallel to and within the strap zone of retaining walls shall be solid wall plastic conduit.

8.6. Drainage Reports

8.6.1. Master Drainage Report

The Developer shall prepare a Master Drainage Report and submit to the Department, for Acceptance, concurrent with the Preliminary (30% Level) Plan Package. The Master Drainage Report shall show how the Developer's design meets the Reference Design and Ultimate configuration, as discussed in this Section.

8.6.2. Interim Drainage Reports

The purpose of an Interim Drainage Report is to actively capture and document all changes to design between the Master and Final report submittals. Interim Drainage Reports shall be submitted by the Developer to the Department for Acceptance. The Developer shall create and include an index of changes to design with each Interim Drainage Report submittal.

8.6.3. Final Drainage Reports

The purpose of the Final Drainage Report is to integrate all Accepted Interim Drainage Reports into one stand-alone report for the Project. The Final Drainage Report shall be prepared by the Developer and submitted to the Department for Acceptance prior to Substantial Completion. The Developer shall include a summary index that incorporates all interim report changes with the Final Drainage Report submittal. No addenda to the Final Drainage Report shall be permitted;

8.6.4. Drainage Reports shall follow the documentation procedure in Chapter 4 of the CDOT *Drainage Design Manual* and shall include the following:

- a. Basic design data, design assumptions, hydrologic and hydraulic methodologies, assumptions, model inputs and outputs, detailed calculations, computations, and computer printouts, relevant design criteria, circumstances influencing design, discussion of all drainage issues and drainage facilities, appropriate maps, figures, and plans;
- b. Rationale for sizing and selection of all drainage elements, including catch basins, Storm Drain systems, Cross Drains, ditches, swales, PSQFs, detention facilities, and pipe materials selection;
- c. Hydraulic data sheets with a summary of hydraulic design information for each Storm Drain and Cross Drain;
- d. A delineation of contributing basins, existing drainage patterns for both highway and cross-drainage flows, drainage parameters, inflow hydrographs for detention basins, detention basin sizing, discharge characteristics, discharge hydrographs for detention basins, detention times, and other information necessary for the design of the drainage system. All drainage reports shall include documentation of tributary flows from areas outside of each construction segment, as defined by the Developer;
- e. Documentation that the proposed runoff will be controlled and treated in accordance with this Section and all drainage and water quality Permits;
- f. Documentation of existing drainage discharge rates, outfall locations and pond release rates;
- g. Documentation of the impact of proposed drainage designs on existing drainage facilities;
- h. Documentation of compatibility with the Ultimate design; and
- i. Calculations, analysis, and all related information used in developing conclusions and recommendations for PSQFs in accordance with CDOT NDRD requirements.

8.6.5. In addition to the documentation procedure in Chapter 4 of the CDOT *Drainage Design Manual*, the Developer shall follow the report outline below. The section and subsection headings shall be maintained at a minimum. If a section or subsection is not used, the reason it is not applicable to the Project shall be specified. New sections or additional subsections shall be added as necessary to fully document the drainage design:

- a. Drainage Report Outline;
 - i. Introduction
 - A. Location of improvements;
 - B. Description of improvements; and
 - C. Discussion of drainage investigation.
 - ii. Cross Drainage, Drainageway, and Irrigation Ditch Crossings
 - A. Location and general discussion;
 - B. Hydrology and design flow development;
 - C. Information sources;

- D. Pipe material selection;
 - E. Agency coordination (i.e. UDFCD, Local Agencies);
 - F. Description of structural design (i.e. for non-CDOT standard CBCs);
 - G. Hydraulic design;
 - H. Groundwater and sub-drainage features;
 - I. Drainageways and floodplains;
 - J. Scour analysis; and
 - K. Bank stabilization.
- iii. Roadway Drainage Systems
- A. General discussion
 - B. Design coordination
 - (I) Adjacent segments; and
 - (II) Agency coordination.
 - C. Drainage Basin Delineations & Characterization
 - (I) Existing basins; and
 - (II) Proposed basins.
 - D. Hydrology and Design Flow Development
 - E. Pavement, Median and Roadside Drainage
 - (I) Inlet/Catch basin spacing design;
 - (II) Storm Drain design;
 - (III) Roadside ditch and channel design; and
 - (IV) Erosion control design.
- iv. Cover Drainage Systems
- A. General discussion
 - B. Design coordination
 - (I) Adjacent segments; and
 - (II) Agency coordination.
 - C. Drainage Basin Delineations & Characterization
 - (I) Proposed basins.
 - D. Hydrology and Design Flow Development
 - E. Pavement, Median and Roadside Drainage
 - (I) Inlet/Catch basin spacing design, and;
 - (II) Storm Drain design.
- v. Permanent Stormwater Quality Facilities
- A. Assumptions and methodologies
 - (I) Allowable release rate discussion
 - B. Hydrology and Hydraulics

- (I) Storage and outlet design documentation
 - C. Adherence to the CDOT MS4 Permit and NDRD requirements.
 - vi. Appendices
 - A. Hydrologic Analysis
 - (I) Onsite hydrology;
 - (II) Offsite hydrology;
 - (III) Precipitation data;
 - (IV) Soil survey;
 - (V) Land use; and
 - (VI) FEMA maps.
 - B. Hydraulic Analysis
 - (I) Spread width, Inlet and Storm Drain calculations;
 - (II) Roadside ditch and channel calculations;
 - (III) Hydraulic grade line calculations;
 - (IV) Drain outfalls, scour and erosion control calculations; and
 - (V) Groundwater and sub-drainage systems.
 - C. Permanent Stormwater Quality Facilities
 - (I) Extended detention basin calculations;
 - (II) Stage storage calculations;
 - (III) Trickle channel calculations; and
 - (IV) Water quality structure calculations.
 - D. Basin Maps
 - (I) Existing and proposed Onsite basin maps; and
 - (II) Offsite Basin maps (full size 22 inch x 34 inch sheets).
 - vii. References.
- b. The Developer shall submit to the Department one hard copy of the Master Drainage Report, one hard copy of all Interim Drainage Reports, and three hard copies of the Final Drainage Report for Acceptance. All Drainage Reports shall be signed and sealed;
- c. The Developer shall submit, to the Department, an electronic copy of all signed and sealed drainage reports in PDF format; and
- d. The Final Drainage Report shall include electronic copies of all computer analysis input and output files in the native file format.

8.7. Water Quality Reports

- 8.7.1. The Developer shall prepare Water Quality Reports to document permanent water quality design decisions for compliance with the CDPHE. All decisions shall adhere to the NDRD program as part of CDOT's overall MS4 Permit.
- 8.7.2. The Developer shall prepare a Master Water Quality Report and submit to the Department, for Acceptance, concurrent with the Preliminary (30% Level) Plan Package. The Master Water Quality Report shall show how the Developer's design meets the Reference Design and Ultimate configuration, as discussed in this Section 8.

- 8.7.3. The purpose of an Interim Water Quality Report is to actively capture and document all changes that affect permanent water quality between the Master and Final report submittals. Interim Water Quality Reports shall be submitted by the Developer to the Department for Acceptance. The Developer shall create and include an index of changes to design with these reports to reflect the content of the Final Water Quality Report.
- 8.7.4. The purpose of the Final Water Quality Report is to integrate all Accepted Interim Water Quality Reports into one stand-alone report for the Project. The Final Water Quality Report, shall be prepared by the Developer and submitted to the Department for Acceptance prior to Substantial Completion. The Developer shall include a summary index that incorporates all interim report changes with the Final Water Quality Report submittal. No addenda to the Final Water Quality Report shall be permitted.
- 8.7.5. The Water Quality Reports shall reference the applicable drainage report for all technical aspects and design calculations.
- 8.7.6. The Water Quality Reports shall include the following:
- a. All assumptions, circumstances influencing design, applicable design standards and/or requirements, and design criteria-related decisions;
 - b. Design decisions shall be documented and shall be based on sound engineering principles;
 - c. All related references including maps, figures, and plans shall be provided in an appendix to the reports;
 - d. Documentation of tributary flows from areas outside of each defined construction segment; and
 - e. An exhibit showing the Construction Work in relation to the MS4 boundary area.
- 8.7.7. The Developer shall prepare an NDRD exhibit to be included with all Water Quality Reports. The NDRD exhibit shall include the following:
- a. A delineation of each basin with a colored, solid-filled, hatch pattern. Each basin shall be tributary to a specific PSQF. Provide different colors for each PSQF basin. These basins shall incorporate the sub-basins found in the Drainage Reports;
 - b. A label for each water quality basin. Include the typical basin designation circle label. Include within the circle the water quality basin ID, the basin area, and the impervious area with that basin. Provide a legend to describe the basin designation label;
 - c. A label for the proposed PSQFs serving each basin. The Developer shall ensure that the location of the PSQF matches the proposed locations found in the construction drawings;
 - d. Flow direction arrows;
 - e. A delineation of disturbed areas for the Construction Work; and
 - f. A table with six column headings. The column headings shall be; Basin, Color, Basin ID, Type of PSQF used to Treat Area, Required Impervious Area to be Treated, Increased Impervious Area Treated, and Comments. At the bottom of the table sum the columns for increased impervious area to be treated and the actual impervious area treated.
- 8.7.8. The Developer shall submit to the Department one hard copy of the Master Water Quality Report, one hard copy of all Interim Water Quality Reports and three hard copies of the Final Water Quality Report for Acceptance. All Water Quality Reports shall be signed and sealed.
- 8.7.9. The Developer shall submit one electronic copy of all signed and sealed Water Quality Reports in PDF format.
- 8.7.10. The Water Quality Reports shall follow the report outline below. New sections or additional subsections shall be added as necessary to fully document the design:

- a. Water Quality Report Outline
 - i. Table of Contents
 - ii. Introduction
 - A. Vicinity Map;
 - B. Site location, stationing;
 - C. State highway number;
 - D. Name of receiving waters;
 - E. Location of existing and proposed outfalls;
 - F. Geographic reference (county, nearest town); and
 - G. Jurisdictional MS4 boundary areas.
 - iii. Discussion of CDOT MS4/NDRD Requirements
 - A. Discussion of how proposed PSQFs satisfy CDOT's MS4 requirements;
 - B. Site map showing locations of PSQFs;
 - C. Relationship of PSQFs to major drainageway and outfall systems plans;
 - D. Detailed description, design criteria, and references to specifications and technical details of PSQFs as documented in the applicable Drainage Reports;
 - E. Detailed descriptions, design criteria, and locations of stream stabilization measures to be implemented;
 - F. Design objectives;
 - G. Treatment options;
 - H. Expected pollutant removal rates;
 - I. Existing water quality features that will be abandoned, reconfigured, or incorporated into a new design;
 - J. ROW needs and/or concerns;
 - K. Recommended design; and
 - L. Maintenance and operation requirements, inspection protocols, and maintenance schedule.
 - iv. The following topics shall be addressed in detail:
 - A. Description of project and land disturbance in acres;
 - B. What area (in acres) is required to be treated, what area (in acres) of treatment is provided, what area (in acres) is not treated, and what area (in acres) is treated in addition to what is required. The discussion shall distinguish between CDOT MS4 area and non-CDOT MS4 area. Include this information in the report and as a note on the NDRD exhibit;
 - C. Detailed description, design criteria, justifications, decision making process (why a permanent BMP was chosen over another), location of permanent BMPs to be implemented, and analysis as to how permanent BMPs (combination or individual) satisfy the current CDOT NDRD requirements; and
 - D. Provide the certification number for the CDPS Construction Permit for the Construction Work.

- v. Maintenance and Operation
 - A. Narrative description of the facility

Example: Extended detention pond with a single cell outlet structure with an orifice plate which is designed for a 40 hour drain time. Three inlets drain into the basin which has a concrete lined forebay with grouted riprap berm. The forebay is designed to drain within five minutes and keep out large floatable/debris.
 - B. Narrative description of maintenance access to the facility

Example: maintenance access off of southbound I-25 before guardrail or take ramp from southbound I-25 to westbound Speer. Parking is from the shoulder.
 - C. Narrative description of what maintenance work will need to be done and at what frequency to ensure continued effectiveness of the facility.

Example:

 - (I) Mowing basin to keep vegetation controlled so water can continue to flow unhindered. Remove vegetation from facility to keep from re-clogging grates and orifice plate;
 - (II) Clean trash rack/grates of debris and dispose of off of PSQF site;
 - (III) Clear orifice plate holes so water can continue to flow;
 - (IV) Remove sediment from basin when reaches lowest orifice hole or blocking forebay outlet pipe. Can use hand shovels, bobcats/skid steers;
 - (V) Remove sediment off of PSQF site to keep from re-polluting the pond;
 - (VI) Re-seed as necessary to keep area stable of erosion;
 - (VII) Add additional erosion control items to keep area stable; and
 - (VIII) Tighten/replace trash rack bolts and screens as necessary to keep structure in working order.
 - D. Documentation of commitments from responsible agency (such as Intergovernmental Agreements, Memoranda of Understanding, etc.) or owner to maintain the PSQF's shall be required and included with the Final Water Quality Report.
- vi. Appendix
 - A. Construction Work in relation to MS4 boundary area exhibit; and
 - B. NDRD Exhibit.

8.8. Drainage Plans

- 8.8.1. The Developer shall prepare plans for all drainage related facilities for the Construction Work in a format that follows the documentation procedure in Chapter 4 of the CDOT *Drainage Design Manual*, CDOT *CADD Manual* and CDOT *Drafting Manual*.
- 8.8.2. The Developer shall submit all applicable plans with each drainage report.

- 8.8.3. Plans shall be submitted with changes to design. The Developer shall include the following for all drainage plan deliverables:
- a. Plan View
 - i. Provide the location of all existing and proposed drains and Approved abandoned pipe locations. Provide a label for each proposed drain and Approved abandoned pipe locations. The Developer shall establish a labeling system that is specific to each proposed storm drain system and provide a table to summarize all pertinent information. The table shall include the drain line and sheet number where the profile can be found;
 - ii. Provide the location of all existing and proposed inlets, manholes, end sections, and outlet protection. Provide a label for each proposed inlet, manhole, end section, and outlet protection. Include a table that summarizes all pertinent information. The table shall include the label ID, station and offset, item, length, pay depth, and notes;
 - iii. Provide all existing and proposed grading;
 - iv. All Utilities and As-Built information for relocated Utilities shall be accurately shown;
 - v. Provide location of existing and proposed ROW lines;
 - vi. Label locations of all drains to be removed or abandoned with flowfill. Include description and length of drain; and
 - vii. Provide locations of all proposed permanent underdrains. Include locations of existing underdrains to be utilized with the Project as discovered during Construction Work. Provide a label for each underdrain location, clean out, fittings, and outlet. The Developer shall establish a labeling system that is specific to each underdrain system and provide a table to summarize all pertinent information. The table shall include the drain line and sheet number where the profile can be found and include the label ID, station and offset, item, length, and notes.
 - b. Profiles
 - i. Provide profiles for all proposed Storm Drains. Include the label ID from plan view sheets, station and offset, invert elevations, rim elevations, structure depth, slopes, sizes, material, existing and proposed finished grade lines, the design flow for the 10 year and 100 year event, and the calculated HGL for the 10 year and 100 year event. All Utilities shall be accurately shown and labeled with appropriate Utility ID number. All clearances between Storm Drains and Utilities shall be clearly labeled;
 - ii. Provide profiles for all proposed Cross Drains. Include the label ID from plan view sheets, station and offset, invert elevations, slopes, sizes, material, existing and proposed finished grade lines, the drainage area of contributing basin, the design flow for the 10 year and 100 year event, the calculated hydraulic grade line (HGL) for the 10 year and 100 year event, and headwater elevation. All Utilities shall be accurately shown and labeled with appropriate Utility ID number. All clearances between Cross Drains and Utilities shall be clearly labeled;
 - iii. Provide profiles for all underdrains. Include the label ID from plan view sheets, station and offset, invert elevations, slopes, sizes, material, and existing and proposed finished grade lines. All Utilities shall be accurately shown and labeled with appropriate Utility ID number. Underdrain profiles may be combined with Storm Drain and Cross Drain profiles where applicable; and

- iv. Provide location of design groundwater elevation in all profiles located within the Brighton Boulevard to Colorado Boulevard Construction Work.
- c. Include details for all non-standard CDOT items.
- d. Details for EDB
 - i. Provide each EDB in plan view. Provide existing and proposed contours that define limits of overall facility. Include access roads, overflow location or structure, forebay, trickle channel, micropool, and outlet structure. Include locations of all property lines. Include point labels to define location and elevations within the facility;
 - ii. Provide a table summarizing each point label. The table shall include the point label, station and offset, northing, easting, elevation and notes;
 - iii. Provide a cross section of the EDB from where flows enter the pond to the outlet structure. Label elevations for the WQCV, 10 year, and 100 year events. Include slopes and elevations of all features;
 - iv. Provide a geometry plan of the EDB from where flows enter the pond to the outlet structure. Include access roads;
 - v. Provide specific details for the forebay, trickle channel, micropool, and outlet structure; and
 - vi. All Utilities shall be accurately shown and labeled with appropriate Utility ID number.

8.8.4. Temporary Drainage Plan

- a. The Developer shall submit Temporary Drainage Plans concurrently with each Temporary Traffic Control Plan (TCP), when required, to the Department for Acceptance as described in Schedule 10, Section 2 Maintenance of Traffic, and with changes to design; and
- b. The Developer shall provide the location of all Approved abandoned drains. The Developer shall establish a labeling system that is specific to each temporary storm drain system and provide a table to summarize all pertinent information. The table shall include temporary connection locations, the drain line and sheet number where applicable profiles can be found.

8.8.5. Pond Certification Letter

- a. The Developer shall prepare and submit to the Department a Pond Certification Letter signed and stamped by a Colorado licensed professional engineer. This form shall be completed before final seeding and submitted for Acceptance prior to Acceptance of the As-Built documents; and
- b. The form shall include the following information for each pond:
 - i. Include the statement "I (professional engineer), certify that I have reviewed all As-Built survey information provided by (Developer) for (pond name) within the Project and hereby certify that the pond was constructed in accordance with the approved design plans.";
 - ii. Provide a pond volume table summarizing the WQCV, 10 year volume plus WQCV and the 100 year volume plus one half the WQCV. Identify the design volume, design elevation, As-Built volume and As-Built elevation for each of the items listed;
 - iii. Provide a pond elevation table summarizing the design and As-Built elevation for the emergency overflow, top of pond, inlet, and outlet;

- iv. Provide a pond release rate table summarizing the design and As-Built 10 year and 100 year release rates and flow over spillway. Include the length of spillway for design and As-Built conditions;
- v. Attach Applicable As-Built plan, profile and detail sheets with the Pond Certification Letter; and
- vi. The Pond Certification Letter shall be submitted to the Department with all changes to design.

8.9. As-Built Documents

All plans, profiles, details, Approved abandoned pipe locations, and other information required to be prepared in accordance with this Section shall be updated based on surveys of what was actually built in the field and submitted to the Department for Acceptance.

8.10. Deliverables

At a minimum, the Developer shall submit the following to the Department for Information, Acceptance, or Approval in accordance with the specified timeframes:

Table 8-6 Deliverables

Deliverable	Information, Acceptance or Approval	Schedule
Use of stormwater pump station	Approval	As required
Final Drainage Report	Acceptance	Prior to Substantial Completion
Final Water Quality Report	Acceptance	Prior to Substantial Completion
Interim Drainage Reports	Acceptance	Concurrent with Final (100% Level) Plan Package and RFC Documents
Interim Water Quality Reports	Acceptance	Concurrent with Final (100% Level) Plan Package and RFC Documents
Master Drainage Report	Acceptance	Concurrent with Preliminary (30% Level) Plan Package
Master Water Quality Report	Acceptance	Concurrent with Preliminary (30% Level) Plan Package
Pond Certification Letter	Acceptance	Prior to Final Acceptance
Temporary Drainage Plans	Acceptance	Concurrent with Temporary Traffic Control Plan (TCP)
Pipe Abandonment Locations	Approval	Prior to Abandonment
CLOMR	Acceptance	Prior to RFC Documents
LOMR	Acceptance	Prior to Substantial Completion
SWMP	Acceptance	Prior to RFC Documents
SWMP Site Map Updates	Acceptance	Monthly during the Construction Period
Sampling Schedule for pipe selection	Information	30 Calendar Days after issuance of NTP 1
Micro tunneling and/or pipe jacking materials means and methods of installation	Acceptance	Prior to RFC Documents
Pipe connections to manholes with material other than concrete	Information	Prior to RFC Documents
Groundwater Elevation Plans	Information	Concurrent with Preliminary (30% Level) Plan Package
Information required for the statewide notification compliance portal for Acceptance	Acceptance	Prior to Final Acceptance

8.11. Appendices

Appendix A Project Special Provisions

Appendix A
Project Special Provisions

The following special provisions supplement or modify and take precedence over the Standard Specifications. The provisions of Appendix A to Schedule 10A Applicable Standards and Specifications apply to these Project Special Provisions.

PROJECT SPECIAL PROVISIONS

	<u>Page</u>
Index	8-26
Revision of Section 603 – Culverts and Sewers	8-27

**REVISION OF SECTION 603
CULVERTS AND SEWERS**

The following specifications modify and take precedence over the Standard Specifications. The requirements of Schedule 10 Section 6 apply to these Project Special Provisions.

Subsection 603.07(a) shall include the following:

 Joints for all circular and elliptical reinforced pipe shall be made with confined rubber gaskets. Concrete collars shall be required at all nonstandard joints (not tongue and groove or bell and spigot), and at all connections to existing pipe.

Subsection 603.07(c) shall include the following:

 All welding of pipe and fittings for plastic conduit shall be performed by qualified and certified personnel trained in Extrusion Welding. Certifications shall be provided to the Department prior to performing any welding for the Project

 In order to limit thermal expansion, all connections made to concrete structures shall be made a minimum of 24 hours after the pipe has been installed and backfilled.

9. ROADWAY

9.1. General

The Developer shall design and construct all roadways, and associated roadway items, including earthwork, pavements, curbs, medians, islands, barriers, guardrail, fences, incidentals and other roadside items.

9.2. Applicable Standards

All Construction Work required to be performed by the Developer pursuant to this Section 9 shall comply with the Construction Standards, the relevant requirements listed in this Section 9, Good Industry Practice, and the following:

- a. Appendix A Roadway Design Criteria to this Section 9; and
- b. Conform to the Roadway Typical Sections as provided in Schedule 10B Contract Drawings.

9.3. Design Requirements

9.3.1. Local Agency Roadways shall be designed and constructed according to the Local Agency's standards and requirements. Where particular Elements of design and construction are not covered by Local Agency standards, the applicable Federal and State Construction Standards shall apply. With the exception of the I-70 Mainline, I-225 and I-270, Local Agency standards shall also be applied to all CDOT Roadways between the back of curb and the ROW line. In addition to Local Agency standards, the Developer shall follow Local Agency Municipal Codes and Ordinances as applicable to the Project. Applicable Codes and Ordinances include, but may not be limited to the following:

- a. Revised Denver Municipal Code Ordinance, Section 49-141: Location and width of curb cuts;
- b. Revised Denver Municipal Code Ordinance Section 49-142: Alteration of existing curb cuts;
- c. Denver Zoning Code 10.4.5.2A and B, Vehicular Access: Access from Public ROW;
- d. Denver Zoning Code 10.4.7.5, Amount Required: Amount of off-street loading and maneuvering space; and
- e. Denver Zoning Code, On-site Design: Design of drive isles, parking stalls and setbacks.

9.3.2. The Developer shall design and construct alleyway connections in accordance with the City and County of Denver (CCD) Transportation Standards and Details.

9.3.3. Intelligent Transportation Systems (ITS) ITS and Electronic Toll Collection (ETC) infrastructure shall comply with the requirements in Schedule 10, Section 3 ITS and Tolling Equipment. Within the full reconstruction limits, to the extent required pursuant to this Schedule 10, the Developer shall install ETC and ITS infrastructure with the accommodation for addition of a future Tolle Express Lane.

9.3.4. The Developer's design shall adhere to the commitments established within the I-70 East EIS. The number, type, and width of traffic lanes, interchange locations, highway and local roadway access are specified in the I-70 East EIS and constitute the Ultimate configuration. All roadway infrastructure Elements shall be designed and constructed to meet the requirements set out in this Section 9 and shall accommodate, to the extent practical, the Ultimate configuration. Considerations include horizontal and vertical geometry, vertical clearances and cover over underground structures, and superelevation.

9.3.5. The Roadway Typical Sections represent a graphical detail of the roadway section widths and components listed in Appendix A Roadway Design Criteria to this Section 9. The Roadway Typical Section information shall form the basis of the Developer's design for typical lane and shoulder widths, curb and sidewalk locations and cross slopes.

- 9.3.6. New traffic signals shall be provided at intersections as required in Schedule 10, Section 11, Signing, Pavement Markings, Striping, Signalization, and Lighting. Application of roadway and pedestrian sight distance triangles required for the design of CCD traffic signal placement, intersecting roadways, driveways and alleyways, shall be in accordance with the CCD Transportation Engineering Plan (TEP) Review Submittal Requirements.
- 9.3.7. For reference and subject always to Section 3 of the Project Agreement, the Reference Documents include the Interstate Access Request (IAR). It shall be the Developer's responsibility to modify and obtain required Governmental Approvals and Permits should alternate design concepts be utilized by the Developer.

9.4. Construction Work Requirements

9.4.1. I-70 Mainline

- a. Pecos Street to Brighton Boulevard (eastbound): Signing, Restriping, ETC and ITS Infrastructure
- i. Utilizing the existing pavement width of the I-70 pavement, the Developer shall provide a new single eastbound Tolled Express Lane beginning approximately 2,100 feet west of Washington Street and extending east to the point of full I-70 Mainline reconstruction at Brighton Boulevard. Tolled Express Lane signage and ITS installation shall begin between Pecos Street and I-25 in accordance with the requirements of Schedule 10, Section 3 ITS and Tolling Equipment.
 - ii. The eastbound I-70 Mainline shall meet the following minimum design requirements:
 - A. Provide an inside shoulder;
 - B. Provide a single Tolled Express Lane as required by Section 9.4.1.a.i;
 - C. Provide a buffer between Tolled Express Lane and adjacent General Purpose Lanes;
 - D. Maintain current number of existing General Purpose Lanes and auxiliary lanes; and
 - E. Provide an outside shoulder width meeting the design criteria specified in this Section 9.
- b. I-25 to Brighton Boulevard (westbound): Signing, Restriping, ETC and ITS Infrastructure
- i. Utilizing the existing pavement width of the I-70 pavement, the Developer shall provide a single westbound Tolled Express Lane from the point of full I-70 Mainline reconstruction at Brighton Boulevard and extending to approximately 1,100 feet west of Washington Street.
 - ii. The westbound I-70 Mainline shall meet the following minimum design requirements:
 - A. Provide an inside shoulder;
 - B. Provide a single Tolled Express Lane as required by Section 9.4.1.b.i;
 - C. Provide a buffer between Tolled Express Lane and adjacent General Purpose Lanes;
 - D. Maintain current number of existing General Purpose Lanes and auxiliary lanes; and

- E. Provide an outside shoulder width meeting the design criteria specified in this Section 9.
 - c. Brighton Boulevard to Colorado Boulevard: Full Reconstruction of Highway Below Grade
 - i. The I-70 Mainline shall be reconstructed to provide three General Purpose Lanes and two Ultimate Tolloed Express Lanes with associated ITS infrastructure in each direction. The Developer is required to construct one Tolloed Express Lane with the accommodation for one additional future Tolloed Express Lane. The Developer is responsible for delineating and striping one Tolloed Express Lane, with weave zones, in each direction as part of the Construction Work.
 - ii. The I-70 Mainline shall be reconstructed to meet the following requirements:
 - A. Provide an inside shoulder (width to include a future Ultimate second Tolloed Express Lane with inside shoulder);
 - B. Provide a single Tolloed Express Lane, adjacent to the General Purpose Lanes;
 - C. Provide a buffer between Tolloed Express Lane and adjacent General Purpose Lanes;
 - D. Provide three General Purpose Lanes; and
 - E. Provide an outside shoulder meeting the design criteria specified in this Section 9.
 - iii. The Developer shall provide ramp acceleration and deceleration lanes, including continuous auxiliary lanes in both directions: between the Brighton Boulevard and Colorado Boulevard interchanges in the eastbound direction, and between Brighton Boulevard and Steele Street/Vasquez Boulevard in the westbound direction.
 - d. Colorado Boulevard to Sand Creek Bridge: Full Reconstruction of Highway on alignment
 - i. The I-70 Mainline shall be reconstructed to provide three General Purpose Lanes and two Ultimate Tolloed Express Lanes with associated ITS infrastructure in each direction, extending full reconstruction of the I-70 Mainline to the west side of the existing Sand Creek bridge. The Developer is required to construct one Tolloed Express Lane with accommodation for one additional future Tolloed Express Lane. The Developer is responsible for delineating and striping one Tolloed Express Lane, with weave zones, in each direction as part of the Construction Work.
 - ii. The I-70 Mainline shall be reconstructed to meet the following requirements:
 - A. Provide an inside shoulder (width to include a future Ultimate second Tolloed Express Lane with inside shoulder);
 - B. Provide a single Tolloed Express Lane, adjacent to the General Purpose Lanes;
 - C. Provide a buffer between Tolloed Express Lane and adjacent General Purpose Lanes;
 - D. Provide three General Purpose Lanes; and
 - E. Provide an outside shoulder meeting the design criteria specified in this Section 9.

- iii. The Developer shall provide ramp acceleration and deceleration lanes, including continuous auxiliary lanes in both directions, between the Colorado Boulevard and Holly Street interchanges, and the Holly Street and Quebec Street interchanges.
- e. Sand Creek Bridge to Chambers Road: Widening and Overlay, Restriping, and ITS Infrastructure
 - i. The existing I-70 Mainline shall be widened to provide an equivalent number of General Purpose Lanes as currently exist, plus one new Tolloed Express Lane with associated ITS infrastructure in each direction.
 - ii. The Developer shall widen the existing I-70 Mainline to meet the following requirements:
 - A. Provide an inside shoulder;
 - B. Provide a single Tolloed Express Lane, adjacent to the General Purpose Lanes;
 - C. Provide a buffer between Tolloed Express Lane and adjacent General Purpose Lanes;
 - D. Provide General Purpose Lanes, maintaining current number of existing General Purpose Lanes;
 - E. Provide an outside shoulder meeting the design criteria specified in this Section 9;
 - F. Ramp acceleration and deceleration lanes, including continuous auxiliary lanes, shall be provided as follows:
 - (I) Continuous auxiliary lanes in both directions, between the Quebec Street and Central Park Boulevard interchanges;
 - (II) Continuous auxiliary lanes in both directions, between the Central Park Boulevard and Havana Street interchanges;
 - (III) Continuous auxiliary lane in the westbound direction, between the Peoria Street and Havana Street interchanges;
 - (IV) Continuous auxiliary lane in the eastbound direction, between the Peoria Street and I-225 interchanges; and
 - (V) Continuous auxiliary lane in the eastbound direction, between the I-225 and Chambers Road interchanges.
 - G. Reconstruct the I-70 Mainline over Peoria Street, including approaches as needed to obtain the vertical clearance over Peoria Street, in accordance with the Ultimate configuration.
 - iii. The Developer shall provide ramp connections to existing I-70. Number and width of lanes and shoulders shall be as described in Appendix A Roadway Design Criteria to this Section 9.
 - iv. In areas of asphalt pavement widening, the existing pavement shall be saw cut to a neat line along the final edge of lane line, or in the middle of the final lane location. Saw cuts and pavement joints shall not be permitted within the wheel tracks of a final lane location.

9.4.2. I-70 Mainline Interchanges

- a. Washington Street Interchange
 - i. The Washington Street westbound entrance ramp shall provide a minimum of 385 feet dual ramp meter queuing, as measured from the ramp meter stop bar to the cross street.
 - ii. The Washington Street eastbound entrance ramp shall provide a minimum of 485 feet dual ramp meter queuing, as measured from the ramp meter stop bar to the cross street.
- b. Brighton Boulevard and Interchange Ramp Reconstruction
 - i. The Brighton Boulevard Interchange shall be reconstructed to provide for the lowering of the I-70 Mainline profile to cross under the Union Pacific Railroad (UPRR) 36th Yard, and extend eastward. Ramp connectivity from Brighton Boulevard to I-70 shall be provided as westbound entrance, eastbound exit, westbound exit, and eastbound entrance ramps.
 - ii. The Developer shall reconstruct the existing diamond interchange at Brighton Boulevard to provide a new diamond interchange in accordance with the following requirements:
 - A. At the Brighton Boulevard westbound entrance ramp, the Developer shall provide two receiving lanes transitioning to a single-lane ramp with single-lane entrance and acceleration lane. A minimum of 600 feet dual ramp meter queuing, as measured from the ramp meter stop bar to the cross street shall be provided;
 - B. At the Brighton Boulevard eastbound exit ramp, the Developer shall provide a three-lane connection to Brighton Boulevard that includes left turn, left/thru and thru/right lanes while maintaining the existing free-flow right turn to Brighton Boulevard;
 - C. At the Brighton Boulevard westbound exit ramp, the Developer shall provide a single-lane exit transitioning to a combined ramp/46th Avenue connection to Brighton Boulevard that includes dual left-turns, a thru and a thru/right lane; and
 - D. At the Brighton Boulevard eastbound entrance ramp, the Developer shall provide a two-lane ramp with two-lane entrance and single-lane acceleration lane. A minimum of 440 feet dual ramp meter queuing, as measured from the ramp meter stop bar to the cross street shall be provided.
 - iii. Reconstruction of Brighton Boulevard shall provide two thru lanes and two left-turn lanes in each direction between the I-70 ramps. Ten foot multi-use path sidewalk shall be provided along the west side and 10 foot wide sidewalk along the east side of Brighton Boulevard under the I-70 Mainline bridge; North and south of the bridge, sidewalks shall be provided for the length of new roadway construction. The Developer shall include raised medians to separate the southbound and northbound lanes of Brighton Boulevard within the interchange and accommodate bridge pier placement as necessary.
 - iv. The Developer's Brighton Boulevard Construction Work between 44th Street and the ramps south of I-70 shall add a northbound right turn lane on Brighton Boulevard from north of 44th Street to the eastbound entrance ramp and new 46th Avenue. A thru/right and exclusive right-turn shall be provided on northbound Brighton Boulevard to the eastbound entrance ramp and 46th Avenue South. The leftmost lane of the dual right-turn shall be signal controlled. Ramp terminals on the west side shall be aligned with the 46th Avenue/ramp

- terminals on the east side to provide for minimum two-lane thru traffic movements across the intersection.
- v. The Developer's Brighton Boulevard Construction Work between the ramps north of I-70 and 47th Avenue including the 47th Avenue intersection shall be reconstructed to provide two thru lanes in each direction, turn lanes, and sidewalks. Southbound Brighton Boulevard approaching the north I-70 Ramp junction shall include: one right turn lane, two thru lanes, and one lane for left turn storage to EB I-70.
 - vi. 47th Avenue eastbound shall include a left and thru/right lane, while 47th Avenue westbound shall include a left, thru, and right lane to Brighton Boulevard. Brighton Boulevard northbound shall include a left and thru/right lane, while Brighton Boulevard southbound shall include a thru/right lane north of 47th Avenue and two thru lanes south of 47th Avenue. 47th Avenue shall maintain a single thru lane, in both directions, between Baldwin Court and Williams Street.
- c. Steele Street/Vasquez and Colorado Boulevards, Interchanges and Ramp Reconstruction
- i. The existing Steele Street/Vasquez and Colorado Boulevard interchanges shall be reconstructed to allow for lowering the I-70 Mainline below the roadways. Ramp connectivity to Steele Street/Vasquez and Colorado Boulevard from the I-70 Mainline shall be designed and constructed as a split diamond interchange with supplemental ramp connections on the west side of Colorado Boulevard. Specifically, ramp connectivity shall be provided for the following movements:
 - A. Westbound entrance ramp from Steele Street/Vasquez Boulevard;
 - B. Eastbound exit ramp to Steele Street/Vasquez Boulevard;
 - C. Westbound entrance slip ramp from Colorado Boulevard;
 - D. Eastbound exit slip ramp to Colorado Boulevard;
 - E. Westbound exit ramp to Colorado Boulevard; and
 - F. Eastbound entrance ramp from Colorado Boulevard.
 - ii. The Developer shall construct the ramps and ramp connections described above in accordance with the following criteria:
 - A. The Steele Street/Vasquez Boulevard westbound entrance ramp shall provide a minimum 750 feet dual ramp meter queuing, as measured from the ramp meter stop bar to the cross street. The ramp shall transition, following the ramp meter stop bar, to a single lane entrance and acceleration lane;
 - B. The Steele Street/Vasquez Boulevard eastbound exit ramp shall have a single-lane ramp with single-lane exit and deceleration lane. A four-lane connection that includes dual left-turn lanes, a thru lane, and a thru/right lane shall be provided to Steele Street/Vasquez Boulevard;
 - C. The Steele Street/Vasquez Boulevard westbound 46th Avenue connection shall have a four-lane connection that includes dual left-turn lanes, a thru lane, and a thru/right lane provided;
 - D. The Steele Street/Vasquez Boulevard eastbound 46th Avenue connection shall have a two receiving-lane connection provided;
 - E. The Colorado Boulevard westbound entrance ramp shall provide a minimum 1,060 feet dual ramp meter queuing, as measured from the ramp meter stop bar to the cross street. The ramp shall transition,

- following the ramp meter stop bar, to a single lane entrance and acceleration lane;
- F. The Colorado Boulevard eastbound exit ramp shall have a single-lane ramp with single-lane exit and deceleration lane. A four-lane ramp terminal connection that includes a left-turn lane, a thru/left lane, a thru/right lane and a right turn lane shall be provided to Colorado Boulevard;
 - G. The Colorado Boulevard westbound exit ramp shall have a single-lane exit transitioning to a combined ramp/Stapleton Drive North connection to Colorado Boulevard. A five-lane connection that includes dual left-turn lanes, a thru/left lane, a thru/right lane, and a right-turn lane shall be provided to Colorado Boulevard; and
 - H. The Colorado Boulevard eastbound entrance ramp shall provide a minimum 650 feet dual ramp meter queuing, as measured from the ramp meter stop bar to the cross street. The ramp shall transition, following the ramp meter stop bar, to a single lane entrance and acceleration lane.
- iii. Steele Street/Vasquez Boulevard shall be reconstructed to provide two thru lanes between 45th Avenue and 46th Avenue North, in both directions, and three thru lanes between 46th Avenue North and 48th Avenue, in both directions. The reconstruction shall also provide left and right turn movements for the new I-70 ramps and 46th Avenue. Dual-left turns shall be provided from Steele Street/Vasquez to the westbound entrance ramp, and a single left turn provided from Steele Street/Vasquez to eastbound 46th Avenue South. Construction shall include a right-in/right-out intersection at 47th Avenue.
 - iv. A thru/right and exclusive right-turn shall be provided at the southbound Steele Street/Vasquez to westbound 46th Avenue/I-70 ramp. The leftmost lane of the dual right-turn shall be signal controlled. 46th Avenue/ramp terminals on the west side shall be aligned with the ramp terminals on the east side to provide for minimum two-lane thru traffic movements across the intersection.
 - v. Colorado Boulevard shall be reconstructed to provide three thru lanes, in both directions, and provide dual left and separate right turn movements to the I-70 ramps and new 46th Avenue. The limits of reconstruction on Colorado Boulevard shall extend from the north abutment of the existing bridge over UPRR and RTD to 48th Avenue. Sidewalk approaches, curb ramps and curb returns shall be provided on the south side of the intersection. The Colorado Boulevard and 48th Avenue intersection shall be reconstructed to meet the ADA requirements, as described in this Section 9.
 - vi. Dual right-turns shall be provided at the Colorado Boulevard intersections with 46th Avenue and Stapleton Drive. Free-flow right-turn movements shall be provided for all rightmost lanes of dual right-turns. The leftmost lanes of the dual right-turns shall be signal controlled. Both lanes of the dual right-turn from southbound Colorado Boulevard to westbound 46th Avenue/I-70 ramp shall be exclusive right turns. An auxiliary lane shall be provided southbound between 48th Avenue and 46th Avenue North, and northbound between the existing bridge over UPRR/RTD and 46th Avenue South. The 46th Avenue/ramp terminals on the west side shall be aligned with the Stapleton Drive/ramp terminals on the east side to provide for minimum two-lane thru traffic movements across the intersection.
 - vii. The Developer shall include raised medians to separate the southbound and northbound lanes of Steele Street/Vasquez and Colorado Boulevard within the general limits of the roadways' reconstruction. Sidewalks shall be provided on

both sides of Steele Street/Vasquez Boulevard and Colorado Boulevard for the length of the new roadway construction.

- d. Holly Street and Interchange Ramp Construction
 - i. The Developer shall remove and replace the existing I-70 slip ramps located at Dahlia Street and Monaco Street with a new diamond interchange at Holly Street. The new Holly Street interchange shall be developed to allow the I-70 Mainline to pass over Holly Street. Ramp connectivity from Holly Street/Stapleton Drive to the I-70 Mainline shall be provided as eastbound exit, westbound entrance, westbound exit, and eastbound entrance ramps in accordance with the following requirements:
 - A. Diverging from Stapleton Drive North, the Holly Street westbound entrance ramp shall have a two-lane ramp tapering to a single-lane entrance and acceleration lane including a physical barrier (i.e. roadside barrier or median) to prohibit vehicles from local intersecting streets (Glencoe Street) from entering the westbound entrance ramp to I-70. A minimum of 1,350 feet dual ramp meter queuing, as measured from the ramp meter stop bar to the cross street shall be provided;
 - B. The Holly Street eastbound exit ramp shall have a single-lane ramp with single-lane exit and deceleration lane merging with Stapleton Drive South with connection to Holly Street that includes a left/thru, two thru lanes, and a right turn lane;
 - C. The Holly Street westbound exit ramp shall have a single-lane ramp with single-lane exit and deceleration lane merging with Stapleton Drive North with connection to Holly Street that includes a left turn lane, two thru lanes, and a right turn lane; and
 - D. Diverging from Stapleton Drive South, the Holly Street eastbound entrance ramp shall have a two-lane ramp tapering to a single-lane entrance and acceleration lane. A minimum of 935 feet dual ramp meter queuing, as measured from the ramp meter stop bar to the cross street shall be provided.
 - ii. Dedicated right-turn lanes shall be provided from northbound and southbound Holly Street to Stapleton Drive, and from eastbound and westbound Stapleton Drive to Holly Street.
 - iii. Reconstruction of Holly Street at the I-70 Mainline shall include, at a minimum, one thru lane each direction and dual left-turn lanes northbound and southbound to Stapleton Drive, plus one bike lane in each direction. A minimum of 110 feet of left-turn storage shall be provided northbound and southbound approaching Stapleton Drive. Provide a minimum of 250 feet of dual thru-lane capacity for the northbound direction of Holly Street, approaching Stapleton Drive South. The extent of Construction Work on Holly Street shall be as necessary to accommodate the required lane capacity and tapers including the removal of on-street parking per [Section 9.4.14](#). Sidewalks shall be provided on both sides of Holly Street for the length of the new roadway construction.
- e. Quebec Street and Interchange Ramp Reconstruction
 - i. Full reconstruction of the I-70 Mainline shall extend to the existing Sand Creek Bridge. Ramp connectivity from Quebec Street to I-70 shall be provided as westbound entrance, eastbound exit, westbound exit, and eastbound entrance ramps.

- ii. The Developer shall provide new I-70 ramp connections for the westbound entrance and eastbound exit ramps in accordance with the following requirements:
 - A. The Quebec Street westbound entrance ramp shall provide a minimum 724 feet dual ramp meter queuing, as measured from the ramp meter stop bar to the cross street. The two lane ramp shall be combined with an entrance lane to new westbound Stapleton Drive North. The ramp shall include a two-lane ramp entrance and two-lane acceleration to I-70;
 - B. The Quebec Street eastbound exit ramp shall have a two-lane exit with two-lane deceleration and ramp. Merging of the ramp with eastbound Stapleton Drive South shall be provided in advance of a two-lane ramp terminal at Quebec Street that includes a left, a left/thru, a thru, and a right turn lane;
 - C. The Quebec Street westbound exit ramp shall have a two-lane exit with two-lane deceleration. Ramp connection to Quebec Street shall include a left turn lane, left/thru lane, right/thru lane, and right turn lane to Quebec Street;
 - D. The Quebec Street eastbound entrance ramp shall provide a minimum 540 feet dual ramp meter queuing, as measured from the ramp meter stop bar to the cross street. The ramp shall transition, following the ramp meter stop bar, to a single lane entrance and acceleration lane; and
 - E. Ramps shall be constructed to accommodate the ultimate Quebec Street width in accordance with the typical sections provided in Schedule 10B, Contract Drawings. Accommodation includes providing sufficient vertical grade such that ramp grades do not require reconstruction with expansion of Quebec Street to the ultimate width.
- iii. Reconstruction of Quebec Street below the I-70 Mainline shall provide two thru lanes with dual left turn lanes for the full length of the reconstruction between the ramp terminals. The Developer shall include a raised median to separate the southbound and northbound lanes of Quebec Street for the length of the new construction and to accommodate bridge pier placement, if necessary. The I-70 Mainline bridge over Quebec Street shall be constructed to the Ultimate I-70 configuration. The extent of reconstruction work on Quebec Street shall be as necessary to accommodate the required lane capacities, tapers and vertical clearances. Sidewalks shall be provided on both sides of Quebec Street for the length of the new roadway construction. Coordination with CCD for sidewalk termini locations and connections to existing sidewalk facilities is required.
- iv. Free-flow right turn movements shall be provided at the Quebec Street ramp terminal intersections. The ramp terminals on the west side shall be aligned with the ramp terminals on the east side to provide for minimum two-lane through traffic movements across the intersections.
- v. The Developer's design and construction shall not preclude CCD identified future improvements as described in Section 1.17 of Schedule 10, Section 1 General.
- f. I-270 Eastbound Connection to I-70 Mainline Reconstruction
 - i. The existing I-270 eastbound Bridge over I-70 Mainline shall be reconstructed to provide a structure compatible with the I-70 Ultimate configuration horizontal and vertical geometry.
 - ii. The reconstructed I-270 connection shall meet the following requirements:
 - A. Provide an inside shoulder. The Developer shall provide the necessary inside shoulder width to ensure an acceptable horizontal sight distance;

- B. Provide two travel lanes; and
 - iii. Provide an outside shoulder.
 - g. Peoria Street and Interchange Ramp Construction
 - i. Peoria Street shall be reconstructed accommodating new bridge piers for the replacement I-70 Mainline bridge. The Developer shall include a raised median to separate the southbound and northbound lanes of Peoria Street for the length of the new construction and to accommodate bridge pier placement as necessary. The I-70 Mainline bridge and highway approaches over Peoria Street shall be constructed to the Ultimate I-70 configuration. The extent of reconstruction work on Peoria Street shall be as necessary to accommodate the required lane capacities, tapers and vertical clearances. Sidewalk shall be provided on the west side of Peoria Street, and a multi-use path provided on the east side for the length of the new roadway construction.
 - ii. Ramp connectivity from Peoria Street to the I-70 Mainline shall be provided as westbound entrance, eastbound exit, eastbound entrance, and westbound exit ramps in accordance with the following requirements:
 - A. The Peoria Street westbound entrance ramp shall provide a minimum 900 feet dual ramp meter queuing, as measured from the ramp meter stop bar to the cross street. The ramp shall transition, following the ramp meter stop bar, to a single lane entrance and acceleration lane;
 - B. The Peoria Street eastbound exit ramp shall have a two-lane ramp with a two-lane exit connection to the existing Peoria Street eastbound exit ramp;
 - C. The Peoria Street eastbound entrance ramp shall provide a minimum 875 feet dual ramp meter queuing, as measured from the ramp meter stop bar to the cross street. The ramp shall transition, following the ramp meter stop bar, to a single lane entrance and acceleration lane; and
 - D. The Peoria Street westbound exit ramp shall remain in its existing configuration.
 - iii. The Developer's design and construction shall not preclude CCD identified future improvements as described in Section 1.17 of Schedule 10, Section 1 General.
 - h. Eastbound I-70 Mainline Ramp Connection to Southbound I-225 Widening
 - i. The I-70 eastbound ramp connection to I-225 southbound shall have three lanes. One lane shall originate from the eastbound Peoria entrance ramp as described in this Section 9 and continue east to merge with southbound I-225. A second lane shall be developed from the I-70 eastbound outside most lane as an exit only to southbound I-225. The third lane shall be developed as a decision lane from the I-70 eastbound General Purpose Lanes to southbound I-225.
 - ii. The Developer shall widen and provide a ramp connection to southbound I-225 in accordance with the following requirements:
 - A. Provide an inside shoulder;
 - B. Provide three travel lanes; and
 - C. Provide an outside shoulder.
 - iii. The Developer shall provide an appropriate ramp merge with the existing southbound I-225 lanes. The merge shall be completed in advance of the existing westbound to southbound flyover merge.

- i. When islands are required, they shall be sized to efficiently channelize traffic, provide pedestrian ramps and refuge, provide for traffic signal poles, safely cross pedestrians at auto lanes, and allow for urban amenity treatments.
- j. Unless otherwise Approved by the Department, all entrance ramps shall be parallel type ramps as defined in the AASHTO A Policy on Geometric Design on Highways and Streets (PGDH).

9.4.3. I-70 Cross Streets

a. UPRR Crossing

The Developer shall reconstruct the I-70 Mainline to pass beneath new UPRR 36th Yard and Service Road bridges. Trackwork required for the bridge reconstruction will be provided by UPRR Railroad Forces as described in Schedule 10, Section 10 Railroads.

b. Cross Streets at I-70 Mainline: York Street to Monroe Street

The Developer shall provide cross street connections over the I-70 Mainline and/or to 46th Avenue including necessary structures, for the following streets:

i. High Street

North of the I-70 Mainline, High Street shall connect to the new local road adjacent to 46th Avenue North.

ii. Race Street

North of the I-70 Mainline, Race Street shall connect to a new local road adjacent to 46th Avenue North. Construction on Race Street shall include a full width mill and overlay to the limits of the new storm drainage pipe and/or Utilities.

iii. Vine Street

North of the I-70 Mainline, Vine Street shall connect to the new local road adjacent to 46th Avenue North.

iv. Gaylord Street

North of the I-70 Mainline, Gaylord Street shall connect to the new local road to adjacent 46th Avenue North.

v. York Street

A. Reconstruction of the street shall provide one lane northbound and one lane southbound from 47th Avenue to 48th Avenue; two lanes southbound and one lane northbound from 46th Avenue to 47th Avenue; and three southbound thru lanes from 45th Avenue to 46th Avenue. York Street shall be constructed to the Ultimate width and laneage in accordance with the typical sections provided in Schedule 10B, Contract Drawings, which includes: two southbound and one northbound lane between 44th Avenue to 45th Avenue; two southbound and two northbound lanes between 45th Avenue and 46th Avenue South; and compliance with the requirements provided in Sections 9.4.3.b.v.B thru F. South of 45th Avenue, achievement of the Ultimate laneage may be accommodated through striping within the existing width.

B. Construction of a new bridge over the I-70 Mainline shall include provision to accommodate future conversion of York Street to two-way with a minimum section of two thru lanes and one left turn lane in each direction. The striping layout for the Project shall provide for two thru lanes southbound and a left turn lane to 46th Avenue South. Additional bridge and reconstructed roadway width shall be constructed to provide the future two-way section. The additional width shall be delineated for

non-use by physically separating with curbs, the future two-way section from the Project laneage. Sidewalk shall be provided on both sides of York Street for the length of the new construction.

- C. The intersection of York Street and 47th Avenue shall be reconstructed to provide a southbound left turn lane on York Street with a minimum 110 feet of storage north of the UPRR at-grade crossing. Modifications shall also be performed on 47th Avenue to provide a westbound left turn lane with a minimum 180 feet of storage.
 - D. A free right-turn movement shall be provided from eastbound 46th Avenue to southbound York Street.
 - E. The UPRR York Street Crossing shall be reconstructed as required to provide the following:
 - (I) Accommodate the widened roadway section;
 - (II) Provide a 10 foot wide pedestrian crossing along the west side;
 - (III) Provide an 8 foot wide pedestrian crossing along the east side;
 - (IV) Accommodate signalization of the 47th Avenue intersection; and
 - (V) Accommodate track reconstruction, crossing panel replacement and Railroad warning device placement associated with the UPRR trackwork, and in accordance Schedule 10, Section 10 Railroads.
 - F. The Developer's design and construction of York Street shall be developed to not preclude CCD's proposed planned construction of a pedestrian railroad overpass near 47th Avenue and York Street. Information on the future overpass is provided in the Reference Documents.
- vi. Josephine Street
- A. Reconstruction of the street shall provide a new bridge over the Lowered Section accommodating three northbound one-way lanes including one left-turn, one left/thru and one thru/right lane. Sidewalks shall be provided on both sides of Josephine Street for the length of the new roadway construction.
 - B. The Developer's design and construction shall not preclude CCD identified future improvements as described in Section 1.17 of Schedule 10, Section 1 General.
- vii. Columbine Street
- Columbine Street shall be reconstructed to provide a new bridge over the Lowered Section accommodating two-way traffic, one lane in each direction, and parking lanes as described in the I-70 Cover Plans provided in Schedule 10B Contract Drawings. Sidewalks shall be provided on both sides of Columbine Street for the length of the new roadway construction.
- viii. Elizabeth Street
- North of the I-70 Mainline, Elizabeth Street will be vacated and incorporated into the Swansea School redevelopment. South of the I-70 Mainline, Elizabeth Street shall be connected with new 46th Avenue South as a curb cut and driveway. Sidewalk connections from Elizabeth Street to new 46th Avenue shall be provided.

- ix. Thompson Court
 - A. North of the I-70 Mainline, Thompson Court shall connect to the new 46th Avenue North providing westbound right turn and southbound left turn connections as the Cover terminus point of 46th Avenue. An alleyway connection to Thompson Court from the existing Elizabeth-Thompson alley shall be provided. The Elizabeth-Thompson alley shall be resurfaced from 47th Avenue to the new alleyway connection.
 - B. South of the I-70 Mainline, Thompson Court shall be constructed to connect with the new 46th Avenue South. All left and right turns shall be provided to and from 46th Avenue. Sidewalk connections from Thompson Court to new 46th Avenue shall be provided for the length of the new Thompson Court construction.
- x. Clayton Street

Reconstruction of the street shall provide a new bridge over the Lowered Section accommodating two-way traffic, one lane in each direction, plus one bike lane in each direction as described in the I-70 Cover Plans provided in Schedule 10B Contract Drawings. Sidewalks shall be provided on both sides of Clayton Street for the length of the new roadway construction.
- xi. Fillmore Street

Reconstruction of the street shall provide a new bridge over the Lowered Section accommodating two-way traffic, one lane in each direction with right turn pockets to 46th Avenue developed at each end of the bridge. Sidewalks shall be provided on both sides of Fillmore Street for the length of the new roadway construction.
- xii. Milwaukee Street

North of the I-70 Mainline, Milwaukee Street shall connect to new 46th Avenue North, providing a right turn movement to westbound 46th Avenue. South of the I-70 Mainline, Milwaukee Street shall connect to the new 46th Avenue South with left and right turn movements provided to 46th Avenue. Sidewalk connections from Milwaukee Street to new 46th Avenue shall be provided.
- xiii. East 48th Avenue at Vasquez Boulevard

Construction on 48th Avenue, west of Vasquez Boulevard, shall provide an eastbound left turn lane, an eastbound thru lane, and a westbound thru lane, modifying the traffic signal as necessary to accommodate the additional lane. The eastbound left turn lane shall provide a minimum 280 feet of storage. Curb and gutter, and sidewalk shall be provided on both sides for the length of the new roadway construction.
- xiv. E 45th Avenue at Steele Street

Construction at the 45th Avenue and Steele Street intersection shall provide a left turn and a full movement lane eastbound, and a left turn-turn lane and a right/thru lane in the westbound direction on 45th Avenue. Along Steele Street, provide a left turn, two thru-lanes, and a right turn lane in the southbound direction, and a left turn lane, a thru-lane, and thru/right lane in the northbound direction.
- xv. Cook Street

Construction of the street shall provide a new bridge over the Lowered Section accommodating two-way traffic, one lane in each direction. From approximately 45th Avenue, Cook Street shall be extended north to connect with 46th Avenue South, cross over the I-70 Mainline, and connect to 46th Avenue North with an access provided for future land use on the north side. Sidewalks shall be

provided on both sides of Cook Street for the length of the new roadway construction.

xvi. Madison Street

South of the I-70 Mainline, Madison Street shall connect to new 46th Avenue South. Sidewalk connections from Madison Street to new 46th Avenue shall be provided.

xvii. Monroe Street

Reconstruction of the street shall provide a new bridge over the Lowered Section accommodating two-way traffic, one lane in each direction. From approximately 45th Avenue, Monroe Street shall be constructed north to connect with new 46th Avenue South, cross over the I-70 Mainline, connect with new 46th Avenue North, and extend north and east to connect with existing Jackson Street. The new Monroe Street shall function as an extension of Jackson Street and serve as the primary access to those properties south of the I-70 Mainline. Sidewalks shall be provided on both sides of Monroe Street for the length of the new roadway construction.

xviii. East 46th Avenue/Colorado Boulevard Connection to Jackson Street

46th Avenue along the west side of Colorado Boulevard shall be reconstructed as required for the realignment and reconstruction of Colorado Boulevard. The road shall be reconstructed to provide two-way traffic, one lane in each direction with a sidewalk along the west side. The extent of Construction Work on East 46th Avenue shall be as necessary to provide a tie-in on the north end and a connection to Jackson Street from the south end.

c. Cross Streets at I-70 Mainline: Dahlia Street to Peoria Street

The Developer shall provide cross street connections under the I-70 Mainline and/or to Stapleton Drive, including necessary structures, for the following streets:

i. Dahlia Street

Reconstruction of the street shall be sufficient to provide one through lane in each direction with single left-turn lanes to Stapleton Drive under the I-70 Mainline. Bike lanes shall be provided in each direction, and sidewalks provided on both sides of Dahlia Street for the length of the new roadway construction. Shared right/thru lanes shall be provided for right turns at Dahlia Street.

ii. Monaco Street

Reconstruction of the street shall be sufficient to provide one through lane northbound with dual left-turn lanes to Stapleton Drive. Southbound shall provide one left-turn, one left/thru lane, and one thru lane. Sidewalks shall be provided on both sides of the Monaco Street for the length of the new roadway construction. Shared right/thru lanes shall be provided for right turns at Monaco Street.

iii. Forest Street

North of the I-70 Mainline, Forest Street shall connect to new Stapleton Drive North. Right-in and right-out turn movements shall be provided. South of I-70, Forest Street shall connect to new Stapleton Drive South. Right-in and right-out turn movements shall be provided.

iv. Glencoe Street

North of the I-70 Mainline, Glencoe Street shall connect to new Stapleton Drive North. Right-in and right-out turn movements shall be provided. South of the I-70 Mainline, Glencoe Street shall connect to new Stapleton Drive South. Right-in and right-out turn movements shall be provided.

- v. Grape Street
North of the I-70 Mainline, Grape Street shall connect to new Stapleton Drive North. Right-in and right-out turn movements shall be provided. South of the I-70 Mainline, Grape Street shall connect to new Stapleton Drive South. Right-in and right-out turn movements shall be provided.
- vi. Ivy Street
North of the I-70 Mainline, Ivy Street shall connect to new Stapleton Drive North. Right-in and right-out turn movements shall be provided.
- vii. Kearney Street
South of the I-70 Mainline, Kearney Street shall connect to new Stapleton Drive South. Right-in and right-out turn movements shall be provided.
- viii. Leyden Street
North of the I-70 Mainline, Leyden Street shall connect to new Stapleton Drive North. Right-in and right-out turn movements shall be provided.
- ix. Oneida Street
South of the I-70 Mainline, Oneida Street shall connect to new Stapleton Drive South. Right-in and right-out turn movements shall be provided.
- x. Airlawn Road
South of the I-70 Mainline, Airlawn Road shall connect to new Stapleton Drive South.
- xi. At each intersection, curb returns shall be constructed to meet the design vehicle requirements listed in Appendix A Roadway Design Criteria to this Section 9. The Developer shall provide sidewalk connections from new construction to all existing adjacent cross street sidewalks.
- xii. Extents of Construction Work on all cross streets and connection streets shall be as necessary to accommodate the required lane capacity, tapers and tie-ins.

9.4.4. 46th Avenue and Stapleton Drive

- a. 46th Avenue North and 46th Avenue South: Brighton Boulevard to Colorado Boulevard
 - i. 46th Avenue shall be reconstructed as a collector street to provide east-west connectivity from Brighton Boulevard to York Street and from Steele Street/Vasquez Boulevard to Colorado Boulevard. Local access to adjacent neighborhoods shall be provided between York Street to Steele/Vasquez Boulevard.
 - ii. The Developer shall construct 46th Avenue in accordance with the following street network connectivity requirements:
 - A. Brighton Boulevard to York Street
 - (I) Provide two lane one-way operations westbound from York Street. 46th Avenue merges and is combined with the westbound exit ramp to Brighton Boulevard. Provide a continuous sidewalk along the outside of 46th Avenue North from York Street to Brighton Boulevard including a minimum 10 foot wide sidewalk under the UPRR bridge. Sidewalk width applications described in this Section 9 shall apply for all sidewalk outside of the UPRR bridge. Westbound sidewalk under the UPRR bridge shall be separated vertically, from 46th

Avenue, by a minimum of 34 inches. Provide all necessary pedestrian handrail protection.

- (II) Provide two lane one-way operations eastbound for 46th Avenue South from the divergence point with the eastbound Brighton Boulevard entrance ramp to York Street. The eastbound approach to York Street, for the Ultimate configuration, shall include one left/thru lane, one thru lane and one right-turn lane. The eastbound approach to York Street, for the Project, shall include one thru lane and one right/thru lane. Provide a continuous minimum 10 foot wide sidewalk on the outside of 46th Avenue. Eastbound sidewalk under the UPRR bridge shall be separated vertically, from 46th Avenue, by a minimum of 34 inches. Provide all necessary pedestrian handrail protection.

B. York Street to Columbine Street

- (I) Along the north side, 46th Avenue North shall be two lanes one-way westbound from York Street to Josephine Street. Between Josephine Street and Columbine Street, 46th Avenue shall be one lane each direction (two-way operations). A raised refuge area shall be provided between the edge of lane and barrier as depicted in the Roadway Typical Sections.
- (II) Along the south side, 46th Avenue South shall be two lanes one-way eastbound from York Street to Josephine Street. Between Josephine Street and Columbine Street, 46th Avenue shall be one lane each direction (two-way operations), with a left turn lane from 46th Avenue eastbound to Columbine Street northbound. A raised refuge area shall be provided between the edge of lane and barrier as depicted in the Roadway Typical Sections. The Developer shall provide a continuous sidewalk on the north side of 46th Avenue North and south side of 46th Avenue South for the length of the new roadway construction.

C. Columbine Street to Clayton Street

- (I) Along the north side, 46th Avenue shall be discontinuous between Columbine Street and Thompson Court. A two-lane, two-way connection with attached sidewalk shall be provided between Thompson Court and Clayton Street as described in the I-70 Cover Plans provided in Schedule 10B Contract Drawings. An alleyway connection shall be provided from Thompson Court to the existing Elizabeth-Thompson alley including reconstruction of the alley from 46th Avenue North to 47th Avenue.
- (II) On the south side, 46th Avenue shall include one lane each direction (two-way operations) with a left turn lane pockets for Columbine and Elizabeth Street access from westbound 46th Avenue. The Developer shall integrate 46th Avenue South with the design of the Cover as necessary to work within ROW constraints and meet the requirements of the I-70 Cover Plans as provided in Schedule 10B Contract Drawings. This includes aesthetics, parking lanes, sidewalks, landscaping and other considerations as required.

- D. Clayton Street to Milwaukee Street
 - (I) Provide one lane each direction (two-way operations) on 46th Avenue North with a left turn lane to Fillmore Street from westbound and eastbound 46th Avenue. A raised refuge area shall be provided as depicted in the Roadway Typical Sections.
 - (II) On 46th Avenue South, provide one lane each direction (two-way operations) with a left turn lane to Fillmore Street from eastbound and westbound 46th Avenue. A raised refuge area between the edge of pavement and barrier shall be provided as depicted in the Roadway Typical Sections. The Developer shall provide a continuous sidewalk on the south side 46th Avenue South and north side of 46th Avenue North for the length of the new roadway construction.
- E. Milwaukee Street to Steele Street/Vasquez Boulevard

The Developer shall provide one lane one-way connections westbound on 46th Avenue North and eastbound on 46th Avenue South to and from merge points with the Steele/Vasquez ramps. A raised refuge area shall be provided as depicted in the Roadway Typical Sections. Sidewalks shall be provided on the south side 46th Avenue South and north side of 46th Avenue North to connect with the sidewalks along Steele Street/Vasquez Boulevard.
- F. Steele Street/Vasquez Boulevard to Colorado Boulevard

In this segment, 46th Avenue North and South are incorporated as split diamond interchange connecting roadways designed as collector-distributor roadways. On 46th Avenue North, provide two westbound lanes with a minimum four foot shoulder to the barrier. On 46th Avenue South, provide two eastbound lanes with a minimum four foot shoulder to the barrier. The Developer shall provide a continuous sidewalk on the south side 46th Avenue South and north side of 46th Avenue North for the length of the new roadway construction.
- iii. Alleyway connections shall be provided at all existing alleys that currently intersect 46th Avenue.
- b. Stapleton Drive North and Stapleton Drive South: Colorado Boulevard to Quebec Street
 - i. Stapleton Drive North and South shall be reconstructed as one-way collector street to provide east-west connectivity from Colorado Boulevard to Quebec Street, and local access to adjacent neighborhoods and commercial districts.
 - ii. The Developer shall design and construct Stapleton Drive in accordance with the following street network connectivity requirements:
 - A. Colorado Boulevard to Dahlia Street

Provide two lanes eastbound on Stapleton Drive South diverging from the Colorado Boulevard entrance ramp and extending east to Dahlia Street. Provide two lanes westbound on Stapleton Drive North from Dahlia Street, tapering to a single lane to merge with the Colorado Boulevard exit ramp and intersecting with Colorado Boulevard. The Developer shall also provide a one-lane westbound local access road from Dahlia Street to connect to the existing East 46th Avenue near the Colorado Boulevard interchange.

B. Dahlia Street to Monaco Street

Provide two lanes eastbound on Stapleton Drive South from Dahlia Street to the merge with the Holly Street exit ramp. Provide four lanes connecting to Holly Street, and three lanes extending east from Holly Street. Provide a minimum one lane eastbound from the Holly Street entrance ramp divergence point with a transition to a two-lane approach and connection to Monaco Street. On Stapleton Drive North, provide two lanes westbound from Monaco Street to the merge point with the Holly Street exit ramp. Provide a four lanes to intersect with Holly Street, and two lanes westbound to the divergence point with the Holly Street entrance ramp. Provide a minimum one lane from the divergence point west, with a transition to a two-lane approach and connection to Dahlia Street.

C. Monaco Street to Quebec Street

Provide two lanes minimum eastbound on Stapleton Drive South from Monaco Street to the divergence point for the Quebec Street eastbound exit ramp connection. Provide a minimum one lane eastbound to the merge point with the Quebec Street eastbound exit ramp and a minimum one lane eastbound to Oneida Street. Provide one lane each direction (two-way operations) on Stapleton Drive South between Oneida Street and Airlawn Road. On Stapleton Drive North, provide a minimum one lane westbound from the divergence point with the Quebec Street westbound entrance ramp to the first commercial property driveway. From the first commercial driveway, provide two lanes westbound to the intersection with Monaco Street.

9.4.5. Sidewalk Width Applications

- a. Unless otherwise directed in this Section 9, sidewalks along all CDOT Roadways and Local Agency Roadways shall be provided by the Developer in accordance with Local Agency standards. Within constrained areas the Developer shall obtain CCD approval of sidewalk and streetscape designs, applied in the following preferred order of precedence:
 - i. Eight foot detached sidewalk with 12 foot detachment width; or
 - ii. Five foot detached sidewalk with eight-foot detachment width; or
 - iii. Five foot detached sidewalk with a detachment width not less than four feet; or
 - iv. Eight foot attached sidewalk; or
 - v. Five foot to eight foot minimum sidewalk.
- b. Available area for sidewalk and detachment areas shall be measured from back of curb to six inches inside the roadway ROW.
- c. Sidewalks, in widths of not less than five feet, shall be provided along reconstructed cross street tie-ins to match existing widths and detachment areas to match existing. Cross streets without existing sidewalk shall have sidewalk provided for the length of the reconstructed area in accordance with the standards described above.

9.4.6. Coordination with Recent I-70 Reconstruction Projects

- a. I-70 over Havana Street Design-Build Project (2015):
 - i. The Havana Street Design-Build Project, I-70 over Havana Street, is under construction. The construction work under the Havana Street Design-Build Project includes a new bridge over Havana Street, a new I-70 bridge over the future relocated UPRR spur track, earthwork, guardrail and pavement approaches to the bridges at each end. All Elements of the Havana Street

Design-Build Project will be constructed independently of the Project. The bridges constructed under the Havana Street Design-Build Project will be compatible with the Ultimate configuration. It is acceptable to maintain the Havana Street Design-Build Project centerline alignment for the Project;

- ii. The Developer shall make any required modifications to these completed improvements to accommodate the integration and completion of the Construction Work. This will likely include striping, signing, barrier/guardrail transitions, embankment transitions, walls, and any other incidental/miscellaneous work required;
 - iii. The Havana Street westbound entrance ramp shall provide a minimum 865 feet dual ramp meter queuing, as measured from the ramp meter stop bar to the cross street. The ramp shall transition, following the ramp meter stop bar, to a single lane entrance and acceleration lane to I-70; and
 - iv. See the Reference Documents for the Havana Street Design-Build Project plans.
- b. I-70 over Sand Creek Bridge Replacement (2011):
- i. The Department replaced the I-70 structure over Sand Creek in 2011. While significant alterations are expected necessary for the Ultimate configuration, minor or no alterations are expected to the bridge as part of the Project; and
 - ii. See the Reference Documents for Sand Creek Bridge As-Built plan information.

9.4.7. Local Agency Roadway Infrastructure

The Construction Work includes the design and construction, reconstruction and closure of Local Agency Roadways. The intended configuration of these arterial, collector, and local roadways is depicted as a guide in the Reference Design drawings, conveying the general intent of the Construction Work. Local Agency Roadway improvements are defined as follows:

- a. Local Agency Roadway Limits
The limits of Local Agency Roadway improvements shown in the Reference Design drawings are approximate only and shall be extended as necessary for completion of the Construction Work, including but not limited for the need to provide smooth horizontal/vertical transitions, meet ADA requirements, and other miscellaneous improvements.
- b. Geometric Roadway Alignments
The horizontal and vertical alignments for the Local Agency Roadways may be changed unless otherwise prohibited by the Project Agreement. However, implementation of any proposed change must be achievable within the ROW.
- c. Number of Lanes
The minimum number of lanes shall be the number depicted in the Roadway Typical Sections as shown in Schedule 10B Contract Drawings.
- d. Intersections
The intersection configurations for the Local Agency Roadways depicted in the Reference Design drawings may be changed unless otherwise prohibited by the Project Agreement. The Developer may propose and submit modifications, with updated traffic modeling for the proposed modifications, to the number of turn lanes and lane storage lengths during design development for approval by the Local Agency. The proposed modifications shall comply with the Project's traffic operational performance requirements that include reasonable expectations for travel times, safety, mobility, and User satisfaction. Any paving Construction Work extending into an intersection shall require a mill and overlay of the existing pavement extending to each curb return within the intersection.

e. Intersection Turning Movement Design

Curb returns shall be constructed to meet the design vehicle requirements listed in Appendix A Roadway Design Criteria to this Section 9. The Developer shall analyze the likely paths and encroachments that may result when a turn is made by the design vehicle. The Developer shall optimize these designs and coordinate with CCD for all curb return designs. Turning movement and curb return designs shall account for:

- i. Where constraints require, the design vehicle turning movements may utilize adjacent source or receiving lanes;
- ii. Where double left turns are implemented, simultaneous turning movements of the design vehicle are not required; and
- iii. Consideration of curb ramp locations and best practices for pedestrian/bike/handicap designs shall be implemented.

f. 46th Avenue/Stapleton Drive and I-70 Ramps Merge/Weave Design

The Developer's design shall optimize the design of the merge/weave section between of 46th Avenue/Stapleton Drive and the I-70 ramps. Strategies to implement shall include the following:

- i. Providing the maximum weave length between the merge point of 46th Avenue/Stapleton Drive and the I-70 ramp to the adjacent intersecting cross-street;
- ii. Additional (above minimum MUTCD requirements) advance directional signing and striping strategies;
- iii. Turning movement restrictions where warranted for safety and as approved by the CCD; and
- iv. Coordinate with CCD to optimize these designs.

g. Pedestrian Movement Design

The Developer shall be responsible for the design of pedestrian movements, including crossing locations, ramps and signals along all relevant portions of the Project (including Local Agency Roadways). It is the goal of the Project to apply context sensitive pedestrian design in order to optimize pedestrian crossing movements at intersections while not significantly degrading vehicle operations. Pedestrian movements design shall consider locations of curb ramps to provide optimal sight distance and shortest route as well as requirements for all crossings at signalized intersections to be protected wherever possible. It is the desire of the Local Agency to avoid the use of directional islands and free right turn vehicle movements where possible to achieve an acceptable intersection level of service. The Developer shall avoid the use of free right turn vehicle movements, unless otherwise required in this Section 9.

h. Bus Stop Locations

- i. Bus stops to be located along 46th Avenue and other Local Agency Roadways shall be at the direction of and in coordination with the Regional Transportation District (RTD) and CCD. The Developer shall work with RTD and CCD to provide bus stops as directed. RTD's design standards shall be used for the design of all bus stops that will be part of the Construction Work. RTD will provide materials, including benches, signage and shelters to the Developer for all bus stops within the Site at no cost to the Project.
- ii. The Developer shall deliver any existing RTD bus stop amenities (benches, shelters, etc.) removed during the course of the Construction Work to RTD as directed by RTD. If agreed with RTD, the Developer may reuse existing

amenities at new locations in the Work or dispose of the existing bus stop amenities.

- i. Local Agency Roadways shall meet minimum flowline to flowline roadway widths, as specified in CCD Rules & Regulations for Standard Right-of-Way Cross Sections and Utility Locations.
- j. Section 12 (other than Sections 12.2.a and b) of the Project Agreement shall apply to the Denver Planned Projects listed in Appendix B Denver Planned Projects to this Section 9.

9.4.8. Americans with Disabilities Act

Without prejudice to any additional Local Agency standards with which the Developer is obliged to comply, the Developer shall produce ADA compliant design for Acceptance by the Department as part of the design plans. The Developer shall include a letter with each Release for Construction submittal demonstrating that the Project complies with all applicable ADA requirements.

- a. Where curb ramps are to be removed and reconstructed, the Developer shall provide and maintain an alternate ADA-compliant pedestrian access route at all times.
- b. Additional ADA requirements are as follows:
 - i. Within the limits of the Construction Work, the Developer shall reconstruct all pedestrian facilities including curb ramps, sidewalks, and driveways to meet ADA requirements; and
 - ii. Any Construction Work that disturbs any portion of an intersection shall require the entire intersection be reconstructed as necessary to meet ADA requirements, regardless if this involves work outside of the Site. In locations outside of the Site only, the Developer may evaluate existing conditions and provide documentation for Acceptance that the existing infrastructure is ADA compliant.

9.4.9. Cross Slope and Superelevation

- a. Normal Cross Slope
 - i. All new and reconstructed pavement sections shall have a minimum normal cross slope of two percent across the inside shoulder and travel lanes, with a minimum cross slope of two percent across the outside shoulder;
 - ii. For pavement widening sections, the widened travel lanes shall have a minimum normal cross slope of two percent. Outside shoulders located within the pavement widening sections shall meet AASHTO PGDH criteria; and
 - iii. For overlay sections where the existing cross slope is equal or greater than two percent, the Developer shall maintain the existing pavement cross slope. For overlay sections where the existing cross slope is less than two percent, the cross slope shall be built up through the use of a variable thickness overlay to a minimum of two percent.
- b. Superelevation Rates

Superelevation runout and runoff lengths for I-70, I-270, and interchange ramps shall be designed to comply with the design criteria and methodology of the AASHTO PGDH and as described in Appendix A Roadway Design Criteria to this Section 9. Adjustments to superelevation transition rates and locations necessary to ensure adequate surface drainage will require Acceptance by the Department as part of the plan submittals in accordance with Schedule 9 Submittals.

9.4.10. Stopping Sight Distance

Stopping sight distances and decision sight distances shall meet the minimum requirements of Appendix A Roadway Design Criteria to this Section 9. Stopping sight distances shall be determined in accordance with AASHTO PGDH.

9.4.11. Fill and Cut Slopes and Clear Zones

(Note: All slopes stated herein are in terms of horizontal:vertical)

- a. The Developer shall design cut and fill slopes to obtain roadside clear zones in accordance with the AASHTO Roadside Design Guide, and avoid the need for guardrail wherever possible. Where clear zones cannot be obtained within the ROW, guardrail shall be required.
- b. The Developer shall provide a maximum 3:1 traversable surface for slope maintenance and vehicle access on all vegetated slopes where flatter slopes are not achievable. The minimum slope on fill and cut slopes shall be 6:1.
- c. Roadside slopes shall be designed and constructed to meet the following requirements as defined in Appendix A Roadway Design Criteria to this Section 9.
- d. Roadside Slopes Adjacent to Pavement
 - i. The Point of Slope Selection (POSS) is defined as the location at which the roadside slope adjacent to the pavement, known as the Z-slope ends, and the cut, or fill slope begins. Width and slope of the area between the edge of pavement (or sidewalk) and the POSS shall be as follows:
 - A. I-70: 18 feet minimum at a 6:1 slope; and
 - B. Ramps: 12 feet at a 6:1 slope.
- e. Fill Slopes
 - i. Fill slopes beyond the POSS shall be designed and constructed in accordance with the following priority:
 - A. Use 6:1 slopes where fill heights are less than four feet and can match to existing surface conditions within the ROW;
 - B. Use 4:1 slopes where fill heights are greater than four feet but less than 15 feet and can match to existing surface conditions within the ROW;
 - C. Use 3:1 slopes where fill heights are less than 15 feet, but slopes steeper than 4:1 are required to match existing surface conditions within the ROW;
 - D. Use 3:1 slopes where fill heights exceed 15 feet, clear zone Z-slope can be obtained, and slopes can match to existing surface conditions within the ROW;
 - E. Where the above requirements in this subsection cannot be met, the Developer may use any of the following design approaches:
 - (I) Use 3:1 to 2.5:1 slopes with guardrail protection. Slopes steeper than 3:1 shall be limited to areas where slopes are transitioning to match slope paving at bridge abutments, or where transitioning to match existing slopes steeper than 3:1. Slopes of 2.5:1 to 3:1 shall comply with the slope stabilization requirements of Schedule 10, Section 7 Earthwork; or

- (II) Use retaining walls as necessary, with guardrail protection where required.
 - ii. Fill slope areas shall be designed with ditches and storm sewer as necessary to prevent untreated roadside and slope drainage from flowing off the ROW to adjacent properties; and
 - iii. All fill slopes shall be rounded at the toes or ties to existing ground.
- f. Cut Slopes
 - i. Cut slopes beyond the POSS shall be designed and constructed in accordance with the following priorities:
 - A. Cut slopes shall be transitioned at the POSS in such a manner to comply with the recommendations of the AASHTO Roadside Design Guide;
 - B. Use 4:1 or flatter slopes for cut slopes where the slope can match with existing surface conditions within the ROW;
 - C. Use 3:1 slopes for cut slopes where slopes steeper than 4:1 are necessary to obtain the match to existing surface conditions within the ROW;
 - D. Where the above conditions cannot be obtained, the Developer may use any of the following design approaches:
 - (I) If a full clear zone Z-slope cannot be provided, use 3:1 if the POSS is at least 10 feet from the edge of pavement; or
 - (II) If a full clear zone Z-slope cannot be provided within the ROW, use 3:1 to 2.5:1 slopes with guardrail protection if the POSS is at less than 10 feet from the edge of pavement. Slopes steeper than 3:1 shall be limited to areas where slopes are transitioning to match slope paving at bridge abutments or where transitioning to match existing slopes steeper than 3:1.
 - (III) Use retaining walls as necessary, with guardrail protection to match existing conditions.
 - ii. Cut slopes and associated ditches shall be designed as necessary to prevent untreated roadside and slope drainage from flowing off ROW to adjacent properties.
 - iii. All cut slopes shall be rounded at their matches to existing ground.

9.4.12. Barrier and Guardrail

- a. Barrier or guardrail shall be required wherever clear zone requirements cannot be achieved.
- b. Median barrier is required along the entire length of the I-70 Mainline reconstruction and widening areas. Median barrier shall be Type 7 concrete barrier with a concrete glare screen in accordance with CDOT Standard M-606-13.
- c. Existing concrete median barrier to be replaced shall include, but may not be limited to, the following locations:
 - i. From the western limit of I-70 Mainline reconstruction at Brighton Boulevard to the Washington Street bridge. The new barrier shall be designed and built to accommodate the existing drainage inlets;

- ii. From the eastern construction limit of I-70 Mainline widening at I-225 to approximately 2,800 feet east; and
- iii. The Developer shall replace existing median barriers within ETC and ITS infrastructure locations outside I-70 Mainline reconstruction and locations provided in accordance with Sections 9.4.12.c.i and 9.4.12.c.ii.
- d. Guardrail along the outside shoulders of the I-70 Mainline shall be concrete barrier where inlets are required for pavement drainage. Type 3 guardrail with asphalt curb will not be permitted for drainage accommodation.
- e. All concrete barrier shall be cast-in-place. Precast barrier will not be accepted for permanent installations.
- f. Provide crash attenuators and rail end treatments at all required locations where barrier/guardrail begins or ends in accordance with the CDOT Safety Guide, Standards M-606-1 and M-606-13 and Chapter 8 of the AASHTO Roadside Design Guide.
- g. Concrete barrier with 36 inch splashguard fence, in accordance with the Aesthetic Standards in Schedule 10B Contract Drawings, shall be provided between 46th Avenue and the Lowered Section where noise walls or the Cover are not provided. At locations of proposed noise walls incorporate barrier requirements as part of the wall design.
- h. Concrete barrier with 36 inch splashguard fence, in accordance with the Aesthetic Standards in Schedule 10B Contract Drawings, shall be provided between Stapleton Drive and I-70, between Colorado Boulevard and Sand Creek Bridge.
- i. Fencing (including splashguard fence shall be constructed at specified locations conforming to Schedule 10, Section 14 Landscaping and Aesthetics.
- j. All new Type 7 concrete barrier shall include a concrete glare screen. Concrete glare screen shall be poured monolithically with the construction of new concrete barrier.

9.4.13. Driveways and Access Design

- a. All private property parcels require access to public ROW. The Developer shall construct connecting roads, driveways and curb cuts to provide access to private property, or connect streets with alleyways where existing access is disturbed or reconfigured and requires relocation. Access design and location shall conform to the following requirements, in the order of precedence listed:
 - i. CDOT Roadways
 - A. CDOT access control lines (or A-Line) restrictions; and
 - B. State of Colorado, State Highway Access Code.
 - ii. Local Agency Roadways
 - A. CDOT access control lines (or A-Line) restrictions; and
 - B. CCD Permit Requirements and Municipal Codes.
- b. Private property accesses from roadway ROW shall be designed and constructed using curb cuts. All public roadway connections shall be designed and constructed using curb returns.
- c. Connecting roads and driveways shall be paved to the ROW limits in accordance with pavement requirements defined by the Local Agency. Connecting roads and driveways shall be replaced in kind as required beyond the ROW line to the limits necessary to match existing grade. Curb return openings that are provided for future connections shall be paved through the curb returns.
- d. Alley cuts shall accommodate trash truck turning movements.

9.4.14. On-Street Parking Removal

There are locations that require the removal of existing on-street parking in order to comply with the requirements under the Project Agreement. The Developer shall coordinate with the City of Denver and obtain approvals meeting the Local Agency requirements and municipal codes in relation to such removal. The Developer shall coordinate with property owners where on-street parking is removed and shall complete the necessary public information process as part of the Construction Work with assistance from the City of Denver.

9.4.15. Design Exceptions

a. Identified Design Exceptions

The Department has obtained approval from FHWA for the design exceptions shown in Table 9-1. The Developer may use the design exceptions to optimize designs to reduce the impacts to adjacent neighborhoods and businesses. Design exceptions 2 and 3 in Table 9-1 are additionally subject to Schedule 18 Section 1.3.2.d Special Provisions for ROW Parcel RW-103 to provide maximum additional buffer space between the highway and residential properties north of I-70 between Brighton Boulevard and Steele Street/Vasquez Boulevard and to Safeway Historic District south of I-70 between Colorado Boulevard and Dahlia Street. Approval of additional or revised design exceptions required for the Developer's design are the responsibility of the Developer to obtain in accordance with the requirements below.

b. Design Exception Process (for additional or revised design exceptions from FHWA)

The Developer shall comply with the following requirements when requesting a design exception:

- i. The Developer shall submit to the Department for Approval five copies of design exception requests in letter form; and
- ii. The design exception request submittals shall consist of the following items:
 - A. A letter identifying the exception(s) by number, Project number, location, and status (new submittal, resubmittal, etc.);
 - B. A completed CDOT Form 464a;
 - C. Supporting documentation indicating the justification for the exception. Justification shall address the following items:
 - (I) Site conditions of the exception;
 - (II) Compelling reason for the exception, including which standard is not being met, if the exception affects any other standards, and what will be done to mitigate the effects of the exception;
 - (III) Effects of the exception on safety and operation of the facility;
 - (IV) Previous crash history near the location of the exception;
 - (V) Calculations estimating the cost of attaining the design standard and costs of exception as proposed;
 - (VI) Effect on scenic, historical, or other environmental features; and
 - (VII) Effect of operations and safety to the facility;
 - D. Plan and profile drawings depicting the exception;
 - E. Modification to submittals to address comments and additional information as requested by the Department or FHWA.

Approval of any request from the Developer to the Department to submit a request to FHWA, and any request submitted to FHWA, in either case, for approval of a design exception shall be at the discretion of the Department or FHWA.

c. Possible Additional Design Exceptions

i. The Reference Design acknowledges certain conflicts that exist within the design as shown (as specified in Section 9.4.15.c.ii) that, without alterations, require additional design exceptions be requested by the Developer from FHWA. It shall be the Developer's responsibility to evaluate the Reference Design as shown, identify design conflicts, and make appropriate alterations to the design, or request design exceptions in accordance with the procedures listed above. The Developer shall make all efforts in its design to eliminate the need for design exceptions, wherever possible. The FHWA may request modifications to the design to improve the design exception and the Developer shall work with FHWA to accommodate requested design modifications.

ii. The following design conflicts are acknowledged within the Reference Design:
 Outside shoulder width on the eastbound I-70 on the Sand Creek bridge
 Available width for outside shoulder does not meet minimum shoulder width requirements.

d. Local Agency Design Variances

Approval of design variances required for the Developer's design, in respect to Local Agency Roadways, shall be obtained by the Developer in accordance with the relevant Local Agency's standard procedures.

Table 9-1 Identified Design Exceptions

No.	Item	Design Criteria	Design Exception	Comments
DE-1	A reduced inside shoulder width on I-70 between I-25 and Brighton Boulevard	12 feet	4 feet (2 feet at lighting and sign structures)	Exception required to stripe Tolled Express Lane within existing wide shoulder.
DE-2	A reduced inside shoulder width on I-70 between Brighton Boulevard and Steele Street/Vasquez Boulevard	12 feet	10 feet (8 feet at bridge piers, lighting and sign structures)	Exception for reduced I-70 footprint.
DE-3	A reduced inside shoulder width on I-70 between Steele Street/Vasquez Boulevard and Dahlia Street	12 feet	10 feet (8 feet at bridge piers, lighting and sign structures)	Exception for reduced I-70 footprint.
DE-4	A reduced inside shoulder width on I-70 between east of the I-70 bridge over Sand Creek to I-225	12 feet	8 feet (6 feet at bridge piers, lighting and sign structures)	Exception to add a Tolled Express Lane on the inside of an existing highway section with minimal widening.
DE-5	A reduced inside shoulder width on the I-70 bridge over Sand Creek and on I-70 from I-225 to Chambers Road	12 feet	4 feet (2 feet at lighting and sign structures)	Exception to add a Tolled Express Lane on the inside of the existing highway section with minimal widening.
DE-6	A reduced outside shoulder width on I-70 with a capped hard surface	12 feet	8 feet outside shoulder width with 4 feet capped hard surface	Exception to add a Tolled Express Lane on the inside of the existing highway section with minimal widening.

9.5. Construction Requirements

9.5.1. Removals

The Developer shall be responsible for the removal of all items within the Site not incorporated into the Construction Work. Removal items shall become the property of the Developer unless identified during the design review to remain property of the Department, CCD, or other agency. Removal items shall include, but not be limited to structures/portions of structures and obstructions, retaining walls, signs designated for removal, pavements, curbs, excavation, guardrail, fencing, landscaping, and pavement markings.

a. Roadways

The Developer shall remove abandoned portions of roadways and roadway fills reconstructed as a part of the Construction Work. The Developer shall smooth the area to blend into adjacent terrain, and topsoil and seed.

b. Buried Foundations

Buried foundations from abandoned structures are believed to exist within the Project Site. Specifically, the buried foundations from the original Swansea Elementary School and pedestrian underpass located near 46th Avenue and Columbine Street. The Developer shall remove and backfill as necessary all buried foundations found to be in conflict with the Construction Work.

9.5.2. Guardrail

The Developer shall use galvanized guardrail (CDOT Standard Plan No. M606-1) with steel posts and composite block for guardrail installations which are not required to be concrete, unless otherwise Approved by the Department. The Developer shall pave asphalt a minimum of one foot behind the new guardrail in accordance with the CDOT *M & S Standard Plans*.

9.5.3. Fencing

a. Temporary Fencing

The Developer shall provide temporary fencing as required by property acquisition agreements to protect adjacent private property. In remaining areas, temporary fencing should be considered to control construction operations beyond ROW and construction limits. Temporary fence shall also be placed to protect sensitive environmental resources, as required by Schedule 17 Environmental Requirements.

b. Permanent Fencing

The Developer shall provide permanent fencing of types at the following locations. Permanent fencing shall be compatible with Schedule 10, Section 14 Landscaping and Aesthetics.

- i. South side ROW line from Brighton Boulevard to York Street (along Purina property);
- ii. North side ROW line along new CDOT/DRIR ROW line; and
- iii. Water quality/detention ponds (where required).

c. Privacy Fencing

The Developer shall provide wood privacy fencing along the new 46th Avenue ROW line at all residential properties.

- i. The Developer shall coordinate with property owners and obtain any agreements or permits required for the Construction Work;

- ii. The fence shall be located on private property wherever possible and the Developer is required to identify the Person that is responsible for maintenance (e.g. the relevant residential property owner);
 - iii. If the fence is located within CCD ROW, then the Developer is required to obtain an Encumbrance Permit from CCD; and
 - iv. The Developer shall comply with CCD municipal Zoning Code requirements.
- d. Gates
- The Developer shall provide gates in fences at locations and of width and type as specified by the Department or maintaining entities for maintenance access. Meet Local Agency standards for location from the ROW and/or back of sidewalk.
- e. Railroad Fencing
- The Developer shall comply with the requirements set out in Section 10.4.17 of this Schedule 10 in relation to fencing in respect of Railroad work.

9.6. Deliverables

At a minimum, the Developer shall submit the following to the Department for Information, Acceptance, or Approval in accordance with the specified timeframes:

Table 9-2 Deliverables

Deliverable	Information, Acceptance, or Approval	Schedule
Design exceptions	Approval	Prior to RFC Documents

9.7. Appendices

- Appendix A Roadway Design Criteria
- Appendix B Denver Planned Projects

**Appendix A
 Roadway Design Criteria**

I-70 Mainline				
Design Element	I-25 to Sand Creek (Project and Ultimate)	Sand Creek to Chambers Road (Project)	Sand Creek to Tower Road (Ultimate)	Remarks
Standards Applied		CDOT/FHWA		
General				
Roadway Classification	Interstate	Interstate	Interstate	
Posted Speed (MPH)	55	55	-	
Design Speed (MPH)	60	65	70	
Design Vehicle	WB-67	WB-67	WB-67	
Horizontal Alignment Criteria				
Curve Radius (Feet) - Minimum	1,330	1,660	2,040	
Stopping Sight Distance (Feet) - At level grade	570	645	730	
Cross Slope	2%	2%	2%	
Superelevation (e _{max})	6%	6%	6%	
Clear Zone on Tangent (Feet)				
Minimum	30	30	30	Apply curve factors, as required, Per RDG
Desirable	34	34	34	
Lane Widths (Feet)	12	12	12	
Shoulder Widths (Feet) ⁷				
Inside	12	12	12	
Outside	12	12	12	
Auxiliary Lanes	6	8 + 4 ⁶	12

- 1 - Steel superstructure with 5 or more beams or 4 or more deck plate girders per track
- 2 - Concrete superstructure or steel through plate girder with bolted bottom flanges
- 3 - Steel through plate girders without bolted bottom flanges
- 4 - Lane widths on bridge structures shall be in accordance with the Structure Typical Sections provided in Schedule 10B Contract Drawings
- 5 - Provide for on-street parking per CCD Standard 5.1
- 6 - Provide minimum street width and lane widths in accordance with the Roadway Typical Sections provided in Schedule 10B Contract Drawings. Striping plans shall be approved by the CCD.
- 7 - Local Agency Roadways shall provide a minimum grade of 0.7%, though flatter grades of no less than 0.5% may be approved at the discretion of the Public Works Engineering, Regulatory & Analytics Office within CCD
- 8 - Cross streets control turning movements at intersection with 46th Avenue and Stapleton Drive, use 46th Avenue and Stapleton Drive design vehicle for thru traffic
- 9 - Lane widths on Stapleton Drive South, between Colorado Boulevard and Dahlia Street, shall be in accordance with the Roadway Typical Sections provided in Schedule 10B Contract Drawings. Striping plans shall be approved by the CCD.
- 10 - 10' lane width for the Local Road north of 46th Avenue North, between Brighton Boulevard and York Street and an 18' lane width on the Local Road north of Stapleton Drive North, between Colorado Boulevard and Dahlia Street. All other Local Roads shall meet Local Agency standards
- 11 - Maximum profile grades of 6% will be permitted for 46th Avenue and Stapleton Drive in order to tie into ramps only

Appendix B Denver Planned Projects

Funded

Martin Luther King Roadway (Havana to Peoria)
Central Park Boulevard (40th Avenue to 56th Avenue)
Brighton Blvd. 29th to 44th
UPRR Yard and Office Improvements (around 38th Street)
38th & Blake Roadway and Sidewalk Improvements
33rd Street Outfall
Festival (between 33rd and 35th) & 33rd Streets (between Brighton and the river)
40th Avenue Widening (Central Park to Havana)
Central Park Boulevard (56th Avenue north to City Limits)
Brighton Blvd 44th to Race
National Western Center Master Plan Improvements
Westerly Creek North

Unfunded 2015-2020

Globeville-Elyria Swansea Rec Center Improvements
RiNO Park

Safety Training Facility (near 31st & the river)
Public Works Solid Waste Facility (NE Denver - location unknown)
Police District Station 5 Replacement (at current location at 46th & Peoria or elsewhere in NE Denver)
Swansea Rec Center Enhancements
Parks Maintenance Facility (Smith & Havana)
56th Avenue Reconstruction, Havana to Pena
Washington Street - 47th to 52nd Reconstruction
35th Street from Arkins to Wazee
Blake Street (38th Street to Broadway) Two-Way Conversion
Central Park Boulevard Widening (36th Avenue to I-70)
Quebec Reconstruction (35th to 53rd Place)
35th Street Ped Bridge over Platte River
City Park Roadway Reconstruction
Broadway Corridor Multi-Modal Improvements (Colfax to I-25)
38th & Blake Station Signalization and Multi-Modal Improvements
21st Street/Festival Street - Blake to Lawrence
Globeville Elyria-Swansea Pedestrian Connectivity Improvements
47th & York Ped Bridge
RiNo Ped Bridge (S. Platte River)
NE Quadrant Transit Improvements
City Park Playground and Ped Circulation
Swansea Neighborhood Park Improvements (52nd & Steele)
Elyria Park Improvements

Heron Pond/Northside Park/52nd & Emerson Infrastructure
Ongoing Local Roadway Improvements and Development north of I-70 in Stapleton, from I-70 to City Limits

Havana Street from Smith Road to Florence

Sand Creek Channel and Park Improvements (Stapleton)

Smith Road Construction From Sand Creek to Havana (Stapleton)

Urban Greenway Corridor North (River North) Trail Improvements
Urban Waterways project (in partnership with the Army Corps)

Unfunded 2020-2026

New Northfield (Stapleton) Fire Station at 51st & Beeler

Police District 6 Station Replacement (1566 N. Washington)

County Jail Improvements (Havana & Smith Road)

Brighton Blvd./Race Street BNSF Underpass

Brighton Blvd./York BNSF Underpass

48th & Holly Roadway Expansion

47th & York Long-Term Improvement

40th & Colorado Station Area Connectivity

Brighton Boulevard - Northern Section and RR Bridge at Race Court

38th Avenue Intersection and Pedestrian Improvements

31st Street Bike-Ped Bridge

Platte River Enhancements (Confluence Park to I-70)

Platte River Enhancements (I-70 to City Limits)

River Promenade (River North) 29th to 38th

10. RAILROADS

10.1. General

10.1.1. This Section sets out the roles and responsibilities of the Developer, the Department, and the Railroads with respect to the requirements applicable to Construction Work performed on, over, under and/or adjacent to Railroad right-of-way, including track, ballast, bridges and signals required for the Project.

10.1.2. UPRR Crossing

- a. Existing conditions have the I-70 Mainline passing over the UPRR on a viaduct bridge built in the early 1960's, while 46th Avenue passes under the UPRR via a grade separation bridge built in 1939. The Construction Work includes removal of existing bridges, bridge construction, trackwork, Railroad signalization, I-70 Mainline and appurtenances construction, and Utility Work;
- b. The UPRR RRA reflects UPRR approval of:
 - i. 100% temporary and permanent trackwork design and construction phasing for the UPRR Crossing (100% UPRR Trackwork Plans) which the Developer shall not be permitted to amend;
 - ii. 30% design for the Construction Work on UPRR right-of-way including I-70 Mainline and the bridges that carry the trackwork and service road (30% UPRR Crossing Plans). The Developer shall complete the design and coordinate with UPRR to obtain approval of the 100% UPRR Crossing Plans;
- c. UPRR shall be responsible to provide all Railroad flagging and Railroad signalization. UPRR trackwork responsibilities shall consist of all track shifts and associated ballast work, and all track tie-in connections, including track and ballast work, that connects existing track to new Developer constructed track, and any additional work specified in Section 10.4.9 as UPRR's responsibility;
- d. The Developer shall be responsible for all other Elements of the UPRR Crossing, including but not limited to construction of I-70 Mainline and appurtenances, bridge construction, shoring, grading, all trackwork and ballast placement for track outside the 13 foot clear point as defined in the 100% UPRR Trackwork Plans, and all related Utility Work within and outside the UPRR ROW, and any additional work specified in Section 10.4.9 as the Developer's responsibility. It shall be the Developer's responsibility to coordinate the scheduling of all separate Railroad Forces required for the performance of all Construction Work related to the UPRR Crossing;
- e. The Department shall pay UPRR directly for their trackwork, ballast and Railroad signalization work. The Developer shall pay for all other costs of the UPRR Work (including associated flagging costs) directly to UPRR. Cost responsibilities of the Department to UPRR are further identified in the UPRR RRA included in the Reference Documents; and
- f. The UPRR approved 30% UPRR Crossing Plans, and the UPRR approved 100% UPRR Trackwork Plans are included in Schedule 10B Contract Drawings.

10.1.3. UPRR Pepsi Lead Crossing

- a. Existing conditions have the UPRR Pepsi Lead Crossing Brighton Boulevard at-grade south of the I-70 Mainline. The Construction Work includes expansion of the existing at-grade crossing for the addition of a traffic lane and new traffic signal along Brighton Boulevard;
- b. The UPRR Pepsi Lead RRA reflects UPRR approval of 30% design for the Construction Work on UPRR right-of-way including the at-grade crossing modification (30% UPRR Pepsi Lead Crossing Plans). The Developer shall complete the roadway design and coordinate with UPRR to obtain approval of the 100% UPRR Pepsi Lead Crossing Plans;

- c. UPRR shall be responsible for providing all Railroad flagging, at-grade crossing modification, and Railroad signalization, including a new Railroad signal bungalow;
- d. The Developer shall be responsible for all other Elements of the UPRR Pepsi Lead Crossing, including but not limited to related Utility Work, repair of roadway approaches to at-grade crossing, roadway widening, sidewalk, traffic signalization, signalization interconnect to Railroad signal bungalow, and a stormwater detention facility, and any additional work specified in Section 10.4.10 as the Developer's responsibility. The Developer shall coordinate the scheduling of all separate Railroad Forces required for the performance of all Construction Work related to the UPRR Pepsi Lead Crossing;
- e. The Department shall pay UPRR directly for the at-grade crossing modification and Railroad signalization (including the new Railroad signal bungalow). The Developer shall pay for all other costs of the UPRR Work (including associated flagging costs) directly to UPRR. Cost responsibilities by the Department to UPRR are further identified in the UPRR Pepsi Lead RRA included in the Reference Documents; and
- f. The UPRR approved 30% UPRR Pepsi Lead Crossing Plans are included in the Reference Documents.

10.1.4. UPRR York Street Crossing

- a. Existing conditions have the UPRR York Street Crossing at-grade with mainlines and yard lead tracks. The Construction Work includes widening York Street as it crosses the UPRR tracks to add a southbound left-turn lane and signalized intersection at 47th Avenue. In addition, reconstruction of the pedestrian crossing will be required and Railroad warning devices must be replaced with an interconnected preemption signalized system;
- b. The UPRR York Street Crossing RRA reflects UPRR approval of 30% design for the Construction Work on UPRR property including the at-grade crossing modification (30% UPRR York Street Crossing Plans). The Developer shall complete the roadway design and coordinate with UPRR to obtain approval of the 100% UPRR York Street Crossing Plans;
- c. UPRR shall be responsible for providing all Railroad flagging and at-grade crossing modification including permanent and temporary crossing panels to be installed during the UPRR Crossing construction, and at-grade warning device signalization including a new Railroad signal bungalow;
- d. The Developer shall be responsible for all other Elements of the UPRR York Street Crossing, including but not limited to related Utility Work and construction of the roadway, sidewalk, traffic signalization, and signalization interconnect to Railroad signal bungalow, and any additional work specified in Section 10.4.11 as the Developer's responsibility. The Developer shall coordinate the scheduling of all separate Railroad Forces required for the performance of all Construction Work related to the UPRR York Street Crossing;
- e. The Department shall pay UPRR directly for the at-grade crossing modification (including the crossing panels) and Railroad signalization. The Developer shall pay for all other costs of the UPRR Work (including associated flagging costs) directly to UPRR. Cost responsibilities by the Department to UPRR are further identified in the UPRR York Street Crossing RRA included in the Reference Documents; and
- f. The UPRR approved 30% UPRR York Street Crossing Plans are included in the Reference Documents.

10.1.5. BNSF Crossing¹

- a. Existing conditions have the I-70 Mainline passing over the BNSF on a viaduct built in the early 1960's, while the BNSF crosses 46th Avenue at-grade to service two businesses on the south side of the I-70 Mainline; Manna Pro Products and Weakland Investments, LLC (RLW Sand Storage). The Construction Work includes removal of existing I-70 viaduct bridge, bridge construction, 46th Ave and I-70 Mainline and appurtenances construction, at-grade crossings with 46th Avenue, trackwork, traffic signalization, signalization interconnect to Railroad signal bungalow, and coordination with Manna Pro and Weakland Investment's restorative improvements within the yard, and scheduling the established 9 month track outage;
- b. The BNSF RRA reflects BNSF approval of:
 - i. 100% trackwork design for the BNSF Crossing (100% BNSF Trackwork Plans);
 - ii. 30% design for the Construction Work on BNSF right-of-way including I-70 Mainline and appurtenances construction including the bridge that carries the trackwork (30% BNSF Crossing Plans). The Developer shall complete the design and coordinate with the Department for the Department to officially submit the design to BNSF to obtain approval of the 100% BNSF Crossing Plans;
- c. The track responsibility demarcation is defined in the 100% BNSF Trackwork Plans. The following responsibilities shall apply to the Construction Work for this crossing:
 - i. North and south of demarcation, BNSF shall be responsible for all Railroad flagging;
 - ii. North of the demarcation, BNSF shall be responsible for trackwork, ballast, Railroad at-grade crossings, lights and gates warning devices, and Railroad signalization including new Railroad signal bungalows;
 - iii. North of the demarcation, Developer shall be responsible for all other Elements of the BNSF Crossing, including but not limited to traffic control, construction of I-70 Mainline and appurtenances, bridge construction, shoring, grading, subgrade and subballast placement, traffic signalization, signalization interconnect to Railroad signal bungalows, and related Utility Work, and any additional work specified in Section 10.4.12 as the Developer's responsibility. It shall be the Developer's responsibility to coordinate the scheduling of all separate Railroad Forces required for the performance of all Construction Work related to the BNSF Crossing;
 - iv. South of the demarcation, the Developer shall be responsible for all grading, drainage, trackwork, and ballast construction within the BNSF right-of-way and private properties, including connections to existing track and industry facilities, and any additional work specified in Section 10.4.12 as the Developer's responsibility. Manna Pro and Weakland Investments will be responsible for procurement and coordination of modifications of their facilities to accommodate the new track geometry, and procurement and coordination of transloading deliveries during the track outage for construction. Cost responsibilities of the Department to Manna Pro and Weakland Investments are further identified in the Right-of-Way Agreements included in the Reference Documents;
- d. The Department will pay BNSF directly for all engineering review costs, Railroad flagging costs, construction inspection costs, BNSF trackwork, ballast, Railroad at-grade crossings with 46th Avenue, lights and gates warning devices, and Railroad signalization

¹ **Note to Proposers:** Amendments to Schedule 10, Section 10 regarding (i) the role of the Department as an intermediary between the Developer and BNSF with regards to certain submittals and (ii) the assumption of certain payment obligations by the Department previously the responsibility of the Developer, reflect discussions between the Enterprises and BNSF subsequent to the release of the BNSF RRA as a Reference Document. The Enterprises anticipate releasing an amended BNSF RRA that reflects the current status of Schedule 10, Section 10 as per this Addendum No. 5 prior to the release of the final RFP.

north of the demarcation, provided that, to the extent that any work requiring Railroad flagging takes a longer period to carry out than is specified in the Developer's Baseline Schedule, the Department shall be entitled to seek reimbursement from the Developer of any Railroad flagging costs that the Department incurs pursuant to the BNSF RRA that are in excess of such costs that the Department would have incurred had the Developer carried out such work within the period specified in the Developer's Baseline Schedule (for certainty, by reference to duration of such period rather than the specific dates thereof). Cost responsibilities of the Department to BNSF are further identified in the BNSF RRA included in the Reference Documents; and

- e. The BNSF approved 30% BNSF Crossing Plans, and the BNSF approved 100% BNSF Trackwork Plans are included in Schedule 10B Contract Drawings.

10.1.6. DRIR Crossing

- a. Existing conditions have the I-70 Mainline passing over a single track from the DRIR Silver Yard on a bridge built in the early 1960's. The Construction Work includes reconstruction of the existing I-70 bridges over the DRIR, and construction of two additional bridges to carry Quebec eastbound exit ramp and N Stapleton Drive traffic;
- b. The DRIR RRA reflects DRIR approval of 30% design for the Construction Work on DRIR Right-of-Way, including the bridges that carry the I-70 Mainline, N Stapleton Drive and Quebec eastbound exit ramp over DRIR (30% DRIR Crossing Plans). The Developer shall complete the design and coordinate with DRIR to obtain approval of the 100% DRIR Crossing Plans;
- c. DRIR shall be responsible to provide all Railroad flagging and modifications of their sand pad spur track to remove it from proposed CDOT ROW as defined in the CDOT/DRIR ROW Agreement;
- d. The Developer shall be responsible for all other Elements of the DRIR Crossing, including but not limited to traffic control, construction of I-70 Mainline and appurtenances, removal of bridges, bridge construction, shoring, grading, and related Utility Work, and any additional work specified in Section 10.4.13 as the Developer's responsibility. The Developer shall coordinate the scheduling of all separate Railroad Forces required for the performance of all Construction Work related to the DRIR Crossing;
- e. The Developer shall pay for all costs of the DRIR Work (including associated flagging costs) directly to DRIR. Cost responsibilities are further identified in the DRIR RRA included in the Reference Documents; and
- f. The DRIR approved 30% DRIR Crossing Plans are included in the Reference Documents.

10.1.7. Railroad Permits and Regional Transportation District (RTD) Railroad Permits

- a. The Developer shall coordinate all drainage related issues, including drainage reports and storm drainage system design and construction, as related to Construction Work on Railroad or RTD right-of-way, with the affected Railroad or RTD. The Developer shall obtain, and be responsible for applicable fees, for all required approvals and Permits for storm drainage from the Railroad or RTD, as described in Schedule 18 Right-of-Way;
- b. The Developer shall coordinate all proposed ITS and Utility Relocations of Public Utilities (as applicable) design and construction, as related to Construction Work on Railroad or RTD right-of-way, with the affected Railroad or RTD. The Developer shall obtain, and be responsible for applicable fees, for all required approvals and Permits for ITS and Utility Relocations of Public Utilities (as applicable) from the Railroad or RTD, as described in Schedule 18 Right-of-Way;
- c. Railroad Permit information is included in the Reference Documents.

10.2. Applicable Standards

- 10.2.1. The design and construction of Construction Work shall be in accordance with the relevant Railroad's written specifications, standards of practice, and construction methods. In the event of a conflict between the requirements of a Railroad and the requirements of the Project Agreement, the Department, at its sole discretion, will determine which shall govern. The Developer shall be responsible for resolution of any unresolved ambiguity prior to proceeding with any Construction Work.
- 10.2.2. The Developer shall comply with the requirements of the applicable RRA in performing the Construction Work.
- 10.2.3. The Developer shall abide by and comply with the standards and requirements of the Colorado Public Utilities Commission (PUC) in performing the Construction Work.
- 10.2.4. The Developer shall comply with all rules and regulations prescribed by the Railroads as to the proper manner of protecting the tracks (and the traffic moving thereon), and other property of the Railroads or their tenants at and in the vicinity of the Site during the time any Construction Work is being performed. Compliance with Railroad rules and regulations shall include execution of contractor's right-of-entry agreements and Permits required by the Railroads.
- 10.2.5. The Developer shall comply with the standards and requirements of the Local Agency in performing the Construction Work.

10.3. Administrative Requirements

- 10.3.1. The following individuals will act as the Developer's main contacts with each of the Railroads:

- a. UPRR
Mr. Lance Kippen
Manager of Public Projects
Union Pacific Railroad
1400 W. 52nd Avenue
Denver, CO 80221
Phone: 303-405-5039
Email: LKippen@up.com
- b. BNSF
Mr. David Miller
Project Engineer
BNSF Railway
3700 Globeville Road
Denver, CO 80216
Phone: 303-480-6342
Email: david.miller6@bnsf.com
- c. DRIR
Mr. Forrest Mars
Vice President
Denver Rock Island Railroad
3400 E. 56th Avenue
Denver, CO 80221
Phone: 303-296-0900
Email: ringo.mars@denverrockisland.com

- 10.3.2. The Developer shall meet with the Department and each of the Railroads as soon as practicable after the Agreement Date to discuss all Railroad points of concern and other items that may affect the Project Schedule. The Developer shall identify critical Activities and sequences as they affect Railroad operations, and shall plan to effectively mitigate Railroad impacts.
- 10.3.3. Before commencing Construction Work on Railroad right-of-way, the Developer shall enter into a right-of-entry agreement with each of the Railroads. All costs associated with applying for and

complying with such right-of-entry agreements and associated Permits, including required insurance coverage, clerical, administrative, and handling expenses in connection with the processing of such agreements and Permits, shall be borne by the Developer.

10.3.4. Railroad Insurance

The Developer shall comply with the provisions for Railroad insurance as specified in the executed right-of-entry agreement with the Railroads and in the terms and conditions of the Project Agreement.

10.3.5. Railroad Flagging and Inspection

- a. Any Construction Work or equipment that could potentially fall within 25 feet of the centerline of an active track shall require a Railroad flagger. The Developer shall notify the Railroad, in accordance with the executed right-of-entry agreement with the Railroad, to arrange for required flagging services. The Developer shall provide an advance notice, as specified in the executed right-of-entry agreement, to the Railroad for the need of Railroad flagger services. The Developer shall be responsible to appropriately notify the Railroad regarding flagging start and end dates for work on the Railroad right-of-way. The Developer shall provide advance notice, as specified in the executed right-of-entry agreement, to the Railroad when all Construction Work on the Railroad right-of-way is scheduled for completion to provide for termination of Railroad flagger services;
- b. During the period of construction, all flagging and protective services shall be performed strictly in accordance with directives and instructions issued by the applicable Railroad. The Developer shall confer with the Railroads for the times, locations, and manner of such protective measures. The Developer shall include the Railroad flaggers in all its regularly scheduled safety meetings;
- c. The Railroad may utilize independent consultant services to inspect and verify that any and all Construction Work on Railroad right-of-way is being undertaken in accordance with Railroad safety requirements. Failure to comply with Railroad safety requirements may result in the Railroad issuing a stop work order;
- d. Costs for Preliminary Engineering, Flagging, Inspection and Design Reviews
 - i. Before submitting design plans to the UPRR or DRIR for approval, the Developer shall enter into a preliminary engineering review agreement with the respective Railroad for design review costs;
 - ii. Except to the extent the Department is responsible for such costs pursuant to Sections 10.1.2.e, 10.1.3.e, 10.1.4.e and 10.1.5.d, the Developer shall be responsible for the cost of Railroad flagging, Railroad inspection, Railroad placement and maintenance of temporary crossings and service roads, Railroad right-of-entry agreements, permitting and coordination fees, Railroad design plan review costs, and other Railroad related costs. The estimated cost for one flagger ranges between \$800 - \$1,600 for an eight hour basic day with time and one-half or double time for overtime, rest days and holidays. Work days longer than eight hour days, and double shifts will require the utilization of additional Railroad flaggers. The flagging costs, provided in the RRAs, shall be understood to be approximate only, and no guarantee is made that the total cost of such flagging will not be in excess of the estimated amount;
 - iii. Notwithstanding the rates specified above in this Section, the rates of pay of the Railroad employees customarily called upon to act for the protection of the Railroad shall be the Railroad rates in effect at the time of the Construction Work for the various classes of labor. Compensation, property damage and public liability insurance, vacation and holiday time, Railroad retirement and unemployment taxes, health and welfare, and supervision charges shall be added to such rates; and

- e. The Developer shall accommodate any and all requests made by the Railroads that serve the purpose of avoiding hazards to Railroad property and/or operations. Neither the Railroads nor the Department have any liability to the Developer for costs or delays associated with such Construction Work stoppage or requirements associated with avoidance of hazardous situations.

10.3.6. Design Reviews

- a. The applicable Railroad will approve design plans for the Construction Work to be performed by the Developer on the Railroad right-of-way. Railroad reviews are separate and independent from submittals required to be made to the Department. The Developer shall coordinate the required Railroad submittals to the UPRR and DRIR for approval via the appropriate Railroad main contact. The Developer shall coordinate the required Railroad submittals to the BNSF for approval via the Department for official submittal to BNSF;
- b. Railroads will be required to approve design plans in writing for all of the design Elements of the Construction Work within or crossing the Railroad right-of-way prior to initiation of construction.

10.3.7. If the Developer is employed upon or directly adjacent to the Railroad right-of-way and performs the Construction Work thereon contrary to the Railroad-approved plans, specifications, and requirements of the Project Agreement or applicable RRA, or if the Developer performs the Construction Work on the Railroad right-of-way in a manner deemed hazardous by the Railroad (to its property and facilities or the safe and expeditious movement of its traffic), the Railroad will have the right to stop all Construction Work on the Railroad right-of-way until the acts or omissions of the Developer have been fully rectified to the satisfaction of the Railroad.

10.3.8. The Developer shall be responsible to the Railroad and its tenants for all damages for delays that may be sustained by the Railroad, its tenants, their employees, or freight in their care caused by interference that could have been avoided by performance of the Construction Work in accordance with the requirements of the Project Agreement and the applicable RRA.

10.3.9. All of the limitations and obligations imposed upon the Developer by this Section shall apply with equal force and effect to any Subcontractor performing any Construction Work for the Developer within the Railroad right-of-way. The Developer shall be primarily liable and responsible to the Railroad for all acts or omissions of any Subcontractor. Nothing herein contained shall be construed to preclude the Railroad from proceeding against the Developer, subcontractors, suppliers, or consultants individually or collectively.

10.3.10. The Developer shall not pursue any levies, liens, or encumbrances of any nature whatsoever against Railroad property, and shall promptly remove any lien against Railroad property arising from performance of Construction Work hereunder by the Developer or any Subcontractor.

10.3.11. Except to the extent the Department is responsible for such costs pursuant to Section 10.1.5.d, the Developer shall be responsible for the cost of all personnel deemed necessary by the Railroad and provided by the Railroad for the protection of the Railroad facilities and trains during the period of Construction Work, and the cost of installing protective devices in the case of impaired clearance, as above specified.

10.3.12. The requirements of the Railroads and the instructions of their representatives shall be strictly adhered to by the Developer, and its Subcontractors. At the request of the Railroads, the Developer shall remove from the Railroad right-of-way any employee of the Developer or any Subcontractor who fails to conform to the instructions of a Railroad's representative. All Construction Work on the Railroad right-of-way shall be suspended until such request of the Railroad is met. The Developer shall indemnify the Railroad against any claim arising from the removal of any such employee from the Railroad premises.

10.3.13. Railroads are not responsible for Utilities on Railroad right-of-way. The Developer shall identify and locate all existing Utilities on Railroad right-of-way within the immediate vicinity of the Construction Work. The Developer shall certify to the Railroad that all the Utilities on Railroad

right-of-way and within the immediate vicinity of the Construction Work have been identified, located and properly addressed for Utility Work.

10.4. Construction Requirements

- 10.4.1. The Developer shall coordinate with the Railroad prior to beginning any construction on or directly adjacent to the Railroad right-of-way. The Developer shall schedule and hold a Railroad pre-construction conference with the affected Railroad. Working windows for demolition and construction shall be coordinated with the Railroads and Railroad flaggers.
- 10.4.2. The Developer shall coordinate with the Railroad to establish a schedule for the start and anticipated completion of all construction work to be undertaken by the Railroad.
- 10.4.3. The Developer shall obtain Railroad approval in writing, in advance of construction Activities, on methods and procedures for all Construction Work.
- 10.4.4. Upon completion of the Construction Work to be performed within or directly adjacent to Railroad right-of-way, the Developer shall promptly remove from Railroad right-of-way all tools, equipment, and materials placed thereon by the Developer. The Developer shall restore said property to the same state and condition as when the Developer entered thereon and shall leave said right-of-way in a clean and presentable condition satisfactory to the Railroad.
- 10.4.5. The Developer shall perform Construction Work in accordance with plans and specifications approved by the Railroad and in such manner and at such times as shall not endanger or interfere with the safe operation of the tracks and property of the Railroad and the traffic moving on such tracks, as well as wires, signals, and other property of the Railroad, its tenants or licensees, at or in the vicinity of the Construction Work. The Developer shall not pile or store any materials, tools, or park any equipment, when not in use, closer to the center of nearest Railroad track than permitted by the following clearances:
 - a. 25 feet, 0 inches horizontally from centerline of the nearest rail; and
 - b. 23 feet, 6 inches vertically above top of rail.Any proposed temporary construction variance of the above clearances shall be submitted by the Developer to the Railroad, the PUC (if applicable), and to the Department. The variance shall not be undertaken until approved by the Railroad and until the Department has obtained necessary authorization from all governmental bodies having jurisdiction.
- 10.4.6. If required, temporary at-grade crossings with the Railroad tracks or service roads within Railroad right-of-way will be constructed by the relevant Railroad Forces. If required, the Developer shall execute a Temporary Crossing Agreement with the Railroad. The Developer shall only enter Railroad right-of-way through routes approved by the applicable Railroad. The Developer shall maintain any such crossings so established in good condition at all times; shall keep flange-ways free of ice, snow, dirt, rock and debris; and shall install, operate, maintain and remove in a manner satisfactory to the Railroad suitable gates or barricades adequate to prevent unauthorized vehicles or equipment from using such temporary crossings. All costs and expenses for installation, maintenance, and operation of any such crossings and barricades, whether performed by the applicable Railroad or by the Developer, shall be borne by the Developer. The Developer shall not, at any time, cross a Railroad's tracks with vehicles or equipment of any kind, except at existing public crossings or at temporary crossings established, as provided for in this Section 10.
- 10.4.7. The Developer shall provide positive drainage along the Construction Work at all times for the duration of the Project.
- 10.4.8. Developer shall provide traffic control as necessary for construction performed by Railroad Forces.
- 10.4.9. UPRR Crossing
 - a. The UPRR mainlines, yard track, lead track and Railroad signalization shall be reconstructed in accordance with the 100% UPRR Trackwork Plans and construction

- phasing design. Track shooflies and other temporary track, as set forth in the 100% UPRR Trackwork Plans, shall be constructed to move rail traffic away from new bridge construction while maintaining connectivity and operations of all mainline and yard tracks;
- b. The Developer shall provide the following Construction Work Elements in accordance with the requirements of the Project Agreement and the UPRR RRA:
 - i. Removal of existing UPRR bridge (E-17-Z) over 46th;
 - ii. Construction of UPRR bridges (E-17-AEW and E-17-AEX) over the I-70 Mainline, 46th Avenue, and sidewalks;
 - iii. Temporary and permanent ballast and trackwork outside the 13 foot clear point of existing track as identified in the 100% UPRR Trackwork Plans;
 - iv. Repair of York Street roadway approaches to at-grade crossing work;
 - v. Service road approaches providing a minimum 12' wide driving surface;
 - vi. Grading, drainage and subballast for all temporary and permanent track;
 - vii. Relocation of Utilities across the UPRR bridges in accordance with Schedule 10, Section 4 Utilities; and
 - viii. Removal of existing I-70 viaduct bridge (E-17-FX).
 - c. During the UPRR bridge construction, the Developer shall provide a temporary 12 foot wide minimum service road crossing under the existing I-70 viaduct until the permanent service road and bridge can be placed in service;
 - d. Temporary and permanent trackwork and Railroad signalization are required to construct the UPRR Crossing over the Lowered Section;
 - e. Temporary and permanent track shifts, track tie-ins and associated ballast identified in the 100% UPRR Trackwork Plans will be constructed by the UPRR;
 - f. All temporary and permanent electronic train management system infrastructure will be constructed and maintained by the UPRR;
 - g. The Developer shall maintain existing Railroad operations, without any closures, at all times; and
 - h. Refer to Schedule 10, Section 13 Structures for requirements and coordination, as it relates to the UPRR Railroad and service road bridges.

10.4.10. UPRR Pepsi Lead Crossing

- a. The UPRR Pepsi Lead Crossing track and roadway shall be protected, and the at-grade crossing with Brighton Boulevard modified while maintaining connectivity and operations of the existing track and roadway;
- b. The Developer shall provide the following Construction Work Elements in accordance with the Project requirements of the Project Agreement and the UPRR Pepsi Lead RRA:
 - i. Modification of Brighton Boulevard roadway and sidewalk approaches to the at-grade crossing;
 - ii. Replacement of CCD owned traffic signal including poles, heads and controller, and reestablishment of interconnect to UPRR signalization;
 - iii. Relocation of Utilities in accordance with Schedule 10, Section 4 Utilities;
- c. At-grade crossing shall meet the requirements of Americans with Disabilities Act (ADA) *Accessibility Guidelines*; and
- d. The Developer shall maintain existing Railroad operations, without any closures, at all times.

10.4.11. UPRR York Street Crossing

- a. The York Street widening and at-grade crossing improvements shall not be constructed prior to completion of the UPRR Crossing track reconstruction work. All UPRR track, regardless of construction status shall be protected, and the at-grade crossing with York Street modified as part of the York Street widening construction work. The Developer shall maintain connectivity and operations of all track and roadway;
- b. The Developer shall provide the following Construction Work Elements in accordance with the Project requirements of the Project Agreement and the UPRR Crossing York Street RRA:
 - i. Modification of York Street roadway and sidewalk approaches to the at-grade crossing;
 - ii. Installation of CCD owned traffic signal including poles, heads and controller, and establishment of preemption system and interconnect to UPRR signalization;
 - iii. Relocation of Utilities in accordance with Schedule 10, Section 4 Utilities;
- c. Warning devices for roadway at-grade rail crossings shall be installed by UPRR; and
- d. The Developer shall maintain York Street pedestrian access across the tracks at all times during construction.

10.4.12. BNSF Crossing

- a. The BNSF Market Lead track shall be reconstructed in accordance with the 100% trackwork design. The existing track will be temporarily taken out of service to allow bridge and trackwork construction. Developer shall provide a minimum of 90 day prior notice to schedule the beginning of the track outage and the termination of the track outage with BNSF, Manna Pro Products, and RLW Sand Storage. A temporary track outage of 9 months has been established. Track outage is the duration from the beginning of track outage that stops rail delivery service to the completion of the track outage when rail delivery service resumes by way of new track work and bridge. Manna Pro Products and RLW Sand Storage shall be responsible for transloading deliveries during the established track outage. The Developer shall be responsible for all additional transloading costs surpassing the established track outage;
- b. The Developer shall provide the following Construction Work Elements in accordance with the requirements of the Project Agreement and the BNSF RRA:
 - i. Construction of BNSF bridge (E-17-AFA) over the I-70 Mainline;
 - ii. Grading, drainage and subballast for trackwork north of the demarcation; and
 - iii. Grading, drainage, subballast and ballast, and all trackwork south of the demarcation;
 - iv. Relocation of Utilities in accordance with Schedule 10, Section 4 Utilities;
 - v. Removal of existing I-70 viaduct bridge (E-17-FX).
- c. Warning devices and crossing material for roadway at-grade rail crossings shall be installed by BNSF north of the demarcation referenced in Section 10.1.5.c;
- d. At-grade crossings shall meet the requirements of Americans with Disabilities Act (ADA) *Accessibility Guidelines*;
- e. Refer to Schedule 10, Section 13 Structures for requirements and coordination, as it relates to the BNSF Railroad bridge; and
- f. The Developer shall coordinate the excavation and backfill material management on BNSF right-of-way with BNSF, and shall comply with BNSF's environmental policy and

practice, and with Schedule 17, Environmental Requirements. BNSF environmental policy information is included in the Reference Documents.

10.4.13.DRIR Crossing

- a. The DRIR track shall be protected during removal of the existing bridges and the construction of I-70 Mainline bridges, Quebec Street ramp bridge, and Stapleton Drive North bridge while maintaining connectivity and operations of the existing track;
- b. The Developer shall provide the following Construction Work Elements in accordance with the requirements of the Project Agreement and the DRIR RRA:
 - i. Removal of existing bridges (E-17-EW and E-17-DF);
 - ii. Construction of eastbound and westbound I-70 bridges (E-17-AFO and E-17-AFN) over the DRIR track;
 - iii. Construction of new Quebec Street eastbound exit ramp bridge (E-17-ADU) and N Stapleton Drive bridge (E-17-ADT) over the DRIR track;
 - iv. Grading and drainage;
 - v. Relocation of Utilities in accordance with Schedule 10, Section 4 Utilities;
- c. Horizontal openings under each bridge should accommodate a future parallel track east of the existing DRIR track; and
- d. Refer to Schedule 10, Section 13 Structures for requirements and coordination, as it relates to the DRIR Railroad bridges.

10.4.14.Subgrade Cross Slope and Track Superelevation

- a. All new and reconstructed track sections shall be designed and constructed with subgrade/subballast cross slopes in accordance with the requirements of the applicable Railroad and 100% approved design;
- b. Superelevation shall be applied to mainline track only, unless otherwise directed by the applicable Railroad. Superelevation rate and transition length for mainline track reconstruction shall be in accordance with the 100% approved design;
- c. Ballast Slopes (Track Roadbed)
 - i. Ballast slopes shall be constructed in accordance with 100% approved design or as specified by the applicable Railroad's standards;
 - ii. Ballast roadbed areas shall be constructed with ditches, underdrains and storm sewer as necessary to direct drainage away from the track roadbed;
- d. Cut slopes beyond the trackside ditch shall be constructed in accordance with 100% approved design or as specified by the applicable Railroad's standards; and
- e. All cut slopes shall be rounded at their matches to existing ground.

10.4.15.Colorado Public Utilities Commission Approvals

- a. All new, modified, and/or reconstructed at-grade crossings, grade separated Railroad/highway crossings, and pedestrian crossings of commercial rail lines will require approval of the Colorado Public Utilities Commission (PUC). Locations anticipated to require PUC approval are:
 - i. I-70 restriping over BNSF and RTD near Washington Street (DOT# 057-080F);
 - ii. UPRR Crossing (DOT# 804-269C & 804-266G);
 - iii. UPRR Pepsi Lead Crossing (DOT# 804-397K);
 - iv. UPRR York Street Crossing (DOT# 804-422R);

- v. BNSF Crossing (DOT# 057-038G);
 - vi. DRIR Crossing (DOT# 594-977N);
 - vii. I-70 restriping over UPRR Arsenal Lead near Havana Street (DOT# 804-689G);
- b. In accordance with PUC Regulations (4 CCR 723-7:7203), only the roadway or Railroad authority in highway-rail crossings may petition or apply to the PUC. The Department will apply in respect of the locations specified in Sections 10.4.15.a.i, vi, and vii above, and the Department and CCD will jointly apply in respect of the locations specified in Sections 10.4.15.a.ii, iii, iv, and v above for the highway-rail crossing PUC authorizations necessary for the Project. The Developer shall support the Department in these efforts by the following:
- i. The Developer shall be responsible for preparing all applications to be submitted to the PUC, including developing the application text and all supporting documentation, and preparing exhibits to the satisfaction of the PUC and for Approval by the Department;
 - ii. The Developer shall attend meetings with appropriately qualified staff and cooperate with the PUC as reasonably requested by the Department;
 - iii. The Developer shall obtain CCD approval (as applicable) of the proposed application in advance of any submittal to the PUC;
 - iv. The Developer shall prepare and coordinate any post application exhibits and/or information requested by the PUC, including providing technical expertise at any PUC legal proceedings, as requested by the Department; and
 - v. The Developer shall allow for appropriate PUC approval durations in the Project Schedule and shall provide the applications and supporting documentation in a timely fashion to the Department to prevent delays to the Construction Work. Any delays or increase in costs of the completion of the Project caused by the failure of or delay by the Developer to provide the PUC applications and supporting documentation to the Department shall be the responsibility of the Developer.

10.4.16.Public Access

The Developer shall obtain CCD approval of the locations of any Railroad maintenance access points taken from public ROW. Access location and gate location shall consider its relation to roadway traffic operations and ensure that Railroad maintenance vehicles are stopped/parked outside of traffic lanes and pedestrian walks.

10.4.17.Fencing

- a. The Developer shall provide temporary fencing as required to protect Railroad right-of-way from unauthorized access and cut-through traffic during construction. Temporary fence shall be of material, dimensions and placement that will prevent vehicle and pedestrian entry, and provide noise and dust mitigation at required locations. The Developer shall consult with property owners adjacent to Railroad ROW regarding location, type, and height of temporary fence. Gates for construction access shall be placed in locations designated in the Developer's plans and approved by the Railroad;
- b. The Developer shall depict the permanent fencing limits on the plans for Railroad approval to provide permanent fencing of types, in accordance with Railroad standards and requirements, in the following locations:
 - i. UPRR right-of-way line north and south of proposed Railroad bridge;
 - ii. BNSF right-of-way line south of proposed 46th Avenue (east side only);
 - iii. BNSF right-of-way line north of proposed 46th Avenue;
 - iv. DRIR right-of-way line north and south of proposed I-70 Mainline;

- v. UPRR industrial track right-of-way line south of the I-70 Mainline, between Havana Street and Peoria Street;
- c. The Developer shall provide gates in fences at locations and of width and type as approved by the Railroad for maintenance access; and
- d. All fencing materials, temporary and permanent, shall be selected in accordance with the guidelines established in Schedule 10, Section 14 Landscaping and Aesthetics.

10.5. Deliverables

At a minimum, the Developer shall submit the following to the Department for Information, Acceptance, or Approval in accordance with the timeframes specified:

Table 10-1 Deliverables

Deliverable	Information, Acceptance, or Approval	Schedule
Copies of Railroad notices, submittals, approvals, and correspondences	Information	Prior to RFC Documents
BNSF Design review submittal	Acceptance	As required by this Section 10
PUC applications (all locations)	Approval	Prior to RFC Documents
Railroad Permits and Regional Transportation District Railroad Permits	Approval	Prior to RFC Documents

11. SIGNING, PAVEMENT MARKINGS, SIGNALIZATION, AND LIGHTING

11.1. General

The Developer shall be responsible for the design and installation of all permanent and temporary signing, pavement marking, signalization, and lighting Elements required for the Project. Permanent and temporary signing, lighting, and other traffic control devices shall be provided to facilitate and maintain the safe flow of traffic for the completed Construction Work elements for all phases of the Construction Work. The Developer shall replace existing signing and pavement markings outside of the Site that are rendered inaccurate, ineffective, or confusing by the Construction Work.

The Developer shall be responsible for maintenance of traffic signals and lighting in accordance with Schedule 11 Operations and Maintenance Requirements.

11.2. Applicable Standards

11.2.1. Unless otherwise stated, the Construction Work requirements shall apply to permanent as well temporary signing, pavement marking, signalization and lighting. The design shall comply with the requirements of this Section and the Construction Standards.

11.2.2. The design shall include electrical designs and power requirements for the respective Construction Work Elements. The Developer shall comply with the Utility service requirements specified in Schedule 10, Section 4 Utilities and coordinate with the relevant electrical Utility companies and the ETC System Integrator to determine electric power requirements for the Construction Work.

11.2.3. Signing and pavement marking designs shall comply with the requirements of the CDOT Standard Specifications, *M & S Standard Plans*, *Sign Design Manual*, CDOT Signing Policies and Procedures, Colorado Supplement Signs and the most current version of the Federal Highway Administration (FHWA) *Manual for Uniform Traffic Control Devices (MUTCD)* including the Standard Highway Signs 2012 Supplement. The requirements of the MUTCD shall include both the standard requirements and the guidance recommendations of the manual. The design shall address all necessary modifications to existing permanent signing inside and outside the Site.

11.2.4. Local Agency signing, pavement markings, and signals on Local Agency Roadways shall comply with the Local Agency standards.

11.3. Signing

11.3.1. Signing Design

- a. Permanent signing shall include all necessary guide, warning, supplemental, tolling, informational, school zones, Railroad, and regulatory, etc., signs for the Project, including signing on adjacent Local Agency Roadways, arterials and highways outside the Site. These signs shall be required to be installed as new at the appropriate locations in coordination with the design and Accepted by the Department prior to installation;
- b. The local roads, arterials, and highways currently display existing signing to direct vehicles to I-70. These signs shall be replaced with new signs to incorporate the new legend and additional signs provided as required;
- c. The requirements of the MUTCD shall include both the standard requirements and the guidance requirements of the manual;
- d. The Interstate Access Request (IAR) includes the Phase 1 Signing and Striping Plan, which shows most Class III signs required within the Site. Signs shall be required to inform Tolloed Express Lane users on all the approaches from all directions of I-70, I-225, I-25 and interstate to interstate ramps. Any changes to the IAR, signing and striping plan requires approval by FHWA. The Developer shall be responsible to provide the Department with all documentation and Information required to obtain the IAR approval.

- e. The Developer shall submit sign layouts for all special signs of any size to the Department for Acceptance;
- f. During the Construction Period the Developer shall re-set the existing permanent signs on the I-70 Mainline that display the LOGOS. The Developer shall coordinate with the contractor responsible for managing the LOGOS program for the correct placement of these signs. Contact information for the LOGOS program can be found at www.colorado.interstatelogos.com. At the end of the Construction Period these signs shall be incorporated into the Permanent Signing Plan at the direction of the LOGOS program manager following the Approval from the Department;
- g. The Developer shall coordinate with the Regional Transportation District (RTD) to replace wayfinding signs for RTD stops and stations in and outside the Site. If existing wayfinding signs require removal, alternative equivalent signs shall be replaced, as directed by RTD;
- h. Mile markers are required for the entire length of the Project and shall be displayed every 0.1 mile. In addition, delineators are required. Mile markers and delineators shall be installed in accordance with the Construction Standards;
- i. Signing designs shall include details of size, legend and locations of ground-mounted and overhead signs, dimensions of Class III sign supports, layouts/dimensions of all special signs, and structural and foundation requirements. Details to be submitted shall include structure cross sections, display signing mounting, hangers, equipment, control boxes, conduits, holes, hand holes, vertical clearances, the Right-of-Way (ROW) line, Utility conflicts, panel sizes, tolling attachments, all Intelligent Transportation Systems (ITS) attachments, Active Traffic Management (ATM) elements, cabinets, conduit locations, caisson foundation sizes and depths, shoulder, General Purpose Lane and Tolloed Express Lane widths, correct sign placement over each lane, direction, barrier protection type, station and offset, etc. Refer to Schedule 10, Section 13 Structures for requirements and coordination;
- j. Where CDOT sign structure standards cannot be met, the Developer shall submit alternative designs, such as custom designed monotube sign structures and foundations, for Approval. Permanent signage on Bridges shall not be hung from or be attached to the face of Bridge superstructures. Existing signs attached to Bridge superstructures shall be removed and replaced with monotube sign bridges or cantilever structures with new signs. Refer to Schedule 10, Section 13 Structures for requirements and coordination;
- k. The Developer shall mount all overhead signs along the I-70 Mainline with a minimum vertical clearance of 17.5 feet and a maximum of 18.5 feet measured from the roadway surface under the sign panels and/or electronic signs to the bottom of the Variable Message Sign (VMS), Variable Toll Message Sign (VTMS), lane use signal (LUS) or guide sign (whichever is lowest). Structure cross sections shall be submitted and display signing mounting, hangers, equipment, control boxes, conduits, holes, hand holes, vertical clearances and all dimensions. Refer to Schedule 10, Section 3 ITS and Tolling Equipment for requirements and coordination;
- l. Sign lighting on overhead guide signs shall not be permitted; and
- m. Unless stated otherwise, walkways shall not be permitted on overhead guide sign structures.

11.3.2. Signing Materials

- a. The materials for sign posts for each class of sign shall comply with the respective requirements of the Construction Standards. The use of wood posts for mounting ground signs is not permitted and all Class I and Class II sign posts shall use schedule 80 in lieu of schedule 40 material;

- b. All Class I, II, and III ground signs shall include breakaway devices per CDOT *S-Standard Plans*. Guide signing on approaches to interstate interchanges on local and arterial roadways shall include advance entrance directional signing. On major cross streets that do not access the I-70 Mainline, supplemental I-70 directional route marker assemblies are required;
- c. Signs on Local Agency Roadways shall be per Local Agency standards for materials, except for Class III signs, which shall be per CDOT *S-Standard Plans*;
- d. Retroreflective sheeting shall be Type IV and Type XI as defined in the CDOT *Retroreflective Sheeting Materials Guide* and shall conform to Subsections 713.04 and 713.06 when applicable. For all permanent signs, the legend, borders, and background shall be Type XI. The retro reflective sheeting standards are subject to change and the most current type prior to manufacturing shall be used; and
- e. Re-use or resetting of any of the existing sign structures, ground signs, and their components shall not be permitted. All signs and structures shall be new and customized to fit the roadway conditions.

11.3.3. Existing Signing

Prior to the issuance of NTP 2, the Developer shall submit an inventory of all existing signs within the Site, including all approaches, in Microstation format to the Department for Information. The Developer shall be responsible for the removal and disposal of the existing sign structures, ground-mounted signs, and delineators affected by the Construction Work.

11.4. Pavement Marking

11.4.1. Pavement Marking Design

- a. Pavement marking design shall include all striping required for center lines, edge lines, lane lines, channelization, gore areas, lane drops, merging lanes, chevrons, transition lanes, dotted lane extensions, Tolloed Express Lanes, arrows, legends, symbols, crosswalks, stencils, stop lines, Railroad and other striping, as well as any modifications required for transitions to existing pavement markings;
- b. The Tolloed Express Lanes shall incorporate ingress, egress, and weave (within the ingress/egress zones) lanes. The IAR depicts the striping plans;
- c. Where existing pavement is to be retained requiring only reconfiguration of existing striping, the stripes shall be removed and replaced according to Best Industry Practice. Stripes shall not be placed on longitudinal joint lines; and
- d. Pavement marking stencils shall be installed as follows: left and right turn lanes, interstate to interstate ramp shields, cross walks, bike symbols, words, school zones, stop bars, highway interstate shields on approach turn lanes, etc.

11.4.2. Pavement Marking Materials

All new pavement markings shall be compliant with Table 11-1.

Table 11-1 Pavement Marking Materials

Color	Retro-reflectivity Reading (R) in a one-mile section (mcd/m ² /lux)
White	R ≥ 400 (Newly applied marking less than 3 weeks old) Newly applied marking minimum 400 mcd/m ² /lux. Less than this reading for newly applied marking; remove and replace, impose a Working Time Violation Incident and stop work.
Yellow	R ≥ 250 (Newly applied marking less than 3 weeks old) Newly applied marking minimum 250 mcd/m ² /lux. Less than this reading for newly applied marking; remove and replace, impose a Working Time Violation Incident and stop work

Developer shall use a calibrated retro-reflectometer and perform the test on each line strip in conformance with ASTM E 1710 or AASHTO TP111 procedures. Developer shall collect the following readings for each day striping test is being conducted:

- a. Within a mile test section, collect 10 readings for each longitudinal line stripe, at no less than 40 feet intervals; and
- b. Where striping is less than 500 feet in length, collect reading at 50 foot intervals.

Readings collected shall be averaged. Excess beads to be removed prior to test.

11.4.3. For pavement markings located within the Limited O&M Work roadway sections, the Project Special Provisions, Schedule 10, Section 11, Appendix A, Revision of Section 627 and 713 Preform Thermo-Plastic Pavement Marking and Table 11-2 shall apply.

Table 11-2 Pavement Marking Materials for Limited O&M Work Roadway Sections

Pavement Marking Type	Asphalt	Concrete
Edge Line	Modified Epoxy	Modified Epoxy
Lane Line	Preform Plastic Type I (Inlaid)	Preform Plastic Type II (Inlaid)(7 inch contrast)
Channelization/Drop Lane Line	Preform Plastic Type I (Inlaid)	Preform Plastic Type II (Inlaid) (11 inch contrast)
Gore Line	Preform Plastic Type I (Inlaid) *	Preform Plastic Type II (Inlaid) (11 inch contrast)*
Hatching Line	Preform Plastic Type I	Preform Plastic Type I
Crosswalks/Stop Bars/Words/Symbols	Preformed Thermoplastic	Preformed Thermoplastic

*Or Modified Epoxy in same widths

11.4.4. Existing Pavement Marking

Prior to the issuance of NTP 2, the Developer shall submit an inventory of all existing striping within the Site including approaches, in MicroStation and Excel format, to the Department for Information.

11.5. Traffic Signalization

11.5.1. Traffic Signal Design

- a. Traffic signals on Local Agency Roadways shall comply with the Local Agency Standards at time of the Setting Date and as outlined in Schedule 10, Section 11, Appendix A;

- b. Traffic signalization design shall include traffic signal mast arm type poles, pedestal poles, pole footing/caisson locations and sizes, mast arm lengths, traffic signal heads, countdown pedestrian signal heads, signal head placement and alignment, controller cabinet(s), power disconnect and meter, signal phasing, lighting/luminaires, conduits, pull boxes, non-invasive vehicle detection, pedestrian push buttons, emergency vehicle preemption, replacement of CCD traffic surveillance cameras, Railroad signal preemption design, Americans with Disabilities Act (ADA) compliant curb ramps, signal timing plan, and signing as required;
- c. All traffic signals shall be interconnected with 3-inch conduit and 12 strand fiber optic cable (6 single mode, 6 multimode) between signal cabinets at each location. Fiber shall not be spliced between cabinets or splice points unless Approved by the Department. New traffic signal installations require an electric meter pedestal cabinet and base for the traffic signal. The electrical meter will be furnished by Xcel Energy. The Developer shall install the electric meter cabinet, pedestal base, and power in conduit to meter;
- d. Traffic signal pole locations shall be staked and Accepted by the Department and the CCD before construction;
- e. Identified locations of traffic signalization (not all inclusive):
 - i. Brighton Boulevard and 46th Avenue (North and South of I-70);
 - ii. Brighton Boulevard and 47th Avenue;
 - iii. Brighton Boulevard and UPRR Pepsi Lead Crossing;
 - iv. Brighton Boulevard and 44th Street;
 - v. York Street and 46th Avenue (North and South of I-70);
 - vi. York Street and 47th Avenue with pre-signal at Railroad crossing;
 - vii. Josephine Street and 46th Avenue (North and South of I-70);
 - viii. Josephine Street and 45th Avenue;
 - ix. Columbine Street and 46th Avenue (North and South of I-70);
 - x. Clayton Street and 46th Avenue (North and South of I-70);
 - xi. Fillmore Street and 46th Avenue (North and South of I-70);
 - xii. Steele Street and 45th Avenue;
 - xiii. Steele Street/Vasquez Boulevard and 46th Avenue (North and South of I-70);
 - xiv. Vasquez Boulevard and 48th Avenue;
 - xv. Cook Street and 46th Avenue (North and South of I-70);
 - xvi. Monroe Street and 46th Avenue with pre-signal at Railroad crossings (North and South of I-70);
 - xvii. Colorado Boulevard and 46th Avenue (North and South of I-70);
 - xviii. Colorado Boulevard and 48th Avenue
 - xix. Dahlia Street and Stapleton Drive (North and South of I-70);
 - xx. Holly Street and Stapleton Drive (North and South of I-70);
 - xxi. Monaco Street and Stapleton Drive (North and South of I-70);
 - xxii. Quebec Street and I-70 Mainline ramps (North and South of I-70); and
 - xxiii. Peoria Street and I-70 Mainline ramps (North and South of I-70);

- f. Temporary traffic signal and timing plans shall be designed, as necessary, to facilitate reconstruction of any existing signalized intersection. Span wire type installations are permitted for temporary signals only. Poles shall be placed at locations that will facilitate all stages of intersection reconstruction and must meet clear zone requirements. Noninvasive loops are permitted for temporary installations. All traffic signal pole locations shall be stacked in the field and approved by CCD and Accepted by the Department before installations. All traffic signal timing plans shall be coordinated and approved by CCD prior to implementation. The plans shall be submitted for Acceptance to the Department prior to implementation for both temporary and permanent installations;
- g. Modifications to existing infrastructure in any way shall not be allowed and will require new installations, unless otherwise stated in the Project Agreement. This can include additions/modifications such as signal heads, foundations, longer mast arms, lighting, drilling holes, adding wire, etc. Existing equipment such as poles, mast arms and foundations cannot be re-used or upgraded and shall be new;
- h. Traffic signal at York Street and 47th Avenue with pre-signal interconnect to the UPRR York Street Crossing warning devices shall not be constructed prior to completion of the final stage of the UPRR Crossing track reconstruction work; and
- i. The Ultimate configuration shall be accommodated.

11.5.2. Traffic Signal Materials

All lighting on the traffic signal poles shall be approved by Xcel prior to design submittals to the Department. This includes wiring, luminaires, luminaire lengths, luminaire heads, conduit sizes, and all other materials related to the lighting for the signals.

11.5.3. Existing Traffic Signalization

- a. Existing signal operations shall be maintained throughout construction. The Developer shall coordinate the removal of the signal poles with Xcel Energy and CCD; and
- b. Xcel Energy is the owner of the signal poles and lighting. CCD is the owner of the remaining equipment. All equipment removed that is owned by CCD shall be delivered within 72 hours to Chris Lillie, Denver Public Works (phone 720-865-4066).

11.5.4. Traffic signals shall be designed and constructed to Local Agency standards.

11.5.5. Railroad At-Grade Crossings and Traffic Signal Interconnect.

- a. All at-grade Railroad crossings shall be interconnected as per the MUTCD and Public Utilities Commission requirements. The Railroad preemption signal to traffic signal interconnect shall be coordinated with the appropriate Railroad. This includes temporary and permanent traffic signal installations. The Railroad will approve Railroad preemption signal to traffic signal interconnect design, interconnect plan and testing prior to the signal being turned on or modified in any way in accordance with Schedule 10, Section 10 Railroads. Developer shall provide pedestrian access during Construction Work and shall coordinate with Denver Public Schools to provide a safe and ADA compliant crossing per Schedule 10, Section 2 Maintenance of Traffic.
- b. The Developer shall be responsible for Construction Work required to interconnect the traffic signal with the Railroad. The Developer shall coordinate the Construction Work, seek approval for the design and construct and terminate the signal interconnect according to the Railroads and CCD requirements in accordance with Schedule 10, Section 10 Railroads.

11.6. Ramp Meters

11.6.1. Ramp Meter Design

- a. Permanent ramp meter signalization design for all entrance ramps affected by the Construction Work shall include traffic signal poles, mast arms, pedestal poles, pole footing/caisson locations and sizes, traffic signal heads, signal head placement and alignment, controller cabinet(s), Advanced Transportation Controllers (ATCs), power disconnect and meter, signal phasing, conduits, pull boxes, in pavement vehicle loop detection for on ramp detection, Microwave Vehicle Radar Detectors (MVRD) for mainline detection, Ethernet communication, and on ramp signal system fiber optic interconnect. Designs for two lane entrance ramps shall include overhead mast arm designs with additional side pole heads for both lanes;
- b. Temporary ramp meter and timing plans shall be designed, as necessary; to facilitate traffic flow during re-construction of any existing ramp meters. Noninvasive detection is permitted for temporary installations;
- c. New designs shall include ramp meter timing plans for the AM, PM and off peak ramp meters affected by the Construction Work;
- d. New permanent ramps shall not be opened until a permanent ramp meter has been installed and connected to the fiber optic backbone and communications is established with the Department;
- e. Permanent ramp meter timing plans shall be implemented prior to opening of the ramp;
- f. Any loops in the I-70 Mainline can be temporarily replaced with non-invasive detection in order to effectively use the ramp meter;
- g. Permanent ramp meters shall be required at I-70 Mainline entrance ramps as follows:
 - i. Westbound Washington Street;
 - ii. Eastbound Washington Street;
 - iii. Westbound Brighton Boulevard;
 - iv. Eastbound Brighton Boulevard;
 - v. Westbound Vasquez Boulevard;
 - vi. Westbound Colorado Boulevard;
 - vii. Eastbound Colorado Boulevard;
 - viii. Westbound Holly/Dahlia Street;
 - ix. Eastbound Holly Street/Monaco Street;
 - x. Westbound Quebec Street;
 - xi. Eastbound Quebec Street;
 - xii. Westbound Havana Street – Reconstruction;
 - xiii. Westbound Peoria Street – Reconstruction; and
 - xiv. Eastbound Peoria Street – Reconstruction.
- h. Existing ramp meter signal operations shall be maintained throughout construction. The Developer shall be responsible for the removal and disposal of existing signal equipment and structures that are to be replaced. The existing Type 170 controllers and serial communication for existing ramp meter locations shall be replaced with ATC's and Ethernet switches. If existing ramp meters are impacted as a part of the Project, new equipment shall be installed. Existing ramp meters, listed below, and any added to temporary configurations need to continue operating with Type 170 controllers and serial communication until a full system switch-over occurs.
 - i. Westbound Central Park Boulevard;

- ii. Eastbound Central Park Boulevard; and
- iii. Eastbound Havana Street.
- i. Existing and new ramp meters shall be connected to the new CDOT fiber optic backbone and utilize Ethernet switches for communication as described in Schedule 10, Section 3 ITS and Tolling Equipment. If lateral conduit and fiber connections require crossing bridge structures, see Schedule 10, Section 13 Structures;
- j. All ramp meters shall be interconnected with a 2 inch conduit and 12 strand single mode fiber optic cable to the local signal cabinet at each ramp termini;
- k. All ramp traffic signal poles shall be galvanized. All two lane entrance ramps to I-70 Mainline shall be a two lane ramp metered, with the exception of westbound Vasquez and eastbound Havana on ramps which will be one lane; and
- l. Supplemental queue detectors, at mid ramp, shall be added to the entrance ramps at Brighton Blvd. eastbound and Colorado Blvd. eastbound. Supplemental ramp metering warning signing and beacons shall be added on Brighton Blvd. northbound, Colorado Blvd. northbound, Quebec St. northbound and Peoria St. northbound. Final locations to be Approved by the Department. Schedule 10, Section 11, Appendix A Revision of Section 614 - Microwave Presence Detector shall be applied for ramp metering detection on a bridge structures.

11.7. Lighting

11.7.1. Lighting Design

- a. Prior to the issuance of NTP 2, the Developer shall submit an inventory of all existing lighting affected by the Construction Work, in MicroStation format, to the Department for Acceptance. The report shall indicate if each individual light is working or not working during night time conditions. The report shall also include the lighting circuitry within the Site;
- b. The Developer shall prepare mid mast median lighting design for the I-70 Mainline between Brighton Boulevard and Chambers Road including the transition into the existing vector lighting from I-25 to Brighton Boulevard, and into the existing high mast interchange lighting at I-225/I-70. New high mast lighting shall not be permitted;
- c. Lighting design shall include ramps, sidewalks, local roads, highways arterials, parks, pedestrian, bike and take into consideration all existing permanent lighting conditions on roadways impacted by the Construction Work. The design shall cover both temporary and permanent lighting; and details shall include existing topography, ROW, Utilities and drainage facilities, structures, all other existing and proposed facilities, location and orientation of standards and fixtures, wiring, conduits, pedestals, power sources, and all other lighting components as required;
- d. Permanent lighting shall be designed and constructed to be consistent with current CDOT *M-Standard Plans*, Xcel Energy lighting standards and CCD lighting standards, as applicable;
- e. Existing lighting impacted by the Construction Work shall be replaced to include complete interchange lighting or partial interchange lighting within the Site and local roads;
- f. The lighting design submittal shall include lighting calculations for both permanent and temporary conditions. Design details shall include lighting calculations and electrical design including voltage-drop calculations for each circuit to Xcel Energy for approval prior to the installation of the wiring for the connections to the power sources; and
- g. New lighting underneath structures shall be placed where a lane closure is not required for maintenance. Existing lighting under structures shall be re-set to a location where a lane closure is not required for maintenance. Both of these requirements for existing and new lighting shall also meet the photometrics regarding design.

11.7.2. Lighting Materials

- a. The Developer shall use lighting equipment for all permanent installations as specified in the CDOT *Standard Specifications* or by Xcel Energy as applicable;
- b. The Developer shall obtain approval of the lighting equipment from the Local Agency responsible for maintenance; and
- c. For areas within incorporated municipal boundaries that Xcel Energy is responsible for maintenance, the Developer shall submit the materials lists for the proposed lighting, including under deck lighting and all associated material for approval by Xcel Energy prior to ordering material. The lighting materials shall also be approved by the CCD.

11.7.3. Existing Lighting

Xcel Energy will remove the existing lighting as required within the Site that is owned by Xcel Energy. The Developer shall be responsible for the coordination of lighting removal and lighting relocation Work to be performed by Xcel Energy, in accordance with the applicable URA. Lighting removal work by Xcel Energy will include all existing lighting on the existing circuitry to be removed, which may require the Developer to provide temporary lighting to maintain minimum lighting levels in accordance with Schedule 10, Section 2.12.7 Temporary Lighting. Deliverables

At a minimum, the Developer shall submit the following to the Department for Information, Acceptance, or Approval in accordance with the specified timeframes:

Table 11-2 Deliverables

Deliverable	Information, Acceptance, or Approval	Schedule
Class III, overhead signs, sign structure cross sections, and Tolled Express Lane regulatory and Guide Signs Plan	Acceptance	As part of the preliminary (30% level) plan package, final (100% level) plan package, and prior to RFC documents.
Existing signing, striping and lighting inventory	Acceptance	Prior to issuance of NTP 2
Layouts for all special and guide signs	Acceptance	Prior to RFC documents
Temporary and permanent traffic signalization plans	Acceptance	Prior to RFC documents
LOGOS signing location	Approval	Prior to RFC documents
Temporary and Permanent ramp meter plans	Acceptance	As part of the preliminary (30% level) plan package, final (100% level) plan package, and prior to RFC documents.
Permanent lighting plans and temporary lighting plans	Acceptance	As part of the preliminary (30% level) plan package, final (100% level) plan package, and prior to RFC documents.
Temporary and permanent traffic signal and ramp metering timing plans with the associated electronic and software files.	Acceptance	Prior to RFC documents
Lighting design, photometric, lighting materials and electrical design calculations for permanent lighting	Acceptance	Prior to RFC documents
Documentation and Information required for IAR approval	Approval	Prior to RFC documents
Class III, overhead signs, sign structure cross sections, and Tolled Express Lane regulatory and Guide Signs Plan	Acceptance	As part of the preliminary (30% level) plan package, final (100% level) plan package, and prior to RFC documents.
Existing signing, striping and lighting inventory	Acceptance	Prior to issuance of NTP 2

Deliverable	Information, Acceptance, or Approval	Schedule
Layouts for all special and guide signs	Acceptance	Prior to RFC documents

11.8. Appendices

Appendix A Project Special Provisions

Appendix A
Project Special Provisions for Signing, Pavement Markings, Signalization and Lighting

The following specifications modify and take precedence over the Standard Specifications. The provisions of Appendix A to Schedule 10A Applicable Standards and Specifications apply to these Project Special Provisions.

PROJECT SPECIAL PROVISIONS

	<u>Page</u>
Index	11-10
Revision of Section 202 – CCD Removal of Traffic Signal Equipment	11-11
Revision of Section 613 – CCD Electrical Conduit Laterals– General	11-12 to 11-13
Revision of Section 613 – CCD Pull Boxes – General	11-14
Revision of Section 614 – CCD LED Pedestrian Signal Head (Countdown)	11-15
Revision of Section 614 – CCD Traffic Control Devices	11-16 to 11-18
Revision of Section 614 – CCD Traffic Signal Controller Cabinet	11-19
Revision of Section 614 – CCD Traffic Signal Cabinet Base	11-20
Revision of Section 614 – CCD Pedestrian Push Button and Instruction Sign	11-21 to 11-22
Revision of Section 614 – CCD Intersection Detection System (Camera)	11-23 to 11-27
Revision of Section 614 – CCD Emergency Vehicle Traffic Signal Priority Control System	11-28 to 11-33
Revision of Section 614 – CCD Traffic Signal Poles – General	11-34 to 11-35
Revision of Section 614 – CCD Traffic Signal Controller (Solid State) (Full-Actuated) (12 Phase)	11-36
Revision of Section 614 – Ramp Metering Controller	11-37 to 11-39
Revision of Section 614 – CCD Double Conversion Uninterrupted Power Supply System	11-40 to 11-48
Revision of Section 614 – Microwave Vehicle Radar Detector	11-49 to 11-53
Revision of Section 614 – Microwave Presence Detector	11-54 to 11-55
Revision of Section 614 – CCD Telemetry (Field)	11-56 to 11-58
Revision of Section 614 – CCD Ethernet Switch	11-59 to 11-60
Revision of Section 614 – CCD Traffic Surveillance Camera	11-61 to 11-63
Revision of Section 627 and 713 – Preform Thermo Plastic Pavement Marking	11-64 to 11-66

See Schedule 10 Section 3 Appendix A for the following Project Special Provisions:

- Revision of Section 613 – CDOT and CCD Electrical Conductor Identification
- Revision of Section 613 – CDOT Electrical Conduit
- Revision of Section 614 – Fiber Optic Pre-Connectorized Cable
- Revision of Section 614 – Fiber Optic Cable (Single Mode)
- Revision of Section 614 – Ethernet Switch (3930)
- Revision of Section 614 – Coarse Wavelength Division Multiplexing SFP
(See Schedule 10 Section 3 Appendix A)
- Revision of Section 614 – Optical Attenuator (See Schedule 10 Section 3 Appendix A)
- Revision of Section 614 – Single Wavelength Course Wavelength Division Multiplexing (CWDM)
Optical Filter
- Revision of Section 614 – Buffer Tube Fan Out Kit
- Revision of Section 614 – Fiber Optic Termination Panel
- Revision of Section 614 – ITS Offline Devices
- Revision of Section 614 – Grounding and Bonding
- Revision of Section 614 – CCD Loose Tube Fiber Optic Cable
- Revision of Section 614 – CCD Test Fiber Optic Cable

**REVISION OF SECTION 202
CCD REMOVAL OF TRAFFIC SIGNAL EQUIPMENT**

Section 202 of the Standard Specification is hereby revised for this project as follows: Subsection 202.03 shall include the following:

The Contractor shall safeguard any salvageable materials designated by City and County of Denver (CCD) Traffic, and shall be responsible for the expense of repairing or replacing damaged or missing material until it is delivered to the CCD Traffic Maintenance Yard at 5440 Roslyn Street, Denver.

Designation of salvageable equipment and times for delivery of such items shall be coordinated with CCD Traffic (contact Chris Lillie at 720-865-4066 or Greg Salazar at 303-591-7146).

Signal operations shall be maintained at each of the Project intersections throughout construction.

Subsection 202.04 shall include the following:

Removal of the traffic signal equipment shall include signal poles (without luminaries), pedestal poles, footings, span wire cable, traffic signal controller and cabinet, pedestrian push button, cabinet footings, all attachment hardware, and all incidental equipment, except as noted on plans. All existing foundations and pull boxes shall be removed and back-filled. All wiring shall be removed from existing conduit and the conduit shall be abandoned in place.

Xcel Energy shall remove all signal poles with luminaries attached. Xcel Energy will remove only the signal pole and luminaries, and the Contractor shall remove the remainder of the traffic signal equipment, as noted in the plans. The Contractor shall coordinate with Xcel Energy for these removals.

All "Light Emitting Diode" (LED) signal lenses in existing signal faces shall be removed prior to the removal of the signal face. These LED lenses shall be protected from damage and delivered to 5440 Roslyn Street, Denver.

Times for delivery to the maintenance yard shall be coordinated with CCD Traffic Engineering Services at 720-865-4000.

**REVISION OF SECTION 613
CCD ELECTRICAL CONDUIT LATERALS- GENERAL**

Section 613 of the Standard Specifications is hereby revised for this project as follows:

Add the following to subsection 613.07:

Directional boring is the preferred method of conduit installation.

All conduit bends, including factory-installed bends, shall not have a bend radius less than six times the inside diameter of the conduit.

The excavations required for the installation of conduit or cable shall be performed in such a manner as to avoid unnecessary damage to streets, sidewalks, landscaping, sprinkler systems and other improvements. Trenches shall not be excavated wider than necessary for the installation of the electrical appurtenances. Excavation shall not be performed until immediately before installation of conduits. The material from the excavation shall be placed in a position not to cause damage or obstruction to vehicular or pedestrian traffic or interfere with surface drainage.

Trenches shall be made with a rock-wheel or other machine capable of cutting a narrow trench (4") so as to allow traffic to pass over prior to back filling. The machine shall be equipped with shields to direct the spoil downward and away from passing vehicles, workmen and pedestrians.

Off-street trenches shall be back-filled with the same material that was removed and shall be compacted and shaped to match the surrounding surface. On-street trenches within all roadway areas shall be back-filled with CDOT approved Structure Backfill (Flow-Fill) and capped with 9" minimum of Hot Mix Asphalt Pavement (Patching) in accordance with Section 403 and City and County of Denver Street Cut Regulations if applicable. If surrounding pavement depth is greater than 9 inches, the HMA (Patching) depth shall match the existing pavement. Patching work to be Approved by the Department.

All surface materials including sprinkler systems, landscaping, shrubs, sod grass, and native growth vegetation which is disturbed by trenching and back-filling operation shall be restored in kind equal to or exceeding the original conditions.

All conduit runs that will not have a copper conductor installed shall have a #14 AWG stranded copper conductor placed inside for locating purposes. Locating conductor and tape shall be included with the work.

Conduit shall always enter a pull box, hand-hole, or any other type structure from the direction of the run only.

All conduit shall be fully compatible with fiber optic cable. Plastic conduit shall be Schedule 80 in the diameters shown on the plans. Each conduit shall be equipped with a pull tape and each bore shall have a copper tracer wire of at least 14 gauge.

-2-

**REVISION OF SECTION 613
CCD ELECTRICAL CONDUIT LATERALS – GENERAL**

Each conduit with a length greater than 400' between pull boxes, shall be equipped with a pull tape. The pull tape shall have a minimum tensile strength of 1250 lbs. and be of a design and manufacture that prevents cutting or burning into the conduit during cable installation.

Plastic PVC conduit shall be certified by the manufacturer as meeting ANSI/UL 6 and 651. The manufacturer shall be ISO 9000 compliant.

If the Contractor is unable to jack or bore the conduit at the lengths shown on the plans from pull box to pull box, all splice couplings and associated work to splice the conduit shall be included with the work. This shall include excavation down to the required depth of conduit at the splice location. All landscape repairs will be required after excavation of conduit at all splice locations. All splice couplings shall be water and air tight and installed at a depth to match the remaining run of conduit. No elevation difference will be allowed. Splices shall be kept to a minimum and all locations shall be Approved by the Department. Additional pull boxes shall not be substituted for splices.

Conduit plugs for sealing conduit shall also be supplied and installed in all open conduit ends as soon as the conduit is installed. Plugs shall be durable, fabricated from no metallic parts, be of the split design to allow removal and reinstallation around in-place cables and be easily removable and reusable. Plugs shall be capable of being installed by hand without any tools and shall provide a water and air tight seal of at least 100 psi and shall cause no damage to the cable when installed.

There may be locations, as shown on the plans, specifications or as directed by the Department, which may require new conduit to be installed into existing pull boxes. The Contractor shall excavate around the pull box, without damaging the existing pull box, and install the new conduit per the requirements of this Special Provision. If the existing pull boxes or concrete collars are cracked or damaged during conduit installation, the Contractor shall be required to replace either or both per the CCD standards, at no expense to the Department or CCD.

Subsection 613.10 shall include the following:

Electrical conduit installed in accordance with these Special Provisions, the Project Standards or as directed by CCD. Electrical conduit will include groundwork, sweeps, pull cord, copper tracer wire, adapters, fittings, splice couplings, conduit plugs (for conduits both with and without fiber optic cable), equipment, labor, and all other items necessary to complete the work.

**REVISION OF SECTION 613
CCD PULL BOXES – GENERAL**

Section 613 of the Standard Specifications is hereby revised for this project as follows:

Subsection 613.07 shall include the following:

All Type A, Type B and Type C pull boxes shall conform to the minimum inside dimensions specified in the City and County of Denver (CCD) Traffic Signal Standards (Drawing 16.1.7). The cover shall be attached to the pull box body by means of screw-in bolts and shall have two lift slots to aid in the removal of the lid. Non-standard bolts shall not be used

Pull boxes Type A and Type B shall be used in all signal conduit installation. The pull box shall have a detachable cover with a skid-resistant surface and have the words "TRAFFIC" or "ELECTRIC" cast into the surface. Painting the words shall not be accepted.

All traffic communication pull boxes shall have the words "TRAFFIC COMM" physically impressed (not painted) on its top. The interconnect pull boxes or Pull Box (Special) shall be the Type C pull box.

When the plans call for a fiber optic cable location marker to be installed at the pull box location, the concrete foundation support for the location marker shall be placed monolithically with the concrete collar.

All concrete collars, footings, and location marker supports shall be Portland Cement Concrete Class B and shall be in accordance with Section 601.

Pull boxes that are to be in traveled ways shall be outfitted with traffic bearing lids rated for HS 20-44 loads. The pull boxes shall have a special concrete footing extending 8 inches around the outside and 6 inches around the inside of the pull box bottom, as shown in the plans. Pull boxes installed in dirt or landscape areas shall have a 12 inch wide by 6 inch thick concrete collar placed around the top in lieu of the concrete footing, as shown in the plans.

Pull Box (Surface Mounted) shall be metal type with a hinged front door and have at least a NEMA 3R rating. The hinged door shall be provided with both a weather tight seal and a key lock mechanism. Surface mounted pull boxes shall be of the dimensions shown in the plans, and shall be mounted on or embedded into hard surfaces such as bridge decks, concrete barriers, retaining walls, or buildings, as shown on the plans. Surface mounted pull boxes shall be attached using 3/8-inch epoxy anchors or other methods, as Approved by the Department. Surface mounted pull boxes shall not be used for ground installations.

**REVISION OF SECTION 614
CCD LED PEDESTRIAN SIGNAL HEAD (COUNTDOWN)**

Section 614 of the Standard Specifications is hereby revised for this project as follows: Subsection 614.01 shall include the following:

This work includes the installation of Light Emitting Diode (LED) Pedestrian Signal Faces with countdown timers as shown in the Contract.

Subsection 614.08 (h) shall include the following:

Pedestrian signal faces with countdown timers shall meet the following requirements:

The dimensions of the signal housing and the LED symbols, as well as moisture and dust resistance requirements shall be in accordance with the current ITE PTCSI Standards.

Signal housing shall be aluminum, painted per CCD standards Federal Green and "clam-shell" mounted. The signal shall have user-selectable modes for countdown for walk cycle only, pedestrian cycle only, or both walk and pedestrian clearance.

The countdown module shall have an internal conflict monitor to prevent any possible conflicts between the Hand/Person signal indications and the time display. The display shall not countdown during a Solid Hand indication.

LED symbols shall be solid icons and shall provide uniform light dispersion such that the "pixel" effect is minimized. Lettered or outline symbol styles will not be permitted. The Man/Hand configuration shall provide clear and distinct lamination where either symbol is in use.

The LED module shall be rated for use in an ambient operating temperature range of -40° F to 165° F.

The signal shall meet NEMA Standard TS2 for voltage surge protection, and shall have an automatic reset in case of a power outage.

REVISION OF SECTION OF 614 CCD TRAFFIC CONTROL DEVICES

Section 614 of the Standard Specification is hereby revised for this project as follows: Subsection 614.08 (h) shall include the following:

Light Emitting Diode (LED) signal lenses shall be installed in all Red, Yellow, Green, Walk and Don't Walk, and Countdown signal displays.

The LED signal lenses for the 12" and 8" circular balls and 12" circular arrows are hereby added to the Standard Specifications and Contractor shall comply with the following specifications:

Manufacturer Requirements and Approvals:

The manufacturer supplying product to this specification shall have a minimum of 13 years of experience in the manufacture of Light Emitting Diode (LED) Traffic Signals with High Flux LEDs used in the North American market.

Manufacturers supplying products to this specification must be a registered participant of the Traffic Signal Modules Certification Program. Manufacturers shall have the unique long life module part numbers being provided certified and listed on the Intertek-ETL LED Traffic Signal Modules Certification Program approved products website prior to ordering equipment.

Manufacturers supplying products to this specification shall manufacture and assemble product on an Intertek ETL audited line located in the USA. Unique part number shall be listed on manufacturers label proving difference between standard modules and long life modules.

If requested, documentation shall be provided by manufacturer demonstrating the changes made to their standard product that allows for ITE specification compliance over 15 year warranty period.

Physical & Mechanical Requirements:

General

Tinted or Non-Tinted Lens. Unless designated lens color shall be tinted with a color as required in paragraph 4.2 of the ITE specification. The products shall be available with non-tinted lenses as an option.

The LED module shall utilize high flux LEDs rated at 1 watt or higher and have an incandescent, non-pixilated appearance when illuminated. The use of low power LEDs, for example 5 mm LEDs, is not permissible in the design and production of long life arrow products.

The external lens shall have a smooth outer surface to prevent buildup of dirt/dust and shall be designed to minimize the potential for sun phantom signals.

All LEDs utilized to illuminate circular signal modules, shall be LEDs that have been manufactured utilizing materials that have industry acceptance as being suitable for uses in outdoor applications. At no time is the use of LEDs that utilize AlGaAs technology acceptable.

-2-

REVISION OF SECTION 614 CCD TRAFFIC CONTROL DEVICES

All plastic components shall be molded and assembled in the USA. This includes: back housing, spreading lens and front lens. Certificate of manufacturing location must be available and supplied at time of ordering.

All lenses shall be hard coated in the USA. Certificate of manufacturing location must be available and supplied at time of bid requested. All reflectors shall be metalized in the USA. Certificate of manufacturing location must be available and supplied at time of ordering.

Module Identification

In addition to the required ITE labeling all modules must be labeled with the ETL Verified label shown in CCD standards. This label designates the compliance and listing with the Intertek- ETL Traffic Signal Certification Program.

Electrical:

General

The following color scheme shall be used for all modules AC power leads: White for Common, Red for the Red ball signal, Yellow for the Yellow ball signal, and Brown for the Green ball signal.

The AC power leads shall exit the module via a rubber grommetted strain relief, and shall be terminated with insulated female quick connect terminals with spade/tab adapters. The leads shall be separate at the point at which they leave the module.

All external wiring utilized in the LED traffic signal module shall be anti-capillary type wire to prevent the wicking of moisture to the interior of the module.

LED module and power supply shall be design to remain ITE compliant over a 15 year life.

To minimize the temperature exposure of the power supply all power supplies should be located at the bottom of the module when the arrow is facing left.

For additional protection from moisture, all power supplies shall be conformal coated for additional protection.

Certified products listing at the time of ordering materials. Upon request, the supplier must provide a copy of the listing in the pre-ordering package.

Transient Voltage Protection

In addition to the transient test requirements defined in the Design Qualification Testing section of ITE Vehicle Traffic Control Signal Heads (VTCSH) specification, all power supplies used in the circular signals supplied to this specification shall be capable of passing an additional ring-wave surge testing in accordance with the IEEE Recommended Practice on Characterization of Surges in Low-Voltage (1000V and less) AC Power circuits, ANSI/IEEE C62.41.2-2002, 6KV, 100 kHz ring-wave with an output impedance of 30 ohms. The short circuit current shall be 200 Amps.

-3-

**REVISION OF SECTION 614
CCD TRAFFIC CONTROL DEVICES**

Power

Typical wattages at 25 o C for the 12" circular arrow LED traffic Signal Modules shall be: Red - 8 watts, Yellow - 13 watts, and Green - 8 watts.

Typical wattages at 25o C for the 12" circular ball LED traffic Signal Modules shall be: Red – 7 watts, Yellow - 11 watts, and Green - 7 watts. Typical wattages at 25o C for the 8" circular ball LED traffic Signal Modules shall not exceed: Red - 8 watts, Yellow - 10 watts, and Green 8 watts.

Upon Request, the supplier must provide an Intertek-ETL test report for the base model being supplied to this specification.

The base products must be listed in the Intertek Directory of LED Traffic Signal Modules

Warranty Requirements:

Manufacturers shall provide a detailed written warranty issued by the factory of module origin with the following minimum provisions:

Modules shall, at the manufacturer's option, be repaired or replaced if the module fails to function as intended due to workmanship or material defects within the first 15 years from the date of delivery.

Modules shall, at the manufacturer's option, be repaired or replaced if the module exhibit luminous intensities less than the minimum specified values within the first 15 years of the date of delivery.

Upon request, the LED lamp module manufacturer shall provide written documentation of its ability to satisfy a worst-case, catastrophic warranty claim.

A current corporate annual report duly-certified by an independent auditing firm, containing financial statements illustrating sufficient cash-on-hand and net worth to satisfy a worst case, catastrophic warranty claim is an example of suitable documentation.

The documentation shall clearly disclose:

The country in which the factory of module origin is located

The name of the company or organization that owns the factory of module origin including any and all of its parent companies and/or organizations, and their respective country of corporate citizenship

For firms with business and/or corporate citizenship in the United States of less than fifteen years, the process by which the end-users/owners of the modules will be able to obtain worst-case, catastrophic warranty service in the event of bankruptcy or cessation of operations by the firm supplying the modules within North America, or in the event of bankruptcy or cessation-of-operations by the owner of the factory of origin, shall be clearly disclosed.

**REVISION OF SECTION 614
CCD TRAFFIC SIGNAL CONTROLLER CABINET**

Section 614 of the Standard Specifications is hereby revised for this project as follows: Subsection 614.01 shall include the following:

This work shall consist of furnishing and installing a new P-type Traffic Controller Cabinet and complete installation of the Traffic Signal Controller Cabinet assembly, malfunction management units (MMU), vehicle detector amplifiers, uninterrupted power supply (UPS), other ancillary hardware, and traffic signal cabinet base per City and County of Denver (CCD) standards.

Delete Subsection 614.08 (c) and replace with the following:

All new cabinets are the P-type cabinets as per the CCD Traffic Standards. Each cabinet shall be installed on a newly installed traffic signal controller cabinet base unless otherwise specified on the plan. Contact Chris Lillie at 720-865-0466 for cabinet assembly requirements and all other necessary auxiliary hardware.

Controller cabinet assemblies shall include an integrated uninterrupted power supply (UPS) units that comply with CCD standards (see CCD Double Conversion Uninterrupted Power Supply System Project Special Provision).

Subsection 614.10 shall include the following:

The Contractor shall demonstrate successful traffic signal operations at all new controller and cabinet locations to the satisfaction of CCD or the Department's designee prior to acceptance of this item. The Contractor shall contact CCD or the Department's designee 3 days before turning on signal. Work shall include all required programming of controllers and establishing or re-establishing all required wiring connections. Phasing and timing information at each location shall be furnished to the Contractor by CCD. Contractor shall allow CCD 30 working day notification prior to needing phasing and timing information.

All new wiring shall conform to CCD and International Municipal Signal Association (IMSA) specifications.

Subsection 614.13 shall include the following:

The installation of traffic signal controllers cabinets shall include all labor, materials, ancillary hardware, traffic signal cabinet base, wiring and wiring re-connection (including Xcel Energy power feed) required to provide successful operation of the item.

REVISION OF SECTION 614 CCD TRAFFIC SIGNAL CABINET BASE

Section 614 of the Standard Specifications is hereby revised for this project as follows:

Subsection 614.01 shall include the following:

This work consists of furnishing and installing a Quazite Traffic Signal Controller Cabinet Base as shown on the plans and in accordance with the CCD standards. The base shall fit the City and County of Denver's P-Type Traffic Signal Controller Cabinet. Dimensions of the base are shown in the following drawing.

Subsection 614.10 shall include the following:

Prior to starting cabinet base installation, the Contractor shall obtain field verification of the location of the base from the CCD or the Department's designee.

Cabinet base installation shall include all labor and materials to completely install a new P-type cabinet base for the controller cabinet as specified in the plans. This is to include all conduit installation and modification work, back-filling, and repair to all surrounding surface/area.

**REVISION OF SECTION OF 614
CCD PEDESTRIAN PUSH BUTTON AND INSTRUCTION SIGN**

Section 614 of the Standard Specification is hereby revised for this project as follows:

Subsection 614.08 (f) shall include the following:

1. Push button assemblies shall be of the direct push button solid state contact type and shall not have any levers, handles or toggle switches externally or internally. The pushbutton shall be of tamperproof and all weather construction. The pushbutton shall have a protective shroud that is an integral part of the cover and it shall encircle the pushbutton actuator to deter vandalism. The assembly shall be made weatherproof and shockproof by means of synthetic rubber gaskets between the cover and the enclosure and between the plunger and the cover so that it shall be impossible to receive an electrical shock under any weather conditions. The front cover plate shall be secured with stainless steel vandal resistant screws. The push button shall operate on logic ground.

2. The solid state switch shall be entirely insulated from the housing and operating button. The pushbutton shall consist of a 2 inch 303 stainless steel metal plunger and an oil and gasoline resistant Piezo driven solid state switch, all encased in a high impact thermoplastic enclosure with 4 stainless steel mounting screws. The solid state switch shall be normally open and shall be closed with a minimum of pressure on the button (3lb ± 1lb), restoring immediately to the normally open position when the pressure is released.

The aluminum housing shall be the flat back frame type with adjustable mounting staves that will readily enable it to be mounted on any size traffic signal pole or push button standard. The housing shall have a ½ inch access hole in the rear for wiring. The housing shall have a bottom threaded conduit entrance hole and shall be provided with a threaded plug so that access is only possible from the rear of the housing. The plug shall not be removable with ordinary tools. The housing shall be painted Dark Olive/Federal Green baked enamel matching to Federal Standard 595A color #14056.

The frame shall have a cast aluminum attachment to allow the mounting of a 9" X 12" pedestrian instruction sign. By removal of 4 screws the frame shall convert to allow the mounting of a 5" X 7 ¾" pedestrian instruction sign.

Pedestrian Instruction Sign.

1. Pedestrian instruction signs shall conform to the latest version of the Manual of Uniform Traffic Control Devices, published by the U.S. Department of Transportation Federal Highway Administration.
2. Pedestrian instruction signs shall be Type R10-3a, Type R10-3b, Type R10-3c, R10-3d, and R10-3e as specified in the contract documents (or bid documents).

Pedestrian instruction signs shall be constructed in accordance with the applicable provisions of the current CCD Standard Specifications. Pedestrian instruction sign need not be reflectorized.

-2-

**REVISION OF SECTION OF 614
CCD PEDESTRIAN PUSH BUTTON AND INSTRUCTION SIGN**

The sign shall be fabricated with 0.063 aluminum. The signs shall be mounted using four 5/16" mounting holes 4" X 6 3/4" for the 5" X 7 3/4" sign and 7" X 10" for the 9" x 12" sign. The pedestrian instruction signs shall have rounded corners 3/4" radius for the 5" X 7 3/4" sign and 1 1/2" radius for the 9" X 12" sign.

**REVISION OF SECTION 614
CCD INTERSECTION DETECTION SYSTEM (CAMERA)**

Section 614 of the Standard Specifications is hereby revised for this project as follows: Subsection 614.01 shall include the following:

This work consists of furnishing and installing a fully-functional video detection system at the intersection as specified on the plans.

Subsection 614.08 shall include the following:

System Hardware:

The machine vision system hardware shall consist of three components: 1) a color, 22x zoom, MVP sensor; 2) a modular cabinet interface unit; 3) a communication interface panel. Additionally, an optional personal computer (PC), based on CCD requirements, shall host the server and client applications that are used to program and monitor the system components. The real-time performance shall be observed by viewing the video output from the sensor with overlaid flashing detectors to indicate the current detection state (on/off). The MVP sensor shall optionally store cumulative traffic statistics internally in non-volatile memory for later retrieval and analysis.

The MVP shall communicate to the modular cabinet interface unit via the communications interface panel and the software applications using the industry standard TCP/IP network protocol. The MVP shall have a built-in, Ethernet-ready, Internet Protocol (IP) address and shall be addressable with no plug in devices or converters required. The MVP shall provide standard MPEG-4 streaming digital video. Achievable frame rates shall vary from 5 to 30 frames/sec as a function of video quality and available bandwidth.

The modular cabinet interface unit shall communicate directly with up to 8 MVP sensors and shall comply with the form factor and electrical characteristics to plug directly into a NEMA type C or D detector rack providing up to 32 inputs and 64 outputs or a 170 input file rack providing up to 16 contact closure inputs and 24 contact closure outputs to a traffic signal controller.

The communication interface panel shall provide 4 sets of 3 electrical terminations for three-wire power cables for up to 8 MVP sensors that may be mounted on a pole or mast arm with a traffic signal cabinet or junction box. The communication interface panel shall provide high-energy transient protection to electrically protect the modular cabinet interface unit and connected MVP sensors. The communications interface panel shall provide single-point Ethernet connectivity via RJ45 connector for communication to and between the modular cabinet interface module and the MVP sensors.

System Software:

The MVP sensor embedded software shall incorporate multiple applications that perform a variety of diagnostic, installation, fault tolerant operations, data communications, digital video streaming, and vehicle detection processing. The detection shall be reliable, consistent, and perform under all weather, lighting, and traffic congestion levels. An embedded web server shall permit standard internet browsers to connect and perform basic configuration, maintenance, and video streaming services.

-2-

**REVISION OF SECTION 614
CCD INTERSECTION DETECTION SYSTEM (CAMERA)**

There shall be a suite of client applications that reside on the host client / server PC. The applications shall execute under Microsoft Windows XP or 7. Available client applications shall include:

Master network browser: Learn a network of connected modular cabinet interface units and MVP sensors, display basic information, and launch applications software to perform operations within that system of sensors.

Configuration setup: Create and modify detector configurations to be executed on the MVP sensor and the modular cabinet interface unit.

Operation log: Retrieve, display, and save field hardware run-time operation logs of special events that have occurred.

Software install: Reconfigure one or more MVP sensors with a newer release of embedded system software.

Streaming video player: Play and record streaming video with flashing detector overlay.

Data retrieval: Fetch once or poll for traffic data and alarms and store on PC storage media.

Communications server: Provide fault-tolerant, real-time TCP/IP communications to / from all devices and client applications with full logging capability for systems integration.

MVP Sensor:

The MVP sensor shall be an integrated imaging color CCD array with zoom lens optics, high-speed, dual-core image processing hardware bundled into a sealed enclosure. The CCD array shall be directly controlled by the dual-core processor, thus providing high-quality video for detection that has virtually no noise to degrade detection performance. It shall be possible to zoom the lens as required for setup and operation. It shall provide JPEG video compression as well as standard MPEG-4 digital streaming video with flashing detector overlay. The MVP shall provide direct real-time iris and shutter speed control. The MVP image sensor shall be equipped with an integrated 22x zoom lens that can be changed using either configuration computer software. The digital streaming video output and all data communications shall be transmitted over the three-wire power cable.

Power: The MVP sensor shall operate on 110/220 VAC, 50/60Hz at a maximum of 25 watts. The camera and processor electronics shall consume a maximum of 10 watts and the remaining 15 watts shall support an enclosure heater.

Detection Zone Programming: Placement of detection zones shall be by means of a PC with a Windows XP or 7 operating system, a keyboard, and a mouse. The PC monitor shall be able to show the detection zones superimposed on images of traffic scenes.

The detection zones shall be created by using a mouse to draw detection zones on the PC monitor. Using the mouse and keyboard it shall be possible to place, size, and orient detection zones to provide optimal road coverage for vehicle detection. It shall be possible to download detector configurations from the PC to the MVP sensor and cabinet interface module, to retrieve the detector configuration that

-3-

**REVISION OF SECTION 614
CCD INTERSECTION DETECTION SYSTEM (CAMERA)**

is currently running in the MVP sensor, and to back up detector configurations by saving them to the PC fixed disks or other removable storage media.

The supervisor computer's mouse and keyboard shall be used to edit previously defined detector configurations to permit adjustment of the detection zone size and placement, to add detectors for additional traffic applications, or to reprogram the MVP sensor for different traffic applications or changes in installation site geometry or traffic rerouting.

Optimal Detection: The video detection system shall optimally detect vehicle passage and presence when the MVP sensor is mounted 30 feet (10 m) or higher above the roadway, when the image sensor is adjacent to the desired coverage area, and when the distance to the farthest detection zone locations are not greater than ten (10) times the mounting height of the MVP. The recommended deployment geometry for optimal detection also requires that there be an unobstructed view of each traveled lane where detection is required. Although optimal detection may be obtained when the MVP is mounted directly above the traveled lanes, the MVP shall not be required to be directly over the roadway. The MVP shall be able to view either approaching or receding traffic or both in the same field of view. The preferred MVP sensor orientation shall be to view approaching traffic since there are more high contrast features on vehicles as viewed from the front rather than the rear. The MVP sensor placed at a mounting height that minimizes vehicle image occlusion shall be able to simultaneously monitor a maximum of six (6) traffic lanes when mounted at the road-side or up to eight (8) traffic lanes when mounted in the center with four lanes on each side.

Count Detection Performance: Using an installed camera that meets the optimal viewing specifications described above for count station traffic applications, the system will be able to accurately count vehicles with at least 98% accuracy under normal operating conditions (day and night), and at least 93% accuracy under artifact conditions.

Artifact conditions are combinations of weather and lighting conditions that result from shadows, fog, rain, snow, etc. The volume count will be accumulated for the entire roadway (all traveled lanes), and accumulated over time intervals that contain a minimum of one hundred (100) vehicles to ensure statistical significance.

Demand Presence Detection Performance: Using an installed camera that meets the optimal viewing specifications described above for intersection control traffic applications, the system will be able to accurately provide demand presence detection.

The demand presence accuracy will be based on the ability to enable a protected turning movement on an intersection stop line, when a demand exists. The probability of not detecting a vehicle for demand presence will be less than 1% error under all operating conditions. In the presence of artifact conditions, the MVP will minimize extraneous (false) protected movement calls to less than 7%.

To ensure statistical significance, the demand presence accuracy and error will be calculated over time intervals that contain a minimum of one hundred, protected turning movements.

-4-

REVISION OF SECTION 614 CCD INTERSECTION DETECTION SYSTEM (CAMERA)

These performance specifications will be achieved with a minimum of 2 presence detectors coupled with a single detector function (Type-9) to provide adequate road coverage to sample the random arrival pattern of vehicles at the stop line.

The calculation of the demand presence error will not include turning movements where vehicles do not pass through the presence detectors, or where they stop short or stop beyond the combined detection zones.

Speed Detection Performance: The MVP will accurately measure average (arithmetic mean) speed of multiple vehicles with more than 97% accuracy under all operating conditions for approaching and receding traffic.

The average speed measurement will include a minimum of 100 vehicles in the sample to ensure statistical significance. Optimal speed detection performance requires the camera location to follow the specifications described above for count station traffic applications with the exception that the camera must be higher than 13 m (40) feet.

The MVP will accurately measure individual vehicle speeds with more than 94% accuracy under all operating conditions for vehicles approaching the camera (viewing the front end of vehicles), and more than 90% accuracy for vehicles receding from the camera (viewing the rear end of vehicles).

These specifications will apply to vehicles that travel through both the count and speed detector pair and will not include partial detection situations created by lane-changing maneuvers.

To ensure statistical significance, the average speed accuracy and error will be calculated over time intervals that contain a minimum of one hundred vehicles.

Using a MVP sensor installed within the optimal viewing specifications described above or count station traffic applications

Modular Cabinet Interface Unit:

The modular cabinet interface unit shall provide the hardware and software means for up to eight (8) MVP sensors to communicate real-time detection states and alarms to a local traffic signal controller. It shall comply with the electrical and protocol specifications of the detector rack standards. The card shall have 1500 Vrms isolation between rack logic ground and street wiring.

The modular cabinet interface unit shall be a simple interface card that plugs directly into a 170 input file rack or a NEMA type C or D detector rack. The modular cabinet interface unit shall occupy only 2 slots of the detector rack. The modular cabinet interface unit shall accept up to sixteen (16) phase inputs and shall provide up to twenty-four (24) detector outputs.

Communications Interface Panel:

The communications interface panel shall support up to eight MVPs. The communications interface panel shall accept 110/220 VAC, 50/60 Hz power and provide predefined wire termination blocks for MVP power connections, a Broadband-over-Power-Line (BPL) transceiver to support up to 10MB/s

- 5 -

**REVISION OF SECTION 614
CCD INTERSECTION DETECTION SYSTEM (CAMERA)**

interdevice communications, electrical surge protectors to isolate the modular cabinet interface unit and MVP sensors, and an interface connector to cable directly to the modular cabinet interface unit.

The interface panel shall provide power for up to eight (8) MVP sensors, taking local line voltage 110/220 VAC, 50/60 Hz and producing 110/220 VAC, 50/60 Hz, at about 30 watts to each MVP sensor. Two ½-amp SLO-BLO fuses shall protect the communications interface panel.

System Installation & Training:

The supplier of the video detection system shall supervise the installation and testing of the video detection system and computer equipment as required CCD. Training shall be available to personnel of CCD in the operation, set up, and maintenance of the video detection system. The MVP sensor and its support hardware / software is a sophisticated leading-edge technology system. Proper instruction from certified instructors shall be required to ensure that the end user has complete competency in system operation. The User's Guide is not an adequate substitute for practical classroom training and formal certification.

Warranty, Service, & Support:

For a minimum of 3 years, the supplier shall warrant the video detection system. An option for additional year(s) warranty for up to 6 years shall be available. Ongoing software support by the supplier shall include software updates of the MVP sensor, modular cabinet interface unit, and supervisor computer applications.

These updates shall be provided free of charge during the warranty period. The supplier shall maintain a program for technical support and software updates following expiration of the warranty period. This program shall be available to CCD in the form of a separate agreement for continuing support.

Subsection 614.13 shall include the following:

The item shall include all labor, materials, ancillary hardware, training and warranty required to provide a fully-functional system to the satisfaction of the Department.

**REVISION OF SECTION 614
CCD EMERGENCY VEHICLE TRAFFIC SIGNAL PRIORITY CONTROL SYSTEM**

Section 614 of the Standard Specifications is hereby revised for this project as follows: Subsection 614.08 shall include the following:

System Description:

The emergency vehicle traffic signal priority control system shall enable designated vehicles to remotely cause the traffic signal controller to advance to and/or hold a desired traffic signal display by using existing controller functions. The control shall be activated at a minimum distance of 548.6M (1,800 feet) along an unobstructed "line of sight" path. The control shall not terminate until the vehicle is within 12.2M (40 feet) of the detector or at the intersection.

The system shall consist of the following components:

- (a) Vehicle emitter which shall be mounted on the emergency vehicle and shall transmit optical energy signals only in the forward direction. If the municipality presently uses optical pre-emption, the emitters shall be of the same manufacture currently used by the City and County of Denver (CCD) Fire Department.
- (b) Phase Selector (minimum 2 channels) which shall cause the signal controller to advance to and/or hold the desired traffic signal display for the emergency vehicle. A pre-emption system chassis shall house two phase selectors.
- (c) Optical detector which shall be mounted on or near a traffic signal and shall receive the optical energy signals generated by the vehicle emitter.
 - 1. Detector (Type A), 1 Direction, 1 Channel
 - 2. Detector (Type B), 2 Direction, 1 Channel
 - 3. Detector (Type C), 2 Direction, 2 Channel
- (d) Detector Cable (Optical).

System Operations:

- (a) The operating sequence shall be initiated when the optical detector receives the required optical energy signal from the Emitter.
- (b) The phase selector shall cause the traffic signal controller to advance to and/or hold the desired traffic signal display for the emergency vehicle.
- (c) The phase selector shall cause the controller to advance to and/or hold the desired traffic signal display even if the optical energy signals cease before the desired display is obtained.
- (d) The phase selector shall allow the traffic signal controller to resume normal operation within ten seconds after optical energy signals cease if the optical energy signals cease after the desired traffic signal display is obtained.

-2-

**REVISION OF SECTION 614
CCD EMERGENCY VEHICLE TRAFFIC SIGNAL PRIORITY CONTROL SYSTEM**

- (e) The phase selector shall not respond to optical energy signals from an emergency vehicle if it is already processing optical energy signals from another emergency vehicle.

System Components:

- (a) Vehicle Emitter.

The emitter assembly consists of an emitter and power supply and an emitter control switch assembly. The emitter assembly is mounted on a vehicle and produces a flashing optical signal when in operation. The following shall apply to the vehicle emitter:

1. Shall operate on ten to fifteen volts DC input voltage, but shall not be damaged by input voltage surges up to twenty-five volts DC.
2. Shall be controlled by a single on/off switch that requires no other adjustments by the operator. The on/off condition shall be indicated by a light located adjacent to the switch.
3. Shall be automatically disabled or de-activated by one or a combination of the following: seat switch, emergency brake switch, door switch, and transmission safety switch.
4. Shall operate over an ambient temperature range of minus 34O C to plus 60O C. (minus 300 F. to plus 140O F.)
5. Shall operate in 0 to 95 % humidity.
6. Shall be a pulsed optical energy source with a controlled repetition rate.
7. Shall not generate voltage transients on the battery input line which exceed battery voltage by more than four volts.
8. Shall produce optical energy in a cone of not more than 90 degrees horizontal and not more than 30 degrees vertical. The detectors and/or phase selector shall not sense a pre-emption signal from an emitter outside this cone.

- (b) Optical Detector.

The optical detector receives the high intensity optical pulses produced by the emitter. These optical energy pulses are transformed by the detector into appropriate electrical signals which are transmitted to the phase selector. The optical detector is mounted at or near the intersection in a location which permits an unobstructed line of sight to vehicular approaches. The units may be mounted on signal span wires, mast arms or other appropriate structures. The following shall apply to the optical detector:

1. Shall produce optical energy in a cone of not more than 90 degrees horizontal and not more than 30 degrees vertical. The detectors and/or phase selector shall not sense a pre-emption signal from an emitter outside this cone.

-3-

**REVISION OF SECTION 614
CCD EMERGENCY VEHICLE TRAFFIC SIGNAL PRIORITY CONTROL SYSTEM**

2. Shall be of solid state construction.
3. Shall operate over an ambient temperature range of minus 34O C to plus 60O C. (minus 300 F. to plus 140O F.)
4. Shall have internal circuitry potted in a semi-flexible compound to ensure moisture resistance.
5. Shall operate in 0 to 95 % humidity.
6. Shall have a cone of detection of not more than 13 degrees. The detector and/or phase selector shall not sense a pre-emption signal from an emitter outside this cone.

(c) Phase Selector.

The phase selector supplies power to and receives electrical signals from the optical detector. When detector signals are recognized as a valid call, the phase selector causes the signal controller to advance to and/or hold the desired traffic signal display. This is accomplished by activating the pre-empt input to the controller.

The phase selector is capable of assigning priority traffic movement to one of two channels on a first-come, first-serve basis. Each channel is connected to select a particular traffic movement from those normally available within the controller. Once a call is recognized, "commit to green" circuitry in the phase selector functions so that the desired green indication will be obtained even if optical communication is lost. After serving a priority traffic demand, the phase selector will release the controller to follow normal sequence operation. The following shall apply to the phase selector:

1. Shall include an internal power supply to supply power to the optical detectors.
2. Shall have minimum two-channel operation with the capability of interfacing with an additional phase selector for expansion of channels of operation.
3. Shall have adjustable detector range controls for each channel of operation, from 12M (40 feet) to 548M (1800 feet).
4. Shall have solid state indicator lights for power on and channel called.
5. Shall operate over an ambient temperature range of minus 34O C to plus 60O C (minus 300 F. to plus 140O F.)
6. Shall operate in 0 to 95 % humidity.

(d) Detector Cable (Optical).

The following shall apply to the detector cable:

1. 3-Conductor cable with shield and ground wire.

-4-

**REVISION OF SECTION 614
CCD EMERGENCY VEHICLE TRAFFIC SIGNAL PRIORITY CONTROL SYSTEM**

2. AWG #20 (7x28) stranded.
3. Individually tinned copper strands.
4. Conductor insulation: 600 volt, 75 deg. C (167O F.).
5. 1 Conductor-yellow; 1 Conductor-blue; 1 Conductor-orange.
6. Aluminized mylar shield tape or equivalent.
7. AWG #20 (7x28) stranded uninsulated drain wire
8. DC resistance not to exceed 11.0 ohms per 305M (1000 feet).
9. Capacitance from one conductor to other two conductors and shield not to exceed 157pf/M (48pf /ft.).
10. Jacket: 600 volts, 80 deg. C (176O F.), minimum average wall thickness -1.14mm (.045").
 - i. Finished O.D.: 7.62mm (0.3") max.

System Interface:

System shall be capable of operating in a computerized traffic management system when appropriate interfacing is provided by the computer supplier.

General:

The Contractor shall furnish the manufacturer the phasing diagrams indicating controller sequence and timing.

The Contractor shall secure from the manufacturer a guarantee for the equipment for a period of 60 months, which time shall commence from the date of delivery. Manufacturer shall certify upon request that all materials furnished will conform to this specification. The manufacturer or his designated representative shall be responsible for determining and setting all required range and emitter intensity for the emergency vehicle operation.

Construction Methods:

All equipment except the vehicle emitter assembly shall be installed and wired in a neat and orderly manner in conformance with the manufacturers' instructions. The vehicle emitter assembly shall be delivered to a designated CCD representative.

Installation of the vehicle emitter assembly shall be the responsibility of the CCD Fire Department.

-5-

**REVISION OF SECTION 614
CCD EMERGENCY VEHICLE TRAFFIC SIGNAL PRIORITY CONTROL SYSTEM**

Traffic signals owned by the State that have optical pre-emption equipment owned and maintained by the CCD shall have an Auxiliary Equipment Cabinet (AEC) attached to the controller cabinet if required by the CCD Traffic Engineer. The optical pre-emption equipment shall be housed in the AEC.

Detector cables shall be continuous with no splices between the optical detector and the AEC. Detector locations shown on the plan are for illustration purposes. Exact location shall be determined by the Contractor or the Department's designated representative for the best possible line of sight.

If not present in an existing traffic controller cabinet, the following items shall be installed and connected, in conformance with the current CCD specifications for Traffic Control Equipment, "D" Cabinet Requirements (Pre-emption Type):

1. Controller "D" harness and adapter.
2. Pre-emption termination panel with terminal block and relay bases.
3. Pre-emption disconnect switch, mounted on the emergency switch panel (on inside of cabinet door).
4. Pre-emption test buttons, mounted on the pre-emption termination panel.

All connections from the phase selector to the "D" harness and to the cabinet wiring shall be made at the termination panel. The termination panel shall have AC+ Lights, AC-, and a switched logic ground. The switched logic ground feeds all the pre-empt inputs to the phase selector. When switched off by the pre-emption disconnect switch, the traffic controller shall not be affected by pre-empt calls from the optical pre-emption system. A minimum of two test buttons shall be provided. If there are more than two pre-empt runs, a button for each shall be installed. A chart or print out indicating the program steps and settings shall be provided along with the revised cabinet wiring diagrams.

Contractor shall test the pre-emption system per the following:

1. Notify the system owner/user, such as the CCD Fire Chief and CCD Traffic Engineer, for the scheduled inspection
2. Request a CCD Fire Department representative and an emergency vehicle, which has an emitter to conduct the test. If not available, the Contractor shall provide an emitter.
3. In the presence of the Engineer and the municipal representative, test each pre-empted approach with the emergency vehicle. Test the following items of the system:
 - i. Confirm that the emitter activates the phase selector and the phase selector activates the correct pre-emption input to the controller.
 - ii. Confirm adequate range. The traffic signal must be pre-empted to green sufficiently in advance of the emergency vehicle arrival. The vehicle emitter shall initiate pre-emption at a minimum distance of 548.6M (1800 feet).

-6-

**REVISION OF SECTION 614
CCD EMERGENCY VEHICLE TRAFFIC SIGNAL PRIORITY CONTROL SYSTEM**

- iii. Confirm there are no false calls. Keep the emitter active as the emergency vehicle passes through the intersection. No other optical detectors shall sense the strobe.
4. Document the test. Provide the CCD Traffic Engineer and, upon request, the municipality copies of the test results.

If a malfunction is found or the system needs adjustment (such as range, emitter intensity, or detector location), schedule a follow-up test. Repeat the above steps for all approaches that did not pass.

All adjustments such as emitter intensity, phase selector range, sensitivity, detector placement, shall be made at the intersection by the Contractor so that the optical pre-emption operates correctly with other major manufacturers' equipment currently owned by the town.

Subsection 614.13 shall include the following:

Emergency Vehicle Traffic Signal Priority Control System units shall include a four-channel card and the number of detectors as shown on the plans. The item shall include all labor, materials, and ancillary hardware required to provide a fully functioning system to the satisfaction of CCD.

**REVISION OF SECTION 614
CCD TRAFFIC SIGNAL POLES – GENERAL**

Section 614 of the Standard Specifications is hereby revised for this project as follows: Subsection 614.08 (g) shall include the following:

Traffic Signal Poles.

All traffic signal poles and mast arms shall conform to City and County of Denver (CCD) Standards and the local utility company's (Xcel Energy) requirements. The traffic signal pole standards are shown below:

All traffic signal poles shall include a 10 foot long luminaries mast arm and a 250 WATT high pressure sodium curvilinear style luminaries in accordance with the current City and County of Denver Standards. Prior to order of traffic signal poles, mast arms and luminaries, Contractor shall submit material specifications to the CCD Traffic Engineering Services for Approval.

All traffic signal mast arm poles and mast arms shall be powder coated in accordance with the following specifications:

General

Super Durable Powder Coating: The super durable powder coating shall consist of a Urethane or Triglycidyl Isocyanurate (TGIC) Polyester Powder, and provide a minimum of 3 times the gloss retention, color retention and ultraviolet light (UV) resistance as standard powder coatings. Color shall be dark olive green, in conformance with Federal Specification No. 14056.

Surface Preparation.

The exterior steel surface shall be blast cleaned to Steel Structures Painting Council Surface Preparation Specification No. 6 (SSPC-SP6) requirements utilizing cast steel abrasives conforming to the Society of Automotive Engineers (SAE) Recommended Practice J827. The blast method is a recirculating, closed cycle centrifugal wheel system with abrasive conforming to SAE Shot Number S280.

The exterior and interior surfaces of the pole shafts shall be hot dip galvanized from the base end for a length of approximately 12.0'.

Interior Color.

Interior surfaces (pole shafts only) at the base end for a length of approximately 2.0' shall be mechanically cleaned and coated with a zinc rich epoxy powder. The coating shall be electrostatically applied and cured in a gas fired convection oven by heating the steel substrate to a minimum of 350 degrees Fahrenheit and a maximum of 400 degrees Fahrenheit.

Exterior Coating.

All exterior surfaces shall be coated with Urethane or Triglycidyl Isocyanurate (TGIC) Polyester Powder to a minimum film thickness of 2.0 mils (0.002"). The coating shall be electrostatically applied and cured in a gas fired convection oven by heating the steel substrate to a minimum of

-2-

**REVISION OF SECTION 614
CCD TRAFFIC SIGNAL POLES – GENERAL**

350 degrees Fahrenheit and a maximum of 400 degrees Fahrenheit. The thermosetting powder resin shall provide both intercoat as well as substrate fusion adhesion that meets 5A or 5B classifications of ASTM D3359.

Packaging.

Prior to shipment, small poles shall be wrapped in 0.188" thick Ultraviolet inhibiting plastic backed foam. Larger poles shall be cradled in a 1.0" rubberized foam base.

Handling and Shipment.

Poles shall be handled in a manner that will preserve the overall appearance and prevent damage to the coating. The use of chains or cables for loading, unloading, or installing is prohibited. Only ¾ inch diameter or larger nonabrasive nylon rope or equivalent nylon belting will be used. Adequate hold-downs and appropriate blocking shall be utilized for shipping to prevent load movement and damage to the outer coating in transit. No handling should be allowed until "dry through" condition has been achieved with the coating.

Delivery, Installation, and Acceptance of Poles.

Extra care will be taken not to damage the coating. Upon arrival of the poles at the delivery point, neither chains nor cables will be used to either unloading or installation of poles.

Procedure for Field Touch-Up.

The pole manufacturer will furnish extra paint, both primer and color coat, to satisfy the needs of field touch-up requirements, in the event of minor physical damage to the coating from handling or transit. Damaged area must be clean and dry before repair application. Field touch-up will be at the direction of the pole manufacturer or their authorized representative.

**REVISION OF SECTION 614
CCD TRAFFIC SIGNAL CONTROLLER
(SOLID STATE) (FULL-ACTUATED) (12 PHASE)**

Section 614 of the Standard Specifications is hereby revised for this project as follows: Delete Subsection 614.08 (b), and replace with the following:

Traffic Signal Controllers – General

This specification sets forth the minimum requirements for a shelf-mountable, two through twelve phases, fully-actuated, digital, solid-state traffic controller. The controller shall meet, as a minimum, all applicable sections of the NEMA Standards Publication No. TS2-1998. Where differences occur, this specification shall govern. Controller versions shall be available to comply with NEMA TS2"Types 1 and 2. Type 2 versions of the controller shall be capable of operating as a Type 1.

The controller shall meet or exceed the specifications of the Econolite Cobalt Fully Actuated ATC Controller (http://cobalt.econolite.com/pdf/Cobalt_ATCTouch_Hardware_Specification.pdf), or an equivalent approved by the City and County of Denver (CCD) Traffic Engineering Services.

Subsection 614.09 shall include the following:

The Contractor shall deliver the traffic signal controller, and cabinet assemblies and other auxiliary hardware, to the CCD Traffic Operations Center at 5440 Roslyn Street, Building E, Denver, Colorado 80216; 6 weeks before installation for controller programming. The Contractor shall coordinate the pick-up of the controller and cabinet assembly from the CCD Traffic Engineering Services and shall install it at the proper location. The Contractor shall coordinate pick-up times with Chris Lillie at 720-865-4066.

The controller shall be installed in accordance with the details shown in the plans and in accordance with manufacturer's recommendations.

Subsection 614.13 shall include the following:

Traffic Signal Controller (Solid State) (Full Actuated) (12 phase) shall include pedestrian detectors and all auxiliary equipment required on the plans and shall include all work necessary to provide and install a complete system. Connection of the controller to the fiber optic interconnect system is included with this work.

REVISION OF SECTION 614 RAMP METERING CONTROLLER

Section 614 of the Standard Specifications is hereby revised for this project as follows:

In subsection 614.08, delete (b) and (c) and replace with the following:

(b) *Ramp Metering Controllers – General.* Each controller shall be an Advanced Transportation Controller (ATC) of the same model acquired from the ATC manufacturer procured under CDOT Request for Proposal #RFP 16-118 RH¹.

Each ATC shall include the ramp metering firmware. The ramp metering firmware shall be compatible with the central ramp metering software.²

The ATC hardware and ramp metering firmware to be provided for this Project must be approved in writing by CDOT prior to procurement by the Contractor.

In addition to the manual two "D" size (24" x 34.5") drawings of all schematics and assembly prints contained in the manual shall be supplied for each twenty controllers or revisions change.

Section 1.8.5.3.3 shall be modified to read "A minimum 100-hour burn-in of all modules is required. This burn-in shall include 48 hours of monitored testing at the high and low temperatures as described in 1.8.3.7.1 and 1.8.3.7.2."

Controller Cabinets. The controller cabinet shall be Model 334. Each cabinet shall be natural aluminum with anchor bolts in accordance with the FHWA-IP-78-16 specification. The input files shall meet the requirements of the split input file below. Unless otherwise specified in the Contract, the cabinet shall include the following:

Quantity	Item
1 ea	ATC
2 ea	Internal (1 per door) fluorescent lamps
2 ea	Model 430 Transfer Relays
1 ea	PDA-3 with Model 206 24 VDC power supply
2 ea	Model 204 2-circuit Flasher (cube type, 25 AMP output)
3 ea	Model 200 Load Switch (cube type, 25 AMP output with I/O indications)
1 ea	208 Watchdog Monitor - Developer shall be responsible for providing any additional accessories needed for connectivity to ATC, e.g., jumpers, connectors, etc., per Section 7 of the ATC Standard Version 6.
1 ea	New York 330 Pull-out Drawer Assembly
1 ea	Transient Voltage Surge Suppression
1 ea	Split Input File
1 ea	Standard Output file with terminal strips
1 ea	PDA Power Supply

Each cabinet shall have two doors and Corbin #2 Locks.

¹ Note to Proposers: Anticipated date of executed contract is end of June or beginning of July 2016. This Section 11 will be updated in a future Addendum once further details of the ATC model are known.

² Note to Proposers: The firmware and software have not yet been selected by CDOT. This Section 11 will be updated in a future Addendum once further details are known.

-2-

REVISION OF SECTION 614 RAMP METERING CONTROLLER

The cabinet shall have a powder coating base TCI WHEEL SILVER #9811-0110 Polyester TGIC Powder Coating and top coating shall be TCI ANTI GRAFFITI Power paint applied at a thickness of 2.4 mils.

The cabinet shall have a hinged protective shield over the Circuit Breakers to prevent them from being accidentally turned off. The hinged shield shall be mounted in such a way that the switches are still readily visible to the technician and can be easily turned on or off.

Split Input file. The split input file shall be an SF 170, which will operate in the standard 332/336 cabinets. The Split Input File shall use the same form factors as the present (older) input file and shall be completely interchangeable with these older input files except as follows. The input file shall use a split 22-pin connector (2 rows or 22 pins) which provide for 44 unique contacts, rather than the 22 double contacts as provided by the former input file.

This design shall interface electrically with the older 2 and 4 channel devices available under the 170 and NEMA TS1 specification as well as the newer 2 and 4 channel devices as specified in the TS2 NEMA specification.

The input file shall be divided into two partitions. The first partition shall include the first eight slots from the left; the second partition shall include the next six slots.

The serial/TTL Transmit and receive pairs shall be wired across the back panel. TXO, DXO, and Ground0 serve the first eight slots; TX1, DX1 and Ground1 serve the next six slots. Back plane addressing is automatically assigned in the rear of the input file, such that Slot 1 – Address 0, Slot 2 – Address 1 . . . Slot 8 = Address 7(all three lines low)

Addressing from the front of any input device shall override the back plane addressing.

Serial connections shall use a standard quick lock connection.

Transient Voltage Surge Suppression System. Transient Voltage Surge Suppression (Surge Protection) shall be a solid-state device with a maximum surge current capacity of 6500 peak current amps x 1 @ 8 X 20 microsecond wave.

The unit shall be UL recognized, both 1449 and 508. The enclosure is to be rated as a NEMA 1 and resistant to oil, moisture, dust and other airborne contaminants.

The units shall be fused (no thermo fusing allowed). Components shall be suitably spaced and have a sub-nanosecond response time (potting compound is not allowed). The Surge Protection is to be suitable for continuous line voltage of a maximum of 130 volts. Nominal clamping voltage shall be no more than 200 volts.

Unit shall have a failure indicator and alarm suitable for RTU connection.

The operating temperature shall be -40°C to +70°C EMI-RFI noise attenuation to 40 dB. Capacitance shall be 1 to 1.5 microfarad per line.

Neutral to ground/phase to ground connection is not allowed. The Unit shall be modularly designed for quick replacement with no tools needed.

-3-

**REVISION OF SECTION 614
RAMP METERING CONTROLLER**

The Unit shall be mounted no more than 8 inches from the incoming power termination point and terminated in parallel with the incoming power.

The Manufacturer must have a satisfactory performance record with this specific device for a minimum of five years.

All of the above components provided, excluding the signal monitor unit, shall be on the CDOT Approved Products list.

**REVISION OF SECTION 614
CCD DOUBLE CONVERSION UNINTERRUPTED POWER SUPPLY SYSTEM**

Section 614 of the Standard Specifications is hereby revised for this project as follows:

Subsection 614.08 shall include the following:

The double conversion uninterruptible power supply system (UPS) shall provide emergency battery power to the traffic signal controller. The work consists of furnishing and installing an UPS in accordance with the City and County of Denver's standards and shall conform to the following specifications:

Operation.

The UPS system shall be capable of producing a fully regenerated, conditioned, pure sine wave AC. The online operational mode shall be continuous to all loads. It shall incorporate a high frequency Pulse-Width Modulated technology and shall use an input rectifier, charger, battery and inverter in a single board configuration. The UPS double conversion UPS shall provide a clean, pure AC sine-wave output at all times with a voltage input variation of 85VAC to 145VAC while providing 120VAC to the connected load at all times. The UPS shall be capable of operating in the voltage range of 85VAC to 135VAC without using the batteries and always provide a regulated output to the protected loads.

The Input rectifier shall be rated at 2.5 times the output rating of the inverter.

The Inverter circuit shall be in continuous operation at all times (constant duty). The inverter shall be rated for 100% duty cycle and simultaneously fed from the rectifier and battery to eliminate any switching to battery or transitions during power fluctuations or power interruption. The inverter's output shall be pure clean sine wave with an efficiency of up to 85%.

The constant duty operation shall be rated in total watts. This will enable the traffic UPS to support any combination of signal heads whether Incandescent, LED or Neon, by any manufacturer, regardless of power-factor.

The UPS shall be capable of operating from a generator source without the need for over-sizing the UPS system. During operation from a generator source, the UPS shall operate in a normal fashion and provide filtered and regulated power with or without automatic input/output frequency synchronization. Upon excessive generator frequency drift, the UPS shall compensate through regeneration and supplying both continuous frequency and voltage regulation to the protected load.

The UPS shall be capable of glitch ride through capabilities and provide a seamless output to the connected load during this anomaly without the use of the batteries.

The UPS shall be capable of providing an overload output rating of 120% for 60 seconds, 150% for 10 seconds to any combinations of signal types whether Incandescent, LED or Neon during inrush or overload conditions.

The UPS shall have an internal static bypass that will transfer to line power if over load exceeds 150% for more than 5 sec. This bypass will maintain the load until this overload has cleared.

-2-

**REVISION OF SECTION 614
CCD DOUBLE CONVERSION UNINTERRUPTED POWER SUPPLY SYSTEM**

The UPS shall have a separate Neutral detecting circuit that shall monitor loss of utility neutral and completely disconnect any input source to the UPS system.

The UPS shall have an input back feed relay operating in series with the Neutral monitoring circuit.

Upon loss of utility power, the UPS inverter shall continue to provide seamless pure sine-wave AC from the batteries without switching, transfer or changing its' operating status. The UPS will use the battery mode in '0' ms. This will insure that the UPS provides pure sine wave power under all conditions, at all times without interruption.

The UPS will continue to provide generated AC from the inverter until the batteries are depleted. When the batteries have been depleted, the UPS will ensure upon the return of Utility Power that the UPS will restart automatically and provide regenerated AC to the protected equipment and allow the equipment to resume normal operation.

The UPS shall be capable of operating in a full regenerated, power-conditioning mode with depleted batteries or failed batteries. The regenerative power conditioning will ensure that there will be regulated and conditioned pure AC power to the equipment. This regenerative mode will provide extended brown-output protection with wide input line regulation, noise filtering and surge protection.

The UPS shall operate in an uninterruptible regenerative on-line mode during flash or normal signal operation.

The UPS shall be rated at Unity Power Factor. The output VA and Watts rating shall be equal on the output at all times.

The UPS shall be capable of COLD starting without AC present and provide AC power to the load.

The UPS shall be capable of self diagnostics during start up or with the use of the front panel TEST button.

The UPS case shall be constructed from .064 aluminum and carbon steel.

The UPS input and output connections shall be Anderson Power Pole quick lock connector to eliminate exposed terminals or connections.

The UPS to bypass interconnect harness shall be reversible with matching Anderson Power connectors that will prevent risk of shock, or damage to the connected equipment.

The UPS shall be capable of Hot-Swapping the batteries or battery bank, without shutting down the UPS.

-3-

REVISION OF SECTION 614
CCD DOUBLE CONVERSION UNINTERRUPTED POWER SUPPLY SYSTEM

The UPS shall be capable of being Hot-Swapped during normal operation when used with the external Hot Swap Bypass. The UPS may also be shut-off with the Hot Swap Bypass in place without loss of AC to the loads.

The UPS shall be capable of providing a replaceable relay card with relay output contacts for AC fail, Inverter ON, Low Battery, Battery Fail, Bypass and Alarms.

The UPS relay card may be replaced with an SNMP card for SNMP communications and information.

The UPS shall provide a programmable Dry Relay output for flash.

The contacts shall be provided in N/O and N/C positions. The delay timer shall be a maximum of 10 hours.

The timer shall be front panel mounted.

The Timer dial shall be 4.7 inches in circumference.

The timer shall have a scale in increments of 1s to 10seconds. This scale can be changed to indicate 1 minute, to 10 minutes or a maximum scale of 1 hour to 10 hours.

The scale shall be controlled by two (2) separate dip switches on the timer face.

The timer shall indicate using a flashing RED LED that the timing function is operating. The timer shall use a steady RED LED to indicate that the timing is now completed

The timer shall count in a down mode to '0' from the preset time indicated on the scale.

The LED indicators shall provide status for AC line, UPS Battery Mode, Charging, Low Battery, Fault, Bypass, Percentage of Load and Battery Charge.

The Event counter and Hour meter may be reset to '0' using separated buttons.

The UPS shall have a battery charger rated at 200 watts @ 36VDC with an optional of 400 watts.

This charger shall be completely separate from the rectifier/inverter included with the main UPS board.

The UPS chargers may be used in a parallel configuration for increased charger ratings.

The UPS uses a redundant internal 1 amp charger that will continue to charge the batteries if the separate board charger fails.

The UPS may be used with redundancy in mind with the use of the Dual Hot Swap Option. That will provide a secondary UPS source in less than 20ms. The Secondary UPS may be connected to the alternate input of the Hot Swap Bypass.

-4-

**REVISION OF SECTION 614
CCD DOUBLE CONVERSION UNINTERRUPTED POWER SUPPLY SYSTEM**

The Flash programming shall be a simple and field programmable without the use an external connected device such as a laptop or computer.

The Hot swap Bypass shall allow the UPS to be removed or installed at any time during normal load operation.

The UPS shall include standard graphical real time software and connection cable.

The UPS shall be capable of sending programmable system alarms to the Econolite "icons" Traffic Management System.

Physical Description.

The UPS shall consist of 3 major components. The Main board Rectifier/Inverter, charger and control board.

The Main Board shall consist of a True-Sine-Wave constant duty high frequency inverter utilizing High-Frequency Pulse-Width Modulated technology.

The Input Rectifier shall be rated for the total wattage output rating of the UPS including the

150% overload and the charger rating. The inverter shall be a high efficiency constant duty design with and efficiency of 83%. The inverter shall include its' own static bypass which provides an alternate AC path during overload and or Inverter alarm conditions.

The heat-sink shall be a continuous aluminum extrusion design with plenum directed airflow cooling. The 12VDC dual stage cooling fans shall be variable speed controlled by the logic board.

The charger portion shall be a 3 stage Hysterisis .5 amp, 36 or 72VDC charger with temperature compensation. The supplementary charger, is a parallel design rated for 200, 500 and 1000 watts.

The Electronic Control board shall monitor the Rectifier and Inverter functions. It shall also provide the overall control of all the UPS functions and or operational capabilities.

Mounting Configuration.

The UPS shall be shelf mounted or rack mounted per the documents. Shelves and cabinets shall be supplied by others. Where rack mounting is required, the 170 style mounting method shall be a 19 inch rack mount. Rack mounting ears shall be removable.

A separate stand alone NEMA Traffic cabinet may be supplied if required in the plans and specifications.

Four rubber feet shall be installed on the bottom of the unit for shelf mounting.

-5-

**REVISION OF SECTION 614
CCD DOUBLE CONVERSION UNINTERRUPTED POWER SUPPLY SYSTEM**

Battery System.

The batteries shall be comprised of a quantity of three (3), high temperature, deep cycle (45AH) batteries which have been proven under extreme temperature conditions. The battery system or configuration shall consist of one string. Each string shall be 36 VDC. The batteries shall be provided with the appropriate interconnect cables. The battery cables shall have a minimum conductor size rating of #10.

The battery cable shall consist of a quick release Anderson connector rated at 25 amps. For the purpose of safety, the connector shall have recessed pins and keyed interlock to prevent reversal of connection or separation.

Battery construction shall be of a polycarbonate high temperature design combined with high, pure lead content with internal resistance of .0028 ohms and a high impact poly case construction, to withstand high vibration and shock. The connections shall be of stainless steel 3/8 stud, with 3/8 stainless nut and locking washer. Removable lifting handle shall be standard.

The batteries shall also meet the following characteristics:

Nominal voltage:	12VDC	Capacity@ 25C:	45AH	Approx weight:
		13.5Kg	Internal Resistance:	9.5 mOhms
Dimensions:	197mm x 165mm x 170mm (7.76 x 6.50 x 6.69)			
Capacity (10hr rate):	75c-112%			
	65c-108%			
	55c-105%			
	25c-100%			
	0c- 85%			
	-15c- 65%			
Self Discharge:	3 months 91% capacity remaining			
6 months	82% capacity remaining			
12 months	65% capacity remaining			
Operating Temperature:	-15c to +75C	Float Voltage:	13.5 to 13.80	
Cyclic charging voltage:	14.5 to 14.90			
Maximum charge current:	12A	Terminal material:	Copper	
Maximum discharge current:	400A (5 sec)			

The system must be 36 volt DC maximum (no exception).

Electrical Specifications.

The unit shall meet the following electrical specifications:

Design:	Double Conversion true on line.		
Nominal input:	110, 115 & 120v AC single phase dip switch selectable.		
Input Voltage Range:	80v to 140v AC		
Input frequency:	50/60hz (47 to 63)		

-6-

**REVISION OF SECTION 614
CCD DOUBLE CONVERSION UNINTERRUPTED POWER SUPPLY SYSTEM**

Efficiency:	83 %
Input configuration:	3 wire with ground
Input Protection:	15 amp re-settable breaker (on UPS 700) Input
Current:	10.4 amps (includes charger) (on UPS 700)
Power Rating Continuous:	700 watts, 1400watts, 2100 watts
Output Current:	@ 700 watts 5.8 amps / 11.6 @1400/ 17.7@2100
Output regulation:	+/- 3% with 100% resistive load
Output regulation w/low battery:	+/- 3% with 100% resistive load
Output Voltage:	120v AC
Output Wave Form:	Pure sine wave
Harmonic Distortion:	3% Linear Load; 5% Non Linear Load
Dynamic Response:	+/- 5% RMS for 100% step load change
1 ms recovery time	
Overload Capability:	120% for 60 sec
150% watts for 10 sec	
Charger:	200 watt 36VDC UPS 700, 72VDC on UPS 1400 Parallel 400, 1000 and 2000 watt.
Surge:	ANSI-C62.41
Fault Clearing:	Current Limit and automatic to bypass
Short Circuit protection:	Output Breaker / Fuse, then shut down
Load Power Factor:	6 leading to .6 lagging
Output Connection:	Anderson Power Pole Connector 6 pin keyed. DC
Connection:	Anderson 50 amp Keyed Recessed connector
Recognition:	UL Recognized & IEE 587 / C62.41 on main UPS board
Mechanical:	

The UPS shall meet the following physical dimensions: For 700 W UPS:

Size:	6.00" H x 10.5" D x 15.15" W
Weight:	18 lbs

The enclosure shall be constructed of 0.064 Carbon steel and aluminum. The enclosure shall be painted with powder coat paint with a minimum of 1.5 mil thickness.

Environmental.

The UPS shall meet or exceed NEMA temperature standards from -40c to + 74c. Communications, Control & Diagnostics LED indicators shall be provided for line monitoring, battery mode,

charging, low battery, fault / bypass load level, battery level and ground fault. Manual test functions shall be available for alarm function, low battery, battery fail, bypass and overload. An RS 232 port with communication software shall be provided for real time UPS operational status in place of a relay status card when required.

The relay status card shall have the following I/O via contact closure:

-7-

**REVISION OF SECTION 614
CCD DOUBLE CONVERSION UNINTERRUPTED POWER SUPPLY SYSTEM**

1. Bypass ON
2. AC fail or out of tolerance.
3. AC normal or in tolerance.
4. Inverter is operating (ON)
5. Battery low
6. Battery failed or bad
7. UPS general alarm
8. Ground (logic)
9. Apply 6 to +25VDC
10. Between pin 9 and 10, will shut the UPS down

Options.

The UPS must be able to accept the following future options

1. SNMP/WEB monitoring.
2. 24/7 Adjustable perpetual timer.
3. Generator input option for hot swap bypass switch.
4. Rack mount hot swap bypass switch.

In place of the relay card, an SNMP card can be installed that shall support TCP/IP, UDP, SNMP, and HTTP protocols and shall provide the SNMP MIB for UPS monitoring and UPS status. Remote access to UPS real time information including unit identification, data logging and UPS status in real time shall also be provided on a by unit basis. It shall be possible to use Microsoft Internet

Explorer for remote viewing of the following:

1. UPS load
2. Battery Charger status
3. UPS operation Normal/Alarm
4. Input Voltage
5. Output Voltage
6. Battery Voltage
7. UPS Temperature

-8-

**REVISION OF SECTION 614
CCD DOUBLE CONVERSION UNINTERRUPTED POWER SUPPLY SYSTEM**

8. UPS information logging
9. Remote UPS battery testing.
10. Send output email if UPS status has changed
11. Built in reset with panel mounted led indicators for SNMP status.

The SNMP card shall have the following status LEDs:

- | | |
|--------|--|
| LED(1) | Green LED: Status receiving
Yellow: Data Transmitting |
| LED(2) | Green: SNMP connecting
Yellow: SNM P functioning |

The optional 24/7 timer shall be integral to the UPS. It shall include a DB9 connector to provide the connection and programming to the timer. This timer shall be programmable for any number of flash delays related to the time of day. It allows the complete flexibility of flash delay or skipping the flash during that particular event related to traffic flow and even holidays. The time shall have the follow features:

1. 7 days, 24 hrs Flash delay timing.
2. Perpetual Clock.
3. Maximum of 31 setting per day.
4. Timing resolution to the minute.
5. 4 Possible commands per event.
6. Real-time operation, editing functions will not interrupt the unit's functions.
7. J-Tag port for instant preload of complete 7-day schedule file.
8. SPDT 10 amp 240VAC /24VDC ratings.
9. Input Voltage 110 to 240VAC or 24VDC unregulated supply.
10. Plus! Capable of scheduling for holidays or specific year/dates.
11. Capable of operating at 2400 baud micro-modem for direct phone connection
12. Capable of operating at 1200 to 230,000 baud rate on a serial port.
13. Capable of log retention

An optional generator input shall be available for the UPS.

-9-

**REVISION OF SECTION 614
CCD DOUBLE CONVERSION UNINTERRUPTED POWER SUPPLY SYSTEM**

Reliability:

Calculated MTBF shall be 120,000 hours based on component ratings. When bypass switch is installed, system MTBF shall increase to 160,000 hours.

Hot Swap Bypass Switch:

A hot bypass switch shall be provided and wired to function within the UPS system. The bypass switch shall have the following characteristics:

Bypass Rating:	30 amps maximum
Bypass Transfer:	Automatically to line in 20ms, '0' crossing at full load
Control:	Rocker On/Off switch indicating 'Auto' and Bypass
Relays:	AC internal Load relay at 'Zero Crossing' with parallel function DC relay for interlocking and protection failsafe mode to N/C for AC power direct to load when failure occurs or in Bypass position.
Protection:	Internal Snubber circuit for spike attenuation during transfer at 'Zero' crossing. Internal fuse required.
Connections:	Flush mounted Anderson Power connector. With locked and keyed.
Indicators:	LED for Line Available, Bypass, Ups On Line, UPS Available.
Dimensions:	7.5 x 5 x 2.5
Weight:	1.4 lbs

Warranty:

A standard (2) two year manufacturer warranty shall be provided for all electronic components. All batteries shall carry a one year warranty.

Subsection 614.13 shall include the following:

Emergency Vehicle Traffic Signal Priority Control System units shall include a four-channel card and the number of detectors as shown on the plans. Emergency Vehicle Traffic Signal Priority Control System shall be measured and paid by the number of intersections at which the system is installed. The item shall include all labor, materials, and ancillary hardware required to provide a fully functioning system to the satisfaction of the Department.

**REVISION OF SECTION 614
MICROWAVE VEHICLE RADAR DETECTOR**

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

This work shall consist of furnishing and installing microwave vehicle radar detectors in accordance with these Special Provisions at the locations shown on the Plans. Contractor shall order the Wavetronix SmartSensor HD, configuration software, mounting hardware, and compatible Click! DIN rail mountable components.

MATERIALS (Pole Mounted Within 40' of Traffic Control Cabinet)

The Microwave Vehicle Radar Detector (MVRD) shall include the radar detector unit, 20' standard combination power/data cable with connector, required length of un-terminated Belden 9330 or approved equal 4 pair separately shielded 22 AWG cable to reach from pole mounted communications cabinet to traffic control cabinet, data line surge suppressor, pole mount hardware, communications cabinet, and configuration software.

The radar detection unit shall be a non-intrusive device using frequency modulated continuous wave radar technology for the gathering of vehicle information including traffic volume, lane occupancy, individual and average speed, vehicle classification, and presence. It shall have auto configuration capabilities to simultaneously identify up to ten highway lanes with the ability to detect over center median barriers and accurately detect partially occluded vehicles. Weather shall not impact the radar detection of the unit. Wind or temperature change shall not cause the device's original field installation configuration to alter over time. The radar detection unit shall include the manufacturer's recommended power/communication cable. The radar detection unit shall meet the following minimum requirements:

- | | | |
|------|----------------------------|--|
| (1) | Installation Type: | Side Fire or Forward Fire installation |
| (2) | Detection Zones: | Up to 10 Lanes Simultaneously |
| (3) | Detection Range: | 3 to 250 feet |
| (4) | Detection Zone Resolution: | 1 foot |
| (5) | Time Resolution: | 2.5 msec |
| (6) | Elevation 3 dB Beamwidth: | 65° |
| (7) | Azimuth 3 dB Beamwidth: | 7° |
| (8) | Operating Frequency: | 24.0 to 24.25 GHz (K-Band) |
| (9) | Communications: | RS-232 and RS-485 |
| (10) | Power: | 8.0 Watts at 9 to 36 Volts DC |
| (11) | Operating Temperature: | -40 to +165°F (Ambient) |
| (12) | Humidity: | Up to 95% Relative |
| (13) | Shock: | 10g 10ms Half Sine Wave |

The communications cabinet shall be non metallic Nema 4x enclosure or equivalent, measuring 8 x 6 x 4 inches (H x W x D), and have a securable hinged door with weather proof seal to prevent the ingress of wind and water. The communications cabinet shall include an internal backplane with DIN rail and mounting bracket assembly for attachment to supporting pole.

-2-

REVISION OF SECTION 614 MICROWAVE VEHICLE RADAR DETECTOR

The DIN rail mountable components to be installed inside the communications cabinet shall include a WX-SC-200 Click 200 data line surge suppressor with hot swappable protected busses. The Data Line surge suppressor shall provide protection for RS-232, RS-485, and DC power to the radar detection unit. Wiring for the surge suppressor shall be by means of pluggable screw terminals and include unprotected as well as protected RS-232 and RS-485 communications connectors and shall have a minimum operating temperature range of -29 to 165°F up to 95 percent relative humidity.

MATERIALS (mounted inside 334 traffic control cabinet)

There shall be a 19" bent rack mount Din rail, a Din rail mountable WX-SC-206 Click 206 .05 Amp re-settable circuit breaker and switch, a DIN rail mountable WX-SC-201 Click 201 AC to DC power converter. The power supply shall accept input voltage from 100 to 240 VAC at 45 to 65 Hz and provide 24 VDC output at 1Amp. The power supply shall have a minimum operating temperature range of -29 to 165°F up to 95 percent relative humidity. The power supply shall provide for 100 percent power reserve for a minimum of 20 ms to protect against static voltage dips, transient failures of supply voltage, or continuous phase failures. There shall be a WX-SC-205 Click 205 AC lightning power line surge protector DIN rail mountable with hot swappable protected busses, and a WX-SC-200 Click 200 data line surge suppressor. The surge suppressor shall provide protection for RS-232, RS-485, and DC power. Wiring for the surge suppressor shall be by means of pluggable screw terminals and include protected and unprotected RS-232 and RS-485 communications connectors. The surge suppressor shall have a minimum operating temperature range of -29 to 165°F up to 95 percent relative humidity. The necessary number of input file-mountable WX-SC-174 Click! 174 four-channel and/or WX-SC-172 Click! 172 two-channel contact closure (loop emulator) modules with required RJ-11 patch cords shall be provided to emulate 1 primary and 1 secondary loop for each mainline lane.

CONSTRUCTION REQUIREMENTS

Two conduit access holes, not to exceed 1.5 inches shall be made on the bottom of the communications cabinet. One of these holes is to be used for the power/communications cable in from the sensor and the other for the power/communications cable out to the traffic control cabinet. The access holes shall be positioned at a location to ensure the proper, safe routing of wiring entering the cabinet. 3/4 inch Type 201 stainless steel strap used in conjunction with Type 201 stainless steel buckles shall be used to mount the communications cabinet to the structure so that the top of the cabinet is approx 5 feet above surrounding grade. The communications cabinet shall be oriented such that anyone working in the cabinet has direct line of sight with oncoming traffic. The Contractor shall be responsible for any necessary modifications or additions needed to mount the communications cabinet to the structure.

0.75 inch Type 201 stainless steel strap used in conjunction with Type 201 stainless steel buckles shall be used to mount the radar detection unit at a height and angle determined by roadway off-set and detection distance in accordance with manufacturer's recommendations and shall be properly grounded per the manufacturer's specifications.

-3-

**REVISION OF SECTION 614
MICROWAVE VEHICLE RADAR DETECTOR**

The manufacturer's recommended power/communication cable shall run on the interior of the mounting structure from the radar detection unit to the communications cabinet. A hole not to exceed 1.5 inches shall be made 12 inches below the radar detection unit to allow passage of the power/communications cable into the structure.

The Contractor shall ensure strain relief and drip loops in the power/communication cable before the cable enters the structure in accordance with manufacturer's recommendations. Two holes not to exceed 1.5 inches shall be made below the communications cabinet to allow the power/communications cables to pass from the interior of the structure to the interior of the communications cabinet. Flexible conduit shall be used to run cables from the structure to the communications cabinet.

The Contractor shall run and connect power from the structure to the 0.5A circuit breaker and power line surge protector in the 334 traffic control cabinet. The Contractor shall wire supply power, power supply, surge suppressors, breaker, and radar detection unit in accordance with the manufacturer's recommendations. The radar detection unit shall be wired to support RS-232 serial communications.

All holes shall be free of burs and sharp edges prior to the installation of all cable, conduit, and conduit nipples. All cable entrances in structures, conduits, and cabinets shall be sealed and waterproofed. All wiring and electrical connections shall be performed in conformance with the latest version of the NEC.

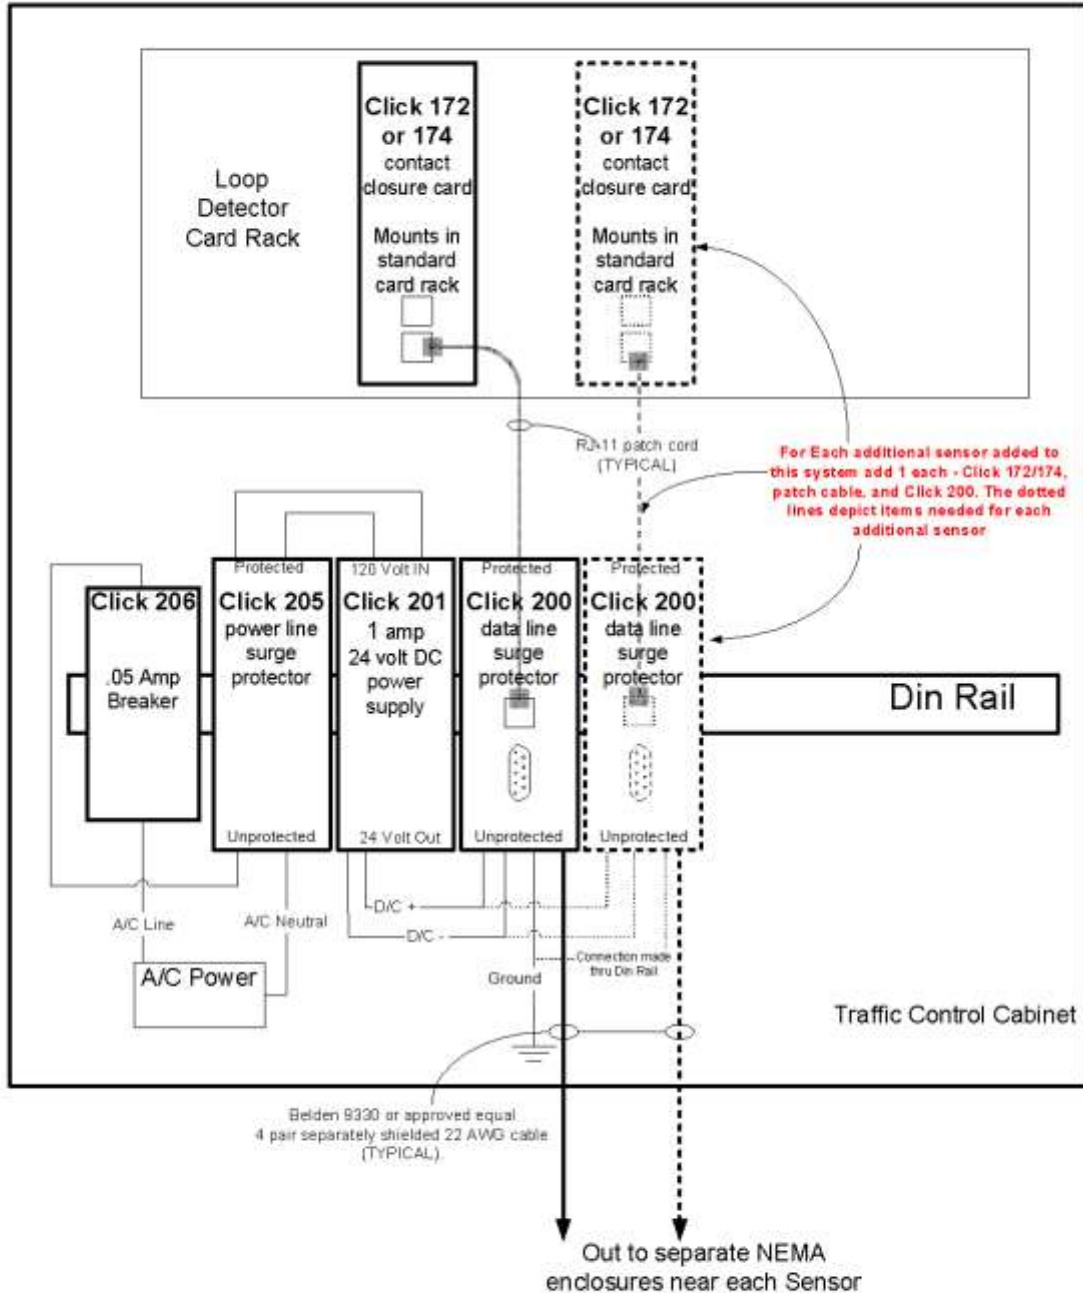

The Contractor shall configure the radar detection unit to detect all lanes, in accordance with the manufacturer's recommendations.

The units shall be environmentally hardened for outdoor use with a temperature range of -10 to +80 degrees centigrade and available in one, two or four RS-232 port units. Also included at this location, a 120 volt AC to 24 volt DC power supply shall be included. This unit shall have a slim line DIN mountable case and be mounted to DIN rail in the 334 traffic control cabinet. The Contractor shall provide units which are compatible with current devices installed at various locations.

-4-

REVISION OF SECTION 614 MICROWAVE VEHICLE RADAR

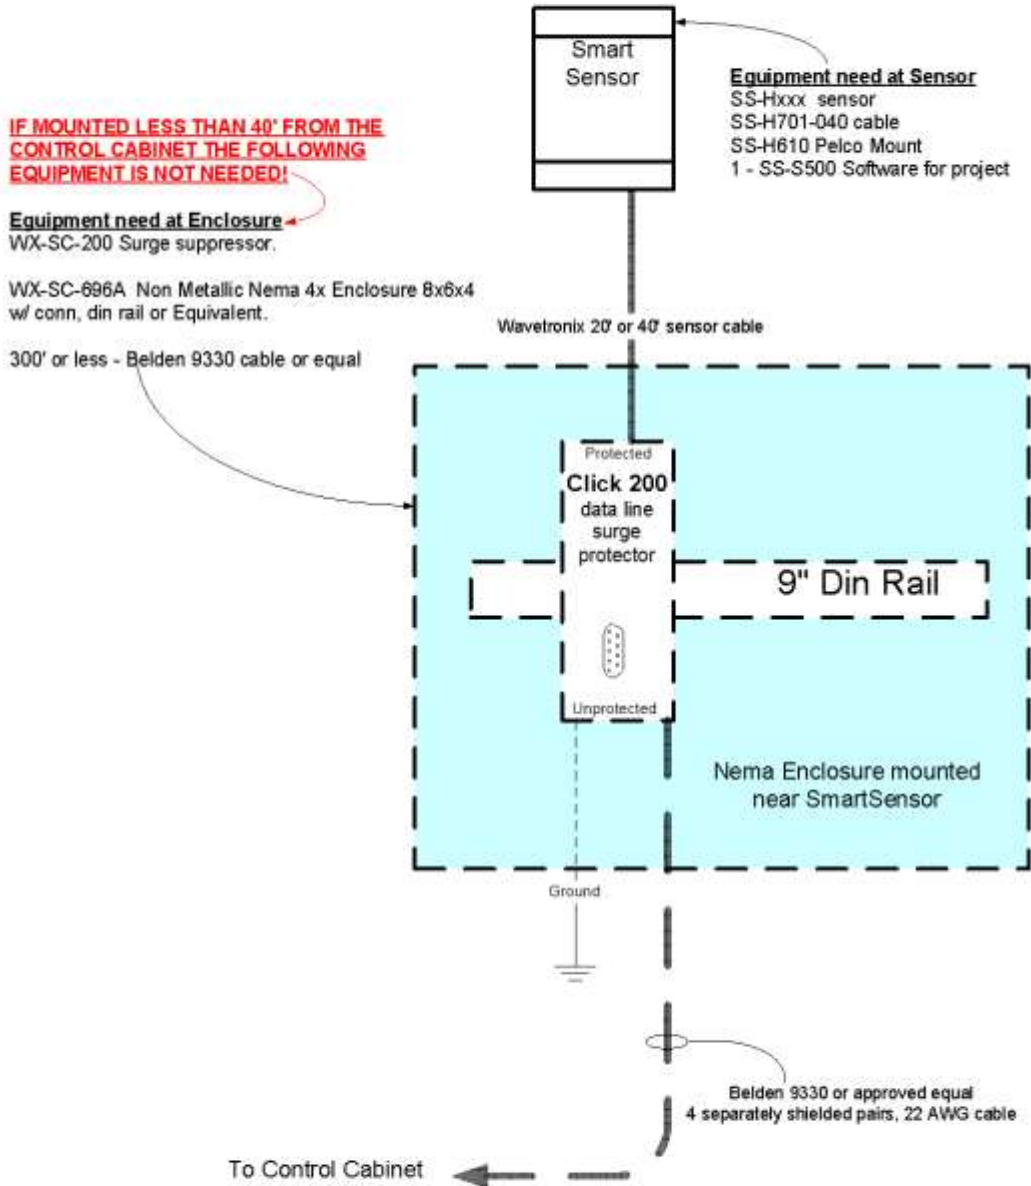

**Drawing showing the equipment needed in the Control Cabinet
when Installing Wavetronix SmartSensors with contact closure.**

-5-

**REVISION OF SECTION 614
MICROWAVE VEHICLE RADAR DETECTOR**

Equipment drawing for each SmartSensor located less than 300' from control cabinet (as the wire travels).

REVISION OF SECTION 614 MICROWAVE PRESENCE DETECTOR

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

This work shall consist of furnishing and installing a Wavetronix SmartSensor Matrix microwave vehicle radar detector unit for passage and demand detection in accordance with these Special Provisions, and per the manufacturer's recommendations. This sensor shall only be used when detection is on a bridge deck.

MATERIALS

The Microwave Presence Detector shall include the radar detector, sensor mounting kit hardware, SmartSensor cable from unit to traffic control cabinet, data line surge suppressor, pole mount hardware, communications cabinet equipment, cabinet interface device, 4-channel contract closure input cards, DIN rail contact closure module, and configuration software.

There shall be a 19" bent rack mount Din rail, Click 600/650 cabinet interface devices, a Din rail mountable WX-SC-206 Click 206 .5 Amp re-settable circuit breaker and switch, a DIN rail mountable WX-SC-201 Click 201 AC to DC power converter. The power supply shall accept input voltage from 100 to 240 VAC at 45 to 65 Hz and provide 24 VDC output at 1Amp. The power supply shall have a minimum operating temperature range of -29 to 165°F up to 95 percent relative humidity. The power supply shall provide for 100 percent power reserve for a minimum of 20 ms to protect against static voltage dips, transient failures of supply voltage, or continuous phase failures. There shall be a WX-SC-205 Click 205 AC lightning power line surge protector DIN rail mountable with hot swappable protected busses, and a WX-SC-200 Click 200 data line surge suppressor. The surge suppressor shall provide protection for RS-232, RS-485, and DC power. Wiring for the surge suppressor shall be by means of pluggable screw terminals and include protected and unprotected RS-232 and RS-485 communications connectors. The surge suppressor shall have a minimum operating temperature range of -29 to 165°F up to 95 percent relative humidity. The necessary number of input file-mountable WX-SC-174 Click! 114 four-channel contact closure (loop emulator) modules with required RJ-11 patch cords shall be provided to emulate the demand and passage detectors at the stop bar.

CONSTRUCTION REQUIREMENTS

The Contractor shall install the unit in accordance with the manufacturer's recommendations. Construction shall include all necessary work to provide a fully operable unit, including mounting the bracket, aligning the sensor, applying the dielectric compound to the sensor connector, connecting the SmartSensor conductor cable to the sensor, wiring to the device and in the 334 cabinet, mounting of DIN rail, and installation of contact closure cards.

A 0.75 inch Type 201 stainless steel strap, in conjunction with Type 201 stainless steel buckles, shall be used to mount the radar detection unit at a height and angle determined by roadway off-set and detection distance in accordance with manufacturer's recommendations and shall be properly grounded per the manufacturer's specifications.

-2-

**REVISION OF SECTION 614
TRAFFIC SIGNAL VEHICLE DETECTOR (MICRO WAVE TYPE)**

The manufacturer's recommended power/communication cable shall run on the interior of the mounting structure from the radar detection unit to the 334 ramp meter cabinet. A hole not to exceed 1.5 inches shall be made 12 inches below the radar detection unit to allow passage of the power/communications cable into the structure. The Contractor shall ensure strain relief and drip loops in the power/communication cable before the cable enters the structure in accordance with manufacture's recommendations.

All holes shall be free of burs and sharp edges prior to the installation of all cable, conduit, and conduit nipples. All cable entrances in structures, conduits, and cabinets shall be sealed and waterproofed. All wiring and electrical connections shall be performed in conformance with the latest version of the NEC.

The Contractor shall configure the radar detection unit to detect all lanes, in accordance with the manufacturer's recommendations.

**REVISION OF SECTION 614
CCD TELEMETRY (FIELD)**

Section 614 of the Standard Specifications is hereby revised for this Project as follows.

Subsection 614.01 shall include the following:

This work consists of fan-out and termination of fiber optic (interconnect) cable at each controller cabinet locations as identified in the plans. This work also includes providing and installing all necessary telemetry equipment including but not limited to optical splice closures, field patch panels, splice organizers, cables, pigtailed/jumpers and labels.

Color-coded fibers and buffer tubes shall be used throughout the entire Project. At the terminal points the jackets shall be stripped and the ends taped. Gel filled compound shall be removed using filled cable cleaner.

At every cabinet or optical closure, only the fibers identified in the plans to be spliced and/or connected to a patch panel or other internal device are required to be landed. All cut and unconnected fibers shall be sealed in a manner recommended by the fiber optic cable manufacturer and coiled neatly in a splice organizer.

The same color-coded pairs of fibers and/or wires shall be used throughout the entire Project unless shown as otherwise in the plans. Gel filling compound shall be removed using filled cable cleaner.

Subsection 614.08 shall include the following: Fiber Optic Patch Pigtail:

The fiber optic pigtail cables shall consist of MM fibers housed individually in protective jackets. Both ends of the cable shall be connected. Fiber optic patch cord cable shall be suitable for operation over a temperature range of -30 degrees to +60 degrees Celsius. Fiber optic patch cord cables shall be of length suitably long to be connected between the interconnect panel and the communications equipment (i.e. fiber optic transceivers). Patch cord couplings shall be compatible with termination points. Appropriate strain relief in the cabinet (through cable ties) shall be installed at a minimum of three locations. Sufficient slack shall be left to allow relocation of the equipment anywhere in the cabinet. The attenuation of a fiber optic patch cord cable after installation, not including the connector loss, shall not exceed 0.1 dB measured at 850 nm and 1300 nm.

Connectors:

The connector shall have a ceramic ferrule with a nickel-plated nut and body. The connector shall be an AT&T ST style compatible field mounted connector. The connector shall be compatible with a physical contact (PC) finish. All connectors shall be polished to a PC finish such that the return loss per mated pair of connectors is less than -25 dB. The return loss when the connector is mated with previously installed connectors shall be less than -18 dB.

The connector insertion loss shall not be greater than 0.20 dB (typical). The connector loss shall not vary more than 0.20 dB after 1000 repeated matings. Tensile strength shall withstand an axial load of 20 lb. with less than 0.20 dB change.

-2-

**REVISION OF SECTION 614
CCD TELEMETRY (FIELD)**

Index matching fluids or gels shall not be used. The connectors shall be compatible with the optical fiber surrounding jacket and shall be installed on one end of the optical fiber in accordance with the manufacturer's recommended materials, equipment and practices. The connector shall be suitable for the intended environment and shall meet the following environmental conditions:

Operating Temperature: -40° to +80° C
Storage Temperature: -40° to +85° C

The connector loss shall not vary more than 0.20 dB over the operating temperature range. Connectors shall be protected by a suitably installed waterproof protection cap.

Miscellaneous Cabling:

Fiber optic patch cords shall be fiber optic jumper cable, duplex, ceramic ferrule, MM 62.5 nm, adaptable to AT&T ST style connectors, 2 meters in length, ITT Canon Model 161001-4020 or approved equal. Cable from fiber optic modem to Port 3 controller harness shall be 25-pin cable Model 44982G4 or approved equal. The Contractor shall deliver transceivers to the CCD Traffic Signal Shop. Contact Joe Strauss 720-865-4062 for coordination.

Optical Splice Closures:

Coyote Runt or Coyote Pup Type closures shall be provided for splicing lateral fiber optic cables to the main (backbone) fiber cable in all pull box locations that are identified in the plans. All closures shall include 1-Inch future port kit (part no. 8003408, Pre- Formed Line Products). The Coyote Runt Closure shall be used at locations with 3 fiber optic cables. In locations requiring more than 3 cables, a Coyote Pup Closure shall be installed.

Subsection 614.13 shall include the following:

Telemetry (Field) shall be measured by the total number of cabinets at which the interconnect cable is fanned out, terminated, connected, patch panels and fiber-optic interfaces installed. All labor and materials required to perform panel installations including but not limited to fiber optic cables, provide in-cabinet strain relief, fan-out, cable termination and connection to the controller is considered included in the unit price for this item.

This item, therefore, includes the following:

1. All required in-cabinet cable ties and strain relief (including ancillary hardware and labor to complete);
2. All required fan-out kits, kit tools, ancillary hardware and labor to accomplish the fan-out at the cabinet;
3. All required pigtails and harness cables;

-3-

**REVISION OF SECTION 614
CCD TELEMETRY (FIELD)**

4. All required interconnect centers and fiber optic interface panels in individual controller cabinets as shown in the plans;
 - All required termination enclosures (including specified features), connectors, adapters, jumpers, pigtails, patch cord cables, ancillary hardware and labor required to accomplish the cabinet termination;
 - All required optical splice closures;
 - All other labor and material necessary to complete the item

REVISION OF SECTION 614 CCD ETHERNET SWITCH

Section 614 of the Standard Specifications is hereby revised for this project as follows: Subsection 614.01 shall include the following:

This work consists of furnishing and installation of an Ethernet managed field switch, in the CCD controller cabinets. The switch shall be compatible with the existing system.

Subsection 614.08 shall include the following:

An Ethernet Switch is hereby added to the Standard Specifications and shall comply with the following specifications:

Managed Field Switch, shall be a Garrettcom Magnum Ethernet Managed Field Switch comprising of the following four (4) parts:

1. 6KQ-24VDC base unit with four 10/100 copper ports in slot A (without 24VDC power supply).
2. 6KQ-RJ45 module with four 10/100 copper ports in slot B.
3. 6KQ4-MLC module with four 100Mb 2km multi-mode LC fiber ports in slot C.
4. 6KQ-BLANK blank cover for 1 unused module in slot C.

The field switch must also meet the following requirements:

May be configured with a variety of 10/100/1000 Mb fiber and copper port connector types - 16 total ports maximum.

Heavy duty and environmentally hardened fully enclosed metal case with advanced thermal design used as a heat sink (no fan).

Dual LEDs for all-around status viewing.

Wire speed filtering and forwarding across all ports - 802.3x flow control, 802.1p priority packet processing, self-learning 4K-node address table, large 240KB packet buffers for 10/100 and 120KB for 1000Mb.

The unit shall be configured as a minimum: Filtering/Forwarding Rate Performance:

Ethernet (10Mb): 14,880 pps

Fast Ethernet (100Mb): 148,800 pps

Gigabit Ethernet (1000Mb): 1,488,000 pps

Switching Processing Type: Store and Forward with IEEE 802.3x full duplex flow control, non-blocking

Data Rate: 10Mbps, 100Mbps and 1000Mbps

Address Table Capacity: 4K node, self-learning with address aging

- Packet buffer size: 240KB for 10/100 and 120KB for 1000Mb
- Latency: 5 μ s + packet time (100 to 100Mbps); 15 μ s + packet time (10 to 10 Mbps, and 10 to 100Mbps)

-2-

REVISION OF SECTION 614 CCD ETHERNET SWITCH

- Throughput with 12 10/100 and 2Glink max.- 4.76M pps (Transmit)
- Back plane- 2.66 GB/s per slot LEDs:
- Per Port (one set at the port, one set on swivel top on right side)
- LK: Steady ON when media link is operational
- ACT: ON with receiver port activity
- FDX/HDX: ON = Full-Duplex Mode; OFF = Half-Duplex Mode
- 100/10: ON = 100Mbps speed; OFF = 10 Mbps

Network cable connectors:

- 1000Mb fiber ports: all standard Gb SFP Transceiver types supported
- 1000Mb copper ports: 10/100/1000Mb auto-negotiating, Cat5e & 6 UTP/STP
- 100Mb Copper and PoE: Category 5 UTP/STP; 10 Mb: Cat. 3, 4, 5 UTP/STP
- 100 Mb Fiber ports connector options: multi-mode FX-MTRJ, LC, ST, SC; Single-mode 15Km LC, 20Km SC and ST, and 40 Km "long reach" single-modes SC.

Operating Environment:

- Ambient Temperature: -40° to 140° F (-40° to 60°C)

Alarm Relay Contacts:

- One NC indicating internal power, one NC software controllable

DC Power Supply:

- 24VDC Power Input nominal (range 18 to 36VDC)
- Power Consumption: 35 watts worst case (for a fully loaded fiber model); 12 watts typical (for a small 4 port copper-only model)

Vertical mounting normal:

- Suitable for wall or DIN-Rail mounting

Testing Requirements_- The Contractor shall supply one unit of Ethernet Switch to the CCD Traffic Engineer for specification compliance testing and approval. If the product passes the specification compliance testing and approval evaluation, the Contractor will be notified to complete the order. If the product does not pass the specification compliance testing and approval evaluation by CCD-TES, the test unit will be returned back to the Contractor. The Contractor shall supply other units until CCD Accepts the test results.

Subsection 614.14 shall include the following:

Each package shall contain one Ethernet Switch, set of mounting bracket, Installation and User guides, and Product Registration Card.

**REVISION OF SECTION 614
CCD TRAFFIC SURVEILLANCE CAMERA**

Section 614 of the Standard Specifications is hereby revised for this project as follows: Subsection 614.01 shall include the following:

DESCRIPTION

This work consists of furnishing and installation of a traffic surveillance camera at City of County of Denver (CCD) operated and maintained traffic signals. Camera shall be compatible with CCD's existing traffic signal system, include all hardware, power and connect and be fully functional with CCD's fiber optic communications.

MATERIALS

Contractor shall provide camera from Panasonic WV-SW598A Super Dynamic PTZ Dome Camera that includes the following:

- a) Resolution of 1,920 x 1,080 pixels up to 30 feet per second; 12x extra optical zoom at 1,920 c 1,080 resolution , 90x extra optical zoom at 640 x 360 resolution;
- b) 360 degree endless panning; rain wash coating dome cover, approximate 1/3 inch type high sensitivity; MOS image sensor; super dynamic range and adaptive black stretch;
- c) Produce a color image with a minimum illumination of 0.009 lux and monochrome image with 0.001lux F1.6 shutter speed of 16/30x and high gain mode; generate multiple simultaneous video streams of JPEG and H.264 high profile; GOP control as bitrate reducing technology, utilize 3D-digital noise reduction;
- d) Rated to IP66, NEMA 4X standard against water and dust ingress, IEC 62262 IK10 vandal resistance;
- e) Video motion detection with four programmable detection areas, 15 steps sensitivity level and 10 steps detection size, and provide up to thirty two areas of electronic privacy masking;
- f) Variable image quality on specified area which sets different image qualities to up to two areas in the full view to reduce bandwidth and storage capacity requirements and offer the prioritized stream control which transmits a video stream;
- g) full-duplex bi-directional audio communication between the camera and monitoring site
- h) conform to the ONVIF standard

Camera

- a) Image Sensor 1/3 type MOS image sensor
- b) Scanning Mode Progressive
- c) Scanning Area 5.35 mm (H) x 3.34 mm (V) {7/32 inches(H) x 1/8 inches(V)}
- d) Minimum Illumination
 - 1) Color 0.009 lux (F1.6, Shutter speed of 1/30s, Gain: On(High))
 - 2) B/W 0.018 lux (F1.6, Shutter speed of 1/30s, Gain : On(High))

Lens

- a) Vari-Focal Length 4.3 ~ 129.0mm {3/16 inches – 5-3/32 inch }
- b) Max. Aperture Ratio 1 : 1.6 (WIDE) ~ 1 : 4.7 (TELE)
- c) Angular Field of View
 - 1) 16:9 aspect ratio H: 2.6° (TELE) – 63° (WIDE), V: 1.5° (TELE) – 37° (WIDE)
 - 2) 4:3 aspect ratio H: 1.9° (TELE) – 46° (WIDE), V: 1.5° (TELE) – 37° (WIDE)

-2-

**REVISION OF SECTION 614
TRAFFIC SURVEILLANCE CAMERA**

Video

- a) Compression Format H.264, JPEG
- b) Image Resolution
 - 1) 16:9 aspect ratio (2 mega pixel mode)
1,920 x 1,080 / 640 x 360 / 320 x 180 (30fps)
 - 2) 16:9 aspect ratio (1.3 mega pixel mode)
1,280 x 720 / 640 x 360 / 320 x 180 (30fps)
 - 3) 4:3 aspect ratio (1.3 mega pixel mode)
1,280 x 960 / 640 x 480 / 320 x 240 (30fps)
- c) H.264
 - 1) Transmission Mode Constant bitrate / Frame rate priority / Best effort / Advanced VBR
 - 2) Frame Rate 1 / 3 / 5 / 7.5 / 10 / 12 / 15 / 20 / 30 fps
 - 3) Bit Rate/Client 64 / 128 / 256 / 384 / 512 / 768 / 1,024 / 1,536 / 2,048 / 3,072 /
4,096 / 6,144 / 8,192 kbps (depending on distribution mode.)
 - 4) Transmission type Unicast, Multicast
- d) JPEG
 - 1) Image quality 10 steps
 - 2) Transmission type Pull, Push

Audio

- a) Audio Compression G.726 (ADPCM) , G.711, AAC-LC
- b) Audio Mode Off / Microphone input / Audio output / Interactive (Half duplex) / Interactive (Full duplex)

Operation

- a) Super Dynamic Range On / Off
- b) Adaptive Black Stretch On / Off
- c) AGC On (LOW, MID, HIGH) / Off
- d) Day & Night Day and Night functionality with a built-in IR-cut filter removal
Off/ On/ Auto1 (Normal) / Auto2 (IR light) / Auto3 (SCC)
- e) Digital Noise Reduction High / Low
- f) Video Motion Detection 4 areas, Sensitivity:15 steps, Detection size:10 steps
- g) Privacy Zone On/Off, up to 32 zones
- h) VIQS Up to 2 zones
- i) Camera Title (OSD)Up to 20 characters
- j) Panning Range 360-degrees endless
- k) Panning Speed
 - 1) Manual Approx. 0.065°/s to 120°/s, Up to 256 steps
(depending on the controller)
 - 2) Preset Up to approx. 300°/s
- l) Tilting Range -15° to 195°
- m) Tilting Speed
 - 1) Manual Approx. 0.065°/s to 120°/s, Up to 256 steps
 - 2) Preset Up to approx. 300°/s

-3-

**REVISION OF SECTION 614
TRAFFIC SURVEILLANCE CAMERA**

Network

- a) Network Interface 10Base-T / 100Base-TX, RJ-45 connector
- b) IP IPv6, IPv4
- c) Supported Protocols
 - 1) IPv6 TCP/IP, UDP/IP, HTTP, HTTPS, RTP, RTSP, RTP/RTCP, FTP, SMTP, DNS, NTP, SNMP, DHCPv6, ICMP, ARP
 - 2) IPv4 TCP/IP, UDP/IP, HTTP, HTTPS, RTSP, RTP, RTP/RTCP, FTP, SMTP, DHCP, DNS, DDNS, NTP, SNMP, UPnP, IGMP, ICMP, ARP
- d) Max. User access Up to 14 users
- e) GUI Language English,

Interface

- a) Monitor Output VBS : 1.0 V [p-p] / 75 ohm, NTSC / PAL composite, BNC jack
- b) Microphone ø3.5 mm stereo mini jack
- c) Audio Output ø3.5 mm stereo mini jack
- d) External I/O Terminals ALARM IN 1 (DAY/NIGHT IN), ALARM IN 2 (ALARM OUT), ALARM IN 3 (AUX OUT)
- e) SD memory card slot 1 slot, SD/SDHC/SDXC

Electrical

- a) Power Source AC 24V, PoE+
- b) Power Consumption Approx. 55W (AC 24V), Approx. 25W (PoE+)

Safety /EMC

- a) Safety UL (UL60950-1), C-UL (CAN/CSA C22.2 No.60950-1), CE, IEC60950-1
- b) EMC FCC (Part15 Class A), ICES-003 Class A, EN55022 Class B, EN55024

Mechanical

- a) Dimensions (D x H) ø229 mm x 392 mm (ø9-1/32 x 15-7/16 inches)
Diameter of the dome 160 mm (6-5/16 inches)
- b) Weight Approx. 5.0 kg (11.04 lbs.)
- c) Construction material
 - 1) Main body Aluminum die cast
 - 2) Sunshields ASA resin
 - 3) Dome Polycarbonate resin
- d) Finish
 - 1) Main body Natural silver
 - 2) Sunshields Natural silver
 - 3) Dome Clear

Environmental

- a) Vandal Resistance IEC 62262 IK10
- b) Ingress Resistance IP66, IEC60529, Type 4X (UL50), NEMA 4X compliant
- c) Operating Temperature
 - 1) AC24V -50 °C ~ +55 °C (-58 °F ~ 131 °F)
 - 2) PoE+ -30 °C ~ +55 °C (-22 °F ~ 131 °F)
 - d) Operating Humidity 10 % ~ 90 % (without condensation)

**REVISION OF SECTION 627 and 713
PREFORMED THERMO-PLASTIC PAVEMENT MARKING**

Section 627 of the Standard Specifications is hereby revised for this project as follows:

In subsection 627.09, first paragraph, delete the first sentence and replace with the following:

The markings shall consist of a resilient white, yellow, or other color thermoplastic product with glass beads and anti-skid elements uniformly distributed throughout the entire cross sectional area to ensure that skid resistance and retro-reflectivity is maximized.

Section 627 of the Standard Specifications is hereby revised for this project to include the following:

Subsection 627.09 (c) shall be added and shall include the following:

Inlaid (Word-Symbol) (X-walk/Stop-bar) (Shield)

All Preformed Thermo-Plastic Pavement Marking surfaces shall be ground before placement of proposed marking. Depth of grinding shall be such as to completely remove any existing pavement markings and to have a nominal depth of 125 mils +/- 10 mils. The inlaid area for the new Preformed Thermo-Plastic Pavement Marking shall be in the same shape or pattern as the Preformed Thermo-Plastic Pavement Marking that is being installed. Grinding of existing preformed thermoplastic pavement marking and existing asphalt shall not be measured and paid for separately, but shall be included in the work. Material thickness shall be 125 mils. Method of Inlaid will not be measured and paid for separately, but will including in cost of work.

Surface shall be dry and free of dirt, dust, chemicals, and/or significant oily substances and cleaned with high pressure water blast or air blast. Existing pavement markings shall be removed prior to installation of preformed thermoplastic pavement marking in areas where markings overlap. Application procedures for Portland concrete pavement shall be as described above except a compatible primer sealer shall be applied before application of marking to assure proper adhesion.

Marking shall be able to be applied at ambient and surface temperatures down to 32°F without any preheating of the pavement, special storage, preheating or treatment of the material before application.

The contractor shall require the stencil manufacture to provide on-site training prior to installation of the first stencil. All crew members on the work site shall be certified by the stencil manufacture. The training shall include surface preparation and stencil installation for both hot bituminous pavement and concrete pavement. The training shall be coordinated with and attended by CDOT project engineers and inspectors. Training shall be incidental to the work.

Section 713 of the Standard Specifications is hereby revised for this project as follows:

Subsection 713.14 shall be revised to include the following:

Marking shall be capable of conforming to pavement contours, breaks, and faults etc. Marking shall be capable of withstanding the actions of traffic at normal pavement temperatures. Marking shall have resealing characteristics such that it is capable of fusing with itself and previously applied thermoplastic pavement markings when heated with the torch.

-2-

**REVISION OF SECTION 627 and 713
PREFORMED THERMO-PLASTIC PAVEMENT MARKING**

Material shall be composed of an ester modified resin, alkyd, or hydrocarbon based, resistant to degradation by motor fuels, lubricants, etc. in combination with aggregates, pigments, binders, and glass beads which have been factory produced as a finished product and meets the requirements of the current edition of the Manual on

Uniform Traffic Control Devices for Streets and Highways. The thermoplastic material shall conform to AASHTO designation M249-79 (98).

Pigments shall contain sufficient titanium dioxide to ensure a color similar to Federal Highway White, Color No. 17886 and sufficient yellow pigment to ensure a color similar to Federal Highway Yellow, Color No. 13655 both conforming to Federal Standard 595. The yellow pigment shall be of an organic nature only and heavy metal free. Red and Blue material shall be manufactured with sufficient pigment to meet FHWA Docket No. FHWA-99-6190 Table 5 and Table 6 as revised and corrected.

The top surface of the stencils (the same side as the factory applied surface beads) shall have an indicator system for the contractor to properly gauge the correct amount of heat to apply during installation. The indicator system shall have a positive visual indication, such as beads changing color or indents closing together, when the material has reached the correct installation temperature. The indicator system must also provide a positive, visual indication if the material has not reached the correct installation temperature.

Marking, when applied in accordance with manufactures recommendations shall demonstrate a uniform level of sufficient night time retro-reflection when tested in accordance to ASTM E1710-97.

The surface of the preformed thermoplastic pavement marking with properly applied and embedded surface beads shall provide a minimum resistance value of 55 BPN when tested according to ASTM E 303.

The material shall contain a minimum of thirty percent (30%) intermixed graded glass beads by weight. The intermixed beads shall be clear and transparent. Not more than twenty percent (20%) shall consist of irregular fused spheroids or silica. The index of refraction shall not be less than 1.50.

Marking shall have a factory applied coated surface of beads in addition to the intermixed beads at the rate of 1 lb. (\pm 10%) per 11 sq. ft. The factory applied coated surface beads shall have the following specifications:

- a) Minimum 80% round
- b) Minimum refractive index of 1.50.
- c) Minimum SiO₂ content of 70%
- d) Maximum iron content of 0.1%

-3-

**REVISION OF SECTION 627 and 713
PERFORMED THERMO-PLASTIC PAVEMENT MARKING**

e) <u>Size Gradation</u>	<u>% Retained</u>
14	0-3%
16	2-10%
18	10-30%
20	30-60%
30	50-80%
35	60-85%
45	95-100%
60	98-100%

Only preformed thermoplastic pavement marking material listed on the Department's approved products list may be used.

12. COVER MEP SYSTEM

12.1. General

- 12.1.1. The Developer is responsible for the design, installation, testing and commissioning of the mechanical, electrical and plumbing systems (MEP) for the Cover and the Lowered Section between Brighton Boulevard and Dahlia Street.
- 12.1.2. The Developer shall deliver the Cover MEP System to provide for the safe and efficient operation and maintenance of the I-70 Mainline so as to minimize risk to Users. For example, the likelihood of serious incidents may be reduced with adequate lighting, signing and traffic control systems and an Intelligent Transportation System (ITS). The severity of incident consequences may be mitigated through effective fire protection systems and procedures.
- 12.1.3. The Cover MEP System shall include:
- a. The fire and life safety system, including:
 - i. Mechanical ventilation;
 - ii. A Fixed Firefighting System (FFFS) and associated water supply systems (required to limit the maximum reasonable design fire to that which is manageable by the longitudinal ventilation system);
 - iii. Fire detection systems;
 - iv. Emergency facilities including Emergency panels and fire hydrants;
 - v. Control systems required for system operation, monitoring, and control;
 - b. Cover lighting;
 - c. ITS;
 - d. Signage;
 - e. Cover specific drainage system; and
 - f. Water and power supplies to support the above.
- 12.1.4. The fire and life safety system shall be designed and installed to:
- a. Provide early detection of vehicle fire events in the Cover;
 - b. Facilitate rapid and effective operator response;
 - c. Instigate and manage effective self-rescue; and
 - d. Facilitate effective Fire Department intervention.
- 12.1.5. Individual system specifications provide minimum extents of systems/assets and are not intended to present prescriptive limits. The Developer's design solution and implementation methods may require interventions that exceed the stated minimum design requirements in order to comply with the applicable General Requirements and meet or exceed the applicable Targets for the Cover MEP System as specified in Schedule 11 Operations and Maintenance Requirements.
- 12.1.6. The Developer is solely responsible for the analyses, reports, design, drawings, detailing, clearances, manufacture, supply, coordination, installation, integration, commissioning, testing and operation of the systems. The Developer shall design the Cover MEP system to ensure functional coordination and integration of all the individual systems. The Developer's Construction Work shall include all necessary incidental Activities, services and actions required to deliver a fully functional system that meets the requirements of the Project Agreement.
- 12.1.7. The Developer shall carry out an engineering analysis as required by NFPA 502 and document such in a Fire System Performance Report submitted to the Department for Acceptance.

- 12.1.8. All equipment mounted in the Cover shall be mounted in such a way that it meets all design standards both in normal and Emergency use. This shall include measures such as mounting equipment outside of vertical clearance requirements on the Cover walls adjacent to I-70 Mainline or recessing all low-level equipment to not protrude into the horizontal clearance requirements.
- 12.1.9. The Developer shall provide emergency exit doors near each entry Portal to each bore and at a minimum one additional emergency exit door located within the Cover (spaced equally), which exit doors shall be for Fire Department use and meet the requirements of the National Fire Protection Association (NFPA) standard 502 subsection 716.5 and the subject requirements provided herein.

12.2. Applicable Standards

- 12.2.1. The Cover MEP System shall be designed to comply with the Construction Standards. The requirements of the NFPA standard 502 and associated standards and specifications apply to the Cover and the Lowered Section on the approaches to the Cover. The Construction Work for the Cover is classified as *Category C* for fire protection and fire life safety purposes.
- 12.2.2. The requirements of the NFPA standard 502 and associated standards and specifications apply to the entire length of the Lowered Section, the limits being between Brighton Blvd. and Dahlia Street.
- 12.2.3. The Developer shall design, install, test, commission and put into operation the Cover MEP System in accordance with the Construction Standards and the requirements specified in this Section 12. The extent of the Cover MEP System shall include the whole of the Cover (including I-70 Mainline, Portals etc.), immediate approaches, all associated plant/equipment rooms and spaces, yards, interconnecting spaces (including pipes, ducts, cabling etc.), local and remote control centers etc., unless stated otherwise.

12.3. Durability

- 12.3.1. All equipment used in the Cover MEP System shall be protected against temperature range and atmospheric corrosion, including saline atmospheres. Materials used shall not be susceptible to mold growth, or attack by vermin or other life forms. All components shall have a minimum design life of 20 years.
- 12.3.2. All cable management systems (CMS) i.e. trunking, trays, conduit, brackets, enclosures etc. for equipment and ancillary items inside the bores of the Cover (including on the Portals and on the cross bore escape doors) shall be manufactured from grade 316L stainless steel.
- 12.3.3. Enclosures shall have minimum penetration protection rating of IP66K in accordance with IEC 60529.
- 12.3.4. Enclosures shall have an impact resistance of IK09 in accordance with EN62262. Durable finishes shall be provided to all materials to resist mechanical stress due to moisture, traffic exhaust fumes, cover washers brush, cleaning detergents, etc.
- 12.3.5. Enclosures shall be designed to be free draining so that water does not 'pond' on any surfaces.

12.4. Pipework

- 12.4.1. The Developer shall use pipe work with anchor joints avoiding the use of concrete anchor or thrust blocks. However, additional anchoring or restraint shall be provided to the pipe work where required. The Developer shall consider the effects of surge within the fire and water distribution systems and shall provide a surge suppression system or devices to counter the effects of surge.
- 12.4.2. The water and fire mains shall be adequately insulated and trace heated where subject to freezing. The mains passing through the Cover shall be insulated and trace heated. Trace heating shall be monitored on the Developer's Command Control and Monitoring System (CCMS). Fire suppression distribution mains shall be insulated and trace heated up to the section control valve as directed by the system provider. Domestic water services within plant rooms shall be insulated and trace heated. Insulation shall be fire resistant and smoke retardant.

- 12.4.3. Pipework shall have electrical earth bonding.
- 12.4.4. Section isolation valves shall be provided at suitable locations and spacing along the Cover to facilitate inspection and maintenance Activities and automatic air release and drain valves shall be provided where necessary. These valves shall be monitored on the CCMS.

12.5. Fixtures

- 12.5.1. No fixture shall be made within two inches of the edge of a transverse movement joint in the Cover structure.
- 12.5.2. All fixings shall be Grade 316L stainless steel, with a grade appropriate to the environmental conditions in the Cover and the design life of a particular item of equipment to be supported.
- 12.5.3. All fixings shall be designed to withstand a temperature of 842°F for a minimum period of one hour without loss of their design load carrying capacity. All fixings for equipment shall be designed so as to not overstress, damage or affect the performance or life of the structural fire protection system.

12.6. Electromagnetic Environment

The Developer shall ensure that any electrical and electronic equipment shall not be interfered with by, nor shall interfere with, any communications systems (including public radio and Emergency Services radio).

12.7. Cables

All cables shall be low smoke and fume and shall be suitable for its CMS in a Cover environment. Any cables exposed to daylight shall be ultraviolet resistant.

12.8. Training

The Developer shall provide operator and maintenance personnel training for each system prior to being put into use. This training shall include all aspects of operation, maintenance, configuration and future modification of the installation. The Developer shall provide training to the Department's staff who will be required to operate the I-70 Mainline and Cover MEP System in the event of the Developer's control room being unusable. The Developer shall provide in a suitable electronic format all training material and notes suitable for Department to train staff in the future. The Developer shall also develop suitable operator and maintenance personnel testing regime to ensure that all staff are trained and understand the systems to a competent level.

12.9. Special Tools

The Developer shall provide any special tools required to maintain the equipment, including licenses for any software required to maintain the system.

12.10. Cover Reference System

The Developer shall submit to the Department for Acceptance a common referencing system for the length of the Cover, for identifying position along the I-70 Mainline and for referencing within asset registers. This shall be coordinated with the rest of the I-70 Mainline. This referencing system shall be clearly and indelibly marked within the Cover, using a method Accepted by the Department. The referencing system shall be coordinated with the Emergency response systems to ensure efficient identification of zones within the Cover during an Emergency for the purposes of operator response, system activation and Fire Department information.

12.11. Cover Design Baseline Report

- 12.11.1. The Developer shall submit a Final Cover Design Baseline Report (consistent with the Draft Cover Design Baseline Report submitted with the Proposal) to the Department for Acceptance in accordance with the Project Schedule. The Cover Design Baseline Report shall provide a system description that includes as a minimum the elements below, incorporating information on concept proposals, design criteria, performance, durability, maintenance requirements and spares:

- a. System block diagrams for the ventilation, FFFS, fire detection, power supply, fire alarm, water supply, and data communication systems;
- b. Proposed ventilation system type and supplier;
 - i. Proposed ventilation design process; and
 - ii. Approach to derivation of design adverse cover portal pressure condition;
- c. Proposed FFFS type and supplier;
- d. Fire detection system type, model and supplier;
- e. CCTV camera system type, model and supplier;
- f. Operator interface system;
- g. Monitoring and control system;
- h. Proposed system operation;
- i. Hydraulic and pneumatic calculations;
- j. Computational Fluid Dynamics (CFD) analysis process, model, cases and assumptions;
- k. Proposed approach to demonstrating FFFS performance;
- l. Analysis of the safety functions for all fire and life safety systems as prescribed in IEC61508-1;
- m. Proposed approach to passive fire protection as prescribed in NFPA 502, Section 7.3;
- n. Lighting and signing;
- o. ITS; and
- p. Drainage.

12.12. Emergency Response Plan

- 12.12.1. The Developer shall prepare an Emergency Response Plan (ERP), as described in NFPA 502. The Developer shall conduct coordination meetings with the Department and stakeholders including City of Denver Fire Department, to discuss the details of the Cover MEP System operation and Emergency procedures. Such meetings shall be held at various stages of design development including draft and final stages. Additional stakeholders are to be determined by CDOT and the AHJ. The ERP shall be submitted by the Developer to the Department for Acceptance at the same time as the Final Cover Design Baseline Report.
- 12.12.2. The Developer shall update the ERP and submit no later than 60 Calendar Days prior to opening of the Cover, or any part thereof, for Acceptance by the Department.

12.13. Ventilation

12.13.1. Scope

A Cover MEP System shall include a Cover Ventilation System (CVS). The scope of the CVS specification is limited to the ventilation of the Cover over I-70 Mainline only and excludes any plant room or service building ventilation systems.

12.13.2. System Requirements

The CVS shall be of longitudinal concept comprising jet fans. The system shall be developed for the following two principal operating modes:

- a. Normal and congested operations: in situations where the traffic induced airflow is insufficient to maintain vehicle emitted pollutants to within acceptable levels, additional airflow will be generated by the ventilation system; and

- b. Emergency operations: in the event of an Emergency incident, the ventilation system shall be operated to control the smoke and hot gasses and shall discharge the smoke and gases via the exit Portal.

12.13.3. Design Objectives

The CVS shall be designed to meet the following objectives:

- a. To provide sufficient capacity for adequate pollution control in the Cover over the I-70 Mainline during normal and congested traffic conditions;
- b. To provide sufficient ventilation to maintain tenable conditions in the Cover over the I-70 Mainline for the evacuation of Users during a design fire; and
- c. Maintain reasonable conditions for the intervention and rescue operations of the Fire Department.

12.13.4. Design Criteria

- a. Normal and congested operations
 - i. The CVS shall provide air flow to induce sufficient outside air into the Cover to ensure acceptable levels of vehicle emission contaminants are maintained throughout.
 - ii. The permissible exposure limits for each bore shall be in accordance with Environmental Protection Agency and FHWA standards. Maximum limit levels for normal traffic operations are given in Table 12-1 below:

Table 12-1 Maximum Pollutant Levels

Pollutant	Maximum Limit
Carbon Monoxide, CO	120 ppm
Nitrogen Dioxide, NO ₂	1 ppm
Nitric Oxide, NO	15 ppm
Particulate Matter, PM	0.007 m ⁻¹ extinction coefficient

- b. Emergency Operations
 - i. The CVS shall be designed such that, in the event of fire during normal, free-flow unidirectional traffic conditions, the system shall induce airflow in the incident bore that moves smoke and hot gases towards the exit Portal, maintaining tenable conditions for self-rescue. Emergency Service intervention will be via a route upstream of the fire event.
 - ii. The Cover and approach/exit highways sections shall be designed to facilitate the rapid clearance of traffic from the Cover downstream of any incident. In the case of a fire during congested unidirectional traffic (i.e. where traffic may be stationary both sides of a vehicle fire), the Developer shall develop operational procedures and a ventilation response to provide the best conditions for escape within the constraints of the CVS design for normal, free-flowing unidirectional traffic. The non-incident bore can be assumed to be operationally available for evacuation.
 - iii. The design fire size for the Cover MEP System shall be 30 MW convective peak heat release rate, as documented in the Reference Documents on design fire Size. The CVS is required to be capable of generating at least the critical velocity for smoke control for the design fire at the worst-case location in the Cover during an adverse Portal pressure condition.

- iv. The CVS shall be designed to minimize recirculation of smoke from the incident bore to the non-incident bore during an Emergency.
- v. The CVS shall be designed to meet the air flow requirements with the cross connecting doors between the bores open during evacuation.

12.13.5. Noise

- a. Noise levels in the Cover, under full operation of the CVS, shall account for any specific requirements of the Fire Department and not be so high as to interfere with the use of Emergency communications systems. The maximum level as defined in NFPA 502 shall not be exceeded.
- b. Noise levels in the Cover under normal operations of the mechanical ventilation system shall be in compliance with the Local Agency noise ordinances.

12.13.6. Ambient conditions

The Developer shall base the CVS design on the following ambient conditions:

- a. Ambient temperature of 100°F;
- b. Local elevation of 5250 ft.; and
- c. Adverse Cover Portal pressure condition representative of a credible worst case headwind defined as the headwind not exceeded 5% of the time.

12.13.7. Jet fans

- a. The jet fans shall be of the horizontal shaft unidirectional type complete with silencers with bell mouth on both ends of the jet fan and shall fit outside of the headroom and width clearances. The mounting of jet fans parallel or inclined to the roadway surface shall be taken into account in their selection, design and manufacture. The jet fans may be inclined, fitted with adjustable air flow directors or fixed deflectors for setting the optimum jet effect.
- b. Each jet fan unit shall be capable of producing a minimum design thrust to meet the specified design criteria under local worst case atmospheric conditions. The thrust developed per power of motor input power shall be taken as an assessment of the fan efficiency.
- c. The complete jet fan assembly, including but not limited to the fan, fan motor and cables shall be capable of operating in the ambient temperature during normal operation.
- d. Anti-vibration mountings shall be provided to reduce the transmission of vibrations, at frequencies associated with the fan running speeds and their first three multiples (harmonics), to levels that are acceptable for transmission of noise and vibration through the structure.
- e. Jet fans shall be equipped with vibration monitors to enable the transmission of vibration levels to the CCMS. The CCMS shall be programmed to provide an alarm indication when the level of vibration exceeds that specified by the manufacturer. The design shall be such that under Emergency operations any vibration alarms shall be inhibited and shall not result in the switching off of a jet fan.
- f. Jet fans shall be equipped with motor temperature monitors to enable the transmission of temperature levels to the CCMS. The CCMS shall be programmed to provide an alarm indication when the level of motor temperature exceeds that specified by the manufacturer. The design shall be such that under Emergency operations any motor temperature alarms shall be inhibited and shall not result in the switching off of a jet fan.
- g. The complete fan assembly, including but not limited to the fan, fan motor and cables, shall be designed and installed such that it not suffer mechanical, electrical or structural failure when operating at full capacity in smoke laden air with an ambient temperature of 482°F for

a minimum period of one hour. The Developer shall include a manufacturer's type test certificate showing that the design meets these requirements as part of its design submittal.

- h. The whole fan assembly shall be waterproof and capable of withstanding water spray from maintenance washing vehicles and the FFFS. A drain fitting with cap shall be located in the lowest part of the fan housing, if not self-draining by manufacturers design.

12.13.8. Jet fan motors

The jet fan motors shall conform to the following requirements:

- a. Suitable for use in the corrosive atmosphere;
- b. Suitable for use with soft starters;
- c. Be totally enclosed fan ventilated cage rotor type;
- d. Protected motor enclosure;
- e. Lifting lugs or eyes shall be provided; and
- f. Capable of being run in an inclined position, not greater than 15° from the horizontal with no detrimental effects.

12.13.9. Ventilation Control System

A ventilation control system (VCS) for the CVS shall be integrated into the CCMS to:

- a. Permit interface between the operator and CVS equipment components;
- b. Provide automatic ventilation control in normal operations, ensuring the Cover is maintained within required environmental conditions that can be adjusted when required;
- c. Operate in real time to provide live monitoring, control and fault reporting of the CVS equipment;
- d. Provide real time indication of status and alarm conditions at various operator locations;
- e. Interface with and provide data transfer between related systems;
- f. Provide a secure interface between the CVS equipment and the automatic incident/fire detection systems in the event of fire in the Cover; and
- g. Minimize effects and constraints on tunnel operations through automatic reconfiguration modes in the event of plant failure or routine maintenance activities.

12.13.10. Monitoring Equipment and System

Monitoring equipment shall be provided for the continuous monitoring of Visibility, CO, NO₂, air speed, air flow direction and temperature in the Cover and:

- a. For pollution monitoring, a logical method for control shall be developed for normal, maintenance and congested operations and safeguard the fans from frequent switching;
- b. Pollutant and visibility monitors shall be located adjacent to the traffic lanes in the Cover, at locations where the worst level is anticipated;
- c. All monitoring equipment shall be calibrated to represent the average air quality within the Cover;
- d. Monitoring system shall be provided to facilitate operational data to be recorded and stored for analysis. Data to be recorded shall include pollution levels, Cover air speed, fan operations and alarm states;
- e. For the measurement of pollutants, at least two sampling points shall be provided at each side of the each bore of the Cover (eight in total). The location of sampling points shall avoid dilution by air circulating from the Portals;

- f. Monitoring stations shall be located and configured so as to provide data to drive the VCS for the management of pollutants in the Cover to acceptable limits;
- g. Monitoring equipment shall not be installed near to jet fan inlets and outlets so as to affect the performance of the CVS; and
- h. Six air speed and direction monitors shall be installed: two in each bore of the Cover to provide information to the operator on the flow speed and direction of air inside the Cover and two outside the Cover near to each Portal at a location suitable to provide information on external ambient wind conditions to the operator. Proposed locations shall be detailed in the Developer's Fire System Performance Report.

12.13.11. Interfaces to Other Systems

- a. Command, Control and Monitoring System
The CCMS shall read and display the status and settings of all fans and control equipment. The operator shall be able to control the ventilation on a per bore basis using a series of pre-configured plans on the CCMS.
- b. Fixed Fire Fighting System
The CVS shall work in tandem with FFFS. The CVS shall be designed to be operated in a way that minimizes the impact on the effectiveness of the FFFS.
- c. Fire Detection and Alarm System
The CVS shall interface to the fire detection and alarm system to determine the location of any active fire detections.
- d. Pollution Monitoring System
The VCS shall interface with the pollution monitoring system via the CCMS, so that ventilation rates in the Cover can be set automatically, according to dilution requirements.

12.13.12. Computational Fluid Dynamics Model

Effective performance in operation of the combined FFFS and the CVS shall be demonstrated through analysis with a CFD model and comparison to full scale fire test data relevant to the proposed design. The CFD model shall be validated for the proposed performance of the CVS and FFFS based on prior full scale tests of the proposed systems considering ambient conditions listed in [Section 12.13.6](#).

12.13.13. Report contents

Information on ventilation system performance requirements, design criteria and the demonstration of how the design meets the requirements for Emergency operation shall be placed in the Fire System Performance Report.

12.14. Fixed Firefighting System

12.14.1. Scope

The Developer shall design and install the FFFS to serve the full length of both bores of the Cover. The FFFS shall be designed to achieve the following objectives in the event of a vehicle fire in the Cover:

- a. To control the fire and limit peak heat release rate and smoke production;
- b. To reduce temperatures in the vicinity of the fire to aid self-rescue operations;
- c. To reduce temperatures in the vicinity of the fire to reduce likelihood of fire spread; and
- d. To maintain conditions that are reasonable for Fire Department intervention.

12.14.2. Basis of Design

The Developer shall design, provide, install, test and commission the FFFS in accordance with the Construction Standards and the requirements of the Authority Having Jurisdiction (AHJ). The Developer shall provide advance notification of FFFS performance testing and complete demonstrations to the Department and the AHJ. The Developer shall undertake all necessary surveys and investigations to validate its design including, but not limited to Utility surveys, investigations, inquiries with relevant Governmental Authorities and for obtaining all Governmental Approvals.

12.14.3. Design Criteria

- a. A key design objective for the FFFS is to suppress a fire of potential to grow to 120 MW to an extent that provides conditions suitable for effective self-rescue and reasonable conditions for fire service intervention and for those Users unable/unwilling to self-rescue until assistance is provided.
- b. Booster pumps or other means shall be provided to supply the FFFS and shall be maintained at required flow and pressures.
- c. The FFFS shall be designed so as to limit the maximum heat release rate to be handled by the CVS to 30 MW convective heat release rate. The design case to be considered shall be of a heavy goods truck with an ultrafast fire growth rate according to NFPA 92 up to a maximum of 120 MW.
- d. The time period between a fire ignition to fire detection shall be based on the performance characteristics of the fire detection system. The performance of the fire detection system shall be validated through full scale testing.
- e. The representative timeline of a design fire scenario, including characterization of the design fire, fire growth, fire detection, activation of Cover fire safety systems, self-rescue and Fire Department intervention shall be presented in the Fire System Performance Report.
- f. The Developer's designer shall be licensed. The installation and certification shall be carried out by certified contractors.

12.14.4. FFFS Requirements

The entire Cover shall be protected by the FFFS, which shall be zoned and shall comprise:

- a. Water supply provision in accordance with NFPA and Fire Department requirements;
- b. Pumps and controls;
- c. Wet main distribution pipework from the local water system, to pump room and routed into and along the walls in the Cover near the soffit level;
- d. Section valves to create suppression zones with a minimum section length of 100 feet in length (at least two zones are activated during a fire equating to a protected area of at least 200 feet in length);
- e. Dry secondary distribution pipework at high (soffit) level of the structure to feed the suppression nozzles above the traffic lanes; and
- f. Suppression nozzles connected to the secondary distribution network; the number of nozzles across the Cover width and nozzle banks shall be longitudinally spaced to provide sufficient and homogeneous flow pattern distribution in the area to be protected.

12.14.5. Water Supply

- a. The Developer shall design, install and commission a water supply system to provide water supply for the FFFS. The water demand for the FFFS shall be sized based upon a

minimum demand of 30 minutes of simultaneous operation for two zones in the event of a fire.

- b. The water supply shall be adequate to provide water at the minimum working pressure required by the FFFS. Under dynamic full fire flow conditions, all locations within the system shall be demonstrated to have adequate pressure for the FFFS. Operation of the FFFS shall not reduce the operating pressure or flow rate of the Cover standpipe system and vice versa.
- c. The Developer shall be responsible for arranging the source of the FFFS water supply, which shall be (i) direct mains supply from the local/municipal water company, (ii) capable of supplying the system minimum demand at the most disadvantageous location for the pipeline system for the required period and (iii) at a water quality that complies with the manufacturer's requirements.

12.14.6. Pumping System

- a. The FFFS shall be equipped with pump station to be located in a designated pump room.
- b. Pump units shall consist of one or more pumps and driven by electrical motors. The electrical power supply shall be dual redundant with automatic switch over. The electrical power supply shall comply with the Construction Standards.
- c. Pump sets shall be arranged with at least one pump available as a standby in the event of a duty pump failing.
- d. The pump station shall be capable of delivering 110% of the full design flow rate demanded by the FFFS at the required system pressure to supply the protected area - the two spray zones within the Cover - at the minimum pressure specific to the nozzle.
- e. Hydraulic and pneumatic calculations submitted with the Cover Design Baseline Report shall:
 - i. Apply only appropriate and validated calculation procedures for pressure loss calculations (i.e. the formulae of Darcy-Weisbach for liquid flow systems);
 - ii. Include provision for the elimination of the effects of surge and water hammer effects in section valves and the pipework system as a whole;
 - iii. Provide assurance that the pumped flows are acceptable in terms of flow rate and pressure at each nozzle location with full system deployment; and
 - iv. Provide pump and system characteristics curves. In addition performance curves shall be provided indicating the efficiency and power requirements including the operating range.
- f. The following equipment/fittings shall be provided as minimum within the pump station:
 - i. Isolating valves;
 - ii. Safety valves for each pump set at 115% of the operating pump pressure;
 - iii. Diverter valves;
 - iv. Manifolds;
 - v. Filters between the tanks and pump sets to be 100% redundant or self-cleaning and provide a by-pass for blockages;
 - vi. Flow meters;
 - vii. Pressure gauges;
 - viii. Controls; and
 - ix. Surge prevention devices.

- g. Water treatment shall be provided where required subject to water quality analysis and suitability for the Developer's system.
- h. Pump rooms shall be kept at a temperature above 39°F at all times in order to prevent freezing. Rooms shall be equipped with a suitable drainage and ventilation system.
- i. A jockey pump or an equivalent of such pump shall be used to pressurize the main pipe to a suitable stand-by pressure up to the section valves (wet pipes). Provision of non-return valve between the pump and the pipes as well as test valve at the pump outlet shall be also provided.

12.14.7. Pipeline System

- a. The pipework shall be dimensioned to ensure that the minimum pressure tested is achieved at all nozzles of the activated sections. The maximum allowable pressure loss shall be within the limits given by the maximum and minimum tested pressure.
- b. A Hardy-Cross or similar pipe network analysis shall be performed for a variety of flow scenarios to identify the maximum and minimum dynamic pressures in the system when operated in various hydraulically remote states. This analysis shall identify the maximum flow velocities expected within the pipe, to ensure that the pipe hanging system is adequate to resist the bend forces expected in the pipe network. Pressure surge mitigation shall be sized to safely handle water hammers expected during the transient operation of the system when various remotely located valves are closed. Where necessary, the Developer shall incorporate into the structural design, any strengthening necessary to eliminate any overstress. Sleeves shall be cast in the hole and the annulus between pipe and the sleeve shall be suitably fire stopped.
- c. The Cover shall be equipped with a main pressure line feeding through section valves into individual zones and associated nozzle arrays.
- d. Pipe material shall be tolerant against corrosion. Adequate support shall be provided for all exposed pipework, nozzles and valves to:
 - i. Prevent undue stresses being imposed on them during operation and while joints are uncoupled for maintenance purposes;
 - ii. Comply with expected levels of load, vibration, water hammer, air velocities and heat resistance; and
 - iii. Minimize the effect of high vehicle impact against nozzles and pipework.
- e. The wet sections of the pipework shall be maintained at a minimum temperature of 39°F at all times, so the design shall include provisions to guarantee this minimum temperature requirement (e.g. insulation and trace heating).
- f. Filters and strainers shall be provided to pipelines that lead water to the pump station to avoid any particles entering the pumps, hence blocking the distribution system.

12.14.8. Valves

- a. All valves constituting the FFFS shall be provided with means of monitoring status which shall be reported to the CCMS. Section valves shall be robust, remotely controlled and fully leakage free.
- b. Valve enclosure boxes shall be fire resistant and provide sufficient resistance to permit continuous and full functioning of valves for a minimum period of two hours with the fire suppression system operating, taking into consideration the anticipated air temperature immediately outside the enclosure during the design fire of 30 MW.
- c. Fire resistant valve enclosure dimensions shall be minimized to reduce any risk of traffic collision.

- d. Adequate support shall be provided to the section valves to withstand the expected air velocities in the Cover.

12.14.9. Nozzles

- a. Nozzle installation shall be at high level (soffit) in the Cover.
- b. The nozzle design shall allow for the expected ventilation velocities of the longitudinal ventilation system and shall be designed to deliver water droplets appropriate to meet the fire performance acceptance for the design fire.
- c. All nozzle openings shall be designed for protection against contamination and clogging.
- d. All nozzles shall be installed in full accordance with the manufacturer's design and installation manual taking into account: positioning, distance from walls and other obstructions, orientation and Site hazards.

12.14.10. Local Control Facilities

- a. The Developer shall provide the following facilities in a protected room near the entry Portal to each bore for Fire Department use:
 - i. Fire main manual wheel valve to allow the dry standpipe hydrant main to be filled from the water supply (automated control to be provided as a backup);
 - ii. Control panel with override facilities and status indicators for the FFFS;
 - iii. Control panel with direct override facilities and status indicators for the ventilation system;
 - iv. Fire alarm control panel;
 - v. Fire Department hose connections to connect sufficient hoses to supplement FFFS should supply fail;
 - vi. Radio coverage repeater; and
 - vii. Sufficient heating and ventilation to avoid condensation or corrosion as well as lighting.
- b. All equipment shall be housed within sealed IP66 enclosures.
- c. The protected rooms shall be provided in accordance with local codes and standards.

12.14.11. Electrical Equipment

- a. Electricity supply for the pumps shall be provided from low voltage distribution boards. Control panels shall be provided at the pump locations. Local controls shall be provided to operate pumps individually from the pump locations.
- b. All power and control cabling shall be sized correctly taking into account the full load current of the plant, characteristics of the protection devices and voltage drop.
- c. Pumping equipment and section valves shall be instrumented to enable remote monitoring of mode and condition to the CCMS.

12.14.12. Control System

The control system shall:

- a. Secure interface between the operators and the fire suppression plant;
- b. Provide real time indication of status and alarm conditions at various operator locations;
- c. Interface with and data transfer between related systems;
- d. The FFFS control system shall be integrated with the CVS;
- e. Be scalable and have flexibility for future changes in operational modes;

- f. Operate in real time to provide live monitoring, control and fault reporting of the plant services;
- g. Faults and alarms shall be reported to the CCMS;
- h. Provide operator access without the need for computer programming skills to carry out the day to day functions;
- i. Provide the option of manual override if the Cover MEP System operator deems necessary; and
- j. Provide a manual back-up at the pump station for independent control of the pumping plant.

12.14.13. Interfaces

- a. Ventilation System
Effective performance in operation of the combined FFFS and the CVS shall be demonstrated through analysis with a CFD model as described in this Section 12. The results shall be included in the Fire System Performance Report.
- b. Command, Control and Monitoring System
The design shall facilitate the FFS status, settings and faults to be reported to the CCMS including: Tank levels and temperatures, pump and valve system status.
- c. Fire Detection and Alarm System
The CCMS shall provide a secure interface between the FFFS and automatic incident detection (AID) system in the event of fire in the Cover to determine the location of any active fire zone.

12.15. Cover ITS and Communications System

12.15.1. This subsection describes all Cover ITS requirements. The Developer shall incorporate these requirements into its design for a fully integrated ITS for the Project.

12.15.2. The Developer shall provide and operate a Control Center for the Cover. It shall be equipped with all the necessary facilities to safely operate the Cover CCMS. All the systems shall be designed to an appropriate level of resilience and redundancy in accordance with IEC61508.

12.15.3. The Developer shall provide communications links to the Fire Department for fire alarms and the CTMC as a fall back center.

12.15.4. Communication System

- a. The Developer shall provide a communication system for the Cover to inform the Users, members of the public, the Emergency Services and the Department. The communication system shall comprise the following four sub-systems:
 - i. Emergency roadside telephones;
 - ii. Radio Rebroadcast;
 - iii. Voice Alarm (VA)/Public Address (PA); and
 - iv. Emergency way-finding signage.
- b. The four subsystems will provide the following facilities:
 - i. Emergency Roadside Telephones
Emergency roadside telephones shall be provided in the Cover and on its immediate approaches in both directions. The telephones shall be connected directly to a telephone on the Cover Control Center operator's desk. An additional telephone shall be provided at the CTMC and it shall be possible for the CTMC operator to pick up

incoming telephone calls from the Cover in the event that the Developer's Control Centre operator is unable to answer the call. The system shall be designed such that in the event that an Emergency call is not answered within 10 seconds, all control room telephones shall ring and the first operator to pick up the call will be connected to the Cover Emergency telephone. This time period shall be adjustable by a suitably accredited system operator.

ii. Radio Rebroadcast

A. The radio rebroadcast shall be in accordance with NFPA 72 and:

- (I) Allow the Emergency Services personnel to communicate by radio with their commanders and one another whilst inside the Cover;
- (II) Allow operations and maintenance staff to communicate by radio with their operations center and with one another while in the Cover;
- (III) Allow Users to receive domestic radio broadcasts using their in-car radios. These radio broadcasts shall be processed within the Cover roadway management system to allow the broadcast program to be interrupted and replaced with an appropriate Emergency public safety message; and
- (IV) Allow all Users in the Cover to make and receive cellular telephone calls.

B. The radio rebroadcast systems shall meet all local, State and Federal Law and standards relating to the transmission of radio services and the Developer shall negotiate and obtain all necessary licenses. Any apparatus emitting radio energy shall be specified and supplied to ensure that there is no interference to any radio or other electronic services outside the Cover.

iii. Voice Alarm/Public Address

A. The voice alarm and public address VA/PA system shall be designed and installed in accordance with NFPA 72 and shall allow Cover operations staff to make Emergency public safety announcements in the Cover and on its immediate approaches. The VA/PA system shall reproduce sound such that clear and intelligible speech can be heard by members of the public at all points in the Cover and within twenty-five feet of the Portal under all conditions of background noise likely to be experienced (e.g. with or without the CVS running and with or without traffic flowing).

B. The functionality and priority of the system shall be determined during detailed design. It shall be possible for the list of available messages and the priority level of that message when selected by the operator to be changed by any suitably accredited system operator.

iv. Emergency Way-Finding Signing

In order to aid the evacuation of Users in the event of an incident in the Cover, internally illuminated Emergency way-finding signs will be provided. Each of the signs shall have two faces with the sign on one face pointing to the entrance Portal and the sign on the second face pointing to the exit Portal. The internal illumination of these signs shall be controlled from the Cover Control Center such that in the event of an incident only the signs that show a safe route shall be illuminated at any time. The Emergency way-finding signs shall otherwise always be illuminated.

12.15.5. Data Communication System

The Developer shall design and install a data communication system to provide and facilitate a reliable, high bandwidth fault tolerant communications to all equipment throughout the Cover and its immediate approaches. It shall be integrated with the Project's ITS infrastructure to provide reliable communications to the Control Centers. It is anticipated that this will be provided by

means of a single high reliability fiber-optic based Ethernet network. Fault tolerance shall be provided by means such as a 'self-healing' ring network topology or Ethernet Ring Protection Switching (ERPS).

The Developer shall provide a 96 strand fiber optic cable, separate from the ITS backbone cable. All Cover system devices shall be spliced to this 96 strand fiber optic cable. The ITS backbone will provide physically diverse communication paths between the CCMS and the CTMC. The Developer shall provide redundant communications paths utilizing the ITS backbone installed as a part of the Project, and utilizing the existing CDOT ITS fiber paths on I-225 to the I-25/Southmoor Node and the existing CDOT ITS fiber path at Node 1. The Developer shall complete backbone connections on existing CDOT ITS fiber paths, per design and construction requirements as outlined in Schedule 10, Section 3 ITS and Tolling Equipment. The Developer shall perform all off-corridor splicing and communications equipment necessary to light the fiber path and enable communications.

Critical equipment shall be provided with IP connections to two different (redundant) Ethernet switches and all Ethernet switches shall be resistant to the effects of MAC address 'flapping' and broadcast storms. The Developer shall ensure security of his systems and those connected to it (including but not limited to the Department's ITS system) in accordance with ISO 27001. Ethernet switches shall be manufactured by Ciena and the same field and aggregation switch types as required per Schedule 10, Section 3 – ITS and Tolling Equipment.

The Developer shall provide continuous DSRC communications within the Cover section as required per Schedule 10, Section 3 – ITS and Tolling Equipment.

12.15.6. Lane-Use Signals

- a. The Cover ITS shall include lane-use signals (LUS) mounted on gantries at the entry Portal of each bore. The operation of these Portal LUS shall be controlled by the Project ITS and integrated into the ATM system per the project-defined operating procedures. The Project ITS system shall interface with the CCMS such that if CCMS detects a condition likely to be a danger to Users, then the Cover can be closed using the Portal signals controlled by the Project ITS.
- b. Portal LUS shall be of same model, manufacture and type as the ATM LUS specified in Schedule 10, Section 3 – ITS and Tolling Equipment.

12.15.7. Dynamic Message Signs

- a. Dynamic Message Signs (DMS) controlled directly by the Cover ITS and CCMS shall be provided at both entry Portals of the Cover. The DMS shall be of the same manufacture and model as the full-color, full-matrix DMS specified in Schedule 10, Section 3 – ITS and Tolling Equipment and Appendix B to that Section 3. DMS shall be capable of displaying messages with wording or graphics as Approved by the Department at the design stage. The DMS shall be used to inform drivers of full or partial Closure of the I-70 Mainline in the Cover or more generally of conditions ahead.
- b. The system design shall include a facility whereby the Department will have the capability to change the message set for the DMS from the CTMC.

12.15.8. Closed Circuit Television

- a. The Developer shall provide pan, tilt and zoom Closed Circuit Television (CCTV) cameras with integrated wash/wipe functionality and associated transmission equipment in the Cover and on its immediate approaches. The CCTV pictures shall be transmitted to the Cover Control Center and linked to the CCMS for operational monitoring, where they shall have recording capability. Recordings from all CCTV cameras shall be made and retained for a minimum duration of 30 Calendar Days to allow for the analysis of any incidents that might have taken place before being overwritten (unless specifically marked for retention by an operator). CCTV video shall also be transmitted to the CTMC for backup recording.

- b. The Developer shall provide a sufficient number of cameras to ensure that 100% coverage within the Cover and its immediate approaches is achieved with all cameras in their 'home' position with no blind spots. Cameras shall be mounted over the running lanes in groups of three, the middle camera of each group shall be a thermal camera. One shall be over the ramp lane, one over the center of general purpose lanes and one over the Tolloed Express Lane.
- c. The CCTV camera images shall be transmitted to both the Cover Control Center and the CTMC. Developer shall integrate the cameras into both the CCMS and CTMC camera viewing and control software; CTMC currently uses NiceVision (Qognify) camera control and viewing software. Developer shall provide a Nice (Qognify) software server at the CCMS for real-time camera viewing and control.
- d. Pan, tilt, zoom and wash/wipe controls of the CCTV cameras are to be provided for both the Cover Control Center and CTMC.

12.15.9. Ramp Meter System interface

The CCMS shall interface to the ramp metering systems on the junctions either side of the Cover. This interface shall permit the CCMS to close, and subsequently reopen, the approaches to the Cover and to expedite the flow of traffic downstream of the Cover in the event of an incident.

12.15.10. Vehicle Detection System

The Developer shall provide a vehicle detection system within the Cover and its immediate approaches. The vehicle detection system shall provide the following facilities:

- a. Traffic speed and flow data (traffic speed and flow data shall also be integrated into the CTMS software);
- b. Detection and alarm for a single stationary vehicle in the Cover;
- c. Detection and alarm for congested traffic flow in the Cover;
- d. Detection and alarm for congested traffic flow downstream of the Cover; and
- e. Detection and alarm for a vehicle travelling in the wrong direction within or approaching the Cover.

12.15.11. Fire Detection and Alarm System

The Developer shall install an automatic Fire Detection and Alarm System (FDAS) in accordance with the provisions in NFPA 72, including fire alarm control panels. The fire detection system shall be capable of locating a vehicle fire to within a longitudinal distance of 25% of the length of a single FFFS zone. The fire detection system shall be integrated with the FFFS and the CVS to ensure effective and timely response to fire to meet the performance requirements for the FFFS and other safety systems.

12.15.12. Information on how the Cover ITS and communications systems are to be operated in an Emergency with demonstration of how the design facilitates effective self-rescue and Fire Department intervention shall be placed in the Fire System Performance Report.

12.16. Plant Rooms and Service Buildings

The Developer shall provide suitable plant rooms to house switchgear, control equipment and associated equipment meeting Local Agency building codes and standards.

Plant rooms and other Cover facilities, including the CCMS, shall have secure access utilizing the same building monitoring and access control system that CDOT uses on its node buildings; refer to Schedule 10, Section 3 – ITS and Tolling Equipment: Traffic Management System Building specification for requirements.

The I-70 Cover Plans in Schedule 10B Contract Drawings indicate locations (labelled 'Maintenance Building') and footprints on the Cover for two service buildings (one at each

bookend). The Developer (i) is required to construct any such buildings that it requires in accordance with its design at such locations, (ii) is not permitted to construct such buildings using a greater footprint than indicated in such plans unless Approved by the Department to be larger and (iii) notwithstanding (ii), shall minimize the sizes of such buildings by locating certain plant rooms and equipment in separate facilities located within remaining ROW areas in the vicinity of the Cover or in Additional ROW areas.

12.17. Command Control and Monitoring System

12.17.1. Scope

- a. The Developer shall design and install a CCMS to provide a comprehensive fault monitoring and management facility for all electrical and mechanical systems installed in the Cover as well as to facilitate the operation and management of the roadway in the Cover and its approaches. The CCMS design shall include provisions to integrate the Project ITS and the Cover ITS described in this Section as necessary to support the CCMS and to enable the CCMS to interface with the operation and management for the I-70 Mainline as a whole as well as either side of the Cover and the associated ramp management systems.
- b. The CCMS shall include the ability to monitor the status of the Cover MEP System and provide facilities to:
 - i. Over-ride the automatic operation of the CVS;
 - ii. Over-ride the automatic operation of the drainage system;
 - iii. Over-ride the automatic operation of the electricity distribution system;
 - iv. Over-ride the automatic operation of the lighting system;
 - v. Over-ride the automatic operation of the Emergency way finding signs;
 - vi. Over-ride the automatic operation of the FFFS;
 - vii. Control the operation of the radio rebroadcast systems;
 - viii. Control the operation of the voice alarm and public address system;
 - ix. Monitor the status of the fire main system;
 - x. Monitor the status and manage alarms from the AID system;
 - xi. Monitor the status and manage alarms from the Fire Detection system;
 - xii. Monitor the status and manage alarms from the cross bore doors;
 - xiii. Monitor Plant Room systems including heating, ventilation, and air conditioning (HVAC), lighting, intruder alarm, fire alarm, FFFS etc.;
 - xiv. Monitor the status and manage alarms from all environmental and other sensors;
 - xv. Monitor the status of the power distribution system; and
 - xvi. Request, via an appropriate interface, specific actions from the traffic management systems (including automatic responses to state changes and alarms from the systems being monitored).
- c. The CCMS shall be integrated with the Project ITS to allow the operators to manage and co-ordinate the operation of the I-70 Mainline in the Cover and along both approaches. The Developer shall be responsible for any integration necessary, including any required CTMS and Qognify software modifications. These include:
 - i. LUS;
 - ii. DMS;

- iii. Communications Systems;
 - iv. CCTV;
 - v. Ramp metering systems; and
 - vi. Vehicle detection systems.
- d. The CCMS shall be based upon a programmable logic controller (PLC) based Supervisory Control and Data Acquisition (SCADA) system. Interfaces to systems both in the Cover and on the surface streets may be required.
- e. The Developer shall provide Cover operations staff to continuously monitor and control the Cover MEP System. Such staff shall:
- i. Be co-located with CDOT ITS staff at the CTMC;
 - ii. Be responsible for the remote control and monitoring of the Cover MEP System; and
 - iii. Assist with Courtesy Patrol dispatch, general traffic, roadway, weather, construction and Special Event management, ATM, and Tolled Express Lane system monitoring and operations.

CDOT ITS staff will cross-train Developer operations staff to assist with operator duties beyond the Cover MEP System (refer to Section 12.8 for Developer training requirements). CDOT will provide one seating area with a desk and computer for housing at the CTMC. Developer shall provide software, licensing, and remote access to all Cover MEP System elements for control and monitoring. All Cover MEP System functionality, monitoring and control shall be able to be performed remotely from the CTMC.

12.17.2. Basis of Design

The Cover and its approaches shall be controlled and managed from a staffed Cover Control Center where the operators will be able to interact with the CCMS to ensure the safety of all Users within the Cover and provide a fallback operations room in the event of the system at the CTMC being unavailable.

12.17.3. Design Criteria

The Cover has been assessed as Category C under NFPA 502. As such the requirements of NFPA 502 section 4.5/7.5 (Emergency Communications), 7.4 (Fire Detection/CCTV), 7.6 (Traffic Control) and 7.16.1 (Emergency egress and signage) shall apply as mandatory requirements.

12.17.4. CCMS Control and Monitoring Facilities

The CCMS shall provide the Cover operations staff the ability to monitor the operation of the Cover and the immediate approaches.

- a. Ventilation
 - i. The CCMS shall allow the Cover operations staff the ability to monitor the operation of the CVS. It shall be possible to monitor the current status of all ventilation fans on a single screen using a pictorial representation. From this screen it shall be possible to interrogate the detailed status of individual fans and fan controllers.
 - ii. The CCMS shall have the facility for the operator to over-ride the normal automatic operation of the CVS, either as whole or just specific fans. In an Emergency, automatic and manual settings on the CVS shall be over-ridden by a predefined Emergency ventilation plan.
 - iii. The CCMS shall have the ability to raise an alarm to the operator if any Element of the CVS becomes faulty. It shall raise a second alarm if the fault will cause the Cover to operate below the agreed minimum operational threshold.

- b. Drainage
 - i. The CCMS shall provide Cover operations staff the ability to monitor the operation of the drainage system. It shall be possible to monitor the current status of all drainage system components on a single screen using a pictorial representation. From this screen it shall be possible to interrogate the detailed status of the drainage system components such as level sensors, pumps and valves.
 - ii. The CCMS shall provide the facility for the Cover operator to over-ride the normal automatic operation of the drainage system (e.g. inhibit or turn on pumps or close/open valves). In an Emergency, manual settings on the drainage system shall be over-ridden by a predefined Emergency drainage plan.
 - iii. The CCMS shall raise an alarm to the operator if any Element of the drainage system becomes faulty. The CCMS shall raise a second alarm if there is an imminent risk of flooding within the Cover.
- c. Lighting
 - i. The CCMS shall provide the Cover operations staff the ability to monitor the operation of the lighting system in the Cover. It shall be possible to monitor the current status of the entire lighting system on a single screen using a pictorial representation. From this screen it shall be possible to interrogate the detailed status of individual lighting system Elements.
 - ii. The CCMS shall provide the facility for the Cover operator to over-ride the normal automatic operation of the lighting control system. In an Emergency, manual settings on the lighting control system shall be over-ridden by a predefined Emergency lighting plan.
 - iii. The CCMS shall raise an alarm to the operator if any Element of the lighting system becomes faulty. It shall raise a second alarm if the fault will cause the Cover to operate below the agreed minimum operational threshold.
- d. Fire Main

The CCMS shall monitor the current status of the fire main system including pumps, pump controllers, trace heating, level sensors and input pressures. The CCMS shall monitor the pressure on the fire main within the Cover. The CCMS shall raise an alarm to the operators if the pressure is outside predefined limits.
- e. Fixed Firefighting System
 - i. The CCMS shall monitor the current status of the FFFS. It shall present the current status of the FFFS to the Cover operators on a graphical user interface (GUI).
 - ii. The CCMS shall raise an alarm if any Element of the FFFS becomes faulty. It shall raise a second alarm if the fault will cause the Cover to operate below the agreed minimum operational threshold.
 - iii. The CCMS shall allow the Cover operator to selectively operate the FFFS based upon the fire location reported by the fire detection system.
- f. Emergency Way-Finding System
 - i. The CCMS shall monitor the status of all Emergency way-finding signs and present this to the Cover operators via a GUI. In the event that an Emergency is detected, the appropriate Emergency plan shall be set automatically.
 - ii. The CCMS shall raise an alarm to the Cover operator if any Element of the Emergency way-finding system becomes faulty. It shall raise a second alarm if the fault will cause the Cover to operate below the agreed minimum operational threshold.

- g. Radio Rebroadcast Systems
 - i. The CCMS shall monitor the status of all radio rebroadcast systems and present this to the Cover operators via a GUI. The CCMS shall raise an alarm to the operator if any Element of the radio rebroadcast system becomes faulty. It shall raise a second alarm if the fault will cause the Cover to operate below the agreed minimum operational threshold.
 - ii. The CCMS shall allow the Cover operator to broadcast speech messages selected from a list of predefined Emergency safety announcements into the Cover and its immediate approaches through a voice break-in facility in the domestic radio rebroadcast system. The CCMS shall recommend the message to be broadcast based upon the information available within the CCMS.
- h. Voice Alarm/Public Address System
 - i. The CCMS shall monitor the status of the voice alarm public address system and present this to the Cover operators via a GUI. The CCMS shall raise an alarm to the operator if any Element of the voice alarm and public address system becomes faulty. It shall raise a second alarm if the fault will cause the Cover to operate below the agreed minimum operational threshold.
 - ii. The CCMS shall allow the Cover operations staff to broadcast speech messages selected from a list of predefined Emergency safety announcements into the Cover and its immediate approaches through a system of public address loudspeakers. The CCMS shall recommend the message to be broadcast based upon the information available within the CCMS.
- i. Vehicle Detection System
 - i. The CCMS shall monitor the status of the vehicle detection system and present this to the operators via a GUI. The CCMS shall raise an alarm to the operator if any Element of the vehicle detection system becomes faulty. It shall raise a second alarm if the fault will cause the Cover to operate below the agreed minimum operational threshold.
 - ii. The CCMS will monitor the vehicle detection system for incidents. If an incident is detected, the CCMS shall alert the operator and recommend the actions to be taken.
- j. Fire Detection System
 - i. The CCMS shall monitor the status of the fire detection system and present this to the Cover operators via a GUI. The CCMS shall raise an alarm to the operator if any Element of the fire detection system becomes faulty. It shall raise a second alarm if the fault will cause the Cover to operate below the agreed minimum operational threshold.
 - ii. The CCMS shall monitor the fire detection system for indications that fire may be present and if a fire is detected, the CCMS shall alert the operator and recommend the actions to be taken. If no response is received from the operator within a predetermined time limit, the recommended action shall be automatically applied.
 - iii. The automated fire detection system shall be supplemented with manual fire alarm call points situated at every Portal, every cross bore door and at all Emergency panels. The operation of the manual call points and the automated fire detection systems shall be coordinated by a fire alarm control panel and monitored by the CCMS. The fire alarm control panel shall permit the fully automated control of the fire and life safety systems by the CCMS but shall allow local manual override facilities.
 - iv. The fire detection systems shall have a direct connection to the Fire Department station/control room as well as the Cover Control Center.

k. Plant Room Systems

The CCMS shall monitor the status of all plant room equipment such as the HVAC, lighting, intruder alarm or building fire alarm and present this to the Cover operators via a GUI. The CCMS shall raise an alarm to the operator if any Element of the plant room equipment becomes faulty.

l. Power Distribution System

The CCMS shall monitor the status of the power distribution system and raise alarms to the operators in the event of any faults in the power distribution system. The CCMS shall also monitor the status of the Uninterruptible Power Supply (UPS) systems and raise alarms if the Cover systems are being powered solely from the UPS. The CCMS shall raise an alarm if either of the incoming mains supplies have failed. It shall raise a second alarm if both incoming supplies have failed and will recommend the closure of the Cover.

m. Power Supply to CCMS and ITS Equipment

All CCMS and ITS equipment shall be supplied by an Uninterruptible Power Supply (UPS) in accordance NFPA 70. This UPS shall be sized to sustain the operation of all critical systems for a minimum of two hours.

n. Ramp Meter System Interface

The CCMS shall interface to the ramp metering systems on the interchanges either side of the Cover. This interface shall permit the CCMS for the Cover to close the approaches to the Cover and to expedite the flow of traffic downstream of the Cover in the event of an incident.

12.17.5. Interfaces

The CCMS shall provide interfaces to the operations, maintenance and management system and the Project ITS. These interfaces shall permit:

- a. The CCMS to report and manage faults to the Maintenance Management Information System;
- b. The CCMS to demand control actions from the Project ITS. These actions shall include:
 - i. Request the complete closure of either bore;
 - ii. Request the complete closure of both bores;
 - iii. Request entrance ramp closure upstream of Cover entry Portal; and
 - iv. Request Emergency traffic clearance signal plan on traffic signaled junctions downstream of the Cover exit Portal.

12.17.6. Location and Protection of ITS Elements

Wherever possible, ITS equipment will be mounted in the plant rooms of the services buildings. Wherever this is not possible, the equipment will be installed in high corrosion resistance stainless steel enclosure mounted outside of the vehicle gauge. These enclosures will be sealed to prevent the ingress of high pressure water jets (such as those used for wall cleaning and from the FFFS) and dust including that arising from the burning of diesel fuels by road vehicles.

12.17.7. Non Functional Requirements

a. Emergency Points

At each of the locations of the Emergency telephones, hydrants and fire alarm call points, the Developer shall provide an Emergency point. Emergency points shall be clearly labeled as such, fabricated of stainless steel and, as a minimum contain portable fire extinguishers, the Emergency telephone and required firefighting equipment.

b. Cable Management System

A full cable management system will be provided in the cornice on each side of the roadway and on the soffit on the centerline of the roadway. The cable management system will be provided using open high corrosion resistance stainless steel cable tray, trunking or conduit.

c. Cabling Requirements

Cables installed in the Cover shall be constructed using low smoke and fume insulation. Cables containing halogens will not be permitted in the Cover. Cabling for essential and life-safety systems shall be constructed from fire survivable materials.

12.18. Electrical Systems

12.18.1. Basis of design

The Developer shall design, provide, install, test and commission all electrical power systems in accordance with the appropriate NFPA standards or other such applicable standards and specifications of the AHJ. The Developer shall allow attendance at all performance testing and demonstrations by the Department and relevant Local Agencies or appointed representatives. The Developer shall undertake all necessary surveys and investigations to validate its design including, but not limited to utility surveys, investigations, enquiries with relevant Governmental Authorities and for obtaining all necessary Governmental Authorities.

12.18.2. Design Criteria – Electrical Power

- a. The Developer shall verify with the AHJ whether the requirements of NFPA 502 – Chapter 12 Electrical Systems (clause 12.1.5) are to be incorporated into the design.
- b. The electrical systems shall be designed to support life safety operations, fire Emergency operations, and normal operations. The electrical systems shall be designed to allow for routine maintenance without disruption of traffic operation.
- c. The main electrical distribution shall be configured, interconnected and controlled to allow all services to the Cover to remain operational in the event of a single power supply transformer failure in the substation at either end of the Cover.
- d. Main low voltage switchboards shall be configured with interlocking switchgear to allow for Emergency standby generator installation to be connected to serve all essential services supplies to the Cover.
- e. Diesel generators shall be provided for backup purposes in order to run the Cover in the event of a failure of both electrical supplies.

12.18.3. Design Criteria – Emergency Power

a. Emergency Standby Generator

Emergency Power shall be provided by an Emergency standby generator in accordance with Article 700 of NFPA 70. (For Emergency and standby power systems as NFPA 110).

b. The following systems shall be connected to the Emergency power system:

- i. Emergency lighting;
- ii. CCMS and ITS;
- iii. Exit signs;
- iv. Emergency communications;
- v. Cover drainage monitoring;
- vi. Emergency ventilation;
- vii. Fire alarm and detection;

- viii. Closed-circuit television or video; and
- ix. FFFS.
- c. Emergency Power Circuits
Emergency circuits installed in the Cover and ancillary areas shall remain functional for a period of not less than one hour, for the anticipated fire condition.
- d. Emergency circuits shall comprise one of the following:
 - i. Fire-resistive cables;
 - ii. Circuits embedded in concrete that are protected by a two-hour fire barrier system; and
 - iii. By the routing of the cable system external to the roadway using diversity in system routing as approved, such as separate redundant or multiple circuits separated by a one hour fire barrier, so that a single fire or Emergency event will not lead to a failure of the system.
- e. Emergency Power UPS System
 - i. Two separate UPS systems shall be provided within each of the services buildings located near each end of the Cover. One of these will feed the lighting system whilst the other will feed the remaining safety critical plant.
 - ii. The UPS specification shall be developed based on the following;
 - A. Three-phase, on-line, double-conversion, static-type, UPS units with 120 minute battery Autonomy;
 - B. 20% Spare capacity;
 - C. N+1 parallel redundant configuration; and
 - D. External wraparound bypass unit

12.18.4. Design Criteria – Containment

Containment shall be provided throughout the Cover for all cabling services. Separate containment systems shall be provided for power and control/communications cabling, segregated in line with Good Industry Practice. Armored cables shall be run on cable trays with non-armored cables run in trunking or conduit to suit the required routing. Control and communications cables shall be run in conduit.

12.18.5. Design Criteria – Cabling

All cables and associated materials shall be insulated or clad using low smoke, zero halogen (LSOH) materials and where required, certain cables will be fire survivable cables.

12.19. Lighting

12.19.1. Scope

- a. The Developer shall design and install lighting systems in accordance with the Illuminating Engineering Society RP-22-11 to provide coverage for the full length of the Cover to achieve the following objectives:
 - i. To provide safe illumination for the passage of vehicular traffic at the posted speeds through the Cover;
 - ii. To reduce any visual adaptation problems caused by the external luminance of the external scene when approaching the Cover by the uses of increased threshold illumination ensuring that stationary traffic or other obstructions are visible to the approaching traffic;

- iii. To provide exit lighting if necessary to cope with visual adaptation problems for drivers leaving the Cover;
- iv. To provide Emergency lighting to cover the safe egress of drivers in an Emergency either by the means of dedicated means of egress or via cross passage doors;
- v. To reduce maintenance costs and associated health and safety risks by mitigating/controlling maintenance procedures and their frequency;
- vi. To reduce energy costs associated with the lighting systems; and
- vii. To allow full control of the lighting systems to allow stepless dimming control between the lighting zones.

12.19.2. Site specific conditions

The Developer shall take into consideration in its design the east - west orientation of the Cover, which creates specific lighting demands in terms of Threshold Luminance levels, the external view of the Cover has been assessed as being scene 4 from figure 3 in RP-22-11. This means that the threshold level has been initially assessed to be 26 cd/ft² due to the posted speed of 60 mph.

12.19.3. The Developer's General Obligations:

The Developer shall be responsible for providing the following services:

- a. Design and development of the Cover general and Emergency lighting;
- b. Develop, design, install and put into operation an integrated lighting control system that complies with the Construction Standards and interfaces with the CCMS to facilitate a coordinated operation and management of the Cover;
- c. Develop a system that facilitates monitoring by the CCMS of all faults and alarms generated by the lighting system including individual lighting fixture and control gear feedback; and
- d. To provide operational and maintenance manuals and as built drawings in sufficient detail and depth that the day to day operation of the Cover can be carried out in an efficient manner by the maintenance operatives.

12.19.4. Choice of Light Source

The lighting system shall be light emitting diode (LED) based.

12.19.5. Basis of design

- a. The Developer shall base its design upon a high wall reflectance (including recessed flush sidewall-mounted cabinets at low level) of >30% to increase the inter-reflected component and help reduce the need for more lighting fixtures in the Threshold Zone in particular.
- b. This Section 12.19.5 relates to the systems located within the Cover only (excluding above or for the approaches to the Cover).

12.19.6. Design Criteria

- a. The lighting systems shall be designed and constructed to meet the standards and guidance identified within IESNA RP22-11.
- b. Table 12-2 shall be used as initial criteria for the Cover lighting design, and adjustments in accordance with RP-22-11 procedures will be allowed.

Table 12-2 Lighting Criteria for Cover

Criteria	Value
Posted Speed	60 mph
AADT	>15000
Cyclists	No
Wall reflectance	70/5020
Cladding height	9.8ft
Maximum threshold luminance (taken table 2 RP-22-11)	26cd/ft ²
Transition Zone 1	26-10.6 cd/ft ² average
Transition Zone 2	10.6-4.6 cd/ft ² average
Exit zone	To be agreed
Daytime Interior zone	0.9 cd/ft ² average
Night Time Luminance	Min 0.3 cd/ft ²
Uniformity ratio ave/min	2.0/1
Uniformity ratio max/min	3.5/1
Veiling illuminance ratio	0.3

- c. The lighting system within the Cover shall be designed as the philosophy for a full tunnel with variable lighting systems in the Threshold Zones, Transition Zones, Exit Zones and constant light within the Interior Zone. The Cover lighting shall to be reduced to a lower night-time level 0.9cd/ft².
- d. The lighting system shall aid visibility of the Cover and any stationary traffic within the Cover. The lighting system shall be able to adapt to the external luminance of the external scenes when approaching the Portals or exiting the Cover. The lighting at the Portals shall increase and reduce accordingly either by switching or dimming. Solar shades may be considered as an alternative to excessively high levels of luminance within the threshold and high concentrations of fixtures. The lighting system shall be chosen to minimize maintenance requirements and be suitable for the aggressive environment within the Cover.
- e. The lighting systems shall be provided with the ability to dim in the range of 1-100%. The lighting system shall be controlled by a system of luminance photometers located within the first 65 foot of the Cover at both Portals. The luminance photometers will measure the external scene luminance. Threshold lighting shall be provided as necessary based on orientation of the Cover. Initial brightness of the external Portal scene has been taken to be scene 4 (RP-22-11 figure 1).
- f. The lighting fixtures will have symmetrical optics and be fixed to the structural soffit of the underside of the Cover. The fixtures shall be in rows or multiple rows aligned with the center line of the lanes. The spacing between the fixtures will be chosen to avoid flicker, noting that continuous line is preferable. The fixtures shall consist only of the LEDs and their optical lens housed within a sealed IP66 enclosure capable of being pressure hosed. The fixtures are to be connected to the electrical distribution panels (EDPs) via specially constructed cables that have IP66 connectors. The EDPs are to house the LED drivers in

fire rated enclosures. The fixtures are to be supplied by two separated electrical supplies providing interleaved circuits so that alternate fixtures are fed from the same supply. EDPs and cable runs along walls shall be fully recessed and covered into or enclosed within the sidewalls the use of surface mounted cabling, conduit, raceways and cable trays etc. within the tunnel sidewall finishes zone is not permitted.

12.19.7. Emergency Lighting

The Emergency lighting within the Cover traffic zone shall be provided by a subset of the general lighting. The Emergency lighting shall be fed by a segregated fire survival cable network capable of running the Emergency lighting for the statutory minimum duration of two hours. The Emergency lighting level shall be a minimum 1 ft cd (10.8 lux) for a minimum duration of two hours. The Cover Emergency lighting will enable way finding to the dedicated means of egress. The escape exits shall be illuminated to 10 ft cd (108 lux). The sources of power for the Emergency lighting and standby lighting will be the UPS systems.

12.19.8. Lighting Control Systems

- a. The Developer shall design, supply, install, commission and set into operation a complete lighting control system. The Cover lighting will be controlled by an automatic lighting control system. The lighting control system will utilize an open lighting control protocol to control, vary, scene-set and fault monitor all the fixtures within the traffic zone of the Cover.
- b. The lighting control system shall be interfaced with the CCMS system and provide information in coordinated manner on the status of the lighting system. The lighting controls system shall also include luminance sensors monitoring the actual luminance provided by the lighting system on the pavement in each of the lighting zones. Alarms shall be generated when designed maintained illuminance levels are not met.
- c. The lighting control system shall use industry recognized protocols such as DALI or 1-10V to control the lighting a then to be integrated on to the communications backbone and then to the CCMS. Information from the Cover Portal photometers shall be communicated to the lighting control system with appropriate output from the CCMS to the lighting control system. The Developer shall provide appropriate graphics pages for indicating real time status, faults and alarms on the lighting systems on the GUI. Individual fixtures/drivers will have a unique address and report status. Light output and any faults including run hours to the central lighting monitoring software located on the ITS server/head-end.

12.19.9. Portal Photometer System

The Developer shall design, supply and install an automatic Portal dimming system to balance threshold luminance in line with the real time external luminance. The photometers shall use the CIE 88 L₂₀ philosophy for sampling angle of 20 degrees of the external scene. The photometers shall be duplicated for each Cover bore and be operated in a run and standby mode with automatic switch over on failure. The run time of each photometer shall be balanced over the period of four week period. The photometer system shall be interfaced with the CCMS.

12.19.10. Requirements

a. System Description

The Cover shall be illuminated for both day time and night time scenarios to provide a safe lit environment for vehicular traffic and routine maintenance works:

- i. The lighting shall be designed for vehicular traffic in a uni-directional situation in each bore for a posted speed of 60 mph;
- ii. The lighting shall include threshold transition and Exit Zones;
- iii. The lighting shall include both standby and Emergency lighting provisions in line with the Construction Standards and Project specific Site generated requirements;

- iv. The lighting shall be automatically controlled to various design parameters to satisfy environmental conditions standard lighting functional requirements and non-standard incident requirements through dimming and scene setting regimes; and
 - v. The light fixtures and support installation shall be designed in such a manner to reduce consumed energy and minimize maintenance activities.
- b. Light fixtures
- The fixtures shall be designed to a minimum of IP66 and shall have a designed service life of a minimum fifteen years. The luminaires shall be tested to IESNA LM79 for LED fixtures.
- c. Light source
- The Developer shall provide fixtures with LED light sources with a color rendering factor of $>60Ra_{14}$. The LEDs shall be arranged in such a manner as they all contribute to the whole of light distribution. The LEDs shall have an L80 lumen depreciation factor at a minimum of 80,000 hours and shall have a mortality of B10 at 80,000 hours. The Lumen depreciation factor shall be calculated according to IESNA LM80 for 6,000 hours at an ambient temperature of 95°F.

12.19.11. Control Gear/Drivers

The Developer shall supply fully electronic control gear matched to the lamp source which shall function fully to either the 0-10v protocol or the DALI protocol.

12.19.12. Emergency and Standby Lighting

The Developer shall develop the Emergency lighting and standby lighting provisions in accordance with the Construction Standards. The Emergency lighting shall include all internal spaces including Emergency escape routes.

12.19.13. Lighting Control System

The Developer shall design a step less dimming lighting control system capable of minimizing energy usage and extending lamp life. The control system shall be fully integrated with the CCMS system and the Portal illuminance system. The system shall report full diagnostic information on each fixture, monitor faults, be capable of setting individual fixture outputs, cumulative scene setting and time scheduling and generate both common and specific alarms.

12.19.14. Electrical Equipment

The Developer shall provide an electrical system suitable for an IP 66 environment including cables, plug and socket arrangements cable support structure and fixings.

12.19.15. Interfaces

The interfaces as shown in Table 12-3 between the lighting and lighting control systems are identified as initial requirements and shall be finalized through the submittal process pursuant to Schedule 9 Submittals.

Table 12-3 Lighting Control System Interfacing

System	Interface	Managing system
Ventilation	None	
Drainage	None	
Lighting	N/A	N/A
Fire main	None	
Fixed firefighting system	None	
Portal Photometer system	Dimming input via analogue system to CCMS and then digital signals to the lighting control system	CCMS linking photometers to Lighting control system
Emergency way-finding system	Testing and monitoring of system status	Lighting control system with status to CCMS
Radio rebroadcast systems	None	
Voice alarm public address system	None	
Vehicle detection system	Go to incident lighting scene	Signal via CCMS
Fire detection system	Go to incident lighting scene	Signal via CCMS
Plant Room systems	None	
Power distribution system	None	

12.20. Standpipes, Hydrants and Portable Fire Extinguishers

12.20.1. Scope

The Developer shall design and install standpipes, hydrants and portable fire extinguishers to provide coverage the full length of the Cover, which shall be available in the event of a fire in the Cover to be used to extinguish or suppress the fire.

12.20.2. Basis of design

The Developer shall design, provide, install, test and commission the FFFS and all fire suppression systems in accordance with the Construction Standards and the requirements of the AHJ. The Developer shall allow for all performance testing and demonstrations to the Department and relevant authorities or appointed representatives. The Developer shall undertake all necessary surveys and investigations to validate the design including, but not limited to Utility surveys, investigations, enquiries with relevant bodies and for obtaining all necessary Permits, approvals and consents.

12.20.3. Design Criteria – Standpipes

- a. The Developer shall design, provide and install all valves, connections, hangers, inserts, piping, sleeves, fittings, and other appurtenances necessary to provide a fully functional and compliant standpipe system.
- b. Standpipes shall be provided in both the eastbound and westbound bores and located in similar locations in each bore at each cross bore door and on the opposite wall. The piping shall be embedded in the pavement and shall be cross connected at cross bore door locations such that either bore can be supplied by either main. Isolation valves shall be provided to enable sections of the system to be shut down for maintenance without shutting the entire system down. A hose connection shall be provided at each cross bore door, in each bore, located adjacent to the door.
- c. The standpipe system shall be a dry pipe system supplied from the municipal water company mains supply. The Developer shall conduct testing in accordance with NFPA 14 to determine that the supply is capable of supplying the system demand for a minimum period of one hour and of delivering water to all hose connections on the system within 10

minutes or less. In the event that tests indicate that the supply is not capable of meeting the system demands, the Developer shall provide suitable pumping equipment to maintain system pressures.

- d. The required flow rate shall be 750 gpm at the hydraulically most demanding outlet. Allowance shall be made for two hydrants operating simultaneously. The calculation procedure shall be in accordance with section 7.10.1.2.2 of NFPA 14 or in accordance with the requirements of the AHJ. The minimum residual pressure at the hydraulically most remote 2.5 inch outlet shall be 100 psi. Pressure restricting valves shall be provided where the hydraulic head exceeds 100 psi.
- e. Standpipes shall be Class 1 dry type system as defined by NFPA 14 subject to the agreement of the AJH. A temporary or permanent standpipe system shall be installed and tested during the construction phase in accordance with NFPA 14, NFPA 25, NFPA 502 and NFPA 241 and to the requirements of the AHJ.
- f. Hose connection spacing shall be such that that no location within the protected area is more than 150 feet from the hose connection. Hose connection spacing shall not exceed 275 feet.
- g. The entire standpipe system including valves shall be protected against freezing and shall be complete with all necessary status monitoring and alarms linked to the CCMS system.
- h. The standpipe system shall be suitably protected from mechanical damage and vandalism.
- i. Suitable back flow prevention devices shall be installed to prevent contamination of the Water Company supply and distribution system.
- j. The standpipe system shall be provided with drain points to enable the entire system to be drained down.
- k. The pipework system shall be protected from unequal settlement or structural movement by the use of appropriate flexible jointing couplings.
- l. Suitable fire collars shall be provided where piping passes through fire rated structure.
- m. A two way Siamese coupling shall be provided at both ends of each bore to allow the Fire Department to provide back-up water supplies, the location of these connections shall be agreed with the Fire Department. The Developer shall provide all fire hydrants and associated piping.
- n. Standpipe fire hoses shall be housed in a "Hose Connection Station" which shall consist of a protective enclosure that also houses portable fire extinguishers. Each hose connection station shall have two, 2.5 inch, hose connections with an external thread in accordance with NFPA 1963 or as otherwise required by the Fire Department. The hose connection station cabinets shall be located in recesses in the side walls of the Cover to finish flush with the wall surface.
- o. The Developer shall provide an appropriate signage system in accordance with NFPA 14 and to the approval of the Fire Department.

12.20.4. Design Criteria - Portable fire extinguishers

- a. Portable fire extinguishers shall be provided in accordance with NFPA 502 with a rating of 2-A: 20-B: C and shall be located along the Cover of both the Eastbound and Westbound bores. They shall be co-located in approved hose connection stations and at intervals of not more than 300 feet. The maximum weight of the extinguishers shall be 20 pounds. The installation shall be in accordance with NFPA 10 and its associated reference documents.
- b. The removal of an extinguisher shall be capable of being detected by the use of a pressure pad or similar device with an alarm raised via the CCMS system.

12.20.5. Design Criteria - Hose connection stations

The Developer shall design and construct hose connection stations with protective enclosures constructed of grade 316 stainless steel. The enclosure shall be provided with suitable alarms to indicate when a door has been opened and also where an extinguisher has been removed. The alarm shall be raised via the CCMS system. The hose connection station cabinets shall be located in recesses in the side walls of the Cover to finish flush with the wall surface.

12.20.6. Cover – Washing

In case the Developer chooses to perform Cover washing operations with a road tanker with suitable pressure washing equipment or other Accepted method, the Developer is not required to provide a piped water supply system within the Cover for washing operations.

12.20.7. Information on how the Cover Standpipes, Hydrants and Portable Fire Extinguishers are to be operated in an Emergency with demonstration of how the design facilitates effective self-rescue and Fire Department intervention shall be placed in the Fire System Performance Report.

12.21. Drainage Systems

12.21.1. Scope

- a. The Developer shall design and install a drainage system in accordance with this Section 12.211 and Schedule 10, Section 8 Drainage for the full length of the Cover along I-70 Mainline to collect and discharge water that results from the discharge of FFFS, standpipe fire suppression systems and water washing operations. The drainage system shall also capture hazardous substances that may arise following a fuel tanker accident occurring within the limits of the Cover.
- b. The Developer shall consult with the appropriate Local Agency to agree on the required method of collecting and managing the proposed drainage effluent prior to design. The Developer shall prepare and submit a Spill Prevention Control and Countermeasures Plan (SPCC) related to spills occurring within the limits of the Cover in accordance with the Colorado Discharge Permit System – Stormwater Construction Permit (CDPS-SCP).

12.21.2. Basis of design

The Developer shall design, install, test and commission a drainage system in accordance with the requirements of NFPA 502, FHWA Road Tunnel Design Guidelines and other such applicable standards and requirements of the AHJ. The systems shall be complete and fully functional. The Developer shall provide advance notification to the Department, AHJ and affected Local Agencies of all performance testing and demonstrations.

12.21.3. Design Criteria

- a. The drainage system shall consist of gullies, drain pipe, grit chambers and water seals, and shall be of sufficient capacity so as not to cause flooding to I-70 Mainline.
- b. The drainage system shall be designed such that spills of hazardous substances or flammable liquids cannot spread or cause flame propagation. The system shall intercept roadway drainage from an arrangement of side gutter catch basins or other drain inlets, such that the length of surface drain path from any potential spill point to the drain inlet is minimized. Components of the drainage system, including the main drain lines, shall be noncombustible.
- c. Grit chambers and water seals shall be used in conjunction with either gullies or manholes per FHWA Road Tunnel Design Guidelines, and shall not exceed spacing requirements in accordance with Schedule 10, Section 8 Drainage. All gratings and manhole covers shall be lockable and designed for the design vehicle loadings.
- d. To prevent contamination of the receiving storm-water drainage system, the drainage effluent shall be monitored for levels of contamination. The Developer shall either demonstrate the feasibility of an on-Site treatment and construction of such on-Site

treatment facilities, or construct facilities that contain the effluent for haulage and treatment off-Site. The effluent shall be automatically diverted to a holding tank when unacceptable levels of contamination are detected. A manual means of diverting contaminated effluent shall also be provided. The holding tank shall be complete with fire suppression systems, hydrocarbon sensors, effluent quality monitoring equipment, water level monitoring and alarms. All sensors and alarms shall be raised via the CCMS system. An alarm shall also be provided local to the plant.

- e. Where drainage gullies are provided, the distance between gullies should be such that the catchment area for each gully will not exceed 2,700 ft² and so that the longitudinal distance between gullies shall not exceed 65 feet.
- f. The Developer shall consult with the municipal drainage authority to confirm that its drainage system is capable of receiving the design discharge without storage or attenuation.
- g. Where a gravity connection to the municipal drainage authority drainage cannot be achieved, the Developer shall provide suitable pumping equipment to raise the effluent to a level that will enable connection. The pumping chamber, wet well and service chambers shall be classified for hazardous locations in accordance with NFPA 70 and 820. The installation shall be fitted with pollution and hydrocarbon sensors with alarms raised via the CCMS system. An alarm shall also be provided local to the plant.
- h. All software utilized for design shall be referenced in all calculations and reports produced by the Developer.

12.22. Requirements Management

- 12.22.1. The Developer shall develop and implement a comprehensive Requirements Management (RM) process for the Cover MEP System, defining how the technical requirements are parsed, captured, documented, derived, apportioned, traced, managed, verified (by CDOT, AHJ, and relevant stakeholders), and validated and which shall also include standard operating procedures for all use cases.
- 12.22.2. The Developer shall develop and manage a requirements database for the management and reporting of the RM process. The requirements database shall include all requirements in these specifications and the requirements that may be added or modified during contract scope modifications.
- 12.22.3. The Developer shall furnish a conventional, off-the-shelf (COTS) product for a requirements management tool, which makes use of a spreadsheet or relational database for the management of Cover MEP requirements. The Developer shall submit the Preliminary Requirements Traceability Matrix (RTM) to the Department for Information with the Final Cover Design Baseline Report.
- 12.22.4. The Developer shall provide updates to the RTM throughout the Project, as necessary.
- 12.22.5. The Developer shall keep the Department's version of the RTM synchronized with the Developer's requirements database by performing a monthly synchronization. Each requirement within the requirements database shall have a unique identifier, be unambiguous, and non-repetitive. Each requirement within the RTM shall be assigned a functional allocation, which allocates the requirements into the functional areas including the FFSS, fire detection system, CCTV, CCMS, power supply system, water supply system, and the ERP. Each requirement within the RTM shall be mapped to the associated deliverable where the requirement is addressed and to the specifications.
- 12.22.6. The Developer shall produce RTM reports. The RTM reports shall list each Project requirement from the Project specifications and provide traceability to each test procedure in which this requirement will be tested.

12.22.7. The Developer shall submit an RTM Report, with each RTM Submittal, that lists only those requirements addressed within the deliverable and the associated mapping of each requirement to where the requirement is addressed.

12.22.8. The Developer shall be responsible for testing every requirement listed in the RTM against pass/fail criteria stated in the Commissioning Test Plan.

12.23. Testing and Commissioning

12.23.1. Testing

- a. The Developer shall perform testing on all equipment, systems, sub-systems and software to demonstrate compliance prior to delivery to Site. The test facility shall perform full functional testing of all parts of the overall system to be tested in the Developer's testing facility. The test facility shall include interface testing and the simulation of all aspects of the Cover systems. The Developer shall note that testing shall include the testing of the integration with external equipment which shall be simulated by the Developer.
- b. Particular testing requirements are detailed in the various standards for each system.

12.23.2. Commissioning

- a. All mechanical, electrical, and software systems shall be inspected and tested as part of a complete commissioning program. The Developer shall arrange for commissioning testing to be performed in accordance with NFPA 13 and NFPA 502. As a component of the commissioning, all Cover Elements shall be initially (baseline) inspected following the National Tunnel Inspection Standards.
- b. Commissioning tests shall include at a minimum the following Elements:
 - i. Component and equipment;
 - ii. Communication links;
 - iii. Status, control, alerts, and alarms;
 - iv. Interfaces between systems;
 - v. Integration among new and existing systems;
 - vi. Failover on faults; and
 - vii. Functioning of redundant components.
- c. The Developer shall arrange for commissioning to be carried out by a commissioning agent/engineer with demonstrated experience in commissioning tunnel systems within the past five years. The Developer shall complete commissioning of all systems for the Department's Acceptance prior to opening any section on the I-70 Mainline for public use whether as a temporary detour measure or permanently after Substantial Completion.
- d. The Developer shall prepare and submit a Commissioning Test Plan, for Acceptance, detailing how all the tests will be carried out prior to the start of any testing. The test plan shall be based on the technical specifications and performance characteristics of all devices, equipment, parts, assemblies, systems, subsystems, software and devices for the Cover.
- e. A Full Scale System Test Program shall be prepared and submitted for Acceptance. The full-scale system test shall involve non-destructive testing of the all systems supplied and installed to demonstrate compliance with the functional performance requirements of the overall integrated system. The full-scale test shall also involve nominated representatives of the Department.
- f. The scope, methods, and timing of the full-scale test shall be submitted in the Full Scale System Test Program prior to the proposed test date. A Full Scale System Test Report

shall be prepared and submitted to the Department for Acceptance 14 Calendar Days after testing.

12.23.3. Temporary Traffic Phasing

Should bi-directional traffic be placed in one of the Ultimate bores in a temporary condition, the Developer shall address the following in its design to the satisfaction of the Department and the AHJ:

- a. Ventilation that provides adequate pollution monitoring and control in the Cover;
- b. Lighting;
- c. Emergency response and access;
- d. Emergency egress;
- e. ITS;
- f. Signage; and
- g. Monitoring and Operations plan.

12.24. Manuals and Documentation

12.24.1. The Developer shall produce and submit to the Department, for Acceptance, a Functional Design Specification (FDS) supported by drawings for every system. Each submitted FDS shall contain a description of the detailed design relevant to the Cover MEP System operations.

12.24.2. The Developer shall submit all design calculations to the Department with each design submittal.

12.24.3. The Developer shall prepare a comprehensive project specific Tunnel Operation, Maintenance, Inspection and Evaluation Manual (TOMIE) in compliance with and covering all aspects of the FHWA TOMIE Manual in relation to all Elements of the Cover, with the exception of the Cover Top O&M Work. The National Tunnel Inspection Standards (NTIS), the FHWA TOMIE Manual, and the Specifications for the National Tunnel Inventory (SNTI) shall be referenced in the Developer's TOMIE and used in addition to the Developer's TOMIE, during the Operating Period.

12.24.4. The Developer's TOMIE documentation shall include documented software codes, fault finding flow charts and all necessary guides to allow the maintainer to make future changes and configuration. The Developer shall provide As-Built drawings and operation and maintenance documentation for every item of equipment. All final documents shall be issued in MS Word format and all final drawings in AutoCAD format. All interim documents may be issued in Adobe Acrobat format.

12.24.5. The Developer's TOMIE shall include a complete parts list. The parts list shall include a list of all parts supplied, down to the lowest level part or assembly that is user-replaceable. Commodity supplies such as conduits, conductors, and pipes do not need to be included. The parts list shall include part numbers, description, system application or use, manufacturer, and supplier. The parts list shall identify sole-source and propriety parts. For all sole-source and proprietary parts, compatible or alternative parts shall be identified. The estimated Residual Life of parts that have a service life less than 30 years shall be identified.

12.24.6. The Developer's TOMIE shall also include a complete consumable supplies list. The supplies list shall include a list of all materials required for routine maintenance of the equipment supplied under the Project Agreement. The supplies list shall include material name, description, function, application rate and frequency, manufacturer, and supplier.

12.24.7. The Developer's TOMIE shall include inspection procedures compatible with State and Federal requirements for initial (baseline), routine (periodic), and in-depth (hands-on) inspections.

12.25. Spare Parts

The Developer shall provide the manufacture's recommended spares. The spares shall comprise 10% of operational equipment rounded up to the nearest whole unit.

12.26. Deliverables

At a minimum, the Developer shall submit the following to the Department for Information, Acceptance, or Approval in accordance with the specified timeframes:

Table 12-4 Deliverables

Deliverable	Information, Acceptance, or Approval	Schedule
Final Cover Design Baseline Report	Acceptance	Prior to RFC Documents
Fire System Performance Report	Acceptance	Prior to RFC Documents
Emergency Response Plan	Acceptance	Submitted with the Final Cover Design Baseline Report
Requirements Traceability Matrix	Information	Submitted with the Final Cover Design Baseline Report
Functional Design Specification (FDS)	Acceptance	Prior to RFC Documents
Commissioning Test Plan	Acceptance	Prior to undertaking the testing
Commissioning of all system	Acceptance	Prior to opening
Full Scale System Test Program	Acceptance	Prior to undertaking the testing
Full Scale System Test Report	Acceptance	14 Calendar Days after testing
Tunnel Operation, Maintenance, Inspection and Evaluation Manual (TOMIE)	Acceptance	Prior to Substantial Completion

13. STRUCTURES

13.1. General

13.1.1. The Developer shall design and construct all structures required to meet the Project requirements and make the Project fully functional in accordance with the requirements of the Project Agreement and this Section 13.

13.1.2. To advance longer-lasting highways, the Department encourages using innovative technologies and practices to accomplish the fast construction of efficient and safe highways and bridges. Consideration by the Developer of state-of-the-art technologies and elevated performance standards that result in improved safety, faster construction, reduced congestion from construction, improved quality, and user satisfaction are encouraged.

13.1.3. All construction, reconstruction and rehabilitation of structures, from I-25 to I-270 and from I-270 to Chambers Road, shall be designed and constructed to the Ultimate configuration geometric requirements.

13.2. Applicable Standards and Software

13.2.1. AASHTO Load and Resistance Factor Design Standard Specifications shall be used for all new structures. For modifications to existing structures, the Developer has the option of using LRFD Specifications or the specifications which were used for the original design. The CDOT bridge design and policy manual should be followed.

13.2.2. Collision load (CT) shall be in accordance with AASHTO LRFD Bridge Design Specifications. The use of a TL-5 barrier in accordance with AASHTO Sect. 3.6.5.1 is allowed.

13.2.3. All Construction Work required to be performed by the Developer pursuant to this Section shall comply with the Construction Standards, the relevant requirements listed in this Section 13, and Good Industry Practice.

13.2.4. Railroad Grade Separations

a. The Developer shall coordinate with the Railroads in accordance with Schedule 10, Section 10 Railroads for any structures Construction Work within Railroad right-of-way or affecting Railroad operations.

b. All Railroad grade separation structures shall be designed and constructed in accordance with the BNSF Railway-Union Pacific Railroad *Guidelines for Railroad Grade Separation Projects* and the American Railway Engineering and Maintenance-of-Way Association (AREMA) *Manual for Railway Engineering*. Structures, including permanent and temporary structures, shall be coordinated with the respective Railroads and are required to meet all applicable requirements. The UPRR service road bridge shall be an independent structure that will not carry railway tracks and shall be designed using AASHTO LRFD Specifications and CDOT bridge design and policy manual.

13.2.5. Structure Aesthetics

The Developer shall comply with Schedule 10, Section 14 Landscaping and Aesthetics in its design and shall comply with the specified materials and finishes treatments, concepts and details for all components of all structures (bridges, retaining walls, noise walls, sign structures, etc.).

13.2.6. Load Rating

a. Load rating methodology shall be In accordance with CDOT's Load Rating Manual and policy, and the AASHTO Manual of Bridge Evaluation.

b. The Developer shall review the latest inspection reports, As-Built plans and carry out visual inspections to load rate the existing bridges.

c. Thrust shall not be used in the design or rating of buried culverts.

- d. Bridges and major culverts under railway tracks shall be rated in accordance with AREMA. For all other structures, the following rating software shall be used for the Project:
 - i. AASHTOWare BrR, Bridge Load Rating; and
 - ii. AASHTOWare BrR, Culvert Load Rating.

13.3. Design Requirements

13.3.1. All highway bridge structures shall be designed for 36 pounds per square foot (psf) dead load to account for overlays, as specified in this Section.

13.3.2. Bridge spans shall be proportioned to avoid uplift at supports due to non-seismic loads. If the Developer demonstrates to the satisfaction of the Department that uplift cannot be reasonably avoided, anchorage shall be designed to meet the requirements of the appropriate specifications AREMA or the AASHTO LRFD Specifications.

13.3.3. Design structures for thermal forces for cold climate temperature ranges.

13.3.4. Geotechnical Data

- a. Preliminary subsurface investigations have been conducted for the Project and are provided in the Reference Documents. The Developer shall be responsible for any additional subsurface investigations that it considers necessary to complete the Construction Work.
- b. The soil and rock samples collected as part of the geotechnical investigation are stored by and available from the Department. The Developer may submit a request to the Department to obtain these geotechnical samples (for inspection and testing as it may consider necessary to supplement its design) no later than 90 Calendar Days after the issuance of NTP 1. At the end of 90 Calendar Days, if the Developer has not submitted such request, the Department will dispose of the samples. If the Developer does submit a request and takes possession of these samples, then the Developer shall be responsible for their storage and disposal.
- c. Existing groundwater observation wells are present within the Site. The Developer shall be responsible for their abandonment or renewal of the Permits for these wells in accordance with Colorado Division of Water Resources requirements. The Developer shall be responsible for installing any additional groundwater observation wells it considers necessary to monitor water level or water quality, including applying for and obtaining the necessary Permits.

13.3.5. Materials

- a. Concrete
 - i. Type II or Type I cement may be used for cast-in-place concrete. Type III cement may be used for precast concrete. Cement shall meet the requirements of Section 601.04 of the CDOT Standard Specifications for sulfate resistance. Class B concrete may be used for panel noise barriers. Class BZ concrete shall be used for drilled caissons. Class B concrete shall be used for filling post holes and slope paving. Class D or H concrete shall be used for all conventionally reinforced bridge decks. Class D concrete shall be used for bridge rails, abutments, piers, and walls. Class D, PS, or S40 concrete shall be used for all pretensioned or post-tensioned concrete. The concrete used for cast-in-place bridge decks shall be dense, with low permeability, highly resistant to abrasion, and it shall resist cracking due to creep and shrinkage. The bridge deck concrete shall have a maximum water/cement ratio (w/c) of 0.45, chloride permeability of 2000 coulombs or less in 56 Calendar Days as tested in accordance with American Association of State Highway and Transportation Officials (AASHTO) T 277, and shrinkage of 500 microstrain or less as tested per ASTM C157. The

proposed mix design and procedures shall meet the above requirements and shall be submitted for Acceptance by the Department. The use of lightweight concrete will not be allowed.

- ii. Minimum design concrete strengths shall meet the requirements of Section 601 of the CDOT Standard Specifications.
- iii. Maximum design concrete strengths used for design shall be:
 - A. Cast-in-place: $f'c = 6.0$ ksi; and
 - B. Precast: $f'c = 10.0$ ksi.
- b. Pre-Tensioning Steel

The maximum diameter for prestressing strands shall be 0.6 inch for a two inch minimum spacing and 0.5 inch for a 1.75 inch minimum spacing.
- c. Post-Tensioning Steel Systems

The Developer shall provide corrosion protection for the strands consisting of grout-filled galvanized or non-metallic ducts. Grout shall meet the requirements of Section 618 of the CDOT Standard Specifications. Prestressing system plants shall be certified by the Post-Tensioning Institute (PTI). The diameter for strands shall be 0.6 inch or 0.5 inch.
- d. Reinforcing Steel

The use of epoxy coated reinforcing steel for all bridges, walls, box culverts, and barriers shall adhere to the requirements of Table 1, SubSection 8.1 of the CDOT *Bridge Design Manual*. The design category for the anticipated level of de-icing salt application shall be "High". Abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel. All reinforcing shall consist only of deformed bars per American Society for Testing and Materials (ASTM) A 615.
- e. Structural Steel
 - i. Structural steel shall conform to AASHTO M 270, Grades 36, 50, 50S, 50W, HPS 50W, or HPS 70W.
 - ii. Additional structural steel grades to be used for any pedestrian structures and architectural structures shall include ASTM A106 or A53 for pipe shapes or ASTM A500 (Grade B) for steel structural tubing shapes.

13.4. Existing Structures

13.4.1. Removal

- a. The Developer shall remove existing structures as shown in Table 13-2.
- b. The removal of Railroad structures shall meet the requirements of the respective Railroad.
- c. Bridge removal shall consist of the complete removal of all superstructure and substructure elements for the reconstruction of new structures at these locations.
- d. Removal of the substructure shall be taken down to at least one foot below the future ground surface or subgrade at the lowest point of interface. Holes resulting from substructure removal shall be backfilled with structure backfill (Class 2) to the adjacent existing grades.
- e. The Developer shall submit a Bridge Removal Plan, for each structure that is to be removed, to the Department no less than 21 Calendar Days prior to start of demolition. The Bridge Removal Plan shall detail procedures, sequences, and all features required to perform the removal in a safe and controlled manner. The Bridge Removal Plan shall

provide complete details of the bridge removal process and meet the requirements as specified in Revision of 107 Performance of Safety Critical Work, located in the Project Special Provisions set out in Appendix A to this Section 13.

13.4.2. Load Rating Additional Existing Bridges

- a. The Developer shall load rate the existing structures as shown in Table 13-1 and submit to the Department for Acceptance.

Table 13-1 Existing Structures to be Load Rated

Structure Description	Structure No.
I-70 Over Sand Creek	E-17-AER
I-70 Over Havana Street	E-17-VD
I-70 over UPRR spur track (near Havana Street)	E-17-VE

13.5. Bridges

13.5.1. Bridge superstructure types that would require falsework or shoring are permitted. All falsework shall be designed in accordance to the AASHTO *Guide Design Specifications for Bridge Temporary Works*.

13.5.2. The bridge structures and actions identified for the Project are listed in Table 13-2.

Table 13-2 Actions for bridge structures

Existing Structure No.	New Structure No.	Structure Location and Description	Action

13.5.3. Geometry

All fill and cut slopes along the longitudinal axis of bridges with spill-through abutments shall not be steeper than 2:1. There shall be a two foot berm at the top of the slopes at the front face of abutments and a two foot minimum dimension from the top of this berm to the bottom of girder. Minimum vertical clearance of 16.5 feet (from travelled way and shoulders) shall be provided for all highway grade separations. Pedestrian bridges or Utility/irrigation structures over roadways shall provide a minimum vertical clearance of 17.5 feet. The minimum structure widths shall be as shown in the Structure Typical Sections as provided in Schedule 10B Contract Drawings.

13.5.4. Type

- a. Bridge types are not restricted to those historically used by the Department. The Developer may propose other types and components and submit to the Department for Approval. The Department will make its assessments by taking into account, among other factors, as to whether the type has been accepted for general use by other transportation authorities and the Developer has demonstrated that the design of the bridge type and components will perform well under the Project's environmental conditions, including frequent freeze-thaw cycles, anti-icing and de-icing.
- b. Experimental bridge types, timber bridges, masonry bridges, and structural-plate arches shall not be permitted.
- c. Bridges shall incorporate as few joints and bearings as possible, be continuous over supports, not use intermediate hinges, and use integral or semi-integral abutments wherever possible.

- d. Fracture critical bridges for highway traffic shall not be permitted.
- e. Precast double tees or precast box girders without a cast-in-place deck placed on top shall not be permitted.
- f. If not supplied in this Section 13, the Developer shall obtain structure numbers for new structures from the Department.

13.5.5. Inspection Access

- a. All bridge superstructures, joints, and steel-reinforced elastomeric bearing pads with sliding surfaces and high load multi-rotational (HLMR) bearings shall be made accessible for long-term inspection and shall be designed and detailed for ease of replacement, including jack locations, and required jack sizes. The bridge shall be designed to withstand the loads and forces with the superstructure jacked.
- b. Superstructures consisting of I-girders with exposed cross frames shall be made accessible with walkways, or by use of an A-40 inspection truck. All concrete or steel box girders with an inside depth of five feet or more shall be made accessible for interior inspection.
- c. Superstructure of the Cover shall be made accessible through ceiling for inspection of all girders and bearings. All pretensioned precast concrete box or tub girders with access shall be provided with low-point drainage through the bottom slab.
- d. Access doors shall be placed at locations that do not impact traffic under the bridge, and shall be located to be readily accessible from bridge inspection trucks. Where applicable, the door shall swing into the box girder. The minimum opening for access doors shall be two feet by three feet and locked by a single padlock with lock protector. Access holes, through diaphragms, shall have a minimum diameter of 2.5 feet. CDOT *Standard Structural Worksheet B-618-2* shows typical bottom-slab access-door details.
- e. All access holes shall be accessible with ladders from the ground and shall not require access by use of the Department's A-40 inspection truck. Where access doors are provided above slope paving, cleats to support a ladder shall be provided in the slope paving. Location of access holes shall be submitted as part of the design submitted for Acceptance by the Department.
- f. Box girders shall be protected from access by vermin.

13.5.6. Components

- a. Bridge Rails and Pedestrian Railing
Bridge rails shall be provided on approach slabs. The Developer shall design and construct pedestrian fencing/railing in accordance with AASHTO *LRFD Bridge Design Specifications*. Bridge rails and pedestrian rails not separated from vehicular traffic by bridge rails shall be designed to meet TL-4 loading in accordance with AASHTO *LRFD Bridge Design Specifications*. Pedestrian railing attached to bridge rails shall be installed behind bridge rail face, or back side of bridge rail. Cover plates shall be used over all breaks in the interior and exterior bridge rail, curbs, or sidewalks to provide structural and safety shape continuity across the joint in the bridge rail and to provide face-of-curb continuity across the joint in the curb for traffic loading at these breaks in bridge rail and curb.
- b. Splashguard and Aesthetic Fences
 - i. A 36 inch splashguard fence shall be provided on both sides of all bridges over I-70 Mainline for the span over the cross street for a minimum distance of 50 feet from the edge of the roadway. Splashguard fences shall be in accordance with CDOT *Worksheet B-607-3*.

- i. All cross-street bridges over I-70 Mainline throughout the Lowered Section shall have aesthetic fences in accordance with the Aesthetic Standards in Schedule 10B Contract Drawings.
- c. Approach Slabs
 - i. Approach slabs shall be used on each new bridge and shall be a minimum of 20 feet in length measured along the centerline of the bridge, except as specified in Sections 13.5.6.c.ii and iii. Approach slabs shall be separate from and fit between cantilevered wingwalls or retaining-wall wingwalls so that the approach slab can freely rotate about the abutment. Bridge rails with water stopper shall be connected to approach slabs. Bridge rails shall function as a barrier to keep water out of the joint between wingwalls or retaining walls and along the edge of approach slab. The approach slab, for highway bridges, shall be at least the same width as the bridge deck, and provide for expansion and contraction at the approach pavement interface where required. Approach slabs shall be anchored to the abutment.
 - ii. For the new bridges over I-70 Mainline from York Street to Colorado Boulevard, where the expansion device is located at the back face of the abutment in accordance with Section 13.5.6.e.i:
 - A. At locations where the adjacent 46th Avenue intersection is constructed of HMA pavement, modified approach slab shall be used for the new bridges over I-70 Mainline from York Street to Colorado Boulevard; or
 - B. At locations where the adjacent 46th Avenue intersection is constructed of concrete pavement, the adjacent intersection shall be constructed as the approach slab.
 - iii. Approach slab is not required at the north abutment of the Cover for the length of the synthetic turf field only.
 - iv. The Developer shall develop and submit to the Department for Acceptance project specific details modifying CDOT Structural Worksheets, found in Schedule 10A Applicable Standards and Specifications, for locations where the expansion device is located at the back face of abutment and modified approach slabs are used in accordance with Section 13.5.6.c.ii.A.
 - v. The design shall include an underdrain system beneath all approach slabs to reduce water in embankment fills at bridge abutments.
 - vi. The approach slabs shall be designed for differential settlement such that they will not produce a grade break that is noticeable to the user and shall not be more than one inch by the date that is one year after Substantial Completion. The Developer shall implement ground-improvement techniques to the approach embankment subgrade, if necessary, to meet this requirement.
- d. Decks
 - i. The Developer shall provide a minimum concrete deck thickness of eight inches. Deck thickness for prefabricated pedestrian truss bridges or side by side precast prestressed box or slab bridges shall be 5 inches minimum.
 - ii. Open or filled grating decks, cast-in-place bare decks, and orthotropic decks shall not be permitted. Concrete decks designed by the simplified "Ontario", or any empirical methods, shall not be permitted.
 - iii. Full-depth precast deck slabs shall require cast-in-place joint closures and post tensioning across joints and an overlay. Pretensioned, precast concrete deck forms shall be a minimum of three inches thick and have a full grout or concrete

- bearing. Full grout is defined as a one inch minimum thickness by two inch wide grout pad.
- iv. Stay-in-place metal deck forms are permitted. If stay-in-place metal forms are used, the superstructure, substructure, and foundation shall be designed for an extra five psf minimum dead load applied to the superstructure. Stay-in-place metal deck forms shall not be considered part of the structural deck.
 - v. Parallel bridges shall have a minimum one inch (four inch preferred) longitudinal gap between decks or parapets, or shall be tied together to make one structure.
 - vi. Permanent deck forms shall not be permitted between girders or stringers where the longitudinal deck joint is located. Permanent deck forms shall not be permitted for cast-in-place post-tensioned box girder or T-girder deck slabs, or cantilevered portions of decks. In order for the cast-in-place portion of concrete placed on top of the top flange of a precast double tee or precast box girder to be considered composite with the precast top flange, the minimum total laminated deck thickness shall be eight inches, the minimum cast-in-place thickness shall be 4-3/4 inches, and the top surface of the precast top flange shall be roughened.
 - vii. Minimum longitudinal steel in the top mat of cast-in-place decks shall be #4s at six inch spacing spliced to the negative-moment steel reinforcing.
- e. Deck Joints
- i. The location of expansion devices shall be at the back face of abutment for the new bridges over I-70 Mainline from York Street to Colorado Boulevard, excluding the south side of the Cover. A waterproofing membrane surface shall be applied to the back face of abutments at each location.
 - ii. An expansion device is not required at the north abutment of the Cover for length of the synthetic turf field only. The Developer shall complete the Construction Work to protect joints from drainage or debris entering joints.
 - iii. For the Cover, the location of the expansion device is not allowed within travel or turn lanes.
 - iv. Expansion device joints shall be covered, providing a smooth surface meeting ADA Accessibility Guidelines requirements wherever located within parking lanes and areas where pedestrian, bicycle, or handicap use is anticipated.
 - v. Deck design shall avoid or minimize joints in accordance with the guidelines in CDOT *Bridge Design Manual*. A minimum of zero to four inch joints shall be placed at the end of approach slabs or locations of expansion devices shall be submitted to the Department for Approval, except where Section 13.5.6.e.i specifies the required location thereof. A minimum of two expansion devices shall be installed per each bridge.
 - vi. Joint design shall use strip seals such as D.S. Brown A2R400-SSA2, WABO SE400 Type A, or equivalent product pre-approved by the Department with expected maximum four inch movement or modular joints for expected movements four inches or greater.
 - vii. Design and location of joints shall provide for maintenance accessibility and future replacement.
 - viii. Aluminum joints shall not be permitted.
 - ix. Modular joints shall be tested for fatigue loading according to the National Cooperative Highway Research Program (NCHRP) *Report 402, Fatigue Design of Modular Bridge Expansion Joints*, or NCHRP *Report 467 Performance Testing*

for *Modular Bridge Joint Systems*, as well as the provisions included in Chapter 14 of the *AASHTO LRFD Bridge Design Specifications*.

- x. Expansion devices shall be set to provide a smooth surface between the final grade into the device and the final grade out from the device. A smooth surface is defined as a maximum grade break, at 30 feet either side of the device, of 0.3 percent. To facilitate the proper placement of expansion devices, the tabular bridge geometry shall include a bent line for the expansion devices on a bridge or approach slab. Asphaltic expansion devices and asphaltic plug joints shall not be used for any new construction. Silicoflex preformed seals shown on worksheets shall not be used on new construction without Approval by the Department.
- f. **Overlays**
- i. The Developer shall provide an initial bridge deck overlay for all bridge decks. Overlays shall be three inch hot mix asphalt (HMA) over a waterproofing membrane or 3/8 inch polymer concrete for bridges. The HMA overlay with a waterproofing membrane shall be used on both the bridge deck and associated approach slab. Thin-bonded overlays, such as epoxy or polymer concrete, shall be used when widening an existing bridge with a bare concrete deck. The thin-bonded overlay will be applied to both the existing deck and the widened portion.
 - ii. A waterproofing membrane shall be placed on the surface of the bridge deck, continuously across the entirety of Cover, meeting the requirements included in Schedule 10, Section 14 Landscaping and Aesthetics.
 - iii. Latex-modified overlays shall not be used.
 - iv. The I-270 over I-70 Mainline bridge shall be constructed with either a three inch stone matrix asphalt (SMA) with waterproofing membrane overlay or a minimum 0.75" polyester concrete overlay.
- g. **Superstructures**
- i. Superstructures shall meet the requirements for redundancy, fatigue, crack control, and deflection in *AASHTO LRFD Bridge Design Specifications*.
 - ii. Field connections shall not be welded, but shall be made with high-strength bolts. Slip-critical connections shall be made with 3/4 inch, 7/8 inch, or one inch diameter, ASTM A325 bolts.
 - iii. The use of pins and hangers shall not be permitted. Category D or poorer weld details shall not be permitted in tension zones subject to fatigue stress ranges.
 - iv. The design shall clearly identify the location of all fracture critical members (FCM) and shall follow the procedures specified in the Applicable Standards and Specifications for identification of and requirements for FCMs.
 - v. The Developer shall follow the Shop Detail Drawing Review/Approval Guidelines developed by the AASHTO/National Steel Bridge Alliance (NSBA) Steel Bridge Collaboration G1.1-2000 for preparation of steel shop drawings.
- h. **Bearings**
- i. The Developer shall design and locate bearings to allow maintenance accessibility and future replacement. Substructure drawings shall show locations for lifting when removing bearings. If design loadings allow, elastomeric pads and steel-reinforced elastomeric bearings with or without sliding surfaces shall be used. Sliding surfaces shall be polytetrafluoroethylene (PTFE) with a stainless-steel mating surface. Bearings shall be either elastomeric pads (CDOT Type I), steel-reinforced elastomeric bearings, with or without PTFE and stainless steel sliding surfaces (CDOT Type I or Type II), or HLMR bearings (CDOT Type III). The thickness of Type II bearings shall be designed so that the acceptable shear-

deflection limits of the pad are not exceeded if, for some reason, slip does not occur. The design of elastomeric pads and steel-reinforced elastomeric bearings shall be such that pad walk-out will not occur by including pad-walkout restraints. Sole plates, when used, shall have a 3/4-inch minimum thickness.

- ii. At expansion bearings, the edge of the sole plate shall not slide past the edge of the elastomeric pad, by the use of a positive stop.
 - iii. At least three inches of cover shall be provided between anchor bolts and the edge of the concrete pedestal. Reinforcement for pedestals shall be greater than three inches high.
 - iv. Suppliers of bearings devices shall be selected from the Department's Preapproved Product List. Only one bearing type shall be used across the width of the bridge at any given substructure location. Elastomeric pads and steel reinforced elastomeric bearing devices shall not be mixed with HLMR bearings at any one particular bridge. The minimum HLMR bearing height shall be seven inches.
- i. Piers and Pier Caps
- i. Aesthetic treatments on piers shall extend below finished grade and be considered for the Ultimate design as necessary to accommodate future construction of the I-70 Mainline and adjacent ramp improvements.
 - ii. Drop caps or integral caps are acceptable. Integral caps are preferred with cast-in-place or precast concrete box Section systems. The use of integral steel pier caps shall be kept to a minimum.
 - iii. The design shall include provision for inspection access for integral steel pier caps.
- j. Abutments
- i. The design shall include integral or semi-integral, end-diaphragm-type abutments for bridge structures whenever possible. Mechanically stabilized earth (MSE) walls may serve as abutment support for bridge superstructure loads. Abutment supported by MSE shall be Geosynthetic Reinforced Soil Integrated Bridge System (GRS IBS). Retaining-wall wingwalls may be used in lieu of cantilevered wingwalls at abutments for all aesthetic categories of bridges. The length of cantilevered wingwalls and/or retaining walls from the end of the abutments of a U-type abutment shall be four feet longer than the point of intersection of the embankment slope with the roadway finished grade.

If GRS abutments are utilized the bridges shall be less than 100' length. The GRS IBS should follow CDOT's bridge design policy guidelines.
 - ii. Backfill behind the abutments shall be as shown in the CDOT *Bridge Structural Worksheets* Backfill Drawings B-206-F1 or B-206-M1.
 - iii. Structure Backfill (Flow-fill) is allowed behind the abutments.
- k. Slope Protection
- The design shall include concrete slope protection for all slopes under bridges and on slopes between tiered walls. Slope protection on slopes between tiered walls and any slopes from shoulder to the top of retaining wall shall use similar detail. All structures shall maintain a hard surface between the roadway and face of abutment.
- l. Foundations
- i. Differential settlement shall not exceed 1/2 inch within a bent or abutment; and span length in (feet)/400 differential settlement between adjacent bents or abutments.

- ii. The Developer's Quality Management Plan (QMP) shall include inspection of all drilled caisson operations using either cross sonic log (CSL) or thermal integrity profiler (TIP) non-destructive testing. A minimum of one test is required per each substructure location (each pier and abutment). For requirements see Revisions to Section 503 included in the Project Special Provisions in Appendix A to this Section 13. All drilled caissons while placing concrete shall have a depth vs. volume plot to monitor caving.
 - iii. Dynamic monitoring of driven-pile foundations using the Pile Driving Analyzer (PDA) tests shall be performed at a minimum of two piles per structure, each at a separate foundation element (abutment or pier foundation), and a minimum of two percent of driven piles to verify that pile capacity, with appropriate resistance factor, meets or exceeds the design-factored load per pile. The PDA tests shall cover pile size, hammer type, and geology condition changes for structures. The PDA tests shall include the measurements for initial driving and re-strike. The Developer may replace or supplement PDA tests with static load tests for piles. Static load tests shall be in accordance with ASTM D-1143 or ASTM D-3996. The exact number, type, layout and location of static and PDA tests shall be per the Developer's QMP. Static axial load tests or PDA on driven piles shall be performed in locations where driven piles will be used and the vertical loads will control the depth of the driven piles. PDA testing criteria including number, type, layout, and location shall be submitted to the Department for Acceptance.
- m. Drainage
- i. Gutter flow at both ends of bridges shall be intercepted. Stormwater flowing toward the bridge shall be intercepted prior to the expansion device of the approach slab. Stormwater flowing away from the bridge shall be intercepted prior to leaving the approach slab. Backup drainage plan between girder and abutment/pier underneath the expansion device shall be provided. All stormwater shall be directed to an appropriate outfall. Permanent erosion protection shall be designed and installed at all outfall locations to prevent the occurrence of erosion. Outfalls shall have a well-defined and protected flow path.
 - ii. All bridge deck-drain inlets shall be grated. The bridge deck drainage system shall be compatible with the structural reinforcement, components, and aesthetics of the bridge. Outfalls shall be positioned to avoid corrosion of structural members, and splash on vehicular traffic and pedestrian areas below the bridge. Downspouts for bridge drains shall be minimum 10 inch diameter galvanized steel pipe, and shall meet the requirements of ASTM A53, Grade B, and Standard Weight Schedule 40. Downspout pipe shall be hot-dipped galvanized after fabrication. Galvanizing shall meet the requirements of AASHTO M111. Metal used in the manufacture of castings shall meet the requirements of ASTM A48, Class 35B. Cleanouts shall be provided for downspout systems.
 - iii. Bridge deck drains shall be located so that downspouts can be taken immediately down pier columns. Bridge drain systems with "horizontal" runs shall not be used unless Approved by the Department.
 - iv. The bridge deck drain system shall be designed and constructed to be easily modified to accommodate future changes to the median width on the bridge. Downspout and outfall locations shall be located such that no changes are required in the future to accommodate the Ultimate design of the I-70 Mainline and adjacent ramp improvements. The bridge deck drain system shall be designed and constructed not to form icicles under the bridges.
- n. Utilities
- i. The Developer shall identify, maintain, and coordinate all Utility location on structures. Hanging of Utilities shall not be permitted under deck overhangs or on

- bridge rail. Protection of the pipes from the settlement of the abutment backfill shall be provided. The Developer shall resolve conflicts between Utilities and proposed structures in accordance with Schedule 10, Section 4 Utilities. A pull box shall be provided for access.
- ii. Details of Utilities to be placed on structures shall be included as part of the design submittals to the Department. Utilities not hidden from view in superstructure elevation shall not be permitted. Bridge deck drainage or anti-icing pipes shall not be allowed inside of box girders or embedded within concrete structural members.
 - iii. The Department has identified two Utility structures, as specified in Table 13-2. Proposals for any additional Utility structures shall be submitted to the Department for Approval.
 - iv. CenturyLink Relocation shall be placed on the proposed Steele/Vasquez Structure to accommodate CNLK-C-201, CNLK-C-202 and CNLK-C-203.
 - v. Xcel Energy electrical Relocation shall be placed on the proposed Josephine Structure to accommodate XCEL-E-214.
 - vi. The Developer shall provide two 2" spare conduits across all bridge structures which shall terminate at pull boxes at the each end of the structure. For the Cover, provide two 2" spare conduits at each roadway crossing which shall terminate at pull boxes at each end of the structure.
 - vii. The Developer shall install conduits for any CDOT and CCD traffic facilities in the bridge rail curb.
- o. Curb and Median
- i. The concrete curb and median cover material on the bridge deck and approach slabs shall be constructed to allow removal and modification in the future without causing damage to the bridge deck concrete and reinforcement.
 - ii. Concrete curbs with 9 inch height shall be constructed on bridge decks and approach slabs for all bridges over I-70 Mainline. The Developer shall overlay bridge decks with 3 inches of HMA in accordance with Section 13.5.6.f resulting in a 6 inch exposed curb height.
- p. The protecting of bridge Elements and roadway/pedestrian areas from bird droppings shall be considered in the design. The Developer shall eliminate all potential pigeon roosting and nesting areas and/or install various control systems, such as plates, grating, nets, spikes, electric systems, and wires as Approved by the Department at bearing areas, abutment and pier caps, and areas above pedestrian traffic. Bird control and nest removal shall be taken into consideration when planning long-term maintenance.

13.6. Cover

- 13.6.1. The structural Elements for the Cover and Swansea Elementary School outdoor areas, as such areas are described in Section 14 of this Schedule 10 shall be designed to comply with the landscaping and aesthetic features reflected in the I-70 Cover Plans included in Schedule 10B, Contract Drawings. The I-70 Cover Plans constitute a preliminary design of the Cover and Swansea Elementary School outdoor areas and as such the Department does not give and has not given any representation, warranty or guarantee as to the accuracy, completeness, fitness for purpose or adequacy of such plans. The Developer shall be required to advance and complete such design of the structural Elements in accordance with the requirements of this Agreement.
- 13.6.2. The Cover shall meet all requirements as described in Schedule 10, Section 4 Utilities, Section 12 Cover MEP System, Section 14 Landscaping and Aesthetics, Section 16 ITS and Tolling Equipment, and Schedule 10B Contract Drawings.

13.6.3. The Developer shall construct a solid concrete pier wall that extends beyond both ends of the Cover a minimum distance of 130 feet, to prevent recirculation of pollution or smoke from the exit of one bore into the entrance of the other, meeting the requirements specified in Schedule 10, Section 12 Cover MEP System.

13.6.4. Cover Design Loads

- a. The Developer's Cover structural design loading shall include:
 - i. All dead loads (i.e. soil, plantings, fields, utilities, barriers and fences, buildings, lighting, overlay, deck, girders and forms, fire protection, ventilation fans/equipment, and MEP requirements, etc.) specific to the final Cover design;
 - ii. Pedestrian loading shall be a minimum of 75 psf and shall consider dynamic loading. The dynamic loading shall include rhythmic excitation from lively concerts or sport events activities and shall consider forcing frequencies for first and second harmonic. The Cover fundamental natural frequency, f_n , shall not be less than the higher of (i) minimum required frequency determined from a rational analysis and (ii) 6.0 Hz.
 - iii. Vehicle live loading for the Cover shall be an emergency vehicle equivalent to AASHTO H10 vehicle, and a Fire Truck in accordance with The 2011 Amendments to the Building Code for the City and County of Denver. All other vehicle classes shall be prohibited from access to the Cover.
 - iv. Dead load reserve capacity of at least 40% shall be included in the structural design for future potential changed conditions that may occur over the design life of the Cover.
- b. Structural design requirements for the Cover, including loading for Columbine Street and Clayton Street, shall comply with AASHTO LRFD Bridge Design Specifications, latest edition and with the 2011 Amendments to the Building Code for the City and County of Denver (snow loading shall be included).

13.6.5. The Cover shall provide a minimum 1 percent slope and maximum 2 percent slope on the structure deck for drainage. Penetration of the deck for drainage is not allowed unless Approved by the Department. See Schedule 10, Section 14 Landscaping for finished surface grading requirements.

13.6.6. At a minimum, the Developer shall include protection of structural elements including provision for fire protection meeting the requirements of NFPA 502, Section 7.3.

13.6.7. The Reference Documents Structure on the Cover shall be attached to the deck.

13.7. CCD Future Cover

13.7.1. Pursuant to Section 1.17.a of Schedule 10, the Developer has an obligation to design and construct the Project so as not to preclude CCD identified improvements for the construction of a future second cover over the I-70 Mainline from 50 feet west of the Steele Street/Vasquez Boulevard Bridge to 50 feet east of the Cook Street Bridge. Notwithstanding the generality of such obligation, compliance therewith shall include the Developer complying with the following requirements:

- a. I-70 Mainline walls shall be designed and constructed to withstand loading for such future cover. The design loading to be used shall be the same design loading as for the Cover, as provided in Section 13.6.4.a. Construction of bearing seats or center pier wall (including foundations) for the future second cover are not required; and
- b. Sufficient vertical clearance shall be allowed for between the I-70 Mainline and the future second cover, including accommodation for ventilation and fire and life safety elements similar to those required to be provided for the Cover pursuant to Schedule 10, Section 12 Cover MEP System.

13.8. Box Culverts

13.8.1. The Developer shall install box culvert structures as shown in Table 13-3 and shall submit to the Department for Acceptance.

Table 13-3 Box Culverts

Structure Description	Location
Offsite Outfall System	44 th Avenue to South Platte River
Onsite Outfall System	Pond
Colorado Boulevard Ponds	Sta 2080+00
Stapleton Drive South Interception	Safeway Distribution Center

13.8.2. Design

- a. New box culverts, replacements, extensions, and strengthening, including corresponding head and wingwalls, shall meet the requirements of Schedule 10, Section 8 Drainage. Culverts not covered in the CDOT *M & S Standards* shall be designed in accordance with *AASHTO LRFD Bridge Design Specifications*, *CDOT Bridge Design Manual*, and *CDOT Drainage Design Manual*. Thrust shall not be used.
- b. All major box culverts, new and widening of existing, shall be load rated, documented and submitted to the Department, using the AASHTOWare BrR software.

13.9. Retaining Walls

13.9.1. All retaining walls on the Project shall comply with Schedule 10, Section 14 Landscaping and Aesthetics. The Developer shall have sole responsibility for the type, material, performance and safety of temporary retaining structures.

- a. Geometry
 - i. The retaining wall layout shall address slope maintenance above and below the wall and provide returns into the retained fill or cut at retaining wall ends where possible. Final tolerances shall be 1 to 200 for level and plumb. Any residual wall batter shall be into the fill. The Developer shall provide a traversable surface between the wall and the Right-of-Way (ROW) line for maintenance access.
 - ii. Walls that support soil and loads from outside ROW shall require an appropriate setback from the ROW line for the construction of the wall, permanent easement or a temporary construction easement shall be required. A system shall be provided to intercept or prevent surface water from entering behind walls. Lengths of wall without relief joints shall be limited to lengths which control the differential settlement. A 72 inch chain-link fence shall be provided at the top of walls over five feet high where access is open to the public or maintenance personnel. This shall include all stormwater ponds to prevent public access into the ponds.
- b. Type

Metal walls, including bin walls and sheet-pile walls, recycled material walls, and timber walls shall not be permitted for permanent retaining walls. Wall types selected by the Developer shall have been used successfully in similar geotechnical locations and environmental conditions.
- c. Design Requirements
 - i. All permanent retaining walls and their associated structural support elements constructed for the Construction Work shall be designed to resist corrosion or deterioration for the design service life. A drainage system shall be required for

every wall type. MSE walls shall be designed in accordance with the requirements of AASHTO *LRFD Bridge Design Specifications*. All retaining wall installations shall include a positive drainage system of the backfill. The design of MSE and modular walls near or in bodies of water shall account for soft saturated soils and scour and shall prevent fines washout between facing elements. All walls near irrigation lines for landscaping shall account for any additional hydrostatic load due to a waterline break. All MSE walls with drainage lines placed within the strap zone shall account for any additional hydrostatic load due to pipe leakage. Utilities shall not be placed within the strap zone unless otherwise Approved by the Department. Retaining walls shall be designed according to the seismic criteria from AASHTO *LRFD Bridge Design Specifications*.

- ii. Temporary retaining walls may be abandoned and left in place if not in conflict with any permanent elements of the Project and Ultimate design. Temporary retaining walls left in place must be completely covered by soil or construction material, so they are not visible.

d. Characteristics

i. MSE (Panel) Walls

- A. Wall panels shall be constructed of reinforced concrete and provide corrosion protection for prestressing or post-tensioning steel. A mechanical connection to the wall facing shall be provided. Wall panels exposed to splash from traffic shall use epoxy coated reinforcing steel. Panel joints shall accommodate differential settlement.
- B. A barrier shall be provided to prevent fines washout between horizontal and vertical facing panel joints, panel wall construction joints, or relief joints.

ii. MSE (Block) Walls

- A. A mechanical connection to the wall facing shall be provided. Friction connections relying on gravity alone are not permitted unless every course of block is connected to the MSE soil mass with a reinforcing layer. MSE block walls are not acceptable for walls at the bridge locations or for primary retaining walls. The Developer may use MSE block walls for secondary retaining wall locations, such as landscaping. The Developer shall make a list of proposed MSE block wall locations for Approval by the Department.
- B. The Developer shall use the FHWA *Design and Construction of Mechanically Stabilized Earth Walls and Reinforced Soil Slopes - Volumes I and II*.
- C. A barrier shall be provided to prevent fines washout between horizontal and vertical block joints, block wall construction joints, or relief joints.

iii. Cast-in-Place Walls

Cast-in-place walls shall be designed and constructed in accordance with AASHTO *LRFD Bridge Design*. Construction-joint spacing shall accommodate or limit differential settlement. Structural diaphragm walls may be used when top-down construction is warranted.

iv. Anchored Walls

Design and construction shall be in accordance with AASHTO LRFD Bridge Design Specifications using the following documents as guidelines: Post Tensioning Institute (PTI) DC35.1-14 Recommendations for Prestressed Rock

and Soil anchors and FHWA DP-90-068, FHWA RD-82-046, FHWA RD-97-130, FHWA Geotechnical Engineering Circular No. 4-Ground Anchors and Anchored Systems IF-99-015. Anchors shall be PTI Class 1 protected. The Class 1 protected system shall encapsulate the prestressed anchor inside a plastic sheathing. Performance and proof load tests for anchors shall be provided in accordance with the above PTI guidelines.

v. Soil Nail Walls

Soil nail walls may only be used when top-down construction is warranted. Soil nail walls shall not be used if ground water seepage will be anticipated. Design and construction shall be in accordance with *AASHTO LRFD Bridge Design Specifications* FHWA Manual for the Design & Construction of Soil Nail Walls SA-96-069R , FHWA and Geotechnical Engineering Circular No. 7-Soil Nail Walls NHI-14-007, and use the following documents as guidelines: FHWA *RD-89-186*, FHWA *Soil Nailing Field Inspectors Manual SA-93-068*. . Load testing for nails shall be provided in accordance with the above FHWA guidelines. Final shotcrete surfaces shall be faced to meet the aesthetic requirements of Schedule 10, Section 14 Landscaping and Aesthetics.

vi. Caisson Walls

Caisson walls may be used when top-down construction is warranted along areas where ROW or other obstacles are constraining, and alternatives such as soil nail wall construction is not feasible. Caisson walls shall be designed with a permanent concrete fascia, using cast-in- place or precast facing. Walls shall be designed and constructed in accordance with the *AASHTO LRFD Bridge Design Specifications*.

vii. Soil Reinforcement

Soil reinforcement for MSE and modular walls shall be galvanized or epoxy-coated steel, geogrids, or fabrics meeting creep requirements of *AASHTO LRFD Bridge Design Specifications*. The design shall account for any item projecting through the soil reinforcement. The Developer shall avoid placing culverts and Utilities perpendicular to soil reinforcement within the reinforced soil mass. Soil reinforcement shall be protected from corrosion of metal due to stray electrical currents.

13.10. Noise Walls

13.10.1. General

Noise walls shall be designed and constructed to the requirements as provided in the I-70 East EIS and Schedule 17 Environmental Requirements. Noise walls shall be designed in accordance with *AASHTO LRFD Bridge Design Specifications*. Final tolerances shall be 1/8 inch in one foot for level and plumb. The design of noise walls shall provide for adequate surface drainage. When the installation of a noise wall interferes with the access to existing, or proposed fire hydrants, the noise wall installation shall include fire hose access openings and associated identification signs. Location and demand for these openings shall be established in cooperation with the local fire department.

13.10.2. Geometry

When placed behind guardrail, noise walls shall be offset according to *AASHTO A Policy on Geometric Design of Highways and Streets*. The Developer shall place noise walls on top of concrete guardrail when offset space is limited to 10 feet or less.

13.10.3. Design Requirements

a. Panels

Panels shall be constructed of concrete. Panels may be cast-in-place or precast. Panels on bridges shall be cast-in-place concrete and jointed from longitudinal structural elements of the bridge. Panel design and construction shall consider future replacement and/or repair, and shall limit the risk from falling debris resulting from traffic impacting with the noise wall. The Developer may propose other types and components and submit to the Department for Approval.

b. Posts

Posts shall be reinforced concrete, prestressed concrete, or galvanized and painted steel.

c. Foundations

Foundations shall be posts set in concrete, flowfill, caissons, cast-in-place, or precast reinforced concrete footings. The bottom of all spread footing foundations shall be placed a minimum of three feet below finished grade. Reinforcing steel projecting into the above ground portion of walls, subject to splash from the roadway (areas within 10 feet horizontally of the edge of travel lane), shall be epoxy coated.

13.11. Sign Structures

13.11.1. General

a. The Developer shall remove all existing sign structures per the limits as defined in Schedule 10, Section 11 Signing, Pavement Marking, Signalization, and Lighting. Static sign structures and supports meeting the geometric and sign layout requirements shown in the CDOT *M & S Standard Plans*. For static sign structures and supports that do not meet the geometric and sign layout requirements shown in the CDOT *M & S Standard Plans*, the structure shall be designed and constructed in accordance with the latest AASHTO *Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals*. Use Fatigue Category I for overhead sign structures. Sign structures shall be galvanized structural steel (single) tubing.

b. Variable Message Signs (VMS) shall be mounted on a sign bridge. The Developer shall prepare a structural design for each VMS structure in accordance with above specified AASHTO requirements and provide to the Department for Acceptance.

c. All sign structures shall include hand holes on poles for addition of future lighting.

d. The Developer shall provide minimum vertical clearance for static and dynamic sign structures in accordance with Schedule 10, Section 11 Signing, Pavement Markings, Signalization, and Lighting.

e. Components

i. Foundations

Drilled caissons shall be used to support overhead and cantilever sign structures. The Developer shall prepare one Project Foundation Report for all sign structures for Acceptance, and shall have one foundation boring near each single caisson supporting monotube sign supports.

ii. Connections

Shop splices shall be made with full-penetration butt welds. Base connections shall be made with full-penetration shop butt welds. All sign connection hardware shall be galvanized, with strengthened structural tubing at electrical connection openings.

iii. Bridge-Mounted Signs

The Developer shall not mount signs on bridges.

13.12. Finishing Structural Concrete Surfaces

- a. All exposed concrete surfaces shall have a surface treatment of concrete stain as specified in Project Special Provisions 601 and 708, Structural Concrete Stain. This includes all bridges, retaining walls, noise walls, concrete roadway/bridge barriers, and slope protection. The color of the structural concrete stain shall be as noted in the Aesthetic Standards.
- b. All exposed concrete surfaces shall have a surface treatment of anti-graffiti coating as specified in Project Special Provision 601, Anti-Graffiti Coating.

13.13. Submittal Requirements

13.13.1. Structural Concept Reports and Plans

The Developer shall submit a Structural Concept Report and Plans to the Department for Acceptance, for each bridge and retaining wall. Submittal contents shall include:

- a. Elevation views and cross sections depicting structure components. Also provide a maximum two-page description of type, materials, and design-life considerations for each proposed structure;
- b. For retaining walls, the Developer shall submit:
 - i. A description of each wall type utilized on the Project;
 - ii. A description of methods of accommodating settlement and differential settlement;
 - iii. A description of the type of foundation for each type of wall; and
 - iv. The location of walls and identification of wall type;
- c. Description of conceptual solutions for complex structural problems identified by the Developer;
- d. Description of creative or innovative ways the design, construction, and/or choice of structural types will benefit and/or enhance Project Schedule, quality, aspects of the Construction Work, and minimize traffic impacts;
- e. Structure Concept Plans, for Acceptance by the Department, including:
 - i. Plans, elevations, and appropriate typical sections for each bridge type;
 - ii. Plan views of the structure identifying each bridge location and type. Include documentation of design vehicle turning movement analysis;
 - iii. Plan views of the structure identifying each wall location and type;
 - iv. Plan and details for the location and type of expansion joints for the interaction between the Cover and the adjoining infrastructure. Expansion joints shall be fully accessible (not buried) and not located within inaccessible areas including: traffic lanes, retaining walls, buildings, play structures, landscaped areas; and
 - v. Structure numbers for major structures;
- f. For bridge types and retaining walls not historically used by CDOT, the Developer shall submit, for Approval by the Department:
 - i. A minimum one-page description of each bridge type (or foundation type) and retaining wall not historically used by CDOT; and
 - ii. A list of the transportation authorities that have used the proposed bridge type and retaining wall (include actual projects, application, performance, and references).

13.13.2. Preliminary (30% Level) Plan Package

Completed general layout drawing(s) shall be submitted for each major structural element. The final geometry and proposed structural type shall have been finalized and shall be shown and detailed in the Developer's drawings. Aesthetic requirements shall have been identified and incorporated into the Developer's drawings. Additional soil borings (if required) shall have been identified and the foundation system shall be shown in the Developer's drawings.

13.13.3. Final (100% Level) Plan Package

The independent design check shall have been completed and the original final structural design calculations shall be revised and corrected based on comments from the independent design check. Aesthetic details shall have been incorporated into the Developer's drawings. All changes or revisions resulting from in-process design progress review meetings, as described in Schedule 8 Project Administration, shall be incorporated.

13.13.4. Release for Construction

Copies in PDF and MicroStation electronic format files shall be made of all plans for all structures and submitted to the Department on computer disk (DVD) format. Falsework and shoring plans shall be signed and sealed by a professional engineer licensed in the State of Colorado.

13.13.5. Shop Drawings and Working Drawings

The Developer shall submit shop drawings and working drawings for each structure in accordance with Table 105-1 of the CDOT Standard Specifications. Shop drawings and working drawings shall be reviewed and approved by the Developer's professional design engineer.

13.13.6. Documentation

The Developer shall submit original design calculations, design-check calculations, and the rating Documents, in PDF format, to the Department as part of the Release for Construction package. A hard copy of certificate letter and a final detail letter shall be also included. As part of the submittals provide the following:

- a. Design and design-check calculations shall have pages numbered and include a table of contents;
- b. All calculations shall identify which code is utilized, and reference the appropriate section in the right-hand column;
- c. References shall be included in the calculations to computer programs used to do the calculations;
- d. Computer documentation shall include the following: name of program, vendor, version, and release date; record of software output and verification of output with manual calculations or other recognized program; clear identification of input and output values and meaning; and check of input; and
- e. All calculations shall be signed and sealed by the Developer's Engineer.

13.13.7. Revisions to Release for Construction Documents and As-Builts

- a. As a condition of Final Acceptance, the Developer shall submit to the Department on computer disk (DVD) format; changes to Release for Construction Documents, As-Built Drawings, and CADD files of the following documents for each structure:
 - i. Design and design-check calculations;
 - ii. Rating packages;
 - iii. Rating files; and
 - iv. As-Built Drawings.

13.14. Deliverables

At a minimum, the Developer shall submit the following to the Department for Information, Acceptance, or Approval in accordance with the specified time frames:

Table 13-4 Deliverables

Deliverable	Information, Acceptance, or Approval	Schedule
Bridge Removal Plan	Acceptance	No less than 21 Calendar Days prior to start of demolition
Structure Concept Report and Plans	Acceptance	Prior to proceeding with the design plan packages
Modified approach slab details	Acceptance	Prior to RFC
Proposed bridge, foundation, or wall types not historically used by CDOT	Approval	Prior to proceeding with the design plan packages
Maintenance plan for each bridge type and box culvert structure type used	Acceptance	Prior to RFC Documents
Proposed locations of access holes	Acceptance	Prior to RFC Documents
Project Foundation Report	Acceptance	Submitted as part of the Preliminary Design Package and/or In-Process Design Packages
PDA testing criteria including number, type, layout and location	Acceptance	Prior to RFC Documents
Structural design for each sign structure	Acceptance	Prior to RFC Documents
Alternative Non-Destructive methods for testing non- redundant drilled caissons	Acceptance	As required
Design calculations and design-check calculations	Acceptance	Prior to RFC Documents
Load rating for box culverts	Acceptance	Prior to RFC Documents
Load rating for bridges	Acceptance	Prior to RFC Documents
VMS structural design	Acceptance	Prior to RFC Documents
As-Built documents	Acceptance	Prior to Final Acceptance.

13.15. Appendices

Appendix A Project Special Provisions

Appendix A Project Special Provisions

The following specifications modify and take precedence over the CDOT Standard Specifications. The provisions of Appendix A to Schedule 10A Applicable Standards and Specifications apply to these Project Special Provisions.

PROJECT SPECIAL PROVISIONS

	<u>page</u>
Index	13-21
Revision of Section 202 – Removal of Expansion Devise	13-22
Revision of Section 202 – Removal of Bridge	13-23 to 13-26
Revision of Section 202 – Removal of Portions of Present Structure	13-27
Revision of Section 202 – Sandblasting Reinforcing Steel	13-28
Revision of Section 210 – Rebuild Portions of Present Structure	13-29
Revision of Section 502 – Drilling Hole to Facilitate Pile Driving	13-30
Revision of Section 502 – Piling Bitumen Coating	13-31
Revision of Section 503 – Drilled Caissons	13-32 to 13-36
Revision of Section 503 – Thermal Integrity Profiler	13-37 to 13-40
Revision of Section 504 – Concrete Panel Facing MSE Wall	13-41
Revision of Section 504 – Concrete Block Facing MSE Wall	13-42
Revision of Section 509 and 708 – Painting of Aluminum Access Door for Steel Structures	13-43
Revision of Section 509 – Lock-Pin and Collar Fasteners	13-44 to 13-46
Revision of Section 509 – Steel Structures	13-47 to 13-52
Revision of Section 509 – Welding	13-53
Revision of Section 513 – Bridge Drain	13-54
Revision of Section 515 – Concrete Sealer (Calcium Nitrite)	13-55
Revision of Section 601 – Painting of Aluminum Access Doors for Concrete Structures	13-56
Revision of Section 601 – Structural Concrete (Grooved Pattern Finish)	13-57 to 13-58
Revision of Section 601 – Concrete Class DT (Deck Topping)	13-59
Revision of Section 601 and 708 Structural Concrete Stain	13-60 to 13-62
Revision of Section 601 – Anti-Graffiti Coating	13-63
Revision of Section 607 – Concrete Masonry Sound Barrier	13-64 to 13-66
Revision of Section 607 – Fence Chain Link Special	13-67 to 13-68
Revision of Section 618 – Prestressed Concrete	13-69 to 13-71
Revision of Section 618 – Segmental Prestressed Concrete Structures	13-72 to 13-74
Revision of Section 628 – Bridge Girder and Deck Unit	13-75 to 13-79

**REVISION OF SECTION 202
REMOVAL OF EXPANSION DEVICE**

Section 202 of the CDOT Standard Specifications is hereby revised for this Project as follows:

SubSection 202.01 shall include the following:

This work shall consist of removing existing bridge expansion devices at locations shown on the plans in accordance with the applicable portions of Section 202 of the CDOT Standard Specifications or as amended by these Special Provisions and in conformity with the plans or as directed.

SubSection 202.02 shall include the following:

Removal operations shall be coordinated with the stage construction shown on the plans, indicated in the Special Provisions, or as directed by the Engineer.

The methods and equipment used for the concrete removal shall be approved by the Engineer. The Contractor shall take all steps necessary to avoid damage to all reinforcing steel designated to remain in place. Any reinforcing bars damaged by the Contractor's operation shall be repaired or replaced.

Following the removal of the concrete, all exposed reinforcing steel to remain in place, shall be straightened as required and thoroughly cleaned to sound metal by sandblasting. Any structural steel (top of girders and top of diaphragms) damaged by the Contractor during removal, shall be repaired at the Contractor's expense. Exposed concrete surfaces within the removal limits shall be sandblasted to remove all fractured or loose particles in order to promote good bond with the new concrete.

**REVISION OF SECTION 202
REMOVAL OF BRIDGE**

Section 202 of the CDOT Standard Specifications is hereby revised for this project as follows:

SubSection 202.01 shall include the following:

This work consists of removal of the existing bridges at the following locations:

Structures to be removed

Structure Description	Structure No.
I-70 over Brighton Blvd	E-17-UY, E-17-US
I-70 Viaduct	E-17-FX
UPRR Bridge Over 46 th Avenue	
Colorado Blvd over I-70	E-17-HU, E-17-HT
I-70 over Dahlia St	E-17-HY, E-17-HZ
I-70 over Holly St	E-17-HW, E-17-HX
I-70 over Monaco St	E-17-GC, E-17-GD
I-70 over Denver Rock Island Railroad	E-17-EW, E-17-DF
I-70 over Quebec St	E-17-GA, E-17-GB
I-270 over I-70	E-17-KR
I-70 over Peoria St	E-17-IQ

Bridge removal shall consist of the complete removal of all superstructure and substructure elements unless otherwise shown on the plans.

SubSection 202.02 shall include the following:

The removal of the existing bridge shall be performed in a safe manner.

When removal operations are located over a Railroad or in proximity to any live waterway, additional coordination with the Railroad or other agency, (United States Army Corps of Engineers (USACE), US Fish and Wildlife Service, US Forest Service, etc.) shall be required.

The Contractor shall submit a Bridge Removal Plan to the Engineer, for record purposes only, at least 21 Calendar Days prior to the proposed start of removal operations. This Plan shall detail procedures, sequences, and all features required to perform the removal in a safe and controlled manner. Special procedures shall be provided for the removal of the external post tensioned piers for E-17-FX. The Bridge Removal Plan shall be stamped "Approved for Construction" and signed by the Contractor.

The Bridge Removal Plan shall provide complete details of the bridge removal process, including:

- (1) The removal sequence, including staging of removal operations. Sequence of operation shall include a detailed Schedule that complies with the working hour limitations.
- (2) Equipment descriptions including size, number, type, capacity, and location of equipment during removal operations.

**REVISION OF SECTION 202
REMOVAL OF BRIDGE**

- (3) Shoring that exceeds 5 feet in height, all falsework and bracing.
- (4) Details, locations and types of protective coverings to be used. The protective covering shall prevent any materials, equipment or debris from falling onto the property below. When removal operations are located over or in proximity to any live waterway, Railroad, or pedestrian/bicycle path, additional width of protective covering sufficient to protect these facilities shall be required. Detailed methods for protection of the existing roadway facilities, including measures to assure that people, property, utilities, and improvements will not be endangered.
- (5) Detailed methods for protection of live waterways including minimization of turbidity and sedimentation, and protection of existing wetlands.
- (6) Detailed methods for mitigation of fugitive dust resulting from the demolition.
- (7) Detailed methods for mitigation of noise resulting from the demolition operation.
- (8) Details for dismantling, removing, loading, and hauling steel elements.
- (9) Methods of Handling Traffic, including bicycles and pedestrians, in a safe and controlled manner.

A Pre-Removal Conference shall be held at least seven days prior to the beginning of removal of the bridge. The Engineer, the Contractor, the removal subcontractor, the Contractor's Engineer, and the Traffic Control Supervisor (TCS) shall attend the Pre-Removal Conference. The Bridge Removal Plan shall be finalized at this Conference.

The Contractor's Engineer shall sign and seal (1) and (3) listed above in the final Bridge Removal Plan. Calculations shall be adequate to demonstrate the stability of the structure remaining after the end of each stage of removal, before traffic is allowed to resume in its normal configuration.

The final Bridge Removal Plan shall be stamped "Approved for Construction" and signed by the Contractor. The Contractor shall submit a final Bridge Removal Plan to the Engineer prior to bridge removal for record purposes only. The Contractor shall not begin the removal process without the Engineer's written authorization.

Submittal of the Bridge Removal Plan to the Engineer, and field inspection performed by the Engineer, will in no way relieve the Contractor and the Contractor's Engineer of full responsibility for the removal plan and procedures.

Work within Railroad right-of-way shall be in accordance with Section 107. For bridge removal over Railroads, including overhead wires, tunnels and underground facilities, bridge removal plans will be contingent upon the drawings being approved by the Railroad company involved.

Unless otherwise directed, the Contractor's Engineer need not be on site when bridge removal operations are in progress, but shall be present to conduct daily inspection for written approval of the work.

REVISION OF SECTION 202 REMOVAL OF BRIDGE

The Contractor's Engineer shall inspect and provide written approval of each phase of the removal prior to allowing vehicles or pedestrians on, below, or adjacent to the structure. The Contractor's Engineer shall certify in writing that the falsework, bracing, and shoring conform to the details of the Bridge Removal Plan. A copy of the certification shall be submitted to the Engineer.

The Contractor's Engineer shall inspect the bridge removal site and report in writing on a daily basis the progress of the operation and the status of the remaining structure. A copy of this daily report shall be available at the site of the work at all times, and a copy of the previous day's inspection report shall be submitted to the Engineer daily.

The Contractor shall have all necessary workers, materials, and equipment at the site prior to closing any lanes to traffic to accommodate bridge removal operations. While the lanes are closed to public traffic, work shall be pursued promptly and without interruption until the roadway is reopened to traffic.

Removal of hazardous material shall be in accordance with Schedule 17 Environmental Requirements.

The Contractor shall take all steps to avoid contaminating state waters, in accordance with subSection 107.25.

Should an unplanned event occur or the bridge removal operation deviate from the submitted Bridge Removal Plan, the bridge removal operations shall immediately cease after performing any work necessary to ensure worksite safety. The Contractor shall submit to the Engineer, the procedure or operation proposed by the Contractor's Engineer to correct or remedy the occurrence of this unplanned event or to revise the final Bridge Removal Plan. The Contractor shall submit his Engineer's report in writing, within 24 hours of the event, summarizing the details of the event and the procedure for correction.

Before removal of the protective covering, the Contractor shall clean the protective covering of all debris and fine material.

Bridge removal may be suspended by the Engineer for the following reasons:

- (1) Final Bridge Removal Plan has not been submitted, or written authorization has not been provided by the Engineer to begin the removal.
- (2) The Contractor is not proceeding in accordance with the Bridge Removal Plan, procedures, or sequence.
- (3) The Contractor's Engineer is not on site to conduct inspection for the written approval of the work.
- (4) Safety precautions are deemed to be inadequate.
- (5) Existing neighboring facilities are damaged as a result of bridge removal.

Suspension of bridge removal operations shall in no way relieve the Contractor of his responsibility under the terms of the Contract. Bridge removal operations shall not resume until modifications have been made to correct the conditions that resulted in the suspension, as approved in writing by the Engineer.

**REVISION OF SECTION 202
REMOVAL OF BRIDGE**

The Contractor shall notify all emergency response agencies of the proposed removal work and any detours 24 hours in advance of work. This shall include the Colorado State Patrol, local Police Department, local Fire Department, all local ambulance services, and the Sheriff's Department, as appropriate.

All required traffic control devices, night time flagging stations, barricades and VMS signs shall be in place, with detours in operation, prior to the beginning of removal operations each day. Night work shall conform to the requirements of the MUTCD, Parts 1, 5, and 6.

Prior to reopening the roadway to public traffic, all debris, protective pads, materials, and devices shall be removed and the roadways swept clean.

Explosives shall not be used for removal work without the written approval of the Engineer.

Removal shall include the superstructure, the substructure, which includes the piers, the abutments and wingwalls, the bridge rail, and any approach slabs and sleeper slabs.

Removal of the substructure shall be taken down to at least 1 foot below the natural existing or future ground surface at the lowest point of interface with the abutment, unless otherwise approved by the Engineer. Holes resulting from substructure removal shall be backfilled with Structure Backfill (Class 2) to the adjacent existing grades.

All other materials removed from the existing structure shall become the property of the Contractor and shall be properly disposed of offsite.

Existing structures, facilities, and surrounding roadways shall not be damaged by the removal operations. Damage that does occur shall be repaired immediately at the Contractor's expense.

**REVISION OF SECTION 202
REMOVAL OF PORTIONS OF PRESENT STRUCTURE**

Section 202 of the CDOT Standard Specifications is hereby revised for this project as follows:
SubSection 202.01 shall include the following:

This work shall include the removal of all or portions of the following: bridge deck, abutments, piers, wingwalls, rail, curb, expansion devices, approach slabs, slope paving, retaining walls, drainage structures, and light fixtures. Removal operations shall be conducted so that there will be the least interference with public traffic using the structure.

SubSection 202.02 shall include the following:

At least 10 days before beginning bridge removal the Contractor shall submit to the Engineer details of the removal operations showing the methods and sequence of removal and equipment to be used.

If requested by the Department, bridge rail shall be carefully dismantled and stockpiled at locations as designated.

The existing concrete shall be removed as shown on the plans or as directed by the Engineer. If additional removal of unsound concrete is required, it shall be included in the work.

All methods and equipment used to accomplish this item shall be approved by the Contractor's Engineer.

Within 24 hours before new concrete is placed, the entire surface upon which new concrete bonds shall be sandblasted to roughen the surface and remove all fractured or loose particles in order to promote good bond with the new concrete.

In SubSection 202.02 delete the sixth paragraph and replace with the following:

Before beginning concrete removal operations on the existing bridge decks, a saw cut approximately one inch deep shall be made to a true line along the limits of removal. A one inch deep saw cut shall also be made along the limits of removal on all faces of monolithic concrete elements which may be visible in the completed work.

**REVISION OF SECTION 202
SANDBLASTING REINFORCING STEEL**

Section 202 of the CDOT Standard Specifications is hereby revised for this Project as follows:

DESCRIPTION

SubSection 202.01 shall include the following:

Sandblasting Reinforcing Steel shall consist of cleaning exposed reinforcing steel designated to remain in place following the removal of adjacent concrete and prior to placing new concrete in accordance with the applicable portions of Section 202 of the CDOT Standard Specifications or as amended by these Special Provisions or as directed.

CONSTRUCTION REQUIREMENTS

SubSection 202.08 paragraph 3 shall include the following:

Rust which may form on the reinforcing steel within seven calendar days following the accepted sandblasting, will not be cause for rejection of the steel.

When acceptable reinforcing steel is exposed to the elements for more than seven calendar days prior to encasement in concrete, adequate measures shall be taken by the Contractor, or as approved by the Engineer, to protect the steel from contamination or corrosion. Reinforcing steel contaminated as a result of the Contractor's failure to provide adequate protection as stipulated herein, shall be re-sandblasted.

**REVISION OF SECTION 210
REBUILD PORTIONS OF PRESENT STRUCTURE**

Section 210 of the CDOT Standard specifications is hereby revised for this project as follows:

DESCRIPTION

This work shall consist of chipping concrete to a minimum depth of 1/8 inch, sandblasting and applying a gel mortar to the damaged area and bring the structure to its original shape.

MATERIALS

The material, to be approved by the Contractor's Engineer, shall be a cementitious, 2-component, fast-setting mortar that is formulated for application by trowel and is especially designed for repair of overhead surfaces.

CONSTRUCTION REQUIREMENTS

Removal and rebuild operations shall be conducted so that there will be minimum interference to traffic below the structures.

The affected areas shall be chipped to a minimum depth of 1/8 inch into existing concrete, all loose concrete will be removed, the area shall be sandblasted and the surface preparation shall be as the product literature describes.

The material shall not be installed in the work prior to the Engineer's approval.

Two copies of the product literature containing pertinent materials and installation of the product supplied on this project shall be furnished to the Engineer at least two weeks prior to the products' installation.

Any damage to portions to remain in place, by the Contractor, in performing the work described above shall be repaired to the satisfaction of the Engineer at the Contractor's expense.

**REVISION OF SECTION 502
DRILLING HOLE TO FACILITATE PILE DRIVING**

Section 502 of the CDOT Standard Specifications is hereby revised for this project as follows:
SubSection 502.06 shall include the following:

When the plans call for drilled holes filled with slurry or mud made from clay or bentonite, the diameter of the drilled holes shall be at least two inches greater than either the pile diameter or the diagonal corner to corner measurement of the pile cross section, unless otherwise designated on the plans. Oversized holes due to sloughing, drifting, over-drilling, or other causes shall be filled with the accepted slurry or mud.

The following mixture will yield approximately 1.2 cubic yards of an acceptable slurry or mud:

50 lbs. dry bentonite powder

Approximately 125 gallons of water (or sufficient amount to make a pourable mix)

1 cubic yard of sand; (approximately 2800 lbs.) reasonably free of material larger than 1/2 inch.

The sand need not be clean. Local soil reasonably free of material larger than 1/2 inch may be substituted for the sand. Cement, lime, flyash, or other pozzolanic or highly alkaline materials shall not be added.

This mixture may be mixed by auger in the drilled hole, by paddle type mortar mixers, by portable or semiportable concrete mixers, or by drum type concrete mixer trucks.

If the mixture is placed or mixed in the hole prior to pile driving, the top two to three feet of the hole may be filled with loose local soil to prevent splashing of the slurry or mud.

REVISION OF SECTION 502 PILING BITUMEN COATING

Section 502 of the CDOT Standard Specifications is hereby revised for this project as follows:
SubSection 502.01 shall include the following:

This work shall consist of furnishing and applying bitumen coating and primer to steel pile surfaces as required in the plans and as specified herein.

SubSection 502.02 shall include the following:

- (a) *Bitumen Coating.* Canal Liner Bitumen (ASTM D-2521) shall be used for the bitumen coating and shall have a softening point of 190°F to 200°F, a penetration of 56 to 61 at 77°F, and a ductility at 77°F in excess of 1.4 inches.
- (b) *Primer.* Primer shall conform to the requirements of AASHTO M116.

SubSection 502.11 shall include the following:

All surfaces to be coated with bitumen shall be dry and thoroughly cleaned of dust and loose materials. No primer or bitumen shall be applied in wet weather, nor when the temperature is below 65°F.

Application of the prime coat shall be with a brush or other approved means and in a manner to thoroughly coat the surface of the piling with a continuous film of primer. The purpose of the primer is to provide a suitable bond of the bitumen coating to the pile. The primer shall set thoroughly before the bitumen coating is applied.

The bitumen should be heated to 300°F, and applied at a temperature between 200°F to 300°F, by one or more mop coats, or other approved means, to apply an average coating depth of 3/8 inch. Whitewashing of the coating may be required, as deemed necessary by the Engineer, to prevent running and sagging of the asphalt coating prior to driving, during hot weather.

Bitumen coated piles shall be stored immediately after the coating is applied for protection from sunlight and heat. Pile coatings shall not be exposed to damage or contamination during storage, hauling, or handling. Once the bitumen coating has been applied, the Contractor will not be allowed to drag the piles on the ground or to use cable wraps around the pile during handling. Pad eyes, or other suitable devices, shall be attached to the pile to be used for lifting and handling. If necessary, the Contractor shall recoat the piles to comply with these requirements.

A nominal length of pile shall be left uncoated where field splices will be required. After completing the field splice, the splice area shall be brush or mop coated with at least one coat of bitumen.

REVISION OF SECTION 503 DRILLED CAISSONS

Section 503 of the CDOT Standard Specifications is hereby revised as follows:

Add SubSection 503.071 immediately following SubSection 503.07 as follows:

503.071 Cross-Hole Sonic Logging.

(a) *General Requirements.*

The nondestructive testing method called Cross-hole Sonic Logging (CSL) shall be used on drilled caissons for the bridge piers.

The testing shall not be conducted until 48 hours after the placement of all concrete in a caisson, and must be completed within 20 calendar days after placement on production drilled caissons. The Engineer may specify a longer minimum time if special retarders, mix designs, or other factors result in slower-setting concrete.

The CSL tests shall be conducted by an experienced independent testing organization retained by the Contractor and approved by the Engineer prior to testing.

The CSL tests measure the time it takes for an ultrasonic pulse to travel from a signal source in one access tube to a receiver in another access tube. In uniform, good quality concrete, the travel time between equidistant tubes will be relatively constant and correspond to a reasonable concrete pulse velocity from the bottom to the top of the foundation. In uniform, good quality concrete, the CSL test will also produce records with good signal amplitude and energy. Longer travel times and lower amplitude/energy signals indicate the presence of irregularities such as poor quality concrete, voids, honeycomb and soil intrusions. The signal will be completely lost by the receiver and CSL recording system for the more severe defects such as voids and soil intrusions.

Upon completion of CSL testing all water shall be removed from access tubes and any other drilled holes. After the CSL results have been evaluated, required repair of defects has been conducted and the repair has been evaluated with another CSL survey, the CSL tubes shall then be grouted at the direction of the Engineer with an approved prepackaged grout having a minimum compressive strength of 4000 psi.

(b) *Preparation for Testing.*

The greater of a minimum of four (4) CSL tubes or one (1) CSL tube per linear foot of the drilled caisson diameter, which maximum number of CSL tubes controls, shall be installed in each drilled caisson, equally spaced around the perimeter of the caisson at 90 degrees.

The CSL tubes shall be Schedule 40 steel with an inside diameter of 1 ½ inches. Galvanized steel will not be permitted. Substitution will not be permitted. Pipes shall have a round, regular internal diameter free of defects or obstructions, including any at pipe joints (all pipe joints shall be threaded without any couplings), in order to permit the free, unobstructed passage of a 1.35 inch diameter source and receiver probe. Tubes shall be watertight and free from corrosion with clean internal and external faces to ensure passage of the probes, and to provide good bond with the concrete.

REVISION OF SECTION 503 DRILLED CAISSONS

CSL tubes shall be fitted with a watertight shoe on the bottom and a removable cap on the top. The tubes shall be securely attached to the interior of the reinforcement cage with a minimum cover of 3 inches.

CSL tubes shall be installed in each caisson in a regular, symmetric pattern such that each tube is placed the maximum distance possible from each adjacent tube, with a spacing of 90 degrees around the perimeter of the cage as specified above or as shown in the plans. The tubes shall be as near to parallel as possible, and are typically wire-tied to the reinforcing cage every 3 feet, or are otherwise secured such that the tubes stay in position during placement of the rebar cage and concrete. The tubes shall extend from ½ foot above the caisson bottoms to at least 3-feet above the caisson tops. Under no circumstances shall the tubes be allowed to rest on the bottom of the drilled excavation. If the caisson top is sub-surface, the tubes shall extend at least 3 feet above the ground or water surface.

All joints in the tubes required to achieve full-length shall be made watertight. Care shall be taken during reinforcement installation operations in the drilled caisson hole so as not to damage the tubes. After placement of the reinforcement cage and prior to concreting the caisson, the tubes shall be filled with clean water as soon as possible (no later than 4 hours after placement of cage) and the tube tops capped or sealed to keep debris out of the tubes. Care shall be exercised in the removal of caps or plugs from the tubes after installation so as not to apply excess torque, hammering, or other stresses which could break the bond between the tubes and the concrete.

The Contractor shall submit to the Engineer for review the proposed CSL system including equipment schematics, material specifications, tube size, installation details, testing procedures, and joint connections at least 14 days prior to starting drilled caisson construction.

(c) *Typical CSL Test Equipment. Typical CSL test equipment consists of the following components:*

1. A microprocessor based CSL system for display of individual CSL records, analog digital conversion and recording of CSL data, analysis of receiver responses and printing of CSL logs.
2. Ultrasonic source and receiver probes for 1-½ inches to 2-inch inside diameter pipe, as appropriate.
3. An ultrasonic voltage pulsar to excite the source with a synchronized triggering system to start the recording system.
4. A depth measurement device to determine and record depths.
5. Appropriate filter/amplification and cable systems for CSL testing.

(d) *CSL Logging Procedures.*

Before the placement of concrete, a minimum of one tube per caisson shall be plumbed and the tube length recorded, including a notation of the tube projection above the caisson tops. Information on

REVISION OF SECTION 503 DRILLED CAISSONS

the caisson bottom and top elevations and/or length, along with construction dates shall be provided to the Engineer before the CSL tests.

CSL tests shall be conducted between the pairs of tubes encompassing the perimeter and the major diagonals. Testing shall be in accordance with ASTM D 6760. Additional logs shall be conducted at no additional costs to the Department in the event anomalies are detected.

The CSL tests shall be carried out with the source and receiver probes in the same horizontal plane unless test results indicate potential defects, in which case, the questionable zone may be further evaluated with angled tests (source and receiver vertically offset in the tubes). CSL measurements shall be made at depth intervals of 0.5 feet or less, and shall be done from the bottom of the tubes working upward to the top of each caisson. Probes shall be pulled simultaneously, starting from the bottoms of the tubes, over a depth-measuring device.

Any slack shall be removed from the cables prior to pulling to provide for accurate depth measurements of the CSL records. Any defects indicated by longer pulse arrival times and significantly lower amplitude/energy signals shall be reported to the Engineer, and further tests shall be conducted as directed by the Engineer to evaluate the extent of such defects.

Additional NDT methods may be used to evaluate possible caisson defects including Single hole Sonic Logging, Gamma-Gamma Nuclear Density Logging, 3D Tomography, and/or Surface Sonic Echo and Impulse Response tests.

(e) *CSL Testing Results.*

CSL results shall be presented to the Engineer in a report. The test results shall include CSL logs with analyses of:

1. Initial pulse arrival time versus depth
2. Pulse energy/amplitude versus depth

A CSL log shall be presented for each tube pair tested, with any defect zones indicated on the logs and discussed in the test report as appropriate.

Additional needed NDT results shall also be presented to the Engineer in a report format.

Copies of all data (written, electronic, etc.) obtained from the CSL and NDT inspections shall be submitted to the Department in an expedient manner. These submitted copies shall become the property of the Department.

(f) *Evaluation of CSL Test Results.*

The Engineer will evaluate the CSL and NDT (if needed) results within 7 days of receipt from the Contractor and determine whether or not the drilled caisson construction is acceptable. The concrete condition shall be evaluated using the methodology described in Section 20.2.1 of the FHWA Geotechnical Engineering Circular Number 10 (Publication No. FHWA-NHI-10-016

REVISION OF SECTION 503 DRILLED CAISSONS

Drilled Shafts: Construction Procedures and LRFD Design Methods, FHWA 2010). The Contractor shall provide consultants and/or personnel, on an as needed basis, who are experienced and competent performing the above NDT methods.

If the NDT records are complex or inconclusive, the Engineer may require coring in accordance with subSection 503.071(g) below, or excavation of the caisson to verify caisson conditions.

The acceptance of each drilled caisson shall be the decision of the Engineer, based on the results of the caisson integrity testing report(s), including caisson coring, and other information on the caisson placement. Rejection of a caisson based on the caisson integrity testing shall require conclusive evidence that a defect exists in the caisson which will result in inadequate or unsafe performance under expected loads.

In the case that any caisson is determined to be unacceptable, the Contractor shall submit a plan for remedial repairs, to the Engineer for approval. Any modifications to the foundation caissons and load transfer mechanisms caused by the remedial action will require calculations and working drawings stamped by a Professional Engineer registered in the State of Colorado for all foundation elements affected. All labor and materials required to perform remedial caisson repairs shall be provided at no cost to the Department and with no extension of the contract time.

(g) *Core Drilling of Drilled Caisson Concrete.*

Production drilled caissons that are determined to be unacceptable by the CSL tests shall be cored to determine the quality of the concrete. One core sample shall be taken from each defective caisson for the full depth of the irregularities and for three (3) feet above and below the irregularity.

Because it is desired to obtain a high percentage of core recovery for visual inspection and testing methods, equipment shall be as follows:

1. The core drill shall be in good condition and capable of delivering a smooth flow of power to the bit, both in rotation and down thrust. The pump shall be in good condition and of the positive displacement type. The pump shall be capable of delivering a minimum of 15 gallons of water per minute at 200 psi. It shall be equipped with a relief valve set to release at a maximum of 200 psi. It shall be equipped with a pressure gauge with range from 0 psi to 1,000 psi.
2. The drill shall be size HW or larger. The core barrel shall be size HW or larger, M series, double-tubed, with a chromed inner barrel. The diamond set bit for each hole shall be of best quality, new, and with a minimum of four waterways. A new bit or replacement of the core barrel may be required at any time inspection indicates excessive wear or loss of diamonds.

**REVISION OF SECTION 503
DRILLED CAISSONS**

3. The core drill machine shall be set so that the drill force will be exactly vertical and so there will be not more than five (5) feet of laterally unsupported drill rod between the bottom of the drill spindle (chuck) and the top of the caisson concrete when the hydraulic feed is in the up position.

When longer laterally unsupported sections of drill stem are necessary, braced casing or rigidly braced guides must be used to prevent lateral whip.

An accurate log of cores shall be kept and the cores shall be placed in a suitable wooden crate and properly marked showing the caisson depth at each interval of core recovery. The cores along with two (2) copies of the coring log shall be available to the Engineer for inspection and testing. Copies of the coring logs shall be submitted to the Engineer for Information concurrently.

Construction shall not proceed above the drilled caisson until the quality of the concrete in the caisson, as represented by the core samples, is determined to be acceptable and notification to continue construction is given by the Engineer.

If the quality of the concrete in a drilled caisson is determined to be acceptable, or after caisson remedial repairs are complete and accepted by the Engineer, the Contractor shall grout the core hole with an approved prepackaged grout having a minimum compressive strength of 4000 psi.

-1-

**REVISION OF SECTION 503
THERMAL INTEGRITY PROFILER**

Section 503 of the CDOT Standard Specifications is hereby revised as follows:

Add SubSection 503.072 immediately following SubSection 503.071 as follows:

(a) *General Requirements.*

The nondestructive testing method called Thermal Integrity Profiler (TIP) shall be used on drilled caissons for the bridge piers. The TIP testing method uses the heat generated by curing cement (hydration energy) to assess the integrity or quality of cast in place concrete foundations. The expected temperature at any location is dependent on the caisson diameter, mix design, time of measurement, and distance to the center of the caisson.

The TIP tests shall be conducted by an experienced independent testing organization retained by the Contractor and approved by the Engineer prior to testing. The Contractor shall submit documentation that the TIP Consultant has successfully completed at least 3 TIP testing projects within the last 3 years. The testing procedures and equipment shall conform to: ASTM D7949 "Standard Test Methods for Thermal Integrity Profiling of Concrete Deep Foundations" using Method B: Embedded Thermal Sensors.

The Contractor shall cooperate fully with the independent testing company as necessary to facilitate the testing at no additional expense. The Contractor shall provide cooperative assistance, suitable access to the site and caissons to be tested, and labor as required to assist the TIP Consultant in performing the required tests.

(b) *Typical TIP Test Equipment.*

Typical TIP test equipment consists of, but is not limited to, the following components:

1. A computer based TIP data acquisition system to download and monitor temperature versus time after concrete placement.
2. The data acquisition system shall have the ability to collect data at user defined time intervals between 15 to 60 minutes.
3. Thermal sensor wires that have a minimum accuracy of 1 degree Celsius and have a readability to the nearest 0.1 degree Celsius. The wire(s) connected to the sensors shall be abrasion resistant and remain operational in the range of anticipated temperatures.

The specifications for the equipment to be used and signed certificates of calibration shall be submitted to the Engineer for approval at least 30 days prior to beginning caisson construction as part of the caisson installation plan in accordance with Section 503.04.

-2-

**REVISION OF SECTION 503
THERMAL INTEGRITY PROFILER**

(c) TIP Testing Procedure

Prior to TIP testing, the Contractor shall provide the caisson lengths with elevations of top and bottom and the field inspection and concrete volume logs of the caisson to be tested. The Contractor shall also provide thermal sensor wire lengths, and thermal sensor wire serial numbers corresponding to the thermal sensor wire locations.

The Contractor shall furnish and install a minimum of one (1) thermal sensor wire in each caisson for each foot of caisson diameter rounded down to the nearest whole number (i.e. a 6.5 foot diameter shaft would have a minimum of 6 thermal sensors wires). The thermal sensor wires shall be equally spaced around the perimeter of the caisson, as shown on the plans. The thermal sensor wires shall be placed near the CSL inspection pipes so the results from the tests can be compared. The Engineer shall approve of the thermal sensor wire locations before they are attached to the reinforcement cage. The thermal sensor wires shall be aligned with the longitudinal reinforcement of the shaft. The thermal sensor wires shall be tied to the steel reinforcement using nylon zip-ties spaced at 1.5 to 2 inches from the top and bottom of each thermal sensor node. If the thermal sensor wire is routed with a bend at any location, extra precautions on securing the cable with zip-ties on either side of each such thermal sensor node must be taken.

Each thermal sensor wire shall be attached to the data acquisition system which shall be fixed well above the top of the concrete. Data shall be collected at 15 minute intervals, unless specified differently by the Engineer, for a duration of time specified by the Engineer. It is estimated it will take between 12 and 48 hours to reach peak temperature. In the event that peak temperature is not reached within the specified time period, the data acquisition system will continue to record until the peak temperature is reached. Once the peak temperature has been reached data shall be downloaded so that the TIP consultant can begin evaluating the data and preparing the report. Potential local defects indicated by locally low temperatures relative to the average temperature at that depth, or average temperatures significantly lower than the average temperatures at other depths, shall be immediately reported to the Engineer.

(d) TIP Testing Results

Results of the TIP testing shall be presented in a written report within five (5) working days of completion of testing, i.e. when the data has been downloaded. The report shall include:

1. Graphical displays of all temperature measurements versus depth.
2. Indication of unusual temperatures, particularly significantly cooler local deviations from the overall average temperature, over the entire depth.
3. The overall average temperature. This temperature is proportional to the average radius computed from the actual total concrete volume installed (assuming a consistent concrete mix was used throughout). The radius at any point can then be evaluated from the temperature at that point by comparing it to the overall average temperature. The estimated caisson radius over the entire depth will be provided.

-3-

**REVISION OF SECTION 503
THERMAL INTEGRITY PROFILER**

4. Variations in temperature between sensors which could correspond to variations in cage alignment. When concrete volume is known, the estimated cage alignment or offset from center should be noted.

The effective radius is defined as the amount (i.e. radius) of intact competent concrete that would theoretically result in the measured temperature. The effective radius could be reduced due to the loss of concrete in a section or increased as a result of a poorly cemented mixture of concrete and/or debris. In either case, the absence of intact competent concrete can have a detrimental effect on strength and/or durability. The concrete condition rating criteria (CCRC) for evaluation of the concrete from the TIP tests shall be as shown on Table 503.12.02-1

**TABLE 503.12.02-1
CCRC BASED ON TIP RESULTS**

CCRC	Rating Symbol	TIP Test Results
Good	G	Effective Radius Reduction is Less Than 3%
Anomaly	Q	Effective Radius Reduction is Between 3% and 6%
Poor/Potential Defect	P/PD	Effective Radius Reduction is Greater Than 6%

(e) Correction of Unacceptable Caissons.

The Engineer will evaluate the integrity test results within 7 days of receipt from the Contractor and determine whether or not the caisson is acceptable. The acceptance of caissons will be based on the CSL and TIP results.

If CSL testing indicates that at least one profile (a profile is the result of the investigation from bottom to top between two inspection pipes) indicates a rating of P/PD that shall be considered a defect. The Engineer shall evaluate the zones that the CSL tomography results indicate a CCRC rating of Q and determine if the caisson indicates a defect.

If TIP testing indicates an area with a CCRC rating of P/PD that shall be considered a defect. The Engineer shall evaluate the zones that the TIP results indicate a CCRC rating of Q and determine if the caisson indicates a defect.

Caissons that indicate a defect shall be considered unacceptable unless:

1. The Structural Engineer and Geotechnical Engineer are both satisfied that the caisson with the defect present can support all structural loads with an acceptable factor of safety and that long term durability will be acceptable.
2. The Engineer determines that either the CSL or TIP tests are not indicative of conditions.

-4-

**REVISION OF SECTION 503
THERMAL INTEGRITY PROFILER**

Caissons that are unacceptable shall be cored or exposed to evaluate the quality of the concrete and caisson construction. One core sample shall be taken from each unacceptable caisson for the full depth of the potential defect and for 3 feet above and below the potential defect. Because it is desired to obtain a high percentage of core recovery for visual inspection and testing methods, the coring method and equipment shall provide for complete core recovery and shall minimize abrasion and erosion of the core. The Engineer shall approve of the coring procedure and methods before they are used.

An accurate log of cores shall be kept and the cores shall be placed in a suitable wooden crate and properly marked showing the caisson depth at each interval of core recovery. The cores along with 2 copies of the coring log shall be turned over to the Engineer for inspection and testing. If a defect is confirmed, the Contractor shall pay for all coring or excavation costs, including grouting of all core holes. If no defect is encountered, the Department shall pay for all coring or excavation costs, including grouting of all core holes.

When a caisson defect is confirmed, the Contractor shall submit a plan for remedial action to the Engineer. Materials and work necessary to complete corrections for defective caissons shall be furnished by the Contractor, at the Contractor's expense, and without an extension of the contract time.

Modifications to the caissons or load transfer mechanisms required by the remedial action shall be designed by a professional engineer registered in Colorado. The Contractor's remedial action plan shall include drawings stamped by the Contractor's engineer for all foundation elements affected. No remedial action work shall begin until the Contractor's remedial action plan has been approved by the Engineer.

Construction shall not proceed above the caisson until the quality of the concrete in the caisson, as represented by the core samples, is determined to be acceptable and notification to continue construction is given by the Engineer.

**REVISION OF SECTION 504
CONCRETE PANEL FACING MSE WALL**

Revision of Section 504 of the CDOT Standard Special Specifications is hereby revised for this project to include the following:

Replace 504.27 with the following:

504.27 Panel Facing Acceptance and Rejection. In this subsection, a “panel” refers to either a concrete panel or a hybrid unit. Each of the following shall be considered a defect:

- (1) Dislocated Panel. A dislocated panel is an individual panel or its corner located outward more than ¼ inch from the adjacent panels.
- (2) Cracked Panel. A cracked panel is an individual panel with any visible crack when viewed from a distance equal to the wall height in natural light.
- (3) Corner Knock Off. A corner knock-off is a panel with any missing facial corners or architectural edges.
- (4) Substandard panel. Substandard panels are concrete panels installed in any wall segments that do not meet the certified values for compressive strength. Each substandard panel counts as one defect.
- (5) Oversize Joints. Panels with oversize joints are two adjacent panels that do not meet the required values in subSection 504.07(f).
- (6) Panels Failing the 10 Foot Straightedge Test. Straightedge test failures are joints that that deviate from even by more than ¼ inch when measured by placing a 10 foot straightedge across the joint.

Defects shared by two adjacent panels such as oversized joint, dislocated panel and panels not passing 10 foot straight edge test will be count as one defect.

In the completed wall, or completed portion of the wall the number of defects, as described above, in each 40 foot Section (horizontal or arc length) will be counted. If there are defects, the number of defects in the 40 foot Section will be considered for acceptance or rejection according to the table below. For panels with less than or equal to 3 in acceptance category, if the defects are repairable or the overall quality of wall can be improved, with the consent from the Engineer, the Contractor is required to repair for panel acceptance without any additional cost. A walkthrough inspection shall be made as requested by the Contractor before final payment.

No. of Defects in 40 Foot Section	< or = 3	> or = 4
% Of Price Reduction for that section	Acceptance	Rejection

When the number of defects exceeds 4, the entire wall or portions thereof shall be replaced.

**REVISION OF SECTION 504
CONCRETE BLOCK FACING MSE WALL**

Revision of Section 504 of the CDOT Standard Special Specifications is hereby revised for this project to include the following:

Replace 504.27 with the following:

504.27 Block Facing Acceptance and Rejection. In this subsection, “block” refers to either a concrete block or a hybrid unit.

- (1) A dislocated block is where the edge of an individual block is offset outward more than ¼ inch or placed with a vertical joint more than ¼ inch from the edge of adjacent blocks.
- (2) A cracked block is an individual block with any visible crack visible in natural light from a distance equal to the wall height.
- (3) A corner knock-off is a block with any missing facial corners or any side longer than ½ inch at the corner.
- (4) Substandard blocks are concrete blocks installed in any wall segments that do not meet the certified values of compression strength, water absorption rate, or freeze/thaw cycles; substandard blocks include blocks actually in the wall for which the Contractor does not provide reports and certifications as required in subSection 504.12.

In the completed wall, or completed portion of the wall, if the number of defective blocks (cracked blocks, corner knock-off blocks, dislocated blocks, efflorescence or cement blemished blocks and substandard blocks) and blocks failing the straightedge test exceeds 6 percent of the total number of blocks in any wall segment of 40 foot horizontal or arc length. Rejection will be applied to that portion of the wall. For blocks subject to rejection, if the defects are repairable or the overall quality of wall can be improved, with the consent from the Engineer, the Contractor shall repair. A walkthrough inspection will be made as requested by the Contractor before final payment

% of Defective Blocks (x) in 40 foot section	$x \leq 6$	$6 < x$
Acceptance or rejection	Acceptance	Rejection

The acceptance or rejection shall be determined by dividing the sum of all defective blocks by the total number of blocks in that portion of the wall. When this percentage exceeds 6 percent, the entire wall or portions thereof are rejected and shall be replaced.

**REVISION OF SECTIONS 509 & 708
PAINTING OF ALUMINUM ACCESS DOORS FOR STEEL STRUCTURES**

Sections 509 & 708 of the CDOT Standard Specifications are hereby revised for this project as follows:
SubSection 509.24 shall include the following:

Aluminum access doors shall receive a solvent cleaning to remove grease, oil, etc.

(SSPC-SPI) followed by a brush blast to provide a profile similar to the structural steel. The access doors shall receive one coat of primer as described in the Revision of Section 708.03.

SubSection 708.03 shall include the following:

If Alternate 1, Alkyd System, is to be used on the structural steel, the aluminum access doors shall receive one coat of vinyl wash primer conforming to Mil-P-15328. Following the application of this primer, the doors will be painted the same as the structural steel (one field coat of primer followed by the top coat). Coating thicknesses shall be the same as specified for the structural steel.

If Alternate 2, Inorganic Zinc-Rich Polyurethane System, is used on the structural steel, the aluminum access doors shall receive one coat of vinyl wash primer conforming to Mil-P-15328. Following application of the vinyl wash primer, the same polyurethane top coat as used on the structural steel shall be applied to the access doors (minimum 3.0 mils dry film thickness).

The manufacturer of the primer shall certify in writing, that the primer used is compatible with the cleaned aluminum access doors and the polyurethane top coat to be used on the structural steel.

REVISION OF SECTION 509 LOCK-PIN AND COLLAR FASTENERS

Section 509 of the CDOT Standard Specifications is hereby revised for this project as follows:
SubSection 509.01 shall include the following:

High strength steel lock-pin and collar fasteners shall be used in unit #5N for all high strength bolts (those required to conform to the required to conform to the requirements of AASHTO M164 (ASTM A325)) specified.

SubSection 509.08 shall include the following:

The steel lock-pin and swaged collar fastener system shall conform to the materials, manufacturing, chemical composition and mechanical requirements (in full size tests) of AASHTO M164 (ASTM A325). The shank diameter and the bearing area under the head and swaged collar shall not be less than those provided by a bolt and nut of the same nominal dimensions prescribed in the requirements for "Heavy Hexagonal Structural Bolts" and for "Heavy Semi-Finished Hexagonal Nuts" given in ANSI Standard B 18.2.1 and B 18.22, respectively. Each fastener shall provide a shank body of sufficient diameter to provided tensile and shear strength equivalent to or greater than the bolt specified; shall have a cold forged head on one end of the type and dimensions specified, a shank length suitable for material thickness fastened, locking groves (all annular rings) on the opposite end. Each fastener shall provide a steel locking collar of proper size for shank diameter used, which by means of suitable installation tools, is cold swaged into the locking grooves forming a head for the grooved end of the fastener after the pull groove Section has been removed. The steel locking collar (the collar shall be of the flanged type) shall be a standard product of an established manufacturer of lock-pin and collar fasteners. The pin shall be specifically marked to identify the manufacturer.

The fasteners after installation shall conform to the following hardness requirements:

Hardness Number		
<u>Brinell</u>		<u>Rockwell C</u>
Min.	Max.	Max.
248	311	33

All washers shall be hardened steel washers conforming to the requirements of AASHTO M293 (ASTM F436). The washers shall be specifically marked to identify the manufacturer.

Pin proof load tests (ASTM F606 Method 1) are required. Minimum frequency of tests shall be as specified in AASHTO M164 (ASTM A325) paragraph 9.2.4.

Wedge tests on full size pins (ASTM F606 paragraph 3.5) are required. If pins are to be galvanized, tests shall be performed after galvanizing. Minimum frequency of tests shall be as specified in AASHTO M164 (ASTM A325) paragraph 9.2.4.

SubSection 509.13 shall include the following:

The Contractor shall provide:

1. Mill Test Reports for all mill steel used in the manufacture of the lock-pin, flanged collars and hardened washers. The Mill Test Reports shall indicate where (city and state) the steel

**REVISION OF SECTION 509
LOCK-PIN AND COLLAR FASTENERS**

- was melted and manufactured. (All materials shall be of domestic origin as well as all subsequent processing.)
2. Mill Test Reports for all mill steel used in the manufacture of the lock-pin, flanged collars and hardened washers. The Mill Test Reports shall indicate where (city and state) the steel was melted and manufactured. (All materials shall be of domestic origin as well as all subsequent processing.)
 3. The lock-pin and collar Manufacturer's Certified Test Report with the following:

The location where all of the lock-pin, collars and hardened washers were manufactured.

A statement that all the fasteners provided meet the requirements of this specification and the applicable requirements of AASHTO M164.

Results of the tests required in SubSection 509.08.

Delete subSection 509.28(d) and replace with the following:

All field connections shall be made with high-strength bolts which include direct tension indicators. Direct tension indicators shall be either washer type direct tension indicators, tension control bolts or high strength steel lock-pin and collar fasteners.

SubSection 509.28(f) shall include the following:

The Contractor shall require a representative of the lock-pin and collar manufacturer to be on the project to train the steel erector's personnel in the proper installation of the fastener system. This representative shall be thoroughly familiar with the lock-pin and collar system and the required installation procedures and equipment.

Installation and tightening of each connection shall be done in the following manner:

Splice connections shall not be tightened until the entire continuous length of girder is in place on the substructure. One half the holes shall be filled with lock- pins and collars. Field splice elevations shall be verified prior to tightening. A hardened washer per ASTM F436 may be used under the pin head for joint thickness adjustment so that the installed fastener conforms to the Dimension "B", (See attached table).

Fasteners in all holes of the connection shall be initially brought to a snug tight condition (as defined in the attached table) progressing systematically from the most rigid part of the connection to the free edges in a manner that will minimize realization of previously tightened fasteners. The snug tight condition shall be verified on the calibration device prior to achieving the required final clamping force when testing for acceptance.

After all fasteners in the connection are snug tight, they shall be fully tightened, progressing systematically from the center most rigid part of the connection to its free edge.

**REVISION OF SECTION 509
LOCK-PIN AND COLLAR FASTENERS**

After installation and tightening is completed each installed fastener shall be pinged with a hammer for soundness. Loose or rejected fasteners shall be removed and replaced with a new fastener. Each fastener shall be visually inspected in accordance with the attached table.

SubSection 509.28(h) shall include the following:

The Contractor shall provide a direct tension measurement device (Skidmore- Wilhelm Calibrator or an acceptable equivalent) for acceptance testing of the fasteners on the project and it shall have been certified by a testing laboratory within the last 6 months.

A representative sample (randomly selected) of three fasteners of each diameter, length and lot shall be tested by the Contractor in the tension measuring device.

The assemblies shall be snug clamped to approximately the value indicated in the following table prior to final clamping. If any fastener fails to meet the required minimum tension (a pin tail brakes off before achieving the final clamping force) listed in the following table, the lot shall be rejected.

<u>PIN DIAMETER</u> <u>(Inches)</u>	<u>SNUG CLAMPING(1)</u> <u>(Kips)</u>	<u>FINAL CLAMPING(2)</u> <u>(Kips)</u>
3/4	5	29
7/8	7	41
1	9	54
1 1/2	14	108

1. Partially swaged collar, pintail still attached to pin.
2. Fully swaged collar, pintail pulled off.

**REVISION OF SECTION 509
 STEEL STRUCTURES**

Section 509 of the CDOT Standard Specifications is hereby revised for this project as follows: Replace subSection 509.08 with the following:

High Strength Bolts. All bolts used in fastening structural steel connections shall conform to the requirements of AASHTO M 164 (ASTM A 325), commonly known as High Strength Structural Bolts (HS). Heavy Hex Structural or Tension Control Bolts with suitable Heavy Hex Nuts and Plain Hardened Washers shall be provided. Type 1 bolts shall be provided for painted and Type 3 bolts for weathering (AASHTO M 222) structural steel. The length of bolts shall be such that the end of bolt will be flush with or outside the face of the nut when properly installed. Sufficient thread shall be provided to prevent the nut from encountering thread runout.

When the plans require bolts for structural steel connections to conform to the requirements of AASHTO M 164M (ASTM A 325M), bolts shall be substituted as outlined in the following table:

AASHTO M 164M	AASHTO M 164
Bolt Diameter	Bolt Diameter, Inch
M16	5/8
M20	7/8
M22	7/8
M24	1

The hardness for bolt diameters of 1/2 inch to 1 inch inclusive shall conform to the following:

BRINELL		ROCKWELL C	
Minimum	Maximum	Minimum	Maximum
248	311	24	33

Bolt proof load tests (ASTM F 606, Method 1) and wedge tests (ASTM F 606) on full size bolts are required. Minimum frequency of testing shall be as specified in AASHTO M 164.

All nuts shall be Heavy Hex and conform to the requirements of AASHTO M 292 (ASTM A 194), heat treated grade 2H, or AASHTO M 291 (ASTM A 563), heat treated grade DH. Proof load tests of all nuts in accordance with the requirements of ASTM F 606 are required. Minimum frequency of testing shall be as specified in AASHTO M 291 or AASHTO M 292.

All washers shall conform to the requirements of AASHTO M 293 (ASTM F 436). Compressible-Washer-Type Direct Tension Indicators, if used, shall conform to the requirements of ASTM F 959.

Rotational capacity (Lubrication) tests are required and shall be performed on all bolt, nut, and washer assemblies by the manufacturer or distributor prior to shipment to the project. Washers are required as part of the test. The rotational capacity tests shall be performed in accordance with the procedure defined in AASHTO M 164 and the following:

- (a) Each combination of bolt production lot, nut lot, and washer lot shall be tested as an assembly.

**REVISION OF SECTION 509
STEEL STRUCTURES**

- (b) A rotational capacity lot number shall be assigned to each combination of lots tested.
- (c) The minimum frequency of testing shall be two assemblies per rotational capacity lot.
- (d) The bolt, nut, and washer assembly shall be tested in a Skidmore- Wilhelm Calibrator or an acceptable equivalent device.
- (e) The minimum rotation, from a snug tight condition (10% of the specified proof load), shall be:
 - 1. 240 degrees (2/3 of a turn) for bolt lengths less than 4 diameters.
 - 2. 360 degrees (1 turn) for bolt lengths greater than 4 diameters and less than 8 diameters.
 - 3. 480 degrees (1 1/3 turns) for bolt lengths greater than 8 diameters.
- (f) The tension reached at the above rotation shall be equal to or greater than 1.15 times the required installation tension. The installation tension and the tension for the turn test are shown below:

Diameter	Inch	Installation Tension	Kips	Turn Test Tension	Kips
1/2		12		14	
5/8		19		22	
3/4		28		32	
7/8		39		45	
1		51		59	

- (g) After the required installation tension listed above has been exceeded, one reading of tension and torque shall be taken and recorded. The torque value shall conform to the following:

Torque = 0.25 PD Where:
Torque = Measured Torque (foot-pounds) P = Measured Bolt Tension (pounds)
D = Bolt Diameter (feet)

Bolts which are too short to be tested in the Skidmore-Wilhelm Calibrator may be tested in a steel joint. The Installation Tension requirements need not apply. The maximum torque shall be computed using a value of P equal to the Turn Test Tension.

Bolts, nuts, and washers (where required) from each rotational capacity lot shall be shipped in the same container. Each container shall be permanently marked with the rotational capacity lot number such that identification is possible at any stage prior to installation.

The Division's QA Inspector shall be provided with the following documents prior to shipment of structural steel to the project:

- (h) Certified Mill Test Reports for all mill steel used in the manufacture of the bolts, nuts, and washers. The mill test report shall indicate where the material was melted and manufactured.

**REVISION OF SECTION 509
STEEL STRUCTURES**

- (i) Certified Laboratory Test Reports for the following:
1. Bolt Hardness tests.
 2. Bolt proof load tests.
 3. Bolt wedge tests.
 4. Nut proof load tests.
 5. Rotational capacity tests.

SubSection 509.10 shall be replaced with the following:

Anchor Bolts. All anchor bolts with suitable hex nuts and plain hardened washers shall conform to the requirements of ASTM A 449 and shall be galvanized in accordance with the requirements of AASHTO M 232 (Class C) or zinc coated in accordance with ASTM B 695, Class 50.

SubSection 509.19(c) shall include the following:

Stiffeners shall not be mechanically forced into position.

SubSection 509.20(a) shall include the following:

Trapezoidal steel box girder fabrication:

1. The exterior web to flange welds on trapezoidal box members, in which the included angle is less than 90 degrees, shall be welded using the flux cored arc welding process (FCAW).
2. The interior web to flange welds, which have included angles greater than 90 degrees, may be welded by either the submerged arc welding process (SAW) or the flux cored arc welding process.

SubSection 509.21 shall include the following:

The field connections of all members (girders and diaphragms) of plate girder systems with a radius of less than 800 feet and steel box girder systems shall be assembled in the shop and the holes match drilled while the connections are assembled.

Shop assembly may be complete structure assembly or progressive structure assembly at the fabricator's option:

- (a) Complete structure assembly shall consist of assembling all of the structural steel for the superstructure of the bridge.
- (b) Progressive structure assembly shall consist of initially assembling part of two adjacent girder lines simultaneously. Each girder line shall consist of at least three girders. While blocked in position,

REVISION OF SECTION 509 STEEL STRUCTURES

the diaphragm and girder field splices shall be fitted and match drilled. At least one shop Section shall be added at the advancing end of a girder line and the next girder line started before any Section is removed from the rearward end.

All girders shall be oriented upright and blocked simultaneously in the position they will occupy on the bridge's substructure. All holes shall be drilled while the girders are blocked in this position. Marking holes to be drilled after the girders are moved is not allowed.

After the holes are drilled, all splice plates shall be positioned in their respective locations and pinned/bolted to demonstrate that the hole alignment through the multiple plate thicknesses is in accordance with the specifications. The Division's QA inspector shall be notified prior to disassembly to verify splice hole alignment. Verification of splice hole alignment shall not relieve the Contractor of the responsibility for proper fit up of the structural steel.

Quality Control shall measure flatness of the bottom flange at the bearing area. The bottom flange shall conform to the requirements of the SubSection 509.19(j). The Contractor's Quality Control Report shall list each bearing measurement.

Connecting parts assembled in the shop for field connections shall be match-marked, and two copies of a diagram showing each match-marked piece and defining how to use the marking system shall be provided to the Engineer 10 days prior to beginning structural steel erection.

The gap of abutting joints between members in a connection shall not exceed 3/8 of an inch.

SubSection 509.22 shall include the following:

The QA Inspector will perform Rotational Capacity and Verification Tests in accordance with the procedures outlined in the Report " High-Strength Bolts for Bridges" (Report No. FHWA-SA-91-031 May 1991, revised April 1992) on all lots used for shop connections.

Any rotational capacity lot that fails to conform to the requirements shall be rejected. Rotational capacity lots that fail may, at the Contractor's option, be reprocessed and submitted for retest.

Bolt assemblies shall be installed in accordance with the procedures defined in Report No. FHWA-SA-91-031 May 1991, as revised April 1992.

Delete subSection 509.24 (c) and replace with the following:

- (c) *Paint System.* All structural steel, with the exception of weathering (AASHTO M 222), shall be painted with the two coat system defined in SubSection 708.03. Painting shall include a coat of primer on splice plates, faying surfaces of girders and diaphragms, and the interior surfaces of steel box girders. The primer and top coat shall be applied in the structural steel fabrication shop prior to shipment of the steel to the project site. The primer and top coat, color as defined in the plans, shall have a dry film thickness of 3.0 mils each. The Volatile Organic Content (VOC) of the paint shall not exceed 2.8 pounds per gallon (340 gm per liter). The QA Inspector shall be provided with a materials data sheet for all paint used on the project.

REVISION OF SECTION 509 STEEL STRUCTURES

Paint shall be stored, mixed, strained, and applied in accordance with the manufacturers application instructions. Quality Control inspections and tests shall be performed in accordance with the listed test. The Quality Control Inspector shall maintain a checklist of the pieces tested. Only deficiencies require measurement records. These records shall be forwarded to the QA Inspector.

The Contractor shall perform the test procedure ASTM D 4285 once every four operating hours to assure the absence of oil and moisture in the compressed air lines used to blast and paint.

The profile of surfaces to be painted shall be tested once every 2000 square feet (185 square meters). The procedure shall conform to ASTM D 4417.

The thinner used shall be that indicated in the Manufacturer's Technical Data Sheet. No material shall be substituted without approval. The maximum volume used in dilution shall not exceed the amount specified in the Technical Data Sheet.

The dry film thickness shall be measured to the frequency and using the procedure listed in The Structural Steel Paint Council Specification SSPC PA-2, with exception of diaphragms, bearings, and ancillary items. Ten percent of internal diaphragms in box girders, external diaphragms on all bridge girders, and ancillary items shall be spot measured (average to three readings). The Quality Control Inspector shall maintain a checklist of the members tested.

Replace subSection 509.28 with the following:

509.28 Connections Using High Strength Bolts.

- (a) *Field Connections.* Only Heavy Hex Structural Bolts with Compressible-Washer- Type Direct Tension Indicators or Tension Control Bolts conforming to the requirements of SubSection 509.08 shall be used in structural steel connections.
- (b) *Bolted Parts.* Bolted parts shall fit solidly together when assembled and shall not be separated by gaskets or any other interposed compressible material. All joint faying surfaces, when assembled, shall be free of scale; dirt; burrs; drilling/cutting lubricants; other foreign material; and other defects that may prevent solid seating of the parts. Contact surfaces within joints shall be free of oil, paint (except primer coat), lacquer, or rust inhibitor.
- (c) *Rotational Capacity and Verification Tests.* The Division will perform Rotational Capacity and Verification Tests in accordance with the procedures outlined in the Report " High-Strength Bolts for Bridges" (Report No. FHWA-SA-91-031 May 1991, revised April 1992) on all lots used for field connections. Any rotational capacity lot that fails to conform to the requirements shall be rejected. Rotational capacity lots that fail may, at the Contractors option, be reprocessed and submitted for retest.
- (d) *Installation.* Bolt assemblies of appropriately assigned lot numbers shall be assembled together when installed in a joint. Fasteners and contact surfaces of splices shall be protected from dirt, moisture, and oil at the project site. Only as many fasteners as are anticipated to be installed and tightened during a work shift shall be taken from protected storage. Fasteners not used shall be returned to protected storage at the end of the shift. Fasteners shall not be cleaned of lubricant that

**REVISION OF SECTION 509
STEEL STRUCTURES**

is required to be present in as-delivered condition. Bolt assembly lots which are improperly stored, lack lubrication, or accumulate rust, dirt, or other contaminants shall be cleaned, relubricated, and submitted for retest as defined in SubSection 509.28(c).

Bolt assemblies shall be installed in and tensioned to the minimum tension specified in the following table:

Bolt Diameter Inch	Required Minimum Bolt Tension Kips
1/2	13
5/8	20
3/4	29
7/8	41
1	54

Bolt assemblies shall be installed in accordance with the procedures defined in the Report "High-Strength Bolts for Bridges" (Report No. FHWA-SA-91-031 May 1991, as revised April 1992).

- (e) *Inspection.* The Contractor shall provide an acceptable platform from which the inspection of the bolt tension can be performed to determine whether the work meets the specification requirements. The Contractor shall inspect all fasteners to assure that the minimum bolt tension has been attained. All undertensioned bolt assemblies shall be brought into compliance.
- (f) *Painting of Connections.* Structural steel connections in which all bolt assemblies have been satisfactorily tensioned shall be cleaned to remove the lubricant from the exposed portions of the fasteners and any other contaminants. The bolts and splice plates shall then be painted as defined in SubSection 509.24.
- (g) *Repair of Painted Surfaces.* The Contractor shall repaint "touch up", all areas in which the paint has been damaged. Tie downs and dunnage shall be cushioned to protect painted surfaces during transit. Repainting shall include all damage incurred during transit, handling, erection of structural steel, and forming and casting the deck. Paint shall conform to SubSection 708.03. Repainting will not be measured and paid for separately, but shall be included in the work.

**REVISION OF SECTION 509
WELDING**

Section 509 of the CDOT Standard Specification is hereby revised for this project as follows:
SubSection 509.20 shall include the following:

For field welding A7 steel, electrodes used shall be E7015, 16, 18, or 28.

For welding A7 steel with low-hydrogen electrodes by any process, the minimum preheat and interpass temperature shall be 150⁰F for thicknesses of metal up to 1-1/2 inches.

SubSection 509.26 shall include the following:

The Contractor shall not commence any field welding on the girders until the Division's Materials Branch has been notified and their inspector is on the site. The preheating process shall be approved by the Division's inspector.

SubSection 509.20(h) shall include the following:

Base metal shall be preheated to 150⁰F on the surface prior to welding studs.

**REVISION OF SECTION 513
BRIDGE DRAIN**

Section 513 is hereby added to the CDOT Standard Specifications for this project as follows:

DESCRIPTION

This work shall consist of furnishing and placing bridge drains in accordance with the details shown on the plans and the specifications.

MATERIALS

Pipe for bridge drains shall meet the requirements of ASTM A53 and shall be standard weight.

Down spout pipe shall be hot dipped galvanized after fabrication. Galvanizing shall meet the requirements of AASHTO M111.

Metal used in the manufacture of castings shall meet the requirements of ASTM A48 Class 35B.

CONSTRUCTION REQUIREMENTS

Bridge drains shall be placed and secured at the locations shown on the plans prior to placement of concrete.

Prior to fabrication of this item, two sets of working drawings which comply with the requirements of Section 105 shall be submitted to the Engineer for Information. The working drawings will not be approved or returned.

**REVISION OF SECTION 515
CONCRETE SEALER (CALCIUM NITRITE)**

Section 515 of the CDOT Standard Specifications is hereby revised for this project as follows:
SubSection 515.01 shall include the following:

This work consists of applying a penetrating corrosion inhibitor to finished surfaces of existing concrete or to cut surfaces of existing concrete prior to placement of new concrete. The corrosion inhibitor shall be placed under the direction of a manufacturer's representative in accordance with the manufacturer's instructions and as described herein.

SubSection 515.02 shall include the following:

The corrosion inhibitor shall consist of calcium nitrite and liquid carriers or penetrating vehicles, or organic inhibitors such as amino alcohols. The corrosion inhibitor shall conform to AASHTO M194, except for the requirements in tables 1, and 2, and sections 11 through 17. The corrosion inhibitor shall be one on the approved products list of the Division. If there are no approved products on the list the corrosion inhibitor shall be a product approved by the Engineer. If the plans specify the use of a calcium nitrite inhibitor, the inhibitor shall be calcium nitrite, if the plans specify the use of an organic inhibitor, an organic inhibitor shall be used. If the plans do not specify the type of inhibitor, either or both types of inhibitor may be used either individually or in combination, provided that the combination use is in accordance with the manufacturers recommendations.

SubSection 515.05 (a) shall include the following:

Prior to the application of the corrosion inhibitor, surfaces to be treated shall be cleaned by air, sand, or water blasting and flushed with water until all material and contaminants which may interfere with the inhibitor's penetration have been removed.

SubSection 515.05 (b) shall include the following:

The corrosion inhibitor shall be applied when the surface to be treated has been dry for at least 24 hours and above a temperature of 40F, or within a more restrictive temperature range if recommended by the manufacturer.

SubSection 515.05 (c) shall include the following:

After the exposed surfaces have been prepared and allowed to dry, coats of corrosion inhibitor shall be applied in accordance with the manufacturer's recommendations. Each coat shall be evenly applied. Each application shall be allowed to dry prior to making the next application. Exposed surfaces shall be protected from precipitation and heavy dew during and after the application of the penetrating inhibitor. Traffic shall not be allowed on the treated surface until the corrosion inhibitor has penetrated the concrete and the liquid corrosion inhibitor is no longer visible on the surface. The Contractor shall follow all manufacturer's recommendations, including penetration time, prior to opening treated surfaces to traffic or completing the work.

Enough coats shall be applied so that each square yard of treated surface shall have absorbed 0.12 lb. of calcium nitrite or organic inhibiting agent. When treating areas from which deteriorated concrete has been removed, lap the treated area onto the adjacent surface at least 2' beyond the removal

**REVISION OF SECTION 601
PAINTING OF ALUMINUM ACCESS DOORS FOR CONCRETE STRUCTURES**

Section 601 of the CDOT Standard Specifications is hereby revised for this project as follows:

SubSection 601.14(b)4 shall include the following:

Aluminum access doors shall receive a solvent cleaning to remove grease and oil (SSPC-SPI) followed by a brush blast.

The aluminum access doors shall receive one coat of vinyl wash primer conforming to Mil-P-15328. Following the application of this primer, the doors will be coated with Structural Concrete Coating conforming to Revision of Section 601 Structural Concrete Coating.

The manufacturer of the primer shall certify in writing, that the primer used is compatible with the cleaned aluminum access doors and the Structural Concrete Coating to be used on the Structural Concrete.

**REVISION OF SECTION 601
STRUCTURAL CONCRETE (GROOVED PATTERN FINISH)**

Section 601 of the CDOT Standard Specifications is hereby revised for this project as follows:

SubSection 601.09 shall include the following:

An approved elastomeric form liner that will produce a grooved pattern finish shall be used in the designated portions of retaining walls. The form liner shall be furnished with a coating of an approved, non-petroleum base, factory-applied form release agent. After fastening the form liner to the form, an additional coat of manufacturer's recommended (only approved non-petroleum base may be used) form release agent shall be applied to the liner prior to and for each pour of concrete. Adjacent sections of the form liner shall be butted together to produce a good mortar tight joint. All grooves shall line up in the vertical direction. The form liner shall be securely fastened to the forms with staples or nails, or other approved methods.

Form ties shall be inserted through the form liner by cutting a cross-shaped slit in the liner. Prior to reuse of the form liner on adjacent wall sections, slits in the form liner that do not coincide with new tie spacing shall be sealed with a plastic tape which will adhere securely to the surface of the form liner.

The Contractor will be responsible to assure that whenever any discontinuances of the grooved pattern, or whenever any lines interrupting or intersecting the grooved pattern, are called for on the plans, that the resulting lines, horizontal, diagonal, vertical or otherwise, are neat and true, and that the form liner is not unduly deflected in any direction, including the form liner at the interface between the form liner and any other interrupting or intersecting line.

SubSection 601.09(f) shall include the following:

Forms to which a form liner is to be attached shall not be treated with oil. Section 601.14(a) shall include the following:

A grooved pattern surface finish as designated on the plans shall be used on the designated portions of concrete walls.

The Contractor shall furnish samples at the job site measuring 4 feet by 10 feet for approval, at least two weeks prior to use. The final samples must receive the Engineer's written approval before the finish can be incorporated into the work. These samples are to remain undisturbed on the project until project acceptance.

For all walls or panels requiring a grooved pattern on the exposed surface which are less than 10 feet in height, the form liner producing the pattern shall be one continuous piece extending the full height of the wall or panel. For all other walls, no Section of the form liner may be less than 10 feet in height except for one Section which may be required to extend the form liner to full height.

Horizontal joints in adjacent form liner sections shall be offset by no less than one foot vertically. The form liners shall be properly aligned to limit visible horizontal and vertical joints in the concrete.

**REVISION OF SECTION 601
STRUCTURAL CONCRETE (GROOVED PATTERN FINISH)**

The required groove pattern finish shall extend from the bottom of wall or top of wall footing to the top of wall or bottom of wall coping or cap, or as otherwise shown on the plans. Grooves shall be continuous with no apparent curves or discontinuances. Variation of the groove from true vertical shall not exceed 1/4 inch for each 10 feet of wall height.

Concrete for such walls shall be poured monolithically vertically unless otherwise provided in the plans or permitted in writing by the Engineer. Concrete finish shall be in accordance with Revision of Section 601 - Structural Concrete Coating and shall be required for the full height of the grooved pattern finish to one foot below ground line.

SubSection 601.18 shall include the following:

Construction of grooved pattern surface finish on concrete walls will not be paid for separately but shall be included in the work.

**REVISION OF SECTION 601
CONCRETE CLASS DT (DECK TOPPING)**

Section 601 of the CDOT Standard Specification is hereby revised for this project as follows:

SubSection 601.16 shall include the following:

Concrete bridge deck overlays shall be cured according to the Revision of Section 601, Bridge Deck Concrete.

SubSection 601.17 shall include the following:

In the event that plastic shrinkage cracking has occurred, any cracks greater than 0.010 inch in width that develop within the first 5 days of overlay placement shall be assumed plastic shrinkage cracks. The cracks will be measured by the insertion of a wire gage at any time or temperature at 5 days. The Contractor shall make repairs by filling the cracks, concrete removal and replacement, or other methods.

A low viscosity two-part methacrylate or approved equal shall be used to fill cracks in accordance with the recommendations of the manufacturer of the crack filling material.

Those portions of the structure that have been overlaid with the Concrete Class DT shall not be opened to traffic, including construction traffic, for at least 5 days after overlay placement and until the concrete has reached compressive strength $f'c$.

SubSection 601.19 shall include the following:

Saw-cutting and sealing construction joints in bridge decks shall be included in the work.

**REVISION OF SECTION 601 AND 708
STRUCTURAL CONCRETE STAIN**

Section 601 and 708 of the Standard Specifications are hereby revised for this project as follows:

Subsection 601.01 shall include the following:

This work consists of: (1) Class 2 surface finish of concrete elements constructed under this Contract and designated to receive Structural Concrete Stain; (2) providing and applying an opaque Structural Concrete Stain to all concrete surfaces designated in the Aesthetic Standards to receive a Structure Concrete Stain and (3) provide 5 gallons of pre-mixed touch-up stain in aerosol spray cans.

The color of the Structural Concrete Stain shall be as noted in the Aesthetic Standards and shall be approved by the Engineer from test panels provided by the Contractor.

Subsection 601.03 shall include the following:

Structural Concrete Stain 708.08

Subsection 601.09(f) shall include the following:

All concrete forms shall be treated with a water based concrete form release agent prior to placing reinforcement for surfaces to which Structural Concrete Stain is to be applied.

In Subsection 601.14(a), delete the third paragraph and replace with the following:

Structural Concrete Stain shall be the final finish for all concrete surfaces designated on the plans and in these specifications prior to application of the Structural Concrete Coating (Anti-Graffiti).

Delete Subsection 601.14(b)4 and replace with the following:

The Structural Concrete Stain shall be applied to all exposed concrete elements of the structure above the ground line, and shall extend 1 foot below the finished ground line. Bridge bearing devices, curb and barrier cover plates, fence, and steel bridge rail shall be masked or otherwise protected to prevent structural concrete coating from coming into contact with them.

The color of the Structural Concrete Stain shall have the written approval of the Engineer prior to final batching and application on the project. The final color of the approved Structural Concrete Stain shall be determined as follows:

- (1) Two (2) foot by two (2) foot samples of the colors required by the contract shall be submitted to the Engineer for approval. The Stain samples shall be applied to a surface similar in texture to the concrete surface on which the Stain will be applied on the project. The Stain samples shall be applied by the same methods to be used in field application.
- (2) At least three weeks prior to beginning of the application of the Structural Concrete Stain, one hundred (100) square foot test panels shall be prepared for the final color approval by the Engineer. The test panels shall be produced on the actual concrete surface on which the final product will be placed, at a location designated by the Engineer. The Stain shall be applied to the test panels by the same methods to be used in the final field application. The Engineer shall be allowed one week after application to the test panels for final review and approval.

-2-

**REVISION OF SECTION 601 AND 708
STRUCTURAL CONCRETE STAIN**

Existing concrete designated to receive Structural Concrete Stain shall be cleaned by water blasting at a minimum pressure of 3,000 psi and at a rate of 4 to 14 gallons per minutes to remove dust, dirt, and other materials that would inhibit bonding of the coating. If the surface is contaminated before application of the coating, it shall be recleaned as required prior to application of the coating.

For concrete construction in this Contract, finishing and curing shall be completed in accordance with the specification prior to the application of the Stain. The concrete finish to which the Structural Concrete Stain is to be applied shall be a Class 2 Finish, except as modified below:

- (1) Following curing of the concrete in accordance with Subsection 601.13, all projections and bulges shall be removed and the surface sandblasted. Sandblasting shall profile the concrete surface and remove all form release agents and all other deleterious materials that would inhibit the bond of the Structural Concrete Stain. The profile of the sandblasted concrete surface shall be equivalent to Concrete Surface Profile Three (CSP 3) as defined in Technical Guideline No. 03732, "Selecting and Specifying Concrete Surface Preparation for Sealers, coatings, and Polymer Overlays" by the International Concrete Repair Institute. The Contractor shall provide a CSP 3 chip for use on the project.
- (2) A mortar mix, proportioned by volume, consisting of one part Portland cement, two to three parts sand (conforming to the requirements of ASTM C 144), and an approved bonding agent shall be used to patch all holes produced by form ties, honeycombing, voids 1/2 inch or larger in any dimension, broken corners and edges, and other defects. The mortar mix shall include an approved bonding agent. The quantity and application procedure of the bonding agent shall be in accordance with the recommendations of the manufacturer of the bonding agent. Areas to be patched shall be moistened with water before the mortar is applied and the patched area shall be float finished and left flush with the concrete surface without checking or cracking of patches. Patching shall be done when the ambient temperature is at least 40°F. Holes deeper than 3/4 inch shall be filled in layers that do not exceed 1/2 inch in thickness.
- (3) Within 24 hours prior to applying Structural Concrete Stain, the concrete surface to be coated shall be cleaned by water blasting at a minimum pressure of 3,000 psi and at a rate of 4 to 14 gallons per minute to remove dust, dirt, and other materials that would inhibit bonding of the coating. If the surface is contaminated before application of the coating, it shall be recleaned as required prior to application of the coating.

New concrete shall be at least 28 days old or as approved in writing by the coating manufacturer before the Stain is applied.

Two coats of Stain shall be applied. Each coat shall be applied at a rate of 200 to 250 square feet per gallon (approximately 3 mils dry film thickness). The second coat shall not be applied until at least 12 hours after the application of the first coat.

If the surface is contaminated between coats, it shall be recleaned as stated above prior to application of the next coat.

The Stain shall be mixed mechanically and applied by spraying. Workmanship shall be such that the final stained surface is colored uniformly and presents a pleasing appearance. Any areas determined by the Engineer to be insufficiently stained shall be restained.

-3-

**REVISION OF SECTION 601 AND 708
STRUCTURAL CONCRETE STAIN**

The Stain shall be applied only when the ambient temperature is between 50°F and 90°F and is anticipated to remain above 40°F for a minimum of 24 hours. Stain shall not be applied in windy or wet conditions or when rain or snow is expected within 24 hours. The surface to be stained shall be dry and free of frost.

Subsection 708.08 shall include the following:

708.08 Structural Concrete Stain. The stain shall be water-based acrylic microemulsionsiloxane solution containing not less than 15 percent solids by volume and not more than 210g/L VOC, or equal with Engineer's written approval.

All stain must be delivered to the project site in sealed containers bearing the manufacturer's original labels.

A material safety data sheet (MSDS) prepared in accordance with Federal Standard 313 and a complete set of manufacturer's mixing and application instructions shall be submitted to the Engineer before the Contractor begins applying the Stain.

REVISION OF SECTION 601 ANTI-GRAFFITI COATING

Section 601 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

Subsection 601.01 shall include the following:

This work consists of the application of a clear anti-graffiti coating to all exposed concrete surfaces including, but not limited to, retaining walls, wall caps, bridge girders, bridge rail, bridge abutments, and piers.

MATERIALS

Subsection 601.03 shall include the following:

The coating shall be “Acryli-Master” Anti-Graffiti Coating produced by TSW, Inc. or approved equal. The Contractor shall verify the compatibility of all concrete finishing products.

Approved equals shall be clear, water based, two component, cross-linked acrylic copolymer anti-graffiti coating. The anti-graffiti system shall create a seamless, breathable, crack-free, monolithic appearing surface and shall resist adverse effects from ultraviolet exposure, smog, sulfur dioxide, smoke, ozone, dirt, and other common urban pollutants.

As an alternative, and as approved by the Engineer, the Contractor may use a silicone based marine coating in lieu of the anti-graffiti coating. The silicone based marine coating shall create a seamless, breathable, crack-free, monolithic appearing surface and shall resist adverse effects from ultraviolet exposure, smog, sulfur dioxide, smoke, ozone, dirt, and other common urban pollutants.

CONSTRUCTION REQUIREMENTS

Subsection 601.14 shall include the following:

Application of anti-graffiti coating shall follow the completed application of stain, in accordance with Revision of Section 601 and 708, Structural Concrete Stain. All staining shall be accepted prior to the anti-graffiti coating application.

The coating shall be applied in accordance with the manufacturer’s recommended procedures.

The coating shall be applied at the rate of approximately 600 square feet per gallon, per coat. A total of four coats is anticipated (or as recommended by the manufacturer).

Prior to application of anti-graffiti coating to the wall and bridge surfaces, the Contractor shall apply a complete coating system to two stained concrete samples, minimum 12 inches square. The samples shall be submitted to the Engineer a minimum of three weeks prior to the application of the coating.

Upon approval of the samples, and prior to the application of the anti-graffiti coating to the wall and bridge surface, the Contractor shall prepare a stained minimum 8-foot x 8-foot square mock-up panel and demonstrate anti-graffiti coating application. The Contractor shall then apply spray paint and permanent marker graffiti to the mock-up panel and demonstrate the actual graffiti removal process. The samples shall be approved by the Engineer a minimum of two weeks prior to applying the coating to the project.

**REVISION OF SECTION 607
CONCRETE MASONRY SOUND BARRIER**

Section 607 of the CDOT Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

This work consists of constructing a Concrete Masonry Sound Barrier in accordance with the plans and specifications.

MATERIALS

- (a) General. References to the International Building Code (IBC) shall refer to the latest Edition. Laboratory technicians involved in masonry testing shall be certified by the National Concrete Masonry Association as a "Certified Laboratory Technician for Concrete Masonry". Technicians shall possess records of certification at all times when on site, during sampling of materials, preparation of test specimens, and while conducting tests.
- (b) Concrete Masonry Units. Concrete masonry units (CMU) shall conform to the requirements of ASTM C 90 and the following:
 - 1. Provide units that are Type II (non-moisture controlled), hollow, and normal weight.
 - 2. The compressive strength of CMU'S shall be as defined in ASTM C 90 or greater as required to attain f'm.
 - 3. Units shall be integrally and uniformly colored as defined in the plans.
 - 4. Units shall be the size and surface texture defined in the plans.
 - 5. Provide an approved water repellent additive in accordance with the manufacturers recommendations.
 - 6. The Contractor shall sample and test CMU's in accordance with ASTM C 140 and provide the Engineer with complete test reports as outlined in Section 10 of C 140.
- (c) Mortar. Mortar for concrete masonry construction shall conform to the requirements of the ASTM C 270 and the following:
 - 1. Provide Type S in accordance with the Proportion Specifications for Portland Cement, lime, and sand. Masonry cement will not be allowed.
 - 2. Quantities of sand, cement, and lime shall be accurately measured, shovel counts shall not be used.
 - 3. Mortar shall be integrally and uniformly colored to match the CMU's.
 - 4. Provide an approved water repellent additive in accordance with the manufacturers recommendations.
- (d) Grout. Grout shall conform to the requirements of UBC Standard 21-19 and the following:

**REVISION OF SECTION 607
CONCRETE MASONRY SOUND BARRIER**

1. A 28 day compressive strength of 2000 psi or greater as required to attain f'm. The Contractor shall sample and test the grout for every 5000 square feet of wall as construction progresses in accordance with the requirements of IBC Standard. Test reports shall be submitted to the Engineer as outlined in IBC.
 2. Air is not required.
 3. Up to 20% by weight of the cement may be an approved fly ash.
 4. Fine aggregate shall conform to the requirements of AASHTO M 6 as defined in Section 703.
 5. The coarse aggregate shall conform to the requirements of AASHTO M 43, Size 7 or 8, as defined in Section 703 and shall be a minimum of 50% of the total aggregate.
 6. Sufficient water (or a combination of water and water reducer) shall be added to the grout to attain a slump of 8 to 10 inches prior to placement.
 7. Provide an approved water repellent additive in accordance with the manufacturers recommendations.
- (e) Prism Testing. The Contractor is responsible for providing a concrete masonry assemblage (a composite of CMU's, mortar, and grout) with a strength, f'm, of at least 2000 psi. Prism tests shall be conducted by the Contractor prior to starting and during construction to verify design compressive strength. Compressive strength of prisms shall be based on tests at 28 days and each set of prisms shall equal or exceed f'm. Compressive strength at seven days or three days may be used provided a relationship between seven-day and three-day and 28-day strength has been established for the project prior to the start of construction. Verification by masonry prism testing shall be as follows:
1. A set of five masonry prisms (grouted solid) shall be built and tested in accordance with IBC prior to the start of construction. Materials used for the construction of the prisms shall be taken from those specified to be used for the project.
 2. A set of three prisms (grouted solid) shall be built and tested during construction in accordance with IBC Standard for each 5000 square feet of wall area, but not less than one set of three masonry prisms for the project. Prisms shall be constructed from materials randomly selected on the project site.
 3. Test reports shall be submitted to the Engineer as outlined in IBC Standard.
 4. Those portions of the wall represented by tested prisms that do not attain f'm shall be removed and replaced with a wall that meets the requirements of this specification at the Contractors expense.
- (f) Masonry Reinforcement. Reinforcing Steel (Deformed Bars) shall conform to the requirements of Section 602 and shall be Grade 60.

**REVISION OF SECTION 607
CONCRETE MASONRY SOUND BARRIER**

Joint reinforcement shall be provided every other course or as shown on the plans and shall be hot dipped galvanized in accordance with ASTM A 153-Class B-2, ladder type with 9 gage side and cross rods. Lap splices for joint reinforcement shall be a minimum of 6 inches.

1. Concrete Cap. Reinforcing Steel shall conform to the requirements of Section 602 and shall be Grade 60. Concrete shall conform to the requirements of Section 601 and the following:
 2. Concrete shall be Class DT with a minimum cement content of 565 pounds per cubic yard.
 3. Concrete shall be integrally and uniformly colored as defined in the plans.
 4. The concrete cap can be either precast or cast-in-place.
- (g) Water Repellent. An approved polymer water repellent shall be provided in all CMU's, mortar, and grout in accordance with the manufacturer's recommendations. The following polymer water repellent additives are approved:
- Dry-Block by W.R. Grace.
 - Addiment Block Plus.
- (h) Control Joints. Control joint material shall conform to the requirements of ASTM D 2000 2AA-805, ASTM D 1751.

CONSTRUCTION REQUIREMENTS

General. Construction of the concrete masonry walls shall conform to the requirements of the International Building Code (IBC), the plans and specifications.

Sample Approval. The Engineer shall approve in writing the following before concrete masonry wall construction begins:

Color and texture of concrete masonry units.

Four weeks before construction begins provide the Engineer with two concrete masonry units of each color and texture required on the project.

**REVISION OF SECTION 607
FENCE CHAIN LINK SPECIAL**

Section 607 of the CDOT Standard Specifications is hereby revised for this project as follows:
SubSection 607.02 shall include the following:

All materials shall meet the requirements specified in AASHTO M181 except as otherwise noted in the plans and these specifications. The Contractor shall provide certification from the manufacturer that all materials used are in compliance with the requirements of the plans and these specifications.

All material shall be galvanized. When required by the plans the fence shall also be vinyl coated. The color shall be as noted in the plans. All exposed materials shall have a uniform coloration. Temporary members and attachments that are to be removed need not be vinyl coated. The inside of pipes shall not be vinyl coated. When the fence is vinyl coated bolts and nuts shall be either vinyl coated or painted to match fence coating. Anchor bolts, threaded rods, anchor studs, post dowels, and other unexposed portions of anchorage assemblies shall be galvanized and not vinyl coated or painted.

The Contractor shall furnish to the Engineer for approval a 12" X 12" sample of the fabric (showing the exact coating and fabric construction to be used) and manufacturer's literature covering all aspects of the system he intends to install before ordering or fabricating any parts.

The fabric shall be AASHTO M181 Class C; or, when vinyl coating is specified in the plans, Class B. The mesh and wire sizes shall be as specified in the plans. When 10 mm (3/8") mesh with 12 gauge wire is specified in the plans the following properties shall apply.

For other mesh and wire sizes the properties shall be as specified by AASHTO M181.

Mesh	3/8" clear opening
Core wire breaking strength	650 lbs (minimum)
Core wire diameter	0.105 inch +/-0.005"
Galvanizing, Class C fabric	
	1.2 oz./sq. ft.
Galvanizing, Class B fabric	
	0.30 oz./sq. ft.
Vinyl Coating Class B Fabric	
	0.008 inch +/-0.002 inch

Tension wires shall be AASHTO M181 Type 1 Class 2; or, when vinyl coating is specified in the plans, Type 4.

Tension wires and their fittings shall have a minimum breaking strength of 1920 pounds.

Truss rods and their fittings shall have a minimum breaking strength of 3840 pounds for fences without horizontal members and with a minimum prestress force given by the plans.

Posts and horizontal members shall be standard or extra strong steel pipe, as noted in the plans, satisfying ASTM A53 Type E or S, Grade B (Fy = 35000 psi); or, at the Contractor's option, ASTM A466 Grade D pipe (50000 psi minimum yield strength) conforming to the following table may be substituted for both the standard and extra strong pipe of the same outside diameter

**REVISION OF SECTION 607
FENCE CHAIN LINK SPECIAL**

called for in the plans. All fittings and connections dependent on the pipe's inside diameter shall be modified as necessary for proper fit-up.

Nominal Diameter	Outside Diameter	Alternative Pipe		Wall Thickness
		Lb. Per <u>Ft.</u>	<u>In.</u>	
<u>In.</u> 1.25	<u>In.</u> 1.660	1.836	0.111	
1.50	1.900	2.281	0.120	
2.00	2.375	3.117	0.130	
2.50	2.875	4.640	0.160	

Stretcher bars, truss rods, tension wires, post tops, and other required fittings and hardware shall be commercial quality steel, or better, or cast or malleable iron as appropriate to the article. A pair of two tension wires with appropriate turnbuckles or other adjustment devices, may be substituted for each truss rod.

Post clips, wire ties, or hog rings shall be galvanized 9 gauge or 14 gauge (before galvanizing) steel wire, and vinyl coated when specified by the plans. Wire ties shall be given at least one complete turn. Ends of wire ties shall be directed away from traffic.

SubSection 607.03 shall include the following:

For fences without permanent horizontal members and with a minimum prestress force given by the plans, the following shall apply.

The total pretension force in the tension wires and the mesh combined shall not be less than the value shown in the plans. Each tension wire, truss rod, and the mesh should have some pretension and shall not be slack. This is to assure the strength and stiffness of the fence system under the anticipated loads.

The Contractor shall control the quality of the fence tensioning by checking that the deflection of the fence does not exceed the value shown in the plans when the test load described in the plans is applied. The Contractor may choose to assure this quality by observing these tests, or by performing tests of his own. If the deflection is excessive, the Contractor shall retension the fence components.

The temporary horizontal members shall be removed after the tensioning of the fence is accepted.

**REVISION OF SECTION 618
PRESTRESSED CONCRETE**

Section 618 of the CDOT Standard Specifications is hereby revised for this project as follows: In subSection 618.04 replace the last sentence with:

The friction losses shall be determined in accordance with the plans and as provided for in the AASHTO LRFD Specifications for Highway Bridges.

Revise 618.06(b) 9 to read:

9. Copies of all concrete mix designs to be used, including mix design computations and test data, and acceptable specific gravities for mud balance tests, provided by the grout manufacturer.

Add 618.06(b) 14:

14. Post-tensioning system. Duct and anchorage inspection schedule, duct splices at closure pour inspection schedule, and duct pressure testing schedule, including name(s) of the of the responsible representative of the post-tensioning system supplier who will conduct inspections and testing.

Revise 618.06(c) to read:

Frequency. QC inspection and testing at all intervals of duct anchorage, duct splice operations, forming, tensioning, steel and concrete placement, curing, and storage operations shall be performed in accordance with the accepted QCP. The QCP shall contain provisions for increased frequencies of inspection and testing when operations or products do not conform to the Contract.”

Add 618.06(d) 8:

8. Post-tensioning Ducts. The responsible representative of the post-tensioning system supplier shall submit to the QA Representative a letter certifying that the ducts, duct splices, and anchorages are installed according to the Contract and that they have been inspected by the responsible representative of the post-tensioning system supplier and adequately held an air pressure test of 45 psi.

Revise 618.07(a)7 to include:

The presence of rust on strand shall not necessarily be cause for rejection. Light rust and rust that does not result in visible pitting of the prestressing steel with the unaided eye shall be acceptable. Prior to evaluation, rust shall be removed from representative lengths of prestressing strand by heavy duty scouring pads, such as Scotchbrite by 3M. After rust removal, visual comparisons shall be made to picture sets in the article “Evaluation of Degree of Rusting on Prestressed Concrete Strand” published in the 1992

May-June edition of the PCI Journal. Surface conditions comparable to picture sets 1 through 3 shall be acceptable, while surface conditions comparable to picture sets 4 and greater shall be cause for rejection of the prestressing strand.

**REVISION OF SECTION 618
PRESTRESSED CONCRETE**

Revise 618.07(c)(1)(4) to read:

- (4) A grout manufacturer's field representative, who is a full-time employee of the grout manufacturer, will provide technical product assistance to the grouting crew, and will be present during start-up of grouting operations and be able to be present, should problems with the grout occur.

Revise 618.07(c)(1)(5) to include:

Be a full-time employee of the post-tensioning system supplier.

A holder of a current Grouting Training Certificate from the American Segmental Bridge Institute.

Revise 618.07(c) Item 9 of grouting plan to read:

9. Procedures for handling blockages, procedures and equipment required for flushing ducts of grout if necessary, and how and when it will be decided whether or not to flush ducts.

Add 618.07(c) Item 12 to grouting plan as follows:

12. List of production testing along with acceptable values. SubSection 618.07(c)2 (1) shall include:

Alternative anchorages must be submitted and approved by the Engineer prior to the bid date. Alternatives submitted after this date will not be accepted.

SubSection 618.08 shall include:

Permanent anchorage grout caps are required and shall be installed before grouting begins. Anchorage devices shall have a minimum clear concrete or grout coverage of 2 inches in every direction unless otherwise shown in the drawings.

Replace the second paragraph of SubSection 618.09 (a) with:

The time from installing the prestressing steel in the ducts in an unstressed condition to grouting after stressing shall not exceed thirty days. The exceptions to the thirty day grouting requirement is during cold weather when heating would be required to allow the ducts to be grouted in accordance with (e) below, or if it is anticipated that a duct may not be grouted within 30 days after installing the tendon strands in the duct the Contractor will be allowed to place a 40 ft test strand into the sealed duct as a corrosion test strand that can be removed and evaluated for corrosion per subSection 618.08(a)7. If the test strand method is used the Contractor shall install a test strand into a representative duct for each installation stage of tendons on the project. The test strand should pass through a local low point of the duct. If the Contractor chooses not to heat the structure, and the ducts have not been grouted within thirty days of installation of the prestressing steel in the ducts, the ducts shall be grouted the first day weather permits in accordance with (e) below.

**REVISION OF SECTION 618
PRESTRESSED CONCRETE**

SubSection 618.09 (b) shall include:

The grout manufacturers lot definition in writing shall be included with the grouting plan. Table 618-1 Fluidity Test shall be revised as follows:

The minimum Efflux Time from Flow cone shall be 11 Seconds Minimum per ASTM C 939 test method.

The minimum Efflux Time from Flow cone shall be 5 Seconds Minimum per ASTM C 939 test method Footnote 3.

Revise SubSection 618.09 (d) to include:

Grouting. All grouting operations shall be performed under the immediate control of the representative of the post-tensioning system supplier.

The Contractor shall perform, or contract a commercial testing entity experienced with the following tests, and report the results to the Contractor's Engineer and the Engineer:

One pressure bleed test per day in accordance with the requirements of Appendix C of the "Specification for Grouting of Post-Tensioned Structures" by the Post-Tensioning Institute. The Gelman filtration funnel shall be secured vertically plump in a stand and shall be pressurized to 50 psi and the maximum percent bleed shall be zero when the vertical rise of ducts is greater than 6 ft, shall be pressurized to 30 psi and the maximum percent bleed shall be 2% when the vertical rise of ducts is greater than 2 ft and equal to or less than 6 ft, and shall be pressurized to 20 psi and the maximum bleed shall be 4% when the vertical rise of ducts is equal to or less than 2 ft.

Two mud balance tests per day or when there is a visual or apparent change in the characteristics of the grout in accordance with the API Recommended Practice 13B-1 "Standard Procedure for Field Testing Water-Based Drilling Fluids". Acceptable specific values for the grout shall be provided by the grout manufacturer and included with the grouting plan."

Replace the last sentence in SubSection 618.09 (d)(4) with: The efflux time shall be as shown in Table 618-1.

**REVISION OF SECTION 618
SEGMENTAL PRESTRESSED CONCRETE STRUCTURES**

Section 618 of the CDOT Standard Specifications is modified for post-tensioned elements for this project and replaced with the following:

SubSection 618.01 shall include the following:

This work shall consist of the construction of post-tensioned concrete members in accordance with these specifications and in conformity with the plan details.

This work shall include the stressing, furnishing and installation of any items necessary for the particular prestressing systems to be used, including but not limited to ducts, prestressing steel, anchorage assemblies, reinforcing for prestressing, and grout used for pressure grouting ducts.

The term "segment" refers to a modular Section of the superstructure consisting of the cross-Section detailed on the plans. The lengths of the segments are detailed on the contract plans.

The weight of each precast segment shall be as permitted for handling and transporting subject to Engineer's approval. The length of cast-in-place segments shall be the length between construction gaps shown.

The term "match cast" refers to a fabrication procedure whereby a segment is cast against the preceding segment. Match casting may be accomplished by either the short line casting method or the long line casting method.

SubSection 618.02 shall include the following:

All Duct splices shall use Shrink Sleeves or as approved by the Engineer. SubSection 618.03 shall include the following:

Post-tensioned members will be of the type, shape, and dimensions as shown on the plans.

The minimum strength of the concrete at the time of post-tensioning shall be 3500 psi or as given on the plans, whichever is greater.

Welds or grounds for welding equipment shall not be made on the forms or on the steel in the member after the prestressing steel has been installed, unless otherwise indicated on the plans.

The Contractor will not be allowed to deviate from the erection method or erection sequence, as shown on the plans. However, the Contractor may add temporary post-tensioning for purposes of erection or supporting construction loads.

The Contractor shall have available copies of all design information (calculations, computer output, etc.).

The Contractor shall submit drawings and calculations for the construction loading, if any, to which the bridge will be subjected during construction. These drawings and calculations shall:

Be prepared by an Engineer who is thoroughly knowledgeable in the design of post-tensioned concrete bridges.

**REVISION OF SECTION 618
SEGMENTAL PRESTRESSED CONCRETE STRUCTURES**

Be in accordance with the current edition of the AASHTO LRFD Specifications for Highway Bridges.

Illustrate the configuration and magnitude of the construction loads. If the loads will vary during the phases of construction, then the details shall show the critical loads at each phase.

Verify that the stresses on the plans or contained in the specifications are not exceeded. In addition, joints with well distributed bonded reinforcing crossing them (as is typical in precast segmental construction) shall have no tension across them during construction or under service load after the structure is completed. The tension in any part of the prestressed concrete during construction shall not exceed $6(f'ci)1/2$ or $3(f'ci)1/2$ for the top of the deck. The tension in any part of the prestressed concrete under service load after the structure is completed shall not exceed $6(f'c)1/2$ or $3(f'c)1/2$ for the top of the deck.

Verify that the foundation or pier column capacities are not exceeded.

If the Contractor intends to add temporary post-tensioning he shall submit complete details and calculations in accordance with subSection 618.03 (d) "Shop Drawings and Calculations" of this specification, for approval by the Engineer. The calculations shall meet the following requirements:

The calculations shall show that any stresses indicated on the plans or contained in these specifications are not exceeded, at any phase of construction.

The calculations shall consider all effects due to dead load, prestressing, and construction loads.

The calculations shall be prepared by an Engineer who is thoroughly knowledgeable in the design of post-tensioned, concrete bridges.

The calculations shall be prepared in accordance with the AASHTO Standard Specifications for Highway Bridges.

Temporary post-tensioning details shall meet the following requirements:

The temporary prestressing steel shall be clearly identified on the shop drawings.

The method, procedure, and sequence of tensioning and de-tensioning the temporary prestressing steel shall be shown. The sequence shall be related to the permanent post-tensioning.

Details shall show any ducts, blockouts, or buildouts necessary for the temporary prestressing steel. Ducts or voids internal to the member for temporary prestressing steel shall not be left void but shall be grouted in accordance with these specifications.

Stressing blocks for any temporary prestressing systems anchorages may be located within the slabs, in partial diaphragms within box girders, in external systems temporarily anchored to the girders and removed after used, or a combination of any of the above methods. All construction added outside a girder for temporary prestressing shall be subsequently removed to restore the girder to the designed cross-Section shown on the plans or as approved by the Engineer.

**REVISION OF SECTION 618
SEGMENTAL PRESTRESSED CONCRETE STRUCTURES**

The detail requirements for the temporary post-tensioning shall be in accordance with 618.03 (d) "Shop Drawings and Calculations".

The Engineer shall review and approve the Contractor's construction loading and temporary post-tensioning details and calculations. If the details are not approved, they will be returned for corrections and resubmitted by Contractor, in the same manner as the first submittal.

The time required for approval of resubmittals will not be more than 5 weeks per submittal. It is the intent of these specifications that not more than two resubmittals will be required. If additional submittals are required by actions of the Contractor, the additional time required for review and approval will be borne by the Contractor.

Only after the Contractor's construction loading and temporary post-tensioning details and calculations are approved will the Division review final shop drawings for post-tensioning, bearing devices, falsework, or expansion devices for the superstructure. Approval of these details and calculations will not relieve the Contractor of the responsibility for the structural adequacy of the bridge, or the performance of the temporary post-tensioning, under construction loading.

**REVISION OF SECTION 628
BRIDGE GIRDER AND DECK UNIT**

Section 628 is hereby added to the CDOT Standard Specifications for this project as follows:

DESCRIPTION

This work consists of the design, fabrication, and erection of a simple span, welded self weathering steel, truss pedestrian bridge (with a timber or concrete deck) in accordance with the specifications and plan details.

Potential bridge suppliers are:

Continental Bridge
8301 State Highway 29 N
Alexandria, Minnesota 56308
1-800-328-2047, FAX 320-852-7067

Steadfast Bridges 4021 Gault Ave. South
Fort Payne, Alabama 35967
1-800-749-7515, FAX 256-845-9750

Excel Bridge Manufacturing Company
12001 Shoemaker Avenue
Santa Fe Springs, California 90670
562-944-0701, FAX 562-944-4025

Big R Manufacturing LLC
P.O. Box 1290
Greeley, Colorado 80632-1290
1-800-234-0734, FAX 1-970-356-9621

Wheeler Lumber, LLC 9330 James Avenue South
Bloomington, Minnesota 55431-2317
1-800-328-3986, FAX 952-929-2909

MATERIALS

Structural Steel. All structural steel shall be new (unused) material. The Contractor shall provide the Engineer and the Staff Bridge Branch Fabrication Inspection Unit with copies of all certified mill test reports for all structural steel and bolts. Floor beams, stringers, and members of each Half-through truss (upper and lower chords, diagonals, end posts and vertical posts) utilized in the bridges shall meet a longitudinal Charpy V-notch (CVN) value of 25 ft. lbs. at 40 degrees Fahrenheit. Testing shall be in accordance with AASHTO T 243 (ASTM A 673). The H frequency of heat testing shall be used. The Contractor shall provide the Engineer and the Staff Bridge Branch Fabrication Inspection Unit with certified copies of all CVN test reports.

All square and rectangular structural steel tubing shall conform to the requirements of ASTM A 847, Cold-Formed Welded and Seamless High Strength, Low Alloy Structural Tubing With Improved Atmospheric Corrosion Resistance.

-2-

**REVISION OF SECTION 628
BRIDGE GIRDER AND DECK UNIT**

All structural steel shapes and plates shall conform to the requirements of ASTM A 588, High-Strength Low-Alloy Structural Steel.

All anchor bolts and nuts shall conform to the requirements of ASTM A 307, Grade A, Carbon Steel Bolts and Studs, and shall be galvanized in accordance with the requirements of ASTM A

153. Each anchor bolt shall be provided with two nuts for jamming.

All structural steel field connections shall be bolted with high strength bolts. High strength bolts, including suitable nuts and plain hardened washers, shall conform to the requirements of ASTM A 325. Bolts shall be Type 3.

Timber. All timber shall be new (unused) material and conform to either of the following:

Southern Pine, No. 1 or better quality, Graded in accordance with Southern Pine Inspection Bureau (SPIB) rules.

Douglas Fir-Larch, No. 1 or better quality, Graded in accordance with West Coast Lumber Inspection Bureau (WCLIB) rules.

All lumber shall be manufactured and inspected in accordance with the latest edition of Product Standard 20-70 as published by the Department of Commerce, and shall be grade marked or have an accompanying certificate from a certified grading agency. The grading agency shall be certified by the Board of Review of the American Lumber Standards Committee.

All timber shall be pressure treated, conforming to the requirements of the American Wood Preserver's Association (AWPA) Standards, Section C1 and C2 (Soil Contact). Either Ammoniacal Copper Arsenate (ACA) or Chromated Copper Arsenate (CCA) preservatives conforming to the requirements of Section P5 (Standards For Waterborne Preservatives) of the AWPA Standards shall be utilized and treatment shall be to a total absorption of 0.40 pounds per cubic foot of timber. A certified treatment report shall be provided to the Engineer and the Staff Bridge Branch Fabrication Inspection Unit.

CONSTRUCTION REQUIREMENTS

Design. The AASHTO LRFD Guide Specifications for the Design of Pedestrian Bridges shall govern the design. Bolted connections shall comply with Section 509 of CDOT Standard Specifications for bolting requirements.

The superstructure of the pedestrian bridge shall consist of two parallel Half-through trusses, or Pony trusses, with at least one diagonal per panel. The trusses shall be the main load-carrying members of the bridge.

The members of each Half-through truss, or Pony truss, (upper and lower chords, diagonals, end posts, and vertical posts) shall be fabricated from square and rectangular structural steel tubing.

-3-

**REVISION OF SECTION 628
BRIDGE GIRDER AND DECK UNIT**

Floor beams and stringers shall be fabricated from structural steel shapes or square and rectangular structural steel tubing.

The structure shall conform to the clear span, clear width, and railing requirements shown on the plans.

Each pedestrian bridge shall be designed for the following loads and loading conditions:

Dead load shall be as defined in the AASHTO LRFD Guide Specifications for the Design of Pedestrian Bridges.

Live load shall be as defined in the AASHTO LRFD Guide Specifications. Distribution to the stringer and floor beams shall be in accordance with the AASHTO LRFD Guide Specifications for the Design of Pedestrian Bridges. Deflection and vibration limits as per the AASHTO LRFD Guide Specifications shall apply.

Pedestrian live load shall be as defined by the AASHTO LRFD Guide Specifications for the Design of Pedestrian Bridges.

Vehicle live load shall be as defined by the LRFD Guide Specifications for the Design of Pedestrian Bridges. When required by the plans, the vehicle live load shall be the Colorado Legal Load Type 3 Vehicle. This is a 27 ton, three axle, vehicle with 13.5' front axle spacing and 4' rear spacing. The axle loads are 7 tons on the front axle and 10 tons on each of the rear axles.

Wind load shall be as defined by the AASHTO LRFD Guide Specifications for the Design of Pedestrian Bridges.

Distribution of wheel loads on timber flooring shall be in accordance with the AASHTO LRFD Guide Specifications for the Design of Pedestrian Bridges.

Minimum thickness of structural steel shall be 3/16 of an inch.

½ inch diameter weep holes shall be drilled (flame cut holes will not be allowed) at all low points of all steel tubing members as oriented in the in-place, completed structure. In members that are level, or flat, a total of two weep holes shall be drilled, one at each end. Weep holes and their locations shall be shown on the Shop Drawings.

All metallic fasteners utilized in attaching timber to structural steel shall be galvanized.

All welded tubular connections shall be designed in accordance with Section 2, Parts A and D (Delete SubSection 2.36.6), of the Structural Welding Code-Steel ANSI/AWS/D1.1 (Latest Edition).

-4-

**REVISION OF SECTION 628
BRIDGE GIRDER AND DECK UNIT**

When timber decking is used it shall be placed transverse to the trusses and have a minimum nominal thickness of 3 inches. Decking shall be securely fastened to each stringer and at each end to prevent warping.

Concrete and reinforcing steel, when used for the deck, shall conform to Sections 601 and 602, respectively.

The Contractor shall submit seven sets of Design Calculations and Shop Fabrication Details (Shop Drawings) to the Engineer for each pedestrian bridge separately. This submittal shall be in accordance with SubSection 105.02. The Design Calculations and Shop Drawings shall contain the endorsement seal of the Professional Engineer registered in the State of Colorado responsible for the design.

Shop Fabrication. Welding and fabrication of weathering steel pedestrian bridges shall conform to the requirements of the Structural Welding Code-Steel ANSI/AWS D1.1 (Latest Edition) as amended by the following:

As required in SubSection 4.7.3, a welding procedure shall be established by qualification in accordance with the requirements of SubSection 3.3 for the ASTM A 847 material used on the bridge. The results of the Procedure Qualification shall be recorded on Form E-1 in Annex E of AWS D 1.1.

The Contractor shall submit a Quality Control Plan. The Plan shall include personnel qualifications, certifications, and a Written Practice in accordance with ASNT SNT-TC-1A.

The quality of all welds shall be in accordance with Section 6, Table 6.1. In Table 6.1, Undercut 7(B), the criteria for primary members shall apply to the bottom chord members.

All Complete Joint Penetration Groove Welds in butt joints in the bottom chord members shall be 100% Magnetic Particle tested in accordance with ASTM E 709. Acceptance shall be determined in accordance with Section 6.10 and Table 6.1, using Alternating Current. In addition, complete joint penetration groove butt welds welded from one side without backing of bottom chord members shall be examined by ultrasonic testing in accordance with Section 6.11.1.

Magnetic Particle Testing shall be performed on 100% of all attachment welds to the bottom chord, using Alternating Current, in accordance with Section 6.10 and Table 6.1.

All Procedure Qualification Records and Welder Qualification Test Records shall be current within three years of the date of beginning fabrication.

A copy of all Procedure Qualification Records, Welder Qualification Test Records, Quality Control Plan and all visual and nondestructive test reports shall be provided to:

The Engineer.
Staff Bridge Branch Fabrication Inspection Unit
4201 E. Arkansas Ave., Room 330
Denver, Colorado 80222

-5-

**REVISION OF SECTION 628
BRIDGE GIRDER AND DECK UNIT**

All weathering steel shall be blast cleaned, Steel Structures Painting Council Surface Preparation No. 6 (SSPC-SP6, Commercial Blast Cleaning), to remove mill scale and foreign material which would prohibit rusting to a uniform color.

Field Construction. The substructure shall be constructed in accordance with the details shown in the plans and the pedestrian bridge shop drawings. Before construction begins on the substructure, the Contractor shall determine the anchor bolt requirements and substructure dimensions needed to properly erect the structure which will be provided. The Engineer and the Department shall be provided with two copies of detail sheets delineating these requirements before work begins.

14. LANDSCAPING AND AESTHETICS

14.1. General

The Developer shall design and construct all landscape and aesthetic Elements of the Project in accordance with the requirements of this Section 14.

14.2. Applicable Standards and Drawings

All Construction Work required to be performed by the Developer pursuant to this Section 14 shall comply with the Construction Standards (including the sections of the CDOT Standard Specifications listed in Section 14.8.1), the relevant requirements listed in this Section 14, Good Industry Practice, and the following documents:

- a. Local Agency Municipal Codes and Ordinances as applicable to the Project;
- b. Swansea Elementary School requirements specified in the DPS MOA;
- c. I-70 Cover Plans included in Schedule 10B Contract Drawings;
- d. I-70 Cover and Swansea Elementary School Outdoor Areas Design Narrative included in Schedule 10B Contract Drawings;
- e. Denver Parks and Recreation (DPR) Planning, Design + Construction Standards;
- f. City of Denver Building Code, Policies, and Guidelines;
- g. Approved Street Tree List for the City of Denver's public Rights-of-Way;
- h. Denver Public School Design and Construction Standards
- i. CDOT's Environmental Stewardship Guide;
- j. National Electrical Code;
- k. The Denver IGA; and
- l. Aesthetic Design Standards for Central 70 included in Schedule 10B Contract Drawings¹.

14.3. Administrative Requirements

14.3.1. Landscaping and irrigation in Local Agency Roadway areas shall be designed and constructed to the Local Agency standards.

14.3.2. The Developer shall obtain a tree removal permit from CCD-Forestry for the removal of any trees within the Denver ROW.

14.3.3. With the exception of the I-70 Mainline, I-225 and I-270, Local Agency standards shall also be applied to all CDOT Roadways between the back of curb and the Right-of-Way (ROW) line.

14.3.4. The landscape and aesthetics designs and plans shall be prepared by a Registered Landscape Architect in the State of Colorado.

14.3.5. Public Art

- a. The Developer shall not preclude the installation of public art features during design or construction in the following locations:
 - i. Bridge gateways at Brighton Boulevard, York Street, Josephine Street and Fillmore Street as identified in the Central 70 Project Aesthetic Standards included in Schedule 10B Contract Drawings
 - ii. Mural wall located along the eastern portion of the Cover as identified in the I-70 Cover Plans included in Schedule 10B Contract Drawings; and

¹ The Procuring Authorities are advancing the aesthetics design requirements including completion of a public involvement process that will further determine the requirements within this document. Final version of this document is expected to be released with the Final RFP

- iii. Neighborhood-facing side of the noise walls as identified in the Central 70 Aesthetic Standards included in Schedule 10B Contract Drawings.
- b. The Developer shall work with the Department through a public art selection process pursuant to which artists will be commissioned to produce features at the locations identified in this Section 14. The Developer shall provide input on durability and maintenance of artworks during the selection process, and constructability during the design process.

14.4. Design Requirements

14.4.1. Deterrence of Vandalism and Unauthorized Use of Facilities

The landscape and hardscape design shall discourage vandalism and discourage dwelling and the storage of personal items within the Site. All plantings shall use open-branch trees and shrubs that will minimize the collection of trash and debris. All plantings shall be designed and spaced to provide a safe space that deters unlawful behavior.

14.4.2. Irrigation

The Developer shall be responsible for the provision of water for irrigation and power supplies and other services required for establishment of the landscaping.

14.4.3. Landscape Design

The landscape design shall fall into three general categories as described below. The Developer's Landscape Plans shall include a schematic drawing of the Project showing where each category of landscaping is proposed.

a. Non-irrigated Areas

These areas shall include plants which, once established, shall not require supplemental water from irrigation. Within Local Agency areas, the landscaping shall comply with Local Agency standards.

b. Irrigated Areas²

These areas shall require plantings and irrigation systems. They will typically be within Local Agency ROW, CDOT ROW which falls under an IGA with a Local Agency, or private property where Construction Work is occurring under an easement.

c. Cover and Swansea Elementary School Outdoor Areas

This area shall require landscape, irrigation, aesthetics, playground facilities, parking lot, and miscellaneous park features in these areas conforming to the specific design requirements as described in this Section 14. This Section 14 references a number of program areas at the Cover and Swansea Elementary School outdoor areas – boundaries of which can be found on sheet L0-02 in the I-70 Cover Plans included in Schedule 10B Contract Drawings. The descriptions of the intent of these areas can be found in the I-70 Cover and Swansea Elementary School Outdoor Areas Design Narrative included in Schedule 10B Contract Drawings. Areas include the following:

- i. Swansea Elementary School;
- ii. Multi-Use Field;
- iii. Central Plaza Space;
- iv. Events Lawn;
- v. Tot Lot and Splash Pad;
- vi. Concessions/Restroom Building;

² The Procuring Authorities will be defining irrigated areas and anticipate providing relevant details to Proposers in the Final RFP

- vii. East Side Community Space;
- viii. Columbine Street Cover Extension;
- ix. Clayton Street Cover Extension; and
- x. 46th Avenue, Columbine Street and Clayton Street Streetscapes.

For certainty, when landscape design requirements and plans are referenced in this Section 14, it shall refer to both the Cover and the Swansea Elementary School outdoor areas (as described in Section 14.5), and the term Corridor shall refer to all other areas.

14.5. Cover and Swansea Elementary School Outdoor Areas - Landscape and Aesthetic Design and Plans

- 14.5.1. The Developer shall be responsible for the design and construction of all aspects of the Cover over the I-70 Mainline (Planning Area 2) and the Swansea Elementary School outdoor areas (Planning Area 1) as depicted in the I-70 Cover Plans included in Schedule 10B Contract Drawings. The I-70 Cover Plans constitute preliminary design of the Cover and the Swansea Elementary School outdoor areas and as such the Department does not give and has not given any representation, warranty, undertaking or guarantee as to the accuracy, completeness, fitness for purpose or adequacy of such plans. The Developer shall be required to advance and complete such design in accordance with the requirements of this Agreement.
- 14.5.2. The Developer shall prepare the Landscape and Aesthetics Plans for the Swansea Elementary School outdoor areas in conformance with Denver Public Schools Design and Construction Standards. The Developer shall coordinate the design with Denver Public Schools and obtain approval of the preliminary plans prior to submittal to the Department and approval of the final (100%) plans prior to submittal to the Department.
- 14.5.3. All Construction Work required to be performed by the Developer for the Cover pursuant to this Section 14 shall comply with the relevant requirements of this Section 14 including Appendix A and Appendix B and Good Industry Practice.
- 14.5.4. The Developer prepared Preliminary Landscape and Aesthetics Plans for the Cover and Swansea Elementary School outdoor areas as part of its Proposal. The Developer shall use the Proposal submittal as a basis to prepare and submit Preliminary Landscape and Aesthetics Plans for Acceptance by the Department. The Preliminary Landscape and Aesthetics Plan submittal shall include as a minimum the following narratives and plans:
- a. Narrative of the Developer's design process to be completed and approach to achieving the vision set forth for the space both in program and character.
 - b. Narrative and plans that outline the opportunities and constraints in the design and construction Elements.
 - c. Narrative and plans for the cross streets, Columbine, Clayton, and 46th Avenue, depicting the character and context of how they relate to the Cover and Swansea Elementary School outdoor areas landscaping and aesthetic designs.
 - d. Narrative and plans related to the coordination and integration of other disciplines including structures, the Cover MEP System, drainage, roadway, utilities, and lighting.
 - e. The Developer shall provide visual renderings that show the proposed designs. A minimum of one rendering for each identified Program Area is required. Renderings include 3D images, sketches or models at a scale to depict overall design intent as well as scale and material selection.
 - f. The Developer's Preliminary Landscape and Aesthetics Plans shall include plans, elevations, sections, perspectives, isometric drawings, details, etc., as necessary to fully convey the proposed Cover and Swansea Elementary School outdoor areas landscape and urban designs including color and texture applications; drawings, tables and

schedule that show where specific Elements are located; and plant palette schedules, size, number, location of trees, shrub beds, accent beds, and planning types.

- g. The Developer's landscape and aesthetics work shall include an underground permanent irrigation system to maintain plant material in accordance with DPR Planning, Design + Construction Standards.
- 14.5.5. The Developer shall prepare and submit the Cover and Swansea Elementary School outdoor areas - Final Landscape and Aesthetics Plans to the Department for Acceptance. The final plans shall address all comments and include all Accepted elements of the Cover and Swansea Elementary School outdoor areas – Preliminary Landscape and Aesthetic Plans.
- 14.5.6. The Developer shall provide adequate levels of lighting on the Cover to enhance safety and security, promote responsible use of program areas, and serve aesthetic compatibility with surrounding uses.
- a. Lighting Typologies
 - i. Requirements for multi-use field lighting are as follows:
 - A. Poles
 - (I) Maximum height of field lighting poles shall not exceed 70 feet.
 - (II) Maximum number of field lighting poles shall not exceed four.
 - (III) Optimize the location of field lighting poles.
 - B. Lighting Fixtures
 - Maximum number of light fixtures shall not exceed 36 fixtures.
 - C. Field Lighting Design
 - (I) Average of 30 foot-candles across the field play surface.
 - (II) Meet IESNA Standards for safe play.
 - D. Spill Light
 - (I) Horizontal spill: Maximum of 0.10 foot-candles spill light at 150 feet from field boundary.
 - (II) Vertical spill: Maximum 0.10 foot-candles spill light at 150 feet from field boundary.
 - E. Glare Light
 - 2072 candelas at 150 feet from boundary.
 - ii. Requirements for pedestrian lighting of 46th Avenue, Columbine Street and Clayton Street streetscapes (refer to CCD standards for street lighting requirements) are as follows:
 - Spacing, Location and Fixture Height
 - All streetscapes along the Cover are to provide pedestrian-scale lighting fixtures along sidewalks at intervals not less than 60 feet within 8 feet of the flow line of the street. Fixture heights shall be between 12 feet and 15 feet. Glare Control full cut-off fixtures shall be provided within the guidelines of "Dark Sky" policies.
 - iii. Requirements for lighting of internal Cover areas, not including the multi-use field, are as follows:
 - A. Paved walkways in open space areas shall be illuminated with a minimum maintained 0.5 foot-candles of light on the walking surface

during the hours of operation and a minimum one hour thereafter. After-hours illumination may be reduced 50%.

- B. Stairways shall be illuminated with a minimum one foot-candle of light on all landings and stair treads, during the hours of operation and a minimum of one hour thereafter.
 - C. Parking lots and walkways accessing buildings and parking areas shall be illuminated with a minimum maintained one foot-candle (maximum eight foot-candles) of light on the driving or walking surface.
 - D. Splash pads, tot lots and playground activity areas shall be illuminated with a minimum maintained one foot-candle of light on walking surfaces.
 - E. Luminaires utilized to meet the requirements of this Section 14 shall have vandal resistant light fixtures, if accessible, and be not less than 12 feet in height from ground level. A luminaire not less than 42 inches may be utilized to illuminate a walkway if adjacent landscaping is of a variety which does not mature higher than two feet, and it does not interfere with the required light distribution for a distance of 16 feet along the walkway. Light fixtures shall be deemed accessible if mounted within 15 feet vertically or 6 feet horizontally from any accessible surface or any adjoining roof, balcony, landing, stair treads, platform or similar structure.
 - F. Activation of the required exterior lighting shall be either by a photocell device or a time clock with an astronomic clock feature and/or photocell.
 - G. As part of the Cover and Swansea Elementary School outdoor areas plan deliverables, provide a site plan showing buildings, parking areas, walkways, detailed landscaping and a point-by-point photometric calculation of the required light levels. Foot-candles shall be measured on a horizontal plane and conform to a uniformity ratio of four to one (4:1 average/minimum).
 - H. Restroom designs shall be naturally lighted during the day and artificially illuminated no later than dusk and turned off no later than two hours after curfew hours
- b. Lighting Product Requirements
- i. All lighting products provided for the Cover shall be LED luminaries and shall incorporate the most recent technology to ensure adequate lighting levels and lower maintenance needs.
 - ii. All pedestrian scale lighting posts along streetscapes or in program areas on the Cover are to include adjustable banner arms. The lower banner arm shall be mounted at a minimum height of eight feet.
 - iii. Lighting controls shall be provided for all lighting within each program area listed below:
 - A. Events lawn;
 - B. Central plaza space, including a separate lighting controls for the pavilion stage;
 - C. Tot lot and splash pad;
 - D. East side community space;
 - E. Multi-use field; and

- F. Swansea Elementary School outdoor areas; lighting controls shall be designed and constructed in order for Swansea Elementary to control the lights individually.

14.5.7. Shade Coverage and Tree Planting

- a. The Developer shall provide shade coverage on the Cover, with the expectation that there is a combination of natural shade (provided by tree canopy) and manufactured shade (provided by permanently installed overhead structures) and that the approach to tree planting maximizes the use of areas to be shaded. Tree locations shall be in accordance with the I-70 Cover Plans included in Schedule 10B Contract Drawings. Minor adjustments to tree locations are allowed to optimize the structural design.
- b. Assumptions
 - i. The Developer shall use the following assumptions in the calculation of shaded areas defined in the tiers below. Due to the nature of the Cover planting environment, it shall be assumed that trees planted on the Cover will not reach expected full maturity sizes. The following are to be considered average mature canopy widths of trees over structure:
 - A. Shade trees: 24' canopy 10 years after installation;
 - B. Ornamental trees: 16' canopy 10 years after installation; and
 - C. Evergreen trees: do not contribute to shade coverage, but should be considered for planting diversity.
 - ii. When calculating shade coverage, credit shall not to be given twice to areas in which individual shade elements overlap. Shade coverage calculations are to be provided by the Developer at time of Deliverable(s).
 - iii. Shade coverage shall be determined through a straight 2D plan surface calculation.
 - iv. All natural shade provided by tree canopy will be dictated by the City of Denver Forestry's tree planting standards and requirements. Minimum sizes and species of trees shall be provided in accordance with these standards and requirements.
- c. Shade Coverage and Tree Planting
 - i. Requirements for the multi-use field are as follows:
 - A. Shade Coverage

Trees shall be planted at a minimum of 30 feet on center adjacent to the Columbine Street sidewalk.
 - B. Tree Planting Approach
 - (I) Trees are to be located in raised planters with a maximum of 30 inches in height as related to surrounding paved/field surfaces.
 - (II) Shade trees are to comprise a minimum of 75% of trees planted adjacent to Columbine Street.
 - ii. Requirements for the central plaza space are as follows:
 - A. Shade Coverage
 - (I) 50% at tree canopy maturity.
 - (II) Minimum of 50% shall be natural shade.
 - (III) Shade coverage shall be clustered and dispersed so as to create large canopies of shade in areas of high use.

- (IV) A minimum of one shade structure shall be provided in the central plaza area, providing a minimum of 1,000 square feet of shade coverage.
 - B. Tree Planting Approach
 - (I) Trees shall be located in raised planters with a maximum of 24 inches in height as related to surrounding paved surfaces.
 - (II) Shade trees shall comprise a minimum of 75% of trees planted in the central plaza area.
- iii. Requirements for the tot lot and splash pad are as follows:
 - A. Shade Coverage
 - (I) 40% at tree canopy maturity.
 - (II) Minimum of 50% shall be natural shade.
 - (III) Shade coverage shall be clustered and dispersed so as to create large canopies of shade in areas of high use.
 - (IV) A minimum of one shade structure shall be provided in the tot lot and splash pad area, providing a minimum of 1,000 square feet of shade coverage.
 - B. Tree Planting Approach
 - (I) Trees adjacent to the tot lot and splash pad shall be located in raised planters with a maximum of 24 inch in height as related to surrounding paved surfaces.
 - (II) Shade trees shall comprise a minimum of 75% of trees planted in the tot lot and splash pad area.
- iv. Requirements for the east side community space are as follows:
 - A. Shade Coverage
 - (I) 35% at tree canopy maturity.
 - (II) Minimum of 50% shall be natural shade.
 - (III) Shade coverage shall be clustered and dispersed so as to create large canopies of shade in areas of high use.
 - (IV) A minimum of one shade structure shall be provided in east side community space, providing a minimum of 1,000 square feet of shade coverage.
 - B. Tree Planting Approach
 - (I) Trees within landscaped areas shall be located in raised planters with a maximum of 24 inches in height as related to surrounding paved surfaces.
 - (II) Trees within the plaza area adjacent to the events lawn shall be planted a grade with the surrounding pavement.
 - (III) Shade trees shall comprise a minimum of 65% of trees planted in the east side community space.
- v. Requirements for the events lawn are as follows:
 - A. Shade Coverage
 - (I) 20% at tree canopy maturity.

- (II) Minimum of 40% shall be natural shade.
 - (III) Shade coverage shall be located at the perimeter of the space.
 - (IV) A minimum of one shade structure shall be provided at the west extents of the events lawn to protect the stage area from sun and natural elements, providing a minimum of 2,500 square feet of shade coverage.
- B. Tree Planting Approach
- (I) Shade trees shall be used within the perimeter of the events lawn and shall be planted at grade with adjacent lawn area.
 - (II) Shade trees shall be planted adjacent to the concession/restroom building, and shall be located in raised planters with a maximum height of 12 inches as related to surrounding paved surfaces.
 - (III) Ornamental trees shall be used at the transition of the events lawn to the east side community space, and shall be located in raised planters.
- vi. Requirements for the 46th Avenue, Columbine Street and Clayton Street streetscapes are as follows:
- A. Shade Coverage – 46th Avenue, Columbine Street and Clayton Street streetscapes
- Trees shall be planted at a minimum of 30 feet on center adjacent to all street frontages.
- B. Tree Planting Approach – 46th Avenue Streetscape
- (I) Shade trees shall be used along all street frontages.
 - (II) East of Thompson Court (46th Avenue and Clayton Street), all streetscape trees shall be planted in raised planters with a maximum height of 12 inches as related to surrounding paved surfaces.
 - (III) West of Thompson Court (46th Avenue and Columbine Street), all streetscape trees shall be planted in raised planters with a maximum height of 30 inches as related to surrounding paved surfaces.
- C. Tree Planting Approach – Columbine Street Streetscape
- (I) Shade trees shall be used along all street frontages.
 - (II) All streetscape trees shall be planted in raised planters with a maximum height of 30 inches as related to surrounding paved surfaces.
- D. Tree Planting Approach – Clayton Street Streetscape
- (I) Shade trees shall be used along all street frontages.
 - (II) All streetscape trees shall be planted in planting areas flush with surrounding paved surfaces.
- vii. Requirements for Swansea Elementary School (playground) are as follows:
- A. Shade Coverage
- (I) 20% coverage at tree canopy maturity.

- (II) Minimum of 50% shall be natural shade.
 - (III) A minimum of three shade structures totaling and minimum of 1000 square feet shall be provided within the playground space.
 - B. Tree Planting Approach
 - (I) Shade trees shall be used within play areas and at the perimeter of the playground; trees planted at the perimeter of the playground may be planted at grade with adjacent pavement or in raised planters, trees planted internal to the playground shall be planted in raised planters.
 - (II) A mix of ornamental and evergreen trees shall be used within garden areas.
- viii. Requirements for Swansea Elementary School (parking lot) are as follows:
 - A. Shade Coverage

A minimum of one shade tree per every five parking spaces shall be provided in planting islands separated by curbs from adjacent pavement
 - B. Tree Planting Approach

Shade trees shall be used within planting islands in the parking lot.

14.5.8. Understory Planting

- a. The Developer shall provide cover planting schemes with respect to material types, landscape maintenance, and character.
- b. All understory planting material will be dictated by the City of Denver Forestry's planting standards and requirements. Height restrictions and species of planting will be provided in accordance with these standards and requirements.
- c. Understory Planting Material Tiers
 - i. Tier 1 – Naturalized Turf: Tier 1 includes areas intended for full access to active and passive use of landscaped areas, and include the events lawn and open lawn (within the east side community space). The following requirements shall be followed in irrigated turf areas:
 - A. Provide low water-use, high-traffic turf sod adapted to the local climate.
 - B. Annual maintenance to be provided at regular weekly intervals during the growing season.
 - C. Permanent irrigation shall be provided, and shall incorporate advanced technologies in turfgrass irrigation to mitigate evaporation; irrigation product preferences are to match City of Denver standards.
 - ii. Tier 2 – Transition Landscapes: Tier 2 areas include landscaped areas between program area uses on the Cover (multi-use field, central plaza space, events lawn, and east side community space). Transition landscapes also include landscaped areas within streetscapes and internal Cover program areas, transition landscapes at the ends of the Columbine Street cover extension and Clayton Street cover extension and landscaped areas within the Swansea Elementary School outdoor areas. The following requirements apply to transition landscapes:
 - A. Materials in transition landscapes shall provide definition and scale to transition areas on the Cover; attention is to be given to plant material massing and seasonal interest.

- B. Hardy, drought-tolerant shrub, ornamental grass and hardy perennial plantings shall comprise a minimum of 80% of plant materials.
 - C. A massed-planting approach shall be applied for ease of maintenance and for aesthetic appeal.
 - D. Maintenance shall be provided on a semi-annual basis (spring pruning and fall clean-up) at a minimum during the growing season.
 - E. Weed removal shall be provided on a regular basis during the growing season.
 - F. Permanent irrigation shall be provided; drip irrigation is not to be used; irrigation product preferences are to match City of Denver standards.
- iii. Tier 3 – Enhanced Landscapes: Tier 3 areas include entry gardens, passive garden areas and focal nodes on the Cover as identified in the I-70 Cover Plans included in Schedule 10B Contract Drawings. The following requirements apply to enhanced landscapes:
- A. Materials used in enhanced landscapes shall vary in size, color, texture and bloom time for four-season interest.
 - B. A combination of hardy, drought-tolerant shrub, ornamental grass and perennial planting shall comprise a minimum of 60% of plant materials. A maximum of 40% of plant materials may be accent or annual planting.
 - C. Planting arrangements may be formal or informal.
 - D. Maintenance shall be provided on a regular basis during the growing season (pruning, dead-heading, weeding, etc.).
 - E. Permanent irrigation shall be provided; drip irrigation is not to be used; irrigation product preferences are to match City of Denver standards, and require separate meters and central control systems.

14.5.9. Site Furnishings Locations and Counts

The Developer shall provide the following items, all of which shall comply with the relevant specifications set out in Appendix B to this Section 14, in the areas specified in this Section 14.5.8.

- a. Benches
 - i. 46th Avenue Streetscape: Provide a minimum of six backless benches located along north side of sidewalk between Columbine Street and Thompson Court;
 - ii. Tot Lot and Splash Pad: Provide a minimum of two backed benches located adjacent to tot lot; and
 - iii. East Side Community Space: Provide a minimum of two backed benches located within playground area.
- b. Bike Racks
 - i. Tot Lot and Splash Pad: Provide bike rack(s) that accommodate a minimum of 12 bikes and shall be located adjacent to the parking area; and
 - ii. Columbine Street: Provide bike rack(s) that accommodate a minimum of 20 bikes and shall be located along east side of Columbine Street.

- c. Trash/Recycling Receptacles
 - i. Style 1: Standard
 - A. Central Plaza Space: Provide one trash and recycling receptacle located within the northwest seating area;
 - B. Tot Lot and Splash Pad: Provide one trash and recycling receptacle adjacent to tot lot; and
 - C. East Side Community Space: Provide one trash and recycling receptacle adjacent to playground space.
 - ii. Style 2 – Solar-Powered Compacting
 - A. Central Plaza Space: Provide one solar-powered compacting trash and recycling receptacle located within the southwest seating area;
 - B. Tot Lot and Splash Pad: Provide one solar-powered compacting trash and recycling receptacle adjacent to west or south side of concession building; and
 - C. Events Lawn: Provide one solar-powered compacting trash and recycling receptacle located at the northeast entrance stairs and provide one solar-powered compacting trash and recycling receptacle located at the southeast entrance stairs.
- d. Tables and Chairs
 - i. Central Plaza Space:
 - A. Provide a minimum of six embedded or surface mount tables with a minimum of 24 embedded or surface mount chairs within northwest seating area; and
 - B. Provide a minimum of three embedded or surface mount picnic tables within southwest seating area.
 - ii. Tot Lot and Splash Pad:

Provide a minimum of six embedded, surface mount or movable tables with a minimum of 24 movable chairs adjacent to concession/restroom building.
 - iii. East Side Community Space:

Provide a minimum of three embedded or surface mount tables with a minimum of 12 embedded or surface mount chairs adjacent to playground area.
- e. Tree Grates

East Side Community Space:

Provide a minimum of five tree grates to be located where trees are planted at grade with surrounding paved surfaces between the events lawn and the open lawn/playground areas.
- f. Removable Bollards
 - i. Swansea Elementary School outdoor areas:

Provide a minimum of three removable bollards located to the south of the sidewalk south of the Swansea Elementary School parking lot, on axis with the central plaza space corridor to the south.
 - ii. Central Plaza Space:

Provide a minimum of three removable bollards located on the south entrance of the central plaza space along the 46th Avenue streetscape.

g. Drinking Fountain

Concession/Restroom Building:

Provide a minimum of one drinking fountain to be provided on the south side of the concession/restroom building.

h. Fences

i. Fencing shall completely enclose the multi-use field, with five gate openings as described in the I-70 Cover Plans included in Schedule 10B Contract Drawings and the I-70 Cover and Swansea Elementary School Outdoor Areas Design Narrative included in the Schedule 10B Contract Drawings; and

ii. Fencing shall completely enclose the Swansea Elementary School, with four gate openings as described in the I-70 Cover Plans included in Schedule 10B Contract Drawings and the I-70 Cover and Swansea Elementary School Outdoor Areas Design Narrative included in Schedule 10B Contract Drawings.

14.5.10. Splash Pad

The Developer shall design and construct the splash pad in accordance with the I-70 Cover Plans included in Schedule 10B Contract Drawings and the I-70 Cover and Swansea Elementary School Outdoor Areas Design Narrative included in Schedule 10B Contract Drawings.

14.5.11. Tot lot

The Developer shall design and construct the tot lot in accordance with the I-70 Cover Plans included in Schedule 10B Contract Drawings and the I-70 Cover and Swansea Elementary School Outdoor Areas Design Narrative included in Schedule 10B Contract Drawings.

14.5.12. Multi-Use Field

The turf supplied and installed by the Developer for the multi-use field shall comply with the relevant specifications set out in Appendix B to this Section 14.

14.5.13. Electrical

a. The Developer shall provide utility service and meters in accordance with this Section 14 and Schedule 10, Section 4 Utilities. Separate metered service shall be provided for Cover Maintainer, Swansea Elementary School outdoor areas, and Developer/Department maintained facilities.

b. Events Lawn Pavilion power (amplification requirement): The Developer shall provide power at the events lawn pavilion structure in accordance with the I-70 Cover Plans included in Schedule 10B Contract Drawings and the I-70 Cover and Swansea Elementary School Outdoor Areas Design Narrative included in Schedule 10B Contract Drawings.

c. As part of the Cover and Swansea Elementary School outdoor areas plan deliverables, the Developer shall provide Electrical plans.

14.5.14. Security Cameras

The Developer shall provide full security camera coverage for the Cover and a signal receiver. Security cameras shall include wireless connectivity. Signal receiver shall be located within an area which has the ability to receive all camera signals. Signal receiver shall be connected to CCD's fiber network.

14.5.15. Buildings

The Developer shall design and construct all buildings in accordance with the I-70 Cover Plans included in Schedule 10B Contract Drawings and the I-70 Cover and Swansea Elementary School Outdoor Areas Design Narrative included in Schedule 10B Contract Drawings, including the concession/restroom building and maintenance buildings.

14.6. Corridor Landscape Design and Plans

14.6.1. Existing Site Inventory

The Developer shall prepare plan sheets and supporting data which document the existing landscape and irrigation system facilities in relation to the Corridor including present conditions. These documents shall be designated as the Existing Site Inventory. The Developer shall submit the Existing Site Inventory to, and obtain Acceptance thereof from, the Department prior to the issuance of NTP 2. The Existing Site Inventory shall be prepared in accordance with the CDOT *Landscape Architecture Manual*, Appendix 5 – Landscape Plan Development. In addition, the Existing Site Inventory shall include:

- a. Locations of wetlands, SB40 Areas and riparian areas; the locations formally landscaped areas; the locations of irrigated areas, and the locations of other non-paved areas. All areas shall have a description of the existing vegetation and conditions;
- b. An inventory of all trees with a diameter two inches or greater at breast height in SB40 areas. An inventory of all trees with a diameter of four inches or greater at breast height in all other areas. An inventory of shrubs including type and square footage of coverage in all areas;
- c. Vegetation location and identification (including photo documentation), including species, location, condition, size, health, and a recommendation for remaining undisturbed, pruning, removal, transplanting, or replacement;
- d. Details of landscapes and irrigation systems impacted by the Project; and
- e. Locations of protected areas.

14.6.2. Corridor - Preliminary (30% Level) Landscape Plans

The Developer shall prepare and submit the Corridor - Preliminary (30% level) Landscape Plans to the Department for Acceptance. The Corridor – Preliminary Landscape Plans shall be prepared in accordance with the CDOT *Landscape Architecture Manual*, Appendix 5 – Landscape Plan Development. In addition, the Corridor – Preliminary Landscape Plans shall include the following:

- a. The landscape design;
- b. Locations, mitigations, removals, and replacements of trees, shrubs, landscapes and irrigation impacted by the Project;
- c. Proposed locations of replacement or proposed transplanted vegetation within the Site;
- d. Proposed tree species for the I-70 Mainline, I-225 and I-270 based on the species and conditions as outlined by the State's portion of the FHWA The Roadside Use of Native Plants;
- e. Proposed tree species for Local Agency landscaping areas. The Developer shall comply with Local Agency requirements;
- f. Proposed seed mixes;
- g. Description of how landscape designs will coordinated into aesthetics for other portions of the Construction Work; including the walls, drainage, structures, streetscape, lighting and fences; and

- h. Inclusion of aesthetic Elements unless these are provided under separate discipline specific plan submittals. Where aesthetic designs are provided elsewhere, provide specific reference to these locations.

14.6.3 Corridor - Final (100% Level) Landscape Plans

The Developer shall prepare and submit the Corridor - Final (100% level) Landscape Plans for the Corridor to the Department for Acceptance.

14.7. Aesthetic Requirements

14.7.1. Bridges

- a. The Developer shall design the finishes and colors for all proposed bridge superstructures and substructures, bridge columns, pier caps, girders, abutments, barrier rails, wing walls, retaining walls, noise walls as provided in the Aesthetic Design Standards for Central 70 included in Schedule 10B Contract Drawings. Existing structures do not need to be modified to comply with these requirements.
- b. The Developer's design shall create visually appealing transitions between various Project Elements. (For example, the transition between a noise wall adjacent to a bridge and the noise wall on the bridge shall blend together.)
- c. Bridge Elements that shall be included in the aesthetic treatments include the bridge super- and substructures, abutments, columns, bridge rail, barriers, pedestrian fencing, retaining walls, and lighting.
- d. Girders on an individual bridge shall have a consistent depth along the bridge to the greatest extent possible.
- e. All exposed drain pipes shall be painted to match adjacent bridge Elements. They shall be positioned where least viewed from the roadway.

14.7.2. Retaining Walls and Noise Walls

The Developer shall design and construct walls with aesthetic treatments as provided in the Aesthetic Design Standards for Central 70 included in Schedule 10B Contract Drawings.

14.7.3. Medians

Where medians are six feet wide or narrower and within islands; hardscape treatments of colored, stamped, or artistic paving shall be provided. Medians greater than six feet wide shall be designed and constructed with landscaping and irrigation.

14.7.4. Grading and Slope Paving Aesthetics

- a. The Developer shall perform all finished grading to maintain an aesthetically pleasing surface, consistent with CDOT best practices; and
- b. Existing slopes that are changed, removed, replaced, refreshed, or altered shall be treated as new slopes and reconfigured to be consistent with the requirements described in this Section 14 and the Aesthetic Design Standards for Central 70 included in Schedule 10B Contract Drawings.

14.7.5. Fencing

Fencing shall comply with the requirements described in the Aesthetic Design Standards for Central 70 included in Schedule 10B Contract Drawings.

14.7.6. Temporary Wall at Swansea Elementary School

The Developer shall design and construct a temporary wall between I-70/Columbine Street and Swansea Elementary School for use during the Construction Period. The wall shall be in place prior to initiation of any Construction Activities within 200 feet of the school ROW. The location and limit of the temporary wall as well as the aesthetic requirements are shown in the DPS

Temporary Wall Exhibit provided in the Reference Documents. The wall shall provide visual screening and reduce noise and dust at the school. The wall shall be constructed of a material that has a minimum density of four pounds per square foot of wall surface area. The wall shall be 12 feet tall and constructed without open joints or gaps.

To allow the school children to observe construction activities the wall shall incorporate 4 observation windows with minimum dimensions of 4 feet wide and 2 feet high. The windows shall be made of shatterproof clear material. The windows shall be set within the wall at varying heights to accommodate children ranging from ages 5 to 12.

14.8. Landscape Requirements

14.8.1. The Developer's Environmental Compliance Work Plan (ECWP) shall include an organization chart showing Developer's organization of the personnel responsible of implementing the Developer's landscape, irrigation, and noxious weed control programs. The plan shall specifically identify the individuals and positions who shall serve in the key roles, including the Engineer, referenced in the following sections of the CDOT Standard Specifications:

- a. Section 212, Seeding, Fertilizer, Soil Conditioner, and Sodding
- b. Section 213, Mulching
- c. Section 214, Planting
- d. Section 215, Transplanting
- e. Section 216, Soil Retention Covering
- f. Section 217, Herbicide Treatment
- g. Section 623, Irrigation Systems

14.8.2. The ECWP shall include a detailed description of the roles that the Developer's Process Control (PC) and Developer's Independent Quality Control (IQC) programs shall be assigned to implement the hold points and decision points required in accordance with the sections of the CDOT Standard Specifications listed in Section 14.8.1.

14.8.3. The Developer shall notify the Department a minimum of three Calendar Days in advance of, and invite the Department to attend, all inspections required to be carried out pursuant to this Section 14.

14.8.4. The landscape plan As-Builts shall be completed by a Registered Landscape Architect in the State of Colorado.

14.8.5. The Notice of Substantial Landscape Completion, as referenced in Section 214.04 of CDOT Standard Specifications, will be issued by the Department. The Developer shall provide the sufficient documentation, including documentation from the IQC Program, to allow the Department to evaluate eligibility for the Notice of Substantial Landscape Completion.

14.8.6. Protection and Preservation

The Developer shall save, protect, and maintain all existing vegetation during implementation of the Construction Work, except for that vegetation that requires removal as part of the Project. All Construction Work shall be performed in such a manner that will avoid these protected areas.

14.8.7. Landscaping Completion and Establishment

- a. Landscape completion
 - i. Completion of all landscaping, is a Final Acceptance Condition, in accordance with the requirements of this Section 14 including that:
 - A. All plants shall have been planted and all irrigation items shall be operational in compliance with the requirements of this Section 14;

- B. All plants shall be healthy and in flourishing condition and be free of dying branches and branch tips, and shall bear foliage of normal density, size, and color;
- C. All mulch beds shall have been completely mulched; and
- D. The Notice of Substantial Landscape Completion shall have been issued by the Department;
- ii. Prior to Final Acceptance, the Developer shall submit to the Department for Information a Landscape Maintenance Plan prepared in accordance with the requirements of Section 214 of the CDOT Standard Specifications; and
- iii. When the Developer considers that all the conditions relating to landscape completion have been achieved, it will notify the Department to arrange a joint landscape inspection with the Developer's Landscape Architect.
- b. Landscape Establishment
 - i. The Developer shall comply with the requirements of Section 214.04 of the CDOT Standard Specifications during the Landscape Establishment period (as described in that Section).
 - ii. All landscape installations shall be completely maintained by the Developer during the Landscape Establishment period in accordance with the requirements of Schedule 11 Operations and Maintenance Requirements.
 - iii. The Developer shall audit the landscape installations on at least a monthly basis during the Landscape Establishment period.
 - iv. At the end of the Landscape Establishment period, the Department will inspect the landscaping to determine compliance to the requirements of the Project Agreement. The Developer's Landscape Architect and an IQC representative shall participate in these inspections. All landscape installations shall be fully established, weed-free, clean, smooth, properly graded, and without plant mortality in order to be Accepted by the Department. Should the Department identify any areas of Nonconforming Work, the provisions of Section 6.5 of Schedule 8 Project Administration shall apply, the Developer shall remedy the Nonconforming Work and the Landscape Establishment period (and the Developer's obligations under this Section 14.8.6.b) shall be extended for a minimum of one additional growing season.

14.9. Deliverables

The Developer shall submit the following to the Department for Information, Acceptance, or Approval in accordance with the timeframes specified:

Table 14-1 Deliverables

Deliverable	Information, Acceptance, or Approval	Schedule
Cover and Swansea Elementary School outdoor areas – Preliminary Landscape and Aesthetic Plans	Acceptance	Prior to the issuance of NTP2
Cover and Swansea Elementary School outdoor areas – Final Landscape and Aesthetic Plans	Acceptance	Prior to RFC Documents
Corridor – Existing Site Inventory	Acceptance	Prior to the issuance of NTP 2
Corridor – Preliminary Landscape Plans	Acceptance	Prior to Final Landscape Plan Submittal
Corridor – Final Landscape Plans	Acceptance	Prior to RFC Documents
Landscape Maintenance Plan	Information	Prior to Final Acceptance
Certificate of Compliance for Imported Topsoil	Information	Prior to hauling topsoil to the Project
Landscape and Aesthetic As-Built plans	Acceptance	Prior to Final Acceptance

14.10. Appendices

- Appendix A Project Special Provisions
- Appendix B Cover Specifications

Appendix A
Project Special Provisions

The following specifications modify and take precedence over the Standard Specifications. The requirements of Appendix A to Schedule 10A Applicable Standards and Specifications apply to these Project Special Provisions.

PROJECT SPECIAL PROVISIONS

	<u>Page</u>
Index	14-17
Section 519 – Garden Roof Assembly	14-18 to 14-36

**SECTION 519
 GARDEN ROOF ASSEMBLY**

Section 519 is hereby added to the Standard Specifications for the project as follows:

DESCRIPTION

519.01 This work consists of furnishing and installing Waterproofing and Garden Roof Assemblies including, Monolithic Waterproofing Membrane and flashings, protection course / root barrier protection, geofoam, drainage / water retention components, growing media confinement system and lightweight engineered growing medium (soil).

MATERIALS

519.02 All material requirements are as follows:

- (a) *Waterproofing Membrane.* Waterproofing Membrane shall be a hot, fluid applied, rubberized asphalt meeting the Construction Standards and other pertinent physical properties:

PROPERTY	TEST METHOD	TYPICAL RESULT
Flash point	ASTM D-92	<500°F*
Penetration	ASTM D-5329	3.9 in @77°F (25°C)
Flow	ASTM D-5329	0.04 in @ 140°F (60°C)
Toughness	CGSB-37.50-M89	16.0 Joules
Ratio of Toughness to Peak Load	CGSB-37.50-M89	0.069
Water Vapor Permeability	ASTM E-96, PROCEDURE E CGSB-37.50-M89	0.3 ng/Pa(s)M ²
Water Absorption	CGSB-37.50-M89	.11 gram weight gain
Low Temperature Flexibility (-25°C)	CGSB-37.50-M89	No delamination, adhesion loss, or cracking or cracking
Low Temperature Crack Bridging Capability	CGSB-37.50-M89	No cracking, adhesion loss, or splitting
Heat Stability	CGSB-37.50-M89	No change in viscosity, penetration, flow or low temperature flexibility
Viscosity	CGSB-37.50-M89	11.0 seconds
Water Resistance (5 days/50°C)	CGSB-37.50-M89	No delamination, blistering, emulsification, or deterioration
Softening Point	ASTM D-36	180°F (82°C)
Elongation	ASTM D-5329	1000% minimum
Resiliency	ASTM D-3407	40% minimum
Bond to Concrete	ASTM D-3407	Pass 0°F (-18°C)
Acid Resistance	ASTM D-896 Procedure 7.1 (N-8)	Pass-50% Nitric Acid -50% Sulfuric Acid

-2-
SECTION 519
GARDEN ROOF ASSEMBLY

PROPERTY	TEST METHOD	TYPICAL RESULT
Resistance to Hydrostatic Pressure	ASTM D-08.22 Draft 2	100 psi (equals 231 foot of head water)
Resistance to Salt Water	ASTM D-896 similar 20% sodium chloride sodium carbonate calcium chloride	No delamination, blistering, emulsification or deterioration
Resistance to Fertilizer	ASTM D-896 similar undiluted, 15/5/5, nitrogen/phosphorus/potash	No delamination, blistering, emulsification or deterioration
Resistance to Animal Waste	3-year exposure	No deterioration
Solids Content		100%-no solvents
Shelf Life		10 years (sealed)
Specific Gravity		1.23 + .02
*102°F more than the application temperature recommended by the manufacturer.		

(b) *Reinforcing*

1. Standard Duty Reinforcing: Spunbonded polyester fabric membrane reinforcing sheet in standard widths of 6, 12, and 39 inches and a length of 600 feet, meeting the following requirements:

PROPERTY	TEST METHOD	TYPICAL RESULT
Color	NA	White
Unit Weight (oz/sq yd)	ASTM D1910	1.35
% Elongation (to break)	ASTM D2523	42
Tear Strength (lb)	ASTM D2263	8
Breaking Strength (lb)	ASTM 2523	25
De Matia Flex Cycles	ASTM D813	100,000

2. Heavy Duty Reinforcing: 60-mil (1.5 mm) thick, in standard widths of 6, 12, 18, 24, 36 and 48 inches, and a length of 100 feet, uncured neoprene membrane reinforcing sheet meeting the following requirements:

-3-
SECTION 519
GARDEN ROOF ASSEMBLY

PROPERTY	TEST METHOD	TYPICAL RESULT
Width (inch)	ASTM D751-66	0 /+ 0.125
Length (inches)	ASTM D751-66	0 /+ 1.0
Thickness (inches)	ASTM D751-66	0.060 +/- 10%
Tensile Strength (psi, min)	ASTM D412, Die C	1400
Elongation (% , min)	ASTM D412, Die C	300
Tear resistance (lb/inch, min)	ASTM D624, Die C	125
Brittleness Point @ -30° F	ASTM D2137	No Break
Ozone Resistance (@20% Ext., 100 MPa, 100 hrs @ 104° F	ASTM 1149	No Cracks @ 7x Magnif.
Water Absorption (% , weight change range) (46 hrs. @ 158° F)	ASTM D471	-8, +2

(c) *Flashing*

1. 60-mil (1.5 mm) thick, uncured neoprene sheet meeting the requirements of Heavy Duty Reinforcing
2. Two-component, liquid applied resin membrane flashing system.
 - A. Poly methyl-methacrylate (PMMA) resin per manufacturer’s recommendations.
 - B. Acrylic resin with integral chopped polymer fiber reinforcement per manufacturer’s recommendations.
 - C. Resin based primers, additives, reinforcing fleece, surfacing topcoats per manufacturer’s recommendations.

(d) *Protection Course / Root Barrier Protection – at Landscape Areas:* 160-mil (4 mm) thick polyester reinforced, rubberized asphalt sheet with granular surface and root inhibiting additive. Roll size shall be approximately 39 inches wide by 33 feet long, and have a minimum tensile strength of 50 lbs/inch (machine & cross direction @ 163°F (73°C).

(e) *Protection Course – at Vehicular Traffic Areas:* 85-mil (2 mm) thick heavy duty, rubberized asphalt protection sheet with synthetic fiber reinforcement. Roll size shall be approximately 39 inches wide by 50 feet long.

(f) *Insulation:* Expanded Polystyrene (EPS) Geofoam

1. Foam-Control EPS Geofoam Type EPS29 in compliance with the following properties:

-4-

**SECTION 519
 GARDEN ROOF ASSEMBLY**

FOAM-CONTROL EPS GEOFOAM PROPERTIES								
PROPERTY	UNITS	ASTM D6817						
		EPS12	EPS15	EPS19	EPS22	EPS29	EPS39	EPS46
Density ¹ , min.	lb/ft ³	0.70	0.90	1.15	1.35	1.80	2.40	2.85
Compressive Resistance ^{1,2} @ 1% deformation, min.	psi	2.2	3.6	5.8	7.3	10.9	15.0	18.6
Elastic Modulus ¹ , min	psi	220	360	580	730	1090	1500	1860
Flexural Strength ¹ , min.	psi	10.0	25.0	30.0	35.0	50.0	60.0	75.0
Water Absorption ¹ by total immersion, max.	vol. %	4.0	4.0	3.0	3.0	2.0	2.0	2.0
Oxygen Index ¹ , min.	vol. %	24	24	24	24	24	24	24
Buoyancy Force	lb/ft ³	61.7	61.5	61.3	61.1	60.6	60.0	59.5
Additional Properties for Compressible Applications								
Compressive Resistance ¹ @ 5% deformation, min.	psi	5.1	8.0	13.1	16.7	24.7	35.0	43.5
Compressive Resistance ¹ @ 10% deformation, min.	psi	5.8	10.2	16.0	19.6	29.0	40.0	50.0
See ASTM D6817 Standard for test methods and complete information Combined live and dead load stresses should not exceed the compressive resistance at 1% deformation.								

2. All Foam-Control EPS Geofoam blocks shall be treated by the manufacturer with a tested and proven termite treatment for below grade applications, 3 year minimum field exposure. The treatment shall be EPA registered, meet requirements of ICC ES EG239, and be recognized in an ICC ES report.
3. Geogripper Plates – The plates shall be made of 20 gauge galvanized or stainless steel, 4"x4" with two-sided 0.6" high multi-barbed design capable of piercing the EPS Geofoam. Each plate shall be capable of a lateral holding strength of 60 lbs.

(g) *Drainage/Water Retention Component*

1. Hydrodrain Air Layer: Composite drainage system consisting of a three dimensional, crush-proof, drainage core and filter fabric meeting the following requirements for Geonet Style 300:

-5-
SECTION 519
GARDEN ROOF ASSEMBLY

PROPERTY	TEST METHOD	UNITS	Geonet Style			Dimple Style			
			300	302	1000	400	420	700	900

Roll Weight	NA	Lb	70	80	55	39	42	47	52

2. Gardendrain Moisture Panels: Three-dimensional, molded panels of recycled polyethylene with drainage channels top and bottom sides and water retention reservoirs top side meeting the following requirements:

-6-
SECTION 519
GARDEN ROOF ASSEMBLY

PROPERTY	TEST METHOD	TYPICAL RESULT
Panel Dimensions	NA	4 ft. x 6 ft.
Panel Height	NA	2 inches
Weight w/cups empty w/cups filled	NA	0.4 lb/ft ² dry; 2.0 lb/ft ² wet 4.3 lb/ft ² dry; 6.3 lb/ft ² wet
Strength w/cups empty w/cups filled	ASTM D1621	3,154 lb/ft ² > 7,000 lb/ft ²
Flow Rate	ASTM D4716	42 gal./min./ft width; h.g. = 1
Water Retention w/cups empty w/cups filled	NA	0.19 gal/ft ² 0.20 gal/ft ²
Volume to Fill	NA	0.08 ft ³ /sf in area

3. Moisture Retention Mat: A moisture retention fabric composed of high-quality, non-rotting polypropylene fibers. The fabric shall be approximately 3/16inch thick, in rolls of approximately 7.5 feet wide by 100 feet long, with a water retention capacity of approximately 0.13 gal./ft² (5.3 l/m²), meeting the following requirements:

PROPERTY	TEST METHOD	TYPICAL RESULT
Tensile Strength	ASTM D4632	380 lb
Elongation:	ASTM D4632	50%
Trapezoidal Tear:	ASTM D4533	145 lb/in ²
Puncture Strength	ASTM D4833	240 lb

- (h) *Drainage/Soil Confinement Components*: Confinement components shall be provided where the concrete substrate surface is sloped greater than 10°.

1. Expandable polyethylene sheet strip assembly, connected by a series of offset, full depth ultrasonic welded seams aligned perpendicular to longitudinal axis of strips which, when expanded, form walls of a flexible, 3-dimensional, confinement system. , meeting the following requirements:
 - A. Strip sheet height: 12 inches.
 - B. Strip sheet thickness: 50 mil (-5%, +10%) per ASTM D5199
 - C. The polyethylene shall have a density of 58.4-60.2 lb/cu.ft. (0.935-0.965 g/cm³) per ASTM D1505.
 - D. The polyethylene shall have an Environmental Stress Crack Resistance (ESCR) of 3000 hours tested per ASTM D1693.
 - E. Carbon black content for UV stabilization shall be 1.5%-2% by weight, distributed throughout the material.

-7-

**SECTION 519
 GARDEN ROOF ASSEMBLY**

- F. Cell seam strength shall be uniform over the full depth of the cell. Minimum seam peel strengths shall be 80 lb (355 N) per inch of cell depth.
 - G. Long-term seam peel-strength test shall be performed on all resin or pre-manufactured sheet or strips. A 4" (100 mm) wide seam sample shall support a 160 lb (72.5 kg) load for a period of 168 hours (7 days) minimum in a temperature-controlled environment undergoing a temperature change on a 1-hour cycle from ambient room to 130 °F (54C).
2. Integral Stainless Steel Cable Tendons (if needed) per manufacturer's recommendations.
 3. Cable stops, oval sleeves, steel washers and polyethylene washers per manufacturer's recommendations.

(i) *Filter Fabrics*

Non-woven, polymeric, geotextile fabric meeting the following requirements:

PROPERTY	TEST METHOD	TYPICAL RESULT
Roll Size	NA	12.5 ft x 120 ft
Weight	ASTM D5261	3.5 oz/yd ²
Flow Rate	ASTM D4491	150 gal/min/ft ²
Tensile Strength	ASTM D4632	90 lb
Elongation	ASTM D4632	50%
Mullen Burst	ASTM D3786	185 lb/in ²
Puncture Strength	ASTM D4833	60 lb
Trapezoidal Tear	ASTM D4533	40 lb
Apparent Opening	ASTM D4751	50

(j) *Soil*

1. Custom Growing Media Mix capable of supporting vigorous growth of the specified vegetation, complying with the following specification:

-8-
SECTION 519
GARDEN ROOF ASSEMBLY

PROPERTY	TEST METHOD	TYPICAL RESULT*
Grain Size Distribution	NA	
Clay fraction		0 – 2 %

Compost Fraction		
1. Meet or exceed USEPA Class A standard, 40 CFR 503.13, Tables 1 & 3 (chemical contaminants) and 40 CFR 503.32(a) (pathogens) and/or be permitted in the state of origin to produce Class A material. 2. Meet US Compost Council STA/TMECC criteria or equal for Class I or II stable, mature product. 3. Testing of material shall be by an approved laboratory with recommendations to support intended plants specified. Required testing of each batch or by each major area of the cover.		
* Values may be adjusted due to availability of local materials or special project conditions related to plant selection and/or environmental conditions, pending approval of the engineer. ** Nutrients shall be adjusted with appropriate slow-release fertilizer with micronutrient additions if below lower target range.		

- Expanded Lightweight Aggregate for use as fill material at vegetation-free zones shall meet the following specification:

-9-

**SECTION 519
 GARDEN ROOF ASSEMBLY**

PROPERTY	TEST METHOD	TYPICAL RESULT
Grain Size Distribution	NA	
Clay fraction		< 1%

OM content	NA	< 1% mass
Abrasion Resistance	ASTM C131-96	< 25% loss
Soundness	ASTM C88	< 0.50% loss

(k) *Garden Roof Accessory Components*

1. Drain Inspection Chambers - 18 gauge stainless steel, over-drain inspection boxes, with perforated sides and removable lids. Utilize extensions to increase the height for deeper growing media applications. Inspection Chambers shall be located within shrub/groundcover areas so they can be screened visually and shall be set square to adjacent paving or hard edges.
2. Vegetation Transition Areas – Metal Angle of unfinished aluminum bent at a 90 degree angle, with a slotted vertical leg to allow for drainage.

(l) *Erosion Control Materials*

1. Erosion Control Mat. Biodegradable Erosion Control Matting: Composed of straw and/or coconut fiber stitched together with biodegradable thread forming top and bottom netting, meeting the following requirements:

-10-
SECTION 519
GARDEN ROOF ASSEMBLY

PROPERTY	TEST METHOD	TYPICAL RESULT
Width (feet)	NA	6.67 +/- 5%
Length (feet)	NA	108.0 +/- 5%

Resiliency (%)	ECTC	85
Stiffness / Flexibility (oz-in)	ASTM D1388 / ECTC	0.11
Smolder Resistance	ECTC	YES ⁴
1. ECTC = Erosion Control Technology Council 2. MD = Machine Direction 3. TD = Transverse Direction 4. Material is smolder resistant according to ECTC Guidelines		

2. Heavy-Duty Anchors. Plastic Anchor Disk with connected plastic stem and friction-fit plastic top disk used to fasten Biodegradable Erosion Control Matting or sedum carpet and tile. The plastic anchor shall have the following thicknesses: Base Disk: 3/16 inch; Shaft: 3/8 inch diameter; Top Disk: 0.03 inch. The plastic anchor length and width shall be as follows: Base Disk: 5 inch diameter; Shaft: 12 inch; Top Disk: 4.75" diameter.
3. Hydromulch. Wood fiber-based hydromulch with natural-based tackifier for use in securing sedum cuttings on the application area. Hydromulch shall be mixed with tackifier and applied as wet slurry to cutting installations.
4. Dry Hydromulch. Wood fiber or straw-based hydromulch with integrally mixed guar-based tackifier. For use where hydromulching equipment and access is not possible. Dry hydromulch shall be applied in accordance with these specifications and per manufacturer's recommendations.

CONSTRUCTION REQUIREMENTS

519.03 Submittals. The contractor shall submit testing results to ensure materials meet the following qualifications:

- (a) Certification from an approved independent testing laboratory experienced in testing this type material, that the material meets these specifications for rubberized asphalt waterproofing membranes (testing not greater than 5 years old) 25% post-consumer recycled rubber content and inert clay fillers. Testing shall be done by a national testing laboratory acceptable to the engineer.
- (b) Certification and description of the full time quality control/quality assurance program of production facilities responsible for the manufacture of the rubberized asphalt and that each batch of material is tested to insure conformance with the manufacturer's published physical properties.

-11-
SECTION 519
GARDEN ROOF ASSEMBLY

The quality assurance program description shall include all methods of testing for physical and mechanical property values. Provide confirmation of manufacturer's certificate of analysis for reporting the tested values of the actual material being supplied for the project prior to issuance of the specified warrantee.

- (c) Certification showing that all components of the Green Roof Assembly are being supplied and warranted.
- (d) Documentation that the roof waterproofing membrane assembly is currently Class A listed with Underwriters Laboratories.
- (e) Documentation from an approved, independent testing laboratory that the extruded polystyrene insulation if used is free from CFC's.
- (f) The plant manufacturing the rubberized asphalt material shall have ISO 9001-2000 approval as evidenced by a notarized copy of the official certificate.
- (g) Provide product data on all components of the Garden Roof Assembly.
- (h) Documentation that the waterproofing membrane assembly is currently listed as a Class 1 Roof Cover with Factory Mutual Research Company Standard 4470 listing for the proposed membrane system. The waterproofing membrane configuration shall be approved by FM for Class 1-SH (severe hail) exposure.
- (i) Documentation from an approved, independent testing laboratory that the roofing waterproofing membrane is resistant to salt water when tested in accordance with ASTM D-896.
- (j) Documentation from an approved, independent testing laboratory that the roofing waterproofing membrane is resistant to fertilizer when tested in accordance with ASTM D-896.
- (k) Documentation that the roofing waterproofing membrane is resistant to a three year exposure to animal waste.
- (l) Documentation from an approved, independent testing laboratory that the roofing waterproofing membrane can withstand a minimum 100 psi resistance to hydrostatic head in accordance with ASTM D-08.22.
- (m) Documentation from an approved, independent testing laboratory that the Garden Roof Assembly root barrier has the ability to resist normal root or rhizome penetration as required by ANSI/SPRI VR_1 2011 "Procedure for Investigating Resistance to Root Penetration on Vegetative Roofs". The documentation shall consist of the testing laboratories report summarizing the successful testing of all seams, edges, and methods of attachment that are exposed to roots or rhizomes for a period of at least 24 months.
- (n) Stormwater performance of the Garden Roof Assembly utilized for this project shall be provided and include:

-12-

**SECTION 519
GARDEN ROOF ASSEMBLY**

1. Composite Curve Number (CN)
 2. Composite C factor
 3. Total volume of water stored in the growing media
 4. Total volume of water stored in the water retention / drainage element
 5. Hydrograph of vegetated roof system showing storm water release delay and stormwater volume reduction.
- (o) List of 3 of the proposed primary waterproofing membrane manufacturer's projects, located in the State of Colorado, of similar size and degree of difficulty which have been performing successfully for a period of at least 10 years. Provide current phone contacts of Architects and Owners for verification.

519.04 Quality Assurance.

- (a) Waterproofing Contractor Qualifications: All Waterproofing work shall be performed by a company specializing in performing the work of this section with at least 10 continuous years documented experience and certified by the waterproofing membrane manufacturer.
1. Certification: Certification or licensing shall have been in effect continuously for at least ten (10) years prior to bidding on this Project.
 2. Contractor shall have at least ten years of experience in installing materials specified and shall have successfully completed at least three projects of similar scope and complexity in the state of Colorado. Provide current phone contacts of Architects and Owners for verification.
 - A. Contractor Certification: Obtain written certification from manufacturer of rubberized asphalt waterproofing system certifying that Contractor is approved by manufacturer for installation of specified waterproofing membrane system. Provide copy of certification to Owner prior to commencement of waterproofing work.
 - B. Contractor's Field Supervision: Installer must maintain full-time supervisor/foreman on jobsite during times that waterproofing work is in progress.
 - C. Manufacturer's Field Supervision: The manufacturer shall maintain supervision of the work and have a full time representative witnessing the work in progress on a weekly basis (different time of day each week so that all parts of the work can be inspected), with a minimum of 8 hours per week.
 3. Contractor shall designate a single individual as project foreman who shall be on site at all times during installation. Foreman shall be employed by the Contractor for at least five (5) years and have at least ten (10) years of experience installing the specified product. Contractor shall designate key personnel of the on-site crew who shall be experienced in work of the type specified. Neither the foreman nor the key personnel shall be changed without the Owner's consent.

-13-

**SECTION 519
GARDEN ROOF ASSEMBLY**

4. Waterproofing Contractors shall be approved by the manufacturer meeting these qualifications:
 - (b) The Garden Roof Assembly Installing Contractor: The contractor performing all work other than Waterproofing shall demonstrate qualifications to perform the work of the section by submitting the following documentation:
 1. Certification or license by the Garden Roof Assembly supplier as a locally based, authorized applicator of the products intended for use, that the contractor has a minimum of five (5) years of experience on similar projects.
 2. List of at least three (3) projects, satisfactory completed within the past five (5) years, of similar scope and complexity to this project. Previous experience submittal shall correspond to specific waterproofing membrane system specified on the plans and in these specifications.
 3. Supplier pre-approved Garden Roof Assembly Contractors shall be used meeting these qualifications:
 - (c) The Developer's Garden Roof Assembly Maintenance Contractor shall demonstrate qualifications to perform the work of this Section by submitting the following documentation:

List of at least three (3) Garden Roof Assembly projects, satisfactorily completed within the past five (5) years, of similar scope and complexity to this project. Previous experience submittal shall correspond to specific waterproofing membrane systems specified on the plans and in these specifications.
 - (d) Waterproofing Membrane Manufacturer Qualifications: Manufacturer shall demonstrate qualifications to supply materials of this section by certifying the following:
 1. Waterproofing Membrane Manufacturer shall provide documentation that the specified rubberized asphalt has been manufactured by the same source for at least ten (10) years and successfully installed on a yearly basis for a minimum of ten (10) years on projects of similar scope and complexity.
 2. Waterproofing Membrane Manufacturer shall not issue warranties for terms longer than they have been manufacturing their hot fluid rubberized asphalt waterproofing membrane.
 - (e) The rubberized asphalt waterproofing membrane product shall contain an inert clay filler and crumb rubber to enable the product to be resistant to acids (fertilizers, building washes and acid rain) and maintain membrane thickness during application. Waterproofing Membrane Manufacturer shall show independent testing of acid resistance performance testing.
 - (f) Waterproofing Membrane Manufacturer shall have available an in-house technical staff to assist the contractor, when necessary, in application of the products and final inspection of the assembly.

-14-

**SECTION 519
GARDEN ROOF ASSEMBLY**

- (g) Pre-Construction Conferences: The manufacturer shall meet with the necessary parties at the jobsite to review and discuss project conditions as it relates to the integrity of the roofing assembly.
- (h) The rubberized asphalt waterproofing membrane product shall be an environmental-grade product with a minimum 25% post-consumer recycled content. Manufacturer shall provide independent certification of recycled content.
- (i) Landscape Installer Qualification: Qualified installer trained by the Garden Roof Assembly system provider who is authorized, approved, or licensed to install the specified products;
- (j) Garden Roof Assembly Supplier shall show evidence that the specified Garden Roof Assembly has been developed, marketed, supported and installed for a minimum of ten (10) years on projects of similar complexity.
- (k) Garden Roof Assembly Supplier shall provide data and calculations, specific to the products being submitted, that verify that the Garden Roof Assembly specified meets the project criteria for storm water runoff volume and rate control.
 - 1. Calculations shall be based on actual testing for supplier's Garden Roof Assembly components to be used for the project including but not limited to the regionally specific growing media formulation and water retention/drainage materials.
 - 2. Calculations shall account for vegetated and un-vegetated portions of the roof as well as local climatic conditions including rainfall depth, intensity, duration, and timing.
- (l) Garden Roof Assembly supplier shall provide data demonstrating that the composite C-factor and Curve Number parameters for the specified Garden Roof Assembly are less than or equal to those factors used in the engineering design and analysis for the projects drainage and storm water systems analysis.
- (m) Growing Media Confinement System:
 - 1. Submit current product quality assurance test data and independent laboratory test results indicating compliance with specified performance.
 - 2. Growing media and growing media confinement system shall be supplied by same manufacturer.
 - 3. Garden Roof Assembly Manufacturer will provide load calculations for growing media confinement system. All structural load calculations for the growing media confinement system shall be verified by the Project's structural engineer or architect.
 - 4. The attachment or anchoring of the growing media confinement system to the structure shall be designed and verified by the Project's structural engineer as adequate for the application.

-15-

**SECTION 519
GARDEN ROOF ASSEMBLY**

519.05 Delivery, Storage, and Handling.

- (a) Deliver materials in original unopened containers of packaging clearly labeled with manufacturer's name, brand name, and instructions for use, all identifying numbers, and U.L. labels.
- (b) Materials shall be stored in a neat, safe manner, not to exceed the allowable structural capacity of the storage area.
- (c) Store materials in a clean, dry area protected from water and direct sunlight.
- (d) Store all adhesives at temperatures between 60°F (15.5°C) and 80°F (26.6°C). If exposed to lower temperatures, restore materials to 60°F (15.5°C) minimum temperature before using.
- (e) Vegetation shall be handled and stored in accordance with the Garden Roof Assembly Manufacturer's recommendations and guidelines.

519.06 Project Conditions.

- (a) Application of the waterproofing membrane shall not commence nor proceed during inclement weather. All surfaces to receive the membrane shall be free of water, dew, frost, snow and ice.
- (b) Application of waterproofing membrane shall not commence nor proceed when the ambient temperature is below 0°F (17.7°C).
- (c) Preparation and application of waterproofing membrane shall be conducted in well ventilated areas.
- (d) Over its service life, do not expose waterproofing membrane or accessories to a constant temperature in excess of 180°F (82°C) (i.e., hot pipes and vents or direct steam venting, etc.).
- (e) Adhesives contain petroleum distillates and are extremely flammable. Do not breathe vapors or use near an open fire. Do not use in confined areas without adequate ventilation. Consult container or packaging labels and Material Safety Data Sheets (MSDS) for specific safety information.
- (f) Do not allow waste products (petroleum, grease, oil, solvents, vegetable or mineral oil, animal fat, etc.) to come in contact with the roof waterproofing membrane. Any exposure to foreign materials or chemical discharges shall be presented to waterproofing membrane manufacturer for evaluation to determine any impact on the deck waterproofing membrane assembly performance.
- (g) Condition of concrete deck for application of waterproofing membrane. The entire deck and the sides of the curbs for a height of 2 inches above the plan thickness of Garden Roof Assemblies shall be free of all foreign material such as dirt, grease, old pavement and primer. All decks shall be sand blasted or shot blasted. Immediately prior to the application of primer or any type of waterproofing membrane, all dust and loose material shall be removed. The deck condition will be approved by waterproofing membrane manufacturer before application of membrane.
- (h) Contractor shall assure that adequate protection is provided after installation so other trades do not damage waterproofing membrane.

-16-

**SECTION 519
GARDEN ROOF ASSEMBLY**

519.07 Inspection.

- (a) The Waterproofing Contractor shall examine all surfaces to receive the waterproofing membrane to verify it is acceptable and proper for the application of the membrane.
- (b) The Waterproofing Contractor shall not proceed with the installation of the waterproofing membrane assembly until all defects have been corrected.

519.08 Preparation.

All surfaces shall be dry, smooth, free of depressions, voids, protrusions, clean and free of unapproved curing compounds, form release agents and other surface contaminants.

- 1. Cast in-place concrete/Composite deck: All concrete operations shall be performed in accordance with contract documents.
- 2. Substrate cleaning
 - A. Thoroughly sweep the substrate which is to receive the roof waterproofing membrane.
 - B. Substrate shall also be blown clean using an air compressor to remove any remaining loose debris.
 - C. If requested by the manufacturer, perform final check to determine if concrete has been properly cleaned by applying a test patch of membrane to the surface and check its adhesion.

519.09 Installation.

- (a) Surface conditioner application (to concrete)
 - 1. Apply a surface conditioner as recommended by the manufacturer and in conformance with ASTM D41 only to concrete using a hand held sprayer evenly at a rate of 300 to 600 SF/gallon (7.4 - 14.7 m²/L) depending on surface texture. Surface conditioner shall "tan" the surface, not blacken it.
 - 2. Allow sufficient time for the surface conditioner to thoroughly dry prior to the waterproofing membrane application.
- (b) Waterproofing membrane preparation
 - A. The waterproofing membrane shall be heated in double jacketed, oil bath or hot air melter with mechanical agitation, specifically designed for the preparation of a rubberized asphalt membrane.
 - B. Heat membrane until membrane can be drawn-free flowing at a temperature range between 350°F (176°C) and 375°F (190°C).

-17-

**SECTION 519
GARDEN ROOF ASSEMBLY**

- (c) Detailing/Flashing
 - 1. All detailing and flashing shall be done in accordance with the manufacturer's standard guideline details.
 - 2. All detailing and flashing shall be completed before installing the waterproofing membrane over the field of the substrate.
 - 3. Install waterproofing membrane and fabric reinforcing at all joints per plan details prior to full waterproofing membrane application.
- (d) Waterproofing Membrane Application
 - 1. Apply the rubberized asphalt waterproofing membrane at a rate to provide a continuous, monolithic coat of 90 mil minimum (approximately 2.3 mm), into which is fully embedded a layer of the spunbonded polyester fabric reinforcing sheet, followed by another continuous monolithic coat of waterproofing membrane at an average thickness of 125 mil (approx. 3.2 mm). Total waterproofing membrane thickness is to be 215 mils average (approx. 5.5 mm), 180 mils minimum.
 - 2. Overlap fabric reinforcing sheet 1-2 inches (25.4 mm - 50.8 mm) with waterproofing membrane between sheets.

519.10 Separation/Protection Course Installation.

Separation/Protection course shall be installed as follows:

- 1. Embed the *Protection Course / Root Barrier Protection – at Landscape Areas* into the membrane while it is still hot to insure a good bond. Overlap adjoining sheet edges 4 inches (100 mm) and seal the laps with a propane torch.
- 2. Embed the *Protection Course – at Vehicular Traffic Areas* into the membrane while it is still hot to insure a good bond. Installation of a separation course is necessary in order to carry out the water test. Overlap adjoining sheet edges (dry) a minimum of 2 inch – 3 inch (50.8 mm - 76.2 mm) to insure complete coverage.

519.11 Waterproofing Membrane Integrity Test.

- (a) The roof area or portions thereof shall be leak tested by means of electronic testing or per manufacturer to meet total system warranty to check the integrity of the waterproofing membrane installation. If leaks are observed the waterproofing membrane installation shall be repaired.
- (b) In the event of excessive damage to the waterproofing membrane assembly, electronic breach detection testing shall be required prior to the placement of subsequent overburden.

-18-

**SECTION 519
GARDEN ROOF ASSEMBLY**

519.12 Drainage, Insulation, and Components Installation.

- (a) All Drainage, Geofoam and Components shall be installed outside of Vehicular Traffic Areas per manufacturer's requirements.
- (b) Insulation. Where specified, EPS Geofoam insulation shall be installed loose-laid in accordance with manufacturer's recommendations. Connector plates shall be used to restrain EPS Geofoam from moving laterally. A minimum of two plates for each 4'x8' section of EPS block shall be installed to minimize EPS Geofoam block to block movement during installation. Additional plates shall be utilized where multiple layers of EPS Geofoam are utilized as per manufacturer's recommendations.
- (c) Hydrodrain Air Layer: Install over the insulation with the filter fabric facing up and the 4 inch overlap of fabric up against the perimeter edge. This fabric overlap should be folded under the core along the perimeter edge. Overlap the 4 inch (100 mm) salvage edge of the geotextile fabric to adjoin sheets and hold in place with duct tape.
- (d) Gardendrain Moisture Panels: Install with holes through the dimples on top, over the Hydrodrain Air Layer. Adjacent panels shall be butt together or overlapped approximately 1 inch (25 mm). Cut to fit around penetrations, etc. with a heavy-duty utility knife or small toothed saw. Fill retention cups with Expanded Lightweight Aggregate.
- (e) Moisture Retention Mat: A layer of Moisture Mat shall be installed over the root barrier (when no insulation is specified) or air layer/ insulation, lapping adjacent rolls a minimum of 4 inches (100 mm). The Moisture Mat shall be turned up all vertical, roofed/flushed surfaces a minimum of 6 inches (150 mm) beyond the anticipated soil level. Any excess shall be trimmed down to the level of the soil.
- (f) Filter Fabric: Install over Gardendrain Moisture Panels, lapping adjacent rolls a minimum of 6 inches (150 mm). Enough material shall be left to be drawn up above the anticipated soil level. Any excess shall be trimmed down to the level of soil.

For slopes $\geq 2:12$ and $< 3:12$ (approx. 10 - 15°, 17 - 25%) filter fabric shall not be installed over the Gardendrain (only) throughout the field of the roof so that the growing media shall be placed directly into the cups. Filter fabric shall be laid at penetrations, terminations, etc.

- (g) Drainage/Soil Confinement System: Place on sloped surfaces in accordance with manufacturer's recommendations.

519.13 Hard Scape / Accessory / Ballast Installation.

- (a) All drains shall be fitted with inspection/maintenance boxes and grills, built up to ensure access at soil level.
- (b) Stone and / or landscape pavement shall be installed at all penetrations, and access hatches and as required for vegetation free zones and as walkway / maintenance paths.

-19-

SECTION 519
GARDEN ROOF ASSEMBLY

519.14 Growing Media Installation.

- (a) Custom Growing Media Mix (soil) shall be placed carefully to avoid damage or displacement of other materials such as walls, paving, drainage components, filter fabric, and roofing waterproofing membrane.
- (b) Soil shall be placed to within 1 inch greater than final grade or to a depth of no greater than 8 inches and compacted as described in herein. For final grades less than 8 inches only one round of compaction shall be performed and remaining soil loosely placed such that top of soil exceeds final grade by 1 inch. For final grades greater than 8 inches, place soil at no greater than 6 inches and repeat procedure until soil has been compacted within 1 inch of final grade.
- (c) Compaction shall be performed with a 200 – 300 lb. landscape roller or lightly compacted with a hand held mechanical compactor to achieve a 85 % compaction as determined by ASTM D1557.
- (d) After compaction remaining soil shall be placed at 1 inch greater than final grade and thoroughly watered or jetted over entire area. Low settled areas shall be filled with additional soil and re-wet to achieve uniform prescribed final grade.

519.15 Vegetation Installation.

- (a) Plant materials shall not be installed between the fall frost date and the following spring frost date.
- (b) Growing media shall be thoroughly watered and saturated immediately prior to installing new plant material.

519.16 Vegetation Maintenance.

- (a) Maintenance activities shall include, but are not limited to, the following:
 - 1. Periodic monitoring of vegetation
 - 2. Watering to maintain proper growing media moisture content (especially during periods of hot and dry weather)
 - 3. Weeding to remove unwanted vegetation from planted areas and vegetation free zones
 - 4. Removal of debris
 - 5. Reporting and photo-documentation of progress of vegetation until the end of the Landscape Establishment period (as described in Section 214.04 of the CDOT Standard Specifications)
- (b) Maintenance by the Developer shall begin immediately after vegetation installation and shall continue until the end of the Landscape Establishment period (as described in Section 214.04 of the CDOT Standard Specifications)

**Appendix B
Cover Specifications**

The following specifications modify and take precedence over the Standard Specifications. The requirements of Appendix A to Schedule 10A Applicable Standards and Specifications apply to these Cover Specifications.

COVER SPECIFICATIONS

	<u>Page</u>
Index	14-37
Section 03 3000 – Cast-in-Place Concrete	14-38 to 14-56
Section 12 9300 – Site Furnishings	14-57 to 14-61
Section 32 1313 – Concrete Paving	14-62 to 14-75
Section 32 1400 – Unit Paving	14-76 to 14-81
Section 32 1816.13 – Playground Protective Surfacing	14-82 to 14-83
Section 32 1823 – Synthetic Turf Surfacing	14-84 to 14-88
Section 32 9300 – Plants	14-89 to 14-105

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes cast-in-place concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, and finishes, for the following:

1. Walks
2. Walls
3. Footing
4. Curbs
5. Bands

B. Related Sections:

1. Section 03 3300 "Architectural Concrete" for general building applications of specialty finished formed concrete.
2. Section 31 2000 "Earth Moving" for drainage fill under slabs-on-grade.

1.3 DEFINITIONS

Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash and other pozzolans, ground granulated blast-furnace slag, and silica fume; subject to compliance with requirements.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Design Mixtures for Credit ID 1.1: For each concrete mixture containing fly ash as a replacement for portland cement or other portland cement replacements, and for equivalent concrete mixtures that do not contain portland cement replacements.

C. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

Indicate amounts of mixing water to be withheld for later addition at Project site.

-2-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

D. Steel Reinforcement Shop Drawings: Placing drawings that detail fabrication, bending, and placement. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement.

E. Formwork Shop Drawings: Prepared by or under the supervision of a qualified professional engineer detailing fabrication, assembly, and support of formwork.

Shoring and Reshoring: Indicate proposed schedule and sequence of stripping formwork, shoring removal, and reshoring installation and removal.

F. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.

Location of construction joints is subject to approval of the Landscape Architect.

G. Samples: For waterstops vapor retarder.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Welding certificates.

C. Material Certificates: For each of the following, signed by manufacturers:

1. Cementitious materials.
2. Admixtures.
3. Form materials and form-release agents.
4. Steel reinforcement and accessories.
5. Waterstops.
6. Curing compounds.
7. Bonding agents.
8. Adhesives.
9. Vapor retarders.
10. Semirigid joint filler.
11. Joint-filler strips.
12. Repair materials.

D. Material Test Reports: For the following, from a qualified testing agency, indicating compliance with requirements:

Aggregates. Include service record data indicating absence of deleterious expansion of concrete due to alkali aggregate reactivity.

E. Floor surface flatness and levelness measurements indicating compliance with specified tolerances.

-3-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

F. Field quality-control reports.

G. Minutes of pre-installation conference.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.

B. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.

Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

C. Testing Agency Qualifications: An independent agency, acceptable to authorities having jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.

1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.
2. Personnel performing laboratory tests shall be ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician - Grade I. Testing Agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician - Grade II.

D. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.

E. Welding Qualifications: Qualify procedures and personnel according to AWS D1.4/D 1.4M, "Structural Welding Code - Reinforcing Steel."

F. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:

1. ACI 301, "Specifications for Structural Concrete," Sections 1 through 5.
2. ACI 117, "Specifications for Tolerances for Concrete Construction and Materials."

G. Concrete Testing Service: Engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixtures.

H. Mockups: Cast concrete slab-on-grade and wall formed-surface panels to demonstrate typical joints, surface finish, texture, tolerances, floor treatments, and standard of workmanship.

-4-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

1. Build panel approximately 200 sq. ft. for slab-on-grade and 100 sq. ft. for wall formed surface in the location indicated or, if not indicated, as directed by Architect.
 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- I. Pre-installation Conference: Conduct conference at Project site.
1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:
 - a. Contractor's superintendent.
 - b. Independent testing agency responsible for concrete design mixtures.
 - c. Ready-mix concrete manufacturer.
 - d. Concrete subcontractor.
 - e. Special concrete finish subcontractor.
 2. Review special inspection and testing and inspecting agency procedures for field quality control, concrete finishes and finishing, cold- and hot-weather concreting procedures, curing procedures, construction contraction and isolation joints, and joint-filler strips, forms and form removal limitations, vapor-retarder installation, steel reinforcement installation, concrete repair procedures, and concrete protection.
- 1.7 DELIVERY, STORAGE, AND HANDLING
- A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage. Avoid damaging coatings on steel reinforcement.
 - B. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

PART 2 - PRODUCTS

2.1 FORM-FACING MATERIALS

- A. Smooth-Formed Finished Concrete: Form-facing panels that will provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.
 1. Plywood, metal, or other approved panel materials.
 2. Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1, and as follows:
 - a. Medium-density overlay, Class 1 or better; mill-release agent treated and edge sealed.
- B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.
- C. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 inch, minimum.

-5-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

- D. Rustication Strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal. 1 inch wide at face by 3/4 inch deep 'V' shape.
- E. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent treatments of concrete surfaces.

Formulate form-release agent with rust inhibitor for steel form-facing materials.

- F. Form Ties: Factory-fabricated, removable or snap-off metal or glass-fiber-reinforced plastic form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

Furnish units that will leave no corrodible metal closer than 1 inch to the plane of exposed concrete surface.

2.2 STEEL REINFORCEMENT

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Reinforcing Bars: ASTM A 615/A 615M, Grade 60, deformed.
- C. Low-Alloy-Steel Reinforcing Bars: ASTM A 706/A 706M, deformed.
- D. Galvanized Reinforcing Bars: ASTM A 615/A 615M, Grade 60, deformed bars, ASTM A 767/A 767M, Class I zinc coated after fabrication and bending.
- E. Epoxy-Coated Reinforcing Bars: ASTM A 615/A 615M, Grade 60, deformed bars, epoxy coated, with less than 2 percent damaged coating in each 12-inch bar length.
- F. Plain-Steel Wire: ASTM A 82/A 82M, galvanized.
- G. Deformed-Steel Wire: ASTM A 496/A 496M.
- H. Epoxy-Coated Wire: ASTM A 884/A 884M, Class A, Type 1 coated, deformed-steel wire, with less than 2 percent damaged coating in each 12-inch wire length.
- I. Plain-Steel Welded Wire Reinforcement: ASTM A 185/A 185M, plain, fabricated from as-drawn steel wire into flat sheets.
- J. Deformed-Steel Welded Wire Reinforcement: ASTM A 497/A 497M, flat sheet.
- K. Galvanized-Steel Welded Wire Reinforcement: ASTM A 185/A 185M, plain, fabricated from galvanized-steel wire into flat sheets.
- L. Epoxy-Coated Welded Wire Reinforcement: ASTM A 884/A 884M, Class A coated, Type 1, plain steel.

-6-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

2.3 REINFORCEMENT ACCESSORIES

- A. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain-steel bars, cut true to length with ends square and free of burrs.
- B. Epoxy-Coated Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain-steel bars, ASTM A 775/A 775M epoxy coated.
- C. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating; compatible with epoxy coating on reinforcement and complying with ASTM A 775/A 775M.
- D. Zinc Repair Material: ASTM A 780, zinc-based solder, paint containing zinc dust, or sprayed zinc.
- E. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete and as follows:
 - 1. For concrete surfaces exposed to view where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.
 - 2. For epoxy-coated reinforcement, use epoxy-coated or other dielectric-polymer-coated wire bar supports.

2.4 CONCRETE MATERIALS

- A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:
 - 1. Portland Cement: ASTM C 150, Type I/II, gray. Supplement with the following:
 - a. Fly Ash: ASTM C 618, Class F.
 - b. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.
 - 2. Blended Hydraulic Cement: ASTM C 595, Type IS, portland blast-furnace slag cement.
- B. Silica Fume: ASTM C 1240, amorphous silica.
- C. Normal-Weight Aggregates: ASTM C 33, Class 3S coarse aggregate or better, graded. Provide aggregates from a single source with documented service record data of at least 10 years' satisfactory service in similar applications and service conditions using similar aggregates and cementitious materials.
 - 1. Maximum Coarse-Aggregate Size: 3/4 inch nominal.
 - 2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.
- D. Water: ASTM C 94/C 94M and potable.

-7-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

2.5 ADMIXTURES

- A. Air-Entraining Admixture: ASTM C 260.
- B. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and that will not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.
 - 1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
 - 2. Retarding Admixture: ASTM C 494/C 494M, Type B.
 - 3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
 - 4. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
 - 5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
 - 6. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.

2.6 WATERSTOPS

Flexible Rubber Waterstops: CE CRD-C 513, with factory-installed metal eyelets, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.

2.7 VAPOR RETARDERS

- A. Sheet Vapor Retarder: ASTM E 1745, Class A. Include manufacturer's recommended adhesive or pressure-sensitive tape.
- B. Fine-Graded Granular Material: Clean mixture of crushed stone, crushed gravel, and manufactured or natural sand; ASTM D 448, Size 10, with 100 percent passing a 3/8-inch sieve, 10 to 30 percent passing a No. 100 sieve, and at least 5 percent passing No. 200 sieve; complying with deleterious substance limits of ASTM C 33 for fine aggregates.

2.8 CURING MATERIALS

- A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.
- B. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.
- C. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.
- D. Water: Potable.
- E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, dissipating.

-8-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

Products: Subject to compliance with requirements, available products that may be

2.9 RELATED MATERIALS

- A. Bonding Agent: ASTM C 1059/C 1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene.
- B. Epoxy Bonding Adhesive: ASTM C 881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements, and as follows:

Types IV and V, load bearing, for bonding hardened or freshly mixed concrete to hardened concrete.

2.10 REPAIR MATERIALS

- A. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch and that can be feathered at edges to match adjacent floor elevations.
 - 1. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
 - 2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
 - 3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by underlayment manufacturer.
 - 4. Compressive Strength: Not less than 4100 psi at 28 days when tested according to ASTM C 109/C 109M.
- B. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/4 inch and that can be filled in over a scarified surface to match adjacent floor elevations.
 - 1. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
 - 2. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
 - 3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by topping manufacturer.
 - 4. Compressive Strength: Not less than 5000 psi at 28 days when tested according to ASTM C 109/C 109M.

2.11 CONCRETE MIXTURES, GENERAL

- A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.

-9-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

Use a qualified independent testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures.

- B. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:
1. Fly Ash: 25 percent.
 2. Combined Fly Ash and Pozzolan: 25 percent.
 3. Ground Granulated Blast-Furnace Slag: 50 percent.
 4. Combined Fly Ash or Pozzolan and Ground Granulated Blast-Furnace Slag: 50 percent portland cement minimum, with fly ash or pozzolan not exceeding 25 percent.
 5. Silica Fume: 10 percent.
 6. Combined Fly Ash, Pozzolans, and Silica Fume: 35 percent with fly ash or pozzolans not exceeding 25 percent and silica fume not exceeding 10 percent.
 7. Combined Fly Ash or Pozzolans, Ground Granulated Blast-Furnace Slag, and Silica Fume: 50 percent with fly ash or pozzolans not exceeding 25 percent and silica fume not exceeding 10 percent.
- C. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.
- D. Admixtures: Use admixtures according to manufacturer's written instructions.
1. Use water-reducing or plasticizing admixture in concrete, as required, for placement and workability.
 2. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
 3. Use water-reducing admixture in pumped concrete, concrete for heavy-use industrial slabs and parking structure slabs, concrete required to be watertight, and concrete with a water-cementitious materials ratio below 0.50.
 4. Use corrosion-inhibiting admixture in concrete mixtures where indicated.
- E. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

2.12 FABRICATING REINFORCEMENT

- A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

2.13 CONCRETE MIXING

- A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M and ASTM C 1116/C 1116M, and furnish batch ticket information.

-10-
SECTION 03 3000
CAST-IN-PLACE CONCRETE

When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 FORMWORK

- A. Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads.
- B. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117.
- C. Limit concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:
Class A, 1/8 inch for smooth-formed finished surfaces.
- D. Construct forms tight enough to prevent loss of concrete mortar.
- E. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.
 - 1. Install keyways, reglets, recesses, and the like, for easy removal.
 - 2. Do not use rust-stained steel form-facing material.
- F. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off templates or compacting-type screeds.
- G. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.
- H. Chamfer exterior corners and edges of permanently exposed concrete.
- I. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.
- J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.
- K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

-11-
SECTION 03 3000
CAST-IN-PLACE CONCRETE

- L. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

3.2 EMBEDDED ITEMS

Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

1. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC's "Code of Standard Practice for Steel Buildings and Bridges."
2. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
3. Install dovetail anchor slots in concrete structures as indicated.

3.3 REMOVING AND REUSING FORMS

- A. General: Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F for 24 hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations and curing and protection operations need to be maintained.
 1. Leave formwork for beam soffits, joists, slabs, and other structural elements that supports weight of concrete in place until concrete has achieved at least 70 percent of its 28-day design compressive strength.
 2. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.
- B. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material will not be acceptable for exposed surfaces. Apply new form-release agent.
- C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

3.4 STEEL REINFORCEMENT

- A. General: Comply with CRSI's "Manual of Standard Practice" for placing reinforcement.

Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete.

- B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that would reduce bond to concrete.

-12-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

- C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcement with bar supports to maintain minimum concrete cover. Do not tack weld crossing reinforcing bars.

Weld reinforcing bars according to AWS D1.4/D 1.4M, where indicated.

- D. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.
- E. Install welded wire reinforcement in longest practicable lengths on bar supports spaced to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.
- F. Epoxy-Coated Reinforcement: Repair cut and damaged epoxy coatings with epoxy repair coating according to ASTM D 3963/D 3963M. Use epoxy-coated steel wire ties to fasten epoxy-coated steel reinforcement.
- G. Zinc-Coated Reinforcement: Repair cut and damaged zinc coatings with zinc repair material according to ASTM A 780. Use galvanized steel wire ties to fasten zinc-coated steel reinforcement.

3.5 JOINTS

- A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.
- B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.
 - 1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.
 - 2. Form keyed joints as indicated. Embed keys at least 1-1/2 inches into concrete.
 - 3. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
 - 4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
 - 5. Space vertical joints in walls as indicated. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
 - 6. Use rustication strips for vertical joints as indicated for surfaces exposed to public view.
 - 7. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
 - 8. Use epoxy-bonding adhesive at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
- C. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length to prevent concrete bonding to one side of joint.

-13-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

3.6 WATERSTOPS

- A. Flexible Waterstops: Install in construction joints and at other joints indicated to form a continuous diaphragm. Install in longest lengths practicable. Support and protect exposed waterstops during progress of the Work. Field fabricate joints in waterstops according to manufacturer's written instructions.
- B. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated, according to manufacturer's written instructions, adhesive bonding, mechanically fastening, and firmly pressing into place. Install in longest lengths practicable.

3.7 CONCRETE PLACEMENT

- A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections have been performed.
- B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Architect.
- C. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.

Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

- D. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete will be placed on concrete that has hardened enough to cause seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as indicated. Deposit concrete to avoid segregation.
 - 1. Deposit concrete in horizontal layers of depth to not exceed formwork design pressures and in a manner to avoid inclined construction joints.
 - 2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 301.
 - 3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.
- E. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.
 - 1. Consolidate concrete during placement operations so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
 - 2. Maintain reinforcement in position on chairs during concrete placement.
 - 3. Screed slab surfaces with a straightedge and strike off to correct elevations.

-14-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

4. Slope surfaces uniformly to drains where required.
 5. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.
- F. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
1. When average high and low temperature is expected to fall below 40 deg F for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
 2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
 3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.
- G. Hot-Weather Placement: Comply with ACI 301 and as follows:
1. Maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
 2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.
- 3.8 FINISHING FORMED SURFACES
- A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.
- Apply to concrete surfaces not exposed to public view, core wall, spread footers.
- B. Light Sandblast or Sandscape Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.
- Apply to all concrete wall surfaces exposed to public view
- C. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

-15-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

- D. Float Finish: Begin the second floating operation when bleed-water sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture
 - 1. Medium-to-Fine-Textured Broom Finish: Draw a soft-bristle broom across float-finished concrete surface perpendicular to line of traffic to provide a uniform, fine-line texture.
 - 2. Apply to all concrete stairs exposed to public view.

3.9 CONCRETE PROTECTING AND CURING

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 301 for hot-weather protection during curing.
- B. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.
- C. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for the remainder of the curing period.
- D. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.
- E. Cure concrete according to ACI 308.1, by one or a combination of the following methods:
 - 1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:
 - a. Water.
 - b. Continuous water-fog spray.
 - c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.
 - 2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period using cover material and waterproof tape.
 - a. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.
 - b. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.

-16-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

- c. Cure concrete surfaces to receive floor coverings with either a moisture-retaining cover or a curing compound that the manufacturer certifies will not interfere with bonding of floor covering used on Project.
3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.
Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound will not interfere with bonding of floor covering used on Project.
4. Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.

3.10 JOINT FILLING

- A. Prepare, clean, and install joint filler according to manufacturer's written instructions.

Defer joint filling until concrete has aged at least one month(s). Do not fill joints until construction traffic has permanently ceased.

- B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joint clean and dry.
- C. Install semirigid joint filler full depth in saw-cut joints and at least 2 inches deep in formed joints. Overfill joint and trim joint filler flush with top of joint after hardening. Seal all vertical joints with silicone.

3.11 CONCRETE SURFACE REPAIRS

- A. Defective Concrete: Repair and patch defective areas when approved by Architect. Remove and replace concrete that cannot be repaired and patched to Architect's approval.
- B. Patching Mortar: Mix dry-pack patching mortar, consisting of one part portland cement to two and one-half parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing.
- C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.
 1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 inch in any dimension to solid concrete. Limit cut depth to 3/4 inch. Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes

-17-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

- and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement so that, when dry, patching mortar will match surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.
 3. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Architect.
- D. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.
1. Repair finished surfaces containing defects. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
 2. After concrete has cured at least 14 days, correct high areas by grinding.
 3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.
 4. Correct other low areas scheduled to receive floor coverings with a repair underlayment. Prepare, mix, and apply repair underlayment and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.
 5. Correct other low areas scheduled to remain exposed with a repair topping. Cut out low areas to ensure a minimum repair topping depth of 1/4 inch to match adjacent floor elevations. Prepare, mix, and apply repair topping and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.
 6. Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-inch clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete except without coarse aggregate. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
 7. Repair random cracks and single holes 1 inch or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.
- E. Perform structural repairs of concrete, subject to Architect's approval, using epoxy adhesive and patching mortar.

-18-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

- F. Repair materials and installation not specified above may be used, subject to Architect's approval.

3.12 FIELD QUALITY CONTROL

- A. Testing and Inspecting: Owner will engage a qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Testing and Inspecting: Engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.
- C. Inspections:
 - 1. Steel reinforcement placement.
 - 2. Steel reinforcement welding.
 - 3. Headed bolts and studs.
 - 4. Verification of use of required design mixture.
 - 5. Concrete placement, including conveying and depositing.
 - 6. Curing procedures and maintenance of curing temperature.
 - 7. Verification of concrete strength before removal of shores and forms from beams and slabs.
- D. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:
 - 1. Testing Frequency: Obtain one composite sample for each day's pour of each concrete mixture exceeding 5 cu. yd., but less than 25 cu. yd., plus one set for each additional 50 cu. yd. or fraction thereof.
 - 2. Testing Frequency: Obtain at least one composite sample for each 100 cu. yd. or fraction thereof of each concrete mixture placed each day.
 - When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
 - 3. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
 - 4. Air Content: ASTM C 231, pressure method, for normal-weight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
 - 5. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F and below and when 80 deg F and above, and one test for each composite sample.
 - 6. Unit Weight: ASTM C 567, fresh unit weight of structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
 - 7. Compression Test Specimens: ASTM C 31/C 31M.

-19-

**SECTION 03 3000
CAST-IN-PLACE CONCRETE**

- a. Cast and laboratory cure two sets of two standard cylinder specimens for each composite sample.
 - b. Cast and field cure two sets of two standard cylinder specimens for each composite sample.
8. Compressive-Strength Tests: ASTM C 39/C 39M; test one set of two laboratory-cured specimens at 7 days and one set of two specimens at 28 days.
 - a. Test one set of two field-cured specimens at 7 days and one set of two specimens at 28 days.
 - b. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.
 9. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
 10. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.
 11. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
 12. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
 13. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by Architect.
 14. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
 15. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.
- E. Measure floor and slab flatness and levelness according to ASTM E 1155 within 24 hours of finishing.

END OF SECTION

**SECTION 12 9300
SITE FURNISHINGS**

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Section Includes:

1. Benches
2. Bicycle racks
3. Trash receptacles / recycling
4. Tables and Chairs
5. Tree grates
6. Removable bollards
7. Drinking fountain

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. LEED Submittals:
 1. Product Data for Credit MR 4.1 and Credit MR 4.2: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 2. Certificates for Credit MR 6 and Credit MR 7: Chain-of-custody certificates indicating that wood components of site furnishings comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
- C. Samples: For each exposed product and for each color and texture specified.
- D. Samples for Initial Selection: For units with factory-applied finishes.
- E. Samples for Verification: For each type of exposed finish, not less than 6-inch- long linear components and 4-inch- square sheet components.
- F. Product Schedule: For site furnishings. Use same designations indicated on Drawings.

1.4 CLOSEOUT SUBMITTALS

Maintenance Data: For site furnishings to include in maintenance manuals.

-2-
SECTION 12 9300
SITE FURNISHINGS

1.5 MAINTENANCE MATERIAL SUBMITTALS

Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Bench Replacement Slats: No fewer than twelve full-size units for each size indicated.
2. Trash/Recycling Receptacle Inner Containers: Five full-size units for each size indicated, but no fewer than two units.

PART 2 - PRODUCTS

2.1 BENCH

Style:

1. Backless
 - a. Minimum depth: 20"
 - b. Maximum seat height: 22"
 - c. Minimum length: 72"
 - d. Arms provided every 36" on benches greater than 72" in length
2. Backed
 - a. Minimum depth: 20"
 - b. Maximum seat height: 22"
 - c. Minimum length: 72"
 - d. Arms provided every 36" on benches greater than 72" in length
3. Mounting: Surface mount
4. Materials and Finishes:
 - a. Seat Panels/Slats: Powdercoated aluminum, powdercoated steel or stainless steel
 - b. Back Panels/Slats: Powdercoated aluminum, powdercoated steel or stainless steel
 - c. Frame and Legs: Powdercoated aluminum, powdercoated steel or stainless steel
5. Anchor Bolts:
Corrosion resistant
6. Skateboard deterrents are to be provided on benches where arms are not used

2.2 BIKE RACK

- A. Style 1 - Standard:
 1. Size:
 - a. Minimum/Maximum Depth: 1.5"/2.0"
 - b. Minimum/Maximum Height: 28"/36"
 - c. Minimum/Maximum Length: 24"/30"
 2. Mounting: Embedded

-3-
SECTION 12 9300
SITE FURNISHINGS

3. Materials and Finishes: Powdercoated aluminum, powdercoated steel or stainless steel
- B. Style 2 - Bike Share: Developer to coordinate appropriate capacity and location with B-Cycle or other community bike share provider.

2.3 TRASH RECEPTACLE / RECYCLING

- A. Style 1 - Standard:
 1. Trash receptacle: top opening, minimum 10" diameter
 2. Recycling receptacle: top opening, 5" – 6" diameter
 3. Size: 32 gallon
 4. Materials and Finish: Powdercoated aluminum, powdercoated steel or stainless steel
 5. Mounting: Surface mount
 6. Instructional graphics - apply instructional graphics to lids as specified to indicate the intended waste or recycling stream
 - a. Graphics type: back-printed polycarbonate
 - b. Letters and symbols color: White
 - c. Graphics background colors: Blue
- B. Style 2 – Solar-Powered Compacting
 1. Trash receptacle: side-opening, minimum 6" x 17"
 2. Recycling receptacle (single-stream): side-opening, bottle/can opening minimum 5" diameter, paper opening minimum 1.75" x 10"
 3. Size: 32 gallon minimum
 4. Mounting: Surface mount
 5. Instructional Graphics – apply graphics to containers to indicate the intended waste or recycling streams

2.4 TABLES AND CHAIRS

Style:

1. Size:
 - a. Tables:
 - 1) Minimum/maximum height: 28"/34"
 - 2) Minimum/maximum diameter: 30"/48"
 - b. Chairs:
Minimum/maximum seat height: 18"/22"
 - c. Picnic:
 - 1) Minimum/maximum seat height: 18"/22"
 - 2) Minimum/maximum table height: 28"/34"
 - 3) Minimum table width: 30"
 - 4) Minimum length: 72"
2. Materials and Finishes: Powdercoated aluminum, powdercoated steel or stainless steel

-4-

**SECTION 12 9300
SITE FURNISHINGS**

3. Mounting:
 - a. Tables: Embedded, surface mount or movable
 - b. Chairs: Embedded, surface mount or moveable
 - c. Picnic: Embedded or surface mount

2.5 TREE GRATES

Style:

1. Size: 5' x 15' minimum
2. Materials and Finishes: Recycled Grey Iron, Ductile Iron, Recycled Aluminum, Silicon Bronze or Nickel Bronze

2.6 REMOVABLE BOLLARD

Style:

1. Size:
 - a. Minimum/Maximum Height: 24"/36" as measured above surrounding pavement
 - b. Minimum/Maximum Diameter: 4"/5"
2. Mounting: Removable, with recessed locking mechanism
3. Materials and Finishes: Powdercoated steel or stainless steel

2.7 DRINKING FOUNTAIN

Style: Drinking fountain to include the following:

1. Min. 1 fountain mounted at ADA-required mounting height with minimum clearances as define by ADA
2. Min. 1 bottle-filling fountain
3. Min. 1 pet bowl
4. Anti-freeze protection

2.8 FABRICATION

- A. Exposed Surfaces: Polished, sanded, or otherwise finished; all surfaces smooth, free of burrs, barbs, splinters, and sharpness; all edges and ends rolled, rounded, or capped.
- B. Factory Assembly: Assemble components in the factory to greatest extent possible to minimize field assembly. Clearly mark units for assembly in the field.

2.9 GENERAL FINISH REQUIREMENTS

Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

-5-

**SECTION 12 9300
SITE FURNISHINGS**

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Comply with manufacturer's written installation instructions unless more stringent requirements are indicated. Complete field assembly of site furnishings where required.
- B. Unless otherwise indicated, install site furnishings after landscaping and paving have been completed.
- C. Install site furnishings level, plumb, true, and securely anchored or positioned at locations indicated on Drawings.

END OF SECTION

**SECTION 32 1313
CONCRETE PAVING**

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

Walks.

B. Related Sections:

Section 033000 "Cast-in-Place Concrete" for general building applications of concrete.

1.3 DEFINITIONS

Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash and other pozzolans, and ground granulated blast-furnace slag.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Design Mixtures for Credit ID 1: For each concrete mixture containing fly ash as a replacement for portland cement or other portland cement replacements. For each design mixture submitted, include an equivalent concrete mixture that does not contain portland cement replacements, to determine amount of portland cement replaced.

C. Shop Drawings: Indicate pavement markings, lane separations, and defined parking spaces. Indicate, with international symbol of accessibility, spaces allocated for people with disabilities.

D. Samples for Initial Selection: For each type of product, ingredient, or admixture requiring color selection.

E. Samples for Verification: For each type of product or exposed finish, prepared as Samples of size indicated below:

Exposed Aggregate: 10-lb Sample of each mix.

F. Other Action Submittals:

-2-
**SECTION 32 1313
CONCRETE PAVING**

Design Mixtures: For each concrete paving mixture. Include alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified ready-mix concrete manufacturer and testing agency.

B. Material Certificates: For the following, from manufacturer:

1. Cementitious materials.
2. Steel reinforcement and reinforcement accessories.
3. Admixtures.
4. Curing compounds.
5. Applied finish materials.
6. Bonding agent or epoxy adhesive.
7. Joint fillers.

C. Material Test Reports: For each of the following:

Aggregates. Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.

D. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Detectable Warning Installer Qualifications: An employer of workers trained and approved by manufacturer of stamped concrete paving systems.

B. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.

Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities" (Quality Control Manual - Section 3, "Plant Certification Checklist").

C. Testing Agency Qualifications: Qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.

Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.

D. Concrete Testing Service: Engage a qualified testing agency to perform material evaluation tests and to design concrete mixtures.

-3-

**SECTION 32 1313
CONCRETE PAVING**

- E. ACI Publications: Comply with ACI 301 unless otherwise indicated.
- F. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockups of full-thickness sections of concrete paving to demonstrate typical joints; surface finish, texture, and color; curing; and standard of workmanship.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- G. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review methods and procedures related to concrete paving, including but not limited to, the following:
 - a. Concrete mixture design.
 - b. Quality control of concrete materials and concrete paving construction practices.
 - 2. Require representatives of each entity directly concerned with concrete paving to attend, including the following:
 - a. Contractor's superintendent.
 - b. Independent testing agency responsible for concrete design mixtures.
 - c. Ready-mix concrete manufacturer.
 - d. Concrete paving subcontractor.
 - e. Manufacturer's representative of stamped concrete paving system used for detectable warnings.

1.7 PROJECT CONDITIONS

Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

PART 2 - PRODUCTS

2.1 FORMS

- A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, and smooth exposed surfaces.

Use flexible or uniformly curved forms for curves with a radius of 100 feet or less. Do not use notched and bent forms.

- B. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and that will not impair subsequent treatments of concrete surfaces.

-4-
SECTION 32 1313
CONCRETE PAVING

2.2 STEEL REINFORCEMENT

- A. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Plain-Steel Welded Wire Reinforcement: ASTM A 185/A 185M, fabricated from galvanized-steel wire into flat sheets.
- C. Deformed-Steel Welded Wire Reinforcement: ASTM A 497/A 497M, flat sheet.
- D. Epoxy-Coated Welded Wire Reinforcement: ASTM A 884/A 884M, Class A, plain steel.
- E. Reinforcing Bars: ASTM A 615/A 615M, Grade 60; deformed.
- F. Galvanized Reinforcing Bars: ASTM A 767/A 767M, Class II zinc coated, hot-dip galvanized after fabrication and bending; with ASTM A 615/A 615M, Grade 60 deformed bars.
- G. Deformed-Steel Wire: ASTM A 496/A 496M.
- H. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60 plain-steel bars; zinc coated (galvanized) after fabrication according to ASTM A 767/A 767M, Class I coating. Cut bars true to length with ends square and free of burrs.
- I. Tie Bars: ASTM A 615/A 615M, Grade 60, deformed.
- J. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from steel wire, plastic, or precast concrete of greater compressive strength than concrete specified, and as follows:
 - 1. Equip wire bar supports with sand plates or horizontal runners where base material will not support chair legs.
 - 2. For epoxy-coated reinforcement, use epoxy-coated or other dielectric-polymer-coated wire bar supports.
- K. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating, compatible with epoxy coating on reinforcement.
- L. Zinc Repair Material: ASTM A 780.

2.3 CONCRETE MATERIALS

- A. Cementitious Material: Use the following cementitious materials, of same type, brand, and source throughout Project:

-5-

**SECTION 32 1313
CONCRETE PAVING**

1. Portland Cement: ASTM C 150, white portland cement Type I/II. Supplement with the following:
 - a. Fly Ash: ASTM C 618, Class F.
 - b. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.
 2. Blended Hydraulic Cement: ASTM C 595, Type IS, portland blast-furnace slag cement.
- B. Normal-Weight Aggregates: ASTM C 33, Class 4S, uniformly graded. Provide aggregates from a single source with documented service-record data of at least 10 years' satisfactory service in similar paving applications and service conditions using similar aggregates and cementitious materials.
1. Maximum Coarse-Aggregate Size: 1 inch nominal.
 2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.
- C. Water: Potable and complying with ASTM C 94/C 94M.
- D. Air-Entraining Admixture: ASTM C 260.
- E. Chemical Admixtures: Admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.
1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
 2. Retarding Admixture: ASTM C 494/C 494M, Type B.
 3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
 4. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
 5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
 6. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.
- 2.4 CURING MATERIALS

- A. Absorptive Cover: AASHTO M 182, Class 3, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. dry.
- B. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.
- C. Water: Potable.
- D. Evaporation Retarder: Waterborne, monomolecular, film forming, manufactured for application to fresh concrete.

Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

- a. Axim Italcementi Group, Inc.; Caltexol CIMFILM.
- b. BASF Construction Chemicals, LLC; Confilm.
- c. ChemMasters; Spray-Film.

-6-
**SECTION 32 1313
CONCRETE PAVING**

- d. Conspec by Dayton Superior; Aquafilm.
- e. Dayton Superior Corporation; Sure Film (J-74).
- f. Edoco by Dayton Superior; BurkeFilm.
- g. Euclid Chemical Company (The), an RPM company; Eucobar.
- h. Kaufman Products, Inc.; VaporAid.
- i. Lambert Corporation; LAMBCO Skin.
- j. L&M Construction Chemicals, Inc.; E-CON.
- k. Meadows, W. R., Inc.; EVAPRE.
- l. Metalcrete Industries; Waterhold.
- m. Nox-Crete Products Group; MONOFILM.
- n. Sika Corporation, Inc.; SikaFilm.

2.5 RELATED MATERIALS

- A. Joint Fillers: ASTM D 1751, asphalt-saturated cellulosic fiber in preformed strips.
- B. Bonding Agent: ASTM C 1059, Type II, non-redispersible, acrylic emulsion or styrene butadiene.
- C. Epoxy Bonding Adhesive: ASTM C 881/C 881M, two-component epoxy resin capable of humid curing and bonding to damp surfaces; of class suitable for application temperature, of grade complying with requirements, and of the following types:

Types I and II, non-load bearing, for bonding hardened or freshly mixed concrete to hardened concrete.

2.6 CONCRETE MIXTURES

- A. Prepare design mixtures, proportioned according to ACI 301, for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.
 - 1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.
 - 2. When automatic machine placement is used, determine design mixtures and obtain laboratory test results that meet or exceed requirements.
- B. Proportion mixtures to provide normal-weight concrete with the following properties:
 - 1. Compressive Strength (28 Days): 4500 psi.
 - 2. Maximum Water-Cementitious Materials Ratio at Point of Placement: 0.45.
 - 3. Slump Limit: 4 inches, plus or minus 1 inch.
- C. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content as follows:

Air Content: 6 percent plus or minus 1.5 percent for 1-inch nominal maximum aggregate size.

-7-

**SECTION 32 1313
CONCRETE PAVING**

D. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

E. Chemical Admixtures: Use admixtures according to manufacturer's written instructions.

Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.

F. Cementitious Materials: Use fly ash, pozzolan, ground granulated blast-furnace slag, and silica fume as needed to reduce the total amount of portland cement, which would otherwise be used, by not less than 40 percent.

2.7 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M and ASTM C 1116/C 1116M. Furnish batch certificates for each batch discharged and used in the Work.

When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M. Mix concrete materials in appropriate drum-type batch machine mixer.

1. For concrete batches of 1 cu. yd. or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
2. For concrete batches larger than 1 cu. yd., increase mixing time by 15 seconds for each additional 1 cu. yd.
3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixing time, quantity, and amount of water added.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.

B. Proof-roll prepared subbase surface below concrete paving to identify soft pockets and areas of excess yielding.

1. Completely proof-roll subbase in one direction and repeat in perpendicular direction. Limit vehicle speed to 3 mph.

-8-

**SECTION 32 1313
CONCRETE PAVING**

2. Correct subbase with soft spots and areas of pumping or rutting exceeding depth of 1/2 inch according to requirements in Section 312000 "Earth Moving."

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

Remove loose material from compacted subbase surface immediately before placing concrete.

3.3 EDGE FORMS AND SCREED CONSTRUCTION

A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.

B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.4 JOINTS

A. General: Form construction, isolation, and contraction joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated.

When joining existing paving, place transverse joints to align with previously placed joints unless otherwise indicated.

B. Construction Joints: Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than one-half hour unless paving terminates at isolation joints.

1. Continue steel reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of paving strips unless otherwise indicated.

2. Provide tie bars at sides of paving strips where indicated.

3. Butt Joints: Use bonding agent at joint locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

4. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, other fixed objects, and where indicated.

1. Locate expansion joints at intervals of 50 feet unless otherwise indicated.

2. Extend joint fillers full width and depth of joint.

3. Terminate joint filler not less than 1/2 inch or more than 1 inch below finished surface if joint sealant is indicated.

-9-

**SECTION 32 1313
CONCRETE PAVING**

4. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
 5. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
 6. During concrete placement, protect top edge of joint filler with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.
- D. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows, to match jointing of existing adjacent concrete paving:
1. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.
Tolerance: Ensure that sawed joints are within 3 inches either way from centers of dowels.
 2. Doweled Contraction Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.
- E. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a 1/4-inch radius. Repeat tooling of edges after applying surface finishes. Eliminate edging-tool marks on concrete surfaces.
- 3.5 CONCRETE PLACEMENT
- A. Before placing concrete, inspect and complete formwork installation, steel reinforcement, and items to be embedded or cast-in.
 - B. Remove snow, ice, or frost from subbase surface and steel reinforcement before placing concrete. Do not place concrete on frozen surfaces.
 - C. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.
 - D. Comply with ACI 301 requirements for measuring, mixing, transporting, and placing concrete.
 - E. Do not add water to concrete during delivery or at Project site. Do not add water to fresh concrete after testing.
 - F. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.

-10-
SECTION 32 1313
CONCRETE PAVING

- G. Consolidate concrete according to ACI 301 by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.

Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating reinforcement joint devices.

- H. Screed paving surface with a straightedge and strike off.
- I. Commence initial floating using bull floats or darbies to impart an open-textured and uniform surface plane before excess moisture or bleed water appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.
- J. Cold-Weather Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:
1. When air temperature has fallen to or is expected to fall below 40 °F, uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 °F and not more than 80 °F at point of placement.
 2. Do not use frozen materials or materials containing ice or snow.
 3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.
- K. Hot-Weather Placement: Comply with ACI 301 and as follows when hot-weather conditions exist:
1. Cool ingredients before mixing to maintain concrete temperature below 90 °F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
 2. Cover steel reinforcement with water-soaked burlap so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
 3. Fog-spray forms and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

3.6 FLOAT FINISHING

- A. General: Do not add water to concrete surfaces during finishing operations.
- B. FINISH TYPE A

Float Finish: Begin the second floating operation when bleed-water sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to

-11-
SECTION 32 1313
CONCRETE PAVING

power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.

Medium-to-Fine-Textured Broom Finish: Draw a soft-bristle broom across float-finished concrete surface perpendicular to line of traffic to provide a uniform, fine-line texture.

C. FINISH TYPE B

1. Sandscape Texture™ Finish or equal approved by Landscape Architect:
 - a. The areas to receive Sandscape Texture™ concrete shall have the sub-grade prepared as required as for any concrete slab on grade.
 - b. The formwork shall be installed in accordance with the drawings. The slab thickness shall be consistent with that of ordinary concrete slabs under the same conditions.
 - c. Provide reinforcement as specified.
 - d. Control joints and/or expansion joints shall be provided in accordance with the drawings and the guidelines established by the American Concrete Institute. As with any concrete slab, Sandscape Texture™ concrete usually contains construction joints, control joints and expansion joints. The contractor shall advise and work with the Landscape Architect/engineer to determine the best location for these joints to minimize the visibility of the joints and to minimize unsightly cracking.
 - e. All concrete flatwork shall be performed under the direct supervision of a Craftsman holding the following certificate: American Concrete Institute (ACI) Concrete Flatwork Finisher and Technician (ACICFFT). A minimum of one certified Craftsman is required at each finishing operation.
 - f. The concrete shall be placed and screeded to the finished grade, and floated to a uniform surface using standard finishing techniques.
 - g. Surface Treatment will be applied and cleaned off with proper equipment.
 - h. After the initial curing period the surface of the slab shall be sealed.

3.7 CONCRETE PROTECTION AND CURING

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.
- B. Comply with ACI 306.1 for cold-weather protection.
- C. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete but before float finishing.
- D. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

-12-
SECTION 32 1313
CONCRETE PAVING

- E. Curing Methods: Cure concrete by moisture curing, moisture-retaining-cover curing or a combination of these as follows:
1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:
 - a. Water.
 - b. Continuous water-fog spray.
 - c. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.
 2. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas that have been subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating, and repair damage during curing period.

3.8 PAVING TOLERANCES

Comply with tolerances in ACI 117 and as follows:

1. Elevation: 3/4 inch.
2. Thickness: Plus 3/8 inch, minus 1/4 inch.
3. Surface: Gap below 10-foot-long, unlevelled straightedge not to exceed 1/2 inch.
4. Alignment of Tie-Bar End Relative to Line Perpendicular to Paving Edge: 1/2 inch per 12 inches of tie bar.
5. Lateral Alignment and Spacing of Dowels: 1 inch.
6. Vertical Alignment of Dowels: 1/4 inch.
7. Alignment of Dowel-Bar End Relative to Line Perpendicular to Paving Edge: 1/4 inch per 12 inches of dowel.
8. Joint Spacing: 3 inches.
9. Contraction Joint Depth: Plus 1/4 inch, no minus.
10. Joint Width: Plus 1/8 inch, no minus.

3.9 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Testing Services: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:
1. Testing Frequency: Obtain at least one composite sample for each 100 cu. yd. or fraction thereof of each concrete mixture placed each day.
 - a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
 2. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.

-13-
SECTION 32 1313
CONCRETE PAVING

3. Air Content: ASTM C 231, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
 4. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F and below and when it is 80 deg F and above, and one test for each composite sample.
 5. Compression Test Specimens: ASTM C 31/C 31M; cast and laboratory cure one set of three standard cylinder specimens for each composite sample.
 6. Compressive-Strength Tests: ASTM C 39/C 39M; test one specimen at seven days and two specimens at 28 days.
A compressive-strength test shall be the average compressive strength from two specimens obtained from same composite sample and tested at 28 days.
- C. Strength of each concrete mixture will be satisfactory if average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.
- D. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
- E. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
- F. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect.
- G. Concrete paving will be considered defective if it does not pass tests and inspections.
- H. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- I. Prepare test and inspection reports.
- 3.10 REPAIRS AND PROTECTION
- A. Remove and replace concrete paving that is broken, damaged, or defective or that does not comply with requirements in this Section. Remove work in complete sections from joint to joint unless otherwise approved by Architect.
 - B. Drill test cores, where directed by Architect, when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory paving areas with portland cement concrete bonded to paving with epoxy adhesive.

-14-
SECTION 32 1313
CONCRETE PAVING

- C. Protect concrete paving from damage. Exclude traffic from paving for at least 14 days after placement. When construction traffic is permitted, maintain paving as clean as possible by removing surface stains and spillage of materials as they occur.
- D. Maintain concrete paving free of stains, discoloration, dirt, and other foreign material. Sweep paving not more than two days before date scheduled for Substantial Completion inspections.

END OF SECTION

**SECTION 32 1400
UNIT PAVING**

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

Section Includes:

1. Concrete unit pavers set in aggregate setting beds.
2. Stone pavers set in sand setting bed over concrete subslab.

1.3 PRECONSTRUCTION TESTING

Preconstruction Adhesion and Compatibility Testing: Submit to latex-additive manufacturer, for testing as indicated below, samples of paving materials that will contact or affect mortar and grout that contain latex additives.

Use manufacturer's standard test methods to determine whether mortar and grout materials will obtain optimum adhesion with, and will be nonstaining to, installed pavers and other materials constituting paver installation.

1.4 ACTION SUBMITTALS

A. Product Data: For the following:

1. Concrete Unit Pavers.
2. Edge restraints.

B. LEED Submittals:

Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.

C. Sieve Analyses: For aggregate setting-bed materials, according to ASTM C 136.

D. Samples for Verification:

1. Full-size units of each type, color and finish of unit paver indicated.
2. Joint materials.

-2-
SECTION 32 1400
UNIT PAVING

1.5 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type of unit paver, joint material, and setting material from single source with resources to provide materials and products of consistent quality in appearance and physical properties.
- B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

- C. Preinstallation Conference: Conduct conference at Project site.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store pavers on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied.
- B. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
- C. Store liquids in tightly closed containers protected from freezing.

1.7 PROJECT CONDITIONS

Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace unit paver work damaged by frost or freezing.

PART 2 - PRODUCTS

2.1 CONCRETE/STONE PAVERS

Concrete/Stone Pavers: Solid paving units, made from normal-weight concrete or natural stone with a compressive strength not less than 8000 psi, water absorption not more than 5 percent according to ASTM C 140, and no breakage and not more than 1 percent mass loss when tested for freeze-thaw resistance according to ASTM C 67.

- 1. Style: Type 1
 - a. Face Size and Shape: 12" x 24" nominal
 - b. Thickness:
 - 1) Vehicular areas: minimum 2 ¾ inches thick
 - 2) Non-vehicular areas: minimum 2 inches thick
- 2. Style: Type 2
 - a. Face Size and Shape: 6" x 16" nominal
 - b. Thickness:

-3-
SECTION 32 1400
UNIT PAVING

- 1) Vehicular areas: minimum 2 ¾ inches thick
 - 2) Non-vehicular areas: minimum 2 inches thick
3. Style: Type 2
- a. Face Size and Shape: 6" x 16" nominal
 - b. Thickness:
 - 1) Vehicular areas: minimum 2 ¾ inches thick
 - 2) Non-vehicular areas: minimum 2 inches thick
- 2.2 CURBS AND EDGE RESTRAINTS
- A. Job-Built Concrete Flush Curb, per plans: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mixed concrete with minimum 28-day compressive strength of 4500 psi.
 - B. Precast Concrete Flush Curb, per plans
- 2.3 ACCESSORIES
- A. Cork Joint Filler: Preformed strips complying with ASTM D 1752, Type II.
 - B. Compressible Foam Filler: Preformed strips complying with ASTM D 1056, Grade 2A1.
- 2.4 AGGREGATE SETTING-BED MATERIALS
- A. Base Course: refer to garden roof assembly specification for base course instructions.
 - B. Sand for Leveling Course: Sound, sharp, washed, natural sand or crushed stone complying with gradation requirements in ASTM C 33 for fine aggregate.
 - C. Stone Screenings for Leveling Course: Sound stone screenings complying with ASTM D 448 for Size No. 10.
 - D. Sand for Joints: Fine, sharp, washed, natural sand or crushed stone with 100 percent passing No. 16 sieve and no more than 10 percent passing No. 200 sieve.
 - E. Drainage Geotextile: Nonwoven needle-punched geotextile fabric, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation greater than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:
 1. Grab Tensile Strength: 120 lbs; ASTM D4632
 2. Apparent Opening Size: No. 40 sieve, maximum; ASTM D 4751.
 3. Permittivity: 0.5 per second, minimum; ASTM D 4491.
 4. UV Stability: 50 percent after 500 hours' exposure, ASTM D 4355.

-4-

**SECTION 32 1400
UNIT PAVING**

- F. Geosynthetic: Woven geotextile fabric, manufactured for separation and reinforcement applications; made from high-tenacity polypropylene yarns; complying with AASHTO M 288 and the following, measured per test methods referenced:
 - 1. Tensile Strength (at ultimate): 2640 lbs/ft; ASTM D4595
 - 2. Apparent Opening Size: No. 60 sieve, maximum; ASTM D 4751.
 - 3. Permittivity: 0.7 per second, minimum; ASTM D 4491.
 - 4. UV Stability: 50 percent after 500 hours' exposure, ASTM D 4355.
- G. Herbicide: Commercial chemical for weed control, registered with the EPA. Provide in granular, liquid, or wettable powder form.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas indicated to receive paving, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Where pavers are to be installed over waterproofing, examine waterproofing installation, with waterproofing Installer present, for protection from paving operations, including areas where waterproofing system is turned up or flashed against vertical surfaces.
- C. Proceed with installation only after unsatisfactory conditions have been corrected and waterproofing protection is in place.

3.2 PREPARATION

- A. Remove substances from concrete substrates that could impair mortar bond, including curing and sealing compounds, form oil, and laitance.
- B. Sweep concrete substrates to remove dirt, dust, debris, and loose particles.
- C. Proof-roll prepared subgrade according to requirements in Section 312000 "Earth Moving" to identify soft pockets and areas of excess yielding. Proceed with unit paver installation only after deficient subgrades have been corrected and are ready to receive subbase and base course for unit pavers.

3.3 INSTALLATION, GENERAL

- A. Do not use pavers with chips, cracks, voids, discolorations, or other defects that might be visible or cause staining in finished work.
- B. Mix pavers from several pallets or cubes, as they are placed, to produce uniform blend of colors and textures.

-5-

**SECTION 32 1400
UNIT PAVING**

- C. Cut pavers with motor-driven masonry saw equipment to provide clean, sharp, unchipped edges. Cut units to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible. Hammer cutting is not acceptable.

For concrete pavers, a block splitter may be used.

- D. Joint Pattern: As indicated.
- E. Pavers over Waterproofing: Exercise care in placing pavers and setting materials over waterproofing so protection materials are not displaced and waterproofing is not punctured or otherwise damaged. Carefully replace protection materials that become displaced and arrange for repair of damaged waterproofing before covering with paving.

Provide joint filler at waterproofing that is turned up on vertical surfaces unless otherwise indicated; where unfilled joints are indicated, provide temporary filler or protection until paver installation is complete.

- F. Tolerances: Do not exceed 1/16-inch unit-to-unit offset from flush (lippage) nor 1/8 inch in 24 inches and 1/4 inch in 10 feet from level, or indicated slope, for finished surface of paving.
- G. Expansion and Control Joints: Provide for sealant-filled joints at locations and of widths indicated. Provide compressible foam filler as backing for sealant-filled joints unless otherwise indicated; where unfilled joints are indicated, provide temporary filler until paver installation is complete. Install joint filler before setting pavers. Sealant materials and installation are specified in Section 079200 "Joint Sealants."
- H. Expansion and Control Joints: Provide cork joint filler at locations and of widths indicated. Install joint filler before setting pavers. Make top of joint filler flush with top of pavers.
- I. Provide edge restraints as indicated. Install edge restraints before placing unit pavers.

Construct edge restraints to comply with drawings.

3.4 REPAIRING, POINTING, AND CLEANING

- A. Remove and replace unit pavers that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Provide new units to match adjoining units and install in same manner as original units, with same joint treatment and with no evidence of replacement.
- B. Pointing: During tooling of joints, enlarge voids or holes and completely fill with grout. Point joints at sealant joints to provide a neat, uniform appearance, properly prepared for sealant application.
- C. Cleaning: Remove excess grout from exposed paver surfaces; wash and scrub clean.
 - 1. Remove temporary protective coating as recommended by coating manufacturer and as acceptable to paver and grout manufacturers.

-6-

**SECTION 32 1400
UNIT PAVING**

2. Do not allow protective coating to enter floor drains. Trap, collect, and remove coating material.

END OF SECTION

**SECTION 32 1816.13
PLAYGROUND PROTECTIVE SURFACING**

PART 1 - GENERAL

1.1 SUMMARY

Section Includes:

Engineered Wood Fiber Play Surfaces

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples for Verification

1.3 DELIVERY, STORAGE, AND HANDLING

- A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws if applicable.
- B. Bulk Materials:
 - 1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
 - 2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
 - 3. Accompany each delivery of bulk materials with appropriate certificates.

PART 2 - PRODUCTS

2.1 ENGINEERED WOOD FIBER PLAY SURFACES

- A. Provide engineered wood fiber play surfaces in areas indicated on plans
- B. The amount of engineered wood fiber play surface depth is to be a minimum of 8” after compaction.
- C. Provide rubberized wear mat (minimum size: 36” x 36” x 1.5”) with beveled edge on all sides under each swing seat, tire swing, slide exist and sliding pole. Double and triple slides may require multiple wear mats.

PART 3 - QUALITY CONTROL

- 3.1 Surfacing shall be IPEMA-certified engineered wood fiber. Standard wood chips or bark mulch will not be acceptable.

-2-

**SECTION 32 1816.13
PLAYGROUND PROTECTIVE SURFACING**

- 3.2 Supplier must provide test results for engineered wood fiber and wear mats for impact attenuation in accordance with ASTM F 1292.
- 3.3 Testing of engineered wood fiber in accordance with ASTM F 1292 must show G-max values of less than 155G for an 8" thick system.
- 3.4 Supplier must provide test results for the engineered wood fiber in accordance with ASTM D 2075.
- 3.5 Testing of wear mats in accordance with ASTM F 1292 must show values of less than 200G and HIC values of less than 1,000 for a 3' drop height.
- 3.6 Supplier must provide test results in accordance with ASTM F 1951.
- 3.7 Supplier must certify that the surface meets the intent of the Americans with Disabilities Act (ADA).

END OF SECTION

**SECTION 32 1823
SYNTHETIC TURF SURFACING**

PART 1 GENERAL

1.01 QUALITY ASSURANCE

- A. The synthetic turf manufacturer must have a minimum of 5 years' experience.
- B. The synthetic turf installer must have a minimum of 5 years' experience and have installed a minimum of 5 acceptable installations of comparable size within the last 3 years.
- C. Do not apply adhesive if temperatures are expected to go below 40 degrees within a 24 hour period.
- D. Synthetic Turf Underlayment (shock pad):
 - 1. Subgrade verification: Contractor shall provide a surveyed verification of grades on a 10' grid across the synthetic turf subgrade leveling course. Local soil contour after final grading and compaction shall not have deviations in surface shape greater than 1/4" over a 10' span. (+/- 1/8").
 - 2. Stringline verification: Contractor shall verify leveling course contour using "string line" method: Lengths of 50' – 100' pulled taught with high/low spots marked and hand-dressed prior to installation of synthetic turf underlayment (shock pad).
 - 3. The manufacturer must demonstrate successful installations for at least 5 million square feet of the material specified herein and a minimum 10 installations within the state of Colorado.
 - 4. Use only new materials manufactured and shipped for the specific installation. No used, recycled or refurbished materials are to be installed. Manufacturer must provide documentation of material content and MSDS sheet for submittal package.
 - 5. Synthetic turf underlayment material shall be shipped as flat panels on prepackaged pallets. Pallets to be wrapped with heavy-duty barrier for protection from moisture and UV exposure. Contractor shall not unwrap packaging until installation period.
 - 6. Manufacturer shall provide written and video procedures to selected turf supplier for installation of turf over the underlayment.
 - 7. Seams shall be mechanically locked into place by hand without use of additional materials, glue, fasteners, or secondary processes and equipment.
 - 8. Install per manufacturer's guidelines.

1.02 WARRANTY

- A. The warranty shall guarantee the usability and playability of the synthetic turf for its intended uses for an eight year period starting at the Final Acceptance Date.
- B. Synthetic Turf Underlayment (shock pad): Provide complete 25-year product warranty that starts at the Final Acceptance Date. Warranty will include the cost to repair or replace the shock pad in the event the product fails to meet warranty. The warranty must also include a field maximum GMax limit of 120 Gs for the usable life of the artificial turf.
- C. The warranty may not be prorated or place limitation on the field's usage.

-2-

**SECTION 32 1823
SYNTHETIC TURF SURFACING**

PART 2 PRODUCTS

2.01 MATERIALS

A. Components:

1. A carpet made of polyethylene fibers tufted into a fibrous, perforated or permeable backing.
2. The infill should be 100% rounded and highly uniform quartz sand, pigmented and sealed with an acrylic polymer that partially covers the carpet.
3. Glue, paint, thread, seaming fabric and materials used to install/mark the synthetic turf.
4. A synthetic turf underlayment (shock pad) made of resilient polypropylene.

B. Monofilament Synthetic Turf:

1. Fiber Denier: 9,000 dtex minimum.
2. Structure: Straight Monofilament.
3. Yarn Thickness: 120 – 80 microns.
4. Yarn Width: 1 mm.
5. Yarn Tensile Strength: 135 N, Minimum.
6. Tuft Gauge: 3/4 inch maximum.
7. Face Weight: 45 oz. minimum
8. Pile Height (consistent throughout material): 1 5/8 inch
9. Primary Backing: Two part composite, comprised of both woven and non-woven components.
10. Primary Backing Weight: 8 oz/sy, minimum.
11. Primary Backing Dimensional Stability: 47.10 n/SQ. Meter.
12. Secondary Backing Coating: Solid polyurethane.
13. Secondary Backing Coating Weight: 26 oz/sy, minimum.
14. Backing Tear Strength - Grab Tear Strength: (X-Y) > 250-400 lbs.
15. Perforated Backing: 1/4 inch minimum holes at 3inch o.c. both directions.

C. Dual Fiber Synthetic Turf:

1. Fiber Denier: 9,000 dtex minimum.
2. Structure: Straight Monofilament.
3. Yarn Thickness: 120 – 80 microns.
4. Yarn Width: 1 mm.
5. Yarn Tensile Strength: 135 N, Minimum.
6. Tuft Gauge: 3/8 inch maximum.
7. Face Weight: 45 oz. minimum. 52 oz. maximum
8. Pile Height (consistent throughout material): 1 5/8 inch
9. Primary Backing: Two part composite, comprised of both woven and non-woven components.
10. Primary Backing Weight: 8 oz/sy, minimum.
11. Primary Backing Dimensional Stability: 47.10 n/SQ. Meter.
12. Secondary Backing Coating: Solid polyurethane.

-3-

**SECTION 32 1823
SYNTHETIC TURF SURFACING**

13. Secondary Backing Coating Weight: 26 oz/sy, minimum.
14. Backing Tear Strength - Grab Tear Strength: (X-Y) > 250-400 lbs.
15. Perforated Backing: ¼ inch minimum holes at 3inch o.c. both directions.

D. Slit Film Synthetic Turf:

1. Fiber Denier: 9,000 dtex minimum.
2. Structure: Fibrillated Tape.
3. Yarn Thickness: 120 – 80 microns.
4. Yarn Width: 17 mm.
5. Yarn Tensile Strength: 135 N, Minimum.
6. Tuft Gauge: 3/8 inch maximum.
7. Face Weight: 45 oz. minimum. 52 oz. maximum
8. Pile Height (consistent throughout material): 1 5/8 inch
9. Primary Backing: Two part composite, comprised of both woven and non-woven components.
10. Primary Backing Weight: 8 oz/sy, minimum.
11. Primary Backing Dimensional Stability: 47.10 n/SQ. Meter.
12. Secondary Backing Coating: Solid polyurethane.
13. Secondary Backing Coating Weight: 26 oz/sy, minimum.
14. Backing Tear Strength - Grab Tear Strength: (X-Y) > 250-400 lbs.
15. Perforated Backing: ¼ inch minimum holes at 3inch o.c. both directions.

E. Infill:

Top Layer: Sealed Silica Sand

- a) Material shall be specifically designed and manufactured for athletic use. It shall be a rounded and highly uniform quartz sand pigmented and sealed with an acrylic polymer.
- b) The coated particles shall be smooth to resist mounding and compaction.
- c) The finished product shall be 100% coated, shall repel water, be non-flammable and have <.001% dust content.
- d) Coefficient of Uniformity: ≤ 1.3.
- e) Sieve Size (95% Minimum): 12 - 20.
- f) Angle of repose: ≤ 30 degrees
- g) Abrasion Index of 26±2.
- h) Color: Green or Tan
- i) Acceptable Products
 - i) Envirofill
 - ii) Accepted substitution. If the bidding contractor does not identify a manufacturer, it will be assumed that the specified product is included in the bid package and will not consider substitutions. Proposed alternate products must be submitted and pre-accepted by the design architect/engineer prior to the bid opening per section 01 25 00.

-4-

**SECTION 32 1823
SYNTHETIC TURF SURFACING**

- F. At sports field, carpet shall be furnished in 15' wide rolls, and shall be long enough to extend sideline to sideline without splicing.
- G. At non-sports field installations, carpet shall be in as large of pieces as practical with a minimum of seams. No seams allowed within 24inch (parallel) of edges.
- H. Synthetic Turf Underlayment (shock pad):
 - 1. Synthetic turf underlayment shall be an impact energy absorbing drainage material specifically designed for use with synthetic turf.
 - 2. The material must have both impact absorption and drainage properties that meet the following performance requirements:
 - a) Vertical drainage: 50 in/hr, minimum per EN12616
 - b) Surface contact: 50% minimum contact with synthetic turf backing
 - c) Friction coefficient: Movement of artificial turf over 50 mm distance must require a minimum of 8.92 N of force per ISO 8295:2010
 - d) Thermal stability: Not to exceed 3 mm per 30 degree C change
 - e) Tensile strength: 100 psi, minimum
 - f) Provide field maximum average Gmax of no greater than 120 during the warranty period of the turf. (system test under infill turf)
 - g) Field must pass ASTM 1292 and produce a minimum 1.3 meter (4 feet 3") critical fall height. (WR Reg22)
 - h) Bacteria and fungi resistance: Pass per ASTM G22-76
 - i) Chemical resistance: No change to material under total saturation of the following chemicals:
 - i) Gasoline
 - ii) Brake fluid
 - iii) Chlorine
 - iv) Underbody coating
 - v) Transmission fluid
 - vi) Motor oil
 - vii) Zinc chloride
 - viii) Tar and oil solvents
 - ix) Windshield washer fluid
 - x) Kerosene
 - xi) Ethylene and propylene glycols
 - j) Product must carry a 25-year product warranty that includes the removal and repair or replacement of the artificial turf in the event underlayment fails to meet warranty claims.
 - k) Material must be 100% recyclable (recycling for energy not acceptable)
 - l) Cradle to Cradle Certification preferred
 - m) USA Made preferred
 - n) Material must not absorb water. Open cell foams not accepted.
 - o) Product must be made from 100% virgin material with no recycled content
 - p) Panel thickness: 23 mm (+/- 1 mm)
 - 3. Acceptable products

-5-

**SECTION 32 1823
SYNTHETIC TURF SURFACING**

- a) Brock PowerBase YSR
 - b) Accepted substitution. If the bidding contractor does not identify a manufacturer, it will be assumed that the specified product is included in the bid package and will not consider substitutions. Proposed alternate products must be submitted and pre-accepted by the design architect/engineer prior to the bid opening per section 01 25 00. Any substitutions that present a cost reduction to the owner, said cost reduction must be credited back to owner.
- B. Surplus Material: The turf contractor shall provide the following surplus material with each installation, to be stored at the manufacturer's or installer's facility.
1. Turf Fabric: 5% extra by square footage.
 2. Seaming Tape: 5%.
 3. Seaming Epoxy: 5%.
 4. Synthetic Turf Underlayment (shock pad): 1000 extra square feet.
- C. Nyloplast drainage or similar systems for athletic field storm drainage systems.

PART 3 EXECUTION

3.01 EXECUTION

- A. The installation shall be performed in full compliance with the approved shop drawings.
- B. The installation shall be in accordance with the manufacturer's specifications and recommendations.
- C. Striping shall be to NFHS standards, or as shown on plans.
- D. All inlaid lines shall be straight and true.
- E. Gmax testing shall be completed following the turf installation. Testing shall be done at a minimum of 5 locations on the field. The average Gmax shall be below 110, with an individual maximum of 120. Testing to be paid for by the contractor.

END OF SECTION

**SECTION 32 9300
PLANTS**

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Plants.
2. Tree Stabilization Materials.

B. Related Requirements:

1. Section 32 1313 "Concrete Paving" for concrete pavement and walks.
2. Section 33 4100 "Storm Utility Drainage Piping" and Section 334600 "Subdrainage" for plaza and planter drainage.

1.3 UNIT PRICES

- A. Work of this Section is affected by unit prices specified in Section 01 2200 "Unit Prices."
- B. Unit prices apply to authorized work covered by quantity allowances.
- C. Unit prices apply to additions to and deletions from the Work as authorized by Change Orders.

1.4 DEFINITIONS

- A. Backfill: The earth used to replace or the act of replacing earth in an excavation.
- B. Balled and Burlapped Stock: Plants dug with firm, natural balls of earth in which they were grown, with a ball size not less than diameter and depth recommended by ANSI Z60.1 for type and size of plant required; wrapped with burlap, tied, rigidly supported, and drum laced with twine with the root flare visible at the surface of the ball as recommended by ANSI Z60.1.
- C. Container-Grown Stock: Healthy, vigorous, well-rooted plants grown in a container, with a well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI Z60.1 for type and size of plant required.
- D. Fabric Bag-Grown Stock: Healthy, vigorous, well-rooted plants established and grown in-ground in a porous fabric bag with well-established root system reaching sides of fabric bag. Fabric bag size is not less than diameter, depth, and volume required by ANSI Z60.1 for type and size of plant.
- E. Finish Grade: Elevation of finished surface of planting soil.

-2-
SECTION 32 9300
PLANTS

- F. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. Pesticides include insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. They also include substances or mixtures intended for use as a plant regulator, defoliant, or desiccant. Some sources classify herbicides separately from pesticides.
- G. Pests: Living organisms that occur where they are not desired or that cause damage to plants, animals, or people. Pests include insects, mites, grubs, mollusks (snails and slugs), rodents (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.
- H. Planting Area: Areas to be planted.
- I. Planting Soil: Existing, on-site soil; imported soil; or manufactured soil that has been modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth. See Section 329113 "Soil Preparation" for drawing designations for planting soils.
- J. Plant; Plants; Plant Material: These terms refer to vegetation in general, including trees, shrubs, vines, ground covers, ornamental grasses, bulbs, corms, tubers, or herbaceous vegetation.
- K. Root Flare: Also called "trunk flare." The area at the base of the plant's stem or trunk where the stem or trunk broadens to form roots; the area of transition between the root system and the stem or trunk.
- L. Stem Girdling Roots: Roots that encircle the stems (trunks) of trees below the soil surface.
- M. Subgrade: The surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

1.5 COORDINATION

Coordination with Turf Areas (Lawns): Plant trees, shrubs, and other plants after finish grades are established and before planting turf areas unless otherwise indicated.

When planting trees, shrubs, and other plants after planting turf areas, protect turf areas, and promptly repair damage caused by planting operations.

1.6 PREINSTALLATION MEETINGS

Preinstallation Conference: Conduct conference at Project site.

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Plant Materials: Include quantities, sizes, quality, photographs and sources for plant materials.

-3-
SECTION 32 9300
PLANTS

2. Plant Photographs: Include color photographs in digital format of each required species and size of plant material as it will be furnished to Project. Take photographs from an angle depicting true size and condition of the typical plant to be furnished. Include a scale rod or other measuring device in each photograph. For species where more than 20 plants are required, include a minimum of three photographs showing the average plant, the best quality plant, and the worst quality plant to be furnished. Identify each photograph with the full scientific name of the plant, plant size, and name of the growing nursery.

B. Samples for Verification: For each of the following:

1. Trees and Shrubs: 12 Samples of each variety and size delivered to site for review. Maintain approved Samples on-site as a standard for comparison.
2. Organic Mulch: 1-pint volume of each organic mulch required; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch. Each Sample shall be typical of the lot of material to be furnished; provide an accurate representation of color, texture, and organic makeup.
3. Mineral Mulch: 2 lb of each mineral mulch required, in sealed plastic bags labeled with source of mulch. Sample shall be typical of the lot of material to be delivered and installed on-site; provide an accurate indication of color, texture, and makeup of the material.
4. Proprietary Root-Ball-Stabilization Device: One unit.
5. Proprietary Staking and Guying Device: One unit.
6. Slow-Release, Tree-Watering Device: One unit of each size required.
7. Edging Materials and Accessories: Manufacturer's standard size, to verify color selected.
8. Root Barrier: Width of panel by 12 inches.

1.8 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For landscape Installer. Include list of similar projects completed by Installer demonstrating Installer's capabilities and experience. Include project names, addresses, and year completed, and include names and addresses of owners' contact persons.
- B. Product Certificates: For each type of manufactured product, from manufacturer, and complying with the following:
 1. Manufacturer's certified analysis of standard products.
 2. Analysis of other materials by a recognized laboratory made according to methods established by the Association of Official Analytical Chemists, where applicable.
- C. Pesticides and Herbicides: Product label and manufacturer's application instructions specific to Project.

-4-
SECTION 32 9300
PLANTS

1.9 CLOSEOUT SUBMITTALS

Maintenance Data: Recommended procedures to be established by Owner for maintenance of plants during a calendar year. Submit before expiration of the Landscape Establishment period (as described in Section 214.04 of the CDOT Standard Specifications).

1.10 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified landscape installer whose work has resulted in successful establishment of plants.
1. Professional Membership: Installer shall be a member in good standing of either the Professional Landcare Network or the American Nursery and Landscape Association.
 2. Experience: Three years' experience in landscape installation in addition to requirements in Section 014000 "Quality Requirements."
 3. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.
 4. Personnel Certifications: Installer's personnel assigned to the Work shall have certification in one all of the following categories from the Professional Landcare Network:
 - a. Landscape Industry Certified Technician - Exterior.
 - b. Landscape Industry Certified Interior.
 - c. Landscape Industry Certified Horticultural Technician.
 5. Pesticide Applicator: State licensed, commercial.
- B. Provide quality, size, genus, species, and variety of plants indicated, complying with applicable requirements in ANSI Z60.1.
- Selection of plants purchased under allowances is made by Architect, who tags plants at their place of growth before they are prepared for transplanting.
- C. Measurements: Measure according to ANSI Z60.1. Do not prune to obtain required sizes.
1. Trees and Shrubs: Measure with branches and trunks or canes in their normal position. Take height measurements from or near the top of the root flare for field-grown stock and container-grown stock. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip to tip. Take caliper measurements 6 inches above the root flare for trees up to 4-inch caliper size, and 12 inches above the root flare for larger sizes.
 2. Other Plants: Measure with stems, petioles, and foliage in their normal position.
- D. Plant Material Observation: Landscape Architect may observe plant material either at place of growth or at site before planting for compliance with requirements for genus, species, variety, cultivar, size, and quality. Landscape Architect may also observe trees and shrubs further for size and condition of balls and root systems, pests, disease symptoms, injuries, and latent defects and may reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.

-5-
SECTION 32 9300
PLANTS

Notify Landscape Architect of sources of planting materials 14 days in advance of delivery to site.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws if applicable.
- B. Bulk Materials:
 - 1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
 - 2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
 - 3. Accompany each delivery of bulk materials with appropriate certificates.
- C. Do not prune trees and shrubs before delivery. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during shipping and delivery. Do not drop plants during delivery and handling.
- D. Handle planting stock by root ball.
- E. Store bulbs, corms, and tubers in a dry place at 60 to 65 deg F until planting.
- F. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.

If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.
- G. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.
- H. Deliver plants after preparations for planting have been completed, and install immediately. If planting is delayed more than six hours after delivery, set plants and trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.
 - 1. Heel-in bare-root stock. Soak roots that are in less than moist condition in water for two hours. Reject plants with dry roots.
 - 2. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.

-6-
SECTION 32 9300
PLANTS

3. Do not remove container-grown stock from containers before time of planting.
4. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly wet condition.

1.12 FIELD CONDITIONS

- A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.
- B. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with maintenance periods to provide required maintenance from date of Substantial Completion.
 1. Spring Planting: April 15 – June 15
 2. Fall Planting: September 1 – October 15
- C. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions and warranty requirements.

1.13 WARRANTY

- A. Special Warranty: Installer agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within the Landscape Establishment period (as described in Section 214.04 of the CDOT Standard Specifications).
 1. Failures include, but are not limited to, the following:
 - a. Death and unsatisfactory growth, except for defects resulting from abuse, lack of adequate maintenance, or neglect by Owner.
 - b. Structural failures including plantings falling or blowing over.
 - c. Faulty performance of tree stabilization.
 - d. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 2. Include the following remedial actions as a minimum:
 - a. Immediately remove dead plants and replace unless required to plant in the succeeding planting season.
 - b. Replace plants that are more than 25 percent dead or in an unhealthy condition at end of the Landscape Establishment period (as described in Section 214.04 of the CDOT Standard Specifications).
 - c. A limit of one replacement of each plant is required except for losses or replacements due to failure to comply with requirements.
 - d. Provide extended warranty for period equal to original warranty period, for replaced plant material.

-7-
SECTION 32 9300
PLANTS

PART 2 - PRODUCTS

2.1 PLANT MATERIAL

- A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in Plant List, Plant Schedule, or Plant Legend indicated on Drawings and complying with ANSI Z60.1; and with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock, densely foliated when in leaf and free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.
1. Trees with damaged, crooked, or multiple leaders; tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); crossing trunks; cut-off limbs more than 3/4 inch in diameter; or with stem girdling roots are unacceptable.
 2. Collected Stock: Do not use plants harvested from the wild, from native stands, from an established landscape planting, or not grown in a nursery unless otherwise indicated.
- B. Provide plants of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of plants required. Plants of a larger size may be used if acceptable to Architect, with a proportionate increase in size of roots or balls.
- C. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which begins at root flare according to ANSI Z60.1. Root flare shall be visible before planting.
- D. Labeling: Label each plant of each variety, size, and caliper with a securely attached, waterproof tag bearing legible designation of common name and full scientific name, including genus and species. Include nomenclature for hybrid, variety, or cultivar, if applicable for the plant.
- E. If formal arrangements or consecutive order of plants is indicated on Drawings, select stock for uniform height and spread, and number the labels to assure symmetry in planting.
- F. Annuals: Provide healthy, disease-free plants of species and variety shown or listed, with well-established root systems reaching to sides of the container to maintain a firm ball, but not with excessive root growth encircling the container. Provide only plants that are acclimated to outdoor conditions before delivery.

2.2 FERTILIZERS

Planting Tablets: Tightly compressed chip-type, long-lasting, slow-release, commercial-grade planting fertilizer in tablet form. Tablets shall break down with soil bacteria, converting nutrients into a form that can be absorbed by plant roots.

1. Size: 10-gram tablets.

-8-
SECTION 32 9300
PLANTS

2. Nutrient Composition: 20 percent nitrogen, 10 percent phosphorous, and 5 percent potassium, by weight plus micronutrients.

2.3 MULCHES

- A. Organic Mulch: Free from deleterious materials and suitable as a top dressing of trees and shrubs, consisting of one of the following:
 1. Type: Shredded hardwood.
 2. Size Range: 3 inches maximum, 1/2 inch minimum.
 3. Color: Natural.
- B. Mineral Mulch: Hard, durable stone, washed free of loam, sand, clay, and other foreign substances, of the following type, size range, and color:
 1. Type: Crushed stone or gravel
 2. Size Range: 3/4 inch maximum
 3. Color: Uniform tan-beige color range acceptable to Architect

2.4 PESTICIDES

- A. General: Pesticide registered and approved by the EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.
- B. Pre-Emergent Herbicide (Selective and Nonselective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.
- C. Post-Emergent Herbicide (Selective and Nonselective): Effective for controlling weed growth that has already germinated.

2.5 TREE-STABILIZATION MATERIALS

- A. Trunk-Stabilization Materials:
 1. Tree anchors: Galvanized steel anchors connected directly to structure below.
 2. Wood Deadmen: Timbers measuring 8 inches in diameter and 48 inches long, treated with specified wood pressure-preservative treatment.
 3. Flexible Ties: Wide rubber or elastic bands or straps of length required to reach stakes or turnbuckles.
 4. Guys and Tie Wires: ASTM A 641/A 641M, Class 1, galvanized-steel wire, two-strand, twisted, 0.106 inch in diameter.
 5. Tree-Tie Webbing: UV-resistant polypropylene or nylon webbing with brass grommets.
 6. Guy Cables: Five-strand, 3/16-inch- diameter, galvanized-steel cable, with zinc-coated turnbuckles, a minimum of 3 inches long, with two 3/8-inch galvanized eyebolts.

-9-

**SECTION 32 9300
PLANTS**

7. Flags: Standard surveyor's plastic flagging tape, white, 6 inches long.
8. Proprietary Staking-and-Guying Devices: Proprietary stake or anchor and adjustable tie systems to secure each new planting by plant stem; sized as indicated and according to manufacturer's written recommendations.
 - a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) Arborbrace; ArborBrace Tree Guying System.
 - 2) Better Bilt Products, Inc; Tree Anchor Kit.
 - 3) DeepRoot Green Infrastructure, LLC; ArborTie AT LD100 Professional Anchoring Kit.
 - 4) Foresight Products, LLC; Duckbill Professional Tree Guy System.

B. Root-Ball Stabilization Materials:

1. Proprietary Root-Ball Stabilization Devices: Proprietary at- or below-grade stabilization systems to secure each new planting by root ball and that do not encircle the trunk; sized according to manufacturer's written recommendations unless otherwise indicated.
Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) Border Concepts, Inc; Tomahawk Tree Stabilizers.
 - 2) Foresight Products, LLC; Duckbill Rootball Fixing System.
 - 3) Tree Staple, Inc; Tree Staples.

2.6 MISCELLANEOUS PRODUCTS

- A. Wood Pressure-Preservative Treatment: AWPA U1, Use Category UC4a; acceptable to authorities having jurisdiction, and containing no arsenic or chromium.
- B. Root Barrier: Black, molded, modular panels 18 inches high (deep), 85 mils thick, and with vertical root deflecting ribs protruding 3/4 inch out from panel surface; manufactured with minimum 50 percent recycled polyethylene plastic with UV inhibitors. Root barriers to be used on all over-structure tree planting.

Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

- a. DeepRoot Green Infrastructure, LLC.
 - b. NDS Inc.
 - c. Villa Root Barrier.
- C. Antidesiccant: Water-insoluble emulsion, permeable moisture retarder, film forming, for trees and shrubs. Deliver in original, sealed, and fully labeled containers and mix according to manufacturer's written instructions.
 - D. Burlap: Non-synthetic, biodegradable.

-10-
SECTION 32 9300
PLANTS

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive plants, with Installer present, for compliance with requirements and conditions affecting installation and performance of the Work.
 - 1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
 - 2. Verify that plants and vehicles loaded with plants can travel to planting locations with adequate overhead clearance.
 - 3. Suspend planting operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
 - 4. Uniformly moisten excessively dry soil that is not workable or which is dusty.
- B. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.
- B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.
- C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Architect's acceptance of layout before excavating or planting. Make minor adjustments as required.
- D. Lay out plants at locations directed by Architect. Stake locations of individual trees and shrubs and outline areas for multiple plantings.

3.3 PLANTING AREA ESTABLISHMENT

- A. General: Prepare planting area for soil placement and mix planting soil according to Section 329113 "Soil Preparation."
- B. Placing Planting Soil: Place manufactured planting soil or growing media over exposed subgrade.

-11-
SECTION 32 9300
PLANTS

- C. Before planting, obtain Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.
- 3.4 EXCAVATION FOR TREES AND SHRUBS (applies only to off-cover planting areas; refer to garden roof assembly specification for over-cover applications)
- A. Planting Pits and Trenches: Excavate circular planting pits.
 - 1. Excavate planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are unacceptable. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil to prevent settling. Scarify sides of planting pit smeared or smoothed during excavation.
 - 2. Excavate approximately three times as wide as ball diameter for balled and burlapped stock.
 - 3. Excavate at least 12 inches wider than root spread and deep enough to accommodate vertical roots for bare-root stock.
 - 4. Do not excavate deeper than depth of the root ball, measured from the root flare to the bottom of the root ball.
 - 5. If area under the plant was initially dug too deep, add soil to raise it to the correct level and thoroughly tamp the added soil to prevent settling.
 - 6. Maintain angles of repose of adjacent materials to ensure stability. Do not excavate subgrades of adjacent paving, structures, hardscapes, or other new or existing improvements.
 - 7. Maintain supervision of excavations during working hours.
 - 8. Keep excavations covered or otherwise protected after working hours.
 - 9. If drain tile is indicated on Drawings or required under planting areas, excavate to top of porous backfill over tile.
 - B. Backfill Soil: Subsoil and topsoil removed from excavations may not be used as backfill soil unless otherwise indicated.
 - C. Obstructions: Notify Architect if unexpected rock or obstructions detrimental to trees or shrubs are encountered in excavations
 - D. Percolation Test Pit:
 - 1. Location: At up to six (6) locations as determined by the Landscape Architect on site.
 - 2. Restrictions: Do not perform test on a rainy day or during freezing weather. Repeat tests interrupted by rain or cold.
 - 3. Procedure:
 - a. Dig test pit of a size specified for the tree pits, a minimum of 4 ft. deep, or to match bottom of root ball location. Legibly calibrate a stake at 1 in. intervals and drive it firmly into the undisturbed soil at the bottom of the pit.
 - b. Fill test pit with water to within 1 ft. of the finish grade. Immediately record water level on the stake.

-12-
SECTION 32 9300
PLANTS

- c. After 3 hours, record water level again. Repeat recording of water level once each hour for the succeeding five hours.
 - d. Tree pits that do not drain completely within twenty-four (24) hours shall be provided with a twelve (12)-inch minimum diameter, thirty-six (36)-inch auger holes one (1) per tree pit filled with gravel. Fill pit with 1 ft. of water to confirm the tree pit is properly draining. If the pit does not drain after the gravel is added, contact Landscape Architect.
 - e. For tree pits that do not drain and require gravel, each adjacent tree pit should also be tested to insure proper drainage.
4. Documentation: Submit written documentation of test pit results, dated and signed by the tester.

3.5 TREE, SHRUB, PERENNIAL AND BULB PLANTING

- A. Inspection: At time of planting, verify that root flare is visible at top of root ball according to ANSI Z60.1. If root flare is not visible, remove soil in a level manner from the root ball to where the top-most root emerges from the trunk. After soil removal to expose the root flare, verify that root ball still meets size requirements.
- B. Roots: Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.
- C. Balled and Burlapped Stock: Set each plant plumb and in center of planting pit or trench with root flare 1 inch above adjacent finish grades.
1. Backfill: Planting soil. For trees, use excavated soil for backfill.
 2. After placing some backfill around root ball to stabilize plant, carefully cut and remove burlap, rope, and wire baskets from tops of root balls and from sides, but do not remove from under root balls. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.
 3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
 4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch from root tips; do not place tablets in bottom of the hole.
Quantity: Two per plant.
 5. Continue backfilling process. Water again after placing and tamping final layer of soil.
- D. Balled and Potted and Container-Grown Stock: Set each plant plumb and in center of planting pit or trench with root flare 1 inch above adjacent finish grades.
1. Backfill: Planting soil. For trees, use excavated soil for backfill.
 2. Carefully remove root ball from container without damaging root ball or plant.
 3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.

-13-
SECTION 32 9300
PLANTS

4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch from root tips; do not place tablets in bottom of the hole.
Quantity: As indicated on Drawings.
 5. Continue backfilling process. Water again after placing and tamping final layer of soil.
- E. Slopes: When planting on slopes, set the plant so the root flare on the uphill side is flush with the surrounding soil on the slope; the edge of the root ball on the downhill side will be above the surrounding soil. Apply enough soil to cover the downhill side of the root ball.
- 3.6 TREE, SHRUB, PERENNIAL AND BULB PERENNIAL PRUNING
- A. Remove only dead, dying, or broken branches. Do not prune for shape.
 - B. Prune, thin, and shape trees, shrubs, and vines as directed by City Forester.
 - C. Prune, thin, and shape trees, shrubs, and vines according to standard professional horticultural and arboricultural practices. Unless otherwise indicated by Architect, do not cut tree leaders; remove only injured, dying, or dead branches from trees and shrubs; and prune to retain natural character.
 - D. Do not apply pruning paint to wounds.
- 3.7 TREE STABILIZATION
- A. Trunk Stabilization by Upright Staking and Tying: Install trunk stabilization as follows unless otherwise indicated:
 1. Upright Staking and Tying: Stake trees of 2- through 5-inch caliper. Stake trees of less than 2-inch caliper only as required to prevent wind tip out. Use a minimum of two stakes of length required to penetrate at least 18 inches below bottom of backfilled excavation and to extend to the dimension indicated on Drawings above grade. Set vertical stakes and space to avoid penetrating root balls or root masses.
 2. Upright Staking and Tying: Stake trees with two stakes for trees up to 12 feet high and 2-1/2 inches or less in caliper; three stakes for trees less than 14 feet high and up to 4 inches in caliper. Space stakes equally around trees.
 3. Support trees with bands of flexible ties at contact points with tree trunk. Allow enough slack to avoid rigid restraint of tree.
 4. Support trees with two strands of tie wire, connected to the brass grommets of tree-tie webbing at contact points with tree trunk. Allow enough slack to avoid rigid restraint of tree.
 - B. Trunk Stabilization by Staking and Guying: Install trunk stabilization as follows unless otherwise indicated on Drawings. Stake and guy trees more than 14 feet in height and more than 3 inches in caliper unless otherwise indicated.

-14-
SECTION 32 9300
PLANTS

1. Site-Fabricated, Staking-and-Guying Method: Install no fewer than three guys spaced equally around tree.
 - a. Securely attach guys to stakes 30 inches long, driven to grade. Adjust spacing to avoid penetrating root balls or root masses. Provide turnbuckle for each guy wire and tighten securely.
 - b. Support trees with bands of flexible ties at contact points with tree trunk and reaching to turnbuckle. Allow enough slack to avoid rigid restraint of tree.
 - c. Support trees with guy cable, connected to the brass grommets of tree-tie webbing at contact points with tree trunk and reaching to turnbuckle. Allow enough slack to avoid rigid restraint of tree.
 - d. Attach flags to each guy wire, 30 inches above finish grade.
 - e. Paint turnbuckles with luminescent white paint.
 2. Proprietary Staking and Guying Device: Install staking and guying system sized and positioned as recommended by manufacturer unless otherwise indicated and according to manufacturer's written instructions.
- C. Root-Ball Stabilization: Install at- or below-grade stabilization system to secure each new planting by the root ball unless otherwise indicated.
1. Wood Hold-Down Method: Place vertical stakes against side of root ball and drive them into subsoil; place horizontal wood hold-down stake across top of root ball and screw at each end to one of the vertical stakes.
 - a. Install stakes of length required to penetrate at least to the dimension indicated on Drawings below bottom of backfilled excavation. Saw stakes off at horizontal stake.
 - b. Install screws through horizontal hold-down and penetrating at least 1 inch into stakes. Pre-drill holes if necessary to prevent splitting wood.
 - c. Install second set of stakes on other side of root trunk for larger trees.
 2. Proprietary Root-Ball Stabilization Device: Install root-ball stabilization system sized and positioned as recommended by manufacturer unless otherwise indicated and according to manufacturer's written instructions.
- 3.8 ROOT-BARRIER INSTALLATION
- A. Install root barrier where trees are planted within 48 inches of paving or other hardscape elements, such as walls, curbs, and walkways, unless otherwise indicated on Drawings.
 - B. Align root barrier vertically and horizontally within permanent planters over structure, and run it linearly along and adjacent to the paving or other hardscape elements to be protected from invasive roots.
 - C. Install root barrier continuously for a distance of 60 inches in each direction from the tree trunk, for a total distance of 10 feet per tree. If trees are spaced closer, use a single continuous piece of root barrier.
 1. Position top of root barrier according to manufacturer's written recommendations.
 2. Overlap root barrier a minimum of 12 inches at joints.

-15-
SECTION 32 9300
PLANTS

3. Do not distort or bend root barrier during construction activities.
4. Do not install root barrier surrounding the root ball of tree.

3.9 PLACING SOIL IN PLANTERS

- A. Place a layer of drainage gravel at least 4 inches thick in bottom of planter. Cover bottom with filter fabric and wrap filter fabric 4 inches up on all sides. Duct tape along the entire top edge of the filter fabric, to secure the filter fabric against the sides during the soil-filling process.
- B. Fill planter with planting soil. Place soil in lightly compacted layers to an elevation of 1-1/2 inches below top of planter, allowing natural settlement.

3.10 GROUND COVER AND PLANT PLANTING

- A. Set out and space ground cover and plants other than trees, shrubs, and vines as indicated on Drawings in even rows with triangular spacing.
- B. Use planting soil for backfill.
- C. Dig holes large enough to allow spreading of roots.
- D. For rooted cutting plants supplied in flats, plant each in a manner that minimally disturbs the root system but to a depth not less than two nodes.
- E. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water.
- F. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.
- G. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.11 PLANTING AREA MULCHING

Mulch backfilled surfaces of planting areas and other areas indicated.

1. Trees in Turf Areas: Apply organic mulch ring of 3-inch average thickness. Do not place mulch within 3 inches of trunks or stems.
2. Organic Mulch in Planting Areas: Apply 3-inch average thickness of organic mulch over whole surface of planting area, and finish level with adjacent finish grades. Do not place mulch within 3 inches of trunks or stems.
3. Mineral Mulch in Planting Areas: Apply 3-inch average thickness of mineral mulch over whole surface of planting area, and finish level with adjacent finish grades. Do not place mulch within 3 inches of trunks or stems.

SECTION 32 9300
PLANTS

3.12 PLANT MAINTENANCE DURING THE LANDSCAPE ESTABLISHMENT PERIOD

- A. Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings.
- B. Fill in, as necessary, soil subsidence that may occur because of settling or other processes. Replace mulch materials damaged or lost in areas of subsidence.
- C. Apply treatments as required to keep plant materials, planted areas, and soils free of pests and pathogens or disease. Use integrated pest management practices when possible to minimize use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.

3.13 PESTICIDE APPLICATION DURING THE LANDSCAPE ESTABLISHMENT PERIOD

- A. Apply pesticides and other chemical products and biological control agents according to authorities having jurisdiction and manufacturer's written recommendations. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.
- B. Pre-Emergent Herbicides (Selective and Nonselective): Apply to tree, shrub, and ground-cover areas according to manufacturer's written recommendations. Do not apply to seeded areas.
- C. Post-Emergent Herbicides (Selective and Nonselective): Apply only as necessary to treat already-germinated weeds and according to manufacturer's written recommendations.

3.14 REPAIR AND REPLACEMENT

- A. General: Repair or replace existing or new trees and other plants that are damaged by construction operations, in a manner approved by Architect.
 - 1. Submit details of proposed pruning and repairs.
 - 2. Perform repairs of damaged trunks, branches, and roots within 24 hours, if approved.
 - 3. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by Architect.
- B. Remove and replace trees that are more than 25 percent dead or in an unhealthy condition before the end of the Landscape Establishment period (as described in Section 214.04 of the CDOT Standard Specifications) or are damaged during construction operations that Architect determines are incapable of restoring to normal growth pattern.
 - 1. Provide new trees of same size as those being replaced for each tree of 4 inches in caliper size.
 - 2. Species of Replacement Trees: Species selected by Architect.

-17-
SECTION 32 9300
PLANTS

3.15 CLEANING AND PROTECTION

- A. During planting, keep adjacent paving and construction clean and work area in an orderly condition. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.
- B. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.
- C. Protect plants from damage due to landscape operations and operations of other contractors and trades. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged plantings.
- D. After installation and before Substantial Completion, remove nursery tags, nursery stakes, tie tape, labels, wire, burlap, and other debris from plant material, planting areas, and Project site.
- E. At time of Substantial Completion, verify that tree-watering devices are in good working order and leave them in place. Replace improperly functioning devices.

3.16 MAINTENANCE SERVICE DURING LANDSCAPE ESTABLISHMENT PERIOD

- A. Maintenance Service for Trees and Shrubs: Provide maintenance by skilled employees of landscape Installer. Maintain as required in "Plant Maintenance" Article. Begin maintenance immediately after plants are installed and continue until plantings are acceptably healthy and well established, but for not less than maintenance period below:
- B. Maintenance Service for Ground Cover and Other Plants: Provide maintenance by skilled employees of landscape Installer. Maintain as required in "Plant Maintenance" Article. Begin maintenance immediately after plants are installed and continue until plantings are acceptably healthy and well established, but for not less than maintenance period below:

END OF SECTION

**Schedule 10A
 Applicable Standards And Specifications**

1. APPLICABLE STANDARDS AND SPECIFICATIONS

- a. Subject to Section 8.6 of the Project Agreement, the Developer shall comply with all Construction Standards, including (but, for certainty, not limited to) those listed in this Schedule 10A.
- b. The standards are listed in this Schedule 10A by technical discipline for convenience only and, accordingly, such listing shall not be interpreted as limiting the application of such standards only to the specified technical disciplines if they are also applicable to other technical disciplines.

2. APPENDICES

Appendix A Modifications to CDOT Standard Specifications

Appendix A
Modifications to CDOT Standard Specifications

1. General

- 1.1** This Appendix sets forth modifications to the CDOT *Standard Specifications for Road and Bridge Construction* (“CDOT Standard Specifications”), the Standard Special Provisions applicable to the Project and the Project Special Provisions. For certainty, the CDOT Standard Specifications, the Standard Special Provisions and the Project Special Provisions (each, as so modified) are Construction Standards for the purposes of the definition thereof in Part A of Annex A (Definitions and Abbreviations) to the Project Agreement. The provisions of Sections 1.2 to 1.11 of this Appendix shall also apply to:
- a. the Standard Special Provisions, as if the references to “the CDOT Standard Specifications” in such Sections were references to “the Standard Special Provisions”; and
 - b. the Project Special Provisions, as if the references to “the CDOT Standard Specifications (as incorporated into the Project Agreement by the terms of this Appendix)” in such Sections were references to “the Project Special Provisions”.
- 1.2** All references to “the Contractor” and “the Contract” in the CDOT Standard Specifications (as incorporated into the Project Agreement by the terms of this Appendix) shall be deemed to be references to “the Developer” and “this Agreement”, respectively.
- 1.3** Subject to Sections 1.4, 1.5, 1.6, 1.8 and 1.9 of this Appendix, all references to “Engineer” in the CDOT Standard Specifications (as incorporated into the Project Agreement by the terms of this Appendix) shall be deemed to be references to the Developer, unless the context requires or the Department determines otherwise.
- 1.4** When the CDOT Standard Specifications (as incorporated into the Project Agreement by the terms of this Appendix) describe actions, materials, means or methods that are required and that are qualified by phrases such as: “as directed by the Engineer”, “when directed by the Engineer”, “as determined by the Engineer”, “with or without permission of the Engineer”, “in the opinion of the Engineer”, “unless authorized by the Engineer”, “satisfactory to the Engineer”, “as approved by the Engineer”, or “unless another type is specified or is permitted with approval of the Engineer”, such phrases shall be disregarded.
- 1.5** When the CDOT Standard Specifications (as incorporated into the Project Agreement by the terms of this Appendix) refer to “Resident Engineer”, “Agricultural Engineer”, “Bridge, Construction or Maintenance Engineer”, “TMC system inspector”, “Concrete Engineer”, “Project Engineer”, “Materials Engineer”, “Commissioner”, “Structural Metals Engineer”, “Department’s Lighting Engineer”, “Geotechnical Engineer” or any other specific Department special engineer, such references shall be deemed to be references to “the Department”.
- 1.6** When the CDOT Standard Specifications (as incorporated into the Project Agreement by the terms of this Appendix) require an approval, acceptance, consent, approval or like assent of the Engineer or the Department for the use of alternative or substituted processes or components, references to “the Engineer” shall be disregarded.
- 1.7** If the CDOT Standard Specifications (as incorporated into the Project Agreement by the terms of this Appendix) require an approval, acceptance, consent, approval or like assent of any correction or repair that deviates from the requirements of the Project Agreement, such Approval, Acceptance, consent, approval or like assent must be given by the Department.
- 1.8** When the CDOT Standard Specifications (as incorporated into the Project Agreement by the terms of this Appendix) provide that reports, records or other documents shall be submitted to the Department or to the Engineer, such reports shall be required to be submitted to the Department only, unless stated otherwise.
- 1.9** When the CDOT Standard Specifications (as incorporated into the Project Agreement by the terms of this Appendix) require actions, materials, means or methods that are “either as indicated

in the Plans or as designated by the Engineer”, the phrase “or as designated by the Engineer” shall be disregarded.

- 1.10** When the CDOT Standard Specifications (as incorporated into the Project Agreement by the terms of this Appendix) require any approvals, acceptances, consents, approvals or like assent to be given by the Department or the State, any references to the State shall be disregarded.
- 1.11** Sections 2.1 and 2.2 of the Project Agreement apply to the CDOT Standard Specifications (as incorporated into the Project Agreement by the terms of this Appendix), which shall be interpreted in accordance with such Sections as if the references in such Sections to “this Agreement” were references to “the CDOT Standard Specifications (as incorporated into the Project Agreement by the terms of this Appendix)”.
- 1.12** If there is any conflict, ambiguity or inconsistency between or among:
- a. any provision(s) of the Construction Standards and any provision(s) of the Project Agreement (including the Schedules), Section 2.4 of the Project Agreement shall apply; and
 - b. any provision(s) of the Construction Standards, the order of precedence set out in Section 105.09 of the CDOT Standard Specifications shall apply.

2. Division 100 of the CDOT Standard Specifications

Division 100 of the CDOT Standard Specifications is not incorporated into the Project Agreement by this Appendix except to the extent expressly specified in this Section 2, provided that (a) any method of measurement and payment related (including price adjustment) provisions shall not be incorporated into the Project Agreement and (b) any provision that refers to another provision of Division 100 that is not specified in this Section 2 shall not be incorporated into the Project Agreement.

101 – Definitions and Terms

102.10 – Material Guaranty

104.05 – Rights in and Use of Materials Found on the Work

105.02 – Plans, Shop Drawings, Working Drawings, Other Submittals and Construction

105.03 – Conformity to the Contract (first paragraph only)

105.07 – Conformity to Roadway Smoothness Criteria of HMA

105.08 – Conformity to Roadway Smoothness Criteria of Portland Cement Concrete Pavement

105.09 – Coordination of Plans, Specifications, Supplemental Specifications, and Special Provisions (order of precedence only)

105.18 – Load Restrictions

106.01 – Source of Supply and Quality Requirements

106.02 (b) – Materials Sources

106.03 – Samples, Tests, Cited Specifications (other than the final sentence)

106.04 – Qualifications of Testing Personnel and Laboratories

106.05 – Sampling and Testing of Hot Mix Asphalt

106.06 – Sampling and Testing of Portland Cement Concrete Paving

106.07 – Material Inspection at Plant

106.08 – Storage of Materials

106.09 – Handling Materials

- 107.06 – Safety, Health, and Sanitation Provisions
- 107.11 – Use of Explosives
- 107.12 - Protection and Restoration of Property and Landscape
- 107.17 – Contractor’s Responsibility for Work (first and final paragraphs only)
- 107.23 – Archaeology and Paleontological Discoveries
- 108.07 – Workplace Violence

3. DIVISIONS 200 TO 700 OF THE CDOT STANDARD SPECIFICATIONS

Divisions 200 through 700 are incorporated by reference into the Project Agreement except (1) as otherwise provided in the Project Agreement and (2) in Divisions 200 through 600, any method of measurement and payment related (including price adjustment) provisions shall not be incorporated into the Project Agreement. Any reference to a specific section of Divisions 200 to 700 in this Schedule 10 shall be deemed to be a reference to that section as modified by this Appendix and any other part of Schedule 10 where that section is modified.

4. CDOT STANDARD SPECIAL PROVISIONS

The Standard Special Provisions listed below are incorporated by reference into the Project Agreement as revisions to the CDOT Standard Specifications provided that:

- a. in the case of the Standard Special Provisions listed that revise provisions of Division 100 of the CDOT Standard Specifications, such Standard Special Provisions shall only be incorporated by reference into the Project Agreement to the extent that they make revisions to provisions of Division 100 of the CDOT Standard Specifications that are incorporated into the Project Agreement pursuant to Section 2 of this Appendix; and
- b. any method of measurement and payment related (including price adjustment) provisions included in the Standard Special Provisions listed shall not be incorporated into the Project Agreement.

STANDARD SPECIAL PROVISIONS

	<u>Date</u>	<u>No. of Pages</u>
Revision of Section 101 and 630 – Construction Zone Traffic Control	(April 30, 2015)	2
Revision of Section 105 – Contractor Submittals Traffic Signal Pedestal Pole	(Feb 3, 2011)	1
Revision of Section 105 – Hot Mix Asphalt Pavement Smoothness	(May 8, 2014)	7
Revision of Section 105 – Portland Cement Concrete Pavement Smoothness	(Feb 18, 2016)	1
Revision of Section 105 and 106 – Conformity To the Contract for HMA (Voids Acceptance)	(Jan 15, 2015)	10
Revision of Sections 105, 106, 412, 601 and 709 - Conformity to the Contract of PCCP and Dowel Bars and Tie Bars for Joints	(April 30, 2015)	24
Revision of Section 106 – Hot Mix Asphalt – Verification Testing	(July 29, 2011)	2
Revision of Section 106 – Material Sources	(Oct 31, 2013)	1
Revision of Section 106 – Supplier List	(Jan 30, 2014)	1

	<u>Date</u>	<u>No. of Pages</u>
Revision of Sections 106 and 412 – Surface Texture of Portland Cement Concrete	(Oct 29, 2015)	3
Revision of Section 106, 627 and 713 – Glass Beads for Pavement Marking	(May 12, 2016)	2
Revision of Section 107 – Warning Lights for Work Vehicles and Equipment	(Jan 30, 2014)	1
Revision of Section 107 – Water Quality Control (Contractor Obtained Stormwater Permit)	(March 29, 2016)	6
Revision of Section 202, 627 and 708 – Pavement Marking Paint	(May 12, 2016)	3
Revision of Section 203 – Imported Material for Embankment	(Feb 3, 2011)	2
Revision of section 203, 206, 304, and 613 – Compaction	(Jul 19, 2012)	2
Revision of Section 206 – Imported Material for Structure Backfill	(Jul 19, 2012)	2
Revision of Section 206 – Structure Backfill (Flowfill)	(Apr 26, 2012)	2
Revision of Section 206 – Structure Backfill at Bridge Abutments	(Jan 30, 2014)	1
Revision of Sections 206 and 601 – Maturity Meters and Concrete Form and Falsework Removal	(Dec 18, 2015)	3
Revision of Section 208 – Erosion Control	(March 29, 2016)	23
Revision of Section 212 – Seed	(Apr 26, 2012)	1
Revision of Section 213 – Mulching	(Jan 31, 2013)	4
Revision of Section 216 – Soil Retention Covering	(July 16, 2015)	6
Revision of Sections 304 and 703 – Aggregate Base Course (RAP)	(Oct 31, 2013)	1
Revision of Section 401 – Compaction of Hot Mix Asphalt	(Apr 26, 2012)	1
Revision of Section 401 – Compaction Pavement Test Section (CTS)	(Jul 19, 2012)	1
Revision of Section 401 – Composition of Mixtures – Voids Acceptance	(Feb 3, 2011)	1
Revision of Section 401 – Plant Mix Pavements	(Feb 3, 2011)	1
Revision of Section 401 – Reclaimed Asphalt Pavement	(May 2, 2013)	2
Revision of Section 401 – Temperature Segregation	(Feb 3, 2011)	1
Revision of Section 401 – Tolerances for Hot Mix Asphalt (Voids Acceptance)	(Jan 6, 2012)	1

	<u>Date</u>	<u>No. of Pages</u>
Revision of Sections 401 and 412 – Safety Edge	(May 2, 2013)	2
Revision of Sections 412 – Portland Cement Concrete Pavement Finishing	(Feb 3, 2011)	1
Revision of Sections 412, 601, and 711 – Liquid Membrane-Forming Compounds for Curing Concrete	(May 5, 2011)	1
Revision of Sections 412 and 705 – Preformed Compression Seals	(Feb 3, 2011)	2
Revision of Section 504 – Concrete Block Facing MSE Wall	(Feb 3, 2011)	13
Revision of Section 504 – Concrete Panel Facing MSE Wall	(Feb 3, 2011)	12
Revision of Section 507 - Grouted Riprap Slope and Ditch Paving	(Nov 6, 2014)	1
Revision of Sections 507, 601, and 606 – Macro Fiber-Reinforced Concrete	(May 2, 2013)	1
Revision of Section 510 – Structural Plate Structures	(Feb 3, 2011)	1
Revision of Section 512 – Bearing Device Testing	(Nov 6, 2014)	1
Revision of Section 518 – Bridge Expansion Device	(Oct 31, 2013)	1
Revision of Section 601 Class B, BZ, D, DT and P Concrete	(February 18, 2016)	2
Revision of Section 601 Class H and HT Bridge Deck Concrete	(May 16, 2013)	4
Revision of Section 601 – Concrete Batching	(Feb 3, 2011)	1
Revision of Section 601 – Concrete Finishing	(Feb 3, 2011)	1
Revision of Section 601 – Concrete Slump Acceptance	(October 29, 2015)	1
Revision of Section 601 – Depositing Concrete Under Water	(May 2, 2013)	1
Revision of Section 601 – Fiber-Reinforced Concrete	(Feb 18, 2016)	1
Revision of Section 601 – QC Testing Requirements for Structural Concrete	(May 8, 2014)	1
Revision of Section 601 – Structural Concrete Strength Acceptance	(April 30, 2015)	1
Revision of Section 601 – Cements and Pozzolans	(Nov 6, 2014)	4
Revision of Section 603 – Culvert Pipe Inspection	(Oct 2, 2014)	1
Revision of Section 603, 624, 705, 707, and 712 – Drainage Pipe	(April 30, 2015)	3
Revision of Section 612 – Delineators	(Feb 3, 2011)	1
Revision of Section 612 – Flexible Delineators	(Jul 19, 2012)	1
Revision of Sections 613 and 715 – LED Roadway Luminaire	(Jan 30, 2014)	5
Revision of Section 614 – Accessible Pedestrian Signal	(Nov 1, 2012)	3
Revision of Section 614 – Blank Out Sign (LED) (Speed Radar)	(Dec 29, 2011)	6
Revision of Section 614 – Pedestrian Push Button Assembly	(Jul 19, 2012)	1

	<u>Date</u>	<u>No. of Pages</u>
Revision of Section 618 – Prestressed Concrete	(Apr 26, 2012)	24
Revision of Section 620 – Field Laboratories with Ignition Furnace	(Feb 3, 2011)	1
Revision of Section 627 – Preformed Plastic Pavement Marking	(May 12, 2016)	2
Revision of Section 627 and 713 – Modified Epoxy Pavement Marking	(May 12, 2016)	2
Revision of Section 630 – Emergency Pull-off Area (Temporary)	(May 5, 2011)	1
Revision of Section 630 – Retroreflective Sign Sheeting	(May 8, 2014)	1
Revision of Section 630 – Temporary Portable Rumble Strip	(Feb 18, 2016)	1
Revision of Section 702 – Bituminous Materials	(March 29, 2016)	11
Revision of Section 703 – Aggregate for Bases	(Oct 31, 2013)	1
Revision of Section 703 – Aggregate for Cover Coat Material	(October 29, 2015)	1
Revision of Section 703 – Aggregate for Hot Mix Asphalt	(Nov 1, 2012)	2
Revision of Section 703 – Aggregate for Stone Matrix Asphalt	(Apr 26, 2012)	1
Revision of Section 703 – Concrete Aggregate	(Jul 28, 2011)	1
Revision of Section 703 – Mineral Filler	(May 8, 2014)	1
Revision of Section 709 – Epoxy Coated Reinforcing Bars	(Feb 18, 2016)	1
Revision of Section 712 – Geotextiles	(Nov 1, 2012)	2
Revision of Section 712 – Water for Mixing or Curing Concrete	(Feb 3, 2011)	1
Revision of Section 713 – Reflectors for Delineators and Median Barrier	(May 2, 2013)	1
Revision of Section 713 – Sign Panel Backgrounds	(Nov 6, 2014)	1

**Schedule 10B
 Contract Drawings**

In addition to all other requirements and obligations provided in this Project Agreement, the Developer shall develop the design and construct the Project in accordance with the Contract Drawings contained in this Schedule 10B, which are listed in Table 1 below.

Schedule 11 Operations and Maintenance Requirements

1. GENERAL OPERATIONS AND MAINTENANCE REQUIREMENTS

1.1. General Requirements

1.1.1. Developer shall perform the O&M Work in accordance with the requirements of this Schedule 11. Developer shall ensure that the Project is operated, maintained and managed in a safe, effective, and reliable level of operation and condition for the duration of the O&M Period During Construction and the Operating Period.

1.1.2. All requirements in this Schedule 11 are applicable throughout the O&M Period During Construction and the Operating Period, unless otherwise specifically stated.

1.1.3. Developer Responsibility to Implement and Report Unplanned Closures

Without prejudice to Developer's obligations under Sections 4.2.2 through 4.2.3 of this Schedule 11 or any other provisions of this Agreement relating to Emergencies or Incidents, if Developer becomes aware of an Emergency, an Incident, an O&M Defect, or any other hazard as a result of which the normal use of any part of the Project would compromise the safety of Users, Developer shall immediately implement a Closure or other action necessary to mitigate the hazard. Regardless of the circumstances, Developer shall immediately inform the Department of the circumstances of any such Closure and shall coordinate with the Department, and other relevant Governmental Authorities that may be impacted by such Closure. The provisions of this Section 1.1.3 are without prejudice to the provisions of Schedule 6 (Performance Mechanism) and Section 2 of Schedule 10 (Design and Construction Requirements), including, for certainty, if any Closure implemented by Developer pursuant to this Section 1.1.3 is a Non-Permitted Closure (a) as a result of such Closure resulting in a breach of, or is not permitted by, any of Sections 2.5, 2.6 or 2.11 of Schedule 10 (Design and Construction Requirements) or (b) for any other reason.

1.1.4. Developer shall ensure that all surplus materials arising from the O&M Work be disposed of at such places as may lawfully be used for disposal, and shall comply with the Environmental Requirements to ensure that such materials will not cause or give rise to pollution of the Environment in contravention of any Environmental Law.

1.1.5. Standards

Subject to Section 8.6 of the Project Agreement, in performing the O&M Work Developer shall comply with the Project Standards, including (but, for certainty, not limited to):

- a. in performing any Renewal Work, the Construction Standards (including those listed in Schedule 10A (Applicable Standards and Specifications)) to the extent applicable to the Renewal Work; and
- b. in performing any O&M Work, the following documents as they are referenced in this Schedule 11 and to the extent applicable to the O&M Work:
 - i. AASHTO Manual for Bridge Element Inspection;
 - ii. AASHTO Manual for Bridge Evaluation;
 - iii. CDOT Bridge Rating Manual;
 - iv. CDOT Colorado Supplement Signs;
 - v. CDOT Distress Manual for HMA and PCC Pavements;
 - vi. CDOT Erosion Control & Stormwater Quality Guide;
 - vii. CDOT Highway Maintenance Levels of Service Manual;
 - viii. CDOT M&S Standard Plans;
 - ix. CDOT Manual of Maintenance Procedures;

- x. CDOT Pavement Management Manual;
- xi. CDOT Pontis Bridge Inspection Coding Guide;
- xii. CDOT Recording and Coding Guide for the Inventory and Inspection of Colorado's Overhead Signs, Signals and High Mast Lights;
- xiii. CDOT Roadside Vegetation Management (Final Guideline Document);
- xiv. CDOT Sign Design Manual;
- xv. CDOT Signing Policies and Procedures;
- xvi. FHWA Bridge Inspector Reference Manual;
- xvii. FHWA Highway and Rail Transit Tunnel Maintenance and Rehabilitation Manual;
- xviii. FHWA National Bridge Inspection Standards (NBIS);
- xix. FHWA National Tunnel Inspection Standards (NTIS);
- xx. FHWA Recording and Coding Guide for the Structure Inventory and Appraisal of the Nation's Bridges (Report No. FHWA-PD-96-001);
- xxi. FHWA Specifications for National Tunnel Inventory (SNTI);
- xxii. FHWA Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual;
- xxiii. Manual of Uniform Traffic Control Devices (MUTCD), including the Colorado Supplement;
- xxiv. National Electric Safety Code (NESC);
- xxv. National Fire Protection Association (NFPA); and
- xxvi. Other referenced AASHTO, ASTM and FHWA standards and manuals.

1.1.6. Toll Exempt O&M Work Vehicles

- a. Developer (and its Subcontractors) shall be responsible for paying the applicable toll fee for use of the Tolled Express Lane(s) during the performance of the O&M Work, except in respect of any vehicles that are exempt from payment thereof pursuant to this Section 1.1.6.
- b. Provided that:
 - i. Developer has submitted a written request to the Enterprises and has received authorization to use a non-revenue transponder for the relevant vehicle;
 - ii. the relevant vehicle has had such a transponder installed; and
 - iii. the relevant vehicle is being used specifically to carry out O&M Work on the Tolled Express Lane(s) or is anticipated to be used to respond to any Emergency,

the following vehicles will be exempt from payment of toll fees for the use of the Tolled Express Lanes:

- iv. vehicles performing Courtesy Patrol Service services in accordance with Section 10 of, and Appendix B to, this Schedule 11;
- v. vehicles performing Snow and Ice Control Services;
- vi. vehicles used to perform sweeping and cleaning services in accordance with this Schedule 11;

- vii. vehicles used to perform scheduled Routine Maintenance or Renewal Work on the Tolled Express Lanes, where such scheduled work is identified in the mostly recently Accepted MMP; and
- viii. vehicles used to respond to an Emergency.

1.1.7. Unless the context requires, or unless expressly provided, otherwise, all references in this Schedule 11 to Developer's obligations in relation to Elements that are within or form part of the Limited O&M Work Segments shall be construed in the context of Developer's obligation to perform O&M Work on the Limited O&M Work Segments being limited to the performance of Limited O&M Work thereon.

2. O&M SCOPE AND LIMITS DURING CONSTRUCTION

2.1. O&M Limits During Construction

2.1.1. Developer shall perform O&M Work During Construction within the O&M Limits During Construction in accordance with this Section 2 and the other provisions of this Schedule 11 that apply during the O&M Work During Construction Period.

2.1.2. Developer shall submit O&M Limits During Construction drawings to, and obtain Acceptance thereof from, the Department prior to the issuance of NTP2. The O&M Limits During Construction drawings produced by Developer shall (a) include the Site for the entire Project, (b) reference the O&M Limits Reference Drawings, and (c) comply with the requirements of this Section 2 and other provisions of this Schedule 11 that apply during the O&M Work During Construction Period. The drawings shall clearly detail Developer's responsibilities and interface of operations and maintenance activities performed by others, and shall be presented in both detailed plans and cross section drawings. The drawings shall also be consistent with Developer's design, and shall additionally be updated for Approval as required during the Construction Period to reflect changes to the as-built Project.

2.2. O&M Scope During Construction

During the O&M Period During Construction (except to the extent expressly provided otherwise in this Section 2.2 or, as applicable, in Appendix D to this Schedule 11), Developer shall comply with the following obligations set out in this Section 2.2.

2.2.1. I-70 Mainline and Associated Infrastructure

Developer shall perform:

- a. O&M Work, other than Snow and Ice Control Services (to which Sections 2.2.2.b and 11 of this Schedule 11 shall apply), on:
 - i. the I-70 Mainline (other than the Limited O&M Work Segments);
 - ii. such infrastructure and portions of the CDOT Roadways as (in the case of both such infrastructure and CDOT Roadways) are identified as 'Developer O&M Work' in the O&M Limits Reference Drawings;
 - iii. such structures as are identified as 'Developer' responsibility in Appendix D to this Schedule 11; and
 - iv. such Elements as are identified as CDOT maintenance responsibility in Exhibit A of the Intergovernmental Maintenance Agreement for the maintenance services of Central Park Boulevard Bridge, dated August 28, 2009; and
- b. Limited O&M Work on the Limited O&M Work Segments, including for certainty:
 - i. such infrastructure as is identified as 'Developer Limited O&M Work' in the O&M Limits Reference Drawings; and
 - ii. such structures as are identified as 'Developer (Limited O&M Work)' responsibility in Appendix D to this Schedule 11;

so as to comply with the applicable General Requirements and to meet or exceed the applicable Targets, in each case as set out in Appendix A-1 to this Schedule 11.

2.2.2. Local Agency Infrastructure

Developer shall perform:

- a. O&M Work (except Incident response, sweeping and cleaning and Snow and Ice Control Services) on Local Agency Roadways and all infrastructure Elements (including the structures identified as Developer responsibility in Appendix D to this Schedule 11) owned by Local Agencies;
- b. Incident response, sweeping and cleaning and Snow and Ice Control Services on those Local Agency Roadways and infrastructure Elements (including the structures identified as Developer responsibility in Appendix D to this Schedule 11), or any portions thereof, where Developer is performing Construction Work thereon and/or has a street occupancy Permit with the relevant Local Agency in relation thereto, as well as being responsible for meeting all other conditions of any relevant Permit; and
- c. any other O&M Work as may be required by the terms of any such street occupancy Permit,

so as to comply with the applicable General Requirements and to meet or exceed the applicable Targets, in each case as set out in Appendix A-1 to this Schedule 11.

2.2.3. Drainage

- a. Developer shall perform the O&M Work of the Onsite Outfall System and the Offsite Outfall System.
- b. Developer shall perform the O&M Work on the groundwater treatment facility constructed by it pursuant to Section 8.4.4.f. of Schedule 10 (*Design and Construction Requirements*), and shall ensure that such facility is functional and capable of meeting the RHM treatment requirements specified in such Section.
- c. Developer shall perform the O&M Work of the dewatering system constructed by it pursuant to Section 8.4.4.e.iv. of Schedule 10 (*Design and Construction Requirements*), and shall ensure that such system is functional and capable of meeting the dewatering requirements specified in such Section.
- d. Developer shall obtain and comply with all Permits identified in Section 8.3.3 of Schedule 10 (*Design and Construction Requirements*) applicable to the performance of the O&M Work in relation to drainage.

2.2.4. Water Quality

Developer shall comply with the conditions of the most current version of the Department's MS4 permit, including inspections and annual reporting requirements. Developer shall furnish the required documents in accordance with the permit to the Department for Acceptance. The required annual report shall be submitted to the Department for Acceptance by December 31st of each Calendar Year.

2.2.5. Maintenance Yard¹

From the Snow and Ice Control Commencement Date for the remainder of the O&M Period During Construction and during the Operating Period, Developer shall perform O&M Work of the Maintenance Yard and associated facilities that are used by Developer to meet the requirements of Schedule 11. Developer may coordinate with the Department after NTP 2 and in advance of the Snow and Ice Control Commencement Date with respect to temporary co-location of

¹ This provision and any other references to the Maintenance Yard will only be included in the Project Agreement if Preferred Proposer elects to use the Maintenance Yard.

Developer's equipment in the Maintenance Yard to facilitate Developer's preparation for performance of Snow and Ice Control Services.

2.2.6. ITS and ETC Facilities

- a. Developer shall ensure that all existing ITS facilities (including all items in Appendix B to Section 3 of Schedule 10) are maintained and operational. Any impact to the operation of these facilities will be rectified by Developer. The Department will continue to operate the existing facilities.
- b. Developer shall inspect all ITS and ETC facilities (including all items in Appendix B to Section 3 of Schedule 10) and report any issues or required repairs to the ETC System Integrator and CTMC and keep a log of such reports.
- c. Developer shall also be responsible for O&M Work with respect to ITS and ETC facilities in accordance with Appendix B to Section 3 (ITS and Tolling Equipment) of Schedule 10 (Design and Construction Requirements).

2.2.7. Utility Service

During the O&M Period During Construction and the Operating Period prior to Final Acceptance, Developer shall be responsible for payment of all Utility service fees and maintenance of Utility services (including pursuant to Section 2.2.8.a of this Schedule 11) unless specified otherwise in the sub-columns "During Construction" in Appendix E to Section 4 (Utilities) of Schedule 10 (Design and Construction Requirements).

2.2.8. Traffic Signals and Lighting

- a. Traffic signals, lighting and their associated equipment and power are the responsibility of Developer where, in relation to a Local Agency Roadway, it is performing Construction Work and/or has a street occupancy Permit for work that includes signals, lighting and/or associated equipment. Developer shall also perform O&M Work on temporary lighting used by Developer along any roadway as required by Appendix A-1 to this Schedule 11.
- b. Developer shall inspect traffic signals, lighting and associated equipment and report outages, O&M Defects, damage or vandalism in respect thereof as required by Appendix A-1 to this Schedule 11. Developer shall additionally remove any graffiti on traffic signals and lighting as required by Appendix A-2 to this Schedule 11.

2.2.9. Railway Structures

Developer shall perform the O&M Work on Railroad structures identified as Developer responsibility in Appendix D to this Schedule 11 in compliance with the RRAs and applicable PUC Rulings. The maintenance of the ballast, tracks and signals shall not be Developer's responsibility.

2.2.10. Fencing

- a. Developer's O&M Work responsibility shall include all fencing on the Site, with the exception of:
 - i. Fencing owned by local residents or businesses that are constructed by Developer; and
 - ii. Railroad fences.

2.3. **Baseline Inspections and Baseline Asset Condition Report**

2.3.1. Developer shall:

- a. carry out inspections and tests to determine the existing condition of each Element of the Project (excluding all Elements within or forming part of the Limited O&M Work Segments) to be maintained by Developer during the O&M Period During Construction pursuant to this Schedule 11 (the "Baseline Inspections"); and

- b. prepare a report (the "Baseline Asset Condition Report (BACR)"), which shall:
 - i. list in detail all such Elements that are required to be subject to the Baseline Inspections;
 - ii. assess and describe the existing condition of all such Elements, which description and condition assessment reporting shall:
 - A. be in reference to CDOT's Highway Level of Service Manual; and
 - B. at a minimum, include, but not be limited to, all such Elements listed in Appendix A-1 to this Schedule 11, referencing additionally any other assessment criteria identified in Appendix A-1;
 - iii. by updating the Performance and Measurement Table set out in Appendix A-1 to this Schedule 11, list the Target minimum baseline asset condition in accordance with which such Elements will be maintained by Developer during the O&M Period During Construction, which such Target minimum baseline condition shall allow for the safe and reliable operation of the existing asset and shall meet or exceed the existing condition of the relevant Element, except to the extent that a Target is specified for such Element in Appendix A-1 of this Schedule 11, in which instance the specified Target condition shall be the minimum baseline asset condition.
- 2.3.2. Developer shall submit the proposed scope of the Baseline Inspections it intends to carry out, together with the methodology proposed and the list of qualified testing organizations in carrying out the proposed scope ("Baseline Asset Condition Inspection Plan") to, and obtain the Acceptance thereof from, the Department prior to the issuance of NTP2. Following Acceptance by the Department of the Baseline Asset Condition Inspection Plan, Developer shall provide to the Department a minimum of ten Working Days' written notice prior to the commencement of the Baseline Inspections.
- 2.3.3. After carrying out the Baseline Inspections, Developer shall submit the Baseline Asset Condition Report (BACR) to, and obtain the Acceptance thereof from, the Department prior to the issuance of NTP2. The Accepted BACR shall be an appendix to the Maintenance Management Plan submitted to the Department pursuant to Section 5 of this Schedule 11.

3. O&M SCOPE AND LIMITS AFTER CONSTRUCTION

3.1. O&M Limits After Construction

- 3.1.1. Developer shall perform O&M Work After Construction within the O&M Limits After Construction in accordance with this Section 3 and the other provisions of this Schedule 11 that apply during the Operating Period.
- 3.1.2. Developer shall submit O&M Limits After Construction drawings to, and obtain the Acceptance thereof from, the Department prior to Substantial Completion. The O&M Limits After Construction drawings produced by Developer shall (a) include the Site for the entire Project, (b) reference the O&M Limits Reference Drawings, and (c) comply with the requirements of this Section 3 and other provisions of this Schedule 11 that apply during the Operating Period. The drawings shall clearly detail Developer's responsibilities and interface of operations and maintenance activities performed by others, and shall be presented in both detailed plans and cross section drawings. The drawings shall reflect the as-built condition of the Project.

3.2. O&M Scope After Construction

During the Operating Period (except to the extent expressly provided otherwise in this Section 3.2), Developer shall comply with the following obligations set out in this Section 3.2.

- 3.2.1. I-70 Mainline and Associated Infrastructure
Developer shall perform

- a. the O&M Work, other than Snow and Ice Control Services (to which Sections 3.2.2.b and 11 of this Schedule 11 shall apply), on:
 - i. the I-70 Mainline (other than the Limited O&M Work Segments);
 - ii. such infrastructure and portions of the CDOT Roadways as (in the case of both such infrastructure and CDOT Roadways) are identified as 'Developer O&M Work' in the O&M Limits Reference Drawings;
 - iii. such structures as are identified as Developer responsibility in Appendix D to this Schedule 11; and
 - iv. such Elements as are identified as CDOT maintenance responsibility in Exhibit A of the Intergovernmental Maintenance Agreement for the maintenance services of Central Park Boulevard Bridge, dated August 28, 2009, and
- b. Limited O&M Work on the Limited O&M Work Segments, including for certainty:
 - i. such infrastructure as are identified as 'Developer Limited O&M Work' in the O&M Limits Reference Drawings; and
 - ii. such structures as are identified as 'Developer (Limited O&M Work)' responsibility in Appendix D to this Schedule 11;

so as to comply with the applicable General Requirements and to meet or exceed the applicable Targets, in each case as set out in Appendix A-2 to this Schedule 11.

3.2.2. Local Agency Infrastructure

Developer shall perform:

- a. O&M Work on all Local Agency Roadways identified as "Developer O&M Work" in the O&M Limits Reference Drawings (with exception of lighting);
- b. O&M Work (except Snow and Ice Control Services) on the portion of 46th Avenue N and 46th Avenue S between Brighton Boulevard and York Street that is identified as "Developer O&M Work except for Snow and Ice Control Services" in the O&M Limits Reference Drawings (with exception of lighting);
- c. O&M Work (except Incident response, sweeping and cleaning and Snow and Ice Control Services) on all Local Agency cross street structures identified as Developer responsibility in Appendix D to this Schedule 11 that connect to Local Agency Roadways (with the exception of signage, traffic signals, lighting, pavement marking, and aesthetic elements on such structures that are owned by the Local Agency);
- d. Incident response, Snow and Ice Control Services and sweeping and cleaning for Local Agency cross street structures identified as Developer responsibility in Appendix D to this Schedule 11 where Developer is performing Renewal Work thereon and/or has a street occupancy Permit with the relevant Local Agency in relation thereto, as well as being responsible for meeting all other conditions of the relevant Permit; and
- e. any other O&M Work as may be required by the terms of any such street occupancy Permit,

so as to comply with the applicable General Requirements and to meet or exceed the applicable Targets, in each case as set out in Appendix A-2 to this Schedule 11.

3.2.3. Cover

- a. Developer shall perform Cover O&M Work. Developer shall comply with the Accepted Tunnel Operation, Maintenance, Inspection and Evaluation Manual (TOMIE) as described in Section 12 (Cover MEP System) of Schedule 10 (Design and Construction Requirements) in relation to the Cover O&M Work.

- b. Developer shall be responsible for the operation, maintenance, and monitoring of the Command Control and Monitoring System (CCMS) as described in Section 12 (Cover MEP System) of Schedule 10 (Design and Construction Requirements) in relation to the Cover and immediate approaches. Developer shall provide a trained and dedicated staff with 24/7 presence co-located at the CTMC to operate the CCMS. Developer's 24/7 operation of the CCMS shall not assume reliance or assistance from Department personnel at the CTMC to carry out Developer's responsibility at any time.
- c. Developer shall coordinate with the Department in respect of operations of the ITS associated with the Cover.
- d. Developer shall coordinate with the relevant Local Agency's fire department with respect to the maintenance and operation of fire detection and firefighting equipment.
- e. Developer shall develop a manual (the "Cover Top O&M Manual") that outlines (1) pertinent Cover design and construction information, (2) recommended operations and maintenance requirements, procedures and protocols and (3) recommended procedures and protocols for coordination between the Cover Maintainer and Developer, in all cases, relevant to the performance of the Cover Top O&M Work by the Cover Maintainer. The Cover Top O&M Manual shall be submitted and be Approved by the Department prior to Substantial Completion. The Cover Top O&M Manual shall include details such as:
 - i. Design and construction documentation and drawings;
 - ii. Video recording of installation of key components on top of the Cover, including structural elements, waterproofing membrane, drainage system, garden roof assembly, and other relevant components identified in consultation with the Department and the Cover Maintainer;
 - iii. Recommended load restrictions on the Cover;
 - iv. Waterproofing layer damage preventative measures, procedures, or protocols to be carried out during the performance of the Cover Top O&M Work;
 - v. Snow removal and storage restrictions;
 - vi. Elements requiring regular inspections and maintenance, and the frequency and procedures of such inspections and maintenance;
 - vii. Record keeping of Cover Top O&M Work, and the frequency of provision of such records to the Department;
 - viii. Developer review timeline and requirement for any major modification by the Cover Maintainer on top of the Cover that would impact Developer's carrying out of the Cover O&M Work;
 - ix. Reference to the Landscape Maintenance Plan as required in Section 14 (Landscaping and Aesthetics) of Schedule 10 (Design and Construction Requirements);
 - x. Other coordination and interface requirements with Developer; and
 - xi. Any other documentation, recommendations, requirements, restrictions, measures, procedures, protocols, coordination matters as deemed necessary by the Department (acting reasonably) that are pertinent to the Cover Top O&M Work.
- f. Developer shall, notwithstanding the Cover Maintainer's responsibility to perform the Cover Top O&M Work, proactively coordinate with the City of Denver and the Cover Maintainer with respect to the performance of the Cover Top O&M Work and, as necessary, the Cover O&M Work.

- g. Developer shall be responsible for any damage caused by a Developer-Related Entity to any elements on the Cover that fall within the scope of the Cover Top O&M Work, including, as appropriate, the repair, restoration, or replacement of such elements.

3.2.4. Railway Structures

Developer shall perform the O&M Work on Railroad structures identified as Developer responsibility in Appendix D to this Schedule 11 in compliance with the RRAs and applicable PUC Rulings. The maintenance of the ballast, tracks and signals shall not be Developer's responsibility.

3.2.5. Utility Infrastructure

Developer shall be responsible for O&M Work of any structures constructed by Developer to carry utility infrastructure.

3.2.6. Drainage

- a. Developer shall perform the O&M Work of the Onsite Outfall System and the Offsite Outfall System.
- b. Developer shall perform the O&M Work of the groundwater treatment facility constructed by it pursuant to Section 8.4.4.f. of Schedule 10 (*Design and Construction Requirements*), and shall ensure that such facility is functional and capable of meeting the RHM treatment requirements specified in such Section.
- c. Developer shall perform the O&M Work of the dewatering system constructed by it pursuant to Section 8.4.4.e.iv. of Schedule 10 (*Design and Construction Requirements*), and shall ensure that such system is functional and capable of meeting the dewatering requirements specified in such Section.
- d. Developer shall obtain and comply with all Permits identified in Section 8.3.3 of Schedule 10 (*Design and Construction Requirements*) applicable to the performance of the O&M Work in relation to drainage.

3.2.7. Water Quality Facilities

The Developer shall comply with the conditions of the most current version of the Department's MS4 permit, including inspections and annual reporting requirements. Developer shall furnish the required documents in accordance with the permit to the Department for Acceptance. The required annual report shall be submitted to the Department for Acceptance by December 31st of each Calendar Year.

3.2.8. ITS and ETC Facilities

- a. Developer shall be responsible for O&M Work of the ITS and ETC civil infrastructure as identified and in accordance with Appendix B to Section 3 (*ITS and Tolling Equipment*) of Schedule 10 (*Design and Construction Requirements*).
- b. Developer shall also be responsible for O&M Work with respect to ITS and ETC facilities as identified and in accordance with Appendix B to Section 3 (*ITS and Tolling Equipment*) of Schedule 10 (*Design and Construction Requirements*).
- c. For the duration of the period commencing at the operation of the Developer installed ITS facilities up to two years following Final Acceptance, Developer shall identify and appoint a person qualified in installing, maintaining, troubleshooting, and repairing the ITS facilities and communications infrastructure (such person's qualification shall be submitted to the Department for Approval). Developer shall maintain the ITS facilities installed by Developer and backbone communications such that they are fully operational and functional during this period.

- d. During the Operating Period Developer shall inspect the ITS and ETC facilities (including any facilities that are maintained and operated by others) and report any issues or required repairs to the ETC System Integrator and CTMC and keep a log of such reports.

3.2.9. Utility Service

Subject to Section 3.2.11 of this Schedule 11, after Final Acceptance Developer shall be responsible for payment of Utility service fees and maintenance of Utility services unless specified otherwise in the sub-columns "Operating Period" in Appendix E to Section 4 (Utilities) of Schedule 10 (Design and Construction Requirements).

3.2.10. Landscaped and Vegetated Areas

Developer shall perform the O&M Work of all landscaped and vegetated areas on the Site, with the exception of any landscaped areas on top of the Cover.

3.2.11. Traffic Signals and Lighting

- a. Lighting (other than lighting beneath the Cover) and signals operation after Final Acceptance will not be the responsibility of Developer.
- b. Developer shall inspect traffic signals and lighting and report outages, O&M Defects, damage, or vandalism in respect thereof as required by Appendix A-2 to this Schedule 11. Developer shall additionally remove any graffiti on traffic signals and lighting as required by Appendix A-2 to this Schedule 11.

3.2.12. Fencing

- a. Developer's O&M Work responsibility shall include all fencing on the Site, with the exception of:
 - i. Fencing owned by local residents or businesses that are constructed by Developer; and
 - ii. Railroad fences.

4. PERFORMANCE REQUIREMENTS AND RESPONSIBILITIES

Developer shall be responsible for and shall take all necessary actions to ensure that all O&M Defects are remedied to allow for the safe, effective and reliable operation of the Project. Developer shall ensure that every Element identified in Appendix A to this Schedule 11 (as updated in accordance with, respectively, Sections 2.3.1.b.iii and 4.2.6.a of this Schedule 11) is in a condition that (as a result of its performance of its obligations under this Schedule 11) complies with the applicable General Requirements and meets or exceeds the applicable Targets, in each case, as set out in Appendix A-1 to this Schedule 11 (as updated in accordance with this Schedule 11) during the O&M Period During Construction and Appendix A-2 to this Schedule 11 (as updated in accordance with this Schedule 11) during the Operating Period.

4.1. Categorization of O&M Defects

- 4.1.1. Developer shall employ personnel who are trained to make the appropriate categorization of O&M Defects and maintain a record of the circumstances of the O&M Defect and how it was categorized.
- 4.1.2. Whenever an O&M Defect is identified, Developer shall make a determination as to whether it is:
 - a. a Category 1 Defect, in which event Developer shall take all necessary action to mitigate and remedy the O&M Defect in accordance with Section 4.2.2 of this Schedule 11; or
 - b. a Category 2 Defect in an Element, in which event Developer shall take all necessary action to mitigate and remedy the O&M Defect in accordance with Section 4.2.3.a of this Schedule 11 and comply with Section 4.2.3.c of this Schedule 11.

4.2. Performance and Measurement Mechanism

The Performance and Measurement Tables assign the following obligations to Developer for each Element during the O&M Period During Construction and the Operating Period, as applicable.

4.2.1. General Requirements

Developer shall take action to ensure that each Element complies with the General Requirements applicable to such Element during the O&M Period During Construction and the Operating Period. Without prejudice to the definition of O&M Defect in Part A of Annex A (Definitions and Abbreviations) to the Project Agreement, an O&M Defect shall be deemed to exist if at any time an Element or part of an Element fails to comply with the applicable General Requirements.

4.2.2. Category 1 – Immediate Action

- a. The first sub-column of the “Defect Remedy Period” column in the Performance and Measurement Tables is entitled “Cat. 1 Immediate Action” and sets out, for each Element, the maximum time period following the time when Developer first becomes (or should have become) aware of the existence of the relevant O&M Defect within which Developer shall take and complete action that will mitigate a Category 1 Defect in such manner that the immediate or imminent hazard, nuisance and/or risk that caused it to be a Category 1 Defect is alleviated.
- b. Such actions may be, depending on the nature of the O&M Defect, to alert Users and provide temporary safety measures, and/or to alert Users and provide temporary repairs that will alleviate the immediate or imminent hazard, nuisance and/or risk within the applicable Defect Remedy Period specified for Cat 1 – Immediate Action.

4.2.3. Category 2 – Permanent Repair

- a. The third sub-column of the “Defect Remedy Period” column in the Performance and Measurement Tables is entitled “Cat. 2 Permanent Repair” and sets out, for each Element, the maximum time period following the time when Developer first becomes (or should have become) aware of the existence of the relevant O&M Defect within which Developer shall complete a permanent repair of a Category 2 Defect in Elements. A permanent repair may include a full replacement of an Element or action that is planned to be undertaken as part of Renewal Work.
- b. Developer shall monitor Category 2 Defects in all Elements and shall not allow a Category 2 Defect to deteriorate into a Category 1 Defect for all Elements.

4.2.4. Measurement Criteria

The first column under the heading “Performance Requirements” is entitled “Measurement Criteria” and sets out, for each Element, the criteria by which the condition of each Element is to be measured.

4.2.5. Target

The second column under the heading “Performance Requirements” is entitled “Target” and sets out, for each Element, a threshold for each of the specified Measurement Criteria. Without prejudice to the definition of O&M Defect in Part A of Annex A (Definitions and Abbreviations) to the Project Agreement, an O&M Defect shall be deemed to exist if the measured value applicable to any of the Measurement Criteria does not meet or exceed the threshold identified as the Target condition.

4.2.6. Updates to Performance Requirements during the Operating Period

- a. Developer may submit to the Department for Approval proposed updates, if any, to the Performance and Measurement Table set out in Appendix A-2 to this Schedule 11 no later than 90 Calendar Days before the then anticipated Substantial Completion Date to reflect Good Industry Practice and specific attributes of Developer's final plan set (for

example, where the final plan set incorporates a feature that is not included as an Element in such Performance and Measurement Table). Developer may thereafter submit to Department for Approval any proposed updates no later than 60 Calendar Days before the start of each subsequent Contract Year to reflect Good Industry Practice.

- b. The Department shall be entitled at any time to require Developer to adopt amendments to any of the Performance Requirements in such Performance and Measurement Table where such amendments are required to comply with then-current Good Industry Practice and under the following conditions:
 - i. the measurement scale associated with the original Measurement Criteria is superseded and no longer complies with Good Industry Practice; and
 - ii. the new Target shall be determined using the principle that compliance with the new Target shall achieve the same standard of performance, frequency of O&M Work and User satisfaction as would have been achieved through Developer's compliance with the original Measurement Criteria and Target.

For example, the Department may require skid resistance to be reported using a different measurement scale from that in current use and would be entitled (subject to calibration between new and old measurement scales to demonstrate equivalence of performance, frequency of O&M Work and User satisfaction) to require the adoption of an amendment to both the Measurement Criteria and Target for this Element.

5. MAINTENANCE MANAGEMENT PLAN

5.1. General

- 5.1.1. Developer shall prepare a Maintenance Management Plan (MMP) that is consistent with its maintenance obligations under this Schedule 11 and that defines the processes and procedures for complying with its maintenance obligations.
- 5.1.2. Developer shall provide, and keep updated, processes and procedures in the MMP to ensure that:
 - a. all Elements comply with the applicable General Requirements and meet or exceed the applicable Targets; and
 - b. all required action is taken and completed in relation to O&M Defects within the applicable Defect Remedy Periods in accordance with Sections 4.2.2 to 4.2.3 of this Schedule 11.
- 5.1.3. Developer shall submit the MMP to, and obtain the Acceptance thereof from, the Department prior to the issuance of NTP2 and shall submit an updated version to the Department for Acceptance by the Department prior to Substantial Completion. In addition, the MMP shall be updated and submitted for Acceptance annually no later than 60 Calendar Days before the end of each Contract Year. The MMP shall also be updated more frequently as required during the Construction Period or Operating Period to indicate changes to relevant protocols, agreements, and other interactions with other entities and to indicate requirements for equipment and systems that have been revised, upgraded, or replaced. Developer shall at all times comply with the latest Accepted MMP.

5.2. Maintenance Management Plan Contents

- 5.2.1. The MMP submitted (i) prior to the issuance of NTP2, shall include, at a minimum, the following elements in respect of both the O&M Work During Construction Period and the Operating Period (except to the extent that any such element is inapplicable to the relevant period and, where applicable, identifying any differences between such periods) and (ii) prior to Substantial Completion, shall include, at a minimum, the following elements in respect of the Operating Period (except to the extent that any such element is inapplicable to such period):

- a. A complete organizational chart and staffing plan that shows the personnel including the O&M Manager required for all maintenance activities including Routine Maintenance and Renewal Work; Emergencies; inspections; and management. A contact list shall be provided. Personnel qualifications for each position, required training, anticipated work hours, and work locations including personnel training requirements for operating in traffic zones shall be included;
- b. The experience and qualification requirements for personnel to be engaged in all inspection work setting out training that is to be provided for all aspects of inspections including as a minimum specialist inspections (e.g. Cover), routine inspections, and safety related inspections;
- c. Developer's O&M Safety Plan that complies with the requirements of Section 5.3 of this Schedule 11, including procedures for providing Project-specific safety training for all personnel engaged in maintenance and inspection activities for the Project;
- d. Developer's O&M Quality Management Plan (OMQMP) setting out arrangements for quality management and assurance that complies with the requirements of Section 5.4 of this Schedule 11;
- e. Drawings, in a size and format that is legible, delineating the O&M Limits During Construction (in the case of the MMP submitted prior to the issuance of NTP2) and the O&M Limits After Construction (in the case of the MMP submitted prior to Substantial Completion) and detailing the limits of infrastructure to be maintained by the Department or by the relevant Local Agency, including the use of photos to illustrate detailed limits;
- f. Location and layout of maintenance and storage facilities, vehicles and equipment, tools, computers, software and other major assets/items including procedures for ensuring all necessary maintenance equipment and materials are readily available;
- g. Procedure for communications and coordination with the Department for scheduling repairs and Closures for maintenance, including minimum time period of notification to the Department on scheduled repairs or Closures;
- h. Procedure for coordination of activities, including repairs/renewals/replacements and Closures, with other entities having interests within and adjacent to the Project, including Utilities;
- i. Approach to the identification and recording of O&M Defects and their repair including the approach and training of personnel in the correct assignment of "Category 1 – Immediate Action" and "Category 2 – Permanent Repair" O&M Defect status including procedures and scheduled frequency of safety inspections;
- j. Procedures for responding in a timely manner to Category 1 Defects and Category 2 Defects;
- k. Procedures for monitoring and maintaining the condition and performance of the Project to meet the General Requirements, the Performance Requirements and Defect Remedy Periods and updates thereof. Procedures shall include the inspection routines, checklists, frequency for each of the inspection routines, and equipment and tools needed for the inspections. The MMP shall set forth the conditions where the frequency of inspections for a particular asset, component or group of assets may be increased due to the ageing of an asset or increased wear and tear;
- l. Reference to procedures for traffic control and management during periods of Closures, with inclusion or reference to Transportation Management Plan and maintenance of traffic requirements in Section 2 (Maintenance of Traffic) of Schedule 10 (Design and Construction Requirements) in respect of O&M Work During Construction and, in respect of O&M Work After Construction, the same requirements as if they applied to O&M Work After Construction;

- m. Procedure for investigation and response to complaints or reports of O&M Defects or Noncompliance Events received from the Department or other sources;
- n. Work plans and schedules for undertaking Routine Maintenance activities and Renewal Work during the O&M Period During Construction based on the Baseline Asset Condition Report and during the Operating Period based on routine inspections, which plans and schedules shall include the information required by Section 5.2.2 of this Schedule 11;
- o. Description of Developer's approach to life cycle assumptions and Renewal Work and interfaces with the Renewal Work Plan during the O&M Period During Construction based on the Baseline Asset Condition Report and during the Operating Period based on routine inspections;
- p. Procedure for record keeping according to Developer's MQMP;
- q. Procedure for tracking O&M Defects, performance compliance and corrections (repairs, renewal, replacements);
- r. Procedure for maintaining a comprehensive, accurate, and auditable spare parts and inventory level to address the maintenance obligations. This information contained in the inventory shall be compatible with the Maintenance Management Information System (MMIS) as described in this Schedule 11;
- s. Description of Developer's MMIS and its functionality;
- t. Details and steps of transition of maintenance activities from the Department or Local Agency necessary to achieve a seamless transition to Developer, and to allow for continuity of service (24 hours per day, seven days per week, and every day of the year) to Users. The details and steps shall outline any phased transition of operations and maintenance activities, including anticipated timeline of such phased transition;
- u. Maintenance and service manuals including detailed technical and servicing descriptions for all Elements assessed as well as software and equipment that is required for the O&M Work. The manual shall include preventative maintenance schedules, testing and diagnostic procedures, trouble-shooting techniques, corrective measures, both temporary and permanent, the location and availability of support services, point to point component wiring schematics and logic signal flows, and assembly and disassembly drawings, including exploded view drawings. Standard service manuals for unmodified commercial products are acceptable for inclusion in the MMP provided that they contain details and accurate information in order to properly service the specific equipment related to the Elements. The manual in relation to the Cover shall comply with the requirements for the TOMIE Manual that is required in accordance with Section 12 of Schedule 10 (Design and Construction Requirements);
- v. Description of all Elements, including an inventory of facilities, systems and equipment to be maintained by Developer, including a logical system breakdown of all Elements, including facilities, equipment and systems and the levels of maintenance and summary of maintenance tasks to be provided by Developer;
- w. List of the maintained Elements major systems and equipment manufacturers/vendors, including their contact information (contact person, address, telephone numbers, website address and e-mail address);
- x. A list of unplanned but anticipated maintenance services for all road Elements;
- y. Repair procedures for repairs that are anticipated;
- z. Inclusion or reference to O&M Work activities and details necessary to comply with Schedule 17 (Environmental Requirements), Section 8 (Drainage) of Schedule 10 (Design and Construction Requirements), and any other Schedule 10 (Design and Construction Requirements) requirements in relation to operations and maintenance;
- aa. Inspection plan and copies of all inspection forms and checklists; and

- bb. How best management practices will be applied.
- 5.2.2. The MMP shall include Developer's schedules and associated plans for Routine Maintenance and Renewal Work. These schedules and plans shall set forth the type of O&M Work, anticipated timing, durations, frequency of each task, intended traffic management arrangements, and reporting requirements. Maintenance schedules shall include:
- a. Monthly Routine Maintenance Schedule;
 - b. Annual Routine Maintenance Schedule;
 - c. Annual Renewal Work Schedule, which shall be consistent with the Renewal Work Plan; and
 - d. Five Year Renewal Work Schedule, which shall be consistent with the Renewal Work Plan.
- 5.2.3. The MMP shall include the latest versions of:
- a. The Performance Requirements in the form most recently Accepted by the Department following the procedure for updates to the Performance and Measurement Tables in accordance with Section 4.2.6 of this Schedule 11, if applicable; and
 - b. The actual Useful Life for each Renewal Element, which such document shall reflect the Useful Life Baseline Requirements Table in the form most recently Accepted by the Department following the procedure for updates to the Useful Life Baseline Requirements Table as set forth in Section 6.1.4 of this Schedule 11.
- 5.2.4. The MMP shall append the following :
- a. Baseline Asset Condition Report;
 - b. Renewal Work Plan;
 - c. O&M Safety Plan; and
 - d. O&M Quality Management Plan (OMQMP).
- 5.3. **O&M Safety Plan**
- a. As part of the MMP, Developer shall provide an O&M Safety Plan that demonstrates compliance with all State, Federal and local Law, codes and regulations for the protection of personnel and Users during the performance of O&M Work. Developer shall develop a Safety Plan that includes staff training, safety procedures and protocols to address hazardous conditions associated with the O&M Work.
 - b. Developer is responsible for ensuring that all equipment used shall be maintained in a safe and efficient manner in accordance with all State, local and Federal Law, safety organizations, regulations and guidelines pertaining to providing the required services.
 - c. Developer shall follow all safety requirements outlined in the National Electric Safety Code (NESC), the Occupational Safety and Health Administration (OSHA) rules, and any applicable standards or practices for safe installation or maintenance of required equipment.
- 5.4. **O&M Quality Management Plan**
- As part of the Maintenance Management Plan, Developer shall provide an O&M Quality Management Plan (OMQMP). The Department will use the OMQMP to monitor Developer's performance of the O&M Work. The OMQMP shall address each of the following:
- a. Approach to quality management including a description of quality assurance and quality control functions for validating the information, accuracy, and results of the OMQMP;

- b. A quality improvement process used to analyze Nonconforming Work and determine methods or processes to minimize or eliminate Nonconforming Work and Noncompliance Events associated with O&M Work;
- c. Approach to reporting relationships and responsibilities including Department oversight;
- d. Approach to Developer self-monitoring/self-reporting requirements for inspection, data validation procedures and tracking of Nonconforming Work and Noncompliance Events;
- e. Approach to preparing and reviewing Incident reports, non-conformance reports, traffic reports and maintenance work reports;
- f. Approach to training of Developer's O&M Work personnel on quality assurance and quality control functions; and
- g. A comprehensive records and document management system to provide access to records and to govern protocols for records retention. Developer shall prepare reports that provide summary of observations and identify the results from the OMQMP processes.

6. RENEWAL WORK REQUIREMENTS

6.1. Renewal Work Plan

- 6.1.1. Developer shall prepare and submit a Renewal Work Plan as part of the MMP that shall be updated annually with the MMP. The Renewal Work Plan shall provide a detailed approach for Renewal Work that includes maintenance, repair, reconstruction, and replacement of each applicable Element, which shall be identified and scheduled in an annual Renewal Work Schedule and a rolling five year Renewal Work Schedule to be updated annually with the MMP. For certainty, Renewal Work does not apply to Elements within or that form part of the Limited O&M Work Segments.
- 6.1.2. The Renewal Work Plan shall identify Developer's procedure for evaluating the condition of the Project, identification of needs for Renewal Work, the identification and reporting of the status of assets under the control of Developer and Developer's procedures for implementing Renewal Work based on the expected Useful Life of each of the Elements.
- 6.1.3. The following information shall be provided in the Renewal Work Plan:
 - a. Developer's overall approach to meeting Renewal Work requirements, and expected Renewal Work expenditure throughout the remainder of the Term;
 - b. Developer's procedure for optimizing the Useful Life of each Element, describing how the replacement cycle is determined based upon initial cost; maintenance cost; reliability; obsolescence; and other relevant factors;
 - c. Developer's annual update to the Useful Life Baseline Requirements Table. For each Renewal Element, Developer shall provide evidence based upon actual performance and condition in service, together with appropriate operations and maintenance records, that the Useful Life as set forth in the Useful Life Baseline Requirements Table will be met or exceeded;
 - d. Developer's procedure for assessing the condition of all Elements, including the critical structural Elements, against intended performance and predicting time to maintenance and Residual Life, including the inspection, testing and monitoring requirements;
 - e. Demonstration that Developer's approach to Renewal Work is aligned with Good Industry Practice. Developer is required to keep up to date with the latest techniques and research in life cycle maintenance and to demonstrate that all such innovation and research is adopted as warranted in its annual updates of the Renewal Work Plan;

- f. Developer's procedure for the selection of suppliers and subcontractors needed to perform Renewal Work, including supply chain management procedures and procedures in place to ensure that quality of work for any Renewal Work is assured;
- g. Staffing, organization and specific responsibilities for implementing the requirements for Residual Life Methodology and testing as required by Schedule 12 (Handback Requirements);
- h. Developer's plan to achieve Handback Requirements for all Elements;
- i. The methods and procedures to be used by Developer to estimate the expected cost of Renewal Work for each asset and component, demonstrating that the estimates are reasonable and appropriate; and
- j. Planned Closures in order to conduct the Renewal Work, to be updated more frequently as required.

6.1.4. Updates to the Useful Life Baseline Requirements

Developer may submit proposed updates to the Useful Life Baseline Requirements Table to the Department for Approval no later than 90 Calendar Days before the then anticipated Substantial Completion Date, to reflect Good Industry Practice and specific attributes of Developer's final plan set (for example, where the final plan set incorporates a feature that is not included as a Renewal Element in the Useful Life Baseline Requirements Table), and thereafter no later than 60 Calendar Days before the end of each Contract Year. For each Renewal Element, the Department may take into consideration evidence based upon actual performance and condition in service, together with appropriate operations and maintenance records when considering a request by Developer to increase the Useful Life of any Renewal Element.

6.2. **Annual Renewal Work Schedule**

- 6.2.1. Not later than 60 Calendar Days before the end of each Contract Year, Developer shall prepare and submit to the Department for Acceptance a detailed annual Renewal Work Schedule for the following year consistent with, and including in respect of such year all information required in accordance with Section 6.3 of this Schedule 11 to be included in, the current five year Renewal Work Schedule.
- 6.2.2. Developer shall perform the Renewal Work as planned to comply with the applicable General Requirements and meet or exceed the applicable Targets.

6.3. **Five Year Renewal Work Schedule**

- 6.3.1. Not later than 60 Calendar Days before the end of each Contract Year, Developer shall prepare and submit to the Department for Acceptance a five year Renewal Work Schedule that identifies Developer's rolling five year plan for performing Renewal Work.
- 6.3.2. Developer shall use the results of all inspections and other relevant information to determine the Residual Life of each Element of the Project to demonstrate how the Handback Requirements will be met. The five year Renewal Work Schedule shall identify any necessary Routine Maintenance to be carried out according to an optimized replacement and renewal cycle such that Renewal Work is performed in accordance with this Section 6.
- 6.3.3. The five year Renewal Work Schedule shall include by Element:
 - a. The estimated Residual Life of each Residual Element and the proposed strategy and activities that will be carried out to meet the Handback Requirements;
 - b. The performance of the Renewal Elements, including any instances where a Renewal Element has not achieved its originally intended Useful Life;
 - c. A description of any Routine Maintenance required to ensure that each Element of the Project continues to comply with the applicable General Requirements and meet or exceed the applicable Targets;

- d. A description of the type of Renewal Work anticipated to be performed at the end of the Element's Residual Life; and
- e. A schedule of anticipated planned maintenance needed to perform the Renewal Work including the nature, timing and duration of any associated Closures.

6.4. General Renewal Work Obligations

6.4.1. Developer shall perform Renewal Work by no later than the date specified therefor in the relevant Accepted Annual Renewal Work Schedule whenever any one or more of the following conditions applies:

- a. Any Element is subject to deterioration that will, or is reasonably likely (as determined in accordance with Good Industry Practice) to, result in imminent or repeated failure to comply with the applicable General Requirements and meet or exceed the applicable Targets;
- b. An O&M Defect exists and Renewal Work is needed in order to ensure that Developer complies with its obligations under either of Sections 4.2.2 or 4.2.3 of this Schedule 11;
- c. A Category 2 Defect exists and Renewal Work is needed to avoid the O&M Defect from deteriorating to a Category 1 Defect;
- d. Any Element ceases to function, or dies (as in the case of certain landscaping); and/or
- e. The frequency of repair is greater than the frequency of preventative maintenance recommended in the manufacturer's preventive maintenance schedule.

6.4.2. Developer shall perform all Renewal Work in accordance with the provisions of this Agreement relating to the performance of Construction Work that are applicable to the relevant item of Renewal Work, including compliance with associated maintenance of traffic requirements (provided that, for certainty, the provisions of Schedule 6 (Performance Mechanism) relating to Non-Permitted Operating Period Closures shall apply and not the provisions thereof relating to Non-Permitted Construction Closure Deductions) and the provisions listed in Section 6.4.3 of this Schedule 11 (and otherwise shall comply with all provisions of this Schedule 11 that apply to the performance of the relevant item of Renewal Work).

6.4.3. Such provisions shall include:

- a. The terms and procedures set forth in this Agreement that relate to Deliverables in respect of Construction Work;
- b. The terms and procedures that relate to performance, design and construction standards in force at the time of the design of the Renewal Work;
- c. All quality assurance and quality control provisions set forth in Schedule 8 (Project Administration);
- d. Developer's obligation to employ an engineer licensed in Colorado to perform specified duties; and
- e. The Department's rights to oversee and audit the Renewal Work.

7. MAINTENANCE MANAGEMENT INFORMATION SYSTEM

7.1.1. Developer shall implement a computer-based Maintenance Management Information System (MMIS) to record inventory, failures, repairs, maintenance activities and inspections performed. Developer shall enter all infrastructure Elements into the MMIS with associated identifications (IDs) consistent with those descriptions and units of measure used by the Department. Developer shall record all information in a consistent manner and shall ensure that all information is searchable by individual attribute. The Department shall have read-only remote access to the

MMIS. The information contained in the MMIS shall be provided in exportable format to allow pertinent information to be included in the Department's maintenance system.

7.1.2. Developer shall include relevant information in the MMIS including, but not limited to, the following for each and every Element, as appropriate:

- a. location, accurate to within one foot in 20 feet
- b. equipment nomenclature;
- c. serial number;
- d. name;
- e. date of installation;
- f. technician identification;
- g. type of failure;
- h. date and time of failure;
- i. date and time of response to the site;
- j. date and time of return to service;
- k. preventive maintenance work;
- l. scheduled work;
- m. work repair code;
- n. failure and repair history;
- o. statistical data on mean time between failure and mean time to repair; and
- p. Closure log by time and location;

7.1.3. Developer shall also keep records of labor hours, expended materials, quantity and equipment types as well as the hours that the equipment was in operation. This information shall be in CDOT component numbers or class code numbers.

7.1.4. Developer shall configure the MMIS to report work by Department function code, infrastructure Element, reference marker, crew and unit of measurement. In the MMIS, the information for bridges shall include National Bridge Inventory (NBI) sheets.

7.2. **Geographical Reporting in the MMIS**

7.2.1. The MMIS shall be capable of reporting system performance on a geographical basis to demonstrate compliance with operational and maintenance requirements. Within the MMIS, Developer shall incorporate a Geographical Information System (GIS), which shall use the same database engine as the MMIS and shall use the MMIS for display of Element information. All infrastructure Elements shall be identified on the MMIS.

7.2.2. The information displayed geographically shall include pavement condition measurements, maintenance limits, work performed by roadway segment, type of work, crew/contractor, and any other information relevant to the operation, maintenance and renewal of the infrastructure Elements.

7.3. **Creation, Updating and Hand Over of the MMIS**

7.3.1. Developer shall fully populate and make operational the MMIS prior to the issuance of NTP2 and shall keep the MMIS updated and operational for the duration of the O&M Period During Construction and the Operating Period. Developer shall provide equipment, facilities and training necessary to permit remote, real-time, dedicated high-speed access to the MMIS, via one terminal each, for the Department. Developer shall provide an operating manual ('MMIS

Operating Manual') and provide full demonstration of the functionality of the MMIS to the Department for Acceptance prior to the issuance of NTP2.

- 7.3.2. When an infrastructure Element is constructed, installed, maintained, inspected, modified, replaced or removed, Developer shall update the MMIS within three Calendar Days of completion of such work. Developer shall record Category 1 Defects and Category 2 Defects on the MMIS within three Calendar Days of them coming to the attention of Developer. Developer shall record all other required information within 15 Calendar Days after completion or occurrence of the relevant activity.
- 7.3.3. Developer shall hand over the fully populated MMIS and everything required for its operation to Department, or other entity as directed by the Department, at the Expiry Date (or, if earlier, the Termination Date).

8. INSPECTIONS

8.1. General Requirements

- 8.1.1. Developer shall carry out inspections and continuous monitoring of all infrastructure Elements in accordance with the MMP. Developer shall use the results of inspections to develop and update the MMP, including the Renewal Work Plan, and to develop programs of maintenance and Renewal Work to minimize the occurrence of O&M Defects and impacts to Users and to ensure that Developer is complying with the applicable General Requirements and meeting or exceeding the applicable Targets. Developer shall cause trained and competent personnel to plan and implement a program of inspections of all infrastructure Elements which:
 - a. verifies the continuing safety of the infrastructure Elements for Users;
 - b. prioritizes Category 1 Defects;
 - c. identifies Category 2 Defects to be included for repair either within Developer's annually recurring highway maintenance and repair program, as Developer's Renewal Work;
 - d. is responsive to reports or complaints received;
 - e. takes account of Incidents and Emergencies affecting the infrastructure Elements;
 - f. monitors the effects of extreme weather conditions and Precipitation Events; and
 - g. collects data to monitor performance of infrastructure Elements and to establish priorities for future maintenance operations and Renewal Work.

8.2. Inspection Frequency

Developer shall annually review and update as necessary the schedule for inspections which will be appropriately spaced throughout the year. After periods of inclement weather or other events which may cause accelerated deterioration of assets, safety hazards or other detrimental impacts to the infrastructure Elements, Developer shall conduct comprehensive visual surveys which will identify all such areas of concern.

8.3. General Inspections

- 8.3.1. Developer shall perform general routine inspections in accordance with the MMP in order to identify all O&M Defects. Operations and maintenance records in respect of general inspections shall include details of the manner of inspection (e.g. types of Closures), the weather conditions and any other unusual features of the inspection. Developer shall perform general routine inspections such that Category 2 Defects are identified and repaired within the applicable Defect Remedy Period. O&M Defects which require Specialist Inspections to identify them may have different identification periods.
- 8.3.2. Developer shall use the results of the inspections described in its MMP and other relevant information to determine, on an annual basis, or more frequently, the Useful Life and Residual

Life of each applicable Element. Developer shall use this information to update the scope of the Renewal Work Plan.

8.4. Specialist Inspections

Developer shall undertake Specialist Inspections for infrastructure Elements listed, at a minimum, in Table 11-1 below and shall include the inspection results as operations and maintenance records.

Table 11-1 – Specialist Inspections

Element	Frequency
Roadway	Annual survey of pavement condition for the I-70 Mainline, CDOT Roadways and Local Agency Roadways within the O&M Limits at the time of the survey and all infrastructure Elements undertaken using automated condition survey equipment to measure all necessary criteria including: ruts, cracking, faulting, skid resistance and ride quality (IRI) according to the inspection and measurement methods set forth in <u>Appendix A-1</u> and <u>A-2</u> .
Bridges and structures (including the Cover)	Inspections and load rating calculations at the frequency specified in <u>Appendix A-1</u> and <u>A-2</u> . In addition, NBIS inspections as per FHWA regulations and at the frequency specified in FHWA regulations, AASHTO Bridge Management, and AASHTO Manual for Condition Evaluation of Bridges. Inspection for the structures and the Cover shall be conducted by certified individuals required by NBIS and NTIS, as applicable. Inspection data shall be updated annually as a minimum.
Electrical supplies to lighting, signs, traffic signals and communications equipment	Inspections as required by FHWA, electrical regulations, as well as all current Department M&S Standard Plans.
Mechanical, electrical, or plumbing equipment, including those associated with the Cover	Inspections as required by the MMP, the equipment manufacturer, and this Project Agreement.

8.5. Roadway Condition Monitoring

The Department will conduct a routine annual roadway condition survey as part of the Department statewide annual pavement condition data collection services performed by a contracted service provider. Data collected, at a minimum, will include the following:

- a. International Roughness Index (IRI) using AASHTO Standard Practices PP50-07, PP49-07, and RR43M/R43-7;
- b. Rutting using a 5-laser sensor rut bar in accordance with AASHTO PP38-00;
- c. Maximum faulting and average faulting for 1/10-mile segments measured in accordance with AASHTO R36-04; and

- d. Cracking Distress in accordance with Distress Identification Manual for Long-term Pavement Management Performance Project (FHWA-RD-03-031). This routine annual pavement condition survey will serve as a quality control check of Developer in order to ensure that Developer is consistently monitoring the pavement condition in accordance with this Agreement.

The Department may conduct additional monitoring at any time in accordance with, and as and when permitted by, the provisions of the Project Agreement.

9. OPERATIONS MANAGEMENT PLAN

9.1. General

- 9.1.1. Developer shall prepare the Operations Management Plan (OMP) to meet the operating requirements set forth in this Schedule 11 and shall include information regarding the procedures for the O&M Period During Construction and the Operating Period.
- 9.1.2. Developer shall submit the OMP to, and obtain the Acceptance thereof from, the Department prior to the issuance of NTP2 and shall submit an updated version to the Department for Acceptance by the Department prior to Substantial Completion. In addition, the OMP shall be updated and submitted for Acceptance annually no later than 60 Calendar Days before the end of each Contract Year. The OMP shall also be updated more frequently as required, during the Construction Period or the Operating Period to indicate changes to relevant protocols, agreements, and other interactions with other entities and to indicate requirements for equipment and systems that have been revised, upgraded, or replaced. Developer shall comply with the latest Accepted OMP.

9.2. OMP Contents

- 9.2.1. The OMP submitted (i) prior to the issuance of NTP2, shall include, at a minimum, details of the approach, procedures and means of implementation in respect of the following in respect of both the O&M Work During Construction Period and the Operating Period (except to the extent that any of the following are inapplicable to the relevant period and, where applicable, identifying any differences between such periods) and (ii) prior to Substantial Completion, shall include, at a minimum, such details in respect of the Operating Period (except to the extent that any of the following are inapplicable to such period):
 - a. Overview description of all facilities, systems and equipment to be operated by Developer;
 - b. Organizational structure to ensure 24 hour response to Incidents and Emergencies;
 - c. Monitoring the safety and operational performance of the Project;
 - d. Staffing plan procedures, including staff qualifications, training and certification processes;
 - e. Incident response, management and reporting;
 - f. Traffic operations restrictions, including permitted Closure hours;
 - g. Description of how operations performance monitoring will be accomplished;
 - h. Establishment of plans and procedures in meeting notification and database requirements in compliance with Part 6 (Reporting Requirements) of Schedule 6 (Performance Mechanism);
 - i. Operating protocols, agreements and interactions with the various entities and agencies with interests in the Project, including the Tolled Express Lanes;
 - j. Standard operating and communication procedures for emergency preparation, response, and recovery, including impacts from extreme weather conditions;

- k. Planning and coordination with all affected Governmental Authorities, including Emergency Services;
 - l. Liaison and coordination with the Colorado Traffic Management Center or any other entities that may establish traffic management centers in the area;
 - m. Analysis of vehicular accident patterns to identify safety issues and implement cost effective solutions to maximize safety;
 - n. Identification, containment and disposal of Hazardous Substances spills with reports to the Department;
 - o. Prompt investigation of reports or complaints received from all sources;
 - p. Establishment of procedures for external communication system messaging resulting in improved dissemination of information and safety notices in reference to, and in compliance with, the requirements of Schedule 14 (Strategic Communications);
 - q. Establishment of guidelines and procedures for handling system failures and ensuring that all failures are properly documented;
 - r. Staff qualifications, equipment availability, response and cleanup as a result of fuel spills or other contamination-causing events; and
 - s. Description of staff training on the National Traffic Incident Management Responder Training Course by FHWA.
- 9.2.2. The OMP shall include the following appended Plans:
- a. Snow and Ice Control Plan;
 - b. Incident Response Plan; and
 - c. Courtesy Patrol Service Plan, which shall provide an overview and establish procedures for the Courtesy Patrol Services as described in Section 10 of this Schedule 11;
- 9.3. **Snow and Ice Control Plan**
- 9.3.1. Developer shall submit a Snow and Ice Control Plan as part of the OMP. The Snow and Ice Control Plan and subsequent updates shall address requirements for the operations, management, proposed equipment, maintenance yards, materials, staffing and all other items necessary to comply with the applicable General Requirements and meet or exceed the applicable Targets related to Snow and Ice Control Services. An annual update to the Snow and Ice Control Plan shall be submitted by September 1 of each year for Acceptance by the Department.
- 9.3.2. The Snow and Ice Control Plan shall outline procedures that will be implemented to maintain the I-70 Mainline, and other infrastructure Elements and portions of the CDOT Roadways (in each case) as identified in the O&M Limits Reference Drawings, free from snow and ice to comply with the applicable General Requirements and meet or exceed the applicable Targets including location of maintenance yards, procedures for snow and ice clearance plans to maintain traffic flows during and after a Precipitation Event, procedure for sourcing and analysis of weather information, procedures for meeting response times, procedures for meeting treatment and sweeping requirements to counteract ice and snow accumulation, procedures for techniques to be adopted on all lane types including Tolled Express Lanes and General Purpose Lanes.
- 9.3.3. The Snow and Ice Control Plan and all updates shall at a minimum include details of the following:
- a. Management and administration;
 - b. Safety approach and compliance with O&M Safety Plan;
 - c. Quality approach and compliance with O&M Quality Management Plan;

- d. Description of facilities that will be used for staging, including locations;
- e. Approach to monitoring and oversight;
- f. Frequency of monitoring patrols during and between Precipitation Events;
- g. Weather forecasting systems, processes and procedures;
- h. Equipment, number, size and type;
- i. Materials and chemicals to be used;
- j. Description of Snow Routes and route analysis to support the equipment and resources required, including the following information:
 - i. Cycle time (time it takes to complete route);
 - ii. Individual maps in a size and format that is legible, including photographs if necessary, clearly showing each winter vehicle route with clear route identification numbers. The colored maps shall be in native file and PDF format, and of sufficient scale that the starting and ending points are clear. Locations of features affecting the route description, including multiple lanes, ramp configurations, channelizations, Tolloed Express Lanes, dead heading, turnarounds and other special features that may affect plowing and/ or material spreading times shall be shown; and
 - iii. Summary map in a size and format that is legible, including photographs if necessary, with all routes clearly labeled on one map.
- k. Description of patrol size and philosophy of plowing including shift and shift change times;
- l. Call out procedures including personnel, contact lists;
- m. Details on how response times will be addressed;
- n. Application procedures for liquid and/or solid de-icers and anti-icers;
- o. Calibration of Spreaders and liquid de-icer and anti-icer equipment;
- p. Staff training plan;
- q. Precipitation Event reporting and documentation;
- r. Procedure for post-Precipitation Event clean-up work, including stockpiling of excess snow, which shall not be stored in the clear zone;
- s. Procedure for sweeping;
- t. Procedure for meeting Denver Regional Council of Government's air quality requirements after Precipitation Events; and
- u. Procedure for reporting including results with respect to Performance Requirements, and pre- and post- event meetings.

9.4. **Incident Response Plan**

Developer shall submit an Incident Response Plan (“IRP”) as part of the OMP that is consistent, and demonstrates how Developer will comply, with Incident management requirements of relevant Governmental Authorities. In the IRP, Developer shall address as a minimum:

- a. description of Developer's specific responses to Incidents;
- b. the responsibility to prepare, and turnaround time for the preparation of, monthly Incident reports in electronic format (and as further specified in this Schedule 11) and submission of them to the Department when Incidents occur;
- c. all issues associated with Hazardous Substances spills; and

- d. necessary coordination responsibilities with the Department and relevant Governmental Authority and Emergency Services personnel when Incidents occur.

10. COURTESY PATROL REQUIREMENTS

10.1. Patrols

10.1.1. For the duration of the O&M Period During Construction and the Operating Period, Developer shall provide Courtesy Patrol Services service for the Project as described in this Section 10 and in Appendix B to this Schedule 11. The purpose of the service is to reduce congestion and potential safety risks on the Project by:

- a. Continuously patrolling within the Project during peak and non-peak traffic hours and weekends;
- b. Providing towing and motorist assistance services;
- c. Providing towing services for the Tolled Express Lane(s) and General Purpose Lane(s);
- d. Providing on-call severe weather emergency or planned Special Event towing services; and
- e. Quickly locating, assisting, and/or removing any disabled vehicles thereon as soon as possible.

10.1.2. Categories of Service

- a. Developer shall provide five general categories of service, as follows:
 - i. To locate a disabled vehicle on the shoulder of the highway segment and, at the motorist's election, to move the vehicle to an appropriate Drop Site and there to provide the limited assistance available to Developer (i.e. flat tire, out of gas, etc.) if such assistance will make the vehicle operational;
 - ii. To locate a disabled vehicle in traffic on the highway segment and, at the motorist's election, to move the vehicle either to the shoulder of the highway segment or to an appropriate drop site, and there to provide the limited assistance available to Developer if such assistance will make the vehicle operational;
 - iii. To assist motorists, and Local Agencies or Emergency Services as requested, concerning an accident or other emergency on the highway segment. Such assistance includes, without limitation, towing or pushing vehicles as directed, protecting the scene of an accident, cleaning up debris caused by an accident, and calling and assisting local law enforcement in the event of an accident;
 - iv. To pick up light debris on roadway; and
 - v. Data collection communication to the Department.

11. SNOW AND ICE CONTROL SERVICES

11.1. Subject to Developer's obligations to perform Snow and Ice Control Services in accordance with Section 2.2.2.b and Section 3.2.2.b of this Schedule 11, Developer shall provide Snow and Ice Control Services on the I-70 Mainline, and other infrastructure and portions of the CDOT Roadways (in each case) as identified in the O&M Limits Reference Drawings, commencing on and from the Snow and Ice Control Commencement Date for the remainder of the O&M Period During Construction and the Operating Period in accordance with the requirements in this Schedule 11, including Appendix A-1 and Appendix A-2 to this Schedule 11.

11.2. Developer shall achieve a Level of Service 'A' with respect to all snow and ice control "survey items" as identified in CDOT's Maintenance Levels of Service Manual, including condition 1 with respect to "snow removal's road condition" requirement in the manual.

- 11.3. Developer is required to use all available resources to assess weather conditions and make decisions and direct actions that maintain the travel ways as safe as possible during and after the occurrence of any Precipitation Event that causes the roadway or any portion of the Project to accumulate snow and/or ice. Developer shall use all available resources to maintain safety on the travel ways and for ensuring that all Developer staff are aware of the relevant requirements specified in Appendix A to this Schedule 11. The Snow and Ice Control Services include, but are not limited to, loading materials on trucks, snow plowing and the application of liquid and solid de-icers and anti-icers within the O&M Limits.
- 11.4. Developer shall also be responsible for all clean up following the occurrence of a Precipitation Event including touch up work to remove snow that could cause freeze-thaw or traffic hazards and sweeping as required by the Denver Regional Council of Governments. Developer shall place necessary Snow and Ice Control Equipment in service and react to changing weather and roadway conditions as quickly as possible, and at a minimum shall meet the response times specified in Appendix A-1 and A-2 to this Schedule 11.
- 11.5. Developer shall take all necessary actions to achieve the following.
 - a. Provide all Snow and Ice Control Services.
 - b. Provide all resources necessary for the performance of the Snow and Ice Control Services.
 - c. Minimize delay and inconvenience to Users as a result of the occurrence of any Precipitation Event.
 - d. Identify all O&M Defects and damage which are caused by any Precipitation Event or Developer causes in the provision of the Snow and Ice Control Services and correct all such O&M Defects and damage.
 - e. Monitor and observe weather and weather forecasts to proactively deploy resources to minimize delays and safety hazards due to Precipitation Events.
 - f. Minimize the risk of damage, disturbance or destruction of third party property during the provision of the Snow and Ice Control Services.
 - g. Coordinate with the Department and Local Agencies with statutory duties or functions in relation to the Snow and Ice Control Services. Coordination shall include interface, edge areas, and boundaries between Developer, the Department, and the Local Agency to ensure the Site and adjacent vicinity is covered. This includes facilitating meetings with all stakeholders prior to each winter season for such coordination, and after each winter season for debriefing, and shall include documenting the conclusions of such coordination. Such meetings shall occur annually at a minimum and more frequently as required or as requested by the Department or Local Agency.
 - h. Provide all necessary post-Precipitation Event sweeping.
 - i. Provide oversight and inspection to assure that the Snow and Ice Control Services are being conducted in accordance with the provisions of the Snow and Ice Control Plan and in accordance with the O&M Safety Plan.
 - j. Actively participate in meetings scheduled by the Department to plan for all forecast Precipitation Events and for debriefing after all Precipitation Events.

11.6. Snow and Ice Control Equipment

- 11.6.1. Developer shall determine the equipment (the "Snow and Ice Control Equipment") including service vehicles, loaders and trucks that it requires to provide the Snow and Ice Control Services to comply with the applicable General Requirements and meet or exceed the applicable Targets. The Snow and Ice Control Equipment required by Developer shall be determined based on an annually reviewed or updated route analysis conducted by Developer, and in accordance with Good Industry Practice. The Snow and Ice Control Equipment shall also include such equipment as is expressly required by this Schedule 11.
- 11.6.2. Each item of Snow and Ice Control Equipment used by Developer in the provision of the Snow and Ice Services shall have the necessary valid registrations, permits, licenses, insurance and certifications, and shall include warning light system to signify snow and ice operations. Developer shall maintain each item of Snow and Ice Control Equipment to the minimum standard established by commercial vehicle inspection as enforced by the Colorado State Patrol Motor Carrier Safety Section, which is charged with ensuring the safe operation of all commercial vehicles and operators within the State, and the Federal Motor Carrier Safety Regulations which apply in the State of Colorado.
- 11.6.3. If any item of Snow and Ice Control Equipment is not in a safe condition, then it shall be removed from the worksite and immediately replaced with an item of Snow and Ice Control Equipment that meets all requirements of this Section 11. Any such item of Snow and Ice Control Equipment shall not be returned to service until the necessary repairs or modifications have been made.
- 11.6.4. Each item of Snow and Ice Control Equipment used by Developer shall bear the name of Developer and shall be assigned a unique number that is prominently displayed on either side of the Snow and Ice Control Equipment while in use.
- 11.6.5. Developer shall equip all winter operations spreading equipment with on board electronic Spreader control system designed to control the application of highway de-icing chemicals.
- a. The system shall consist of: a programmable microprocessor control console, with light emitting diode (LED), vacuum fluorescent display (VFD), or liquid crystal display (LCD) that are easy to read during both day and night operation. The controller shall display to the Spreader operator, application rate settings, gate setting, spinner speed setting, material selected - both granular and liquid, and shall indicate errors. The system operating mode shall indicate manual or automatic. The system shall include a means to transfer data to an Automated Vehicle Locator (AVL) system. The discharge of de-icing material shall be controlled proportional to road speed at the pre-programmed application rates.
 - b. The Spreader control system shall incorporate a data collection system that records all specified data for each event during an operation. A new event occurs every time that the system power is turned on or off, the application rate is changed, material selection is changed, data is downloaded, the operating mode changes, incorrect gate setting, or insufficient material detected.
 - c. The data collected per event shall include, Truck Number, Event Start Date, Event Start Time, 24 hour clock (HH:MM), Material Type Solid, Spinner Mode (Single or Dual), Spread Rate (lbs/mi), Total Distance (mi), Spread Distance (mi), Spread Quantity (lbs), Blast Distance (mi), Blast Quantity (lbs), Event Type, Material Type Liquid, Pre-wet Liquid Rate (%) and Pre-wet Volume (gal).
 - d. The system shall have sufficient memory to store a minimum of 100 events per category before downloading is required.
- 11.6.6. Developer shall equip all winter operations spreading, plowing and anti-icing equipment including patrol vehicles with digital infrared temperature indicating system for both road surface and ambient temperatures, suitable for vehicle mounting and operation. The sensor shall accurately sense road surface and ambient temperatures in all weather conditions and will be capable of taking samples at a minimum of 10 times/second, while the vehicle is not moving or in full motion,

to provide “real time” temperature readings. The system accuracy will be +/-1.0°F@32°F, in all operating ambient temperatures from -40°F to 150°F.

11.7. Snow and Ice Removal Restrictions

Snow and Ice Control Services performed in any lanes closed to traffic and behind all temporary barriers shall be done in a way to avoid placing snow back into open lanes of traffic. Snow shall be removed far enough from the edge of travel lanes that runoff from melting snow will not enter into the travel lanes. Developer shall not create windrows or snow piles that may block ramps, intersections or adjoining Local Agency Roadways nor shall Developer leave any windrow or snow piles that may become hazards after a Precipitation Event. Developer shall not cast snow onto any roads beneath bridges when snowplowing or working on bridges or overpasses. Developer shall not cast snow onto private property, nor cast snow in a way that would cause damage to that property. Notwithstanding other reporting or monitoring requirements identified in this Schedule 11, Developer shall additionally be required to self-report using forms that contain at least the minimum information required by Appendix C to this Schedule 11.

11.8. De-icing and Anti-icing Chemicals

All de-icing and anti-icing chemical materials introduced into the Environment by Developer shall meet or exceed Pacific Northwest Snow Fighters (PNS) criteria, and materials used shall be materials identified on the PNS approved products list, which such materials shall not have any known adverse reactions when used with CDOT anti-icing and de-icing materials. All de-icing and anti-icing chemical materials introduced into the Environment by the Developer shall also conform to the requirements of the Colorado Department of Public Health and Environment, Air Quality Control Commission’s Regulation 16.

11.9. Winter Operations Environmental Training

Winter operations staff training shall include environmental compliance requirements. All applicable environmental topics shall be covered including water quality regulations, air quality regulations, and compliance procedures.

12. AUTOMATED VEHICLE LOCATOR

12.1. AVL Requirements

- a. Developer shall install and maintain an automated vehicle locator (AVL) system for vehicles used on the Project to perform O&M Work on the Site, including but not limited to:
 - i. Winter vehicles, such as vehicles equipped for spreading winter materials of any kind, vehicles equipped for plowing with one-way plow, reversible plow, plow and/or wing plow, tow plow or any combination thereof;
 - ii. Patrol vehicles, such as Courtesy Patrol Service vehicles, and vehicles such as pick-up trucks and cars used in roadway patrol and project supervision; and
 - iii. Other vehicles for O&M Work, such as dump trucks, flatbed trucks, crew cabs, pavement marking vehicles, crash trucks, electrical maintenance vehicles, Incident response vehicles, and sweepers;
- b. AVL is not required on equipment used for Renewal Work.
- c. The system shall track, store, display (on a state highway base map) and report movements and actions, in real-time, with instant live replay every 10 to 12 seconds while in use, 24 hours a day, seven days a week. The system’s data shall all be accessible by the Department in real-time and be compatible with Department’s system. The system shall transmit data even when the vehicle is turned off. The on-board AVL/GPS unit shall allow for data to be stored when there is no wireless network present, and then uploaded once network service is re-gained. The on-board unit’s software shall continuously run tests to determine whether or not network coverage exists prior to transmitting data, to

ensure there will be no data loss. If a loss of coverage is detected, the unit shall immediately begin to store the data within the on-board memory allocated to this application.

- d. The system shall be capable to read and transmit all data captured by the electronic Spreader control units in all Spreaders, Tow Plow Spreaders and/or plow Spreader combination units and digital infrared temperature indicating system.

13. REPORTING AND LIAISON

13.1. Monthly Operations and Maintenance Reporting Requirements

13.1.1. During the O&M Period During Construction and the Operating Period, Developer shall report on all of the monthly O&M Work activities performed during the previous month and the planned activities for the upcoming month ("Monthly O&M Report"). Monthly O&M Reports shall be submitted to the Department for Acceptance no later than the 10th Working Day of each month, with the first such report to be submitted in the month following the month in which NTP2 is issued.

13.1.2. The Monthly O&M Reports shall contain at minimum the following information with respect to maintenance activities:

- a. A summary of planned O&M Work activities for the month during which the report is submitted and the following month;
- b. A summary of the O&M Work performed and completed for the previous month;
- c. A summary of the planned maintenance that was not completed for the previous month, including the reasons for the non-completion and a summary of deferred days for each deferred item;
- d. Summary of the maintenance activities and results performed for the previous month beyond the planned maintenance activities for that month;
- e. Developer's Incident response logs related to maintenance activities, including a time-based report of all actions and activities performed by Developer including a description of any damages including the date, infrastructure component, details of the resulting Category 1 Defect or Category 2 Defect or damage;
- f. Detailed results of all inspections, assessments and testing activities, including the related procedures and forms; and
- g. Preventative maintenance plan and progress.

13.1.3. The Monthly O&M Reports shall contain at minimum the following information with respect to operations activities:

- a. Monthly Incident reports: For any Incidents that in the previous month result in damage to any Elements or require response of Emergency Services. The report shall be created identifying the nature of the Incident, time, date, location, parties involved, and actions taken. For Incidents involving fatalities, Developer shall submit the Incident report to the Department within 24 hours of the Incident;
- b. Reports on O&M Defects: For each O&M Defect in an Element identified in the previous month, the report shall identify the location, nature, and cause of the O&M Defect and the steps that will be, or have been, taken by Developer to address the O&M Defect;
- c. Summary of conformance with OMQMP in the previous month;
- d. Environmental monitoring activities, including the requirements specified in Schedule 17 (Environmental Requirements), performed in the previous month;
- e. Snow and Ice Control Services performed in the previous month; and

- f. Courtesy Patrol Services activities in the previous month.
- 13.1.4. Developer shall report on other data that are tracked in the MMIS, the AVL system, or other relevant information, as may be reasonably requested by the Department.
- 13.2. Annual Operations and Maintenance Reporting**
- 13.2.1. The annual report ("Annual O&M Report") shall be submitted no later than 30 Calendar Days after the end of each Contract Year to the Department for Acceptance, and shall contain at minimum the following information:
- a. An overall summary of the performance for the year including quality, safety, environmental aspects;
 - b. A summary of the planned maintenance and operations activities for the Contract Year in which the report is submitted;
 - c. A summary of the maintenance and operations activities performed and completed for the year along with the results;
 - d. A summary of the Renewal Work that was performed, including the type of work performed and the dates of commencement and completion of the work. As-Built drawings associated with Renewal Work shall also be provided;
 - e. A summary of the planned activities that were not completed for the year, including the reasons for the incompleteness and a summary of deferred days for each deferred item;
 - f. Summary of the maintenance and operations activities performed for the year beyond the planned activities for that year;
 - g. Summary of Noncompliance Points accrued including details of each Noncompliance Event;
 - h. Summary of Non-Permitted Closures including details of each Non-Permitted Closure;
 - i. Developer's Incident response logs including a time-based report of all actions and activities performed by Developer;
 - j. Results of all inspections (including specialist inspections), assessments and testing activities, including any update of asset condition inventory;
 - k. Preventative maintenance plans and progress; and
 - l. Other data that are tracked in the MMIS, the AVL system, and other information as may be reasonably requested by the Department.
- 13.3. Project Meetings**
- 13.3.1. Developer shall schedule, prepare an agenda, and facilitate monthly meetings, or as needed, with the Department representatives to discuss the O&M Work and to review O&M Work status including the reports required in this Schedule 11. The items to be discussed shall include, but not be limited to: O&M Work in the previous month, planned O&M Work for the following month, public information and User issues, future Closures, Incidents and Emergencies, Incident management coordination, accrual of Noncompliance Points, Construction Closure Deductions and Operating Period Closure Deductions, and any other pertinent information related to the O&M Work. The Department may wish to hold separate meetings for general management/operations and maintenance as required.
- 13.3.2. The Department may request a meeting at any time to discuss O&M Work-related issues and accidents. In addition, Developer shall coordinate meetings to be held at least one week prior to planned Closures. Developer shall be required to actively participate in toll system meetings, major work meetings, meetings to plan for all forecast Precipitation Events and for debriefings after all Precipitation Events, planning meetings and others as directed by the Department, and shall provide assistance, information, and expertise as needed.

13.3.3. Developer shall conduct Incident debriefings to review lessons learned and best practices. These Incident debriefings shall be summarized at subsequent meetings. Developer shall be required to attend quarterly meetings with the Department to review any safety and traffic operations issues or requests related to the O&M Work of any Elements.

13.3.4. Section 9.1 of Schedule 8 (Project Administration) shall apply to the preparation of minutes for all meetings held pursuant to this Section 13.3.

13.4. Project Liaison

13.4.1. Developer shall liaise with the Department and other Governmental Authorities, companies including Utilities and adjoining jurisdictions to ensure that planned maintenance and other proposed Closures do not conflict with closures on adjacent facilities or Governmental Approvals or Permits granted for right of access or special hauling.

13.4.2. Developer shall liaise with the Department to keep informed of Governmental Approvals or Permits granted for the Project.

13.4.3. Developer shall provide the Department with one point-of-contact, Developer’s Representative, as a member of Developer’s Key Personnel with authority to coordinate all O&M Work. The Department will require contact details for the primary, secondary and back-up contacts that are knowledgeable with the O&M Work and have decision making authority.

13.5. Annual Review of O&M Work

13.5.1. The Department will meet with Developer to discuss any potential impacts to the O&M Work, including those that may result from the occurrences below as well as any changes which may be required to the MMP and OMP:

- a. A change to statewide maintenance programs or practices;
- b. A change to any of the policies, procedures, standards, manuals, handbooks, guides, specifications, or any other State, local, or federal documents used to monitor the performance of the O&M Work;
- c. Increased maintenance due to the construction of roadways, structures, and facilities not included in the Department’s work program at the time of execution of this Agreement;
- d. Increased maintenance due to the transfer of ownership to the Department of non-state roadways, structures, and facilities within the O&M Limits; and
- e. Additional requirements as a result of traffic operational improvements.

14. DELIVERABLES

14.1. Deliverable Requirements

At a minimum, Developer shall submit the following to the Department for Information, Acceptance, and/or Approval in accordance with the timeframes specified.

Deliverable	Information, Acceptance, Approval	Schedule
O&M Limits During Construction Drawings; and subsequent updates	Acceptance	Prior to the issuance of NTP2; Updated as required
Baseline Asset Condition Inspection Plan	Acceptance	Prior to the issuance of NTP2

Deliverable	Information, Acceptance, Approval	Schedule
Baseline Asset Condition Report	Acceptance	Prior to the issuance of NTP2
O&M Limits After Construction Drawings	Acceptance	Prior to Substantial Completion
MS4 permit annual reporting	Acceptance	December 31 of each Calendar Year
Cover Top O&M Manual	Approval	Prior to Substantial Completion
ITS personnel in accordance with <u>Section 3.2.8.c. of this Schedule 11</u>	Approval	Prior to Substantial Completion
Updates to Performance and Measurement Table in <u>Appendix A-2</u>	Approval	90 Calendar Days before the anticipated Substantial Completion Date; no later than 60 Calendar Days before the end of each Contract Year
Maintenance Management Plan (MMP), including Plans forming the MMP	Acceptance	Prior to the issuance of NTP2, and updated version prior to Substantial Completion; 60 Calendar Days before the end of each Contract Year; or more frequently as required
Operations Management Plan (OMP), including Plans forming the OMP	Acceptance	Prior to the issuance of NTP2, and updated version prior to Substantial Completion; 60 Calendar Days before the end of each Contract Year; or more frequently as required
Snow and Ice Control Plan	Acceptance	Same schedule as the OMP; and annual updates by September 1 of each year
Monthly O&M Report	Acceptance	No later than 10 th Working Day of each month commencing the month following the issuance of NTP2
Annual O&M Report	Acceptance	30 Calendar Days after the end of each Contract Year
Maintenance Management Information System (MMIS) Operating Manual, and demonstrated functionality	Acceptance	Prior to the issuance of NTP2

Deliverable	Information, Acceptance, Approval	Schedule
Updates to Useful Life Baseline Requirements Table	Approval	90 Calendar Days before the anticipated Substantial Completion Date; and no later than 60 Calendar Days before the end of each Contract Year thereafter
Annual Renewal Work Schedule	Acceptance	Not later than 60 Calendar Days before the end of each Contract Year
Five Year Renewal Work Schedule	Acceptance	Not later than 60 Calendar Days before the end of each Contract Year

15. APPENDICES

- Appendix A-1 Performance and Measurement Criteria During Construction
- Appendix A-2 Performance and Measurement Criteria After Construction
- Appendix B Courtesy Patrol Requirements
- Appendix C I-70 East Snow Removal Survey
- Appendix D O&M Work Responsibility for Structures

Appendix A-1 – Performance and Measurement Criteria During Construction

Unless stated otherwise, Measurement Criteria for pavement related Performance Requirements shall be measured using procedures, techniques, and the measuring equipment used shall be consistent with the Colorado DOT Distress Manual for HMA and PCC Pavements by National Center for Pavement Preservation, Appendix B of the Development of a Pavement Preventative Maintenance Program for the Colorado Department of Transportation, Report No. CDOT-DTD-R- 2004-17 Final Report.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
1 PAVEMENT (ROADWAY, RAMPS, ACCESS ROADS AND OTHER PAVED AREAS)							
1.1	I-70 Mainline, CDOT Roadways, and Local Agency Roadways and connecting structures	Elements to be free from obstructions and debris.	1 hrs		N/A	Visual Inspection	No obstructions or debris noted by visual inspection.
1.2	Pavement - All roadways, including ramps, detours, and shoulders (mainline including the bridge deck, covers, gratings, frames, expansion joints and boxes)	Smooth and quiet surface course with adequate skid resistance and free from Defects.	2 hrs		12 mo.	<p>a) Localized deficiencies - Physical measurement.</p> <p>b) Faulting</p> <p>c) Lane to lane, and lane to shoulder drop-off - Physical measurement</p> <p>d) Instances of pavement failures- Visual Inspection of roadway surfacing</p> <p>e) Edge drop-offs Physical measurement of edge drop-off level to adjacent surface</p>	<p>Maintain or exceed condition as identified in the BACR.</p> <p>Maintain or exceed condition as identified in the BACR.</p> <p>No instances of drop-off greater than 1.0 inch.</p> <p>No instances of failure, including potholes, greater than 1.0 sq-ft and 1.5 inch in depth.</p> <p>No instances of base failures, punch-out's and jointed concrete pavement failures.</p> <p>Maintained roadway (including shoulder) free from instances greater than 2".</p>

² Note to Proposers: Column will be removed in the Final RFP.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
1.3	Pavement - All roadways, including ramps, detours, and shoulders (mainline including the bridge deck, covers, gratings, frames, expansion joints and boxes)	Removal of deleterious material and repair of damaged pavement.	12 hrs		N/A.	Oil, antifreeze, gasoline or other liquids spilled from vehicles onto traffic lanes is removed from the roadway.	Incident logs and maintenance records demonstrate scheduled inspections and clean up times.
1.4	Crossovers, access roads and other paved areas	Elements are free of Defects.	12 hrs		12 mo.	Measurement of potholes and base failures.	No instances of potholes or base failures.
1.5	Curbs	Maintain or exceed the condition as identified in the BACR.	7 days		N/A	Visual inspection	Maintain or exceed condition as identified in the BACR.
1.6	Hard Capped Surface	Free of Defects and removal of deleterious material.	24 hrs		6 mo.	Visual inspection	No instances of material tracking onto pavements or presence of weeds/grass.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
2. DRAINAGE SYSTEMS							
2.1	Storm Sewer Systems (conduit, catch basins, inlets, manholes, outfalls), including adjacent drainage conduit extending from an existing drainage structure to the next downstream existing drainage structure	Each element of the drainage system is maintained to ensure it functions correctly from the point at which water drains to the outfall or drainage way.	2 hr		N/A	Compliance with the CDOT Level of Service Manual (Drainage Inlets and Structures). Measurement of clogging of pipes, conduits, catch basins, inlets, or outfalls.	Maintain or exceed condition as identified in the BACR.
2.2	Open Water Carriers (standard roadside ditches, median ditches, relocated channels, channel linings)	Each Element of the drainage system is maintained to ensure it functions correctly.	24 hrs		N/A.	Visual inspection and all elements rated in accordance with the CDOT Level of Service Manual (Drainage Ditches).	Maintain or exceed condition as identified in the BACR. No instances of: Undermining, undercutting, erosion, or obstructions impeding the flow of water

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
2.3	Pavement Drainage (trench drains, slotted drains, gutters, catch basins, inlets, outlets)	Each element of the drainage system is maintained to ensure that it functions correctly.	2 hrs		N/A	Measurement of standing water within the I-70 Mainline and on paved surfaces.	Maintain or exceed condition as identified in the BACR.
2.4	Culverts	Culvert is maintained and functions correctly, joints remain soil tight and erosion controlled.	2 hrs		N/A.	Culvert condition and functionality.	Culvert functioning as designed.
2.5	End Treatments (Headwalls, precast reinforced concrete outlets, concrete apron)	Elements are maintained and function correctly.	24 hrs		N/A	Visual inspection of erosion, undercutting, scour, cracked, spalled, or broken concrete.	Maintain or exceed condition as identified in the BACR.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
2.6	Storm water systems	Storm water systems installed as permanent features maintained, functioning correctly, and operating as designed.	24 hrs		N/A	<p>Compliance with regulations and standards and in accordance with CDOT's Erosion Control and Storm Water Quality Guide (ECSQG).</p> <p>Manufactured Systems: Compliance with manufacturers manuals</p> <p>Vegetated Biofilters/Filter Strips: Inspection of slopes and ditch bottom; vegetation management; debris and litter management.</p> <p>Detention Ponds: Inspected and checked for compliance with management plan.</p> <p>Bioretention Cell, Infiltration: Inspected for excessive ponding; overgrown vegetation, litter/debris; erosion and deposition; and outlet structure clogging</p> <p>Infiltration Basin/Trenches: Inspected for debris, overgrown vegetation, level of sedimentation; and condition of observation wells.</p> <p>Constructed Wetlands: Effectiveness of vegetation management; absence of erosion, clogging; litter/debris and sediment.</p>	<p>Operate as designed and no instances of non-compliance with regulations and standards and ECSQG.</p> <p>Operate as designed and routine clean-out, removed material sampled and tested in line with manufacturers manuals</p> <p>Filters performing as designed.</p> <p>All systems operate as designed and no instances of excessive ponding, threats to structural soundness of embankments and outlet structures; excessive erosion and sediment, seepage from embankments, overgrown vegetation, outlet clogging or litter/debris.</p>

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
2.7	Discharge systems	Surface water discharge systems perform their proper function and discharge to groundwater and waterways complies with the relevant regulations and permits.	24 hrs		N/A	Compliance with regulations and in accordance with CDOT's Erosion Control and Storm Water Quality Guide.	No instances of non-compliance.
3. STRUCTURES							
3.1	Structures having an opening measured along the center of the roadway of more than 20 feet between under copings of abutments or springlines of arches or extreme ends of openings or multiple boxes.	Substructures and superstructures are free of: <ul style="list-style-type: none"> • undesirable vegetation • debris and bird droppings • blocked drains, weep pipes manholes and chambers • blocked drainage holes in structural components • Defects in joint sealants • Defects in pedestrian protection measure • scour damage • corrosion of rebar • paint system failures • impact damage Bridge structures maintain a minimum vertical clearance of 16.5 feet over traveled lanes. Maintain structures to specified condition rating.	24hrs		6 months	Inspection and assessment in accordance with the requirements of federal National Bridge Inspection Standards (NBIS) of the Code of Federal Regulations, 23 Highways – Part 650, the current version of the CDOT Pontis Bridge Inspection Coding Guide and AASHTO Manual for Bridge Evaluation, the FHWA Bridge Inspector Reference Manual, AASHTO Manual for Bridge Element Inspection, and Recording and Coding Guide for the Structural Inventory and Appraisal of the Nation's Bridges.	Records as required in the current version of the CDOT Pontis Bridge Inspection Coding Guide and AASHTO Manual for Bridge Evaluation. No occurrence of NBI and Pontis condition rating below the BACR condition.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
3.2	Structure component	i) Expansion joints are free of: • dirt debris and vegetation • Defects in drainage systems • loose nuts and bolts • Defects in gaskets • leaking ii) The deck drainage system is free of all and operates as intended. iii) Barriers are free of: • loose nuts or bolts • blockages of hollow section drain holes • vegetation • accident damage iv) Bearings and bearing shelves are clean.	24 hrs		6 months	Inspection and assessment in accordance with the requirements of federal National Bridge Inspection Standards (NBIS) of the Code of Federal Regulations, 23 Highways – Part 650, the current version of the CDOT Pontis Bridge Inspection Coding Guide and AASHTO Manual for Bridge Evaluation, the FHWA Bridge Inspector Reference Manual, AASHTO Manual for Bridge Element Inspection, and Recording and Coding Guide for the Structural Inventory and Appraisal of the Nation's Bridges.	Records as required in the current version of the CDOT Pontis Bridge Inspection Coding Guide and AASHTO Manual for Bridge Evaluation. No occurrences of NBI and Pontis condition rating below the BACR condition.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
3.2 (cont.)	Structure component (continued)	<p>v) Sliding and roller surfaces are clean and greased to ensure satisfactory performance.</p> <p>Additional advice contained in bearing manufacturers' instructions, in the Current CDOT M&S Standard Plans, Standard Specification for Road and Bridge Construction is followed.</p> <p>Special finishes are clean and perform to the appropriate standards.</p> <p>vi) All non-structural items such as hoists and electrical fixings, operate correctly, are clean and lubricated as appropriate, in accordance with the manufacturer's recommendations and certification of lifting devices are maintained.</p> <p>vii) Maintain structures to specified condition rating.</p>					Maintain or exceed condition as identified in the BACR.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
3.3	Structures (general) – including existing viaduct.	Safe operation of structures, maintained to prevent safety issues arising	1 hrs		12 months	Inspection of surfaces adjacent to and above the Roadway, and all structural components.	No instances of delaminated concrete above the Roadway. Maintain or exceed condition as identified in the BACR.
3.4	Non-bridge class culverts	Non-bridge-class culverts are free of: <ul style="list-style-type: none"> • vegetation and debris and silt • Defects in sealant to movement joints • scour damage 	24hrs		6 months	Inspection and assessment in accordance with the requirements of federal National Bridge Inspection Standards (NBIS) of the Code of Federal Regulations, 23 Highways – Part 650, the current version of the CDOT Pontis Bridge Inspection Coding Guide and AASHTO Manual for Bridge Evaluation, the FHWA Bridge Inspector Reference Manual, AASHTO Manual for Bridge Element Inspection, and Recording and Coding Guide for the Structural Inventory and Appraisal of the Nation's Bridges.	Records as required in the current version of the CDOT Pontis Bridge Inspection Coding Guide and AASHTO Manual for Bridge Evaluation. No occurrences of NBI and Pontis condition rating below the BACR condition. Vegetation, debris and silt levels to be at or lower than that identified in the BACR. None with Defects in sealant and movement joints. None with scour damage.
3.5	Retaining walls	Maintain retaining walls free of vertical, lateral or rotational movement with no material Defects compromising the intended performance.	24hrs		6 months	Physical Measurement and Inspections.	Maintain or exceed condition as identified in the BACR.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
3.6	Sign structures	Sign gantries and foundations are structurally sound and free of: loose nuts and bolts, Defects in surface protection systems	24hrs		6 months	Inspection and assessment in accordance with the requirements of CDOT Recording and Coding Guide for the Inventory and Inspection of Colorado's Overhead Signs, Signals and High Mast Lights and CDOT M&S Standard Plans.	Maintain or exceed all Pontis condition states as identified in the BACR. None with loose assemblies. None with Defects in surface protection.
3.7	Load ratings	All structures maintain the design load capacity	24hrs		6 months	Load rating calculations in accordance with the AASHTO Manual for Bridge Evaluation, the current version of the CDOT Pontis Bridge Inspection Coding, and CDOT Bridge Rating Manual. Load restriction requirements as per AASHTO Manual for Bridge Evaluation, the current version of the CDOT Pontis Bridge Inspection Coding, and CDOT Bridge Rating Manual.	Comply with load restrictions on new structures for Colorado legal loads (including legally permitted vehicles)

			Cat 1 Immediate Action		Cat. 2 Permanent Repair	MEASUREMENT CRITERIA*	TARGET*
4 ROADWAY MARKING							
4.1	Pavement markings – General (temporary and permanent)	Pavement markings are: <ul style="list-style-type: none"> • clean and visible during the day and at night • whole and complete and of the correct color, type, width and length • correctly placed to meet the MUTCD and CDOT M&S Standard Plans. Non-applicable pavement markings are removed.	24 hrs		1 mo.	Compliance with regulations Using a calibrated retro-reflectometer, in conformance with ASTM E 1710 or AASHTO TP111 procedures, collect the following readings for each day striping work has been conducted or when reading collected: <ul style="list-style-type: none"> • within a mile test section, collect 10 readings for each longitudinal line stripe, at no less than 40 foot intervals • where striping is less than 500 feet in length, collect reading at 50 foot intervals • readings collected shall be averaged. Excess beads to be removed prior to reading Bridge decks longitudinal lines, words and symbols shall be measured by presence and reflectivity on pavement surface Removal of non-applicable pavement markings or conflicting pavement markings	100% in accordance with the Manual on Uniform Traffic Control Devices (MUTCD) and the CDOT M&S Standard Plans. Retro-reflectivity reading in test section (mcd/m ² /lux): Longitudinal Lines – White 150 Longitudinal Lines – Yellow 100 Measured minimum presence: Longitudinal Lines 80% Words and Symbols 85% Visual inspection

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
4.2	Reflective markers	Reflective pavement markers (RPM's), are: <ul style="list-style-type: none"> • clean and clearly visible • of the correct color and type • reflective or retroreflective as required in the MUTCD and CDOT M&S Standards • correctly located, aligned and at the correct level • are firmly fixed • are installed in a way that will ensure that they remain at the correct level. 	24 hrs		6 mo.	Number of pavement markers in any 10 consecutive markers that are ineffective. (Ineffective includes missing, nonreflective, broken, damaged, settled or sunk) Number of pavement marker casting securely fastened (Category 1 Defect) Uniformity; percentage (replacement RPM's having equivalent physical and performance characteristics to adjacent markers.)	Maintain or exceed condition as identified in the BACR.
4.3	Delineators & Markers	Object markers and delineators are: <ul style="list-style-type: none"> • clean and visible • of the correct color and type • legible and reflective • straight and vertical • placed per MUTCD and CDOT M&S Standards 	2 hrs		28 days	Number of object markers or delineators defective or missing Sign sheeting material for object markers and delineator shall meet manufacturers minimum reflective requirements	Maintain or exceed condition as identified in the BACR. 100%

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
5 GUARD RAILS, BARRIERS, IMPACT ATTENUATORS							
5.1	Guard rails and barrier walls	All guardrails, traffic barriers and other concrete barriers are maintained free of Defects. They are placed per MUTCD, CDOT's M&S Standards and CDOT's Roadway Design Manual and FHWA Roadside Design Guide.	2 hrs		1 mo.	Length free from Defects (loose nuts/bolts) Surface condition Guardrail installed and maintained at correct height and distance from roadway and obstacle in accordance with relevant standards. Posts Spacer Blocks	All nuts, bolts and connections to be properly tightened 90% of surfaces to be free from Defects (spalling of concrete, failure of corrosion protection) within a 12.5 foot section. No Defect greater than 1 foot square or 1 cubic foot of missing material within a 12.5 foot section. 100% within 3 inches vertical of correct system height. Vegetation maintained and mowed at least 5 feet behind guardrail. No missing posts. No post shall have section loss greater than 25%, No two adjacent post shall have a combined section loss greater than 25%. No missing spacer or rotated blocks. No section loss greater than 10%.
5.2	Impact attenuators, anchor assembly, and end assembly	All impact attenuators, anchor assemblies, and end assemblies are appropriately placed and correctly installed per MUTCD, CDOT's M&S Standards and maintained	2 hrs		1 mo.	Percentage of impact attenuators, anchor assemblies, and end assemblies correctly placed and installed and free of damage Integrity of the system	100% 100% cell replacement (unit replacement) following impact.

7 Traffic Signals							
7.1	Traffic Signals - General	i) Traffic Signals and their associated equipment are: .Be clean and visible, heads and buttons correctly aligned and operational .All traffic signal elements including cabinets, foundations, signing, vehicle detection (cameras or loops), electrical power and boxes: are aligned correctly, structurally sound, full operational and free from damage caused by accident or vandalism	1 hrs		6 mo.	Review of Maintenance records a) General condition Visual inspection b) Damage Visual inspection c) Standards Adhere to MUTCD and CCD Standards	Maintained in accordance with Good Industry Practice Signals are clean and visible 100% of the time All signals are in compliance with MUTCD and CCD Standards. All signals are fully operational 100% of the time. Signals and signal elements are undamaged 100% of the time Electrical power 100% of the time Signal interconnect is fully functionally for permanent signals.
7.2	Traffic Signals Operations	Compliance with Accepted Temporary TCP	1 hrs		1 mo.	Visual Inspection	100% of the time per Section 2.10 of Schedule 10.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
7.3	Traffic Signals – Contingency	Contingency plans are in place to rectify Category 1 Defects not immediately repairable to assure alternative traffic control is provided during a period of failure.	NA		1 mo.	a) Contingency Plan Record Reviews	Full contingency plans are in place 100% of the time.
8 Lighting							
8.1	Existing Roadway Lighting – General	All lighting is free from Defects and provides acceptable uniform lighting quality. Lanterns are clean and correctly positioned.	24hr		NA	Visual inspection and reporting log listing the following as a minimum: 1. Issue (e.g. inefficiencies, malfunction, cleanliness, etc.) 2. date and time of issue occurrence 3. date and time of report 4. reporting person 5. date and time of issue resolution	Written notification of outdoor lightning outage or repair requirement to Xcel Energy and Department, and reporting on a log 100% of time.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
8.2	Existing Lighting Structures	Columns are upright correctly founded and structurally sound.	24 hrs		NA	Visual inspection and reporting log as per Ref.8.1 in this <u>Appendix A-1</u> .	Written notification of outdoor lightning repair requirement to Xcel Energy and Department, and reporting on a log 100% of time. Structure is plumb.
8.3	Existing Lighting Fixtures	All luminaries functioning on each pole	24 hrs		NA	Visual inspection and reporting log as per Ref. 8.1 in this <u>Appendix A-1</u> .	Written notification of outdoor lightning repair requirement to Xcel Energy and Department, and reporting on a log 100% of time.
8.4	Temporary Lighting-General, including pedestrian lighting	All lighting is free from Defects and provides acceptable uniform lighting quality. Lanterns are clean and correctly positioned.	24 hrs		14 days	Visual inspection and reporting log as per Ref.8.1 in this <u>Appendix A-1</u> .	Level as per required in <u>Section 2</u> of <u>Schedule 10</u> .

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
8.5	Temporary Lighting Structures, including pedestrian lighting	Columns are upright correctly founded and structurally sound	24 hrs		14 days	Visual inspection and reporting log as per Ref.8.1 in this <u>Appendix A-1</u> . Structure is plumb.	Columns are plumb, bases are not damaged and no section loss. No hazard with wiring and loose assemblies to public.
8.6	Temporary Lighting Fixtures, including pedestrian lighting	All luminaries functioning on each pole	24 hrs		14 days	Visual inspection and reporting log as per Ref. 8.1 in this <u>Appendix A-1</u> .	Lighting levels per <u>Section 2</u> of <u>Schedule 10</u> . No instances of three consecutive lamps not working per circuit. No instances of two or more lamps not working per high mast pole.
9 FENCES AND WALLS							
9.1	Fences and Walls - Design and Location	Fences and walls act as designed and serve the purpose for which they were intended	1 hr		6 mo.	Visual Inspection	Maintain or exceed condition as identified in the BACR.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
9.2	Fences and Walls - Construction (includes existing)	Integrity and structural condition of the fence is maintained	1 hr		6 mo.	Structural assessment if visual inspection warrants.	Maintain or exceed condition as identified in the BACR, and ensuring there are no structural safety issues.
10	ROADSIDE						

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
10.1	Vegetated Areas - Except landscaped areas – General (for areas that are not undergoing active construction)	Vegetation is maintained so that: <ul style="list-style-type: none"> i. Height of grass and weeds is kept within the limits described for urban and rural areas. Mowing begins before vegetation reaches the maximum height. ii. Spot mowing at intersections, ramps or other areas maintains visibility of appurtenances and sight distance. iii. Grass or vegetation does not encroach into or on paved shoulders, main lanes, sidewalks, islands, riprap, traffic barrier or curbs. iv. A herbicide program is undertaken to control noxious weeds in accordance with the EO D 006 99. 	48 hrs		28 days	Urban areas Physical measurement of height of grass and weeds Encroachment Visual inspection of instances of encroachment of vegetation Wildflowers Visual Inspection with audit of process Sight lines Visual inspection	Individual measurement areas to have 80% of height of grass and weeds between 8” to 10”, and not shorter than 6” Occurrences of vegetation encroachment shall not exceed the condition identified in the BACR. Maintain or exceed the condition identified in the BACR. No instances of impairment of sight lines or sight distance to signs, including control of weeds in pavement and barrier. No blocked view of roadside reflectors

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
		v. Development and implementation of noxious weed management program to control noxious weeds and to eliminate grass in pavement or concrete. Avoid mowing zone 2 and 3 between April 15 th and August 15, as required in Manual of Maintenance Procedures.				Noxious weeds Visual inspection and/or notification	Not more than 15% (aggregate) of a 1 mile section of roadway contains noxious weeds. Not more than 15% (aggregate) of a 1/10 mile section of ramp contains noxious weeds.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
10.2	Landscaped Areas (for areas that are not undergoing active construction)	i. All landscaped areas are maintained to their originally constructed condition. Landscaped areas are as designated in the plans. ii. Mowing, litter pickup, irrigation system maintenance and operation, plant maintenance, pruning, insect, disease and pest control, fertilization, mulching, bed maintenance, watering is undertaken as per MMP. iii. The height of grass and weeds is kept between 8" to 10", and not shorter than 6" Mowing begins before vegetation reaches a hazardous condition, such as sight distance, blocking reflectors, hiding animals or causing drifting snow.	48 hrs		28 days	Visual inspection Roadside appearance is excellent, characterized by well-tended landscaping and vegetation.	The percent of landscaping area meeting the General Requirement is 85%.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
10.2 (cont.)	Landscaped Areas	iv. Damaged or dead vegetation is replaced.					
10.3	Fire hazards	Fire hazards are controlled	24 hrs		N/A	Instances of dry brush or vegetation forming a fire hazard are removed.	No instances of plant material that is a fire hazard.
10.4	Trees, brush and ornamentals	i) Trees, brush and ornamentals on the right of way, except in established no mow areas, are trimmed in accordance with CDOT standards. ii) Trees, brush and ornamentals are trimmed to insure they do not interfere with vehicles or sight distance, or inhibit the visibility of signs or shading on the road. iii) Dead trees, brush, ornamentals and branches are removed. Potentially dangerous trees or limbs are removed. iv) All undesirable and unplanned trees and	24 hrs		28 days	Visual inspection and/or notification	Maintain or exceed the condition identified in the BACR.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
		vegetation are removed. Diseased trees or limbs are treated or removed by licensed personnel.					
10.5	Wetlands	Wetlands are properly managed, and in accordance with any applicable permit requirements.	48 hrs		N/A	In accordance with applicable permit requirements	Maintain or exceed the condition identified in the BACR.
10.6	Water Quality Ponds	Maintenance of all vegetation within the pond area	24 hrs		28 days	Visual inspection of ponds	Maintained as required per the design
11 EARTHWORKS & EMBANKMENTS							
11.1	Slope – Stability	All structural or natural failures of the embankment, cut slopes, and slope and ditch paving on the Site are repaired.	1 hr		6 mo.	Visual inspection by geotechnical specialist and further tests as recommended by the specialist.	Maintain or exceed the condition identified in the BACR.
11.2	Slopes - General	Slopes are maintained in general conformance to the original graded cross-sections.	24 hrs		6 mo.	Areas where replacement of landscaping materials, reseeding and re-vegetation for erosion control purposes and removal and disposal of all eroded materials from the roadway and shoulders are required.	Maintain or exceed the condition identified in the BACR.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
12 GRAFFITI							
12.1	Graffiti	Graffiti removal on all Elements including but not limited to: <ul style="list-style-type: none"> • Signs, walls, barriers, guardrail, lighting, traffic signals, structural elements, fence, water quality and drainage features. 	24 hrs		28 days	Removed in a manner and using materials that restore the surface to a like appearance similar to adjoining surfaces.	Inspection records showing 100% compliance
12.2	Offensive Graffiti	Offensive graffiti (i.e. graffiti that is insulting or causes offense to the public) is removed	6 hr		N/A	Removed in a manner and using materials that restore the surface to a like appearance similar to adjoining surfaces. All offensive graffiti is considered a Category 1 Defect.	Inspection records showing 100% compliance
13 INCIDENT RESPONSE							
13.1	General	Respond to Incidents in accordance with the Incident Response Plan.	1 hr		N/A	Incident Response Plan. No complaints from Emergency Services.	Response times met for 98% of Incidents measured on a 1 year rolling basis.
13.2	Spillage of Hazardous Materials	For any hazardous materials spills, comply with the requirements of Schedule 17.	1 hr		1 day	Incident Response Plan details the process and procedures in place and followed.	Inspection records showing compliance.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
13.3	Elements damaged as a result of Incident - Structural Assessment	Evaluate damage to structures and liaise with emergency services to ensure safe working in clearing the Incident.	1 hr		1 day	Inspections and surveys of relevant Elements as required. (Note. CDOT staff bridge office shall be notified immediately to complete an inspection.)	Inspection records showing 100% compliance
13.4	Elements damaged as a result of Incident - Temporary and permanent remedy	Propose and implement temporary measures or permanent repairs to Defects arising from the Incident. Ensure the structural safety of any structures affected by the Incident.	24 hrs		6 mo.	Review and inspection of the relevant Elements.	Inspection records showing 100% compliance.
14	MAINTENANCE YARD³ (The requirements set out in this Section 14 shall apply with effect from the Snow and Ice Control Commencement Date).						
14.1	Developer Identification Signs	Signs installed at the entrance(s)/exit(s) to/from the Maintenance Yard.	7 days		12 mo.	Signs installed depicting the name and contact information for Developer.	Signs functioning as designed.
14.2	Environmental contamination	No increase in contamination.	2 hr		6 mo.	Environmental site assessment or other inspections, as necessary.	No increase in contamination during the O&M Period During Construction.

³ Section 14 only to be included if Preferred Proposer elects to use the Maintenance Yard.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
14.3	Maintenance of grounds and buildings	Kept in a neat and tidy order. Kept structurally safe.	24 hr		6 mo.	Good housekeeping practice used to maintain buildings and land in a well maintained and neat condition, free from environmental damage. Regular inspection performed.	100% compliance
15 SNOW AND ICE REMOVAL							
15.1	Response Time, material application vehicle	The manning and loading of material application vehicles for a Precipitation Event	½ hr		N/A	All spreading vehicles on any route ready to load anti-icing or de-icing materials within ½ hour as measured by winter operation records and AVL system monitoring.	The required maximum time to complete the manning and loading of all material application vehicles for an event is 0.5 hours from the time precipitation has started.
15.2	Response Time, plowing vehicle	The manning of a snowplow vehicle for a Precipitation Event	½ hr		N/A	All snowplow vehicles on any route have left the yard and ready to begin work within ½ hour as measured by winter operation records and AVL system monitoring.	The required maximum time to complete the manning of all snowplow vehicles for an event is 0.5 hours from the time precipitation has started to the time the unit has left its yard to begin work.
15.3	Plowing and material application	Continuous plowing and material application	½ hr		N/A	All units operating as measured by winter operation records and AVL monitoring systems.	Once operations have begun, all units as identified in the Snow and Ice Control Service Plan shall operate continuously on all routes so that bare and wet pavement is maintained.
15.4	Circuit time	Complete one entire route within 1 hour	1 hr		N/A	AVL systems monitoring and/or winter operation record.	Circuit time shall be 1 hour from the time a winter unit begins its plowing and/or material application route until the time it is complete.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
15.5	All lanes and ramps (including paved shoulders)	Bare and wet pavement during the Precipitation Event	1 hr 24 hr (paved shoulder)		N/A	Visual inspection and AVL system monitoring	Maintain Bare and Wet pavement during the Precipitation Event, or immediately at the End of Precipitation Event (meaning the time when snow or freezing rain stops falling and accumulating on any portion of a Route, when drifting ceases to cause accumulation on the Pavement or when frost is no longer creating a slippery condition) if all equipment listed in the most recently Accepted Snow and Ice Services Plan are continuously deployed.
15.6	Hazards	Address any snow and ice hazard immediately upon detection or notification	1 hr		N/A	Visual inspection, AVL system monitoring, or notification	100% compliance
15.7	Isolated slippery conditions	Address isolated slippery conditions.	1 hr		N/A	Visual inspection, AVL system monitoring, or notification	All isolated slippery conditions as identified by Developer, or notified by Emergency Services, the Department, and/or User are addressed.
15.8	Winter Snow and Ice Materials storage	Winter snow and Ice materials stored in tanks or covered buildings at all times.	½ hr		N/A	Visual inspection.	No instances of uncovered storage of winter de-icing/anti-icing materials or winter maintenance liquids.
15.9	Reporting requirements	All reporting requirements identified in <u>Schedule 11</u> are accurate, complete, and timely 100% of the time.	1 day		N/A	Audit records and AVL system monitoring.	100% accuracy.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
15.10	Automated Vehicle Locator system	All identified vehicles equipped with on board AVL at all times, as required in <u>Section 12</u> of this <u>Schedule 11</u>	24 hrs		1 mo.	Random audit, AVL system monitoring.	95% of all AVL units operational 100% of the time. No loss of data due to network service loss.
15.11	Material Spreader calibration	Spreader controller (including winter liquids) calibration is operational.	24 hrs		N/A	Random audit, AVL system monitoring	95% units operational 100% of the time
15.12	Winter Drainage	Melting snow and ice causing flooding.	1 hr		6 hrs	Visual inspection, AVL system monitoring	No flooding on roadway caused by snow and/or ice impeding drainage through or to drains, culverts and ditches.
16. COURTESY PATROL							
16.1	Courtesy Patrol	Respond to any calls on the General Purpose Lanes or Tolloed Express Lanes 15min after being dispatched.	1/4hr		N/A	Measured by patrol records, and AVL system.	100% of the time

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ²	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
17. SWEEPING AND CLEANING							
17.1	Sweeping	i) Keep all channels, lanes, hard shoulders, gore areas, ramps, intersections, islands and frontage roads, and curb and gutter swept clean. ii) Clear and remove debris from all paved areas other than as required in <u>Section 1.1</u> of this <u>Appendix A-1</u> . iii) Remove all sweepings without stockpiling in the right of way and dispose of at approved site.	1 hrs		28 days	Visual Inspection of buildup dirt, ice, rock, debris (from accidents and/or otherwise).	Inspection records showing 100% compliance.
17.2	Litter	i) Keep the Site in a neat condition, remove litter regularly ii) Pick up large litter items before mowing operations. iii) Dispose of all litter and debris collected at an approved solid waste site. iv) Remove dead animals from the Site.	24 hrs		28 days	Visual Inspection of pieces of litter.	Inspection records showing 100% compliance

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS

1.2 (cont.)	Pavement - All roadways, including ramps, detours, and shoulders (mainline including the bridge deck, covers, gratings, frames, expansion joints and boxes)					<ul style="list-style-type: none"> Scaling < 70 sq ft/tenth mile Spalling < 2 sq ft/tenth mile No slabs broken in more than 3 pieces No more than 2 broken slabs / tenth mile 	
					<p>d) Edge drop-offs Physical measurement of edge drop- off level to adjacent surface,</p> <p>e) Edge Break Physical measurement of pavement edge break.</p>	<p>Maintained roadway (including shoulder) free from instances greater than 2"</p> <p>No more than 50 cumulative feet of edge breaking greater than 4" wide.</p>	
		Skid resistance shall be measured on 4 year cycle or after a resurfacing.	7 days		6 mo.	<p>Skid resistance</p> <p>Skid resistance measured in accordance with ASTM E 274 Standard Test Method for Skid Resistance Testing of Paved Surfaces at 40 MPH using a full scale smooth tire meeting the requirements of ASTM E 524.</p>	Average test value 25 or higher within any 0.5 mile section of mainline lanes, shoulders and ramps.
	Posting of slippery road signs on sections exceeding skid resistance threshold.	2 hrs		6 mo.	Signs posted within timescale measured from test date.	100% of the time	

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
		Perform site investigation and implement resultant required corrective action where skid resistance exceeds thresholds.	30 days		6 mo.	Delivery of site investigation report and implementation of resultant corrective actions within timescale measured from test date.	100% of the time
		Removal of deleterious material and repair of damaged pavement	24 hrs		12 mo.	Oil, antifreeze, gasoline or other liquids spilled from vehicles onto traffic lanes is removed from the roadway	Incident logs and maintenance records demonstrate scheduled inspections and clean up times.
		Noise measurement is carried out when problem is suspected or complaints warrant investigation.	N/A		12 mo.	Pavement noise as measured by on board sound intensity and speed requirements in accordance with AASHTO TP 76 (measurements taken on a contiguous 1/10th mile basis)	Mainline and system ramps: < 105db
1.3	Crossovers, access roads and other paved areas	Crossovers, access roads and other paved areas are free of Defects.	4 hrs		12 mo.	Measurement of potholes and base failures	No instances of potholes or base failures
1.4	Curbs	Curbs are free from Defects.	24 hrs		12 mo.	Curb condition or length of alignment.	95% of continuous length of curb free from Defects and separation < ¼” from roadway surface. Curbs no more than 1” out of alignment over 10”. No exposed rebar.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
1.5	Hard Capped Surface	Free of Defects and removal of deleterious material	24 hrs		6 mo.	Visual inspection	No instances of material tracking onto pavements or presence of weeds/grass.
2. DRAINAGE SYSTEMS							

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
2.1	Storm Sewer Systems (conduit, grates, catch basins, inlets, manholes, outfalls), including adjacent drainage conduit extending from an existing drainage structure to the next downstream existing drainage structure.	Each element of the drainage system is maintained to ensure it functions correctly from the point at which water drains to the outfall or drainage way,	1 hr		6 mo.	<p>All storm sewers, pipes and conduits, regardless of size or location, inspected and rated in accordance with the CDOT Level of Service Manual (Drainage Inlets and Structures)</p> <p>Measurement of clogging and condition of pipes, conduits, catch basins, grates, inlets, or outfalls.</p> <p>Measurement of discontinuities and settlement between adjacent conduit segments or within conduit segment.</p> <p>Measurement of cracking, spalling in concrete pipes, catch basins, inlets, culverts</p> <p>Measurement of joints in drainage system.</p>	<p>No instance of a condition rating for any inspected ratable item rated as Level of Service "B" or worse.</p> <p>No instances of:</p> <ul style="list-style-type: none"> • Clogging or blockage of pipes, conduits, grates, catch basins or inlets in pavement or adjacent to pavement, or outlet/outfalls greater than 10% of hydraulic capacity. • Clogging or blockage of catch basins or inlets in ditches greater than 25% of hydraulic capacity. • Damaged, insecure, rusted, or missing grates, end sections, metal structure or hardware <p>No offsets greater than 1.5inches or ponding greater than 3inches</p> <p>No cracks open greater than 1/8". No spalling, or scaling deeper than 3/4", or exposed reinforcement.</p> <p>No instances of separated joints or missing joint material or joints not soil tight.</p>

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
2.2	Open Water Carriers (standard roadside ditches, median ditches, relocated channels, channel linings)	Each Element of the drainage system is maintained to ensure it functions correctly.	24 hrs		12 mo.	Visual inspection and all elements rated in accordance with the CDOT Level of Service Manual (Drainage Ditches). Ditches/channel length out of alignment, and damages or missing sections in ditches/channel lining.	No instance of a condition rating for any inspected ratable item rated as "B" or worse. No instances of: Undermining, undercutting, erosion, or obstructions impeding the flow of water No ditches/channel length out of alignment, and no damaged or missing sections in ditches/channel lining.
2.3	Pavement Drainage (trench drains, slotted drains, gutters, catch basins, inlets, outlets)	Each element of the drainage system is maintained to ensure it functions correctly.	1 hrs		6 mo.	Measurement of standing water within I-70 Mainline, paved shoulder, or other paved surfaces.	No instances of standing water in any I-70 Mainline and paved surfaces, and no greater than 1" in depth elsewhere
2.4	Culverts	Culvert is maintained and functions correctly, joints remain soil tight and erosion controlled.	1 hrs		6 mo.	Culvert condition and functionality.	Culvert functioning as designed.
2.5	End Treatments (Headwalls, reinforced concrete outlets, concrete apron)	Elements are maintained to ensure they function correctly.	24 hours		6 mo.	Visual inspection of erosion, undercutting, scour, cracked, spalled, or broken concrete.	No instances of undercutting, scour, cracked, spalled, exposed rebar, or broken concrete.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
2.6	Storm Water systems	Storm Water Systems installed as permanent features maintained, functioning correctly, and operating as designed.	24 hrs		6 mo.	<p>Compliance with regulations and standards and in accordance with CDOT's Erosion Control and Storm Water Quality Guide (ECSCG).</p> <p>Manufactured Systems: Compliance with manufacturers manuals</p> <p>Vegetated Biofilters/Filter Strips: Inspection of slopes and ditch bottom; vegetation management; debris and litter management.</p> <p>Detention Ponds: Inspected and checked for compliance with management plan.</p> <p>Bioretention Cell, Infiltration: Inspected for excessive ponding; overgrown vegetation, litter/debris; erosion and deposition; and outlet structure clogging</p> <p>Infiltration Basin/Trenches: Inspected for debris, overgrown vegetation, level of sedimentation; and condition of observation wells;</p> <p>Constructed Wetlands: Effectiveness of vegetation management; absence of erosion, clogging; litter/debris</p>	<p>Operate as designed and no instances of non-compliance with regulations and standards and ECSQG.</p> <p>Operate as designed and routine clean-out, removed material sampled and tested in line with manufacturers manuals</p> <p>Filters performing as designed.</p> <p>All systems operate as designed and no instances of excessive ponding, threats to structural soundness of embankments and outlet structures; excessive erosion and sediment, seepage from embankments, overgrown vegetation, outlet clogging or litter/debris.</p>

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
2.7	Discharge systems	Surface water discharge systems perform their proper function and discharge to groundwater and waterways complies with the relevant regulations and permits.	24 hrs		6 mo.	Compliance with regulations and in accordance with CDOT's Erosion Control and Storm Water Quality Guide.	No instances of non-compliance.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
3. STRUCTURES							
3.1	Structures having an opening measured along the center of the roadway of more than 20 feet between under copings of abutments or springlines of arches or extreme ends of openings or multiple boxes. (Includes the Cover's structural components)	Substructures and superstructures are free of: <ul style="list-style-type: none"> • undesirable vegetation • debris and bird droppings • blocked drains, weep pipes manholes and chambers • blocked drainage holes in structural components • Defects in joint sealants • Defects in pedestrian protection measure • scour damage • corrosion of rebar • paint system failures • impact damage Bridge structures maintain a minimum vertical clearance of 16.5 feet over traveled lanes. Maintain structures to specified condition rating.	24hrs		6 months	Inspection and assessment in accordance with the requirements of federal National Bridge Inspection Standards (NBIS) of the Code of Federal Regulations, 23 Highways – Part 650, the current version of the CDOT Pontis Bridge Inspection Coding Guide and AASHTO Manual for Bridge Evaluation of Bridges, the FHWA Bridge Inspector Reference Manual, AASHTO Manual for Bridge Element Inspection, and Recording and Coding Guide for the Structural Inventory and Appraisal of the Nation's Bridges.	Records as required in the current version of the CDOT Pontis Bridge Inspection Coding Guide and AASHTO Manual for Bridge Evaluation. No occurrence of NBI condition rating below seven for any new and widened deck, superstructure or substructure. No occurrence of NBI condition rating below six for any existing or rehabilitated deck, superstructure or substructure, prior to reconstruction of a new structure. All Pontis condition states to be one or two for all structure components.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
3.2	Structure component (Includes the Cover's structural components)	i) Expansion joints are free of: <ul style="list-style-type: none"> • dirt debris and vegetation • Defects in drainage systems • loose nuts and bolts • Defects in gaskets • leaking ii) The deck drainage system is free of all and operates as intended. iii) Barriers are free of: <ul style="list-style-type: none"> • loose nuts or bolts • blockages of hollow section drain holes • vegetation • accident damage iv) Bearings and bearing shelves are clean. v) Maintain settlement within specified requirement.	24 hrs		6 months	Inspection and assessment in accordance with the requirements of federal National Bridge Inspection Standards (NBIS) of the Code of Federal Regulations, 23 Highways – Part 650, the current version of the CDOT Pontis Bridge Inspection Coding Guide and AASHTO Manual for Condition Evaluation of Bridges, the FHWA Bridge Inspector Reference Manual, AASHTO Manual for Bridge Element Inspection, and Recording and Coding Guide for the Structural Inventory and Appraisal of the Nation's Bridges.	Records as required in the current version of the CDOT Pontis Bridge Inspection Coding Guide and AASHTO Manual for Bridge Evaluation. No occurrences of NBI condition rating below seven for any new and widened deck, superstructure or substructure No occurrence of NBI condition rating below six for any existing or rehabilitated deck, superstructure or substructure, prior to reconstruction of a new structure. All Pontis condition states to be one or two for all structure components. Differential settlement of bridge approach slabs: Less than 1-inch total settlement and less than 0.5 inch differential between end of approach slabs.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
3.2 (cont.)	Structure component (continued)	<p>vi) Sliding and roller surfaces are clean and greased to ensure satisfactory performance.</p> <p>Additional advice contained in bearing manufacturers' instructions, in the Current CDOT M&S Standard Plans, Standard Specification for Road and Bridge Construction is followed.</p> <p>Special finishes are clean and perform to the appropriate standards.</p> <p>vii) All non-structural items such as hoists and electrical fixings, operate correctly, are clean and lubricated as appropriate, in accordance with the manufacturer's recommendations and certification of lifting devices are maintained.</p> <p>viii) Maintain structures to specified condition rating.</p>					100% compliance for Elements without Pontis or NBI condition rating targets.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
3.3	Structures – General (Includes the Cover’s structural components)	Safe operation of structures, maintained to prevent safety issues arising	1 hrs		12 mo.	Inspection of concrete surfaces adjacent to and above the Roadway	No instances of delaminated concrete above the Roadway.
3.4	Structures – Bridge girders/beams (Includes the Cover’s structural components)	Design stress is not exceeded in bridge girders/ beams (particularly in skew bridge decks)	1 hrs		12 mo.	Measurement of out of plumb twisting/rotation of bridge girders/beams.	The out-of-plumb rotation of bridge girders/beams shall not exceed 0.6° or 1/8 in. per ft
3.5	Non-bridge class culverts	Non-bridge-class culverts are free of: <ul style="list-style-type: none"> • vegetation and debris and silt • Defects in sealant to movement joints • scour damage 	24 hrs		6 months	Inspection and assessment in accordance with the requirements of federal National Bridge Inspection Standards (NBIS) of the Code of Federal Regulations, 23 Highways – Part 650, the current version of the CDOT Pontis Bridge Inspection Coding Guide and AASHTO Manual for Bridge Evaluation, the FHWA Bridge Inspector Reference Manual, AASHTO Manual for Bridge Element Inspection, and Recording and Coding Guide for the Structural Inventory and Appraisal of the Nation’s Bridges.	Records as required in the current version of the CDOT Pontis Bridge Inspection Coding Guide and AASHTO Manual for Bridge Evaluation. No occurrences of NBI condition rating below seven for any culvert elements. All Pontis condition states to be one or two for all structure components. None with vegetation, debris and silt. None with Defects in sealant and movement joints.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
3.6	Retaining Walls (other than MSE walls)	Maintain retaining walls to be structurally sound, and free of vertical, lateral or rotational movement with no material Defects compromising the intended performance.	48 hrs		12 mo.	<p>Condition of exposed surfaces showing cracking, spalling, leaking, build-up of efflorescence and rust staining.</p> <p>Area of cracks measured as the length of the crack and six inches on either side of the centerline of the crack.</p> <p>Measurement of settlement of spread footing foundations in deviation from constructed elevation.</p> <p>Measurement of rotational movement resulting in deviation from constructed alignment using a 10 foot straight edge.</p> <p>Visual Inspection</p>	<p>No more than 5% of a combined retaining wall area of each wall showing cracking with leaking, build-up of efflorescence, delamination's, spalls, and rust staining.</p> <p>No concrete surfaces with spalls greater than 1" deep or to reinforcement level.</p> <p>No more than 5% of retaining wall area showing cracking of >1/8".</p> <p>None greater than 1.5" total or 1/2" in a 5 year period</p> <p>None greater than 1/2" horizontal movement within 10' vertical.</p> <p>Free from vegetation and overgrowth of trees.</p> <p>At least 90% of drain holes are free of build up (for any walls).</p>

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
3.7	MSE Retaining Walls	Maintain retaining walls to be structurally sound, and free of vertical, lateral or rotational movement with no material Defects compromising the intended performance.	48 hrs		12 mo.	<p>Panel condition</p> <p>Joint condition</p> <p>Measured erosion</p> <p>Measurement of bowed wall: variance from constructed alignment. Change from as built records measured using 10' straight edge.</p> <p>Visual Inspection</p>	<p>No more than 5% showing cracking, delamination's, spalls, or scaling per panel or each MSE wall.</p> <p>No instances cracks >1/4", on more than one panel per wall.</p> <p>No concrete surfaces with spalls greater than 1" deep or to reinforcement level.</p> <p>No instances of joints with exposed fabric, MSE backfill material below joint or vegetation growing between joints</p> <p>Panel offset at joints shall not exceed 3/4 inch. Joint opening shall not exceed 1/4 inch greater or 1/2 inch less than the design width along adjoining panels.</p> <p>No instances of erosion >1 feet deep along wall coping, erosion exposing the top of the leveling pad (where pad is not on rock), or exposed straps or mesh</p> <p>No instances of variance from constructed alignment greater than 3/4 inch horizontal movement within 10' vertical</p> <p>Free from vegetation and overgrowth of trees.</p>

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
3.8	Sign structures	Sign gantries and foundations are structurally sound and free of: loose nuts and bolts, Defects in surface protection systems	24 hrs		6 months	Inspection and assessment in accordance with the requirements of CDOT Recording and Coding Guide for the Inventory and Inspection of Colorado's Overhead Signs, Signals and High Mast Lights and CDOT M&S Standard Plans.	All condition states to be one or two for all structural members. None with loose assemblies. None with Defects in surface protection.
3.9	Load ratings (Includes the Cover's structural components)	All structures shall have adequate capacity for the design load, legal loads (including Specialized Hauling Vehicles and Notional Rating Load, as referenced in AASHTO Manual for Bridge Evaluation, and Colorado Permit Vehicle, as referenced in CDOT Bridge Rating Manual)	24 hrs		6 months	Load rating calculations in accordance with the AASHTO Manual for Bridge Evaluation, the current version of the CDOT Pontis Bridge Inspection Coding, and CDOT Bridge Rating Manual. Load restriction requirements as per AASHTO Manual for Bridge Evaluation, the current version of the CDOT Pontis Bridge Inspection Coding, and CDOT Bridge Rating Manual.	Comply with load restrictions on new structures for Colorado legal loads (including legally permitted vehicles).

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
4 ROADWAY MARKING							
4.1	Pavement markings – General (includes temporary marking in the event of future Construction work done by Developer, and permanent marking) (excludes crosswalk and stop bar pavement markings at signalized ramp intersections, which such markings are maintained by Local Agency)	Pavement markings are: <ul style="list-style-type: none"> • clean and visible during the day and at night • whole and complete and of the correct color, type, width and length • correctly placed to meet the MUTCD and the Colorado Supplement to MUTCD and CDOT M&S Standard Plans. Non applicable pavement markings are removed.	24 hrs		1 mo.	Compliance with regulations Using a calibrated retro-reflectometer, in conformance with ASTM E 1710 or AASHTO TP111 procedures, collect the following readings for each day striping work has been conducted or when reading collected: <ul style="list-style-type: none"> • within a mile test section, collect 10 readings for each longitudinal line stripe, at no less than 40 feet intervals. • where striping is less than 500 feet in length, collect reading at 50 foot intervals • readings collected shall be averaged. Excess beads to be removed prior to reading Bridge decks longitudinal lines, words and symbols shall be measured by presence and reflectivity on pavement surface Removal of non-applicable pavement markings or conflicting pavement markings	100% in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) and the MUTCD -Colorado Supplement Retro-reflectivity reading in test section (mcd/m ² /lux): Longitudinal Lines – White 150 Longitudinal Lines – Yellow 100 Measured minimum presence: Longitudinal Lines 80% Words and Symbols 85% Visual inspection

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
4.2	Reflective markers	Reflective pavement markers (RPM's), are: <ul style="list-style-type: none"> • clean and clearly visible • of the correct color and type • reflective or retroreflective as required in the MUTCD and CDOT M&S Standards • correctly located, aligned and at the correct level • are firmly fixed • are installed in a way that will ensure that they remain at the correct level. 	24 hrs		6 mo.	Number of pavement markers that are ineffective. (Ineffective includes missing, nonreflective, broken, damaged, settled or sunk) Number of pavement marker casting securely fastened (Category 1 Defect) Uniformity; percentage (replacement RPM's having equivalent physical and performance characteristics to adjacent markers.)	Less than 10-percent ineffective in a centerline mile, with no more than two (2) consecutive RPMs missing or non-reflective. 100% 100%
4.3	Delineators & Markers	Object markers and delineators are: <ul style="list-style-type: none"> • clean and visible • of the correct color and type • legible and reflective • straight and vertical • placement per MUTCD, and CDOT M&S Standards 	1 hrs		28 days	Number of object markers or delineators defective or missing. Sign sheeting material for object markers and delineator shall meet manufacturers minimum reflective requirements.	No more than 10% of delineators or markings will be missing or not easily visible in any 1 mile section. 100%
5 GUARD RAILS, BARRIERS, IMPACT ATTENUATORS							

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
5.1	Guard rails and barrier walls	All guardrails, traffic barriers and other concrete barriers are maintained free of Defects. They are placed per MUTCD, CDOT's M&S Standards and Roadway Design Manual and FHWA Roadside Design Guide.	1 hrs		1 mo.	Length free from Defects (loose nuts/bolts) Surface condition Guardrail installed and maintained at correct height and distance from roadway and obstacle Alignment Vegetation Posts Spacer Blocks	All nuts, bolts and connections to be properly tightened 90% of surfaces to be free from Defects (spalling of concrete, failure of corrosion protection) within a 12.5 foot section. No Defect greater than 1 foot square or 1 cubic foot of missing material within a 12.5 foot section. No exposed rebar. 100% within 3 inches vertical of correct system height. No misalignment of more than 4 inches. Vegetation maintained and mowed and chemically controlled in front and under and at least 5 feet behind guardrail. No missing posts. No post shall have section loss greater than 25%, No two adjacent post shall have a combined section loss greater than 25%. No missing spacer or rotated blocks. No section loss greater than 10%.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
5.2	Impact attenuators, anchor assembly, and end assembly	All impact attenuators, anchor assemblies, and end assemblies are appropriately placed and correctly installed per MUTCD, CDOT's M&S Standards, and maintained free of damage.	1 hrs		1 mo.	Percentage of impact attenuators, anchor assemblies, and end assemblies correctly placed and installed and free of damage Integrity of the system	100% 100% cell replacement (unit replacement) following impact.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
6 SIGNS							
6.1	General – all sign panels	<p>Signs are clean, correctly located, clearly visible, legible, reflective, at the correct height and free from structural and electrical Defects</p> <p>Identification markers are provided, correctly located, visible, clean and legible</p> <p>Sign mounting posts are vertical, structurally sound and rust free</p> <p>Visibility distances meet those stated in the MUTCD and CDOT M&S Standards</p> <p>Sign information is of the correct size, location, type and wording to meet its intended purpose</p>	24 hrs		6 mo.	<p>Compliance with regulations</p> <p>Retroreflectivity measured in accordance with the requirements of MUTCD</p> <p>Face Damage or Blockage</p> <p>Placement</p> <p>Sign information is of the correct size, location, type and wording to meet its intended purpose and requirements of MUTCD, M&S Standards, Guide Signing Policies and Procedures Manual, CDOT Sign Design Manual, and Colorado Supplement Signs</p> <p>Visual Inspection</p>	<p>No missing signs and 100% in accordance with the current edition of the (MUTCD)</p> <p>Retroreflectivity is no less than that required by MUTCD and the Colorado Supplement for retroreflectivity.</p> <p>No signs with face damage greater than 5% of area or 0% if text is damaged or fading. No vegetation is impeding sign visibility.</p> <p>Signs are placed in accordance with Requirements of the MUTCD and the Colorado Supplement</p> <p>100%</p> <p>Post shall be plum</p>

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
6.2	Safety critical signs	Requirements as 6.1, Plus: "Stop," "Yield," "Do Not Enter," "One Way" and "Wrong Way" and all Turn-Prohibition signs are clean, legible and undamaged.	1 hrs		7 days	Safety critical signs functionally legible when viewed from a vehicle travelling at posted speed Sign mounting posts and multi-Post breakaway installed and maintained per CDOT requirements.	No instances of signs functionally illegible, no twisting or leaning. All connections shall be free from Defects and free from debris or material that would impede function.
6.3	Obsolete, illegal or obscene signs, banners, flags, or posters	Removed from the Project	2hr*		N/A	Time for obsolete, illegal or obscene(*) signs to be removed	100% compliance

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
7 Traffic Signals							
7.1	Traffic Signals - General	Traffic Signals shall meet the following: .Be clean and visible, heads and buttons correctly aligned and operational . All traffic signal elements including cabinets, foundations, signing, vehicle detection (cameras or loops), electrical power and boxes: are aligned correctly, structurally sound, full operational and free from damage caused by accident or vandalism	24 hrs		NA	Traffic signal issue reporting log listing the following as a minimum: 1. Issue (e.g. inefficiencies, malfunction, cleanliness, etc.) 2. date and time of issue occurrence 3. date and time of report 4. reporting person 5. date and time of issue resolution	Written notification of issue to CCD and Department, and reporting on a log 100% of time.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
8 Lighting							
8.1	Roadway Lighting – General	All lighting is free from Defects and provides acceptable uniform lighting quality. Lanterns are clean and correctly positioned.	24hr		NA	Visual inspection and reporting log listing the following as a minimum: 1. Issue (e.g. inefficiencies, malfunction, cleanliness, etc.) 2. date and time of issue occurrence 3. date and time of report 4. reporting person 5. date and time of issue resolution	Written notification of outdoor lightning outage or repair requirement to Xcel Energy and Department, and reporting on a log 100% of time.
8.2	Lighting Structures	Columns are upright correctly founded and structurally sound.	24 hrs		NA	Visual inspection and reporting log as per Ref. 8.1 in this Appendix A-2. Structure is plumb.	Written notification of outdoor lightning repair requirement to Xcel Energy and Department, and reporting on a log 100% of time.
8.3	Lighting Fixtures	All luminaries functioning on each pole.	24 hrs		NA	Visual inspection and reporting log as per Ref. 8.1 in this Appendix A-2.	Written notification of outdoor lightning outage or repair requirement to Xcel Energy and Department, and reporting on a log 100% of time.

10.2	Landscaped Areas (refer to General Requirement i. to iv. for any landscaped areas other than top of Cover; and to v. for landscaped areas on top of Cover)	i. All landscaped areas are maintained to their originally constructed condition. Landscaped areas are as designated in the plans. ii. Mowing, litter pickup, irrigation system maintenance and operation, plant maintenance, pruning, insect, disease and pest control, fertilization, mulching, bed maintenance, watering is undertaken as per MMP. iii. The height of grass and weeds is kept between 8" to 10", and not shorter than 6 Mowing begins before vegetation reaches a hazardous condition, such as sight distance, blocking reflectors, hiding animals or causing drifting snow.	24 hrs		28 days	Visual inspection Appearance is excellent, characterized by well-tended landscaping and vegetation.	The percent of landscaping area meeting the General Requirement is more than 90%.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
10.2 (cont.)	Landscaped Areas	iv. Damaged or dead vegetation is replaced. v. Landscaping on top of the Cover are carried out by Developer, until the end of the Landscape Establishment period, (as described in Section 214.04 of the CDOT Standard Specifications) in accordance with <u>Section 14 of Schedule 10 (Design and Construction Requirements)</u>					
10.3	Fire hazards	Fire hazards are controlled	12 hrs		14 days	Instances of dry brush or vegetation forming a fire hazard	No instances of plant material that is a fire hazard

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
10.4	Trees, brush and ornamentals (Other than landscaped areas on top of the Cover, where REF 10.2 would apply)	i) Trees, brush and ornamentals on the right of way, except in established no mow areas, are trimmed in accordance with CDOT standards. ii) Trees, brush and ornamentals are trimmed to insure they do not interfere with vehicles or sight distance, or inhibit the visibility of signs or shading on the road. iii) Dead trees, brush, ornamentals and branches are removed. Potentially dangerous trees or limbs are removed. iv) All undesirable and unplanned trees and vegetation are removed. Diseased trees or limbs are treated or removed by licensed personnel.	24 hrs		28 days	Visual inspection and/or notification	Inspection records showing 100% compliance

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
10.5	Wetlands	Wetlands are properly managed, and in accordance with applicable permit requirements.	24 hrs		28 days	In accordance with applicable permit requirements	No Instances of permit requirements not met.
10.6	Water Quality Ponds	Maintenance of all vegetation within the pond area.	24 hrs		28 days	Visual inspection of ponds	Maintained as required per the design
11 EARTHWORKS & EMBANKMENTS							
11.1	Slope - Stability	All structural or natural failures of the embankment, cut slopes, and slope and ditch pavement Defects on the Site are repaired.	1 hr		6 mo.	Visual inspection by geotechnical specialist and further tests as recommended by the specialist	No instances of slope failure, and no unsealed cracks or joints on paved slopes. No vegetation on paved slopes. No rut, washout, or deviation greater than 6 inches and more than 2 foot wide.
11.2	Slopes - General	Slopes are maintained in general conformance to the original graded cross-sections	24 hrs		6 mo.	Areas where replacement fill and of landscaping materials, reseeding and re-vegetation for erosion control purposes and removal and proper disposal of all eroded materials from the roadway and shoulders are required.	No slope failures. Inspection records showing compliance.
12 GRAFFITI							

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
12.1	Graffiti	Graffiti removal on all Elements including but not limited to: <ul style="list-style-type: none"> • Signs, walls, barriers, guardrail, lighting, traffic signals, structural elements, fence, water quality and drainage features. 	24 hrs		28 days	Removed in a manner and using materials that restore the surface to a like appearance similar to adjoining surfaces.	Inspection records showing 100% compliance
12.2	Offensive Graffiti	Offensive graffiti (i.e. graffiti that is insulting or causes offense to the public) is removed	6 hr		N/A	Removed in a manner and using materials that restore the surface to a like appearance similar to adjoining surfaces. All offensive graffiti is considered a Category 1 Defect.	Inspection records showing 100% compliance
13 INCIDENT RESPONSE							
13.1	General	Respond to Incidents in accordance with the Incident Response Plan.	1 hr		N/A	Incident Response Plan. No complaints from Emergency Services.	Response times met for 98% of Incidents measured on a 1 year rolling basis.
13.2	Spillage of Hazardous Materials	For any hazardous materials spills, comply with the requirements of <u>Schedule 17</u> .	1 hr		1 day	Incident Response Plan details the process and procedures in place and followed.	Inspection records showing compliance

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
13.3	Elements damaged as a result of Incident - Structural Assessment	Evaluate damage to structures and liaise with emergency services to ensure safe working in clearing the Incident.	1 hr		1 day	Inspections and surveys of relevant Elements as required. (Note. CDOT staff bridge office shall be notified immediately to complete an inspection.)	Inspection records showing 100% compliance
13.4	Elements damaged as a result of Incident - Temporary and permanent remedy	Propose and implement temporary measures or permanent repairs to Defects arising from the Incident. Ensure the structural safety of any structures affected by the Incident.	24 hrs		6 mo.	Review and inspection of the relevant Elements.	Inspection records showing 100% compliance.
14	MAINTENANCE YARD⁵						
14.1	Developer Identification Signs	Signs installed at the entrance(s)/exit(s) to/from the Maintenance Yard	7 days		12 mo.	Signs installed depicting the name and contact information for Developer	Signs functioning as designed.

⁵ Section 14 only to be included if Preferred Proposer elects to use the Maintenance Yard.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
14.2	Environmental contamination	No increase in contamination.	2 hr		6 mo.	Environmental site assessment or other inspections, as necessary.	No increase in contamination during the Operating Period.
14.3	Maintenance of grounds and buildings	Kept in a neat and tidy order. Kept structurally safe.	24 hr		6 mo.	Good housekeeping practice used to maintain buildings and land in a well maintained and neat condition, free from environmental damage. Regular inspection performed.	100% compliance
15 SNOW AND ICE REMOVAL							
15.1	Response Time, material application vehicle	The manning and loading of material application vehicles for a Precipitation Event	½ hr		N/A	All spreading vehicles on any route ready to load anti-icing or de-icing materials within ½ hour as measured by winter operation records and AVL system monitoring.	The required maximum time to complete the manning and loading of all material application vehicles for an event is 0.5 hours from the time precipitation has started.
15.2	Response Time, plowing vehicle	The manning of a snowplow vehicle for a Precipitation Event	½ hr		N/A	All snowplow vehicles on any route have left the yard and ready to begin work within ½ hour as measured by winter operation records and AVL system monitoring.	The required maximum time to complete the manning of all snowplow vehicles for an event is 0.5 hours from the time precipitation has started to the time the unit has left its yard to begin work.
15.3	Plowing and material application	Continuous plowing and material application	½ hr		N/A	All units operating as measured by winter operation records and AVL monitoring systems.	Once operations have begun, all units as identified in the Snow and Ice Control Service Plan shall operate continuously on all routes so that bare and wet pavement is maintained.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
15.4	Circuit time	Complete one entire route within 1 hour	1 hr		N/A	AVL systems monitoring and/or winter operation record	Circuit time shall be 1 hour from the time a winter unit begins its plowing and/or material application route until the time it is complete.
15.5	All lanes and ramps (including paved shoulders)	Bare and wet pavement during the Precipitation Event	1 hr 24 hr (paved shoulder)		N/A	Visual inspection and AVL system monitoring	Maintain Bare and Wet pavement during the Precipitation Event, or immediately at the End of Precipitation Event (as defined in item 15.5 in <u>Appendix A-1</u>) if all equipment listed in the most recently Accepted Snow and Ice Services Plan are continuously deployed.
15.6	Hazards	Address any snow and ice hazard immediately upon detection or notification	1 hr		N/A	Visual inspection, AVL system monitoring, or notification	100% compliance
15.7	Isolated slippery conditions	Address isolated slippery conditions.	1 hr		N/A	Visual inspection, AVL system monitoring, or notification	All isolated slippery conditions as identified by Developer, or notified by Emergency Services, the Department, and/or User are addressed.
15.8	Winter Snow and Ice Materials storage	Winter snow and Ice materials stored in tanks or covered buildings at all times.	½ hr		N/A	Visual inspection.	No instances of uncovered storage of winter de-icing/anti-icing materials or winter maintenance liquids.
15.9	Reporting requirements	All reporting requirements identified in <u>Schedule 11</u> are accurate, complete, and timely 100% of the time.	1 day		N/A	Audit records and AVL system monitoring.	100% accuracy.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
15.10	Automated Vehicle Locator system	All identified vehicles equipped with on board AVL at all times, as required in <u>Section 12</u> of this <u>Schedule 11</u>	24 hrs		1 mo.	Random audit, AVL system monitoring.	95% of all AVL units operational 100% of the time. No loss of data due to network service loss.
15.11	Material Spreader calibration	Spreader controller (including winter liquids) calibration is operational.	24 hrs		N/A	Random audit, AVL system monitoring	95% units operational 100% of the time
15.12	Winter Drainage	Melting snow and ice causing flooding.	1 hr		6 hrs	Visual inspection, AVL system monitoring	No flooding on roadway caused by snow and/or ice impeding drainage through or to drains, culverts and ditches.
16. Courtesy Patrol							
16.1	Courtesy Patrol	Respond to any calls on the General Purpose Lanes or Tolloed Express Lanes 15min after being dispatched.	1/4hr		N/A	Measured by patrol records, and AVL system.	100% of the time

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
17. Sweeping and Cleaning							
17.1	Sweeping	i) Keep all channels, lanes, hard shoulders, gore areas, ramps, intersections, islands and frontage roads, and curb and gutter swept clean. ii) Clear and remove debris from all paved areas other than as required in <u>Section 1.1</u> of this <u>Appendix A-2</u> . iii) Remove all sweepings without stockpiling in the right of way and dispose of at approved site.	1 hrs		28 days	Visual Inspection of buildup dirt, ice, rock, debris (from accidents and/or otherwise).	Inspection records showing 100% compliance
17.2	Litter	i) Keep the Site in a neat condition, remove litter regularly ii) Pick up large litter items before mowing operations. iii) Dispose of all litter and debris collected at an approved solid waste site. iv) Remove dead animals from the Site.	24 hrs		28 days	Visual Inspection of pieces of litter.	Inspection records showing 100% compliance

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
17.3	Sweeping	Clear and remove granular and sand material used as deicer or tractive material at the End of Precipitation Event (as defined in item 15.5).	1 hr		48 hrs	Visual Inspection.	Inspection records showing 100% compliance.
18. Cover (Note. The TOMIE Manual referred to in the Measurement Criteria is the Accepted Tunnel Operation, Maintenance, Inspection and Evaluation Manual (TOMIE) as described in Section 12 (Cover MEP System) of Schedule 10 (Design and Construction Requirements).)							
18.1	Snow and ice removal	Snow and ice removal in the Cover section and at access and egress points	1hr		N/A	Visual observation and/or AVL system monitoring.	No snow or ice along the Cover structure wall and soffit. No snow or ice along the right shoulder at the access and egress points.
18.2	Subsurface structures	All subsurface structures, including passive fire protection, shall be free of Defects.	1hr		N/A	All subsurface structures maintained and inspected in accordance with National Tunnel Inspection Standards, Highway and Rail Transit Tunnel Maintenance and Rehabilitation Manual, and the Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual and the Specifications for the National Tunnel Inventory (SNTI).	Elements maintained free of Defects

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
18.3	Structural supports and Connections for all miscellaneous structural attachments or supports	Structural Supports & Connections for all miscellaneous structural attachments or supports shall be free of Defects.	1hr		6 mo.	All structural supports maintained and inspected in accordance with National Tunnel Inspection Standards, Highway and Rail Transit Tunnel Maintenance and Rehabilitation Manual, and the Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual and the Specifications for the National Tunnel Inventory (SNTI).	All Elements with full capacity connections in accordance with the design and manufacturer's requirements Sections free of loss of connection material due to impact, corrosion, or wear. Free of loose connections or bolts. Free of deterioration or damage of base structure material. Free of movement of supported item. Free of excessive vibration of supported item.
18.4	Retaining Walls	As a minimum free of the Defects as identified in <u>Section 3 Structures</u> of this <u>Appendix A-2</u> .	1hr		6 mo.	Compliance with Maintenance Management Plan (MMP). The plan shall be based on the Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual, Highway and Rail Transit Tunnel Maintenance and Rehabilitation Manual, and in accordance with <u>Section 3 Structures</u> of this <u>Appendix A-2</u> .	All Elements maintained free of Defects.
18.5	Waterproofing	Leaks in subsurface structures.	24 hrs		6 months	Visual Inspection and in accordance with the Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual.	The subsurface structures shall be free of leaks.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
18.6	Finishes	All finishes shall be free of Defects and clean.	24 hrs		6 months	Visual inspection and in accordance with the Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual, Highway and Rail Transit Tunnel Maintenance and Rehabilitation Manual, and the Specifications for the National Tunnel Inventory (SNTI).	Maintaining level of reflectivity and brightness consistent with lighting level criteria, free of loose or damaged finish materials with fully functional emergency equipment such as exit signage, lights, emergency panels, fire alarm boxes, signage and communications equipment and maintain colors and design characteristics consistent with aesthetic requirements.
18.7	Drainage	Subsurface drainage and pumping systems fully operational and clear of debris.	2 hrs		1 month	Regular inspection in accordance with the Highway and Rail Transit Tunnel Maintenance and Rehabilitation Manual, and the Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual and the Specifications for the National Tunnel Inventory (SNTI).	Maintenance performed and documented per the Maintenance Management Plan (MMP) with flow rates established per design, free from blockage due to sedimentation or calcification and, fully functional pumping components and systems, screeds, and control and monitoring equipment.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
18.8	Fire Protection	Fire protection systems such as but not limited to fire detection, alarm, notification and suppression systems fully functional and operational.	1 hr		3 months	Compliance with Maintenance Management Plan MMP. The plan shall be based on the Highway and Rail Transit Tunnel Maintenance and Rehabilitation Manual, Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual, the Specifications for the National Tunnel Inventory (SNTI), and applicable NFPA standards. Life Safety preventative maintenance performed and reported bi-annually.	Fire protection systems functioning correctly 100% of the time and in full compliance with the MMP
18.9	Electrical Systems, regular & Emergency Lighting	Lighting system fixtures, lamps and control functioning to provide the intended illumination level, light output, lighting quality, duration and energy efficiency, for the location.	1 hr		3 months	Compliance with Maintenance Management Plan (MMP). The plan shall be based on the Highway and Rail Transit Tunnel Maintenance and Rehabilitation Manual, Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual and the Specifications for the National Tunnel Inventory (SNTI).	Electrical and emergency lighting systems functioning correctly 100% of the time and in full compliance with the MMP

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
18.10	Electrical Systems, Fire / vehicle Detection and Alarm and emergency way-finding signage	Fire / vehicle detection and alarm systems provide the intended detection and notification functions including emergency way-finding signage.	1 hr		3 months	<p>Compliance with Maintenance Management Plan (MMP). The plan shall be based on the Highway and Rail Transit Tunnel Maintenance and Rehabilitation Manual, Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual, the Specifications for the National Tunnel Inventory (SNTI), manufacturer's recommendations, and NFPA 70B and 72.</p> <p>Preventative maintenance of fire alarm sources and testing per NFPA 70B, 72, 101, 110 & 111. Follow manufacturer's recommendations for maintenance and testing where requirements are more demanding. Continuous monitoring through self-system diagnostics and failure detection.</p>	<p>All fire alarm systems perform as designed and provide the intended level of protection with all detectors operating within manufacturer's tolerance for sensitivity and cleanliness.</p> <p>All inspections conducted and documented.</p> <p>All preventative maintenance performed and documented in accordance with the referenced standards.</p>

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
18.11	Electrical Systems, Communications including Radio Rebroadcast, 2-way Radio, public emergency message rebroadcast, voice alarm and public address, Telephone and CCTV	Communications systems serving their intended functions.	1 hr		3 months	<p>Compliance with Maintenance Management Plan (MMP). The plan shall be based on the Highway and Rail Transit Tunnel Maintenance and Rehabilitation Manual, Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual, the Specifications for the National Tunnel Inventory (SNTI), and manufacturer's recommendations.</p> <p>Operational tests using 2- way radio equipment and frequencies to match outside agencies served, weekly.</p> <p>Continuous monitoring through self-system diagnostics and failure detection. CCTV system compliance with NFPA 72 inspection and maintenance requirements for fire detection, where used.</p>	<p>All equipment operating in accordance with manufacturer's recommendations for actual conditions of use.</p> <p>2-way radio system performance conforming with up-to-date Department specifications.</p> <p>Public emergency message rebroadcast performance conforming with relevant standards.</p> <p>Voice alarm and public address performance conforming with relevant standards.</p> <p>CCTV system complying with all requirements required to function as second means of fire detection.</p> <p>All inspections conducted and documented.</p> <p>All preventative maintenance performed and documented in accordance with the referenced standards and MMP.</p> <p>Free from database and communication system security breaches.</p> <p>Electronic retention of database files, back-ups and other stored media.</p>

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
18.12	Electrical Systems, Distribution – Normal, Essential & Emergency	Electrical system serving connected loads with intended capacity, voltage regulation, protection, control and monitoring.	1 hr		3 months	Compliance with Maintenance Management Plan (MMP). The plan shall be based on the Highway and Rail Transit Tunnel Maintenance and Rehabilitation Manual, Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual, and the Specifications for the National Tunnel Inventory (SNTI), and manufacturer's recommendations. Preventative maintenance and testing of essential and Emergency sources per NFPA 110 and 111. Exercising of back-up generators under load where used as essential and Emergency sources, monthly. Exercising of ATS switches, semi-annually. Load testing of UPS systems where used as essential and Emergency source, monthly. Monitoring and Testing of individual battery cell condition, annually.	All elements of electrical systems distribution normal, essential and emergency functioning as designed 100% of the time.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
18.13	Command, Control and Monitoring System	Command, Control and Monitoring System provides intended function of control, monitoring, communication and visual display of all connected systems including integration with other systems.	1 hr		3 months	Compliance with Maintenance Management Plan (MMP). The plan shall be based on the Highway and Rail Transit Tunnel Maintenance and Rehabilitation Manual, Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual, and the Specifications for the National Tunnel Inventory (SNTI). Follow manufacturer's recommendations for maintenance and testing where requirements are more demanding. Continuous monitoring through self-system diagnostics and failure detection.	All elements of Command, Control and Monitoring System functioning as designed 100% of the time.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
18.14	Electrical Systems, Grounding & LP	Grounding and lightning protection systems provide intended function and level of protection for equipment, structure and personnel protection.	2 hrs		3 months	<p>Compliance with Maintenance Management Plan (MMP). The plan shall be based on the Highway and Rail Transit Tunnel Maintenance and Rehabilitation Manual, Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual, the Specifications for the National Tunnel Inventory (SNTI), manufacturer's recommendations and NFPA 780.</p> <p>The fall of potential method shall be used to test the resistance to earth of all grounding electrode systems serving electrical services, lightning protection and alternate energy sources, every 5 years.</p> <p>The continuity of ground connections to remote earth shall be tested during replacement of equipment served or any major change of system configuration.</p>	All elements of Grounding and lightning protection systems functioning as designed 100% of the time.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
18.15	Ventilation System	Ventilation system fully maintained, functional and operational.	2 hrs		3 months	<p>Compliance with Maintenance Management Plan (MMP). The plan shall be based on the Highway and Rail Transit Tunnel Maintenance and Rehabilitation Manual, Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual, the Specifications for the National Tunnel Inventory (SNTI), and manufacturer's recommendations.</p> <p>Life Safety preventative maintenance performed and reported bi-annually.</p> <p>Life safety components of the tunnel ventilation system tested annually, Verification of OCC activation and separately, local activation of tunnel ventilation life safety response, annually.</p>	All elements of the ventilation system functioning as designed 100% of the time.
18.16	Cover electrical Supplies	Electricity supplies, feeder panels, transformers, cabinets, switches and fittings are electrically, mechanically and structurally sound and functioning	1 hr		1 mo.	<p>Availability of supply of power and electricity to the cover systems, and in accordance with the Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual.</p>	<p>A continuous availability level of 100% from metered source to all O&M equipment and facilities.</p> <p>Securely in place and free from damages or exposed wiring.</p>

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
18.17	Cover firefighting Water Supplies	Firefighting water supplies, plumbing, pipework and valves mechanically and structurally sound and functioning	1 hr		1 mo.	Availability of supply of firefighting water to the cover systems, and in accordance with the Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual.	A continuous availability level of 100% to all firefighting equipment and facilities.
18.18	Plant rooms	Electricity supplies, panels, cabinets, switches, heating/cooling/air conditioning and fittings are electrically, mechanically and structurally sound and functioning	1 hr		3 mo.	Availability of equipment and systems to the cover systems, and in accordance with the Tunnel, Operations, Maintenance, Inspection, Evaluation (TOMIE) Manual.	A continuous availability level of 100% to all O&M equipment and facilities. Securely in place and free from damages or exposed wiring.
19. ITS AND ETC FACILITIES							
19.1*	ITS and ETC elements installed by Developer	Fully functional and operational without damages.	24hr		48hr	Operation records; Visual Inspection	No instances of malfunction or damages to devices or equipment, other than planned outages that have prior written approval by the Department.
19.2*	Backbone communication and VTMS	Fully functional and operational without damages.	4hr		24hr	Operation records; Visual Inspection. Follow manufacturer's recommendations for maintenance and testing. Continuous monitoring through self-system diagnostics and failure detection.	No instances of communication or VTMS failures, other than planned outages that have prior written approval by the Department.

REF	ELEMENT	GENERAL REQUIREMENT	DEFECT REMEDY PERIOD			PERFORMANCE REQUIREMENTS	
			Cat 1 Immediate Action	See Footnote ⁴	Cat 2 Permanent Repair	MEASUREMENT CRITERIA	TARGET
19.3	ITS and ETC Equipment installed by Developer and Backbone communication	Developer to provide reporting on inefficiencies or malfunction of ITS and ETC equipment, including ramp meters, and backbone communication.	4hr		24hr	ITS and ETC reporting log or records. Visual inspection.	100% reporting and follow up reporting on equipment corrections, repairs and connections to communication lines to ETC System Integrator and CTMC.
19.4	ITS and ETC civil infrastructure, such as pullboxes, manholes, cabinets, foundations, ITS sign structures, poles.	Fully functional and operational without damages.	24 hrs.		1 mo.	Maintenance records. Visual Inspection.	100% of time.

*For the period commencing the operations of the ITS and/or Tolling Equipment installed by the Developer, up to two Calendar Years after Final Acceptance.

Appendix B – Courtesy Patrol Requirements

1.1 GENERAL REQUIREMENTS:

- A. The location and limits of the patrols shall be the I-70 Mainline within the O&M Limits.
- B. Developer shall patrol and monitor the Project within the O&M Limits every Calendar Day except for New Year's Day, Thanksgiving Day, and Christmas Day. The hours for patrol and monitoring shall be 6:30am to 8pm for weekdays, and 10am to 7pm for weekends. Developer shall patrol and monitor regardless of weather conditions. Any extensions of operating hours due to Emergencies, Severe Weather Event or planned Special Events as identified by Developer and accepted by the Department, or as required by the Department, (up to 30 hours per Contract Year for all required vehicles, dispatch staff, and required personnel and equipment) shall be the responsibility of Developer.
- C. Developer shall provide full time dedicated dispatch staff responsible for dispatch of Developer's Courtesy Patrol Vehicles when there are Incidents, accidents, or other events requiring the services of the Courtesy Patrol Vehicles. Developer shall also interface with Department's Mile High Courtesy Patrol program. Developer's dispatch staff shall be co-located with Department's CTMC dispatch staff, unless otherwise agreed by Department. Developer's dispatch staff may also operate the CCMS as required in Section 3.2.3 of this Schedule 11 if Developer can demonstrate to the Department's satisfaction that both functions can be carried out as per the requirements of this Schedule 11.
- D. Developer shall respond with vehicle to any calls on the Tolloed Express Lane(s) or General Purpose Lane(s) within fifteen (15) minutes of being dispatched from the Department's call center or authorized Department representative. All vehicles shall be towed to a designated Drop Site. Drop Sites shall be open at all times during the patrol and monitoring hours set out in Section 1.1.B. of Appendix B of this Schedule 11. Furthermore, Incidents or accidents will be moved to the nearest shoulder, or a location that is safe to all, to open all lanes of the Tolloed Express Lane(s) and General Purpose Lanes. Developer shall use flat-bed or wrecker tow trucks to remove vehicles from the scene, and these trucks shall meet the requirements in this Schedule 11 and contain all the equipment that is set forth by the Colorado PUC. No gas, tire change, or jump start shall be given to anyone in the Tolloed Express Lane(s) and General Purpose Lanes due to the danger of the location. Cell phones shall be provided for emergency uses only.
- E. Developer shall provide the Courtesy Patrol Service vehicles needed to perform the assistance services mentioned above.
- F. Developer shall comply with all Laws regarding travel on the shoulders of any highway areas.

1.2 SPECIFIC WORK REQUIREMENTS:

- A. Work Requirements:
Developer shall provide such services according to the following requirements:
 - 1. All services shall, at all times, be provided by Developer free of any charge to, or payment from, the disabled motorists or any other person or entity, public or private. Developer shall refuse any offers of other payment or gratuities of any kind.

2. Developer shall provide the services to disabled motorists only after Developer explains to the motorist the services to be provided (including the Drop Site, and that the services are free of charge), and only after requesting and obtaining the motorist's consent to such services. The services may be refused by the motorist at any time.
 3. Subject to the motorist's consent, it is preferable for Developer to move the vehicle from traffic or from the shoulder (whichever is applicable) off of the highway to a Drop Site before providing additional services, in order to eliminate any hazard or congestion that might result if Developer provided service in traffic or on the shoulder.
 4. Developer shall move a disabled vehicle that is in traffic to the shoulder of the highway and provide limited assistance to the vehicle on the shoulder, as an alternative to having the vehicle moved from the highway to a Drop Site.
 5. Developer shall provide service(s) chosen by the motorist; however, Developer shall not provide any service not described herein.
 6. Developer shall report all occurrences causing traffic congestion, all Incidents requiring Developer to be in and out of service, and each beginning and ending shift to the Department when the event occurs.
- B. Drop Sites:
Developer shall obtain the right to use suitable "Drop Sites" near the Project.

A "Drop Site" is defined as any business location to which the Developer can tow (and leave) the disabled vehicle, and from which the motorist of the disabled vehicle can safely make arrangements to be picked up and/or to have the vehicle repaired, subject to the specific conditions described below.

1. Specific Drop Site Conditions

Drop Sites shall satisfy all of the following specific conditions:

- a. The site(s) shall be located as close as reasonably possible to the highway, and within the Project limits.
- b. The sites shall be well lighted and must have a working phone (pay or business) available to the public on the premises.
- c. It is preferable, but not required; that each business Drop Site be able to provide assistance to the disabled vehicle, e.g. full service gas stations, tire stores, or other repair facilities.
- d. Businesses used as Drop Site (s) must allow a disabled vehicle to remain on site, free of charge, for at least three hours, in order to provide sufficient time for the motorist to make suitable arrangements.
- e. The Developer shall have written evidence from the owner/operator of the business of the Developer's right to use that business as a Drop Site.

2. General Drop Site Requirements

The Developer shall also comply with the following general requirements concerning Drop Sites.

- a. Developer shall not receive any payment or compensation of any kind from such businesses in connection with, or as a result of, the program services, including for any repairs made to the vehicle by the business.

- b. The particular Drop Sites used by Developer may vary from hour to hour, depending on the conditions at each site during the hours of operation of the patrol.
- c. Developer shall provide a list of Drop Sites, listed by hour each Drop Site is available for use, to the Colorado State Patrol and to any local law enforcement agency with jurisdiction over such sites immediately upon commencement of the O&M Work. Developer shall also provide any modification of such list to such agencies and Department, within one (1) working day of that modification.
- d. As described above, Developer shall obtain the motorist's consent to move the motorist and the disabled vehicle to a Drop Site. Developer shall explain to the motorist that they have only three hours at the Drop Site to make suitable arrangements or their vehicle can be towed away at their expense.
- e. Department shall not be responsible for any motorist injury or vehicle damage resulting from Developer's selection or use of a particular Drop Site.
- f. Developer shall not leave a motorist and/or a disabled vehicle at a particular Drop Site if, under the circumstances, that Drop Site presents an unreasonable risk of harm to the motorist or vehicle.

C. Work Prohibitions:

The success of this Courtesy Patrol program relies heavily on public relations and on the public's perception of the program's purposes and operation and, therefore, on the conduct of Developer and its operators in performing the program services.

The Department has determined that all of the actions listed below would create a negative public image, present a problem for local law enforcement concerning traffic management, and interfere with the operation and success of the program. Therefore, at all times during the performance of the Courtesy Patrol Services, Developer, its operators, and its employees shall not:

1. Solicit membership in any commercial/business organization or association, including vehicle repair or service associations.
2. Recommend or pressure motorists to use any towing service other than the Courtesy Patrol for a disabled vehicle.
3. Recommend, or pressure motorists to use, any business (including Drop Site businesses) for service on a disabled vehicle.
4. Radio for an alternative towing service, except when specifically asked by a motorist to do so, after the free Courtesy Patrol Services have been offered and explained to the motorist.
5. Tow a vehicle to a location other than the shoulder of the highway segment, or to the designated Drop Site nearest the vehicle location.
6. Interfere with a private sector towing service that is already present at the immediate location of a disabled vehicle. When Developer arrives at the vehicle in such circumstances, Developer should stop and offer assistance only to the motorist.
7. Patrol near another Courtesy Patrol Services vehicle off the Project limits.
8. Stay at the scene of an accident on the highway segment after the local law enforcement authorities have arrived at the scene, unless requested by local authorities to assist at the accident scene.
9. Refuse the orders of a law enforcement officer, or any directions the Department, or his/her designee, as provided to the Developer.

10. Tow a disabled vehicle while the motorist, or other occupants of the disabled vehicle, are in the towed vehicle, or leave any unattended occupants on the freeway while towing the vehicle. Patrol staff shall contact Developer dispatcher and request alternate transport of such occupants (e.g. other Courtesy Patrol Service vehicle or police vehicle).
11. Accept tips, money, or any other payment or compensation of any kind from the disabled motorists for the services provided.
12. Patrol with any other person in the patrol vehicle, unless that person is directly associated with the Developer.
13. Commit traffic violations of any kind including without limitation, speeding, or illegal lane changes.
14. Perform any act that provides an unfair competitive advantage to any private tow service.
15. Use the vehicle's yellow warning lights other than as authorized by law. The yellow warning lights shall be activated only when the vehicle is operating on the roadway to eliminate hazards to other traffic, as required by Colorado Revised Statutes 42-4-214.
16. Complete services as a private tow service when services were initiated as Courtesy Patrol Service. This includes staying at the scene of an Incident until the end of patrol hours in a Developer assigned shift, removing Courtesy Patrol Service signs, and then performing services as a private tow service for a fee. Courtesy Patrol Service signs shall be put in-place before entering, and removed and upon leaving, the freeway.

Developer will notify the Department of any of its operators/employees who perform such actions and, upon receipt of such notice; Developer shall take immediate action to remove such operators/employees from further performance of program services.

D. Patrolling:

Developer shall dispatch the appropriate number of Courtesy Patrol Service vehicles to patrol the Project and to meet the response timeline as set out in Section 1.1.D of this Appendix B. The operators/drivers of patrol vehicles shall be sufficiently spaced to adequately provide continuous coverage. The Courtesy Patrol Service vehicle(s) shall patrol the designated highway segment for disabled vehicles in need of assistance and, upon finding such vehicles, remove such vehicles from the traveled portion of the highway segment and/or providing assistance to such vehicles as quickly as possible.

When a disabled vehicle Incident/accident is discovered, the patrol vehicle shall respond as follows:

1. Arriving At a Disabled Vehicle on the Shoulder:

When a Developer operator finds a disabled vehicle on the shoulder of a highway segment, the operator shall pull directly behind the vehicle. However, the operator shall not turn on the towing vehicle's yellow warning lights unless the disabled vehicle or the towing vehicle poses a hazard to other motorists.

The operator shall communicate data collection requirements to the CTMC dispatch for detection (if the operator is the first to identify the Incident) and verification (location of the Incident based on the initial radio report).

The operator shall then exit the patrol vehicle, distribute Department's program brochure, and offer the program services to the motorist. Following directives provided by the Department, the operator shall explain to the motorist:

- a. The Courtesy Patrol is a Department program;
- b. The program is publicly funded;
- c. The services are free of charge to the motorist;
- d. Quick clearance Benefits;
- e. The motorist has the option to refuse or accept the service;
- f. Only particular services may be provided to the motorist (as defined below);
- g. The nature of the Drop Site(s) available;
- h. The motorist has the option to leave his/her vehicle on the shoulder of the freeway or to be taken to a Drop Site; and
- i. Law enforcement may provide authorization to override a motorist's refusal to move the vehicle.

Developer's operator shall then request the motorist's consent, to such service, and must obtain such consent - in writing, before providing service.

The Developer's operator shall offer to allow the motorist to use the mobile telephone equipment in the Courtesy Patrol Service vehicle, and the motorist shall be allowed up to five minutes of local calls at no charge to the motorist.

If the motorist refuses the service, Developer's operator shall contact the Department's dispatch to determine if the operator should leave the scene to continue patrolling or protect the vehicle until law enforcement arrives.

If the motorist consents to service and, if the operator can make the vehicle operational by providing the limited assistance available to the Developers operator, then the operator shall proceed as follows:

- a. If the motorist does not consent to have the vehicle moved, and the operator can render service on the shoulder with minimal hazards created, then the operator will render such service on the shoulder for a period not to exceed 10 minutes. If the operator cannot make the vehicle operational within 10 minutes then, with the motorist's consent, the operator shall move the disabled vehicle and motorist to the Drop Site nearest the location of the vehicle. If the motorist does not consent to moving the disabled vehicle and the operator has offered all available options of the Courtesy Program to the motorist, the operator shall notify his/her supervisor and the appropriate law enforcement agency then leave the scene immediately and continue patrolling, unless dispatch and/or law enforcement direct them to stay on scene.
- b. If the motorist does consent to have the vehicle moved, it is recommended that the vehicle be moved to the nearest Drop Site to provide assistance.

After the vehicle is moved to the shoulder or if the operator provides assistance on the shoulder the operator shall notify CTMC dispatch that the lane is clear. When the disabled vehicle and the motorist are moved safely to the Drop Site and/or assistance provided at the Drop Site, the operator shall notify the CTMC dispatch that the Incident has been removed from the roadway and shoulder. The operator shall immediately return to patrolling.

2. Arriving At a Disabled Vehicle in Traffic:

When Developer's operator finds a disabled vehicle in traffic, the operator shall pull directly behind the vehicle as soon as possible, and turn on the tow vehicle's yellow warning lights.

Developer's operator shall communicate data collection requirements to the CTMC dispatch for Detection (if the operator is the first to identify the Incident) and Verification (location of the Incident based on the initial radio report).

Developer's operator shall then ask for the motorist's consent to move the disabled vehicle, and the motorist, to a Drop Site (first choice), or to the shoulder of the highway segment (second choice). If the motorist consents, the operator shall take appropriate action and inform the Department's dispatcher of the Incident's status, when the blocked lane has been cleared, and when the Incident has been removed from the roadway and shoulder. Developer's operator shall then exit the vehicle and explain the Departments program to the motorist, and the services available.

If the motorist refuses, the operator shall immediately contact local law enforcement to report the disabled vehicle in traffic, and the operator shall stay directly behind the disabled vehicle with yellow warning lights activated until the vehicle is moved from traffic or until a local law enforcement officer arrives. The operator shall follow the instructions of the local law enforcement officer and inform the Departments dispatcher of the Incident's status.

3. Arriving At an Accident:

When the operator finds an accident on the highway, the operator shall pull directly behind the vehicle(s) as soon as possible and turn on the yellow warning lights. The operator should then carefully exit the patrol vehicle and discuss the situation with the motorist(s).

The operator shall communicate data collection requirements to the CTMC dispatch for detection (if the operator is the first to identify the Incident) and verification (location of the Incident based on the initial radio report).

If there are injuries, the operator shall not attempt to move the vehicle(s), but rather immediately call 911 and discuss further action with local law enforcement. The operator shall follow all instructions made by local law enforcement and inform the Departments dispatcher of the Incident's status.

If there are no injuries (accident involves only property damage) but the vehicle(s) cannot be safely driven, the operator shall explain the program to the motorists and ask the motorist's consent to move the vehicles from the traveled portion, median, or ramp of the highway and inform the Departments dispatcher of the Incident's status.

If the motorist does not consent, then the operator shall stay immediately behind the vehicles until local law enforcement arrives, shall assist law enforcement as requested, and inform the Departments dispatcher of the Incident's status.

If the motorist consents, the operator shall request additional Courtesy Patrol assistance before taking further action. (The operator should not move one of the vehicles if that means the other disabled vehicle will remain alone in traffic, but instead protect the accident scene by staying directly behind both vehicles until assistance arrives). If the motorists have already fulfilled the requirements of Colorado Revised Statutes 42-4-1603, concerning exchanging identification/information, then when assistance arrives, the operator(s) should move the disabled vehicles to the nearest Drop Site if damages appear to total less than \$1,000.00 (indexed). If the motorist(s) have not exchanged such information, then the operator(s) shall move the vehicles to the nearest suitable location for that purpose in accordance with C.R.S. 42-4-1602(2).

Under no circumstances shall an operator attempt to repair an accident vehicle in an attempt to make it mobile.

The operator shall communicate data collection requirement to the CTMC dispatch when the Incident has been moved from the travel lanes and when the Incident has been removed from the roadway and shoulder.

1.3 SPECIFIC EQUIPMENT REQUIREMENTS:

The Courtesy Patrol Service roving fleet shall contain at a minimum 50% towing vehicles, the remainder of the fleet (maximum of 50%) shall be motorist assistance vehicles. Patrol routes shall have a maximum of one motorist assistance vehicle per segment, unless otherwise approved by the Department.

A. The Courtesy Patrol Service vehicles shall be equipped, at a minimum, with the following:

Towing Vehicles:

1. Wheel lift towing equipment, including safety straps with a minimum lift rating of 3,000 pounds;
2. Hydraulic boom lift capability with a static rating of 5,000 pounds;
3. Winch cable with an 8,000 pound rating on the first layer of cable;
4. Towing slings rated at 3,000 pounds;
5. Tow chains of 5/16" alloy or OEM specs, and J.T. hook assembly;
6. Yellow/amber warning lights with front to rear (360 degree) directional flashing, with on/off switch in cab;
7. Power outlets ("hot boxes"), front mounted , with outlets compatible with 12-volt booster cables;
8. Heavy duty, 60+-amp battery;
9. Two-way radio communications with base office;
10. Cellular telephone;
11. Cab Lighting;
12. Rear work lights;
13. Safety D-ring on rear of truck;
14. Floor jack on rollers with a 2-ton rating;
15. All equipment necessary to operate the towing vehicles during winter driving conditions (i.e. chains, studded snow tires, etc.);
16. Wrap around push bumpers; and
17. Automated Vehicle Location (AVL).

Motorist Assistance Vehicles:

1. Winch cable with a 12,000 pound rating on the first layer of cable;
2. Tow chains of 5/16" alloy or OEM specs, and J.T. hook assembly;
3. Two (2) tow straps rated at 53,000 pounds, minimum;

4. Yellow/amber warning lights with front to rear (360 degree) directional flashing, with on/off switch in cab;
 5. Power outlets ("hot boxes"), front mounted , with outlets compatible with 12-volt booster cables;
 6. Heavy duty, 60+-amp battery;
 7. Two-way radio communications with base office;
 8. Cellular telephone;
 9. Cab Lighting;
 10. Rear work lights;
 11. Safety D-ring on rear of truck;
 12. Floor jack on rollers with a 2-ton rating;
 13. All equipment necessary to operate the motorist assistance vehicles during winter driving conditions (i.e. chains, studded snow tires, etc.);
 14. Wrap around push bumpers;
 15. Automated Vehicle Location (AVL); and
 16. Child restraints in accordance with C.R.S. 42-4-236.
- B. In addition to the specific vehicle equipment described above, at the start of a shift, the Courtesy Patrol Service vehicles shall contain each of the following items in order to ensure adequate service to disabled vehicles. These items shall be promptly replenished prior to the next shift, and as needed:

Towing Vehicle:

1. Unleaded gasoline (5 gallons) available in an easy access gas transfer system;
2. Safety chains measuring a minimum of 5 ft. (1 each);
3. Radiator water (5 gallons). Anti-freeze shall be added to the water when needed to keep the water in a liquid form;
4. Four way lug wrench (metric) (1 each);
5. Four way lug wrench (standard) (1 each);
6. Rechargeable air bottle (100 psi capacity), hoses and fittings to fit tire valve stems (1 each);
7. Flashlight and spare batteries (1 each);
8. Booster cables, 25 ft. long minimum, 3-gauge copper wire with heavy-duty clamps with one end adapted to truck's power outlets (1 set);
9. Funnel, multipurpose, flexible spout (1 each);
10. 36-inch highly visual orange traffic cones with reflectorized bands (5 each);
11. Reflector vest for the operator (1 each) (Type III night and day time);
12. First aid kit, 16 units (1 kit);
13. Fire extinguisher, 1OABC (1 each);
14. Hand broom (1 each);
15. Snow shovel (1 each);
16. Traction sand (20lbs);
17. Flares, 30 minute (3 each);
18. Reflective Triangular Warning devices (3 each);
19. Dry floor; and
20. Personal protective equipment such as gloves, glasses, etc.

Motorist Assistance Vehicle:

1. Unleaded gasoline (5 gallons) available in an easy access gas transfer system;
2. Safety chains measuring a minimum of 5 ft. (1 each);
3. Radiator water (5 gallons). Anti-freeze shall be added to the water when needed to keep the water in a liquid form;
4. Four way lug wrench (metric) (1 each);

5. Four way lug wrench (standard) (1 each);
 6. Toolbox containing:
 - Screwdrivers: Standard 1/8, 3/16, 1/4, 5/16, (1 each), Phillips head #1 and #2 (1 each), and
 - Star Driver (1 set),
 - Needle nose pliers (1 pair),
 - Adjustable rib joint pliers—2 inch minimum capacity (1 pair),
 - Adjustable wrenches, 8 inch (1 each) and 12 inch (1 each),
 - 5 pound hammer (1 each)
 - Rubber mallet (1 each)
 - Electrical tape (20 yards)
 - Duct Tape (20 yards)
 - Tire pressure gauge (1 each)
 - Mechanic's wire (25 foot roll)
 - Bolt cutter—24 inch or larger (1 pair), and
 - Complete set of box wrenches, metric and standard (1 set each).
 7. Rechargeable air bottle (100 psi capacity), hoses and fittings to fit tire valve stems (1 each);
 8. Flashlight and spare batteries (1 each);
 9. Booster cables, 25 ft. long minimum, 3-gauge copper wire with heavy-duty clamps with one end adapted to truck's power outlets (1 set);
 10. Funnel, multipurpose, flexible spout (1 each);
 11. 36-inch highly visible orange traffic cones with reflectorized bands (5 each);
 12. Reflector vest for the operator (1 each) (Type III night and day time);
 13. First aid kit, 16 units (1 kit);
 14. Drinking water, individually sealed bottles, minimum 16 oz. (12 each);
 15. Fire extinguisher, 1OABC (1 each);
 16. Hand broom (1 each);
 17. Snow shovel (1 each);
 18. Traction sand (20lbs);
 19. Flares, 30 minute (3 each);
 20. Reflective Triangular Warning devices (3 each);
 21. Dry floor; and
 22. Personal protective equipment such as gloves, glasses, etc.
- A. Developer's operators shall wear Department approved uniforms. Uniforms shall include, at a minimum, shirts covering the chest and armpits, full length pants, and protective footwear. Developer shall submit uniform samples for review and Acceptance of the Department prior to beginning work and in the event changes are proposed. The Developer's operators shall wear high visibility safety apparel. These items shall be provided and maintained by Developer. Developer's operators shall wear hats with Developer logos at all times while patrolling.
- B. Developer's operators shall not smoke during patrol operations and/or while assisting motorists.
- C. Developer's operators shall not use, be under the influence of, or have in their possession any alcohol, marijuana, or illegal substances during patrol operations. Operators shall not carry firearms, or any device whose primary function is as a weapon, either on their person or in the towing vehicle.

- D. Developer's operators shall express a positive, helpful, cooperative attitude when dealing with motorists.
- E. Any new operator assigned by Developer to the program, shall be properly trained in the courtesy patrol program and field operations. The new operator shall accompany a current operator, experienced with the Mile High Courtesy Patrol, for at least five shifts prior to patrolling a highway.
- F. Any new operator assigned by the Developer to the courtesy patrol program shall complete required Developer training, which shall be consistent with training on the Mile High Courtesy Patrol program, prior to patrolling a highway segment.

1.4 GENERAL EQUIPMENT AND OPERATOR REQUIREMENTS:

Developer shall comply with the general equipment and operator requirements described in this section.

Developer shall provide the Courtesy Patrol Service vehicles needed to meet the Performance Requirements in this Schedule 11. The Courtesy Patrol Service vehicle(s) shall meet the following requirements at all times during the O&M Period During Construction and Operating Period.

- A. **Tow Trucks:**
Tow truck shall be Colorado licensed, including Public Utility Commission licenses, and be an insured Class A tow truck with a minimum gross vehicle rating of 10,000 pounds, dual wheel chassis and four (4) ton recovery equipment rating. Flatbed "roll back" service trucks may be used in-lieu-of boom type wrecker trucks. Flatbed trucks must be equivalent in capacity to specified boom type trucks (excluding vertical lift) to safely handle the scope of work.
- B. **Motorist Assistance Vehicle:**
Motorist assistance vehicles shall be at minimum, a full size, one ton crew cab 4 door, long bed pickup truck with a minimum gross vehicle rating of 10,000 pounds, insured, equipped with and capable of carrying the equipment specified.
- C. All Courtesy Patrol Service vehicles shall be completely operational, in sound mechanical condition, and in full compliance with applicable legal requirements at all times, for the performance of the program services.
- D. The Courtesy Patrol Service vehicle's exterior shall be reasonably clean at the beginning of each shift, free of road grime, grease, and articles/equipment not needed for the program. No body damage and/or broken glass shall be permitted on the vehicle at the start of a shift.
- E. The inside of the vehicle shall be kept clean. The seat and floor shall be free of dirt, grease and any other substance that may transfer to someone's clothing by contact. The seat shall not be torn. Exposed springs, seat stuffing or damaged upholstery shall not be permitted. Torn dashboards, missing screws, hanging hoses or wire, or any other unsightly items inside the cab shall not be permitted.

- F. Developer shall maintain a backup Courtesy Patrol Service vehicle at all times, and shall use the backup to replace any disabled or otherwise unavailable Courtesy Patrol Service vehicle.
- G. The towing vehicles and motorist assistance vehicles must be a single color, as Accepted by the Department.
- H. The vehicle shall display a 15 inch by 26 inch (minimum) Courtesy Patrol logo sign on each door at all times during performance of program services. Developer shall have signs Accepted by the Department or his/her designee to verify logo and branding consistency with Department's Mile High Courtesy Patrol Program. Developer name, phone number, and/or logo shall not be permitted anywhere on the vehicle, unless completely covered with the Courtesy Patrol Service signs during performance of program services. All private information including, but not limited to logos, contact information, etc. shall be completely covered at all times while a vehicle is in service.
- I. The Courtesy Patrol Service signs shall be removed from the vehicle at all times when the vehicle is used for purposes other than the Courtesy Patrol Service program. Developer shall cover or remove future branding/sponsorship information when vehicles are not in service for Courtesy Patrol Service activities.
- J. Developer shall only be required to perform services up to the capacities of their equipment. If situations are encountered outside of their capacities, the operators shall:
 - 1. If on shoulder, offer use of cellular phone.
 - 2. If in roadway, alert motorists by activating yellow warning lights and contacting the responsible law enforcement agency.
 - 3. When a police officer is at the scene, return to patrolling, unless otherwise ordered.
 - 4. When cellular phones are provided, their usage must be reasonable to the situation. Developer shall have the right to control unreasonable requests (such as calls outside the 303, 720, or 719 Area Codes). Developer shall provide the cellular phone numbers to the Department upon request.

1.5 SAFETY OF VEHICLE OCCUPANTS:

Developer shall make provisions to transport all occupants of a disabled vehicle to the shoulder of the road or to the Drop Site. Under no circumstances are any occupants or pets to be left unprotected in the disabled vehicle while the vehicle and operator are transported to the shoulder of the road or a Drop Site

1.6 RADIO PROCEDURES:

Department has developed radio procedures required for use by the Developer's operators, and shall provide these procedures to Developer in writing. The Department may periodically update procedures, updated procedures will be provided to Developer in writing. A schedule for implementation of the updated procedures will be provided by the Department for Developer to follow.

Developer shall provide all the radios required for the Courtesy Patrol Services program within the Project

1.7 MAIL IN CARDS:

Developer shall give every assisted motorist a mail-in card, and a program brochure. The card will aid Department in tracking those services provided to the motorist and the public's reaction to the program. Department will provide Developer with the mail-in cards and program brochures. If mail-in cards and/or brochures are updated, Developer shall distribute the most recent version.

1.8 PAPERWORK:

Developer shall be required to complete an electronic log of each motorist assist and a log of total miles driven each shift for each operator. Motorist assist logs will also include data collection points of detection, verification, lane clearance, and roadway clearance times. Developer's vehicles that are required to use Express Toll Lanes shall also complete a toll log. The logs shall be accurate and completed at the end of each shift. Developer shall submit these logs electronically through the AVL system in chronological order for each operator.

1.9 TRAINING AND OPERATIONAL MEETINGS:

All operators shall receive orientation training provided by the Developer and Accepted by the Department, prior to the operator performing Courtesy Patrol Services duties. Developer shall not allow operators not having this training to perform any duties of the Courtesy Patrol Services program.

Schedule 12 Handback Requirements

1. General Handback Requirements

- a. Developer shall hand back the Project to the Enterprises on the Expiry Date such that as at the Expiry Date:
 - i. for each Element, the applicable Target as set out in the Performance and Measurement Table in Appendix A-2 to Schedule 11 (Operations and Maintenance Requirements) is met or exceeded;
 - ii. for each Residual Element, the Residual Life at Handback of such Element meets or exceeds its Residual Life Minimum Requirement;
 - iii. for each Element, all Renewal Work identified as needing to be performed in accordance with the most recent Accepted Renewal Work Plan, and following the identification of Category 1 Defects or Category 2 Defects affecting such Element within the 12 months prior to the Expiry Date, has been completed; and
 - iv. for each Renewal Element, Developer has demonstrated through the Final Handback Inspection Report that, from the time of its last reconstruction, rehabilitation, restoration, renewal or replacement, such Element has a Useful Life that meets or exceeds its Useful Life Baseline Requirement.
- b. The Handback Requirements and the Developer's other obligations under this Schedule 12 do not apply to Elements within or forming part of the Limited O&M Work Segments.

2. Specific Handback Requirements

2.1. Bridge Decks

- a. The Residual Life Methodology used by Developer for calculating the Residual Life of bridge decks shall, at a minimum, include a prediction of deterioration due to reinforcement corrosion over the duration of the Residual Life Minimum Requirement based on information obtained during the Term, including as reflected in or by:
 - i. the Durability Plan;
 - ii. routine inspections;
 - iii. Renewal Work Plans;
 - iv. Renewal Work Schedules; and
 - v. non-routine and Special Inspections.
- b. Developer shall ensure that quantitative data used in the prediction of Residual Life for all Residual Elements is representative and is gathered in accordance with the Durability Plan requirements and the relevant inspection requirements.

3. Developer Deliverables and Handback Activities

3.1. Introduction

- a. Developer shall submit each of the Handback Deliverables to the Enterprises no later than the date specified in the "End" column against such deliverable in Table 12-1 (Schedule of Handback Deliverables and Activities).
- b. Table 12-1 below also lists certain activities associated with the preparation of the Handback Deliverables and the required duration of such activities.

Table 12-1 Schedule of Handback Deliverables and Activities

Handback Deliverable/Activity	Months to Expiry Date		
	Start	End	Duration (Months)
Handback Schedule (Deliverable)	-	70	-
Residual Life Methodology (Deliverable)	-	70	-
Enterprises' Review of Handback Schedule and Residual Life Methodology (Activity)	70	68	2
Initial Handback Inspections (Activity)	68	62	6
Preparation of Initial Handback Inspection Report and Asset Condition Report (Activity/Deliverable)	62	60	2
Initial Calculation of Handback Reserve Amount (Deliverable)	60	60	0
Enterprises' Review of Initial Handback Inspection Report, Asset Condition Report and Initial Calculation of Handback Reserve Amount (Activity)	60	58	2
Handback Work Period (Activity)	58	0	58
Second Handback Inspections (Activity)	42	39	3
Preparation of Second Handback Inspection Report and Asset Condition Report (Activity/Deliverable)	39	36	3
Second Calculation of Handback Reserve Amount (Deliverable)	36	36	0
Enterprises' Review of Second Handback Inspection Report, Asset Condition Report and Second Calculation of Handback Reserve Amount (Activity)	36	34	2
Establishment of Handback Reserve Account	36	34	2
Initial Funding of Handback Reserve Account (Activity)	34	34	0
Handback Period (Activity)	34	0	34
Third Handback Inspections (Activity)	20	17	3
Preparation of Third Handback Inspection Report and Asset Condition Report (Activity/Deliverable)	17	14	3
Third Calculation of Handback Reserve Amount (Deliverable)	14	14	0
Enterprises' Review of Third Handback Inspection Report, Asset Condition Report and Third Calculation of Handback Reserve Amount (Activity)	14	12	2
Staff Training (Activity)	9	0	9
Final Handback Inspections (Activity)	3	1	2
Preparation of Final Handback Inspection Report and Asset Condition Report (Activity/Deliverable)	3	1	2
Issuance of Handback Certificate	<1	<1	0
Expiry Date		0	0

3.2. Handback Schedule

- a. Developer shall prepare, and no later than 70 months prior to the Expiry Date shall submit to the Enterprises for Acceptance, a schedule that complies with the requirements set out in Section 3.2.b of this Schedule 12.
- b. The Handback Schedule shall:
 - i. specify the dates of the activities to be undertaken by Developer for the remainder of the Term in accordance with the requirements of this Schedule 12; and
 - ii. state the date on which Developer shall provide the Enterprises an updated Maintenance Management Information System in accordance with Schedule 11 (Operations and Maintenance Requirements) that takes into account all Handback Inspections to be conducted pursuant to this Schedule 12.

3.3. General Requirements for Residual Life Methodology

- a. Developer shall prepare, and no later than 70 months prior to the Expiry Date shall submit to the Enterprises for Acceptance, a report that complies with the requirements set out in Section 3.3.b of this Schedule 12.
- b. The Residual Life Methodology Report shall:
 - i. include the evaluation and calculation criteria to be adopted for the calculation of the Residual Life at Handback of each Residual Element;
 - ii. comply with Good Industry Practice and be in accordance with the Enterprises' and/or CDOT's testing and forecasting methodologies in use in relation to similar Enterprise or CDOT owned or operated assets at the time of preparation of the report;
 - iii. include the scope of any Residual Life inspections and testing, together with a list of all inspection and testing organizations proposed by, and which shall be financially independent of, Developer; and
 - iv. address the specific requirements to be included in the Residual Life Methodology Report that are set out in the column headed "Residual Life Methodology (RLM) Requirement" in the table in set out in Appendix A (Residual Life Requirements) to this Schedule 12.

Developer shall ensure that all inspection and testing requirements conform to Good Industry Practice and reflect all technological advancements in the field of inspection, testing and Residual Life calculation.

- c. In reviewing and commenting on the RLM, the Enterprises shall be allowed access to all of Developer's Project Records used in the preparation of the report.
- d. Developer shall be required to obtain the Enterprises' Acceptance of the Residual Life Methodology Report, including the scope and schedule of inspections and tests proposed to be carried out, before commencing any Residual Life inspections and/or tests.
- e. Developer shall ensure that the Enterprises are given the opportunity to witness any of the inspections and/or tests and shall provide the Enterprises with a minimum of 15 Working Days' notice prior to the performance of any inspections or tests.
- f. Developer shall make full historic records of inspections, monitoring, testing, maintenance and Renewal Work that support the estimates of Residual Life for each Element available to the Enterprises.

3.4. Qualification of Inspection Engineers and Organizations

- a. The Residual Life Methodology Report shall include the qualifications and experience of all independent engineers, testing facilities, specialists and organizations that shall undertake the Handback Inspections, all of which shall be submitted to the Enterprises for Acceptance in the Residual Life Methodology Report.
- b. Developer shall cause:
 - i. all Handback Inspections to be conducted by a qualified independent consultant (financially independent of any Developer-Related Entity) appointed by Developer at its own cost and expense, who shall be an engineer registered in the State and shall owe a duty of care to both Developer and Enterprises jointly and whose identity and scope of work shall have been Accepted by the Enterprises (for the purposes of this Schedule 12, any such consultant (regardless of such consultant's scope of work), an "Accepted Independent Consultant"); and
 - ii. all Handback Inspection Reports and all Residual Life Methodology Reports to be prepared by an Accepted Independent Consultant.

3.5. Asset Condition Report

- a. Developer shall prepare and shall submit (updated as appropriate) to the Enterprises for Acceptance, at the same time as it submits each Handback Inspection Report, a report that complies with the requirements set out in Section 3.5.b of this Schedule 12.
- b. Each Asset Condition Report shall provide a record of the asset condition of all Elements, shall utilize the results of previous inspections and maintenance records held by the MMIS (supported by the results of the Handback Inspections) and, for each Element, shall set out:
 - i. a description and location of the Element;
 - ii. information that describes its current condition and rating according to CDOT's inspection manuals in use at the time of inspection, or other agreed inspection methodology;
 - iii. an assessment of (in the case of Residual Elements) its current Residual Life and (in the case of Renewal Elements) the period remaining of its Useful Life, in either case, based on the Handback Inspections, as well as the Renewal Work Plan inspection, testing and monitoring requirements set out in Schedule 11 (Operations and Maintenance Requirements); and
 - iv. photographs of the Element to support the assessment of the asset condition.

3.6. General Requirements for Handback Inspections

- a. Developer shall carry out the inspection and testing detailed in the Handback Schedule and required by the terms of this Schedule 12 for assessing the condition of Elements against intended performance and predicting the time to next maintenance activity and calculated Residual Life.
- b. Unless the method of inspection is previously mutually agreed with the Enterprises and then detailed in the Handback Inspection Report, Developer shall conduct all Handback Inspections in accordance with the inspection manuals, guidance, and standards issued by CDOT, and current at the time of inspection, that detail the means and methods for assessing the condition of national highway system assets including road pavement, Structures, cut slopes and embankments and other ancillary assets such as signs, fences, barriers and lighting stock.

3.7. Initial Handback Inspections

- a. Developer shall procure that an Accepted Independent Consultant shall carry out the initial Handback Inspections to identify and establish the asset condition, Residual Life and period remaining of the Useful Life of all Elements and verify the extent of all Work required to ensure that the requirements set out in Section 1 of this Schedule 12 are satisfied as at the Expiry Date (the "Handback Work").
- b. The inspection schedule shall be coordinated with the Enterprises and shall take account of the Enterprises' requirements for joint inspections, provided that, in any event, Developer shall provide the Enterprises a minimum of 15 Working Days' notice of any proposed inspection.
- c. The initial Handback Inspections shall be carried out from 68 to 62 months prior to the Expiry Date.
- d. Developer shall undertake appropriate testing to determine the condition of Elements, in accordance with the requirements set out in the column headed "Inspection Requirements" set out in Appendix A (Residual Life Requirements) to this Schedule 12. The required testing shall be identified based on the results of the inspections in order to permit an assessment of the performance and progressive deterioration of each Element over the Term. The testing shall be conducted under the control of an Accepted Independent Consultant.

3.8. Initial Handback Inspection Report

- a. Following the initial Handback Inspection(s) and testing, Developer shall prepare, and no later than 60 months prior to the Expiry Date submit to the Enterprises for Acceptance, a report that complies with the requirements set out in Section 3.8.b of this Schedule 12.
- b. The Initial Handback Inspection Report shall, at a minimum, include the following information:
 - i. initial Handback Inspection(s) results;
 - ii. results of the Asset Condition Report for all Elements;
 - iii. a list of each Residual Element that Developer considers:
 - A. did meet or exceed the applicable Target as set out in the Performance and Measurement Table in Appendix A-2 to Schedule 11 (Operations and Maintenance Requirements) at the time of the inspection;
 - B. would meet or exceed the applicable Target as set out in the Performance and Measurement Table in Appendix A-2 to Schedule 11 (Operations and Maintenance Requirements) as at the Expiry Date without the need for Handback Work; and
 - C. its Residual Life at Handback would meet or exceed its Residual Life Minimum Requirement without the need for Handback Work;
 - iv. a list of each Residual Element that Developer considers:
 - A. did not meet or exceed the applicable Target as set out in the Performance and Measurement Table in Appendix A-2 to Schedule 11 (Operations and Maintenance Requirements) at the time of the inspection and will require Handback Work prior to the Expiry Date to ensure that (i) it would meet or exceed such Target at the Expiry Date and (ii) its Residual Life at Handback would meet or exceed its Residual Life Minimum Requirement; and
 - B. did meet or exceed the applicable Target as set out in the Performance and Measurement Table in Appendix A-2 to Schedule 11 (Operations and Maintenance Requirements) at the time of the inspection, but will

require Handback Work prior to the Expiry Date to ensure that (i) it would meet or exceed such Target at the Expiry Date and (ii) its Residual Life at Handback would meet or exceed its Residual Life Minimum Requirement;

- v. a schedule (the "Handback Work Schedule") providing details of all Handback Work required, the timing and implementation strategy for the Handback Work and an estimate of the Handback Reserve Amount.
- c. In reviewing the report, the Enterprises shall be allowed access to all of Developer's Project Records used in the preparation of the report.

3.9. **Handback Work Obligation**

- a. Developer shall carry out the Handback Work in accordance with the Handback Work Schedule set out in the Accepted Initial Handback Inspection Report and each subsequent Accepted Handback Inspection Report.
- b. Handback Work identified as required in the Initial Handback Inspection Report and each subsequent Accepted Handback Inspection Report for any Residual Element to meet or exceed its Residual Life Minimum Requirement shall be completed no later than 18 months before the Expiry Date. All other Handback Work shall be completed before the Expiry Date.
- c. During the Handback Work Period Developer shall ensure that all Elements comply with the applicable General Requirements and meet or exceed the applicable Targets specified for the relevant Element in Appendix A-2 to Schedule 11 (Operations and Maintenance Requirements).
- d. During the Handback Work Period the Annual O&M Report shall detail the results of the Asset Condition Inspections, Specialist Inspections and Handback Work carried out during the previous year.

3.10. **Second and Third Handback Inspections**

- a. The objective of the second and third Handback Inspection(s) shall be to update the Asset Condition Report of each Element and to record wherever actions have been taken such as repairs, Renewal Work and/or Handback Work to address the findings of the previous Handback Inspection Report.
- b. The inspection schedule shall be coordinated with the Enterprises and shall take account of CDOT's requirements for joint inspections, provided that, in any event, Developer shall provide the Enterprises a minimum of 15 Working Days' notice of any proposed inspection.
- c. Developer shall procure that an Accepted Independent Consultant shall carry out:
 - i. the second Handback Inspection(s) from 42 to 39 months prior to the Expiry Date; and
 - ii. the third Handback Inspection(s) from 20 to 17 months prior to the Expiry Date.

3.11. **Second and Third Handback Inspection Reports**

- a. Following:
 - i. the second Handback Inspections, Developer shall prepare and, no later than 36 months prior to the Expiry Date; and
 - ii. the third Handback Inspections, Developer shall prepare and, no later than 14 months prior to the Expiry Date,

in each case, submit to the Enterprises for Acceptance a report that complies with the requirements set out in Section 3.11.b of this Section 12.

- b. The Second Handback Inspection Report and the Third Handback Inspection Report shall, at a minimum, include the following information:
 - i. results of the relevant Handback Inspection(s);
 - ii. list of repairs, Renewal Work and Handback Work undertaken subsequent to the previous Handback Inspection(s);
 - iii. revised Asset Condition Report for all Elements; and
 - iv. revised Handback Work Schedule.
- c. In reviewing the reports, the Enterprises shall be allowed access to all of Developer's Project Records used in the preparation of the reports.

3.12. Final Handback Inspection Report

- a. Three months prior to the Expiry Date, Developer shall procure that an Accepted Independent Consultant shall carry out the final Handback Inspections.
- b. Developer shall prepare, and no later than one month prior to the Expiry Date submit to the Enterprises for Acceptance, a report that complies with the requirements set out in Section 3.12.c of this Schedule 12.
- c. The Final Handback Inspection Report shall include the final Asset Condition Report of all Elements and a list of all such Elements and their Residual Life or Useful Life and shall demonstrate effective completion of all Handback Work identified in the Initial Handback Inspection Report, the Second Handback Inspection Report and the Third Handback Inspection Report.
- d. Following the Enterprises' Acceptance of the Final Handback Inspection Report, they shall, in their discretion, issue a certificate to Developer certifying either:
 - i. that all Handback Requirements have been met; or
 - ii. that some, but not all, of the Handback Requirements have been met and any such certificate shall specify which Handback Requirements the Enterprises consider have not been met.

Any certificate issued pursuant to this Section 3.12.d is a "Handback Certificate".

3.13. Staff Training

No later than nine months prior to the Expiry Date, Developer shall make arrangements to provide training for the Enterprises' and CDOT's nominated employees, or any other persons designated by the Enterprises, pertaining to all the aspects of the operation and maintenance of the Project to facilitate a seamless handover.

4. Handback Reserve Account

4.1. Establishment and Security

- a. No later than two months prior to the first day of the Handback Period, Developer shall establish an interest-bearing bank account (the "Handback Reserve Account"), with a financial institution to be selected by the Enterprises in their discretion, in the joint names of Developer and the Enterprises (or, at their discretion, either of them). Promptly after establishing the Handback Reserve Account, Developer shall provide to the Enterprises all details regarding the Handback Reserve Account, including the name, address and contact information for the institution and the account number.
- b. The Parties agree that (i) withdrawals from the Handback Reserve Account will only be permitted in accordance with this Section 4 and (ii) any withdrawal from the Handback Reserve Account will require the prior written approval of all named account holders (which approval each account holder shall be required to provide if the proposed

withdrawal is in accordance with this Section 4), other than in circumstances where Section 4.4.e of this Schedule 12 applies, in which event any withdrawal in accordance with such Section shall not require the prior written approval of Developer.

- c. At the discretion of the Enterprises, the Handback Reserve Account, and withdrawals therefrom, shall be controlled by a third party escrow agent pursuant to the terms of an escrow agreement to be entered into by such agent and the Parties. If the Enterprises exercise their discretion pursuant to this Section 4.1.c, the identity of such agent, and the terms of such agreement, shall be agreed between the Parties, acting reasonably.
- d. Developer shall not be permitted to grant any Encumbrance in favor of any third party (including, for certainty, its Lenders) in relation to the Handback Reserve Account or any amounts standing to the credit of it.

4.2. Reserve Funding

- a. No later than:
 - i. two months prior to the commencement of the Handback Work Period;
 - ii. two months prior to the commencement of the Handback Period; and
 - iii. 14 months prior to the Expiry Date,

Developer shall deliver to the Enterprises a report setting out its calculations of the Handback Reserve Amount in accordance with Section 4.3 of this Section 12, together with the report of an Accepted Independent Consultant, either verifying that the Developer's calculations of the Handback Reserve Amount are consistent with the then most recent Handback Work Schedule or stating the consultant's determination of the Handback Reserve Amount. Such reports shall be addressed to the Enterprises and shall state explicitly that the Enterprises may rely on the report. Within 45 Calendar Days of any such report being delivered to the Enterprises, the Parties shall seek to agree (acting reasonably) upon the Handback Reserve Amount and, in the absence of agreement within such period, the Handback Reserve Amount shall be the amount equal to the amount specified in the Accepted Independent Consultant's report.

- b. Subject to Section 4.5 of this Schedule 12, no later than five Working Days:
 - i. prior to the commencement of the Handback Period, Developer shall be required to fund the Handback Reserve Account in the amount of the Handback Reserve Amount determined in accordance with Section 4.2.a of this Schedule 12;
 - ii. after determination of the Handback Reserve Amount in accordance with Section 4.2.a of this Schedule 12 following submission of a report in accordance with Section 4.2.a.iii of this Schedule 12, Developer shall be required to ensure that the Handback Reserve Account is funded in an amount at least equal to the Handback Reserve Amount, provided that, to the extent that the amount standing to the credit thereof at such time exceeds the Handback Reserve Amount, the Developer shall be entitled to have such excess amount withdrawn and paid to it.
- c. Unless Developer has provided and maintains a Handback Letter of Credit that complies with the requirements of Section 4.5 of this Schedule 12, to the extent that at any time after the commencement of the Handback Period the balance standing to the credit of the Handback Reserve Account is not at least equal to the Handback Reserve Amount, the Enterprises shall, until such time as the balance standing to the credit of the Handback Reserve Account is equal to the Handback Reserve Amount, make deductions from subsequent Performance Payments, and pay such amounts into the Handback Reserve Account, provided that, at any time during the Handback Reserve Standstill Period, the Enterprises shall not make such deductions to the extent that such deductions would, in aggregate with all other deductions made with respect to any Performance Payment, result in a payment default or a drawing on any debt service reserve under the Financing

Agreements as determined based on a notice from Developer attaching a certificate to such effect from the Collateral Agent.

4.3. Calculation of Handback Reserve Amount

The following methodology shall be used for calculating the Handback Reserve Amount.

- a. The "Handback Renewal Elements Amount" means the aggregate amount, which shall be calculated by an Accepted Independent Consultant, of the estimated cost (in real dollars) to renew or replace each Renewal Element at the end of its Useful Life multiplied by a fraction (the "Deterioration Fraction", the numerator of which is its Age and the denominator of which is its Useful Life). In such calculation:
 - i. the Handback Renewal Elements Amount shall not be less than zero;
 - ii. the value of the Deterioration Fraction shall not be greater than 1.0; and
 - iii. where a Renewal Element has not been renewed or replaced during the Term, the value of the Deterioration Fraction for such Element shall be 1.0.
- b. The "Handback Residual Elements Amount" means the aggregate amount, which shall be calculated by an Accepted Independent Consultant, of the estimated cost (in real dollars) to improve, repair, renew or replace each Residual Element to ensure that its measured Residual Life will meet or exceed its Residual Life Minimum Requirement.
- c. Where the Age, Useful Life or Residual Life of any Element varies across the Project, the calculations of the Handback Renewal Elements Amount and the Handback Residual Elements Amount shall take into account such variability through multiple calculation line items for each relevant Element, each line item calculating the Handback Reserve Amount for component parts of the Element having similar Age, Useful Life or Residual Life as appropriate. The calculations of the Handback Renewal Elements Amount and the Handback Residual Elements Amount shall be made using the values of Age, Useful Life, Residual Life and estimated costs applicable as of the date of each calculation.
- d. For purposes of calculating the Handback Reserve Amount, the estimated costs of performing the Handback Work shall be equal to the greater of (i) the cost to Developer of self-performing the Handback Work and (ii) the cost to Developer of procuring the performance of the Handback Work by one or more third parties on an arms-length and commercially reasonable basis, in the case of (i) and (ii), inclusive of all design, engineering, construction, QA/QC, overhead, profit, insurance, bonding, escalation and other costs to perform such Handback Work in full.

4.4. Handback Reserve Account Use

- a. Subject to Section 4.4.b of this Schedule 12, Developer shall not be entitled to withdraw funds from the Handback Reserve Account to pay for the cost of performing any Handback Work.
- b. If, at any time during the Handback Reserve Standstill Period, Developer notifies the Enterprises that a withdrawal of funds from the Handback Reserve Account to pay for the cost of any Handback Work that has been performed is necessary to avoid a payment default or a drawing on any debt service reserve under the Financing Agreements, and such notice attaches a certificate to such effect from the Collateral Agent, any amounts standing to the credit of the Handback Reserve Account may at Developer's request be withdrawn to reimburse Developer for reasonable and documented third-party costs and expenses previously incurred by Developer to effect Handback Work to the extent, but only to the extent, necessary to avoid such default or drawing.
- c. The Handback Reserve Account shall remain in place and (subject to Sections 4.2.c, 4.4.b, and 4.5 of this Schedule 12) be fully funded at all times in an amount at least equal to the Handback Reserve Amount until the issuance of a Handback Certificate by the Enterprises or, if earlier, the Termination Date.

- d. Promptly following the issuance of a Handback Certificate by the Enterprises, any amounts standing to the credit of the Handback Reserve Account shall be withdrawn as follows:
 - i. if the Handback Certificate certifies that any Handback Requirements have not been met, in the following order of priority:
 - A. first, an amount equal to the portion of the Handback Reserve Amount equal to the cost of performing the Handback Work not performed by Developer shall be paid to the Enterprises; and
 - B. second, the remaining balance shall be paid to the Developer; or
 - ii. if the Handback Certificate certifies that all Handback Requirements have been met, the full balance standing to the credit of the Handback Reserve Account shall be paid to the Developer.
- e. If the Termination Date occurs prior to the issuance of a Handback Certificate, the full balance standing to the credit of the Handback Reserve Account as at the Termination Date shall be paid to the Enterprises.
- f. Any interest that accrues on amounts standing to the credit of the Handback Reserve Account shall only be withdrawn at the times other amounts are being withdrawn therefrom in accordance with, and shall be withdrawn pursuant to, Sections 4.2.b.ii and 4.4.c of this Schedule 12.

4.5. Handback Letter of Credit

- a. Instead of funding the Handback Reserve Account, Developer may, at its discretion, deliver to the Enterprises one or more letters of credit (collectively, the "Handback Letter of Credit") from an Eligible Financial Institution, each in a form Acceptable to the Enterprises and on the basis that the Enterprises shall be the sole beneficiaries, with aggregate value equal to the Handback Reserve Amount (provided that, for certainty, notwithstanding such delivery by Developer, it shall in any event be required to establish (but not fund) the Handback Reserve Account in accordance with the requirements of Section 4.1 of this Schedule 12).
- b. The Enterprises shall have the right to draw on the Handback Letter of Credit:
 - i. in circumstances where, had Developer not elected to deliver a Handback Letter of Credit pursuant to this Section 4.5, the Enterprises would have been entitled to payment of a portion of the amounts standing to the credit of the Handback Reserve Account pursuant to Sections 4.4.d.d or 4.4.e of this Schedule 12, up to an amount equal to such portion;
 - ii. if the issuer of the Handback Letter of Credit ceases to be an Eligible Financial Institution, up to the full amount of the Handback Letter of Credit, provided that, following such a draw, the Enterprises shall pay such amount into the Handback Reserve Account and the provisions of Sections 4.1, 4.2 and 4.4 of this Schedule 12 shall apply thereafter to the operation of the Handback Reserve Account; or
 - iii. if the Termination Date occurs prior to the issuance of a Handback Certificate, up to the full amount of the Handback Letter of Credit.

5. Deliverables

Deliverables shall be submitted for Acceptance in accordance with the specified time frames in both electronic format and hardcopy format. Acceptable electronic formats include Microsoft Word, Microsoft Excel, or Adobe Acrobat (PDF) files, unless otherwise indicated.

Deliverable	Information, Acceptance or Approval	Schedule
Handback Schedule	Acceptance	70 months before the Expiry Date
Residual Life Methodology Report	Acceptance	70 months before the Expiry Date
Asset Condition Report	Acceptance	Submit with all Handback Inspection Reports
Handback Work Schedule	Acceptance	Submit with all Handback Inspection Reports
Initial Handback Inspection Report	Acceptance	60 months before the Expiry Date
Initial Calculation of Handback Reserve Amount	Acceptance	60 months before the Expiry Date
Second Handback Inspection Report	Acceptance	36 months before the Expiry Date
Second Calculation of Handback Reserve Amount	Acceptance	36 months before the Expiry Date
Third Handback Inspection Report	Acceptance	14 months before the Expiry Date
Third Calculation of Handback Reserve Amount	Acceptance	14 months before the Expiry Date
Final Handback Inspection Report	Acceptance	After final Handback Inspections

**Appendix A
 Residual Life Requirements**

Element	Residual Life at Handback (yrs)	Inspection Requirements	Residual Life Methodology (RLM) Requirement
Road Pavement			
Traveled way structural capacity	– 10	<p>Pavement inspections shall be undertaken by an Accepted Independent Consultant.</p> <p>Inspections shall provide a continuous or near-continuous record of Residual Life in each lane. Where the inspection method does not provide a continuous record of Residual Life, the number of valid measurements in each measurement section shall be sufficient to give a statistically valid result.</p> <p>Inspections shall be repeatable to an agreed level of accuracy and inspection contracts shall include an agreed proportion of inspections to verify accuracy.</p> <p>Inspections shall include automated condition distress survey, ride quality, skid resistance, rutting and faulting and measurement of structural capacity of the pavement.</p>	<p>RLM shall:</p> <ul style="list-style-type: none"> • Be capable of calculation of Residual Life for any 0.1 mile section. • Take account of the thickness and stiffness of the pavement layers, the pavement loading history in equivalent standard axles as calculated from the traffic volume reports and the forecast traffic volumes, measured in equivalent standard axles, for the following 15 years. <p>At the Expiry Date, the structural capacity of each lane of the mainline roadway shall be such that a rehabilitation design for 10 years of traffic loading starting as of the Expiry Date will require no more than a 2-inch asphalt concrete overlay or equivalent treatment for the pavement type. The calculation method may assume that the 2 inch overlay is applied at any time over the ten years following the Expiry Date. The 10 year traffic loading will be determined based on the average annual traffic measured over the four years prior to the date upon which the calculation is undertaken and shall not include any predicted traffic escalation.</p> <p>Pavement strength testing and subsequent analysis to determine the structural capacity and the rehabilitation needed to meet the requirement above shall be completed by an Accepted Independent Consultant. Developer shall provide all traffic accommodation to allow pavement strength testing or other testing (either destructive or non-destructive), as required.</p>

Element	Residual Life at Handback (yrs)	Inspection Requirements	Residual Life Methodology (RLM) Requirement
Structures			
Reinforced concrete	40	Inspections of Structures shall be undertaken by Accepted independent testing organizations. Inspections shall follow the latest inspection guidelines (as they apply at the relevant date that the testing is undertaken) recognized by the Enterprises. A close examination shall be made of all parts of each Structure. Non-destructive tests shall be undertaken appropriate to the type of Structure. These shall include the measurement of structural deflection under calibrated load, the measurement of chloride and carbonation profiles from surface to reinforcement and/or tendon level, half-cell potential and the in-situ strength testing of concrete elements. Testing of steel Structures shall include the depth of corrosion and/or the measurement of remaining structural thickness for hidden and exposed parts. All lengths of weld shall be tested for cracking at key areas of structural steelwork.	RLM shall: <ul style="list-style-type: none"> • Draw on historical asset maintenance records, inspection and test histories for each Structure. Take account of the Enterprises', CDOT's and FHWA records of other Structures on the network with similar characteristics. • Include an assessment of load carrying capacity based on the original structural design calculations, the as built drawings, loading history and results of load deflection tests where appropriate. • Take account of any trends in asset deterioration to determine the rate of deterioration and to predict the future condition of individual Elements and the entire Structure. • Take account of industry guidance relating to residual life estimation. The measured performance shall be compared with expected performance and trends in asset deterioration and maintenance to predict the future condition and maintenance requirements of main structural Elements.

 Residual Life Requirements**

Element	Residual Life at Handback (yrs)	Inspection Requirements	Residual Life Methodology (RLM) Requirement
Bridge Deck (Structural)	15	Inspections shall be in accordance with the Durability Plan schedule. Inspections shall, at a minimum, identify and measure delamination in Bridge decks by chain dragging or hammer sounding, the measurement of chloride and carbonation profiles from surface to reinforcement and/or tendon level, half-cell potential and the in-situ strength testing of concrete elements.	As above
Railing	25	Inspections of Structures shall be undertaken by Accepted independent engineers, test facilities and specialists. For visual inspections and measurement, competence shall be based on experience and training. For Specialist Inspections, competence shall be based on the possession of valid national or international certification by a recognized certification authority. Inspections shall follow the latest inspection guidelines (at the time of inspection) issued by the Enterprises. A close visual inspection shall be made of all parts of each Structure including items such as hidden or limited access components such as cables, bearings and expansion joints.	RLM shall: <ul style="list-style-type: none"> • Draw on historical asset maintenance records, inspection and test histories for each Structure. • Take account of the Enterprises', CDOT's and FHWA records of other Structures on the network with similar characteristics.
Bearings	25		
Overhead sign supports (structural Elements)	15		
Retaining walls (Including MSE Walls)	40		
Drainage			
Underground storm sewer systems (Including pipes, manholes, chambers.)	40	Inspection of storm sewer systems shall include closed circuit TV inspection of all buried pipe work. Groundwater level monitoring at locations defined in the	RLM shall: <ul style="list-style-type: none"> • Draw on historical asset maintenance records, inspection and test histories for each Element of

 Residual Life Requirements**

Element	Residual Life at Handback (yrs)	Inspection Requirements	Residual Life Methodology (RLM) Requirement
Culverts/ headwalls	40	Residual Life Methodology Report shall be required to provide assurance of a 10 year Residual Life for groundwater interceptor drains. Inspection of stormwater management systems shall include all components such as ditches, stormwater basins and filters. Inspections of culverts shall include measurement of deformation. Confirm that all Elements and assemblies for inlets, outfalls, water quality structures and detention ponds function as designed.	the drainage system. • Include a methodology to determine the Residual Life of filter drains designed to intercept groundwater. • Draw on design and Permit requirements.
Reinforced ditches (Concrete lined, rock channel, tied concrete block, energy dissipaters.)	10		
Underdrains, filter drains	10		
End Treatments (inlet protection, aprons)	25		
Water Quality features	10		
Earthworks			
Earthwork slopes (Including reinforced soil slopes)	30	For embankment and cut slopes a risk based inspection procedure shall be adopted following Good Industry Practice. Deformation monitoring will be required to provide assurance through the RLM of a 50-year Residual Life. Inspections of all ancillary items shall be undertaken by personnel having adequate training on modes of failure, risk assessment and observational skills.	RLM for earthwork slopes shall draw on historical inspection and asset maintenance records and the vulnerability of the slope to failure.
Ancillaries			
Concrete barrier (median)	15	Inspections of all ancillary items shall be undertaken by personnel having adequate training on modes of failure, risk assessment and observational skills where applicable	RLM shall draw on historical inspection, maintenance and rehabilitation records for system components, and life cycle and durability analyses.
Fences	10

Light Poles	10	elements will be rated to ensure adequate performance and load resistance. Unless otherwise agreed inspections to be carried out in accordance with guidance, manuals and standards issued by the Enterprises current at the time of inspection.	
Curbs and gutters	10		
Manhole covers, gratings, frames and boxes	20		
Mechanical and Electrical Systems			
Cabling, joints, switch gear, etc.	20	Inspection scope and depth shall be determined by the inspecting organization but as a minimum shall be based upon relevant State or Federal codified requirements, applicable NFPA Standards, and by the design and system manufacturer's/fabricators inspection requirements.	RLM shall draw on historical inspection, maintenance and rehabilitation records for system components, and life cycle and durability analyses.
Cover Plumbing Systems			
Standpipe and Sprinkler/Deluge Piping and nozzles	50	Inspections shall be based upon Good Industry Practice, manufacturers' inspection requirements and applicable FHWA requirements and NFPA Standards. Inspection of electrical systems shall be undertaken by qualified individuals (NETA or equivalent for electrical, NICET for Fire Alarm, other) and performed in accordance with NFPA 70B, as a minimum.	RLM shall draw on historical inspection, maintenance and rehabilitation records for system components, and life cycle and durability analyses and historical fault logs from the SCADA system
Roadway Piping and Drains	50

**Schedule 13
Required Insurances¹**

1. CONSTRUCTION PERIOD INSURANCES²

From the Financial Close Date until (unless specified otherwise in this Section 1 of this Schedule 13) the Substantial Completion Date, Developer will obtain and maintain, or cause to be obtained and maintained, the Insurance Policies with respect to the Work (including O&M Work During Construction) and the Project described in this Section 1 of this Schedule 13.

1.1. "All Risk" Builders' Risk

Builder's Risk insurance written on an "all risks" basis, completed value form, on a non-reporting basis, insuring against "all risks", including the following perils: loss or damage by fire, collapse, lightning, windstorm, tornado, flood, earthquake, hail, explosion, riot, vandalism and malicious mischief, civil commotion, aircraft, vehicle impact, terrorism (both domestic and foreign acts of terrorism), smoke and such other risks as are usual to a similarly situated project, in each case:

- a. in an amount not less than:
 - i. the lesser of:
 - A. the full replacement cost of the Work and the Project³, including on and off-site fabrication, installation, storage and staging areas; and
 - B. the Probable Maximum Loss for the Work and the Project (and, with respect to any sublimits, subject to Section 1.1.e of this Schedule 13, the Probable Maximum Loss in respect of the relevant peril), including on and off-site fabrication, installation, storage and staging areas; *plus*
 - ii. until such date as the demolition of the existing viaduct is completed:
 - A. \$115,000,000; *plus*
 - B. \$80,000,000⁴ in extra expense insurance, which extra expense insurance may be combined with that specified in Section 1.1.g.ii of this Schedule 13, subject to a combined limit of \$80,000,000 with respect to any one loss, to cover, among other things, the additional expenses incurred for traffic rerouting following an insured loss to the viaduct;
- b. providing for either a DE 5 or LEG 3 exclusion pertaining to the cost of making good any faulty work, faulty materials, or any design error or omission;
- c. providing coverage for demolition/debris removal costs and increased cost of construction, with a minimum sublimit of \$50,000,000;
- d. providing "Ordinance or Law Coverage", with a minimum sublimit of \$50,000,000;

¹ Developer may satisfy the requirements set out in Schedule 13 by (i) placing any of the Insurance Policies on a Project-specific basis or (ii) relying on corporate policies of Developer-Related Entities (or their Affiliates). In either case, however, Developer must satisfy all requirements of this Schedule 13 and be able to evidence that all such requirements have been satisfied.

² This Schedule 13, as drafted, assumes that Developer will satisfy its Construction Period obligations hereunder (including in respect of (i) O&M During Construction and (ii) completed Payment Milestones in the period between the applicable Milestone Completion Date and Substantial Completion) by placing insurances that satisfy Section 1 of this Schedule 13. The Enterprises will permit amendments to be made to this Schedule 13 prior to execution of the Agreement to reflect Preferred Proposer's insurance program to the extent that such program involves insuring O&M During Construction and/or completed Payment Milestones under Section 2, provided that (A) Proposer has proposed such amendments as commercial/legal Project Agreement comments during the procurement process and (B) such amendments have been approved by the Enterprises (as a result of determining that the resulting coverage would be equivalent and the Project, the Enterprises and CDOT would not be adversely affected).

³ The replacement cost is assumed to be the Construction Contract price (not including the cost of O&M Work During Construction), plus \$40,000,000, which amount reflects the replacement cost of those portions of the Project that do not require construction or material reconstruction. Developer's proposed replacement cost calculation will be subject to Acceptance by the Enterprises.

⁴ **Note to Proposers:** This amount remains under review.

- e. if such insurance places a sublimit on flood coverage, such sublimit shall be no less than the greater of:
 - i. \$100,000,000; and
 - ii. the Probable Maximum Loss in respect of such peril;
- f. including coverage for delay in start-up on a gross income basis for the greater of:
 - i. 12 months of delay; and
 - ii. the Probable Maximum Delay;
- g. including coverage for the following, with the limits specified below:
 - i. property in transit (in-land only) and unnamed locations;
 - ii. extra/expediting expenses (with a minimum sublimit of \$50,000,000);
 - iii. off premises services interruption to a minimum of FLEXA perils cover;
 - iv. professional fees (with a minimum sublimit of \$10,000,000);
 - v. valuable papers;
 - vi. hot and cold testing and commissioning (with a minimum limit of 120 Calendar Days);
 - vii. prevention of access (with a minimum limit of eight weeks); and
 - viii. ingress/egress (with a minimum limit of eight weeks); and
- h. provide for interim payments in the event of any loss.

1.2. Commercial General Liability

Commercial general liability insurance (together with any excess or umbrella liability) against claims for personal injury (including bodily injury and death) and property damage or loss (including liabilities as a result of repairs and alterations) however arising occurring with respect to the Work or the Project, including on and off-site fabrication, installation, storage and staging areas, such insurance:

- a. to be on an occurrence form (as that term is used in the insurance industry) with a combined single limit of not less than \$100,000,000 per occurrence and in the aggregate which may be provided in a layered placement, with the layers excess of the primary general liability to provide excess automobile liability and employers' liability;
- b. to be subject to an ISO CG 22 80 endorsement and no other professional services exclusions; and
- c. to cover at least the following hazards:
 - i. premises and operations liability;
 - ii. completed operations for a period of not less than eight years after the Substantial Completion Date or, if later, the expiration of any applicable statutes of limitation or repose;
 - iii. independent contractors;
 - iv. blanket contractual liability for all contracts;
 - v. sudden and accidental pollution to a minimum of 240 hours detection and a further 240 hours reporting to insurers;
 - vi. broad form property damage;
 - vii. contingent employers' liability;

- viii. non-owned automobile liability;
- ix. cross liability and severability of interests; and
- x. employees as additional insureds.

1.3. Workers' Compensation and Employers' Liability

Workers' compensation insurance, as required by the statutory limits of the State, and employers' liability with a limit of not less than \$1,000,000 and excess liability coverage.

1.4. Professional Liability

- a. From the Financial Close Date until the eighth anniversary of the Substantial Completion Date (or for a total period of ten (10) years from the Financial Close Date if the insurance is provided by a policy specific to this Project), professional liability insurance, which may be written on a claims made form, with limits of liability not less than \$10,000,000 per claim and \$10,000,000 annual aggregate (A) for each of the Principal Subcontractors (other than the O&M Contractor or any other Principal Subcontractor only performing O&M Work) and (B) for such other Subcontractor(s) (if any), including the Lead Engineer (as defined in the ITP), that are primarily responsible for engineering and design of structural Elements of the Work.
- b. Developer will ensure that all other professionals performing design, engineering, quality management, inspection, surveying and related professional services in respect of the Work and the Project carry or are covered by professional liability insurance for limits that are in accordance with Good Industry Practice.

1.5. Contractors' Pollution Liability and Pollution Legal Liability (Combined Form)

Contractors' Pollution Liability and Pollution Legal Liability insurance for the Work and the Project, which may be written on a claims made form, which coverage will:

- a. be with limits of not less than \$10,000,000 per occurrence (or such similar term as defined in the policy or policies) and \$20,000,000 aggregate; and
- b. include coverage for:
 - i. environmental impairment liability;
 - ii. third party bodily injury;
 - iii. property damage liability (including remediation and clean-up costs);
 - iv. disposal site and transportation extensions; and
 - v. underground storage tanks; and
- c. provide for an extended reporting period until the earlier of: (i) the eighth anniversary of the Substantial Completion Date; and (ii) the tenth anniversary of the Agreement Date,

provided that, should such Contractors' Pollution Liability and Pollution Legal Liability insurance be provided in separate policies, the limits of \$10,000,000 per occurrence (or such similar term as defined in the policy or policies) and \$20,000,000 aggregate will apply to each policy.

1.6. Automobile Liability

Automobile Liability insurance on any owned, non-owned, and hired automobile used in connection with the Work and the Project with a limit of not less than \$10,000,000 per occurrence.

1.7. Aircraft Liability

If and when aircraft are used in the performance of the Work and the Project, aircraft liability insurance (including owned and non-owned aircraft) which coverage will be with limits of not less than \$25,000,000 per occurrence and \$25,000,000 in the aggregate. Where the only aircraft used

in the performance of the Work and the Project are unmanned aerial vehicle(s), at the option of the Developer, cover may be provided under Section 1.2 of this Schedule 13.

1.8. Railroad Liability and Railroad Protective Liability

If such coverage is not already provided under the commercial general liability insurance required pursuant to Section 1.2 of this Schedule 13, railroad liability and railroad protective liability insurance which coverage shall be with limits of not less than \$5,000,000 per occurrence and \$10,000,000 in the aggregate or, if higher, such other limits as required by UPRR, BNSF or DRIR in connection with the Work and the Project. This insurance shall be in effect only at such times as are required by the relevant Railroad.

1.9. Marine Cargo

If and when any property, materials or equipment intended to be used in connection with the Work and the Project are to be shipped by sea, marine cargo insurance which coverage shall provide coverage in an amount of not less than full replacement value per occurrence.

1.10. Contractors' Equipment

Contractors' equipment insurance covering any piece of equipment with a replacement cost in excess of \$500,000, which coverage shall provide coverage in an amount of not less than full replacement value per occurrence.

1.11. Insureds

All Insurance Policies required pursuant to this Section 1 of this Schedule 13:

- a. other than the policies required pursuant to Sections 1.4 and 1.8 of this Schedule 13, must include Developer and the Construction Contractor⁵ as named insureds; and
- b. other than the policies required pursuant to Sections 1.3, 1.4, 1.8, 1.9 and 1.10 of this Schedule 13, must include the Specified Additional Insureds as additional insureds.

2. OPERATING PERIOD INSURANCES

From the Substantial Completion Date for the duration of the Term, Developer will obtain and maintain, or cause to be obtained and maintained, the Insurance Policies with respect to the Work and the Project described in this Section 2 of this Schedule 13.

2.1. "All Risks" Property

"All Risks" property insurance with no co-insurance including the following perils: loss or damage by fire, collapse, lightning, windstorm, tornado, flood, earthquake, hail, explosion, riot, vandalism and malicious mischief, civil commotion, aircraft, vehicle impact, terrorism (both domestic and foreign acts of terrorism), smoke and such other risks as are usual to a similarly situated project, in each case:

- a. the lesser of:
 - i. the full replacement cost of the Work and the Project, including on and off-site fabrication, installation, storage and staging areas; and
 - ii. the Probable Maximum Loss for the Work and the Project (and, with respect to any sublimits, subject to Section 2.2.b of this Schedule 13, the Probable Maximum Loss in respect of the relevant peril), including on and off-site fabrication, installation, storage and staging areas;
- b. if such insurance places a sublimit on flood coverage, such sublimit shall be no less than the greater of:

⁵ This assumes that the Construction Contractor will perform O&M Work During Construction. To also include the O&M Contractor if it will perform such work.

- i. \$100,000,000; and
- ii. the Probable Maximum Loss in respect of such peril;
- c. include coverage for the following, within the limits specified below:
 - i. business interruption on a gross income basis for the greater of:
 - A. 12 months of delay; and
 - B. the Probable Maximum Delay;
 - ii. boiler and machinery perils including machinery breakdown;
 - iii. property in transit (in-land only) and unnamed locations;
 - iv. extra/expediting expenses (with a minimum sublimit of \$50,000,000);
 - v. off premises services interruption;
 - vi. professional fees (with a minimum sublimit of \$10,000,000);
 - vii. valuable papers;
 - viii. prevention of access (with a minimum limit of eight weeks);
 - ix. ingress /egress (with a minimum limit of eight weeks); and
- d. provide for interim payments in the event of any loss.

2.2. Commercial General Liability

Commercial general liability insurance (together with any excess or umbrella liability) against claims for personal injury (including bodily injury and death) and property damage or loss (including liabilities as a result of repairs and alterations) however arising occurring with respect to the Work or the Project, including on and off-site fabrication, installation, storage and staging areas, such insurance:

- a. to be on an occurrence form (as that term is used in the insurance industry) with a combined single limit of not less than \$100,000,000 per occurrence and in the aggregate, which may be provided in a layered placement, with the layers excess of the primary general liability to provide excess automobile liability and employers' liability; and
- b. include coverage for:
 - i. premises and operations liability;
 - ii. products and completed operation liability;
 - iii. independent contractors;
 - iv. blanket contractual liability for all contracts;
 - v. sudden and accidental pollution;
 - vi. broad form property damage;
 - vii. contingent employers' liability;
 - viii. non-owned automobile liability;
 - ix. cross liability and severability of interests clause; and
 - x. employees as additional insureds.

2.3. Workers' Compensation and Employers' Liability Insurance

Workers' compensation insurance, as required by the statutory limits of the State, and employers' liability with a limit of no less than \$1,000,000 and excess liability coverage.

2.4. Pollution Liability

Pollution and Environmental Impairment Liability insurance for the Work and Project, which may be written on a claims made form, which coverage will:

- a. be with limits of not less than \$10,000,000 per occurrence and \$10,000,000 annual aggregate; and
- b. include coverage for:
 - i. environmental impairment liability;
 - ii. third party bodily injury;
 - iii. property damage liability (including remediation and clean-up costs);
 - iv. disposal site and transportation extensions; and
 - v. underground storage tanks.

2.5. Automobile Liability

Automobile Liability insurance on any owned, non-owned and hired automobile used in connection with the Work and the Project with a limit of not less than \$10,000,000 per occurrence.

2.6. Railroad Liability and Railroad Protective Liability

If such coverage is not already provided under the commercial general liability insurance required pursuant to Section 2.1 of this Schedule 13, railroad liability and railroad protective liability insurance which coverage shall be with limits of not less than \$5,000,000 per occurrence and \$10,000,000 in the aggregate or, if higher, such other limits as required by UPRR, BNSF or DRIR in connection with the Work and the Project.

2.7. Insureds

All Insurance Policies required pursuant to this Section 2 of this Schedule 13:

- a. other than the policies required pursuant to Section 2.6 of this Schedule 13, must include Developer and the O&M Contractor as named insureds; and
- b. other than the policies required pursuant to Sections 2.3 and 2.6 of this Schedule 13, must include the Specified Additional Insureds as additional insureds.

2.8. Indexation

- a. All Dollar figures in the Insurance Policy requirements set out in Section 2.1 of this Schedule 13 shall be indexed annually pursuant to Section 2.3 of the Project Agreement.
- b. All Dollar limits of liability in the Insurance Policy requirements set out in Sections 2.2, 2.4 and 2.5 of this Schedule 13 shall be indexed annually from the Substantial Completion Date pursuant to Section 2.3 of the Project Agreement.
- c. After indexation has been applied from time to time, Developer's obligation shall be to take out and maintain, or to cause the obtaining and maintenance of, insurance pursuant to Section 25 of the Project Agreement and this Schedule 13 where the limits are as close to and in excess of the indexed values as is reasonably obtainable in the insurance market, provided that such obligation shall only apply to newly placed or renewed Insurance Policies and not to the Insurance Policies in effect at the time such time as the indexation applies.

3. GENERAL REQUIREMENTS

3.1. Probable Maximum Loss Study

- 3.1.1. Whenever this Schedule 13 references:

- a. “Accepted PML Study”, such term means the PML Study (and any update thereto) Accepted by the Enterprises;
 - b. “PML Study”, such term has the meaning given to it in Section 3.1.2 of this Schedule 13;
 - c. “Probable Maximum Delay”, such term means each probable maximum delay period limit determined from time to time pursuant to an Accepted PML Study; and
 - d. “Probable Maximum Loss”, such term means each probable maximum loss amount limit (or sublimit) determined from time to time pursuant to an Accepted PML Study.
- 3.1.2. If, at any time, Developer elects to place the insurance required pursuant to Section 1.1 or 2.1 of this Schedule 13 on a Probable Maximum Loss and Probable Maximum Delay basis, Developer shall submit to the Enterprises, for Acceptance, a Probable Maximum Loss and Probable Maximum Delay study (a “PML Study”, which term, if such a study has previously been submitted by Developer pursuant to this Section, shall include any updates thereto submitted by Developer pursuant to this Section) performed for the Developer by its Insurance Broker prior to, as the case may be:
- a. the placement of coverage required pursuant to Section 1.1 of this Schedule 13;
 - b. the first placement on such basis of any coverage required pursuant to Section 2.1 of this Schedule 13; and
 - c. following submission of a PML Study pursuant to Section 3.1.2.b of this Section 13, every sixth anniversary of the placement of coverage referenced in such Section.

3.2. Deductibles

Each Insurance Policy may include deductibles pursuant to Section 3.2 of this Schedule 13, and, for certainty, shall not include any self-insured retentions. A self-insured retention may be utilized on the Insurance Policies required pursuant to Sections 1.4, 1.5 and 2.4 of this Schedule 13.

3.3. Placement on Occurrence Basis

Except for the Insurance Policies required pursuant to Sections 1.4, 1.5 and 2.4 of this Schedule 13, all liability insurance Policies shall be placed on an occurrence and not a claims made basis.

3.4. Reinstatement Work and Loss Payee Provisions

Any loss payee provision in any Insurance Policy shall be consistent and not conflict with the requirements of Section 25.5 of the Project Agreement.

3.5. Maintenance Yard

All references in this Schedule 13 to insuring “the Work and the Project” (or statements to similar effect) shall be interpreted to include, with effect from the Snow and Ice Control Commencement Date, the Maintenance Yard (including activities performed thereat).⁶

⁶ This Section will only be included if the Preferred Proposer elects to use the Maintenance Yard with effect from the Snow and Ice Control Commencement Date.

Schedule 14 Strategic Communications

1. GENERAL

1.1. General Requirements

- 1.1.1. Providing timely, relevant and context sensitive information is a critical component of the Project. The Developer and the Department shall work collaboratively to provide a robust and coordinated communications approach to achieve the overall Strategic Communication goals. The Developer shall be responsible for development and implementation of a communication strategy in collaboration with the Department and in accordance with the requirements of this Schedule. The Developer shall document these communication strategies in an overall Strategic Communications Plan, which shall comprise the individual plans required within this Schedule.
- 1.1.2. The Strategic Communications Plan shall be developed with an awareness of the following issues:
- a. Communication and outreach commitments made in the I-70 East EIS;
 - b. Presence of an environmental justice community and limited English proficient residents and business owners in close proximity to project;
 - c. Community "fatigue" from lengthy I-70 East EIS;
 - d. Diversity of stakeholders, including local residents, local governments, commuters, small and local businesses, and major national/international corporations;
 - e. Large, separate infrastructure projects planned near the Project area including the redevelopment of the National Western Center; and
 - f. Use of a public-private partnership to deliver this Project.

2. STAFF REQUIREMENTS

2.1. General Requirements

- 2.1.1. The Developer shall provide a full-time Project Communications Manager (PCM) with at least seven years' professional experience working on design-build construction projects and a practical understanding of construction schedules, Transportation Management Plans (TMPs), and Work performance processes; experience with and understanding of the importance of maintaining good relationships between the Project and government, businesses, residents, the general public, and other stakeholders; and experience with implementing communication and Public Involvement and Information (PI) strategies on projects of similar scope, nature, and complexity as this Project. The PCM shall be responsible for overseeing all Developer communications efforts during the Term.
- 2.1.2. The Developer shall provide a full-time Spanish/English bilingual Community Liaison with experience in and knowledge of the Swansea-Elyria neighborhoods. The Community Liaison shall coordinate closely with the Department and be responsible throughout the Term for ensuring that local residents, businesses and nonprofit groups are informed about the Project and have a single point of contact for all questions and concerns.
- 2.1.3. The communications team shall be housed at the Developer's office during the Construction Period and with the Developer's operations team during the remainder of the Term.

3. STAFF COORDINATION

3.1. General Requirements

3.1.1. Developer's Communications Team

Prior to the issuance of NTP1, the Developer shall submit to the Department for Information the names and resumes of all members of its communications team with assigned roles and responsibilities and provide a staff availability list covering all days and hours during the

Construction Period. The Developer shall update such information quarterly during the Construction Period and annually thereafter throughout the Term (reflecting coverage during the Operating Period) and at such other times as are reasonably required to ensure that such information remains up to date.

3.1.2. Throughout the duration of the Term, the Developer shall hold weekly Strategic Communication meetings, to include the Department's Communications Team, at the Project office. At these meetings the Developer and the Department will discuss weekly communications issues and provide details for upcoming media advisories/press releases, community meetings, Lane Closure Reports, website updates and information line recordings. The agenda for each meeting shall be the responsibility of the PCM and shall be submitted to the Department in advance of each meeting.

3.1.3. Public Involvement Services Contact Sheet

The Developer shall prepare a PI Contact Sheet containing the names of appropriate Strategic Communications personnel for the Project. At a minimum, the contact list shall include the name, address, phone number(s) and email addresses for the following individuals or organizations. The PI Contact Sheet shall be submitted to the Department for Information prior to the issuance of NTP1 and updated annually throughout the Term and at such other times as are reasonably required to ensure that such information remains up to date.

- a. Developer and Department;
 - i. Project Director;
 - ii. HPTE Director;
 - iii. Project Communications Manager;
 - iv. Project website administrator;
 - v. Community Liaison; and
 - vi. Project Colorado Transportation Management Center (CTMC) contact;
- b. City and County of Denver;
 - i. Mayor's Office;
 - ii. Public Works;
 - iii. PI Office;
 - iv. Chamber of Commerce;
 - v. Fire/rescue; and
 - vi. Police department;
- c. City of Aurora;
 - i. City Manager's Office;
 - ii. Public Works;
 - iii. PI Office;
 - iv. Chamber of Commerce;
 - v. Fire/rescue; and
 - vi. Police department;
- d. City of Commerce City;
 - i. City Manager's Office;
 - ii. Public Works;

- iii. Public Information Office (PIO);
- iv. Chamber of Commerce;
- v. Fire/Rescue; and
- vi. Police Department;
- e. Local State Patrol Office;
- f. Local hospitals;
- g. Key stakeholders: to be provided by the Department, including but not limited to the following:
 - i. Local schools and school districts;
 - ii. Businesses;
 - iii. Community centers;
 - iv. Visitor/tourist destinations;
 - v. Churches; and
 - vi. Registered Neighborhood Organizations and neighborhood associations;
- h. Railroads;
- i. Airports;
- j. Utility Owners;
- k. Commercial vehicle operators, including airport shuttles and taxi companies; and
- l. Others as defined by the Department.

4. STRATEGIC COMMUNICATIONS PLANS

4.1. General Requirements

- 4.1.1. The Developer shall prepare and maintain an overall Strategic Communications Plan consisting of the following individual plans to ensure well-coordinated two-way communications during each phase of the project:
 - a. Construction Period Communications Plan (CPCP);
 - b. Maintenance and Operations Communications Plan (MOCP); and
 - c. Crisis Communications Plan (CCP).
- 4.1.2. Each plan shall include planned communications strategies; primary stakeholder communications lists; and identification of any PI issues and proposed outreach. Each plan shall be submitted to the Department for Approval according to the timelines provided in this Schedule. The Developer shall monitor and improve the effectiveness of each plan and resubmit for Acceptance annually upon the anniversary of the initial Approval by the Department or whenever the following conditions exist:
 - a. A plan or procedure no longer adequately addresses the matters it was originally intended to address;
 - b. A plan or procedure does not conform to the requirements of this Agreement;
 - c. An audit by the Developer or the Department identifies a deficiency requiring an update; or
 - d. Organizational structure changes require revision to a plan.
- 4.1.3. The Developer shall clearly identify in a cover sheet what changes were made in each update to expedite the Department's review. Also, a red line and a final copy shall be provided.

- 4.1.4. Each plan shall describe the basic roles and responsibilities between the Department and the Developer. In general:
- a. Department Responsibilities
The Department is responsible for communicating overall vision on the Project including why the Project is needed, what Work will be done, how the Project will benefit customers, how the Project fits into the community, and how the Project fits into broader transportation plans. The Department will communicate the overall purpose of, implementation of, and education on how to use, the Tolled Express Lanes.
 - b. Developer Responsibilities
The Developer is responsible for communicating overall coping information during the Construction Period and the Operating Period including details about the TMP, and other activities that affect residents and businesses.
 - c. Joint Department/Developer Responsibilities
The Developer shall collaborate with the Department to develop key messages related to Construction Work and O&M Work activities. The Department will have final Approval before the messages are disseminated.
 - i. Government Relations
Throughout the Term, all communication requests received by the Developer from Governmental Authorities shall be immediately referred to the Department (not including those requests related to Project management or coordination for Local Agency Permits). The Developer shall assist in giving timely information to the Department regarding construction Activities, and shall participate in meetings as requested.
 - ii. Media Requests
The Developer shall make project managers, supervisors, and other area experts available to the Department for assistance in media requests. The Developer shall also assist in media site visits and adhere to media deadlines when possible.

5. CONSTRUCTION PERIOD COMMUNICATIONS PLAN

5.1. General Requirements

- 5.1.1. The Developer shall prepare and maintain a CPCP to develop two-way communication of Project information with the public. This CPCP shall be used by the Developer throughout the duration of the Construction Period to manage and implement the PI process. The Developer's CPCP shall be submitted to the Department for Approval prior to the issuance of NTP 1.
- 5.1.2. The CPCP shall include the following:
- a. Community, Government and Business Stakeholders
The Developer shall use a variety of strategic PI approaches and tools to ensure that stakeholders have accurate information about the Project schedule, progress and construction impacts, as well as address issues as they arise.
When necessary, PI strategies shall be tailored to individual stakeholders and shall specify which approaches and tools will be used to disseminate information. Specific organizations shall be provided by the Department utilizing the database established through the I-70 East EIS. Project stakeholders include, but are not limited to, the following groups:
 - i. Area residents;
 - ii. Local and regional business owners, employees and customers;

- iii. Registered Neighborhood Organizations and neighborhood associations;
 - iv. Local community organizations;
 - v. Local schools;
 - vi. Property owners and property management companies;
 - vii. Commuters;
 - viii. Transportation management/advocacy organizations;
 - ix. Denver International Airport;
 - x. National Western Center;
 - xi. Regional Transportation District (RTD);
 - xii. Traveling public;
 - xiii. Local, regional, and state government officials;
 - xiv. Delivery and courier services;
 - xv. Taxis, shuttles, and rental car companies;
 - xvi. Commercial vehicle operators, Ports of Entry and Denver Permit Office, and Colorado Motor Carriers Association;
 - xvii. Emergency response agencies, such as the Colorado State Highway Patrol, and local police departments, sheriff departments, fire departments, ambulance service providers, and hospitals;
 - xviii. Tourist destinations and organizations;
 - xix. Colorado Department of Transportation (CDOT) employees and other internal team members, including CDOT Headquarters, the Office of Communications and the Government Relations Office;
 - xx. Disadvantaged Business Enterprises and Emerging Small Businesses;
 - xxi. Utility Owners; and
 - xxii. Railroads.
- b. Key Communication Topics
- i. The CPCP shall describe outreach strategies specific to the following topics:
 - A. Coping Strategies
The Developer shall develop and implement community and business relations strategies that communicate coping messages to stakeholders including those listed in Section 5.1.2.a of this Schedule 14. Coping messages shall focus on providing stakeholders with the information they need to make short-term and long-term decisions about how they can deal with the Construction Work and O&M Work During Construction with as little disruption as possible.
 - B. Environmental Information
 - (l) The CPCP shall develop a plan for coordinating any environmental mitigation requirements as provided in Schedule 17 (Environmental Requirements), as they pertain to stakeholders including those listed in Section 5.1.2.a of this Schedule 14, to ensure that stakeholders are aware of and participate in those areas where appropriate.

- (II) The Developer shall make the Environmental Compliance Work Plan (ECWP) monthly update as provided in accordance with Schedule 17 (Environmental Requirements) available via the Project website on a monthly basis. The Developer shall make the results of all PM10 monitors, as specified in Schedule 17 (Environmental Requirements), available on the Project website as specified in Schedule 17 (Environmental Requirements).

C. Noise

The CPCP shall develop a plan for communicating the scheduling of high noise events as well as temporary and permanent noise wall construction with individual property owners and impacted communities.

D. Access to Local Schools

The CPCP shall develop a plan for coordinating with Denver Public Schools, and all schools within close proximity of the Project, including Swansea Elementary School, Garden Place Elementary, and Bruce Randolph Middle School. The Developer shall maintain pedestrian, bus and vehicle access to impacted schools during the Construction Period.

E. Access to Transit and Pedestrian and Bicycle Routes

The CPCP shall identify a plan for communicating to the public and other associated stakeholders significant impacts and routing changes pertaining to mass transit, bicycles, pedestrian and handicap mobility.

F. National Western Center Coordination

The CPCP shall identify a strategy for coordinating with the anticipated redevelopment of the National Western Center. This strategy shall at a minimum describe the frequency of joint meetings, shared communication tools, and how lane closures and access impacts will be coordinated between the two projects. This strategy shall be developed with input from the MOT Task Force per Schedule 10, Section 2.6.

G. Cover Coordination and Outreach

The CPCP shall describe a process for continuing to engage the community in the development of the Cover. This shall include coordination with the City of Denver to involve local residents in selecting a name for the Cover as well as any final design considerations that would benefit from resident input.

5.2. Public Information Outreach Tools

The Developer shall provide a PI tool box with the flexibility to meet different stakeholder needs. The Developer shall continue to coordinate with the Department to ensure that the tools employed during the Project are effective. All PI materials shall be provided in English and Spanish, unless Approved otherwise by the Department.

a. Phone and Email

- i. The Developer shall establish and maintain from the issuance of NTP2 throughout the Term a PI office equipped with a telephone, voicemail, computer and email address. The PI telephone line shall be a local call line. The voicemail for the project information line shall be recorded in English and Spanish and provide an updated message each week, or each day if necessary, concerning relevant completion dates and forthcoming activities on the Project and allow the recording of a message from the caller. If unable to answer the PI line, the Developer shall check and respond to voicemail messages throughout each day that construction operations and lane Closures are being carried out. During

times of highly impactful construction activity or extended night work, as identified by the Department, the Developer shall provide 24-hour staffing of the PI telephone line.

- ii. Throughout the Term, the Developer shall track inquiries made by citizens and businesses, including names, addresses, phone numbers, and follow-up action taken in response to inquiries; such inquiries and any follow-up action shall be entered into Dialog, a web-based contact and issue tracking database provided by the Department. The Developer shall pay for the necessary Dialog license. The system shall provide an automated report to the Department and the Developer each week. All inquiries and complaints shall be followed up with a return phone call or email from either the Developer and/or, when necessary (and as requested by the Developer or determined by the Department), the Department. The following information shall be recorded:
 - A. Provide the date and time of call;
 - B. Contact information (name, phone number, street address, and e-mail address);
 - C. Location and description of complaint and/or request; and
 - D. Response provided including date and manner of response and whether request was relayed to the Department for response.

b. Public Meetings

- i. The Developer shall host and facilitate one in person public meeting within one month after the issuance of NTP2. This meeting shall have two primary purposes: 1) to introduce the Developer to the local community and 2) to seek input on defining community values per Instructions to Proposers Part B, Section 1.1.e. Additional public meetings shall be held at key times (e.g. prior to removal of the viaduct) during the Term, as identified by the Department (in consultation with the Developer). An agenda for all such meetings shall be submitted to the Department for Acceptance two weeks prior to the meeting date. The Developer shall publicize these meetings through multiple means including local media, paid advertisements in newspapers, email, inserts in local newsletters, door-to-door flyers, mailers and others. The Developer shall utilize a stakeholder list, which will be provided by the Department prior to the issuance of NTP1, which will include local elected officials, city/county staff, and surrounding Local Agencies. These meetings shall be held within the corridor boundaries; however, where relevant, the Developer shall host meetings in the neighborhood location(s) closest to the upcoming Construction Work or O&M Work.
- ii. All public meetings shall inform attendees of Project plans and schedules and provide information on how to receive updates on the Project (via email address list and/or the Department's GovDelivery messaging system). The Developer will provide Project displays that explain information on Construction Work, O&M Work, phasing, traffic impacts, etc. Project displays and other presentation materials used at the public meetings shall be of professional quality and designed to clearly convey accurate Project information to a non-technical audience. All displays shall be provided in English and Spanish.
- iii. The Developer shall, in coordination with the Department, respond to all feasible requests to attend regular community and stakeholder meetings or community events, such as those organized by nonprofit groups and neighborhood and business associations. The Developer shall provide appropriate technical staff, as required.

c. Business Meetings

In addition to the public meetings required to be held pursuant to Section 5.2.b of this Schedule 14, the Developer shall organize and lead at least two public meetings specifically focused on local and regional business impacts within two months after the issuance of NTP2 and shall host additional meetings focused on local and regional business impacts at designated project phases (e.g. major or extended closures) as identified by the Department.

d. Social Media

The Developer shall utilize the Department's social media platforms, including Facebook and Twitter, to share information with the public. All social media posts shall be submitted to the Department for Acceptance one Working Day in advance of inclusion on social media.

e. Stakeholder Distribution List

The Developer shall develop a master distribution list of contacts to be used for general PI, publications, and informational flyers/newsletters. The Department's database established through the I-70 East EIS shall be used as the basis for development of this list/database as well as the Department's GovDelivery messaging system. This list or database shall be submitted to the Department for Acceptance prior to issuance of NTP2 and updated annually throughout the duration of the Term. Through the Developer's data gathering process, the Developer shall assist the Department in supplementing the database and the GovDelivery messaging system.

f. Tours and Communication Events

The Developer shall, at the request of the Department, be available to participate in all media, business and government official tours of the construction areas. The Developer shall participate in the coordination and delivery of communication events (e.g. groundbreaking or grand openings). The Department will lead tours and events.

g. Lane Closure Reports

The Developer shall throughout the Term submit a Lane Closure Report each Thursday as required by Schedule 10, Section 2 (Maintenance of Traffic) for the following week (Saturday through Friday) for Information. This report shall be provided to the list of contacts as provided by the Department.

h. Traffic Alerts

The Developer shall throughout the Term submit a weekly traveler alert each Thursday for distribution on GovDelivery and COTRIP weekly. The alert shall include I-70 Mainline, CDOT Roadways, and Local Agency Roadways and any activity that may impact the traveling public. Upcoming alerts shall be reviewed and discussed during the weekly Strategic Communications meetings.

i. Web Page Updates

The Developer shall work with the Department to develop internet web page content for a Project website developed by the Enterprises and CDOT specifically for this Project. The Developer shall provide consistent updates with the latest Project information (web page development experience is not necessary as the Developer will supply information for the Department web page template). Updates shall contain all appropriate links to/from other sites if applicable, e.g., local city, county, bus service, etc. as well as associated graphics, e.g. detour maps. The Developer will ensure the web page is updated at least weekly, and otherwise as reasonably required, with pertinent schedule information, new photos, contact information, etc. All proposed updates to the web page content shall be submitted to the Department for Acceptance two Working Days in advance of inclusion on the website.

j. Project Newsletters

Throughout the Construction Period, the Developer shall prepare and distribute a quarterly newsletter. The newsletter shall be provided in English and Spanish. The first newsletter shall be distributed within 30 Calendar Days following the issuance of NTP2. The newsletter shall at a minimum provide summary information on the Project's purpose and schedule, list any upcoming job fairs or opportunities, list the Project information line, email address, web address, Project map and a construction safety message, and any other matters reasonably requested by the Department. The newsletter shall be submitted to the Department for Acceptance prior to distribution. The Department will provide the Developer a newsletter template which will include the Project's logo. The Developer shall be responsible for distributing the newsletter via mail and email to the master distribution list of contacts as described in Section 5.2.e of this Schedule 14.

k. Language Assistance for Limited English Proficient Persons

The Developer shall provide access to Limited English Proficient (LEP) persons. LEP persons are individuals for whom English is not their primary language and who have a limited ability to read, write, speak or understand English. The Developer's Community Liaison shall ensure LEP assistance for the Project including, but not limited to, translation of communication materials, including meeting notices and newsletters, and providing interpretation services at meetings. The Developer shall document all measures taken to communicate with LEP persons and record all requests for language assistance and submit details thereof in the CPCP quarterly report and the MOCPP quarterly report.

l. Public Communication Collateral

The Developer shall develop a variety of outreach collateral to share information, including coping strategies, to the public as necessary for major project milestones such as long-term Closures or impactful Construction Work or O&M Work activities (i.e. nighttime noise, restricted access, Utility impacts, etc.). The Developer's Community Liaison shall work with the Department to determine which collateral shall be used. Collateral could include newsletters, fact sheets, emails, flyers, social media updates, etc. and in all cases shall be submitted to the Department for Acceptance prior to distribution. The Developer shall use the Department provided branding on all PI materials throughout the Project and adhere to the CDOT *The Colorado Brand Guidelines*. The Developer shall not use its own logos or Subcontractor logos for public communications materials. All collateral material intended for broad distribution shall include Spanish translation.

m. Photos/Videos

Without prejudice to the Developer's obligations to take photos under Section 10 of Schedule 8 (*Project Administration*), the Developer shall take and submit photos/videos of the Work on regular intervals. Except as noted below, a cell phone camera is permitted. Photographs/videos may include traffic control, paving, slope repair, erosion control, bridge deck and rail work, and other key areas of work identified by the Developer, Department, and PCM for use in reports to interested agencies, social media, and flyers. A minimum of two digital photographs shall be submitted each month to the Department. The Developer shall also develop videos for public distribution to share progress of the Project either annually or at key project milestones. Developer shall also develop videos as necessary to communicate key coping strategies as directed by the Department. The Developer shall provide professional aerial photographs annually to show progress of the corridor during the Construction Period.

n. Project Identification Signing

The Developer shall provide one large project identification sign for each direction of travel along the I-70 Mainline at the Project limits. Sign layout and position shall be Accepted by the Department prior to installation. Project identification signs shall be

installed within 14 Calendar Days following the issuance of NTP2. Project identification signs shall be MUTCD compliant and contain the following information:

- i. Project logo;
- ii. Project start and estimated completion dates; and
- iii. Developer name and PI hotline number.

5.2.2. Response and Deliverables Protocol

- a. The Developer shall comply with Table 1 in responding to communications from stakeholders and the public:

Table 1 Response Protocol

Type of Communication	Timing of Response
Hotline calls	Check messages throughout day Respond same day (initial call) or within 24 hours (including weekends if work is occurring)
Email	Same day (within two Working Days for high volume situations)
Call from Department staff	As soon as possible (no later than 24 hours)
Webpage and social media inquiries	Same day (within two Working Days for high volume situations)
Public meeting inquires	Within one week of the meeting

5.3. CPCP Quarterly Reporting

5.3.1. The Developer shall prepare a quarterly communications report during the Construction Period. The initial report shall be provided to the Department for Acceptance no later than 10 Working Days after the 90th Calendar Day following the issuance of NTP2. Each quarterly report shall be provided in English and, if requested by a member of the public, Spanish. The CPCP quarterly report shall include the following:

- a. A summary of primary Construction Work and O&M Work during Construction activities performed during the preceding quarter (refer to Progress Reports as required in Schedule 8 (Project Administration));
- b. Detailed summary of Strategic Communication efforts as part of the Progress Report activities performed during the preceding quarter;
- c. Detailed summary of the ECWP as part of the Progress Report activities, environmental mitigation summary, and a list of the date and time of any PM10 alert thresholds reached or exceeded, in each case, during the preceding quarter;
- d. A summary of progress in implementing the Small and Disadvantaged Business Participation Plan's Construction Contract Plan from the preceding quarter;
- e. A summary of progress in implementing the Workforce Development Plan from the preceding quarter;
- f. Detailed summary of number of accidents cleared during the preceding quarter; and
- g. Detailed summary of measures taken to communicate with LEP persons and requests for language assistance during the preceding quarter.

6. MAINTENANCE AND OPERATIONS COMMUNICATIONS PLAN

6.1. General Requirements

6.1.1. The Developer shall prepare and maintain an MOCP in coordination with the Department to develop two-way communication of Project information with the public. This MOCP shall be used throughout the duration of the Operating Period to manage and implement the PI process. The

MOCP shall be submitted to the Department for Approval prior to Substantial Completion. The MOCP shall include the following:

a. Planned Projects

This outreach consists of providing regular and continuous PI services throughout the duration of the Operating Period and must adhere to the specifications outlined in the High Performance Transportation Enterprise (HPTE) Strategic Communications and Transparency Plan. The Developer shall coordinate with the Department to determine which level of Public Information management (PIM) activities are warranted prior to commencement of planned O&M Work (including Renewal Work) projects. Two tiers of planned projects require Developer PIM activities.

i. Tier II PIM projects of medium to high impact which typically involve:

- A. Moderate/High visibility from media/ public;
- B. Moderate/High stakeholder involvement; and/or
- C. Moderate/High impact to traveling public/ stakeholders.

Examples: Grand Ave. Bridge, I-25 in CO Springs, I-76 (Brush to Ft. Morgan), US 36 Lyons to Estes Park, US 160/US 550 CFI Durango

ii. Tier II PIM requirements apply under the following conditions:

- A. The planned project is being conducted on a high-volume road with possibly a significant number of direct-access points/driveways;
- B. The planned project is in or adjacent to a community's business center with high commuter/pedestrian/cycling traffic; changing work zones; variety of stakeholders (e.g., businesses, transit providers, commuters, tourists, etc.); and/or
- C. The Department identifies a need for more consistent public information activities.

iii. Tier II PIM requirements

The Developer's PCM shall ensure the following activities are performed in relation to Tier II PIM projects:

- A. Host a public meeting prior to commencement of, as well as (if warranted) during, the project;
- B. Gather and manage a planned project specific Stakeholder Distribution List;
- C. Establish a project information number for posting on static construction signs;
- D. Complete a Lane Closure Report each week;
- E. Deliver project flyers to those residences/businesses with direct access to highway and email to specific Users;
- F. Meet with affected property owners as necessary;
- G. Provide content for project web page, if warranted;
- H. Answer and log calls/emails to the project information line/email address, tracking inquiries using Dialog; and
- I. Assist with media relations, including providing information for or writing press releases.

- iv. Tier III projects are of medium impact which typically involve:
 - A. Moderate visibility from media/public;
 - B. Moderate stakeholder involvement; and/or
 - C. Moderate impact to traveling public/ stakeholders.Examples: I-25 Lane Balancing, US 287 Resurfacing, US 50 Delta to Montrose resurfacing
- v. Tier III PIM requirements apply under the following conditions:
 - A. The planned project is being conducted on a mid-volume road with possibly a significant number direct-access points/driveways;
 - B. The planned project is in a location with relatively high commuter/tourist traffic, and changing work zones; and/or
 - C. The Department identifies a need for consistent public information.
- vi. Tier III PIM requirements
The Developer's PCM shall ensure the following activities are performed in relation to Tier III PIM projects:
 - A. Establish a project number for construction signs;
 - B. Complete a Lane Closure Report each week;
 - C. Deliver project flyers to those residences/businesses with direct access to highway and email to specific Users;
 - D. Meet with affected property owners as necessary;
 - E. Provide content for project web page, if warranted;
 - F. Answer and log calls/emails to the project information line/email address, tracking inquiries using Dialog; and
 - G. Assist with media relations, including providing information for or writing press releases.

b. Safety-Related Complaints

The Developer shall report safety-related complaints to the Department within one Calendar Day of receipt by Developer unless the circumstance that is the subject of a complaint constitutes an immediate safety hazard in which case the Developer shall notify the Department as soon as practicable after the receipt of such complaint but in any event no later than 1 hour after receipt. The Developer shall respond to valid complaints or requests to the extent that the complaints or requests cover issues within the scope of the Developer's responsibilities under Schedule 11 (Operations and Maintenance Requirements). The Developer shall convey any requests for services that are beyond the scope of its obligations under this Agreement to the Department. All complaints and response shall be recorded in the Dialog system.

c. Operations and Maintenance Education

The Developer shall assist the Department in outreach and education messages to help clarify unfamiliar, complex or often misunderstood concepts related to the Project's long-term O&M, allowing the public to make informed decisions. Topics include HOV 3, Travel Demand Management, and accessing Tolloed Express Lanes. Outreach must adhere to the specifications outlined in the High Performance Transportation Enterprise (HPTE) Strategic Communications and Transparency Plan.

d. Maintenance and Operations Communications Plan Quarterly Reporting

The Developer shall prepare and submit quarterly maintenance and operations communications reports during the Operating Period. The initial report shall be provided to the Department for Acceptance no later than 10 Working Days after the 90th Calendar Day following Substantial Completion. Each quarterly report shall be provided in English and with Spanish translation, if requested by a member of the public, and shall include the following:

- i. Details of primary O&M Work activities performed during the preceding quarter (refer to Progress Reports as required in Schedule 8 (*Project Administration*));
- ii. Detailed summary of MOCP activities performed during the preceding quarter;
- iii. Detailed summary of the ECWP as part of the Progress Report activities during the preceding quarter;
- iv. A summary of progress in implementing the Small and Disadvantaged Business Participation Plan's O&M Contract Plan from the preceding quarter;
- v. Detailed summary of number of accidents cleared during the preceding quarter;
- vi. A summary of all calls and emails as recorded in the Dialog system; and
- vii. Detailed summary of measures taken to communicate with LEP persons and requests for language assistance during the preceding quarter.

6.1.2. Emergency Maintenance

- a. The MOCP shall establish a communications procedure for Emergency maintenance. The MOCP shall specify which communications tools will be utilized to communicate the impacts of repairs.
- b. For Emergency maintenance, the Developer shall immediately provide the following information to the Department and the CTMC.
 - i. Description of the activity and why it is necessary;
 - ii. Start of the activity;
 - iii. End of the activity including any updates to the above;
 - iv. Impacts to traffic and property (businesses and residences);
 - v. Communications tools to share information (Variable Message Sign boards, GovDelivery alert, Twitter, photos, etc.); and
 - vi. Contact number.
- c. Once work is completed the Developer shall also contact the Department's Communications Manager and the CTMC.

7. CRISIS COMMUNICATIONS PLAN

7.1. General Requirements

- 7.1.1. The Developer shall prepare and maintain a Crisis Communications Plan (CCP) for the Developer's response to Emergencies and incidents at any time during the Term. The Developer shall coordinate this approach with the Developer's overall Incident Management Plan. The Developer's CCP shall be submitted to the Department for Approval prior to the issuance of NTP 1.
- 7.1.2. In an event of a crisis, the Department will be the lead agency to handle communication with the media, public, the Department staff, etc. The Developer shall be available to help coordinate with the Department and provide information necessary to respond to the crisis.

7.1.3. The CCP shall include:

- a. Types of potential Emergencies;
- b. Designated staff to respond to the Emergency;
- c. Approaches to addressing potential Emergencies; and
- d. Boilerplate messaging that includes:
 - i. Cause of specific disruptions (whether construction related or not);
 - ii. Actions being taken to alleviate the problem;
 - iii. Impact to the public and notification procedures;
 - iv. Instructions for coping with/avoiding the impact (e.g. detours); and
 - v. Anticipated duration of the disruption.

7.1.4. The Developer shall provide specific details on internal coordination and communication that will occur with the Developer team, the Department, and other stakeholders.

7.1.5. Emergency Information Dissemination - Communications Tree

The CCP shall include an Emergency response telephone and email tree established by the Developer. All appropriate personnel shall be included on this communications tree for immediate response in the event of an Emergency. The telephone/email tree shall be divided into areas of expertise so the proper people are called and/or emailed for specific Emergency situations. The Project Director, PCM, and the Developer shall be included on the communications tree for notification of any Emergency that may arise. The Developer shall develop and maintain a contact list of Emergency service providers as part of its CCP. The Developer shall provide information to Emergency service providers. The Developer shall submit the Emergency response communications tree to the Department, for Acceptance, prior to the issuance of NTP 1.

8. DELIVERABLES AND PUBLIC NOTIFICATIONS

8.1. Deliverables

At a minimum, the Developer shall submit the following to the Department for Information, Acceptance, or Approval in accordance with the timeframes specified:

Table 2 Deliverables

Deliverable	Information, Acceptance, or Approval	Schedule
Developer's Communications Team Details	Information	Prior to the issuance of NTP 1. Updates submitted quarterly during the Construction Period, annually during the Operating Period and otherwise as required
Public Involvement Services Contact Sheet	Information	Prior to the issuance of NTP 1. Updates submitted annually and otherwise as required
Stakeholder Distribution List	Acceptance	Prior to the issuance of NTP 2. Updates submitted annually
Construction Period Communications Plan (CPCP)	Approval/Acceptance	Prior to the issuance of NTP 1 for Approval Updates submitted annually for Acceptance
Maintenance and Operations Communications Plan (MOCP)	Approval/Acceptance	Prior to Substantial Completion for Approval

Deliverable	Information, Acceptance, or Approval	Schedule
		Updates submitted annually for Acceptance
CPCP Quarterly Report	Acceptance	10 Working Days after 90 Calendar Days after issuance of NTP 2; quarterly thereafter
MOCP Quarterly Report	Acceptance	10 Working Days after 90 Calendar Days after Substantial Completion; quarterly thereafter
Crisis Communications Plan (CCP)	Approval/Acceptance	Prior to the issuance of NTP 1 for Approval Updates submitted annually for Acceptance
Emergency response communications tree	Acceptance	Prior to the issuance of NTP 1
Traffic alerts/media releases	Acceptance	Weekly by Thursday at 10:30 a.m.
Lane Closure Reports	Information	Weekly by Thursday at 10:30 a.m.
Newsletters	Acceptance	Five Working Days prior to scheduled quarterly distribution date during the Construction Period
Project identification sign layout	Acceptance	To permit installment by 14 Calendar Days following the issuance of NTP 2
Fliers, posters or other public material	Acceptance	As needed, five Working Days prior to the scheduled distribution date or, in cases of rapid response, 48 hours prior to distribution
Photos	Acceptance	Two a month or as requested Aerial photographs annually during the Construction Period
Video	Acceptance	One annually or at key project milestones
Social media posts	Acceptance	As needed, one Working Day in advance of inclusion on social media
Web page content	Acceptance	Weekly or as often as reasonably required, two Working Days in advance of inclusion on the website

8.2. Public Notification

The Developer shall comply with Table 3 in providing the following information to the public:

Table 3 Submittal Time to the Public

Deliverable	When to be published
Full road closures, detours, and major traffic impacts lasting seven Calendar Days or longer	14 Calendar Days prior to the beginning of activity in any area of the Project.
Major project activities (such as major lane shifts, bridge demolitions, etc.) lasting seven Calendar Days or less	7 Calendar Days prior to the beginning of the activity.
Other remaining types of Construction Activities in any area of the Project including: <ul style="list-style-type: none"> ▪ Night Work ▪ Heavy Noise Work ▪ Utilities ▪ Change of business/residential access 	7 Calendar Days prior to the beginning of activity in any area of the Project or as determined jointly by the Developer and Department.
Other construction updates (e.g., cancellation of planned closures, additional lane closures, closure removals, major traffic shifts, etc.) that directly impact the public.	As soon as known with at least 24 hours' notice.

Schedule 15
Federal and State Requirements

1. GENERAL REQUIREMENTS

1.1. Civil Rights Program Manager

- 1.1.1. The Developer shall retain a full-time Civil Rights Program Manager (“CRPM”) who shall be responsible for the day-to-day operational components of, and serve as the primary contact to the Department for, all matters and requirements concerning:
- a. Davis-Bacon and related Acts (contained in Section 2.1 of this Schedule 15);
 - b. equal employment opportunity (contained in Section 2.2 of this Schedule 15);
 - c. Title VI of the Civil Rights Act (contained in Section 2.3 of this Schedule 15);
 - d. Americans with Disabilities Act (contained in Section 2.4 of this Schedule 15);
 - e. compliance with certain Federal Law requirements relating to the matters set out in Parts I through V of Appendix H to this Schedule 15 (contained in Section 2.5 of this Schedule 15);
 - f. small business participation and workforce development (contained in Sections 5 and 6 of this Schedule 15); and
 - g. community development programs (contained in Section 7 of this Schedule 15)
- (together, the “Civil Rights Requirements”).
- 1.1.2. The CRPM shall have at least three years’ professional experience working on transportation-related construction projects and knowledge of small business and workforce applicable regulations and best practices to ensure compliance with all the Civil Rights Requirements.
- 1.1.3. The CRPM position shall be filled prior to issuance of NTP1, and remain filled through the duration of the Construction Period. The appointment of the CRPM, and any replacement thereof, shall be subject to the Department’s Acceptance. Prior to Substantial Completion, the Developer shall identify the individual/position responsible for compliance with the Civil Rights Requirements for the Operating Period and keep the Department apprised of any changes during the remainder of the Term.

1.2. Construction Period Meetings and Reporting

1.2.1. Monthly Meeting Requirement

The Developer, through its CRPM, shall host monthly meetings with the Department during the Construction Period at such times and locations as are reasonably convenient to the Department. The purpose of such meetings shall be to discuss all matters concerning the Civil Rights Requirements. The Developer and the Department shall jointly set the agenda for each meeting and the Department may request the presence of specific Persons participating on the Project, as necessary.

1.2.2. Monthly Reporting Requirements

As part of its monthly Progress Report submissions made during the Construction Period pursuant to Section 4.1.1 of Schedule 8 (*Project Administration*), the Developer shall submit to the Department for Acceptance all reports referenced in this Schedule 15 as applicable during the Construction Period, including as necessary to comply with the Construction Period small business participation reporting requirements contained in Appendix A to this Schedule 15, the Construction Period workforce development program reporting requirements contained in Appendix B to this Schedule 15 and the Davis-Bacon reporting requirements contained in Section 2.1.3 of this Schedule 15.

1.2.3. Semi-Annual Self-Assessment

No later than each anniversary of the commencement of each Contract Year and of the date that is six months thereafter in each Contract Year during the Construction Period, the Developer shall submit to the Department:

- a. for Approval, an assessment of its progress toward achieving the Construction Work Small Business Goals; and
- b. for Acceptance, an assessment of its progress toward achieving the Workforce Goals applicable during the Construction Period.

Additional requirements for such self-assessments are contained in Appendices A and B to this Schedule 15.

1.2.4. Annual Progress Review

During the Construction Period the Developer shall participate in an annual review (on a Contract Year basis) of its progress toward achieving the Small Business and Workforce Goals applicable during the Construction Period. Additional requirements for such reviews are contained in Appendices A and B to this Schedule 15. Such review shall also consider the Developer's compliance with its obligations under Section 7 of this Schedule 15.

1.2.5. Web-based compliance system

- 1.2.6. During both the Construction Period and the Operating Period, the Developer shall use B2Gnow and LCPtracker, the Enterprises' web-based certified payroll and contractor compliance system, to submit Deliverables required by this Schedule 15 and to report payments to Subcontractors so as to document compliance with Section 17.5 of the Project Agreement. For any required Deliverable that is not supported by the Enterprise's B2Gnow or LCPtracker software, the applicable Deliverable shall be submitted to the Enterprises in a form mutually agreed between the Parties (both acting reasonably).

1.2.7. Monthly Reporting Requirement

As part of its monthly Progress Report submissions made during the Operating Period pursuant to Section 4.1.1 of Schedule 8 (*Project Administration*), the Developer shall submit all reports referenced in this Schedule 15 as applicable during the Operating Period, including as necessary to comply with the Operating Period reporting requirements contained in Appendix C to this Schedule 15 and the Davis-Bacon reporting requirements contained in Section 2.1.3 of this Schedule 15.

1.2.8. Annual Progress Review

During the Operating Period the Developer shall participate in an annual review (on a Contract Year basis) of its progress toward achieving the Small Business and Workforce Development Goals applicable during the Operating Period. Additional requirements for such reviews are contained in Appendix C to this Schedule 15. Such review shall also consider the Developer's compliance with its obligations under Section 7 of this Schedule 15.

1.3. Noncompliance Events

1.3.1. Construction Period

Failure to Achieve Construction Work Small Business Goals

- a. The failure by the Developer both (a) to achieve any Construction Work Small Business Goal as of the Final Acceptance Date and (b) to have made good faith efforts (as determined by reference to Part II of Appendix A to this Schedule 15) to achieve such goal shall constitute a Noncompliance Event. If such Noncompliance Event occurs, for the purposes of the "Number of Points" column in respect of item 2.69 in Table 6A-2 of Schedule 6 (*Performance Mechanism*), the number of Noncompliance Points that accrue shall be determined as follows (with the result to be rounded to the nearest whole

number) and be calculated in accordance with Sections 2 and 3 of Part II of Appendix A to this Schedule 15:

((Relevant Construction Work Small Business Goal Percentage – Actual Percentage of Relevant Participation Achieved) x (Total Dollar Value of all (i) Design Services or (ii) Other Construction Work or (iii) Other Construction Work and Routine Maintenance, as applicable)) / \$5,000 = Number of Noncompliance Points

Failure to Achieve Construction Period OJT Goal

- b. The failure by the Developer to achieve the Construction Period OJT Goal as of the Final Acceptance Date shall constitute a Noncompliance Event. If such Noncompliance Event occurs, for the purposes of the “Number of Points” column in respect of item 2.70 in Table 6A-2 of Schedule 6 (Performance Mechanism), the number of Noncompliance Points that accrue shall be determined as follows (with the result to be rounded to the nearest whole number):

(Construction Period OJT Goal – Actual OJT Employment Hours on Other Construction Work During The Construction Period calculated in accordance with Section 1 of Part III of Appendix B to this Schedule 15) / 175 = Number of Noncompliance Points

1.3.2. **Operating Period**

Failure to Achieve Routine Maintenance ESB Goal

- a. The failure by the Developer both (a) to have achieved the Routine Maintenance ESB Goal, as of the last date in any five Contract Year period in respect of which the Routine Maintenance ESB Goal is assessed pursuant to Section 6.2.2 of this Schedule 15, and (b) to have made good faith efforts to achieve such goal shall constitute a Noncompliance Event. If such Noncompliance Event occurs, for the purposes of the “Number of Points” column in respect of item 2.71 in Table 6A-2 of Schedule 6 (Performance Mechanism), the number of Noncompliance Points that accrue shall be determined as follows (with the result to be rounded to the nearest whole number):

(Routine Maintenance ESB Goal – Value of Routine Maintenance ESB Work calculated in accordance with Section 3.b of Part I of Appendix C to this Schedule 15) / \$5,000 (indexed)) = Number of Noncompliance Points

Failure to Achieve Renewal Work DBE Goal

- b. The failure by the Developer both (a) to have achieved the Renewal Work DBE Goal, as of the last date in any five Contract Year period in respect of which the Renewal Work DBE Goal is assessed pursuant to Section 6.2.2 of this Schedule 15, and (b) to have made good faith efforts to achieve such goal shall constitute a Noncompliance Event. If such Noncompliance Event occurs, for the purposes of the “Number of Points” column in respect of item 2.71 in Table 6A-2 of Schedule 6 (Performance Mechanism), the number of Noncompliance Points that accrue shall be determined as follows (with the result to be rounded to the nearest whole number)

(Renewal Work DBE Goal – Value of Renewal Work calculated in accordance with Section 3.b of Part II of Appendix C to this Schedule 15) / \$5,000 (indexed)) = Number of Noncompliance Points

Failure to Achieve Renewal Work OJT Goal

- c. The failure by the Developer to achieve the Renewal Work OJT Goal in respect of any Contract Year shall constitute a Noncompliance Event. If such Noncompliance Event occurs, for the purposes of the “Number of Points” column in respect of item 2.72 in Table 6A-2 of Schedule 6 (Performance Mechanism), the number of Noncompliance Points that accrue shall be determined as follows (with the result to be rounded to the nearest whole number):

(Renewal Work OJT Goal – Actual OJT Employment Hours on Renewal Work During applicable Contract Year calculated in accordance with Section 2 of Part III of Appendix C to this Schedule 15) / 175 = Number of Noncompliance Points

2. LABOR, EQUAL EMPLOYMENT OPPORTUNITY AND NON-DISCRIMINATION

2.1. Davis-Bacon and Related Acts (DBRA) Compliance

2.1.1. Application to all Construction, Alteration and Repairs

The Davis-Bacon and Related Acts (40 USC §276a; 29 CFR Parts 1, 3, 5, 6 and 7) (the “DBRA”) apply to the Developer and Subcontractors performing on federally funded or assisted contracts in excess of \$2,000 for the construction, alteration, or repair (including painting and decorating) of public buildings or public works. The Developer shall ensure that the requirements of the DBRA are implemented on all applicable Subcontracts throughout the Term.

2.1.2. Wage Rates

The wage rates to be used for purposes of compliance with this Section 2.1 of this Schedule 15 throughout the Construction Period are attached as Appendix D¹ to this Schedule 15.

The wage rates to be used for purposes of compliance with this Section 2.1 of this Schedule 15 throughout the Operating Period shall be established by the Department and notified to the Developer at least 60 Calendar Days prior to the commencement of each Contract Year during the Operating Period. The first such notification shall be made prior to the Substantial Completion Date and shall apply to the Contract Year during which the Substantial Completion Date occurs.

2.1.3. Compliance and Reporting

The Developer shall ensure that all employees working during the Term and under all DBRA-applicable contracts receive the minimum compensation required in accordance with DBRA and other Law. The Developer shall provide monthly payroll reports to the Department throughout the Term for all activities subject to DBRA. The Developer shall, and shall ensure that each of its Subcontractors and each of their respective Subcontractors shall, pursuant to Section 19 of the Project Agreement, maintain and make available for review, inspection and audit by the Department all such Project Records as are necessary to document compliance with DBRA and other law. During the Construction Period, the CRPM shall be the person responsible for reporting this data to the Department.

2.2. Equal Employment Opportunity

2.2.1. Executive Order 11246

The Developer shall, and shall ensure that all Subcontractors shall, comply with all Laws that prohibit certain employment practices. In furtherance of this and in accordance with Executive Order 11246 and Appendix E to this Schedule 15, the Developer shall not discriminate against any employee or applicant for employment because of race, color, religion, sex, sexual orientation, gender identity, or national origin. The provisions contained in Appendix E to this Schedule 15 shall be included in all Subcontracts without modification except as appropriate to identify the Subcontractor who will be subject to the provisions of such Subcontract.

2.2.2. Affirmative Action

The Developer shall take affirmative action to ensure that applicants for employment and employees are treated without regard to their race, color, religion, sex, sexual orientation, gender identity, or national origin. The Developer shall, and shall ensure that all Subcontractors shall, comply with CDOT’s Standard Special Provision “Affirmative Action Requirements Equal Employment Opportunity” (attached as Appendix F to this Schedule 15). Appendix F shall be included in all Subcontracts without modification except as appropriate to identify the Subcontractor who will be subject to the provisions of such Subcontract.

¹ **Note to Proposers:** Appendix D will be populated in the Final RFP.

2.3. Title VI of the Civil Rights Act and Related Statutes

2.3.1. Non-Discrimination Provisions

Pursuant to Title VI of the Civil Rights Act of 1964 and related statutes, the Developer shall not, and shall ensure that none of the Subcontractors shall, exclude from participation in the Work, deny the benefits of, or subject to discrimination, any person in the United States on the ground of race, color, national origin, sex, age or disability. The Developer shall, and shall ensure that all Subcontractors shall, comply with all applicable Federal and State nondiscrimination Law and with the required terms of USDOT Order No.1050.2A "USDOT Standard Title VI/Non-Discrimination Assurances, which are set out in Appendix G to this Schedule 15. The Developer shall include the clauses contained in Parts I through IV of Appendix G in all Subcontracts without modification except as appropriate to identify the Subcontractor who will be subject to the provisions of such Subcontract.

2.3.2. Notice and Complaints

The Developer shall, and shall ensure that all Subcontractors shall, report all complaints alleging discrimination on the grounds of race, color, national origin, sex, age or disability to the Department. In all facilities open to the public and on any websites (or equivalent digital media) maintained by the Developer for the Project, the Developer shall post and make available to the public CDOT's non-discrimination notice and complaint procedures.

2.4. Americans with Disabilities Act

Pursuant to Federal regulations promulgated under the authority of the Americans with Disabilities Act, 28 CFR § 35.101 et seq., the Developer, and each of its Subcontractors and each of their Subcontractors, understands and agrees that no individual with a disability shall, on the basis of the disability, be excluded from participation in this Agreement or from activities provided for under this Agreement. As a condition of accepting and executing this Agreement, the Developer agrees to comply with the "General Prohibitions Against Discrimination," 28 CFR § 35.130, and all other regulations promulgated under Title II of the Americans with Disabilities Act which are applicable to the benefits, services, programs, and activities provided by CDOT through contracts with outside contractors.

2.5. Required Federal Provisions, Federal-Aid Construction Contracts, for FHWA 1273

2.5.1. Applicability

As the Construction Work and Renewal Work will be financed in whole or in part with Federal funds, all the statutes, rules and regulations promulgated by the Federal government and applicable to work financed in whole or in part with Federal funds will apply to such work. In accordance with Section 1 of The "Required Contract provisions, Federal-Aid Construction Contracts, Form FHWA 1273" ("FHWA 1273") attached as Appendix H to this Schedule 15, FHWA 1273 applies to, and shall be included in, this Agreement and (subject to Section 2.5.3 of this Schedule 15) all Subcontracts under which any part of the Construction Work or the Renewal Work is performed, excluding those Subcontracts that are purchase orders, rental agreements or other agreements for supplies or services (other than design services). FHWA 1273 applies to, and shall be incorporated by reference in any contract, for work done under any purchase order, rental agreement, or agreement for other services.

2.5.2. Definitions

For purposes of Appendix H to this Schedule 15 the following terms or phrases in FHWA 1273 shall have the respective meanings set out below:

- a. "Department contracting officer", "Department resident engineer", or "authorized representative of the Department" shall mean the Department or its authorized representative;
- b. "contractor", "prime contractor", "bidder" or "prospective primary participant" shall mean the Developer or its authorized representative and/or the Construction Contractor or its

authorized representative and/or the O&M Contractor or its authorized representative, as may be appropriate under the circumstances;

- c. "contract" or "prime contract" shall mean the Construction Contract or any other Subcontract as may be appropriate under the circumstances (including any Subcontract for Renewal Work);
- d. "subcontractor", "supplier", "vendor", "prospective lower tier participant" or "lower tier subcontractor" shall mean, as appropriate, contractors other than the Construction Contractor or any other Subcontractor as may be appropriate under the circumstances (including any Subcontractor performing Renewal Work); and
- e. "department", "agency" or "department or agency entering into this transaction" shall mean the Department, except where a different department or agency is specified.

2.5.3. Sections Applying to the Construction Contractor

Sections VI.1 and VI.2 of FHWA Form 1273 shall apply only to the Construction Contractor.

2.5.4. Compliance Reviews

The Department will periodically conduct compliance reviews to ensure that the Developer and all Subcontractors are complying with the requirements of FHWA 1273. The Developer shall, and shall ensure that Subcontractors, remedy any noncompliance with the requirements of FHWA 1273 in a timely manner, whether or not such noncompliance is first identified by the Department.

3. COMPLIANCE WITH FHWA BUY AMERICA REQUIREMENT

3.1. General Requirement

The Developer shall, and shall cause each Subcontractor (as applicable), to comply with the FHWA Buy America Requirement in 23 CFR 635.410, which permits FHWA participation in this Agreement only if domestic steel and iron will be used on the Project. To be considered domestic, all steel and iron used and all products manufactured from steel and iron must be produced in the United States and all manufacturing processes, including application of a coating, for these materials must occur in the United States. Coating includes all processes that protect or enhance the value of the material to which the coating is applied. This requirement does not preclude a minimal use of foreign steel and iron materials, provided the cost of such materials does not exceed 0.1 % of the aggregate value of the Construction Work to be performed under the Construction Contract.

3.2. Additional Documentation Requirements

Additional Buy America documentation requirements are contained in Section 6.4.3.b.iv of Schedule 8 (Project Administration). Developer shall require each Subcontractor providing steel and iron material to the Project to complete and submit to Developer all certificates required for Developer to comply with its obligations under Section 6.4.3.b.iv of Schedule 8 (Project Administration).

4. GENERAL FEDERAL REQUIREMENTS

4.1. Non-Collusion

The provisions in this Section 4.1 are applicable to all contracts except contracts for Federal Aid Secondary Projects. Title 23, United States Code, Section 112, requires as a condition precedent to approval by the FHWA of this Agreement that each bidder file a sworn statement executed by, or on behalf of, the person, firm, association, or corporation to whom this Agreement would be awarded, certifying that such person, firm, association, or corporation has not, either directly or indirectly, entered into any agreement, participated in any collusion, or otherwise taken any action in restraint of free competitive bidding in connection with the submitted bid. A form to make the non-collusion affidavit statement required by Section 112 as a certification under penalty of perjury rather than as a sworn statement as permitted by 28 U.S.C., Sec. 1746 was included in the Proposal.

4.2. Convict Produced Materials

FHWA Federal-aid projects are subject to 23 CFR § 635.417, Convict produced materials. Materials produced after July 1, 1991 by convict labor may only be incorporated in a Federal aid highway construction project if such materials have been: (i) produced by convicts who are on parole, supervised release, or probation from a prison, or (ii) produced in a prison project in which convicts, during the 12 month period ending July 1, 1987, produced materials for use in Federal aid highway construction projects, and the cumulative annual production amount of such materials for use in Federal aid highway construction does not exceed the amount of such materials produced in such project for use in Federal aid highway construction during the 12 month period ending July 1, 1987. The Developer and each Subcontractor shall comply with such requirements and the Developer agrees to include this [Section 4.2](#) in each Subcontract, without modification except as appropriate to identify the Subcontractor who will be subject to the provisions of such Subcontract.

4.3. Access to Records and Record Retention

As required by 49 CFR 18.36(i)(10), and without limiting the Developer's obligations under [Section 19](#) of the Project Agreement, the Developer and its Subcontractors shall allow FHWA and the Comptroller General of the United States, or their duly authorized representatives, access to all books, documents, papers, and records of the Developer and such Subcontractors which are directly pertinent to any grantee, subgrantee or financing contract, for the purpose of making audit, examination, excerpts, and transcriptions thereof. In addition, as required by 49 CFR 18.36(i)(11), the Developer and its Subcontractors shall retain all such books, documents, papers, and records for three years after final payment is made pursuant to any such contract and all other pending matters are closed (or, if applicable, for such longer period as is required pursuant to [Sections 19.1.6](#) and [19.1.7](#) of the Project Agreement). The Developer agrees to include this [Section 4.3](#) in each Subcontract, without modification except as appropriate to identify the Subcontractor who will be subject to the provisions of such Subcontract.

5. SMALL BUSINESS PARTICIPATION AND WORKFORCE DEVELOPMENT

5.1. Required Plans

- 5.1.1. Construction Period: The Developer shall submit, and obtain Approval from the Department of, a Small and Disadvantaged Business Participation Plan (for purposes of this [Schedule 15](#), the "SDBPP") and a Workforce Development Plan (for purposes of this [Schedule 15](#), the "WDP") prior to the issuance of NTP1. Both plans shall be consistent with and expand upon the draft plans contained in the Proposal. Requirements for the SDBPP are contained in [Appendix A](#) to this [Schedule 15](#) and requirements for the WDP are contained in [Appendix B](#) to this [Schedule 15](#).
- 5.1.2. Operating Period: Prior to the commencement of each consecutive five Contract Year period during the Operating Period, the Developer shall submit, and obtain Approval from the Department of, a plan for achieving the Routine Maintenance ESB Goal and the Renewal Work DBE Goal applicable to such period. The first such plan is required to be submitted and Approved prior to the Substantial Completion Date and shall apply to the Contract Year during which the Substantial Completion Date occurs and the immediately following four Contract Years. Requirements for these plans are contained in [Appendix C](#) to this [Schedule 15](#).

5.2. Investigations

As it determines necessary, the Department may conduct reviews or investigations of participants in the Project to ensure Developer's compliance with its obligations under this [Schedule 15](#) with respect to DBEs, ESBs, OJT and local hiring, including: the Developer; all Subcontractors; DBE and ESB firms and applicants for DBE and/or ESB certification that are not themselves Subcontractors; all OJT and local hire participants; and complainants. The Developer is required to (and shall ensure its Subcontractors and each of their Subcontractors) cooperate fully and promptly with compliance reviews, certification reviews, investigations and other requests for information, in any such case, by the Department in connection with Developer's compliance with this [Section 5](#) and [Section 6](#) of, and [Appendices A, B and C](#) to, [Schedule 15](#).

5.3. Intimidation and retaliation

The Developer shall not (and shall ensure that its Subcontractors and each of their Subcontractors shall not) intimidate, threaten, coerce, or discriminate against any individual or firm for the purpose of interfering with any right or privilege secured by CDOT's DBE, ESB or OJT programs or the Project's local hiring program, each as implemented for this Project pursuant to this Schedule 15, or because the individual or firm has made a complaint, testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under any such program.

5.4. Assurance of Non-Discrimination

By entering into this Agreement, the Developer agrees to the following assurance (which for purposes of Developer Default number (29) in Section 32.1.1 of the Project Agreement shall constitute a material obligation) and shall include it in all Subcontracts without modification except as appropriate to identify the Subcontractor who will be subject to the provisions of such Subcontract:

The contractor, sub-recipient or subcontractor shall not discriminate on the basis of race, color, national origin, or sex in the performance of this contract. The contractor shall carry out applicable requirements of 49 CFR Part 26 in the award and administration of DOT-assisted contracts. Failure by the contractor to carry out these requirements is a material breach of this contract, which may result in the termination of this contract or such other remedy as the recipient deems appropriate, which may include, but is not limited to: (1) Withholding progress payments; (2) Assessing sanctions; (3) Liquidated damages; and/or (4) Disqualifying the contractor from future bidding as non-responsible.

5.5. OJT Program and Minimum Wages

The intent of the On-the-Job Training (OJT) program plan is to provide an innovative approach to train and upgrade females and minorities in the journey worker status of the skilled crafts. Training opportunities may be provided with on-the-job trainees or duly registered apprentices.

The minimum wage rates for OJT program participants during the Construction Period are []². The minimum wage rates for OJT program participants during the Operating Period shall be established by the Department and notified to the Developer at least 60 Calendar Days prior to the commencement of each Contract Year during the Operating Period. The first such notification shall be made prior to the Substantial Completion Date and shall apply to the Contract Year during which the Substantial Completion Date occurs.

The Developer shall ensure that payment to all OJT program participants is not less than such minimum rates from time to time. In addition, trainees/apprentices working in the skilled crafts must be paid the Davis-Bacon wage decision full fringe benefit rate per hour for the classification of work required by the approved program in accordance with Appendix D to this Schedule 15.

6. SMALL BUSINESS AND WORKFORCE DEVELOPMENT GOALS

6.1. Summary of Goals

The following table summarizes the goals defined in greater detail in Sections 6.2 and 6.3 of, and Appendices A, B and C to, this Schedule 15 with respect to DBEs, ESBs, OJT and local hiring.

Collectively, the Construction Work Small Business Goals, the Operating Period Small Business Goals and the Workforce Development Goals (each as separately defined in Sections 6.2 and 6.3 of this Schedule 15) are referred to herein as the "Small Business and Workforce Goals".

² **Note to Proposers:** Minimum wage rates will be provided in the final RFP.

	Disadvantaged Business Enterprise	Emerging Small Business	On-the-Job-Training	Local Hiring
Construction Period				
Design Services	11.6%	3%	N/A	760,000 total employment hours with 380,000 employment hours performed by new hires
Other Construction Work	12.5%	3%	200,000 employment hours	
Routine Maintenance	N/A		N/A	
Operating Period				
Routine Maintenance	N/A	\$850,000 (indexed) every five Contract Year period	N/A	N/A
Renewal Work	% to be established for each five Contract Year period	N/A	Number of employment hours to be established for each Contract Year	N/A

6.2. Small Business Goals

6.2.1. Construction Period Goals

- a. As further outlined in Appendix A to this Schedule 15, the Developer shall make good faith efforts to achieve the DBE and ESB Construction Period goals set out in Section 6.1 of this Schedule 15: DBE Design Goal (11.6%); ESB Design Goal (3%); DBE Construction Goal (12.5%); and ESB Construction and Routine Maintenance Goal (3%) (collectively, the “Construction Work Small Business Goals”). Following consultation with the Developer, the Department may lower any of these goals at any time if it reasonably believes, upon evaluation of the DBE and ESB markets, that such goal is unachievable.
- b. The Developer shall also assist in the development of DBEs and ESBs as outlined in the Developer’s Approved SDBPP. The Developer shall ensure that during the Construction Period at least one of its (or its Subcontractors’) employees has three or more years of experience in small business outreach and capacity building.

6.2.2. Operating Period Goals

- a. During the Operating Period the Developer shall make good faith efforts to achieve the Routine Maintenance ESB Goal applicable to each five Contract Year period and the Renewal Work DBE Goal applicable to each five Contract Year period (collectively, the “Operating Period Small Business Goals”) as set out below. Following consultation with the Developer, the Department may lower any of these goals at any time if it reasonably believes, upon evaluation of the DBE and ESB markets, that such goal is unachievable.

Routine Maintenance ESB Goal

- b. As further outlined in Appendix C to this Schedule 15, commencing with the Contract Year during which the Substantial Completion Date occurs, the Developer shall make good faith efforts to achieve \$850,000 (indexed) of ESB participation in the Routine Maintenance (the "Routine Maintenance ESB Goal") during each sequential five Contract Year period during the Operating Period, with the first such period being the Contract Year during which the Substantial Completion Date occurs and the immediately following four Contract Years (provided that, if applicable, the amount of such goal shall be prorated for the first such period to account for the Substantial Completion Date occurring part way through a Contract Year).
- c. The Developer and the Department shall meet at agreed upon intervals, but no less than annually, to evaluate the Developer's progress toward achieving the then applicable Routine Maintenance ESB Goal (such meeting may be the annual progress review held pursuant to Section 1.2.8 of this Schedule 15).
- d. At the end of each five Contract Year period, the Department will evaluate whether the Developer has achieved the Routine Maintenance ESB Goal and its efforts to achieve such goal, in order to determine whether a Noncompliance Event has occurred pursuant to Section 1.3.2.a of this Schedule 15. Whether or not the Developer has achieved the goal, the Developer shall submit for review by the Department documentation evidencing the good faith efforts that the Developer considers it has taken to achieve the goal.

Renewal Work DBE Goal

- e. As further outlined in Appendix C to this Schedule 15, commencing with the Contract Year during which the Substantial Completion Date occurs, the Developer shall make good faith efforts to achieve the Renewal Work DBE Goal (as defined in Section 6.2.2.f of this Schedule 15) during each sequential five Contract Year period during the Operating Period, with the first such period being the Contract Year during which the Substantial Completion Date occurs and the immediately following four Contract Years (provided that, if applicable, such goal for the first such period shall take into account that the first Contract Year in such period is not a full 12 month period if the Substantial Completion Date occurs part way through a Contract Year).
- f. Prior to the Substantial Completion Date, and thereafter prior to the end of each five Contract Year period referenced in Section 6.2.2.e of this Schedule 15, the Department shall notify the Developer of a goal for DBE participation on Renewal Work during each applicable period (the "Renewal Work DBE Goal"). The Department shall determine such goal based on a review of the Accepted Renewal Work Plan most recently submitted prior to the start of the first Contract Year in any such period (or, in the case of the first such period, prior to the Substantial Completion Date), together with any other relevant documentation.
- g. The Developer and the Department shall meet at agreed upon intervals, but no less than annually, to evaluate the Developer's progress toward achieving the then applicable Renewal Work DBE Goal (such meeting may be the annual progress review held pursuant to Section 1.3.4 of this Schedule 15).
- h. At the end of each five Contract Year period, the Department will evaluate whether Developer has achieved the Renewal Work DBE Goal and its efforts to achieve such goal, in order to determine whether a Noncompliance Event has occurred pursuant to Section 1.3.2.b of this Schedule 15. Whether or not the Developer has achieved the goal, the Developer shall submit for review by the Department documentation evidencing the good faith efforts that the Developer considers it has taken to achieve the goal.

6.3. Workforce Development Goals

The Developer is obligated to achieve the Local Hiring Goal, the Construction Period OJT Goal and the Renewal Work OJT Goals (collectively defined as the "Workforce Development Goals"), as further detailed in this Section 6.3.

6.3.1. Construction Period Goals

On-the-Job Training Goal

- a. The Developer shall achieve the OJT goal for the Construction Period set out in Section 6.1 of this Schedule 15 (the "Construction Period OJT Goal"), as calculated by reference to Other Construction Work comprised of skilled craft work and otherwise in accordance with Appendix B to this Schedule 15. Failure to achieve the Construction Period OJT Goal shall constitute a Noncompliance Event pursuant to Section 1.3.1.b of this Schedule 15.

Local Hiring Goal³

- b. The local hiring goal for the Construction Period is 760,000 total contract employment hours with a minimum of 380,000 hours performed by new hires (the "Local Hiring Goal"), as calculated in accordance with Section 2 of Part III of Appendix B to this Schedule 15. For certainty, achievement of the Local Hiring Goal requires the Developer to have achieved both the total employment hours goal and the new hire employment hours goal. For the purposes of this Schedule 15, a new hire is any individual hired by their employer after the Agreement Date. Monetary incentives for achieving and exceeding the Local Hiring Goal are described in Section 2 of Part V of Appendix B of this Schedule 15.

6.3.2. Operating Period OJT Goals

The Developer shall achieve the Renewal Work OJT Goal during each Contract Year period during the Operating Period, with the first such period being the Contract Year during which the Substantial Completion Date occurs (the "Renewal Work OJT Goal"), as calculated by reference to Renewal Work comprised of skilled craft work and otherwise in accordance with Appendix C to this Schedule 15. Failure to achieve the Renewal Work OJT Goal applicable to any Contract Year period shall constitute a Noncompliance Event pursuant to Section 1.3.2.c of this Schedule 15.

6.4. Goals and Subcontractors

Subject to Section 2(c) of Part A of Schedule 16 (Mandatory Terms), the Developer may utilize Subcontractors on the Project to achieve the Small Business and Workforce Goals.

7. COMMUNITY DEVELOPMENT PROGRAMS

7.1. Community Development Programs

In order to contribute to the community development needs of the Globeville, Elyria and Swansea neighborhoods and otherwise create a positive relationship between local communities and the Developer, the Developer shall :

- a. establish an organized program to assist businesses in taking advantage of the significant business opportunity provided by the local workforce during the Construction Period. This program shall include a commitment to work with restaurants, food vendors and catering businesses that are located within such neighborhoods and are likely to be impacted by the Construction Work. This program may include the following elements:
 - i. Business investment revolving loans and/or grant programs;
 - ii. Property access agreements for food carts and food trucks;

³ **Note to Proposers:** The Department has received full approval from FHWA to have local hiring preferences in this contract. All local hiring provisions are subject to change according to the FHWA approval process for Special Experimental Project No. 14-Local Labor Hiring Program.

- iii. Coupon programs;
 - iv. Advertisements; and/or
 - v. Partnerships with food-access non-profits;
- b. establish a college scholarship program that will benefit students enrolled during the Construction Period as students of good-standing at Swansea Elementary school. The scholarship program shall be designed for students who go on to successfully obtain a high school degree or equivalent, and who subsequently are accepted to and enroll in a two or four year associates or bachelors degree program. The Developer may partner with a foundation or other nonprofit in the management and allocation of such scholarships;
 - c. in partnership with Swansea Elementary school, develop and/or fund a construction education curriculum for the school designed to impart math and engineering concepts relevant to the construction of the Project; and
 - d. establish any other programs that it considers appropriate for the purposes of achieving the community development objective referred to above in relation to such neighborhoods.

7.2. Annual Report

The Developer shall submit, and obtain Acceptance from the Department of, a report (in a form to be agreed between the Parties, both acting reasonably) prior to NTP2, with subsequent reports to be submitted to the Department for Acceptance no later than 30 Calendar Days (1) before the end of each Contract Year that ends during the Construction Period, (2) after the Substantial Completion Date and (3) before the end of each Contract Year that ends during the Operating Period during which any of such programs remain active and, in each case, prior to the annual progress review conducted pursuant to Section 1.2.4 or 1.3.2, as applicable, of this Schedule 15. Each such report shall (to the extent known at the time of submission of such report) describe:

- a. each of the programs that has been, or will be, established by the Developer to comply with its obligations under Section 7.1 of this Schedule 15;
- b. the participation and any equivalent targets that have been established in relation to each of the programs;
- c. progress towards achieving such targets, both on an aggregate and a Contract Year basis; and
- d. any other relevant information.

8. DELIVERABLES

At a minimum, the Developer shall submit the following to the Department for Information, Acceptance, or Approval in accordance with the specified timeframes:

Table 1. Deliverables

Deliverable	Information, Acceptance, or Approval	Schedule
Details of the Civil Rights Program Manager (CRPM)	Acceptance	Prior to the issuance of NTP1, and at the time of any replacement.
Annual EEO Report (FHWA Form PR 1391)	Acceptance	Annually by August 15 during the Construction Period and the Operating Period.
Davis-Bacon monthly payroll reports	Acceptance	Monthly during the Construction Period and the Operating Period.

Deliverable	Information, Acceptance, or Approval	Schedule
Small and Disadvantaged Business Participation Plan (SDBPP)	Approval	Prior to the issuance of NTP1
Annual Small Business Commitments	Acceptance	Concurrently with the SDBPP and concurrently with the Annual Performance Progress Review Report thereafter during the Construction Period.
Small Business Commitment for each DBE and ESB	Acceptance	Concurrently with the Annual Small Business Commitments or by 10th Working Day of each month, and no earlier than 90 Calendar Days prior to the firm commencing work.
Joint Venture Commitments	Acceptance	Concurrently with the Annual Small Business Commitments or by 10th Working Day of each month, and no earlier than 90 Calendar Days prior to the firm commencing work.
Joint Check Letter	Approval	Prior to any payment intended to be made with a joint check to a DBE or ESB.
Small Business Commitment Modification	Acceptance	Submit prior to occurrence requiring termination or modification or, if that is not possible, within five Calendar Days of the occurrence.
Small and Disadvantaged Business monthly reports	Acceptance	No later than the tenth Working Day of each month during the Construction Period and the Operating Period.
Semi-annual small and disadvantaged business assessment	Approval	Every six months during the Construction Period.
Uniform Report of DBE Awards or Commitments and Payments Form	Acceptance	Submit bi-annually by May 15 and November 15.
Annual small and disadvantaged business annual performance progress review report	Approval	No later than 30 Calendar Days before the end of each Contract Year during the Construction Period and the Operating Period.
Construction Period small and disadvantaged business final report	Approval	Within 30 Calendar Days after the Substantial Completion Date, with update as needed within 30 Calendar Days after the Final Acceptance Date.
Five-Year Routine Maintenance ESB Participation Plan	Approval	Concurrently with the Maintenance Management Plan at the commencement of each new five Contract Year period commencing with the Contract Year in which Substantial Completion occurs.
Five-Year Renewal Work DBE Participation Plan	Approval	Concurrently with the Maintenance Management Plan at the commencement of each new five-year period commencing with the Contract Year in which Substantial Completion occurs.
Small Business Commitment for each DBE on Renewal Work projects more than \$1 million	Acceptance	At least two weeks prior to the commencement of construction on each Renewal Work project more than \$1 million during the Operating Period.

Deliverable	Information, Acceptance, or Approval	Schedule
Routine Maintenance ESB Five-Year Final Report	Approval	At the end of each sequential five Contract Year period within 30 Calendar Days after the end of the final Contract Year in such period.
Renewal Work DBE Five-Year Final Report	Approval	At the end of each sequential five Contract Year period within 30 Calendar Days after the end of the final Contract Year in such period.
Workforce Development Plan (WDP)	Approval	Prior to the issuance of NTP1.
Yearly WDP update	Approval	No later than 30 Calendar Days prior to the commencement of each Contract Year during Construction Period.
Approval form for each proposed OJT apprentice and trainee	Approval	Approval must occur before training begins
Enrollment and Residency Disclosure for each proposed local worker	Acceptance	Acceptance must occur before individual's hours may count toward the goal.
OJT monthly reports	Acceptance	Monthly during the Construction Period and the Operating Period.
Local hiring monthly reports	Acceptance	Monthly during the Construction Period.
Semi-annual workforce development assessment	Acceptance	Every six months during the Construction Period.
Construction Period workforce development final report	Approval	Within 30 Calendar Days after the Substantial Completion Date, with update as needed within 30 Calendar Days after the Final Acceptance Date.
Community Development Program report	Acceptance	Prior to the issuance of NTP2, no later than 30 Calendar Days prior to the commencement of each Contract Year during the Construction Period and the Operating Period and no later than 30 Calendar Days after Substantial Completion.

9. APPENDICES

- Appendix A Construction Work Small Business Goals Compliance and Plan Requirements
- Appendix B Construction Period Workforce Development Goals Compliance and Plan Requirements
- Appendix C Operating Period Goals Compliance and Plan Requirements
- Appendix D Davis-Bacon Wage Decision
- Appendix E Executive Order No. 11246
- Appendix F CDOT's Special Standard Provision for "Affirmative Action Requirements Equal Employment Opportunity"
- Appendix G USDOT Standard Title VI/Non-Discrimination Assurances
- Appendix H FHWA Form 1273 (Revised May 1, 2012)

Appendix A
Construction Work Small Business Goals Compliance and Plan Requirements

Part I. Small and Disadvantaged Business Participation Plan (SDBPP)

The Developer's SDBPP shall include the following:

1. Identification of the CPRM and the other team members responsible for small business program development, including:
 - a. The names of the small business team members and team members' experience working with small businesses or agencies on transportation or construction projects.
 - b. The roles and responsibilities of the team members, including descriptions of their activities as well as the delegated authority of the team members and how they are integrated with Key Personnel on the Project, and identification of meetings they will attend.
2. Strategic Approach for Meeting Goals during the Construction Period including:
 - a. Outline of how Developer will calculate the value of Design Services and Other Construction Work in compliance with Part II of this Appendix A.
 - b. An estimated schedule for achievement of each of the Construction Work Small Business Goals. The Developer shall outline the expected participation toward achieving each goal over the Construction Period and identify an annual target for each goal for each Contract Year during the Construction Period. This outline shall set the framework for achieving the Construction Work Small Business Goals during the Construction Period.
 - c. For each Construction Work Small Business Goal, a list of the areas of Work the Developer has identified for potential DBE or ESB participation with a range of the approximate percentage of the value of the applicable Construction Work relative to the value of all Construction Work. The SDBPP must reflect a reasonable approach to meeting the goals with ready, willing and able DBEs and ESBs to perform the applicable Work. The Developer shall consult the respective directories at www.coloradodbe.org and www.coloradoesb.org to ensure availability to meet the goals. If already selected, DBE or ESB team members should be identified in respect of their relevant area(s) of Work.
 - d. The strategic approach to integrating achievement of small business participation into the overall approach to subcontracting, including discussion of how the Developer will communicate opportunities, create a transparent process, unbundle work to establish opportunities for small businesses, or take other actions to secure DBE and ESB participation.
 - e. A description of how participation will be monitored and tracked. Describe the internal procedures through which the Developer will ensure the Construction Work Small Business Goals are met. This will include distribution of the goal responsibilities to Subcontractors, collecting data on Subcontractor participation and performance, ensuring only valid performance is counted, etc.
3. Approach to small business development and assistance including:
 - a. Methods for ensuring prompt payment to all Subcontractors (for certainty, not only DBE or ESB Subcontractors), including a description as to whether and how the Developer will implement any additional prompt payment requirements, beyond those mandated in Section 17.5 of the Project Agreement, as well as the process by which the Developer will track and monitor the following: invoicing by Subcontractors; prompt payment to Subcontractors; and release of retainage. This portion of the plan shall include any efforts that the Developer and Subcontractors that are not themselves DBEs or ESBs will make to assist with mobilization efforts and early purchase of materials, or any other payment measures that will aid the viability of small business participation in the Work.

- b. Assistance with bonding and insurance, including a description of any measures to be implemented by the Developer or its team members to assist DBEs and ESBs with bonding and insurance while maintaining compliance with the applicable provisions of this Agreement and the requirements of Law. This may include any of the following: adding DBEs and ESBs to insurance plans; waiving bond requirements; phased bonding; and limitations on bond and insurance requirements imposed by Subcontractors.
- c. Small business outreach, training, and development, including at a minimum, a description of how Developer will:
 - i. conduct a mandatory outreach event directed at DBE and ESB firms prior to the issuance of NTP2;
 - ii. collaborate with and utilize CDOT's established Connect2DOT Program (www.connect2dot.org);
 - iii. assist in the development and facilitation of a Connect2DOT Transportation Leading Edge Course for firms participating or seeking to participate in the Construction Work (see <http://www.connect2dot.org/need-assistance/leading-edge> for more information);
 - iv. regularly bring Project updates to and participate in CDOT's quarterly Small Business Collaborative Forums;
 - v. on a monthly basis, provide a list of upcoming subcontracting opportunities and events for distribution via the Connect2DOT newsletter;
 - vi. conduct any other measures of outreach, training and development and the resources dedicated to such measures; and
 - vii. conduct any other activities or efforts not included in the above related to achievement of the Construction Work Small Business Goals.

Part II. Good Faith Efforts, Commitments and Counting

- 1. Good Faith Efforts Requirement. The Developer shall make good faith efforts to achieve the Construction Work Small Business Goals. Good faith efforts means all necessary and reasonable steps to achieve the relevant goal which, by their scope, intensity, and appropriateness to the objective, could reasonably be expected to achieve the goal, even if not fully successful. For additional guidance on how the Department will determine whether or not it considers that the Developer has made good faith efforts, see 49 CFR Part 26 Appendix A.
 - a. The Developer's good faith efforts toward achieving the Construction Work Small Business Goals shall be evaluated annually at a minimum but a final determination by the Department as to whether the Developer has complied with its obligation to make good faith efforts shall not be made until Final Acceptance. The Department may issue a written non-compliance warning as it deems necessary if it believes the Developer is not making good faith efforts at any time during the Construction Period.
 - b. For each Construction Work Small Business Goal, the Developer shall submit, and obtain the Acceptance of the Department of, its annual small business commitments prior to the commencement of every Contract Year during the Construction Period. The initial list of annual small business commitments shall be submitted concurrently with the Developer's SDBPP for Acceptance by the Department prior to the issuance of NTP1. Each year thereafter, the annual small business commitments shall be submitted with the Annual Performance Progress Review Report (as required to be submitted pursuant to Section 5 of Part III of this Appendix A) no later than 30 Calendar Days prior to the commencement of each Contract Year. The annual small business commitments shall list all Small Business Commitments to DBE and ESB firms for the upcoming Contract Year sufficient to meet or exceed the annual participation target established for such year by the Developer in its SDBPP. A "Small Business Commitment" is a portion of the Design Services or Other Construction Work, identified by dollar amount and Work area,

designated by the Developer for participation by a particular DBE or ESB. For each firm listed, the Developer shall also provide a "Commitment Confirmation Form" in a form to be agreed between the Parties (both acting reasonably) (further described in Section 3 of this Part II) for Acceptance.

- c. If the total eligible participation in the annual small business commitments does not meet the Developer's identified annual target, the Developer shall provide a description of the good faith efforts made to obtain commitments prior to submission of the annual small business commitments and additional good faith efforts that will be made during the current year to maintain compliance with the SBDPP. This description of good faith efforts is subject to Approval by the Department.
2. Construction Work Small Business Goal Calculation. The goals shall be calculated as follows:
 - a. For purposes of this Schedule 15, the Construction Work to be performed during the Construction Period shall be separated (i) into design-related activities ("Design Services") (as further defined below) and (ii) all other Work to be performed during the Construction Period under the terms of the Construction Contract (excluding, for certainty, O&M Work During Construction) ("Other Construction Work").
 - b. For the purposes of this Schedule 15, "Design Services" shall be comprised of all program management, construction management, feasibility study, preliminary engineering, design, engineering, surveying, mapping, and architectural related services that comprise part of the Construction Work; provided, however, that, (i) the following (or equivalent) Design Services performed by the Construction Contractor or its Subcontractors such as construction surveying, erosion control consulting, health and safety plans, and public involvement may, at the Developer's reasonable discretion, be considered Other Construction Work and (ii) the Developer may request that any other Design Services that are under the direct control of the Construction Contractor be included in the Other Construction Work subject to the Department's consent. The Developer must establish whether design-related activities under the direct control of the Construction Contractor will be considered in Design Services or Other Construction Work and make any other requests for modifications to these categories in its draft SDBPP. The Department may request additional data to verify the value of the Design Services.
 - c. The dollar value of the DBE Design Goal and ESB Design Goal shall each be determined by multiplying the percentage of the goal set out in Section 6.1 of this Schedule 15 by the total value of the Design Services. Subject to Section 3 of this Part II of this Appendix A, only the performance of Design Services by DBEs and ESBs, respectively, shall count toward achieving the respective goals, provided that (for certainty) the participation in the performance of Design Services by a firm that is certified as both a DBE and an ESB shall count towards the achievement of both goals.
 - d. The dollar value of the DBE Construction Goal and ESB Construction Goal shall each be determined by multiplying the percentage of the goal set out in Section 6.1 of this Schedule 15 by the total value of the Other Construction Work. Subject to Section 3 of this Part II of this Appendix A, only the performance of Other Construction Work by DBEs and ESBs, respectively, shall count toward achieving the respective goals, provided that (for certainty) the participation in the performance of Other Construction Work by a firm that is certified as both a DBE and an ESB shall count towards the achievement of both goals.
 3. Counting Eligible Participation. Unless otherwise specified in this Appendix A, eligible DBE participation will be counted in accordance with 49 CFR 26.55. ESB participation will be counted in the same manner as DBE participation with the exception that ESBs do not have work codes and therefore are not limited to performance in certain work areas.
 - a. In order for the work performed by a DBE or ESB to count toward achieving a Construction Work Small Business Goal, the Developer must have an Accepted Small

Business Commitment for the Work to be performed. All proposed Small Business Commitments to DBE and ESB firms must be submitted to the Department for Acceptance prior to the DBE or ESB commencing work in order for the participation to be counted toward the relevant Construction Work Small Business Goal. Once Accepted, Small Business Commitments are enforceable obligations from the Developer under this Agreement. Each DBE and ESB firm must be certified for the work to be performed upon submission of the Small Business Commitment.

- i. For firms not listed in its annual small business commitments, the Developer shall submit a "Commitment Confirmation Form," in a form to be agreed between the parties (both acting reasonably), no later than the 10th Working Day of each month during the Term. The Commitment Confirmation Form must be submitted no earlier than 90 Calendar Days prior to the firm commencing work.
 - ii. For trucking participation by DBE and/or ESB firms, the Developer may submit an overall trucking commitment for an annual period with a list of DBE or ESB firms that will perform work under such commitment. Each DBE and ESB firm listed may provide no more than \$100,000 of participation under this commitment. The Developer shall submit a Commitment Confirmation Form for each listed firm and the annual overall commitment for each goal shall be submitted for Approval concurrently with its list of annual small business commitments.⁴ For any individual trucking firm with a commitment more than \$100,000, the Developer shall submit a separate Small Business Commitment for that firm.
- b. The Work performed by a DBE or ESB must be reasonably construed to be included in the work area identified by the Developer in the Accepted Small Business Commitment. DBE firms must be certified in the applicable work code (NAICS code plus descriptor) for the work to be performed. A DBE cannot receive credit for work in an area for which it is not certified.
 - c. The Department's DBE Program does not permit the counting of participation by non-certified trucking firms.
 - d. In accordance with 49 CFR 26.55(2), the Developer shall only count a reasonable fee for contract-specific services toward achieving the relevant Construction Work Small Business Goal. Non-contract specific expenses may not be counted. In the case of temporary employment placement agencies, only the placement fee and fees for a temporary employee that will be specifically and exclusively used for work on the Project shall count toward achieving the relevant Construction Work Small Business Goal; the temporary employee's hourly fee will not count.
 - e. Work by a DBE or ESB firm that was not certified for the work to be performed upon execution of its Subcontract will not count toward achieving the relevant Construction Work Small Business Goal. If a DBE or ESB is decertified in the work to be performed after Acceptance of a Small Business Commitment and the execution of a Subcontract, the Developer may still count the DBE or ESB participation toward achieving the relevant Construction Work Small Business Goal.
 - f. If the Developer seeks to count participation by a DBE or ESB firm engaged in a joint venture, the Developer shall seek Acceptance from the Department of the joint venture's eligible participation by submitting the joint venture agreement explaining the work and management arrangement between the joint venture.

⁴ **Note to Proposers:** Being listed as a trucking firm does not guarantee the relevant firm work. The Developer could achieve their annual trucking commitment by using any combination of the listed firms (so long as any one firm does not exceed \$100,000).

4. Commercially Useful Function (“CUF”) Reviews. All DBEs and ESBs must perform a commercially useful function as defined by 49 CFR § 26.55.
 - a. The Developer shall monitor all DBE and ESB firms to ensure those firms are performing a CUF. The Department shall determine whether a DBE or ESB firm has performed a CUF on the Project. If the Department determines that a firm is not performing a CUF pursuant to 49 CFR § 26.55, no work performed by such firm shall count toward achieving the relevant Construction Work Small Business Goal.
 - b. The use of joint checks to DBEs and ESBs must be Approved by the Department before used to make a payment. The Developer shall request Approval for the use of a joint check in a written letter signed by the DBE/ESB and the Developer, stating the reason for the joint checks and the approximate number of checks that will be needed.
5. Small Business Commitment modifications. The Developer shall not terminate, reduce or otherwise modify the work to be performed under a Small Business Commitment without Acceptance from the Department. If, due to exigent circumstances, it is not possible for the Developer to seek Acceptance prior to termination, reduction or modification, the Developer shall submit to the Department a request for Acceptance within five Calendar Days of the occurrence requiring such action. Requests for Acceptance shall be made upon a form mutually agreed by the Developer and the Department (both acting reasonably).
 - a. Terminations and reductions include instances in which the Developer seeks to perform work originally designated for a DBE/ESB Subcontractor with its own forces, those of an Affiliate, a non-DBE/ESB firm or with another DBE/ESB firm.
 - i. In order to receive Acceptance of a termination or reduction, the Developer shall, at a minimum, have good cause for the termination or reduction as outlined in 49 CFR § 26.53(f).
 - ii. Prior to requesting Acceptance of a termination or reduction, the Developer shall provide the firm written notice of the Developer’s intent to terminate or reduce the commitment and the reason for such termination or reduction, with a copy to the Department. In such notice of intent, the Developer shall provide the firm at least five Working Days to respond to the notice and to inform the Department and the Developer of the reasons, if any, why it objects to the proposed termination or reduction and any reasons why it considers that it should not be Accepted. The Developer is not required to provide the five Working Days’ written notice in cases where the DBE or ESB has provided written notice that it is withdrawing. The notice period may be reduced by the Department in its discretion if required by public necessity. The Developer shall not request Acceptance until the period has passed or been waived.
 - b. Requests for other modifications, such as the addition of Work to be performed by the DBE or ESB, shall be made by submitting an updated Commitment Confirmation Form for Acceptance by the Department.
 - c. The Developer shall make good faith efforts to replace any DBE or ESB commitment that has been terminated or reduced with another DBE or ESB firm as outlined in 49 CFR § 26.53(g).

Part III. Reporting Requirements

1. Disclosure of information: In order for the Department to monitor and enforce the requirements of this Schedule 15, the Developer shall accurately track and disclose to the Department the cumulative value of the Design Services, the cumulative value of the Other Construction Work, and the value of all individual Subcontracts (and, for certainty, this requirement shall apply to all Subcontracts and not just DBE or ESB Subcontracts). The Department may verify this information by reviewing contracts and payment documents which shall be provided upon request.

2. Monthly Reporting: In accordance with Schedule 8 (Project Administration) the Developer shall submit a monthly summary report (in a form to be agreed between the Parties, both acting reasonably) to the Department for Acceptance no later than the tenth Working Day of each month during the Construction Period. The report shall include:
 - a. Subcontractor Participation and Payment: total value of (1) Design Services, (2) all Other Construction Work, (3) Routine Maintenance and (4) all other O&M Work During Construction to date (regardless of the entity that has performed such Work); a detailed breakdown of all Subcontractors (and, for certainty, this requirement shall apply to all Subcontractors and not just DBE or ESB Subcontractors) that have participated on the Project to date, separated by these same four categories of Work. It shall include:
 - i. firm name;
 - ii. whether the firm is an ESB or DBE and the Small Business Commitment amount to the firm and whether the firm is a Small Subcontractor;
 - iii. Subcontract amount; area of work performed; total paid to date to the firm; most recent invoice date and amount; most recent payment date and amount;
 - iv. identification of all parties to the relevant Subcontract and to the higher and lower tier Subcontracts associated with the Subcontract; and
 - v. any other relevant information to facilitate the Enterprises' assessment of compliance by the Developer with Section 17.5 of the Project Agreement in relation to the Subcontract.
 - b. Outreach and Upcoming Opportunities: a description of work areas on the Project for which the Developer is seeking Subcontractors. The description shall also include upcoming outreach and training events.
 - c. Compliance Issues Report: details of any issues that the Department should be aware of regarding DBE and ESB participation on the Project. This may include payment disputes, non-performance by DBEs and ESBs, significant scope of work changes, potential CUF concerns or other performance issues.
3. Semi-annual Assessment: In addition to the monthly report required to be submitted in the relevant month, the Developer shall, pursuant to Section 1.2.3 of this Schedule 15, also submit to the Department for Approval on a semi-annual basis an assessment of progress (in a form to be agreed between the Parties, both acting reasonably) toward achieving the Construction Work Small Business Goals, including a summary of solicitation and good faith efforts to date, and anticipated DBE and ESB participation for the next six months.
4. Uniform Report of DBE Awards or Commitments and Payments Form: By May 15 and November 15 of each year, the Developer shall submit to the Department for Acceptance a completed Uniform Report of DBE Awards or Commitments and Payments Form that has been completed in accordance with Appendix B of 49 CFR Part 26.
5. Annual Performance Progress Review Reports: In addition to the monthly and semi-annual reports referred to in Sections 2 and 3 above, the Developer shall submit an annual report (in a form to be agreed between the Parties, both acting reasonably) to the Department for Approval no later than 30 Calendar Days before the end of each Contract Year and prior to the annual progress review conducted pursuant to Section 1.2.4 of this Schedule 15, which report shall include the following information:
 - a. Bidders List: The Developer shall list all firms that submitted a quote to participate on the Project. The list shall include a description of the work for which the bid was submitted, whether the firm is a DBE or ESB, and whether they were selected for the work.
 - b. Participation Assessment: A summary and assessment of DBE and ESB participation of the past Contract Year and total to date progress made toward achieving the Construction Work Small Business Goals.

- c. Strategies for continuing implementation of the SDBPP: This shall include proposed areas of work for DBEs and ESBs and outreach efforts for the next Contract Year.
 - d. If necessary, a request for amending the SDBPP if the Developer has not met its annual target for the current Contract Year or if the Developer has not met other commitments detailed in the SDBPP. The request shall include a revised schedule of annual targets for each Construction Work Small Business Goal. The revised schedule of annual targets shall include a description of the Developer's approach to making up the participation not achieved during the current Contract Year.
6. Department Annual Assessment: Within 30 Calendar Days after the Annual Performance Progress Review conducted pursuant to Section 1.2.4 of this Schedule 15, the Department shall provide a written determination on the Developer's progress toward achieving the Construction Work Small Business Goals. Progress will be based on the Developer's demonstrated good faith efforts, compliance with its SDBPP and meeting the schedules and milestones described in the plan.
7. Final Report: The Developer shall submit, for Approval by the Department, its final report (in a form to be agreed between the Parties, both acting reasonably) on DBE and ESB participation during the Construction Period within 30 Calendar Days after the Substantial Completion Date. The final report shall include a summary report of total DBE and ESB participation toward achieving each of the Construction Period Small Business Goals. The report shall include the Small Business Commitment amount, the actual dollar amount paid to each DBE or ESB firm, the eligible participation amount, area of work performed, and the total value of the Design Services and Other Construction Work. In the event that Developer failed to achieve any Construction Period Small Business Goal as of the Substantial Completion Date (as determined by the Department pursuant to Section 8 of this Appendix A of this Schedule 15), the Developer shall submit, for Approval by the Department, an updated report within 30 Calendar Days after the Final Acceptance Date.
8. Department Report: Following Approval of the Developer's report (or any update thereto) submitted pursuant to Section 7 of Part III this Appendix A, the Department will evaluate the data to determine, and issue a written report setting out its determination of, whether the Developer has (i) achieved each of the Construction Work Small Business Goals as of the Substantial Completion Date (or, as applicable, as of the Final Acceptance Date) and (ii) in relation to any such goal that has not been met, demonstrated that it has made good efforts to achieve such goal.

Appendix B
Construction Period Workforce Development Goals Compliance and Plan Requirements

Part I. Workforce Development Plan Requirements

The WDP shall at a minimum include the following elements:

1. General Plan Requirements:
 - a. A written statement indicating the Developer's commitment to achieve the Construction Period OJT Goal and the Local Hiring Goal.
 - b. A description of the CRPM and other team members responsible for implementing the Developer's WDP, including the name of each team member, a description of their workforce development experience, and a description of their roles and responsibilities on this Project.
 - c. A description of how the Developer and all Subcontractors will recruit their workforce, including planned outreach events involving the local community. The Developer shall describe how it will work with CDOT-approved workforce development organizations to advertise job openings locally.
2. On-The-Job Training Plan: With respect to OJT:
 - a. Identification of the number and description of the skilled craft areas where trainees and apprentices will be used during the Construction Period on Other Construction Work.
 - b. The minimum length and type of training that will be offered for each position.
 - c. A description of how the Developer will monitor hours completed, training provided, and how the Developer will alleviate barriers to employment, graduation and successful permanent placement.
 - d. A description of the Developer's approach to graduating participants. The Developer shall identify a target number of graduates in order to maximize participant graduation rates from the pre-approved trainee/apprenticeship programs during the Construction Period.
 - e. An annual schedule indicating the distribution of training hours over each Contract Year for the duration of the Construction Period.
 - f. The Developer shall describe recovery tools and methods that will be implemented should appropriate progress not be made toward the overall goal attainment.
3. Local hiring plan: With respect to local hiring
 - a. Strategic approach for meeting the Local Hiring Goal, including the identification of jobs targeted for recruitment, the estimated length of employment associated with identified jobs, and an estimated schedule of the distribution of hours for the Construction Period.
 - b. A description of how the Developer shall provide assistance to prospective and actual local employees to alleviate barriers to employment and to promote retention.
 - c. A description of how the Developer shall monitor and track hours worked and of the internal procedures through which the Developer will ensure the Local Hiring Goal will be met. This will include distribution of the goal responsibilities to Subcontractors, collecting data on Subcontractor participation and performance, and ensuring only valid participation is counted.
 - d. A description of how the Developer plans to ensure compliance with the residency requirements in Section 2 of Part III of this Appendix B for workers that will count toward the Local Hiring Goal.
 - e. An affirmative statement that no existing employees of the Developer or any Subcontractor will be displaced or have their employment terminated as a result of the Local Hiring Goal.

4. Plan Updates. The WDP is intended to be a living document and shall be updated or revised as necessary during the course of the Construction Period, including as requested by the Department. At a minimum, an update of the WDP shall be submitted to the Department for Approval no later than 30 Calendar Days prior to the commencement of each Contract Year.

Part II. Advertisement of Job Openings

To ensure local workers are given full and fair opportunity to participate in the hiring process for vacant positions, the Developer and all Subcontractors shall advertise all job openings with Department-approved workforce development organizations for a period of seven Calendar Days before such job openings can be advertised through any other sources.

Part III. Counting goal participation

1. Counting OJT participation
 - a. OJT participation that counts toward satisfying the Construction Period OJT Goal shall be calculated based on the aggregate number of employment hours on Other Construction Work (excluding, for certainty, O&M Work During Construction) worked by trainees and apprentices who satisfy the requirements below.
 - b. The employment of the following categories of individuals by the Developer (and Subcontractors) shall count towards achieving the Construction Period OJT Goal :
 - i. trainees that are enrolled in a program approved by the Department and FHWA;
 - ii. apprentices that are enrolled and duly registered in a U.S. Department of Labor approved program; and/or
 - iii. trainees that are enrolled in an approved program with Colorado Contractors Association (CCA).
 - c. In addition, a proposed apprentice or trainee must have been Approved by the Department for such individual's participation to be counted toward achieving the Construction Period OJT Goal. Approval must occur before employment hours can be counted toward the goal. To obtain Approval for the apprentice or trainee, the Developer must submit the following to the Department for each apprentice and each trainee:
 - i. evidence of the registration of the trainee or apprentice into the approved training program; and
 - ii. the completed CDOT form for each trainee or apprentice.
 - d. The employment of a trainee/apprentice in a skilled craft will not be counted toward the Construction Period OJT Goal if that individual has already worked or been paid at a professional/journeyman level status for more than 6 months prior to Approval of their participation as a trainee/apprentice.
 - e. Before training begins, the Developer shall provide each trainee with a copy of the approved training program, pay scale, pension and retirement benefits, health and disability benefits, promotional opportunities, other employer policies and complaint procedures.
2. Counting local hiring program participation
 - a. For the purposes of this Schedule 15, the geographic area applicable to the Local Hiring Goal consists of the following zip codes: 80010, 80011, 80019, 80022, 80205, 80207, 80211, 80216, 80221, 80238, 80239, 80249, and 80266.

- b. For a worker's hours to be eligible for the Local Hiring Goal, the individual must perform a function on the Project (whether as skilled or non-skilled labor) and meet one of the following eligibility criteria⁵:
 - i. Current Resident: An individual that has resided in the local hire geographic area for a minimum of 60 consecutive Calendar Days and continues to reside in the geographic area. A current resident's hours are eligible to count toward the Local Hiring Goal for as long as the individual resides in the local hire geographic area;
 - ii. Former Resident: An individual that resided in the local hire geographic area for a minimum of 180 consecutive Calendar Days provided that such period of residency ended no more than one year prior to the Agreement Date. A former resident's hours are eligible to count toward the Local Hiring Goal for the duration of the Construction Period;
 - iii. Displaced Resident: An individual that was subjected to a Right-of-Way relocation. A displaced resident's hours are eligible to count toward the Local Hiring Goal for the duration of the Construction Period.
- c. A proposed local worker must have been Accepted by the Department for such individual's hours to be counted toward the Local Hiring Goal. Acceptance must occur before the participation can be counted toward the Local Hiring Goal. To gain Acceptance, the Developer must submit the following to the Department for each local worker:
 - i. Completed Local Hiring Program Enrollment, in a form to be agreed between the Parties (both acting reasonably);
 - ii. A self-certifying Residency Disclosure, in a form to be agreed between the Parties (both acting reasonably), signed by the individual whose employment hours are to be counted toward the Local Hiring Goal; and
 - iii. Any additional documentation to prove residency or prior residency on a case-by-case basis as the Department determines is necessary.
- d. Hours worked by local workers must be documented and reported (pursuant to Part IV of this Appendix B) to the Department in a format mutually agreed upon by the Developer and the Department (both acting reasonably).
- e. The Developer shall notify the Department when an Accepted current resident worker no longer meets the eligibility requirements within 14 Calendar Days of the local worker's employer obtaining knowledge of the local worker's new residency status. The Developer may seek Acceptance for the worker to count as a former resident if eligible. Failure to notify the Department in accordance with this Section may result in all of the individual local worker's hours being disqualified from counting toward the Local Hiring Goal.
- f. The Developer and all Subcontractors are prohibited from displacing or terminating existing employees to attain the Local Hiring Goal.

⁵ **Note to Proposers:** The Department is exploring partnerships with local schools for starting an internship program and having hours worked by interns count toward the Local Hiring Goal. More information would be provided in the Final RFP.

Part IV. Reporting requirements

1. Disclosure of Information: In order to monitor and enforce the requirements of this Schedule 15, the Developer shall disclose employment records for trainees and apprentices as well as individuals that will count toward achieving the Local Hiring Goal. The Department may verify employment records and information by reviewing personnel files as well as interviewing any individual employed by the Developer or any Subcontractor.
2. Records: The Developer shall keep records regarding the progress of the Workforce Development Plan participation on the Project, including Subcontractor participation.
3. Reports: The Developer shall submit each of the following reports for Acceptance:
 - a. Monthly report: In accordance with Section 8 (Project Administration) the Developer shall submit a monthly report (in a form to be agreed between the Parties, both acting reasonably) to the Department no later than the tenth Working Day of each Month during the Construction Period. The report shall include:
 - i. On-The-Job Training reports, which shall include the following, at a minimum:
 - A. Total employment hours expended during the Construction Period to date separated into skilled craft employment hours, professional services employment hours, and all other employment hours.
 - B. Total employment hours by trainees/apprentices expended during the Construction Period to date.
 - C. Updated projected employment hours by trainees/apprentices for the Work during the Construction Period.
 - D. If the projected employment hours are less than the Construction Period OJT Goal, the Developer shall provide an explanation detailing how it intends to meet the OJT participation projections outlined in its WDP, including a description of activities and other proactive measures intended to facilitate increased OJT participation.
 - E. A list of current and new (i.e. since the last report) trainees/apprentices by providing full name, employer, description of services or applicable work code, start date, skilled craft program registered in (including verification of enrollment) for trainees/apprentices, total hours worked in current month, pay rate, total hours worked to date on the Project, supervisor full name, and a description of the training and performance level.
 - F. Any performance problems with the training/apprenticeship participants and how the problems were resolved, including any reasons for participants leaving the Project.
 - G. A list of trainees/apprentices that have graduated or successfully completed their training program, and last date worked on site.
 - H. A signature by the Developer certifying the information in the report is accurate.
 - ii. Local Hiring Program reports, which shall include the following, at a minimum:
 - A. Total employment hours expended during the Construction Period to date separated into skilled craft employment hours, professional services employment hours, and all other employment hours..
 - B. Total hours worked by individuals hired locally during the Construction Period to date separated into skilled craft employment hours, professional service employment hours, and all other employment hours.

- The Developer shall specify whether each worker is considered a new hire.
- C. Projected local hiring hours to be utilized during the Construction Period.
 - D. If the projected local hiring hours worked are less than the Local Hiring Goal, the Developer shall provide an explanation detailing how it intends to achieve the Local Hiring Goal including any remedies necessary to meet the Local Hiring Goal.
 - E. A list of current newly (i.e. since the last report) employed locally hired individuals, within that month, by providing full name, address, employer, description of services or applicable work code, start date, skilled craft program registered in (including verification of enrollment for newly employed individuals) if applicable, total hours worked in current month, pay rate, total hours worked to date on the Project, supervisor full name, address verification, and a description of performance level.
 - F. Any performance problems with the locally hired individuals and how the problems were resolved, including any reasons for individuals leaving the Project.
 - G. A signature by the Developer certifying the information in the report is accurate.
4. Semi-annual Assessment: In addition to the monthly report required to be submitted in the relevant month, the Developer shall, pursuant to Section 1.2.3 of this Schedule 15, also submit to the Department for Acceptance on a semi-annual basis an assessment of progress (in a form to be agreed between the Parties, both acting reasonably) toward achieving the Workforce Development Goals applicable during the Construction Period, which shall include the following:
- a. a summary of solicitation and good faith efforts to date, effectiveness of the program, identification of areas for improvement, and recommendations for improving the WDP; and
 - b. a notification as to whether the Developer considers that it has achieved any of the incentive milestones described in Sections 1.a to 1.c of Part V of this Appendix B. For any On-the-Job Training milestone reached, the Developer shall submit documentation evidencing that the trainee/apprentice has graduated from the applicable OJT Program and has since worked at least six months as a full-time journeyman on the Project in the skilled craft for which the individual graduated. Documentation shall include payrolls showing the individual worked as a fulltime journeyman.
5. Annual Performance Progress Review: The Developer shall participate in an annual meeting with the Department within 30 Calendar Days before the end of each Contract Year to review its progress with its Workforce Development Plan and toward achieving the Workforce Development Goals applicable during the Construction Period. Within 30 Calendar Days after the annual performance review meeting, the Department will provide a written assessment as to whether the Developer has made adequate progress toward achieving the Construction Period OJT Goal and the Local Hiring Goal. Progress will be based on the Developer's demonstrated efforts with implementing its Workforce Development Plan and meeting the schedules and milestones described within the Workforce Development Plan.
6. Final Report: The Developer shall submit, for Approval by the Department, its final report (in a form to be agreed between the Parties, both acting reasonably) on OJT and local hiring participation during the Construction Period within 30 Calendar Days after the Substantial Completion Date. The final report shall include total participation data through Substantial Completion. In the event that the Developer failed to achieve either the Local Hiring Goal or the Construction Period OJT Goal as of the Substantial Completion Date (as determined by the Department pursuant to Section 7 of this Appendix B), the Developer shall submit, for Approval by the Department, an updated report within 30 Calendar Days after the Final Acceptance Date.

7. Department Report: Following Approval of the Developer's report (or any update thereto) submitted pursuant to Section 6 of this Appendix B, the Department will evaluate the data to determine, and issue a written report setting out its determination of, whether the Developer has achieved as of the Substantial Completion Date (or, as applicable, as of the Final Acceptance Date) each of the Local Hiring Goal and the Construction Period OJT Goal. Such report shall also confirm whether or not the Developer is entitled to be paid any incentive payment(s) pursuant to Section 2 of Part V of this Appendix B and, if so entitled, the amount thereof (including relevant calculations).

Part V. Monetary Incentives for Workforce Participation

1. Monetary incentives for On-the-Job Training Participation:
 - a. The Enterprises shall pay the Developer the applicable monetary incentive set out below for reaching one of the following milestones by the end of the third Contract Year of the Construction Period:
 - i. \$40,000 for achieving a total of 120,000 employment hours and graduating and retaining for at least six months after graduation 21 individuals; or
 - ii. \$60,000 for achieving a total of 120,000 employment hours and graduating and retaining for at least six months after graduation 23 individuals; or
 - iii. \$80,000 for achieving a total of 120,000 employment hours and graduating and retaining for at least six months after graduation 25 individuals.
 - b. The Enterprises shall pay the Developer the applicable monetary incentive set out below for reaching one of the following milestones by the end of the fourth Contract Year of the Construction Period:
 - i. \$40,000 for achieving a total of 160,000 employment hours and graduating and retaining for at least six months after graduation 31 individuals; or
 - ii. \$60,000 for achieving a total of 160,000 employment hours and graduating and retaining for at least six months after graduation 33 individuals; or
 - iii. \$80,000 for achieving a total of 160,000 employment hours and graduating and retaining for at least six months after graduation 35 individuals.
 - c. The Enterprises shall pay the Developer the applicable monetary incentive set out below for reaching one of the following milestones by Substantial Completion:
 - i. \$50,000 for achieving a total of 200,000 employment hours and graduating and retaining for at least six months after graduation 41 individuals; or
 - ii. \$70,000 for achieving a total of 200,000 employment hours and graduating and retaining for at least six months after graduation 43 individuals; or
 - iii. \$90,000 for achieving a total of 200,000 employment hours and graduating and retaining for at least six months after graduation 45 individuals.
 - d. For purposes of this Section 1:
 - i. eligible employment hours shall be calculated in accordance with Section 1 of Part III of this Appendix B;
 - ii. graduation means the individual has completed his or her training or apprenticeship program described in Section 1 of Part III of this Appendix B and has reached full journeyman status; and
 - iii. retention means the individual is working full-time on the Project as a journeyman in the skilled craft for which they graduated.

- e. Any amount payable pursuant to this Section 1 shall be paid no later than 45 Calendar Days after receipt by the Enterprises of an invoice from the Developer for the relevant amount, provided that the Developer shall not be entitled (i) to deliver such an invoice until after the Department has issued an assessment pursuant to Section 5 of Part IV of this Appendix B confirming that the Developer is entitled to such a payment and (ii) to any such payment earlier than the end of the relevant Contract Year by reference to which the relevant milestone is to be determined.
2. Monetary incentives for Local Hiring participation:
- a. The Enterprises shall pay the Developer \$125,000 for achieving the Local Hiring Goal.
 - b. The Enterprises shall pay the Developer \$2.50 for every local employment hour worked by a new hire (as defined in Section 6.3.1.b of this Schedule 15) achieved in excess of the Local Hiring Goal, with a total maximum incentive payment payable pursuant to this Section 2.b of \$125,000.
 - c. Any amount payable pursuant to this Section 2 shall be paid no later than 45 Calendar Days after receipt by the Enterprises of an invoice from the Developer for the relevant amount, provided that the Developer shall not be entitled to deliver such an invoice until after the Department has issued a report pursuant to Section 7 of Part IV of this Appendix B that confirms the Developer's entitlement to such a payment.

Appendix C
Operating Period Goals Compliance and Plan Requirements

Part I. Routine Maintenance ESB Goals and Requirements

1. Routine Maintenance ESB Goal: As stated in Section 6.2.2 of this Schedule 15, the Developer shall make good faith efforts to achieve the Routine Maintenance ESB Goal applicable to each sequential five Contract Year period during the Operating Period. Good faith efforts means all necessary and reasonable steps to achieve the goal which, by their scope, intensity, and appropriateness to the objective, could reasonably be expected to achieve the goal, even if not successful. For additional guidance on how the Department will determine whether or not it considers that the Developer has made good faith efforts, see 49 CFR Part 26 Appendix A.
2. Five-Year Routine Maintenance ESB Participation Plan: Commencing with the Contract Year in which Substantial Completion occurs, the Developer shall submit the following information for Approval at the same time as it submits its Maintenance Management Plan prior to the commencement of each new five Contract Year period:
 - a. An estimated schedule for achievement of the Routine Maintenance ESB Goal applicable to the relevant five Contract Year period. The Developer shall outline the expected participation toward achieving the goal. This outline shall set the framework for achieving the Routine Maintenance ESB Goal during such period.
 - b. A list of the areas of Work the Developer has identified for potential ESB participation and approximate dollar value of each area.
 - c. A description of how participation will be monitored and tracked and the internal procedures through which the Developer will ensure the goal is met. This will include distribution of goal responsibilities to Subcontractors, collecting data on Subcontractor participation and performance, and ensuring only valid performance is counted.
 - d. Methods for ensuring prompt payment to all Subcontractors (for certainty, not only ESB Subcontractors) performing O&M Work After Construction (other than Renewal Work) (for certainty, not just Routine Maintenance) during the Operating Period, including a description as to whether and how the Developer will implement any additional prompt payment requirements, beyond those mandated in Section 17.5 of the Project Agreement, as well as the process by which the Developer will track and monitor the following: invoicing by Subcontractors; prompt payment to Subcontractors; and release of retainage. This portion of the plan shall include any efforts that the Developer and Subcontractors that are not themselves ESBs will make to assist with mobilization efforts and early purchase of materials, or any other payment measures that will aid the viability of small business participation in the Work.
3. Commitments and Counting
 - a. Commitments. In order for the work performed by an ESB to count toward achieving the applicable Routine Maintenance ESB Goal, the Developer must have an Accepted Small Business Commitment for the Routine Maintenance to be performed. A "Small Business Commitment" is a portion of the Routine Maintenance, identified by dollar amount and Work area, designated by the Developer for participation by a particular ESB.
 - i. All proposed Small Business Commitments to ESB firms must be submitted to the Department for Acceptance via a "Commitment Confirmation Form". The Commitment Confirmation Form must be Accepted by the Department prior to the ESB commencing work in order for the participation to be counted toward the applicable Routine Maintenance ESB Goal. Once Accepted, Small Business Commitments are enforceable obligations of the Developer under this Agreement. Each ESB firm must be certified for the work to be performed upon submission of the Small Business Commitment.

- ii. Commitment Confirmation Forms shall be submitted to the Department for Acceptance no later than the 10th Working Day of each month during the Term. The Commitment Confirmation Form must be submitted no earlier than 90 Calendar Days prior to the firm commencing work.
- b. Counting Eligible Participation. Unless otherwise specified in this Appendix C, eligible ESB participation will be counted in accordance with 49 CFR 26.55. ESB participation will be counted in the same manner as DBE participation with the exception that ESB firms do not have work codes and therefore are not limited to performance in certain work areas.
 - i. If the Developer seeks to count participation by an ESB firm engaged in a joint venture, the Developer shall seek Acceptance from the Department of the joint venture's eligible participation by submitting the joint venture agreement explaining the work and management arrangement between the joint venture.
 - ii. The Developer shall only count a reasonable fee for contract-specific services toward achieving the applicable Routine Maintenance ESB Goal. Non-contract specific expenses may not be counted. In the case of temporary employment placement agencies, only the placement fee and fees for a temporary employee that will be specifically and exclusively used for work on the Project shall count toward achieving the applicable Routine Maintenance ESB Goal; the temporary employee's hourly fee will not count.
 - iii. If an ESB is decertified from the ESB program after Acceptance of a Small Business Commitment and the execution of a Subcontract, the Developer may still count the ESB participation toward achieving the applicable Routine Maintenance ESB Goal.
- c. Commercially Useful Function ("CUF") Reviews. The Department applies the DBE requirement from 49 CFR § 26.55 to all ESB firms. The Developer shall monitor all ESB firms to ensure those firms are performing a CUF. The Department shall determine whether an ESB firm has performed a CUF on the Project. If the Department determines that a firm is not performing a CUF pursuant to 49 CFR § 26.55, no work performed by such firm shall count toward achieving the Routine Maintenance ESB Goal.
- d. The use of joint checks to ESBs must be Approved by the Department before they are used to make a payment. The Developer shall request Approval for the use of a joint check in a written letter signed by the ESB and the Developer, stating the reason for the joint checks and the approximate number of checks that will be needed.
- e. Small Business Commitment modifications. The Developer shall not terminate, reduce or otherwise modify the work to be performed under a Small Business Commitment without Acceptance from the Department. If, due to exigent circumstances, it is not possible for the Developer to seek Acceptance prior to termination, reduction or modification, the Developer shall submit to the Department a request for Acceptance within five Calendar Days of the occurrence requiring such action. Requests for Acceptance shall be made upon a form mutually agreed by the Developer and the Department (both acting reasonably).
 - i. Terminations and reductions include instances in which the Developer seeks to perform work originally designated for an ESB Subcontractor with its own forces, those of an Affiliate, a non-ESB firm or with another ESB firm.
 - ii. In order to receive Acceptance of a termination or reduction, the Developer shall, at a minimum, have good cause for the termination or reduction as outlined in 49 CFR § 26(f).
 - iii. Prior to requesting Acceptance of a termination or reduction, the Developer shall provide the firm written notice of the Developer's intent to terminate or reduce the commitment and the reason for such termination or reduction, with a copy to the Department. In such notice of intent, the Developer shall provide the firm at least

five Working Days to respond to the notice and to inform the Department and the Developer of the reasons, if any, why it objects to the proposed termination or reduction and any reasons why it considers that it should not be Accepted. The Developer is not required to provide the five Working Days' written notice in cases where the ESB has provided written notice that it is withdrawing. The notice period may be reduced by the Department in its discretion if required by public necessity. The Developer shall not request Acceptance until the period has passed or been waived.

- iv. Requests for other modifications, such as the addition of Work to be performed by the ESB, shall be made by submitting an updated Commitment Confirmation for Acceptance by the Department.
- v. The Developer shall make good faith efforts to replace any ESB commitment that has been terminated or reduced with another ESB firm as outlined in 49 CFR § 26.53(g).

4. Reporting Requirements

- a. **Monthly Reporting.** In addition to the monthly reporting requirements contained in Section 13 of Schedule 11, the Developer shall, at the same time as complying with such requirements, submit a monthly report (in a form to be agreed between the Parties, both acting reasonably) to the Department for Acceptance during the Operating Period, which shall include the following information:
 - i. **Subcontractor Participation and Payment:** total value of Routine Maintenance Work to date during the applicable five Contract Year period, a detailed breakdown of all Subcontractors (and, for certainty, this requirement shall apply to all Subcontractors and not just ESB Subcontractors) that have participated on the Project during the five Contract Year period to date. It shall include:
 - 1. firm name;
 - 2. whether the firm is an ESB and the Small Business Commitment amount to the ESB;
 - 3. Subcontract amount; area of work performed; total paid to date to the firm; most recent invoice date and amount; and most recent payment date and amount.
 - 4. Identification of all subcontracting parties and the higher and lower tiered contracts associated with the Subcontract.
 - ii. **Outreach and Upcoming Opportunities:** a description of work areas on the Project for which the Developer is seeking ESB Subcontractors. The description shall also include upcoming outreach and training events if applicable.
 - iii. **Compliance Issues Report:** details of any issues that the Department should be aware of regarding ESB participation on the Project. This may include payment disputes, non-performance by ESBs, and significant scope of work changes, potential CUF concerns or other performance issues.
- b. **Annual Progress Review Report:** In addition to the monthly report required to be submitted in the relevant month pursuant to Section 4.a. of Part I of this Appendix C, the Developer shall submit an annual report (in a form to be agreed between the Parties, both acting reasonably) to the Department for Approval no later than 30 Calendar Days before the end of each Contract Year and prior to the annual progress review conducted pursuant to Section 1.3.2 of this Schedule 15, which report shall include the following information:
 - i. **Bidders List:** The Developer shall list all firms that submitted a quote to participate on the Project. The list shall include a description of the work for

which the bid was submitted, whether the firm is a DBE or ESB, and whether they were selected for the work.

- ii. Participation Assessment: A summary and assessment of ESB participation of the past Contract Year and total to date progress made toward achieving the applicable ESB Routine Maintenance Goal.
- iii. Summary of solicitation and good faith efforts to date.
- iv. Anticipated ESB participation for the remainder of the current five Contract Year period.
- v. If necessary, a request for amending the ESB Routine Maintenance Plan for the applicable period if the Developer believes it is not on target to meet the applicable goal or if the Developer has not met other commitments detailed in the plan. The request shall include a revised schedule for attaining the goal and a description of the Developer's approach to making up the participation.

- c. Department Annual Assessment: Within 30 Calendar Days after the Annual Performance Progress Review conducted pursuant to Section 1.3.2 of this Schedule 15, the Department shall provide a written determination on the Developer's progress toward achieving the Routine Maintenance ESB Goal for the applicable period. Progress will be based on the Developer's demonstrated good faith efforts, compliance with its five-year Routine Maintenance ESB Participation Plan, and meeting the schedules and milestones described in the plan.
- d. Five-Year Period Final Report: The Developer shall submit, for Approval by the Department, its final report (in a form to be agreed between the Parties, both acting reasonably) on ESB participation at the end of each sequential five Contract Year period within 30 Calendar Days after the end of the final Contract Year in such period. The final report shall include a summary report of total participation toward achieving the Routine Maintenance ESB Goal for the applicable period. The report shall include the Small Business Commitment amount, the actual dollar amount paid to each ESB firm, the eligible participation amount, and area of work performed.
- e. Department Five-Year Report: Following Approval of the Developer's five-year period final report, the Department will evaluate the data to determine, and issue a written report setting out its determination of, whether the Developer has (i) achieved the Routine Maintenance ESB Goal for the applicable period and (ii) if the goal has not been met, demonstrated that it has made good faith efforts to achieve the goal.

Part II. Renewal Work DBE Goals and Requirements

- 1. Renewal Work DBE Goal
 - a. The Department shall establish a Renewal Work DBE Goal to apply during each sequential five Contract Year period during the Operating Period, with the first such period being the Contract Year during which the Substantial Completion Date occurs and the immediately following four Contract Years. Each goal will be set in accordance with 49 CFR § 26.45(e)(3) and based on information contained in submittals required to be submitted by the Developer pursuant to Schedule 8 and Schedule 11.
 - b. The Developer shall participate in a meeting with the Department at least 180 Calendar Days prior to the commencement of each new five Contract Year period to discuss the establishment of a new Renewal Work DBE Goal. At the meeting, the Developer may provide data to supplement its most recent Maintenance Management Plan. At the request of the Department, the Developer shall participate in any consultation and public participation efforts taken by the Department pursuant to 49 CFR 26.45(g).
 - c. The Department shall notify the Developer of the applicable Renewal Work DBE Goal for the upcoming five Contract Year period at least 60 Calendar Days prior to the commencement of the new five Contract Year period.
 - d. In accordance with Section 6.2.2.e of this Schedule 15, the Developer shall make good faith efforts to achieve the Renewal Work DBE Goal applicable to each sequential five Contract Year period during the Operating Period. Good faith efforts means all necessary and reasonable steps to achieve the goal which, by their scope, intensity, and appropriateness to the objective, could reasonably be expected to achieve the goal, even if not successful. For additional guidance on how the Department will determine whether or not it considers that the Developer has made good faith efforts, see 49 CFR Part 26 Appendix A.
- 2. Five-year Period Renewal Work DBE Participation Plan: Commencing with the Contract Year in which Substantial Completion occurs, the Developer shall submit the following information for Approval with its Maintenance Management Plan at the commencement of each new five-year period:

- a. An estimated schedule for achievement of the Renewal Work DBE Goal applicable to the relevant five Contract Year period. The Developer shall outline the expected participation toward achieving the goal. This outline shall set the framework for achieving the Renewal Work DBE Goal during such period.
 - b. A list of the areas of Work the Developer has identified for potential DBE participation and approximate dollar value of each area.
 - c. The strategic approach for integrating DBE participation into the overall approach to subcontracting, including discussion of how the Developer will communicate opportunities to DBE firms, create a transparent process, unbundle work to establish opportunities for DBE firms, or other actions to secure DBE participation.
 - d. A description of how participation will be monitored and tracked and the internal procedures through which the Developer will ensure the goal is met. This will include distribution of goal responsibilities to Subcontractors, collecting data on Subcontractor participation and performance, and ensuring only valid performance is counted.
 - e. Methods for ensuring prompt payment to all Subcontractors (for certainty, not only DBE Subcontractors) performing Renewal Work during the Operating Period, including a description as to whether and how the Developer will implement any additional prompt payment requirements, beyond those mandated in Section 17.5 of the Project Agreement, as well as the process by which the Developer will track and monitor the following: invoicing by Subcontractors; prompt payment to Subcontractors; and release of retainage. This portion of the plan shall include any efforts that the Developer and Subcontractors that are not themselves DBEs will make to assist with mobilization efforts and early purchase of materials, or any other payment measures that will aid the viability of small business participation in the Work.
3. Commitments and Counting
- a. Commitments. In order for the work performed by a DBE to count toward achieving the Renewal Work DBE Goal, the Developer must have an Accepted Small Business Commitment for the Renewal Work to be performed. A "Small Business Commitment" is a portion of the Renewal Work, identified by dollar amount and Work area, designated by the Developer for participation by a particular DBE.
 - i. All proposed Small Business Commitments to DBE firms must be submitted to the Department for Acceptance via a "Commitment Confirmation Form." The Commitment Confirmation Form must be Accepted by the Department prior to the DBE commencing work in order for the participation to be counted toward the Renewal Work DBE goal. Once Accepted, Small Business Commitments are enforceable obligations from the Developer to the Department under this Agreement. Each DBE firm must be certified for the work to be performed upon submission of the Small Business Commitment.
 - ii. For Renewal Work projects more than \$1 million, the Developer shall submit a list of commitments along with a Commitment Confirmation Form for each listed firm at least two weeks prior to the commencement of construction on the Renewal Work project.
 - iii. For all other DBE commitments, Commitment Confirmation Forms shall be submitted to the Department for Acceptance no later than the 10th Working Day of each month during the Term. The Commitment Confirmation Form must be submitted no earlier than 90 Calendar Days prior to the firm commencing work.
 - b. Counting Eligible Participation. Unless otherwise specified in this Appendix C, eligible DBE participation will be counted in accordance with 49 CFR 26.55.
 - i. If the Developer seeks to count participation by a DBE firm engaged in a joint venture, the Developer shall seek Acceptance from the Department of the joint

- venture's eligible participation by submitting the joint venture agreement explaining the work and management arrangement between the joint venture.
- ii. In accordance with 49 CFR 26.55(2), the Developer shall only count a reasonable fee for contract-specific services toward achieving the Renewal Work DBE Goal. Non-contract specific expenses may not be counted. In the case of temporary employment placement agencies, only the placement fee and fees for a temporary employee that will be specifically and exclusively used for work on the Project shall count toward achieving the relevant Renewal Work DBE Goal; the temporary employee's hourly fee will not count.
 - iii. Work by a DBE firm that was not certified for the work to be performed upon execution of its Subcontract will not count toward achieving the relevant goal. If a DBE is decertified from the DBE program after Acceptance of a Small Business Commitment and the execution of a Subcontract, the Developer may still count the DBE participation toward achieving the Renewal Work DBE Goal.
 - iv. If the Developer seeks to count participation by a DBE firm engaged in a joint venture, the Developer shall seek Acceptance from the Department of the joint venture's eligible participation by submitting the joint venture agreement explaining the work and management arrangement between the joint venture.
- c. Commercially Useful Function ("CUF") Reviews. The Developer shall monitor all DBE firms to ensure those firms are performing a CUF. The Department shall determine whether a DBE firm has performed a CUF on the Project. If it determines that a firm is not performing a CUF pursuant to 49 CFR § 26.55, no work performed by such firm shall count toward achieving the goal.
- d. The use of joint checks to DBEs must be Approved by the Department before they are used to make a payment. The Developer shall request Approval for the use of a joint check in a written letter signed by the DBE and the Developer, stating the reason for the joint checks and the approximate number of checks that will be needed.
- e. Small Business Commitment modifications. The Developer shall not terminate, reduce or modify the work to be performed under a Small Business Commitment without Acceptance from the Department. If, due to exigent circumstances, it is not possible for the Developer to seek Acceptance prior to termination, reduction or modification, the Developer shall submit to the Department a request for Acceptance within five Calendar Days of the occurrence requiring such action. Requests for Acceptance shall be made upon a form mutually agreed by the Developer and the Department (both acting reasonably).
- i. Terminations and reductions include instances in which the Developer seeks to perform work originally designated for a DBE Subcontractor with its own forces, those of an Affiliate, a non-DBE firm or with another DBE firm.
 - ii. In order to receive Acceptance of a termination or reduction, the Developer shall, at a minimum, have good cause for the termination or reduction as outlined in 49 CFR § 26 (f).
 - iii. Prior to requesting Acceptance of a termination or reduction, the Developer shall provide the firm written notice of the Developer's intent to terminate or reduce the commitment and the reason for such termination or reduction, with a copy to the Department. In such notice of intent, the Developer shall provide the firm at least five Working Days to respond to the notice and to inform the Department and the Developer of the reasons, if any, why it objects to the proposed termination or reduction and any reasons why it considers that it should not be Accepted. The Developer is not required to provide the five Working Days' written notice in cases where the DBE has provided written notice that it is withdrawing. The notice period may be reduced by the Department in its discretion if required by

public necessity. The Developer shall not request Acceptance until the period has passed or been waived.

- iv. Requests for other modifications, such as the addition of Work to be performed by the DBE, shall be made by submitting an updated Commitment Confirmation for Acceptance by the Department.
- v. The Developer shall make good faith efforts to replace any DBE commitment that has been terminated or reduced with another DBE firm as outlined in 49 CFR § 26.53(g).

4. Reporting Requirements

- a. Monthly Reporting. In addition to the monthly reporting requirements contained in Section 13 of Schedule 11, the Developer shall, at the same time as complying with such requirements, submit a monthly report (in a form to be agreed between the Parties, both acting reasonably) to the Department for Acceptance during the Operating Period which shall include the following information:
 - i. Subcontractor Participation and Payment: total value of (1) Renewal Work and (2) other O&M Work After Construction to date during the applicable five Contract Year period; a detailed breakdown of all Subcontractors (and, for certainty, this requirement shall apply to all Subcontractors and not just DBE Subcontractors) that have participated on the Project during the five Contract Year period to date, separated by these same two categories of Work. It shall include:
 - 1. firm name;
 - 2. whether the firm is a DBE and the Small Business Commitment amount to the DBE, and whether the firm is a Small Subcontractor or an ESB;
 - 3. Subcontract amount; area of work performed; total paid to date to the firm; most recent invoice date and amount; and most recent payment date and amount;
 - 4. identification of all parties to the relevant Subcontract and the higher and lower tiered Subcontracts associated with the Subcontract; and
 - 5. any other relevant information to facilitate the Enterprises' assessment of compliance by the Developer with Section 17.5 of the Project Agreement in relation to the Subcontract.
 - ii. Outreach and Upcoming Opportunities: a description of work areas on the Project for which the Developer is seeking DBE Subcontractors. The description shall also include upcoming outreach and training events if applicable.
 - iii. Compliance Issues Report: details of any issues that the Department should be aware of regarding DBE participation on the Project. This may include payment disputes, non-performance by DBEs, and significant scope of work changes, potential CUF concerns or other performance issues.
- b. Annual Progress Review Report: In addition to the monthly report required to be submitted in the relevant month pursuant to Section 4.a of Part II of this Appendix C, the Developer shall submit an annual report (in a form to be agreed between the Parties, both acting reasonably) to the Department for Approval no later than 30 Calendar Days before the end of each Contract Year and prior to the annual progress review conducted pursuant to Section 1.3.2 of this Schedule 15, which shall include the following information:
 - i. Bidders List: The Developer shall list all firms that submitted a quote to participate on the Project. The list shall include a description of the work for

which the bid was submitted, whether the firm is a DBE or ESB, and whether they were selected for the work.

- ii. Participation Assessment: A summary and assessment of DBE participation of the past Contract Year and total to date progress made toward achieving the applicable Renewal Work DBE Goal.
- iii. Summary of solicitation and good faith efforts to date.
- iv. Anticipated DBE participation for the remainder of the current five Contract Year period.
- v. If necessary, a request for amending the ESB Routine Maintenance Plan for the applicable period if the Developer believes it is not on target to meet the applicable goal or if the Developer has not met other commitments detailed in the plan. The request shall include a revised schedule for attaining the goal and a description of the Developer's approach to making up the participation.

- c. Department Annual Assessment: Within 30 Calendar Days after the Annual Performance Progress Review conducted pursuant to Section 1.3.2 of this Schedule 15, the Department shall provide a written determination on the Developer's progress toward achieving the Renewal Work DBE Goal for the applicable period. Progress will be based on the Developer's demonstrated good faith efforts, compliance with its five-year Renewal Work DBE Participation Plan, and meeting the schedules and milestones described in the plan.
- d. Five-year Period Final Report: The Developer shall submit, for Approval by the Department, its final report (in a form to be agreed between the Parties, both acting reasonably) on DBE participation at the end of each sequential five Contract Year period within 30 Calendar Days after the end of the final Contract Year in such period. The final report shall include a summary report of total participation toward achieving the Renewal Work DBE Goal for the applicable period. The report shall include the Small Business Commitment amount, the actual dollar amount paid to each DBE firm, the eligible participation amount, and area of work performed.
- e. Department Five-year Report: Following Approval of the Developer's five-year period final report, the Department will evaluate the data to determine, and issue a written report setting out its determination of, whether the Developer has (i) achieved the Renewal Work DBE Goal for the applicable period and (ii) if the goal has not been met, demonstrated that it has made good faith efforts to achieve the goal.
- f. Uniform Report of DBE Awards or Commitments and Payments Form: By May 15 and November 15 of each year, the Developer shall submit to the Department for Acceptance a Uniform Report of DBE Awards or Commitments and Payments Form that has been completed in accordance with Appendix B of 49 CFR Part 26.

Part III. On-the-Job Training Goals and Requirements

- 1. On-the-Job Training (OJT) Goal
 - a. The Department shall establish a Renewal Work OJT Goal for every Contract Year commencing with the Contract Year in which Substantial Completion occurs.
 - b. The Department shall notify Developer of its Renewal Work OJT goal within 30 Calendar Days of the submission date of the Developer's Maintenance Management Plan for the applicable upcoming Contract Year. Each goal will be set in accordance with the then-current CDOT OJT Special Standard Provision and based on the information contained in submittals required to be submitted by the Developer pursuant to Schedule 8 and Schedule 11.
- 2. Counting Goal Participation
 - a. OJT participation that counts toward satisfying the applicable Renewal Work OJT Goal shall be calculated based on the aggregate number of employment hours on Renewal Work worked by trainees and apprentices who satisfy the requirements below.
 - b. The employment of the following categories of individuals by the Developer (and Subcontractors) shall count towards achieving the applicable Renewal Work OJT Goal:
 - i. Trainees that are enrolled with a program approved by the Department and FHWA; and/or
 - ii. Apprentices that are enrolled and duly registered in a U.S. Department of Labor approved program.

- c. In addition, a proposed apprentice or trainee must have been Approved by the Department for such individual's participation to be counted toward achieving the applicable Renewal Work OJT Goal. Approval must occur before employment hours can be counted toward the goal. To obtain Approval for the apprentice or trainee, the Developer must submit the following to the Department for each apprentice and trainee:
 - i. Evidence of the registration of the trainee or apprentice into the approved training program, and
 - ii. The completed CDOT form for each trainee or apprentice.
 - d. The employment of a trainee/apprentice in a skilled craft will not be counted toward the applicable Renewal Work OJT Goal if that individual has already worked or been paid at a professional/journey level status for more than 6 months prior to Approval of their participation as a trainee/apprentice.
 - e. Before training begins, the Developer shall provide each trainee with a copy of the approved training program, pay scale, pension, and retirement benefits, health and disability benefits, promotional opportunities, other employer policies and compliant procedures.
3. Reporting Requirements
- a. Disclosure of Information: In order to monitor and enforce the requirements of this Schedule 15, the Developer shall disclose employment records for trainees and apprentices. The Department may verify employment records and information by reviewing personnel files as well as interviewing any individual employed by the Developer or any Subcontractor.
 - b. Records: The Developer shall keep records regarding the progress on achieving the applicable Renewal Work OJT Goal, including Subcontractor participation.
 - c. Monthly Reports: In addition to the monthly reporting requirements contained in Section 13 of Schedule 11, the Developer shall, at the same time as complying with such requirements, submit a monthly report (in a form to be agreed between the Parties, both acting reasonably) to the Department for Acceptance during the Operating Period, which shall include the following information:
 - i. Total Renewal Work employment hours expended during the applicable Contract Year to date separated into skilled craft employment hours and professional services employment hours.
 - ii. Total employment hours for apprentices/trainees expended during the applicable Contract Year to date.
 - iii. If the projected employment hours are less than the Renewal Work OJT Goal, the Developer shall provide an explanation detailing how it intends to achieve the then applicable Renewal Work OJT Goal, including a description of activities and other proactive measures intended to facilitate increased OJT participation.
 - iv. A list of current and new (i.e. since the last report) trainees/apprentices by providing full name, employer, description of services or applicable work code, start date, skilled craft program registered in (including verification of enrollment) for trainees apprentices, total hours worked in current month, pay rate, total hours worked to date on the Project, supervisor full name, and a description of the training and performance level.
 - v. Any performance problems with the trainee/apprentice and how the problems were resolved, including any reasons for participants leaving the Project.
 - vi. A list of trainees/apprentices that have graduated or successfully completed their training program, and last date worked on site.

- vii. A signature by Developer certifying the information in the report is accurate.
- d. Department Report: Following Acceptance of the final monthly report for the applicable Calendar Year, the Department will evaluate the data to determine, and issue a written report setting out its determination of, whether the Developer has achieved the Renewal Work OJT Goal for the applicable period.

Appendix D
Davis-Bacon Wage Decision

[]⁶

⁶ **Note to Proposers:** Wage rates to be provided in future Addendum.

Appendix E
Executive Order No. 11246

The following clauses from Executive Order No. 11246 shall be included in all Subcontracts without modification except as appropriate to identify the Subcontractor who will be subject to its provisions in place of "Developer":

1. Developer will not discriminate against any employee or applicant for employment because of race, color, religion, sex, sexual orientation, gender identity, or national origin. Developer will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex, sexual orientation, gender identity, or national origin. Such action shall include, but not be limited to the following: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. Developer agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the contracting officer setting forth the provisions of this nondiscrimination clause.
2. Developer will, in all solicitations or advancements for employees placed by or on behalf of Developer, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, sexual orientation, gender identity, or national origin.
3. Developer will not discharge or in any other manner discriminate against any employee or applicant for employment because such employee or applicant has inquired about, discussed, or disclosed the compensation of the employee or applicant or another employee or applicant. This provision shall not apply to instances in which an employee who has access to the compensation information of other employees or applicants as a part of such employee's essential job functions discloses the compensation of such other employees or applicants to individuals who do not otherwise have access to such information, unless such disclosure is in response to a formal complaint or charge, in furtherance of an investigation, proceeding, hearing, or action, including an investigation conducted by the employer, or is consistent with Developer's legal duty to furnish information.
4. Developer will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the agency contracting officer, advising the labor union or workers' representative of Developer's commitments under Section 202 of Executive Order No. 11246 of September 24, 1965, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.
5. Developer will comply with all provisions of Executive Order No. 11246 of Sept. 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.
6. Developer will furnish all information and reports required by Executive Order No. 11246 of September 24, 1965, and by the rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the contracting agency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.
7. In the event of Developer's noncompliance with the nondiscrimination clauses of this contract or with any of such rules, regulations, or orders, this contract may be cancelled, terminated, or suspended in whole or in part and Developer may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order No. 11246 of Sept. 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order No. 11246 of September 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.
8. Developer will include the provisions of Sections 1 to 8 of this Appendix E in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued

pursuant to Section 204 of Executive Order No. 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. Developer will take such action with respect to any subcontract or purchase order as may be directed by the Secretary of Labor as a means of enforcing such provisions including sanctions for noncompliance: Provided, however, that in the event Developer becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction, Developer may request the United States to enter into such litigation to protect the interests of the United States."

Appendix F
CDOT’s Special Standard Provision for
“Affirmative Action Requirements Equal Employment Opportunity”

A. AFFIRMATIVE ACTION REQUIREMENTS

Notice of Requirement for Affirmative Action to Ensure Equal Employment Opportunity (Executive Order 11246)

- i. The Developer acknowledges the “Equal Opportunity Clause” and the “Standard Federal Equal Employment Opportunity Construction Contract Specifications” set out in this Appendix F.
- ii. The goals and timetables for minority and female participation, expressed in percentage terms for the Developer’s aggregate workforce in each trade on all construction work in the covered area are as follows:

Goals and Timetable for Minority Utilization

TIMETABLE - UNTIL FURTHER NOTICE			
Economic Area	Standard Metropolitan Statistical Area (SMSA)	Counties Involved	Goal
157 (Denver)	2080 Denver-Boulder	Adams, Arapahoe, Boulder, Denver, Douglas, Gilpin, Jefferson.....	13.8%
GOALS AND TIMETABLES FOR FEMALE UTILIZATION			
Until Further Notice.....6.9% -- Statewide			

These goals are applicable to all the Developer’s Construction Work performed in the covered area. If the Developer performs Construction Work in a geographical area located outside of the covered area, it shall apply the goals established for such geographical area where the work is actually performed. With regard to this second area, the Developer also is subject to the goals for both its Federally involved and non-Federally involved construction.

The Developer’s compliance with the Executive Order and the regulations in 41 CFR Part 60-4 shall be based on its implementation of the Equal Opportunity Clause specific affirmative action obligations required by the specifications set forth in 41 CFR 60-4.3(a), and its efforts to meet the goals established for the geographical area where the contract resulting from this solicitation is to be performed. The hours of minority and female employment and training must be substantially uniform throughout the length of the contract, and in each trade, and the Developer shall make a good faith effort to employ minorities and women evenly on each of its projects. The transfer of minority or female employees or trainees from Contractor to Contractor or from project to project for the sole purpose of meeting the Developer’s goals shall be a violation of the contract, the Executive Order and the regulations in 41 CFR Par 60-4. Compliance with the goals will be measured against the total work hours performed.

- iii. The Developer shall provide written notification to the Director of the Office of Federal Contract Compliance Programs within 10 Working Days of award of any construction subcontract in excess of \$10,000 at any tier for construction work under the contract resulting from this solicitation. The notification shall list the name, address and telephone number of the subcontractor; employer identification number; estimated dollar amount of the subcontract; estimated starting and completion dates of the subcontract; and the geographical area in which the contract is to be performed.
- iv. As used in this specification, and in the contract resulting from this solicitation, the “covered area” is the county or counties shown on the Invitation for Bids and on the

plans. In cases where the work is in two or more counties covered by differing percentage goals, the highest percentage will govern.

B. STANDARD FEDERAL EQUAL EMPLOYMENT OPPORTUNITY CONSTRUCTION CONTRACT SPECIFICATIONS

- i. Standard Federal Equal Employment Opportunity Construction Contract Specifications (Executive Order 11246) As used in these Specifications:
 - A. "Covered area" means the geographical area described in the solicitation from which this contract resulted;
 - B. "Director" means Director, Office of Federal Contract Compliance Programs, United States Department of Labor, or any person to whom the Director delegates authority;
 - C. "Employer identification number" means the Federal Social Security number used on the Employer's Quarterly Federal Tax Return, U.S. Treasury Department Form 941.
 - D. "Minority" includes;
 1. Black (all persons having origins in any of the Black African racial groups not of Hispanic origin);
 2. Hispanic (all persons of Mexican, Puerto Rican, Cuban, Central or South American or other Spanish Culture or origin, regardless of race);
 3. Asian and Pacific Islander (all persons having origins in any of the original peoples of the Far East, Southeast Asia, the Indian Subcontinent, or the Pacific Islands); and
 4. American Indian or Alaskan Native (all persons having origins in any of the original peoples of North America and maintaining identifiable tribal affiliations through membership and participation or community identification).
- ii. Whenever the Developer, or any Subcontractor at any tier, subcontracts a portion of the work involving any construction trade, it shall physically include in each subcontract in excess of \$10,000 the provisions of these specifications and the Notice which contains the applicable goals for minority and female participation and which is set forth in the solicitations from which this contract resulted.
- iii. If the Developer is participating (pursuant to 41 CFR 60-4.5) in a Hometown Plan approved by the U.S. Department of Labor in the covered area either individually or through an association, its affirmative action obligations on all work in the Plan area (including goals and timetables) shall be in accordance with that Plan for those trades which have unions participating in the Plan. The Developer must be able to demonstrate its participation in and compliance with the provisions of any such Hometown Plan. If the Developer is participating in an approved Plan it is required to comply with its obligations under the EEO clause, and to make a good faith effort to achieve each goal under the Plan in each trade in which it has employees. The overall good faith performance by other contractors toward a goal in an approved Plan does not excuse any covered contractor's failure to take good faith efforts to achieve the Plan goals and timetables.
- iv. The Developer shall implement the specific affirmative action standards provided in paragraphs vii A through P of these specifications. The goals set forth in the solicitation from which this contract resulted are expressed as percentages of the total hours of employment and training of minority and female utilization the Developer should reasonably be able to achieve in each construction trade in which it has employees in the covered area. Covered construction contractors performing construction work in geographical areas where they do not have a Federal or Federally assisted construction

contract shall apply the minority and female goals established for the geographical area where the work is being performed. Goals are published periodically in the Federal Register in notice form, and such notices may be obtained from any office of Federal Contract Compliance Programs Office or from Federal procurement contracting officers. The Developer is expected to make substantially uniform progress in meeting its goals in each craft during the period specified.

- v. Neither the provisions of any collective bargaining agreement, nor the failure by a union with whom the Developer has a collective bargaining agreement, to refer either minorities or women shall excuse the Developer's obligations under these specifications, Executive Order 11246, or the regulations promulgated pursuant thereto.
- vi. In order for the nonworking training hours of apprentices and trainees to be counted in meeting the goals, such apprentices and trainees must be employed by the Developer during the training period, and the Developer must have made a commitment to employ the apprentices and trainees at the completion of their training, subject to the availability of employment opportunities. Trainees must be trained pursuant to training programs approved by the U.S. Department of Labor.
- vii. The Developer shall take specific affirmative actions to ensure equal employment opportunity. The evaluation of the Developer's compliance with these specifications shall be based upon its effort to achieve maximum results from its actions. The Developer shall document these efforts fully, and shall implement affirmative action steps at least as extensive as the following;
 - A. Ensure and maintain a working environment free of harassment, intimidation, and coercion at all sites, and in all facilities at which the Developer's employees are assigned to work. The Developer shall specifically ensure that all foremen, superintendents, and other on-site supervisory personnel are aware of and carry out the Developer's obligation to maintain such a working environment, with specific attention to minority or female individuals working at such sites or in such facilities.
 - B. Establish and maintain a current list of minority and female recruitment sources, provide written notification to minority and female recruitment sources and to community organizations when the Developer or its union have employment opportunities available, and maintain a record of the organization's responses.
 - C. Maintain a current file of the names, addresses and telephone numbers of each minority and female off-the-street applicant and minority or female referral from a union, a recruitment source of community organization and of what action was taken with respect to each individual. If such individual was sent to the union hiring hall for referral and was not referred back to the Developer by the union or, if referred, not employed by the Developer, this shall be documented in the file with the reason therefor, along with whatever additional actions the Developer may have taken.
 - D. Provide immediate written notification to the Director when the union with which the Developer has a collective bargaining agreement has not referred to the Developer a minority person or woman sent by the Developer, or when he the Developer has other information that the union referral process has impeded the Developer's efforts to meet its obligations.
 - E. Develop on-the-job training opportunities and/or participate in training programs for the area which expressly include minorities and women, including upgrading programs and apprenticeship and trainee programs relevant to the Developer's employment needs, especially those programs funded or approved by the Department of Labor. The Developer shall provide notice of these programs to the sources compiled under paragraph vii.B of these specifications.

- F. Disseminate the Developer's EEO policy by providing notice of the policy to unions and training programs and requesting their cooperation in assisting the Developer in meeting its EEO obligations; by including it in any policy manual and collective bargaining agreement; by publicizing it in the company newspaper, annual report, etc., by specific review of the policy with all management personnel and with all minority and female employees at least once a year, and by posting the Developer's EEO policy on bulletin boards accessible to all employees at each location where construction work is performed.
- G. Review, at least annually, the Developer's EEO policy and affirmative action obligations under these specifications with all employees having any responsibility for hiring, assignment, layoff, termination or other employment decisions including specific review of these items with onsite supervisory personnel such as Superintendents, General Foreman, etc., prior to the initiation of construction work at any job site. A written record shall be made and maintained identifying the time and place of these meetings, persons attending, subject matter discussed, and disposition of the subject matter.
- H. Disseminate the Developer's EEO policy externally by including it in any advertising in the news media, specifically including minority and female news media, and providing written notification to and discussing the Contractors and Subcontractors with whom the Developer does or anticipates doing business.
- I. Direct its recruitment efforts, both oral and written, to minority, female and community organizations, to schools with minority and female students and to minority and female recruitment and training organizations serving the Developer's recruitment area and employment needs. Not later than one month prior to the date for the acceptance of applications for apprenticeship or other training by any recruitment source, the Developer shall send written notification to organizations such as the above, describing the openings, screening procedures, and tests to be used in the selection process.
- J. Encourage present minority and female employees to recruit other minority persons and women and, where reasonable, provide after school, summer and vacation employment to minority and female youth both on the site and in other areas of a the Developer's workforce.
- K. Validate all tests and other selection requirements where there is an obligation to do so under 41 CFR Part 60-3.
- L. Conduct, at least annually, an inventory and evaluation at least of all minority and female personnel for promotional opportunities and encourage these employees to seek or to prepare for, through appropriate training, etc. such opportunities.
- M. Ensure that seniority practices, job classifications, work assignments and other personnel practices, do not have a discriminatory effect by continually monitoring all personnel and employment related activities to ensure that the EEO policy and the Developer's obligations under these specifications are being carried out.
- N. Ensure that all facilities and the Developer's activities are non-segregated except that separate or single-user toilet and necessary changing facilities shall be provided to assure privacy between the sexes.
- O. Document and maintain a record of all solicitations of offers for subcontracts from minority and female construction contractors and suppliers, including circulation of solicitations to minority and female contractor associations and other business associations.
- P. Conduct a review, at least annually, of all supervisor's adherence to and performance under the Developer's EEO policies and affirmative action obligation.

- viii. Contractors (including the Developer) are encouraged to participate in voluntary associations which assist in fulfilling one or more of their affirmative action obligations (paragraphs vii.A through P). The efforts of a contractor association, joint contractor-union contractor-community, or other similar group of which the Developer is a member and participant, may be asserted as fulfilling any one or more of its obligations under paragraphs vii.A through P of these specifications provided that the Developer actively participates in the group, makes every effort to assure that the group has a positive impact on the employment of minorities and women in the industry, ensures that the concrete benefits of the program are reflected in the Developer's minority and female workforce participation, makes a good faith effort to meet its individual goal and timetables, and can provide access to documentation which demonstrates the effectiveness of actions taken on behalf of the Developer. The obligation to comply, however, is the Developer's and failure of such a group to fulfil an obligation shall not be a defense for the Developer's noncompliance.
- ix. A single goal for minorities and a separate single goal for women have been established. The Developer, however, is required to provide equal employment opportunity and to take affirmative action for all minority groups, both male and female, and all women, both minority and non-minority. Consequently, the Developer may be in violation of the Executive Order if a particular group is employed in a substantially disparate manner (for example, even though the Developer has achieved its goals for women generally, the Developer may be in violation of the Executive Order if a specific minority group of women is underutilized).
- x. The Developer shall not use the goals and timetables or affirmative action standards to discriminate against any person because of race, color, religion, sex, sexual orientation, gender identity, national origin, or disability.
- xi. The Developer shall not enter into any Subcontract with any person or firm debarred from Government contracts pursuant to Executive Order 11246.
- xii. The Developer shall carry out such sanctions and penalties for violation of these specifications and of the Equal Opportunity Clause, including suspension, termination and cancellation of existing subcontracts as may be imposed or ordered pursuant to Executive Order 11246, as amended, and its implementing regulations, by the Office of Federal Contract Compliance Programs. If the Developer fails to carry out such sanctions and penalties it shall be in violation of these specifications and Executive Order 11246, as amended.
- xiii. The Developer, in fulfilling its obligations under these specifications, shall implement specific affirmative action steps, at least as extensive as those standards prescribed in paragraph vii of these specifications, so as to achieve maximum results from its efforts to ensure equal employment opportunity. If the Developer fails to comply with the requirements of the Executive Order, the implementing regulations, or these specifications, the Director shall proceed in accordance with 41 CFR 60-4.8.
- xiv. The Developer shall designate a responsible official to monitor all employment related activity to ensure that the company EEO policy is being carried out, to submit reports relating to the provisions hereof as may be required by the Government and to keep records. Records shall at least include for each employee the name, address, telephone numbers, construction trade, union affiliation if any, employee identification number when assigned, social security number, race, sex, status (e.g., mechanic, apprentice, trainee, helper, or laborer), dates of changes in status, hours worked per week in the indicated trade, rate of pay, and locations at which the work was performed. Records shall be maintained in an easily understandable and retrievable form, however, to the degree that existing records satisfy this requirement, contractors shall not be required to maintain separate records.

- xv. Nothing herein provided shall be construed as a limitation upon the application of other laws which establish different standards of compliance or upon application of requirements for the hiring of local or other area residents (e.g., those under the Public Works Employment Act of 1977 and the Community Development Block Grant Program).
- C. SPECIFIC EQUAL EMPLOYMENT OPPORTUNITY RESPONSIBILITIES.
- i. *General.*
 - A. Equal employment opportunity requirements not to discriminate and to take affirmative action to assure equal employment opportunity as required by Executive Order 11246 and Executive Order 11375 are set forth in Required Contract Provisions (Form FHWA 1273 or 1316, as appropriate) and these Special Provisions which are imposed pursuant to Section 140 of Title 23, U.S.C., as established by Section 22 of the Federal-Aid highway Act of 1968. The requirements set forth in these Special Provisions shall constitute the specific affirmative action requirements for project activities under this contract and supplement the equal employment opportunity requirements set forth in the Required Contract provisions.
 - B. The Developer will work with the Department and the Federal Government in carrying out equal employment opportunity obligations and in their review of his/her activities under the contract.
 - C. The Developer and all his/her Subcontractors holding subcontracts not including material suppliers, of \$10,000 or more, will comply with the following minimum specific requirement activities of equal employment opportunity: (The equal employment opportunity requirements of Executive Order 11246, as set forth in Volume 6, Chapter 4, Section 1, SubSection 1 of the Federal-Aid Highway Program Manual, are applicable to material suppliers as well as contractors and subcontractors.) The Developer will include these requirements in every subcontract of \$10,000 or more with such modification of language as is necessary to make them binding on the Subcontractor.
 - ii. *Equal Employment Opportunity Policy.* The Developer will accept as its operating policy the following statement which is designed to further the provision of equal employment opportunity to all persons without regard to their race, color, religion, sex, sexual orientation, gender identity, national origin, or disability, and to promote the full realization of equal employment opportunity through a positive continuing program;

It is the policy of this Company to assure that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex, sexual orientation, gender identity, national origin, or disability. Such action shall include; employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship, pre-apprenticeship, and/or on-the-job training.
 - iii. *Equal Employment Opportunity Officer.* The Developer will designate and make known to the State highway agency contracting officers and equal employment opportunity officer (herein after referred to as the EEO Officer) who will have the responsibility for and must be capable of effectively administering and promoting an active contractor program of equal employment opportunity and who must be assigned adequate authority and responsibility to do so.
 - iv. *Dissemination of Policy.*
 - A. All members of the Developer's staff who are authorized to hire, supervise, promote, and discharge employees, or who recommend such action, or who are substantially involved in such action, will be made fully cognizant of, and will implement, the Developer's equal employment opportunity policy and contractual

responsibilities to provide equal employment opportunity in each grade and classification of employment. To ensure that the above agreement will be met, the following actions will be taken as a minimum.

- B. Periodic meetings of supervisory and personnel office employees will be conducted before the start of work and then not less often than once every six months, at which time the Developer's equal employment opportunity policy and its implementation will be reviewed and explained. The meetings will be conducted by the EEO Officer or other knowledgeable company official.
- C. All new supervisory or personnel office employees will be given a thorough indoctrination by the EEO Officer or other knowledgeable company official, covering all major aspects of the Developer's equal employment opportunity obligations within thirty days following their reporting for duty with the Developer.
- D. All personnel who are engaged in direct recruitment for the project will be instructed by the EEO Officer or appropriate company official in the Developer's procedures for locating and hiring minority group employees.
 - 1. In order to make the Developer's equal employment opportunity policy known to all employees, prospective employees and potential sources of employees, i.e., schools, employment agencies, labor unions (where appropriate), college placement officers, etc., the Developer will take the following actions:
 - a. Notices and posters setting forth the Developer's equal employment opportunity policy will be placed in areas readily accessible to employees, applicants for employment and potential employees.
 - b. The Developer's equal employment opportunity policy and the procedures to implement such policy will be brought to the attention of employees by means of meetings, employee handbooks, or other appropriate means.

v. *Recruitment.*

- A. When advertising for employees, the Developer will include in all advertisements for employees the notation; "An Equal Opportunity Employer." All such advertisements will be published in newspapers or other publications having a large circulation among minority groups in the area from which the project work force would normally be derived.
- B. The Developer will, unless precluded by a valid bargaining agreement, conduct systematic and direct recruitment through public and private employee referral sources likely to yield qualified minority group applicants, including, but not limited to, State employment agencies, schools, colleges and minority group organizations. To meet this requirement, The Developer will, through his EEO Officer, identify sources of potential minority group employees, and establish with such identified sources procedures whereby minority group applicants may be referred to The Developer for employment consideration.

In the event the Developer has a valid bargaining agreement providing for exclusive hiring hall referrals, he is expected to observe the provisions of that agreement to the extent that the system permits the Developer's compliance with equal employment opportunity contract provisions. (The U.S. Department of Labor has held that where implementation of such agreements has the effect of discriminating against minorities or women, or obligates The Developer to do the same, such implementation violates Executive Order 11246, as amended.)

- C. The Developer will encourage his present employees to refer minority group applicants for employment by posting appropriate notices or bulletins in areas accessible to all such employees. In addition, information and procedures with regard to referring minority group applicants will be discussed with employees.
- vi. *Personnel Actions.* Wages, working conditions, and employee benefits shall be established and administered, and personnel actions of every type, including hiring, upgrading, promotion, transfer, demotion, layoff, and termination, shall be taken without regard to race, color, religion, sex, sexual orientation, gender identity, national origin, or disability. The following procedures shall be followed:
 - A. The Developer will conduct periodic inspections of project sites to insure that working conditions and employee facilities do not indicate discriminatory treatment of project site personnel.
 - B. The Developer will periodically evaluate the spread of wages paid within each classification to determine any evidence of discriminatory wage practices.
 - C. The Developer will periodically review selected personnel actions in depth to determine whether there is evidence of discrimination. Where evidence is found, the Developer will promptly take corrective action. If the review indicates that the discrimination may extend beyond the actions reviewed, such corrective action shall include all affected persons.
 - D. The Developer will promptly investigate all complaints of alleged discrimination made to the Developer in connection with his obligations under this contract, will attempt to resolve such complaints, and will take appropriate corrective action within a reasonable time. If the investigation indicates that the discrimination may affect persons other than the complainant, such corrective action shall include such other persons. Upon completion of each investigation, the Developer will inform every complainant of all of his avenues of appeal.
- vii. *Training and Promotion.*
 - A. The Developer will assist in locating, qualifying, and increasing the skills of minority group and women employees, and applicants for employment.
 - B. Consistent with the Developer's work force requirements and as permissible under Federal and State regulations, the Developer shall make full use of training programs, i.e., apprenticeship, and on-the-job training programs for the geographical area of contract performance. Where feasible, 25 percent of apprentices or trainees in each occupation shall be in their first year of apprenticeship or training.
 - C. The Developer will advise employees and applicants for employment of available training programs and entrance requirements for each.
 - D. The Developer will periodically review the training and promotion potential of minority group and women employees and will encourage eligible employees to apply for such training and promotion.
- viii. *Unions.* If the Developer relies in whole or in part upon unions as a source of employees, the Developer will use his/her best efforts to obtain the cooperation of such unions to increase opportunities for minority groups and women with the unions, and to effect referrals by such unions of minority and female employees. Actions by the Developer either directly or through a contractor's association acting as agent will include the procedures set forth below:
 - A. The Developer will use best efforts to develop, in cooperation with the unions, joint training programs aimed toward qualifying more minority group members and women for membership in the unions and increasing the skills of minority

- group employees and women so that they may qualify for higher paying employment.
- B. The Developer will use best efforts to incorporate an equal employment opportunity clause into each union agreement to the end that such union will be contractually bound to refer applicants without regard to their race, color, religion, sex, sexual orientation, gender identity, national origin, or disability.
 - C. The Developer is to obtain information as to the referral practices and policies of the labor union except that to the extent such information is within the exclusive possession of the labor union and such labor union refuses to furnish such information to the Developer, the Developer shall so certify to the State highway department and shall set forth what efforts have been made to obtain such information.
 - D. In the event the union is unable to provide the Developer with a reasonable flow of minority and women referrals within the time limit set forth in the collective bargaining agreement, the Developer will, through independent recruitment efforts, fill the employment vacancies without regard to race, color, religion, sex, sexual orientation, gender identity, national origin, or disability; making full efforts to obtain qualified and/or qualifiable minority group persons and women. (The U.S. Department of Labor has held that it shall be no excuse that the union with which the Developer has a collective bargaining agreement providing for exclusive referral failed to refer minority employees.) In the event the union referral practice prevents the Developer from meeting the obligations pursuant to Executive Order 11246, as amended, and these special provisions, such the Developer shall immediately notify the State highway agency.
- ix. *Subcontracting.*
- A. The Developer will use his best efforts to solicit bids from and to utilize minority group Subcontractors or Subcontractors with meaningful minority group and female representation among their employees. The Developer shall obtain lists of minority-owned construction firms from State highway agency personnel.
 - B. The Developer will use his best efforts to ensure Subcontractor compliance with their equal employment opportunity obligations.
- x. *Records and Reports.*
- A. The Developer will keep such records as are necessary to determine compliance with the Developer's equal employment opportunity obligations. The records kept by the Developer will be designed to indicate:
 - 1. The number of minority and nonminority group members and women employed in each work classification on the project.
 - 2. The Progress and efforts being made in cooperation with unions to increase employment opportunities for minorities and women (applicable only to contractors who rely in whole or in part on unions as a source of their work force).
 - 3. The progress and efforts being made in locating, hiring, training, qualifying, and upgrading minority and female employees, and
 - 4. The progress and efforts being made in securing the services of minority group Subcontractors or Subcontractors with meaningful minority and female representation among their employees.
 - B. All such records must be retained for a period of three years following completion of the contract work and shall be available at reasonable times and places for

inspection by authorized representatives of the State highway agency and the Federal Highway Administration.

The Developer will submit an annual report to the State highway agency each July for the duration of the project, indicating the number of minority, women, and non-minority group employees currently engaged in each work classification required by the contract work. This information is to be reported on Form PR 1391.

Appendix G

USDOT Order No.1050.2A “USDOT Standard Title VI/Non-Discrimination Assurances”

Part I – All Contracts

During the performance of this Agreement, the Developer, for itself, its assignees, and successors in interest agrees as follows:

1. **Compliance with Law:** the Developer (hereinafter includes consultants) will comply with all Law relative to Non-discrimination in Federally-assisted programs of the U.S. Department of Transportation, Federal Highway Administration (as they may be amended from time to time, “**Non-discrimination Law**”) which are herein incorporated by reference and made a part of this Agreement.
2. **Non-discrimination:** the Developer will not discriminate on the grounds of race, color, or national origin in the selection and retention of subcontractors, including procurements of materials and leases of equipment. The Developer will not participate directly or indirectly in the discrimination prohibited by Non-discrimination Law, including employment practices when the relevant contract covers any activity, project, or program set forth in Appendix B of 49 CFR Part 21.
3. **Solicitations for Subcontracts, Including Procurements of Materials and Equipment:** in all solicitations, either by competitive bidding, or negotiation made by the Developer for work to be performed under a Subcontract, including procurements of materials, or leases of equipment, each potential Subcontractor will be notified by the Developer of the Developer's obligations under this Agreement and Non-discrimination Law.
4. **Information and Reports:** the Developer will provide all information and reports required by Non-discrimination Law, and directives issued pursuant thereto, and will permit access to its books, records, accounts, other sources of information, and its facilities as may be determined by the Department or FHWA to be pertinent to ascertain compliance with Non-discrimination Law and any such directives. Where any information required of the Developer is in the exclusive possession of another who fails or refuses to furnish the information, the Developer will so certify to the Department or FHWA, as appropriate, and will set forth what efforts it has made to obtain the information.
5. **Sanctions for Noncompliance:** in the event of the Developer's noncompliance with the nondiscrimination provisions in this Agreement, the Department will impose such contract sanctions as it or FHWA may determine to be appropriate, including, but not limited to: withholding payments to the Developer under this Agreement until the Developer complies; and/or cancelling, terminating, or suspending a contract, in whole or in part.
6. **Incorporation of Provisions:** the Developer will include the provisions of Sections 1 through 6 of this Part I in every Subcontract, including procurements of materials and leases of equipment, unless exempt by Non-discrimination Law and directives issued pursuant thereto. The Developer will take action with respect to any subcontract or procurement as the Department or FHWA may direct as a means of enforcing such provisions including sanctions for noncompliance, provided that, if the Developer becomes involved in, or is threatened with, litigation by a Subcontractor because of such direction, the Developer may request the Department to enter into any litigation to protect the interests of the Department and the Enterprises. In addition, the Developer may request the United States to enter into the litigation to protect the interests of the United States.

Part II – Clauses for Transfer of Real Property Acquired or Improved under the Activity, Facility, or Program

The Developer for himself/herself, his/her heirs, personal representatives, successors in interest, and assigns, as a part of the consideration hereof, does hereby covenant and agree that, in the event facilities are constructed, maintained, or otherwise operated on the property subject to the Project License for a purpose for which a US DOT activity, facility, or program is extended or for another purpose involving the provision of similar services or benefits, the licensee will maintain and operate such facilities and services in compliance with all requirements imposed by Non-

discrimination Law such that no person on the grounds of race, color, or national origin will be excluded from participation in, denied the benefits of, or be otherwise subjected to discrimination in the use of said facilities.

Part III – Clauses for Construction/Use/Access to Real Property Acquired under the Activity, Facility or Program

The licensee for himself/herself, his/her heirs, personal representatives, successors in interest, and assigns, as a part of the consideration hereof, does hereby covenant that (1) no person on the ground of race, color, or national origin, will be excluded from participation in, denied the benefits of, or be otherwise subjected to discrimination in the use of said facilities, (2) in the construction of any improvements on, over, or under such land, and the furnishing of services thereon, no person on the ground of race, color, or national origin, will be excluded from participation in, denied the benefits of, or otherwise be subjected to discrimination, and (3) the licensee will use the premises in compliance with all other requirements imposed by or pursuant to Non-discrimination Law.

Parts IV – Non-Discrimination Authorities

Without prejudice to the generality of any other nondiscrimination provisions in this Agreement, during the performance of this Agreement, the Developer, for itself, its assignees, and successors in interest agrees to comply with the following Non-discrimination Law (as any such Law is amended from time to time):

Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000d et seq., 78 stat. 252), (prohibits discrimination on the basis of race, color, national origin); and 49 CFR Part 21;

The Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, (42 U.S.C. § 4601), (prohibits unfair treatment of persons displaced or whose property has been acquired because of Federal or Federal-aid programs and projects);

Federal-Aid Highway Act of 1973, (23 U.S.C. § 324 et seq.), (prohibits discrimination on the basis of sex);

Section 504 of the Rehabilitation Act of 1973, (29 U.S.C. § 794 et seq.), as amended, (prohibits discrimination on the basis of disability); and 49 CFR Part 27;

The Age Discrimination Act of 1975, (42 U.S.C. § 6101 et seq.), as amended, (prohibits discrimination on the basis of age);

Airport and Airway Improvement Act of 1982, (49 USC § 471, Section 47123), as amended, (prohibits discrimination based on race, creed, color, national origin, or sex);

The Civil Rights Restoration Act of 1987, (PL 100-209), (Broadened the scope, coverage and applicability of Title VI of the Civil Rights Act of 1964, The Age Discrimination Act of 1975 and Section 504 of the Rehabilitation Act of 1973, by expanding the definition of the terms “programs or activities” to include all of the programs or activities of the Federal-aid recipients, sub-recipients and contractors, whether such programs or activities are Federally funded or not);

Titles II and III of the Americans with Disabilities Act, (42 U.S.C. §§ 12131-12189), (prohibits discrimination on the basis of disability in the operation of public entities, public and private transportation systems, places of public accommodation, and certain testing entities), as implemented by US DOT regulations at 49 C.F.R. parts 37 and 38;

The Federal Aviation Administration's Non-discrimination statute, (49 U.S.C. § 47123), (prohibits discrimination on the basis of race, color, national origin, and sex);

Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations(ensures non-discrimination against minority populations by discouraging programs, policies, and activities with disproportionately high and adverse human health or environmental effects on minority and low-income populations);

Executive Order 13166, Improving Access to Services for Persons with Limited English Proficiency, and resulting agency guidance, national origin discrimination includes discrimination because of Limited English proficiency (LEP). To ensure compliance with Title VI, you must take reasonable steps to ensure that LEP persons have meaningful access to your programs (70 Fed. Reg. at 74087 to 74100);

Title IX of the Education Amendments of 1972, as amended, (20 U.S.C. 1681 et seq.), (prohibits discrimination because of sex in education programs or activities).

Appendix H
Required Contract Provisions
Federal-Aid Construction Contracts

- I. General
- II. Nondiscrimination
- III. Nonsegregated Facilities
- IV. Davis-Bacon and Related Act Provisions
- V. Contract Work Hours and Safety Standards Act Provisions
- VI. Subletting or Assigning the Contract
- VII. Safety: Accident Prevention
- VIII. False Statements Concerning Highway Projects
- IX. Implementation of Clean Air Act and Federal Water Pollution Control Act
- X. Compliance with Governmentwide Suspension and Debarment Requirements
- XI. Certification Regarding Use of Contract Funds for Lobbying

I. GENERAL

1. Form FHWA-1273 must be physically incorporated in each construction contract funded under Title 23 (excluding emergency contracts solely intended for debris removal). The contractor (or subcontractor) must insert this form in each subcontract and further require its inclusion in all lower tier subcontracts (excluding purchase orders, rental agreements and other agreements for supplies or services).

The applicable requirements of Form FHWA-1273 are incorporated by reference for work done under any purchase order, rental agreement or agreement for other services. The prime contractor shall be responsible for compliance by any subcontractor, lower-tier subcontractor or service provider.

Form FHWA-1273 must be included in all Federal-aid design-build contracts, in all subcontracts and in lower tier subcontracts (excluding subcontracts for design services, purchase orders, rental agreements and other agreements for supplies or services). The design-builder shall be responsible for compliance by any subcontractor, lower-tier subcontractor or service provider.

Contracting agencies may reference Form FHWA-1273 in bid proposal or request for proposal documents, however, the Form FHWA-1273 must be physically incorporated (not referenced) in all contracts, subcontracts and lower-tier subcontracts (excluding purchase orders, rental agreements and other agreements for supplies or services related to a construction contract).

2. Subject to the applicability criteria noted in the following sections, these contract provisions shall apply to all work performed on the contract by the contractor's own organization and with the assistance of workers under the contractor's immediate superintendence and to all work performed on the contract by piecework, station work, or by subcontract.
3. A breach of any of the stipulations contained in these Required Contract Provisions may be sufficient grounds for withholding of progress payments, withholding of final payment, termination of the contract, suspension / debarment or any other action determined to be appropriate by the contracting agency and FHWA.
4. Selection of Labor: During the performance of this contract, the contractor shall not use convict labor for any purpose within the limits of a construction project on a Federal-aid highway unless it is labor performed by convicts who are on parole, supervised release, or probation. The term Federal-aid highway does not include roadways functionally classified as local roads or rural minor collectors.

II. NONDISCRIMINATION

The provisions of this Section related to 23 CFR Part 230 are applicable to all Federal-aid construction contracts and to all related construction subcontracts of \$10,000 or more. The provisions of 23 CFR Part 230 are not applicable to material supply, engineering, or architectural service contracts.

In addition, the contractor and all subcontractors must comply with the following policies: Executive Order 11246, 41 CFR 60, 29 CFR 1625-1627, Title 23 USC Section 140, the Rehabilitation Act of 1973, as amended (29 USC 794), Title VI of the Civil Rights Act of 1964, as amended, and related regulations including 49 CFR Parts 21, 26 and 27; and 23 CFR Parts 200, 230, and 633.

The contractor and all subcontractors must comply with: the requirements of the Equal Opportunity Clause in 41 CFR 60-1.4(b) and, for all construction contracts exceeding \$10,000, the Standard Federal Equal Employment Opportunity Construction Contract Specifications in 41 CFR 60-4.3.

Note: The U.S. Department of Labor has exclusive authority to determine compliance with Executive Order 11246 and the policies of the Secretary of Labor including 41 CFR 60, and 29 CFR 1625-1627. The contracting agency and the FHWA have the authority and the responsibility to ensure compliance with Title 23 USC Section 140, the Rehabilitation Act of 1973, as amended (29 USC 794), and Title VI of the Civil Rights Act of 1964, as amended, and related regulations including 49 CFR Parts 21, 26 and 27; and 23 CFR Parts 200, 230, and 633.

The following provision is adopted from 23 CFR 230, Appendix A, with appropriate revisions to conform to the U.S. Department of Labor (US DOL) and FHWA requirements.

1. **Equal Employment Opportunity:** Equal employment opportunity (EEO) requirements not to discriminate and to take affirmative action to assure equal opportunity as set forth under laws, executive orders, rules, regulations (28 CFR 35, 29 CFR 1630, 29 CFR 1625-1627, 41 CFR 60 and 49 CFR 27) and orders of the Secretary of Labor as modified by the provisions prescribed herein, and imposed pursuant to 23 U.S.C. 140 shall constitute the EEO and specific affirmative action standards for the contractor's project activities under this contract. The provisions of the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 et seq.) set forth under 28 CFR 35 and 29 CFR 1630 are incorporated by reference in this contract. In the execution of this contract, the contractor agrees to comply with the following minimum specific requirement activities of EEO:
 - a. The contractor will work with the contracting agency and the Federal Government to ensure that it has made every good faith effort to provide equal opportunity with respect to all of its terms and conditions of employment and in their review of activities under the contract.
 - b. The contractor will accept as its operating policy the following statement:

"It is the policy of this Company to assure that applicants are employed, and that employees are treated during employment, without regard to their race, religion, sex, color, national origin, age or disability. Such action shall include: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship, pre-apprenticeship, and/or on-the-job training."
2. **EEO Officer:** The contractor will designate and make known to the contracting officers an EEO Officer who will have the responsibility for and must be capable of effectively administering and promoting an active EEO program and who must be assigned adequate authority and responsibility to do so.
3. **Dissemination of Policy:** All members of the contractor's staff who are authorized to hire, supervise, promote, and discharge employees, or who recommend such action, or who are substantially involved in such action, will be made fully cognizant of, and will implement, the contractor's EEO policy and contractual responsibilities to provide EEO in each grade and

classification of employment. To ensure that the above agreement will be met, the following actions will be taken as a minimum:

- a. Periodic meetings of supervisory and personnel office employees will be conducted before the start of work and then not less often than once every six months, at which time the contractor's EEO policy and its implementation will be reviewed and explained. The meetings will be conducted by the EEO Officer.
 - b. All new supervisory or personnel office employees will be given a thorough indoctrination by the EEO Officer, covering all major aspects of the contractor's EEO obligations within thirty days following their reporting for duty with the contractor.
 - c. All personnel who are engaged in direct recruitment for the project will be instructed by the EEO Officer in the contractor's procedures for locating and hiring minorities and women.
 - d. Notices and posters setting forth the contractor's EEO policy will be placed in areas readily accessible to employees, applicants for employment and potential employees.
 - e. The contractor's EEO policy and the procedures to implement such policy will be brought to the attention of employees by means of meetings, employee handbooks, or other appropriate means.
- 4. Recruitment:** When advertising for employees, the contractor will include in all advertisements for employees the notation: "An Equal Opportunity Employer." All such advertisements will be placed in publications having a large circulation among minorities and women in the area from which the project work force would normally be derived.
- a. The contractor will, unless precluded by a valid bargaining agreement, conduct systematic and direct recruitment through public and private employee referral sources likely to yield qualified minorities and women. To meet this requirement, the contractor will identify sources of potential minority group employees, and establish with such identified sources procedures whereby minority and women applicants may be referred to the contractor for employment consideration.
 - b. In the event the contractor has a valid bargaining agreement providing for exclusive hiring hall referrals, the contractor is expected to observe the provisions of that agreement to the extent that the system meets the contractor's compliance with EEO contract provisions. Where implementation of such an agreement has the effect of discriminating against minorities or women, or obligates the contractor to do the same, such implementation violates Federal nondiscrimination provisions.
 - c. The contractor will encourage its present employees to refer minorities and women as applicants for employment. Information and procedures with regard to referring such applicants will be discussed with employees.
- 5. Personnel Actions:** Wages, working conditions, and employee benefits shall be established and administered, and personnel actions of every type, including hiring, upgrading, promotion, transfer, demotion, layoff, and termination, shall be taken without regard to race, color, religion, sex, national origin, age or disability. The following procedures shall be followed:
- a. The contractor will conduct periodic inspections of project sites to insure that working conditions and employee facilities do not indicate discriminatory treatment of project site personnel.
 - b. The contractor will periodically evaluate the spread of wages paid within each classification to determine any evidence of discriminatory wage practices.
 - c. The contractor will periodically review selected personnel actions in depth to determine whether there is evidence of discrimination. Where evidence is found, the contractor will promptly take corrective action. If the review indicates that the discrimination may extend beyond the actions reviewed, such corrective action shall include all affected persons.

- d. The contractor will promptly investigate all complaints of alleged discrimination made to the contractor in connection with its obligations under this contract, will attempt to resolve such complaints, and will take appropriate corrective action within a reasonable time. If the investigation indicates that the discrimination may affect persons other than the complainant, such corrective action shall include such other persons. Upon completion of each investigation, the contractor will inform every complainant of all of their avenues of appeal.

6. Training and Promotion:

- a. The contractor will assist in locating, qualifying, and increasing the skills of minorities and women who are applicants for employment or current employees. Such efforts should be aimed at developing full journey level status employees in the type of trade or job classification involved.
- b. Consistent with the contractor's work force requirements and as permissible under Federal and State regulations, the contractor shall make full use of training programs, i.e., apprenticeship, and on-the-job training programs for the geographical area of contract performance. In the event a special provision for training is provided under this contract, this subparagraph will be superseded as indicated in the special provision. The contracting agency may reserve training positions for persons who receive welfare assistance in accordance with 23 U.S.C. 140(a).
- c. The contractor will advise employees and applicants for employment of available training programs and entrance requirements for each.
- d. The contractor will periodically review the training and promotion potential of employees who are minorities and women and will encourage eligible employees to apply for such training and promotion.

7. Unions: If the contractor relies in whole or in part upon unions as a source of employees, the contractor will use good faith efforts to obtain the cooperation of such unions to increase opportunities for minorities and women. Actions by the contractor, either directly or through a contractor's association acting as agent, will include the procedures set forth below:

- a. The contractor will use good faith efforts to develop, in cooperation with the unions, joint training programs aimed toward qualifying more minorities and women for membership in the unions and increasing the skills of minorities and women so that they may qualify for higher paying employment.
- b. The contractor will use good faith efforts to incorporate an EEO clause into each union agreement to the end that such union will be contractually bound to refer applicants without regard to their race, color, religion, sex, national origin, age or disability.
- c. The contractor is to obtain information as to the referral practices and policies of the labor union except that to the extent such information is within the exclusive possession of the labor union and such labor union refuses to furnish such information to the contractor, the contractor shall so certify to the contracting agency and shall set forth what efforts have been made to obtain such information.
- d. In the event the union is unable to provide the contractor with a reasonable flow of referrals within the time limit set forth in the collective bargaining agreement, the contractor will, through independent recruitment efforts, fill the employment vacancies without regard to race, color, religion, sex, national origin, age or disability; making full efforts to obtain qualified and/or qualifiable minorities and women. The failure of a union to provide sufficient referrals (even though it is obligated to provide exclusive referrals under the terms of a collective bargaining agreement) does not relieve the contractor from the requirements of this paragraph. In the event the union referral practice prevents the contractor from meeting the obligations pursuant to Executive Order 11246, as amended, and these special provisions, such contractor shall immediately notify the contracting agency.

- 8. Reasonable Accommodation for Applicants / Employees with Disabilities:** The contractor must be familiar with the requirements for and comply with the Americans with Disabilities Act and all rules and regulations established thereunder. Employers must provide reasonable accommodation in all employment activities unless to do so would cause an undue hardship.
- 9. Selection of Subcontractors, Procurement of Materials and Leasing of Equipment:** The contractor shall not discriminate on the grounds of race, color, religion, sex, national origin, age or disability in the selection and retention of subcontractors, including procurement of materials and leases of equipment. The contractor shall take all necessary and reasonable steps to ensure nondiscrimination in the administration of this contract.
- a. The contractor shall notify all potential subcontractors and suppliers and lessors of their EEO obligations under this contract.
 - b. The contractor will use good faith efforts to ensure subcontractor compliance with their EEO obligations.
- 10. Assurance Required by 49 CFR 26.13(b):**
- a. The requirements of 49 CFR Part 26 and the State DOT's U.S. DOT-approved DBE program are incorporated by reference.
 - b. The contractor or subcontractor shall not discriminate on the basis of race, color, national origin, or sex in the performance of this contract. The contractor shall carry out applicable requirements of 49 CFR Part 26 in the award and administration of DOT-assisted contracts. Failure by the contractor to carry out these requirements is a material breach of this contract, which may result in the termination of this contract or such other remedy as the contracting agency deems appropriate.
- 11. Records and Reports:** The contractor shall keep such records as necessary to document compliance with the EEO requirements. Such records shall be retained for a period of three years following the date of the final payment to the contractor for all contract work and shall be available at reasonable times and places for inspection by authorized representatives of the contracting agency and the FHWA.
- a. The records kept by the contractor shall document the following:
 - (1) The number and work hours of minority and non-minority group members and women employed in each work classification on the project;
 - (2) The progress and efforts being made in cooperation with unions, when applicable, to increase employment opportunities for minorities and women; and
 - (3) The progress and efforts being made in locating, hiring, training, qualifying, and upgrading minorities and women;
 - b. The contractors and subcontractors will submit an annual report to the contracting agency each July for the duration of the project, indicating the number of minority, women, and non-minority group employees currently engaged in each work classification required by the contract work. This information is to be reported on Form FHWA-1391. The staffing data should represent the project work force on board in all or any part of the last payroll period preceding the end of July. If on-the-job training is being required by special provision, the contractor will be required to collect and report training data. The employment data should reflect the work force on board during all or any part of the last payroll period preceding the end of July.

III. NONSEGREGATED FACILITIES

This provision is applicable to all Federal-aid construction contracts and to all related construction subcontracts of \$10,000 or more.

The contractor must ensure that facilities provided for employees are provided in such a manner that segregation on the basis of race, color, religion, sex, or national origin cannot result. The contractor may neither require such segregated use by written or oral policies nor tolerate such use by employee custom. The contractor's obligation extends further to ensure that its employees are not assigned to perform their services at any location, under the contractor's control, where the facilities are segregated. The term "facilities" includes waiting rooms, work areas, restaurants and other eating areas, time clocks, restrooms, washrooms, locker rooms, and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing provided for employees. The contractor shall provide separate or single-user restrooms and necessary dressing or sleeping areas to assure privacy between sexes.

IV. DAVIS-BACON AND RELATED ACT PROVISIONS

This Section is applicable to all Federal-aid construction projects exceeding \$2,000 and to all related subcontracts and lower-tier subcontracts (regardless of subcontract size). The requirements apply to all projects located within the right-of-way of a roadway that is functionally classified as Federal-aid highway. This excludes roadways functionally classified as local roads or rural minor collectors, which are exempt. Contracting agencies may elect to apply these requirements to other projects.

The following provisions are from the U.S. Department of Labor regulations in 29 CFR 5.5 "Contract provisions and related matters" with minor revisions to conform to the FHWA-1273 format and FHWA program requirements.

1. Minimum wages

- a. All laborers and mechanics employed or working upon the site of the work, will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics.
- b. Contributions made or costs reasonably anticipated for bona fide fringe benefits under Section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph 1.d. of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in 29 CFR 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided, that the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under paragraph 1.b. of this section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.
 - (1) The contracting officer shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The contracting officer shall approve an additional classification

and wage rate and fringe benefits therefore only when the following criteria have been met:

- i. The work to be performed by the classification requested is not performed by a classification in the wage determination; and
 - ii. The classification is utilized in the area by the construction industry; and
 - iii. The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.
- (2) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the contracting officer agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the contracting officer to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, DC 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.
- (3) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the contracting officer do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the contracting officer shall refer the questions, including the views of all interested parties and the recommendation of the contracting officer, to the Wage and Hour Administrator for determination. The Wage and Hour Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.
- (4) The wage rate (including fringe benefits where appropriate) determined pursuant to paragraphs 1.b.(2) or 1.b.(3) of this Section 1.b., shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.
- c. Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.
- d. If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, Provided, That the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

2. Withholding

The contracting agency shall upon its own action or upon written request of an authorized representative of the Department of Labor, withhold or cause to be withheld from the contractor under this contract, or any other Federal contract with the same prime contractor, or any other Federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be

considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work, all or part of the wages required by the contract, the contracting agency may, after written notice to the contractor, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

3. Payrolls and basic records

a. Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in Section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in Section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

(1) The contractor shall submit weekly for each week in which any contract work is performed a copy of all payrolls to the contracting agency. The payrolls submitted shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on weekly transmittals. Instead the payrolls shall only need to include an individually identifying number for each employee (e.g., the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Website at <http://www.dol.gov/esa/whd/forms/wh347instr.htm> or its successor site. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors. Contractors and subcontractors shall maintain the full social security number and current address of each covered worker, and shall provide them upon request to the contracting agency for transmission to the State DOT, the FHWA or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this Section for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to the contracting agency.

(2) Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

- i. That the payroll for the payroll period contains the information required to be provided under §5.5 (a)(3)(ii) of Regulations, 29 CFR part 5, the appropriate information is being maintained under §5.5 (a)(3)(i) of Regulations, 29 CFR part 5, and that such information is correct and complete;
 - ii. That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR part 3;
 - iii. That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.
 - (3) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph 3.b.(2) of this section.
 - (4) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under Section 1001 of title 18 and Section 231 of title 31 of the United States Code.
- b. The contractor or subcontractor shall make the records required under paragraph 3.a. of this Section available for inspection, copying, or transcription by authorized representatives of the contracting agency, the State DOT, the FHWA, or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the FHWA may, after written notice to the contractor, the contracting agency or the State DOT, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

4. Apprentices and trainees

- a. Apprentices (programs of the USDOL).

Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice.

The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the

ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed.

Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination.

In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

b. Trainees (programs of the USDOL).

Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration.

The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration.

Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed.

In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

- c. Equal employment opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR part 30.
 - d. Apprentices and Trainees (programs of the U.S. DOT).
Apprentices and trainees working under apprenticeship and skill training programs which have been certified by the Secretary of Transportation as promoting EEO in connection with Federal-aid highway construction programs are not subject to the requirements of paragraph 4 of this Section IV. The straight time hourly wage rates for apprentices and trainees under such programs will be established by the particular programs. The ratio of apprentices and trainees to journeymen shall not be greater than permitted by the terms of the particular program.
5. **Compliance with Copeland Act requirements.** The contractor shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this contract.
 6. **Subcontracts.** The contractor or subcontractor shall insert Form FHWA-1273 in any subcontracts and also require the subcontractors to include Form FHWA-1273 in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR 5.5.
 7. **Contract termination: debarment.** A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.
 8. **Compliance with Davis-Bacon and Related Act requirements.** All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR parts 1, 3, and 5 are herein incorporated by reference in this contract.
 9. **Disputes concerning labor standards.** Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and the contracting agency, the U.S. Department of Labor, or the employees or their representatives.
 10. **Certification of eligibility.**
 - a. By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of Section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).
 - b. No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of Section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).
 - c. The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

V. CONTRACT WORK HOURS AND SAFETY STANDARDS ACT

The following clauses apply to any Federal-aid construction contract in an amount in excess of \$100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. These clauses shall be inserted in addition to the clauses required by 29 CFR 5.5(a) or 29 CFR 4.6. As used in this paragraph, the terms laborers and mechanics include watchmen and guards.

1. **Overtime requirements.** No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such

work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.

2. **Violation; liability for unpaid wages; liquidated damages.** In the event of any violation of the clause set forth in paragraph (1.) of this section, the contractor and any subcontractor responsible therefor shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (1.) of this section, in the sum of \$10 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in paragraph (1.) of this section.
3. **Withholding for unpaid wages and liquidated damages.** The FHWA or the contacting agency shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other Federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph (2.) of this section.
4. **Subcontracts.** The contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraph (1.) through (4.) of this Section and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (1.) through (4.) of this section.

VI. SUBLETTING OR ASSIGNING THE CONTRACT

This provision is applicable to all Federal-aid construction contracts on the National Highway System.

1. The contractor shall perform with its own organization contract work amounting to not less than 30 percent (or a greater percentage if specified elsewhere in the contract) of the total original contract price, excluding any specialty items designated by the contracting agency. Specialty items may be performed by subcontract and the amount of any such specialty items performed may be deducted from the total original contract price before computing the amount of work required to be performed by the contractor's own organization (23 CFR 635.116).
 - a. The term "perform work with its own organization" refers to workers employed or leased by the prime contractor, and equipment owned or rented by the prime contractor, with or without operators. Such term does not include employees or equipment of a subcontractor or lower tier subcontractor, agents of the prime contractor, or any other assignees. The term may include payments for the costs of hiring leased employees from an employee leasing firm meeting all relevant Federal and State regulatory requirements. Leased employees may only be included in this term if the prime contractor meets all of the following conditions:
 - (1) the prime contractor maintains control over the supervision of the day-to-day activities of the leased employees;
 - (2) the prime contractor remains responsible for the quality of the work of the leased employees;
 - (3) the prime contractor retains all power to accept or exclude individual employees from work on the project; and

- (4) the prime contractor remains ultimately responsible for the payment of predetermined minimum wages, the submission of payrolls, statements of compliance and all other Federal regulatory requirements.
- b. "Specialty Items" shall be construed to be limited to work that requires highly specialized knowledge, abilities, or equipment not ordinarily available in the type of contracting organizations qualified and expected to bid or propose on the contract as a whole and in general are to be limited to minor components of the overall contract.
2. The contract amount upon which the requirements set forth in paragraph (1) of Section VI is computed includes the cost of material and manufactured products which are to be purchased or produced by the contractor under the contract provisions.
 3. The contractor shall furnish (a) a competent superintendent or supervisor who is employed by the firm, has full authority to direct performance of the work in accordance with the contract requirements, and is in charge of all construction operations (regardless of who performs the work) and (b) such other of its own organizational resources (supervision, management, and engineering services) as the contracting officer determines is necessary to assure the performance of the contract.
 4. No portion of the contract shall be sublet, assigned or otherwise disposed of except with the written consent of the contracting officer, or authorized representative, and such consent when given shall not be construed to relieve the contractor of any responsibility for the fulfillment of the contract. Written consent will be given only after the contracting agency has assured that each subcontract is evidenced in writing and that it contains all pertinent provisions and requirements of the prime contract.
 5. The 30% self-performance requirement of paragraph (1) is not applicable to design-build contracts; however, contracting agencies may establish their own self-performance requirements.

VII. SAFETY: ACCIDENT PREVENTION

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts.

1. In the performance of this contract the contractor shall comply with all applicable Federal, State, and local laws governing safety, health, and sanitation (23 CFR 635). The contractor shall provide all safeguards, safety devices and protective equipment and take any other needed actions as it determines, or as the contracting officer may determine, to be reasonably necessary to protect the life and health of employees on the job and the safety of the public and to protect property in connection with the performance of the work covered by the contract.
2. It is a condition of this contract, and shall be made a condition of each subcontract, which the contractor enters into pursuant to this contract, that the contractor and any subcontractor shall not permit any employee, in performance of the contract, to work in surroundings or under conditions which are unsanitary, hazardous or dangerous to his/her health or safety, as determined under construction safety and health standards (29 CFR 1926) promulgated by the Secretary of Labor, in accordance with Section 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C. 3704).
3. Pursuant to 29 CFR 1926.3, it is a condition of this contract that the Secretary of Labor or authorized representative thereof, shall have right of entry to any site of contract performance to inspect or investigate the matter of compliance with the construction safety and health standards and to carry out the duties of the Secretary under Section 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C.3704).

VIII. FALSE STATEMENTS CONCERNING HIGHWAY PROJECTS

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts.

In order to assure high quality and durable construction in conformity with approved plans and specifications and a high degree of reliability on statements and representations made by engineers, contractors, suppliers, and workers on Federal-aid highway projects, it is essential that all persons concerned with the project perform their functions as carefully, thoroughly, and honestly as possible. Willful falsification, distortion, or misrepresentation with respect to any facts related to the project is a violation of Federal law. To prevent any misunderstanding regarding the seriousness of these and similar acts, Form FHWA-1022 shall be posted on each Federal-aid highway project (23 CFR 635) in one or more places where it is readily available to all persons concerned with the project:

18 U.S.C. 1020 reads as follows:

"Whoever, being an officer, agent, or employee of the United States, or of any State or Territory, or whoever, whether a person, association, firm, or corporation, knowingly makes any false statement, false representation, or false report as to the character, quality, quantity, or cost of the material used or to be used, or the quantity or quality of the work performed or to be performed, or the cost thereof in connection with the submission of plans, maps, specifications, contracts, or costs of construction on any highway or related project submitted for approval to the Secretary of Transportation; or

Whoever knowingly makes any false statement, false representation, false report or false claim with respect to the character, quality, quantity, or cost of any work performed or to be performed, or materials furnished or to be furnished, in connection with the construction of any highway or related project approved by the Secretary of Transportation; or

Whoever knowingly makes any false statement or false representation as to material fact in any statement, certificate, or report submitted pursuant to provisions of the Federal-aid Roads Act approved July 1, 1916, (39 Stat. 355), as amended and supplemented;

Shall be fined under this title or imprisoned not more than 5 years or both."

IX. IMPLEMENTATION OF CLEAN AIR ACT AND FEDERAL WATER POLLUTION CONTROL ACT

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts.

By submission of this bid/proposal or the execution of this contract, or subcontract, as appropriate, the bidder, proposer, Federal-aid construction contractor, or subcontractor, as appropriate, will be deemed to have stipulated as follows:

1. That any person who is or will be utilized in the performance of this contract is not prohibited from receiving an award due to a violation of Section 508 of the Clean Water Act or Section 306 of the Clean Air Act.
2. That the contractor agrees to include or cause to be included the requirements of paragraph (1) of this Section X in every subcontract, and further agrees to take such action as the contracting agency may direct as a means of enforcing such requirements.

X. CERTIFICATION REGARDING DEBARMENT, SUSPENSION, INELIGIBILITY AND VOLUNTARY EXCLUSION

This provision is applicable to all Federal-aid construction contracts, design-build contracts, subcontracts, lower-tier subcontracts, purchase orders, lease agreements, consultant contracts or any other covered transaction requiring FHWA approval or that is estimated to cost \$25,000 or more – as defined in 2 CFR Parts 180 and 1200.

1. Instructions for Certification – First Tier Participants:

- a. By signing and submitting this proposal, the prospective first tier participant is providing the certification set out below.
- b. The inability of a person to provide the certification set out below will not necessarily result in denial of participation in this covered transaction. The prospective first tier participant shall submit an explanation of why it cannot provide the certification set out below. The certification or explanation will be considered in connection with the department or agency's determination whether to enter into this transaction. However, failure of the prospective first tier participant to furnish a certification or an explanation shall disqualify such a person from participation in this transaction.
- c. The certification in this clause is a material representation of fact upon which reliance was placed when the contracting agency determined to enter into this transaction. If it is later determined that the prospective participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the contracting agency may terminate this transaction for cause of default.
- d. The prospective first tier participant shall provide immediate written notice to the contracting agency to whom this proposal is submitted if any time the prospective first tier participant learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
- e. The terms "covered transaction," "debarred," "suspended," "ineligible," "participant," "person," "principal," and "voluntarily excluded," as used in this clause, are defined in 2 CFR Parts 180 and 1200. "First Tier Covered Transactions" refers to any covered transaction between a grantee or subgrantee of Federal funds and a participant (such as the prime or general contract). "Lower Tier Covered Transactions" refers to any covered transaction under a First Tier Covered Transaction (such as subcontracts). "First Tier Participant" refers to the participant who has entered into a covered transaction with a grantee or subgrantee of Federal funds (such as the prime or general contractor). "Lower Tier Participant" refers any participant who has entered into a covered transaction with a First Tier Participant or other Lower Tier Participants (such as subcontractors and suppliers).
- f. The prospective first tier participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency entering into this transaction.
- g. The prospective first tier participant further agrees by submitting this proposal that it will include the clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion-Lower Tier Covered Transactions," provided by the department or contracting agency, entering into this covered transaction, without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions exceeding the \$25,000 threshold.

- h. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant is responsible for ensuring that its principals are not suspended, debarred, or otherwise ineligible to participate in covered transactions. To verify the eligibility of its principals, as well as the eligibility of any lower tier prospective participants, each participant may, but is not required to, check the Excluded Parties List System website (<https://www.epls.gov/>), which is compiled by the General Services Administration.
- i. Nothing contained in the foregoing shall be construed to require the establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of the prospective participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.
- j. Except for transactions authorized under paragraph (f) of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the department or agency may terminate this transaction for cause or default.

Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion – First Tier Participants:

- a. The prospective first tier participant certifies to the best of its knowledge and belief, that it and its principals:
 - (1) Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participating in covered transactions by any Federal department or agency;
 - (2) Have not within a three-year period preceding this proposal been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;
 - (3) Are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated in paragraph (a)(2) of this certification; and
 - (4) Have not within a three-year period preceding this application/proposal had one or more public transactions (Federal, State or local) terminated for cause or default.
- b. Where the prospective participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

* * * * *

2. Instructions for Certification – Lower Tier Participants:

(Applicable to all subcontracts, purchase orders and other lower tier transactions requiring prior FHWA approval or estimated to cost \$25,000 or more - 2 CFR Parts 180 and 1200)

- a. By signing and submitting this proposal, the prospective lower tier is providing the certification set out below.
- b. The certification in this clause is a material representation of fact upon which reliance was placed when this transaction was entered into. If it is later determined that the prospective lower tier participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the department, or agency with which this transaction originated may pursue available remedies, including suspension and/or debarment.
- c. The prospective lower tier participant shall provide immediate written notice to the person to which this proposal is submitted if at any time the prospective lower tier participant learns that its certification was erroneous by reason of changed circumstances.
- d. The terms "covered transaction," "debarred," "suspended," "ineligible," "participant," "person," "principal," and "voluntarily excluded," as used in this clause, are defined in 2 CFR Parts 180 and 1200. You may contact the person to which this proposal is submitted for assistance in obtaining a copy of those regulations. "First Tier Covered Transactions" refers to any covered transaction between a grantee or subgrantee of Federal funds and a participant (such as the prime or general contract). "Lower Tier Covered Transactions" refers to any covered transaction under a First Tier Covered Transaction (such as subcontracts). "First Tier Participant" refers to the participant who has entered into a covered transaction with a grantee or subgrantee of Federal funds (such as the prime or general contractor). "Lower Tier Participant" refers to any participant who has entered into a covered transaction with a First Tier Participant or other Lower Tier Participants (such as subcontractors and suppliers).
- e. The prospective lower tier participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency with which this transaction originated.
- f. The prospective lower tier participant further agrees by submitting this proposal that it will include this clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion-Lower Tier Covered Transaction," without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions exceeding the \$25,000 threshold.
- g. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant is responsible for ensuring that its principals are not suspended, debarred, or otherwise ineligible to participate in covered transactions. To verify the eligibility of its principals, as well as the eligibility of any lower tier prospective participants, each participant may, but is not required to, check the Excluded Parties List System website (<https://www.epls.gov/>), which is compiled by the General Services Administration.
- h. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render in good faith the certification required by this clause.

The knowledge and information of participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

- i. Except for transactions authorized under paragraph e of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the department or agency with which this transaction originated may pursue available remedies, including suspension and/or debarment.

* * * * *

Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion – Lower Tier Participants:

1. The prospective lower tier participant certifies, by submission of this proposal, that neither it nor its principals is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participating in covered transactions by any Federal department or agency.
2. Where the prospective lower tier participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

* * * * *

XI. CERTIFICATION REGARDING USE OF CONTRACT FUNDS FOR LOBBYING

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts which exceed \$100,000 (49 CFR 20).

1. The prospective participant certifies, by signing and submitting this bid or proposal, to the best of his or her knowledge and belief, that:
 - a. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any Federal agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.
 - b. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any Federal agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.
2. This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by 31 U.S.C. 1352. Any person who fails to file the required certification shall be subject to a civil penalty of not less than \$10,000 and not more than \$100,000 for each such failure.

3. The prospective participant also agrees by submitting its bid or proposal that the participant shall require that the language of this certification be included in all lower tier subcontracts, which exceed \$100,000 and that all such recipients shall certify and disclose accordingly.

**Schedule 16
Mandatory Terms**

Part A: Subcontracting Terms

1. Mandatory Terms for Subcontracts of Every Tier

Each Subcontract (including each Principal Subcontract, except to the extent expressly provided otherwise below) shall:

- (a) include an acknowledgement and agreement from the lower-tier Subcontractor (or, in the case of a Principal Subcontract, from the Principal Subcontractor):
 - (i) of and to all the terms of the Project Agreement to the extent expressly applicable to it as a Subcontractor;
 - (ii) that:
 - (A) the Colorado General Mechanics' Lien Statute, C.R.S. §§ 38-22-101, *et seq.*, is not available to such Subcontractor as a remedy for non-payment with respect to the Project and, as such, such Subcontractor shall not file or permit to be filed any mechanics' lien, materialmen's lien, or other lien against the Enterprises or CDOT, or the Project, in the records of the Clerk and Recorder of the City of Denver or in any other real property records;
 - (B) notwithstanding Section 1(a)(ii)(A) of this Part A of this Schedule 16, the Colorado Contractor's Bond and Lien on Funds Statute, C.R.S. §§ 38-26-101, *et seq.*, provides remedies to public authorities and subcontractors in the event of a non-payment of a subcontractor (which remedies are in the form of deductions by the public authority from payments to the contractor and liens by subcontractors against relevant payment bonds) and, therefore, pursuant to C.R.S. §§ 38-26-107 and, as contemplated by Section 5 of Schedule 5 (Milestone Payments), if such Subcontractor has an unpaid claim under its Subcontract, such Subcontractor may file a verified statement of the amount due and unpaid with the Enterprises at any time up to and including, but not after, the Substantial Completion Date (following which filing the Enterprises shall be entitled to withhold funds from Developer pursuant to Section 5(a)(i) of Part 3 of Schedule 4 (Payments) as a result of such claim); and
 - (C) such Subcontractor shall execute and deliver any lien waiver as and when required to be executed by it pursuant to Sections 2.4(b)(ii) or 2.4(b)(iii) of Part 2 of Schedule 4 (Payments) or Sections 4(c)(ii) or 4(c)(iii) of Schedule 5 (Milestone Payments); and
 - (iii) that:
 - (A) all notices, documentation and other information required to be delivered by Developer to the Enterprises or, as applicable, the Department pursuant to this Agreement shall be directly delivered by Developer and not by such Subcontractor acting, directly or indirectly, on Developer's behalf, except to the extent that the Enterprises Approve in advance the direct delivery of such type of notice by such Subcontractor to the Enterprises or, as applicable, the Department; and
 - (B) the Enterprises (and the Department) may, in their discretion, disregard any notice delivered by such Subcontractor contrary to Section 1(a)(iii)(A) of this Part A of this Schedule 16;

- (b) incorporate all terms and provisions:
 - (i) that the Project Agreement requires to be expressly incorporated in such Subcontract; and
 - (ii) as are otherwise necessary for Developer to comply with its obligations under this Agreement with respect to the compliance of Subcontractors with certain provisions of this Agreement, including:
 - (A) Sections 8.1.2, 8.3.1.a, 8.5, 8.6.1.a, 15.1.1 (with respect to Principal Subcontracts only), 15.4.b, 17.5, 19.1, 20.1.2, 20.1.4, 20.1.5, 20.1.6, 25.2.7.b and 30.1.4.b of the Project Agreement; and
 - (B) Sections 2.1, 2.2, 2.3, 2.4, 2.5, 3, 4.2, 4.3, 5.2, 5.3 and 5.4 of, and the Appendices to, Schedule 15 (*Federal and State Requirements*);
- (c) require the lower-tier Subcontractor (or, in the case of a Principal Subcontract, the Principal Subcontractor) to:
 - (i) participate in meetings between Developer and Enterprises where requested in writing by either Developer or the Enterprises; and
 - (ii) cooperate with any reasonable requests for information or assistance provided to them through the Dispute Resolution Procedures, except to the extent that such cooperation would require such Subcontractor to assume any legal liability;
- (d) contain all provisions necessary to ensure Developer shall comply with its obligations under Section 34.2 of the Project Agreement as they relate to such Subcontract;
- (e) not otherwise contain terms that are contrary to or inconsistent with the Project Agreement; and
- (f) provide that any amendment or waiver of any such Subcontract's provisions that would result in a violation of this Part A of this Schedule 16 shall be null and void unless Approved by the Enterprises.

2. **Mandatory Terms for Subcontracts (Excluding Principal Subcontracts)**

In addition to complying with Section 1 of Part A of this Schedule 16, subject to any exemptions that may be Approved by the Enterprises, each Subcontract (other than any Principal Subcontract) shall:

- (a) not require from a Subcontractor the delivery to Developer or the higher-tier Subcontractor, as applicable, of any construction, payment or performance bond or letter of credit for an amount (in aggregate with all other such bonds and letters of credit) exceeding the aggregate value of the relevant Subcontract, provided that, if separate payment and performance bonds are required, each type of bond may separately be in an amount not to exceed such aggregate value;
- (b) specify an alternative dispute resolution mechanism ("ADR") of referral for binding arbitration (which may be preceded by voluntary mediation) for payment disputes that complies with the following requirements:
 - (i) save to the extent expressly required otherwise by this Section 2(b), the ADR shall be conducted in accordance with the American Arbitration Association's Construction Industry Arbitration Rules and Mediation Procedures in effect from time to time;
 - (ii) the arbitrator(s) shall be mutually agreed by the parties to Subcontract at the time of, or prior to, referral;
 - (iii) either party to the Subcontract may require referral to ADR provided that, if the recipient of the invoice has not required referral within 90 Calendar Days after delivery of the invoice not paid or partially paid, the recipient shall irrevocably

- waive its rights to dispute the relevant invoice. Delivery shall be deemed made when deposited in the U.S. mail postage prepaid or hand delivered;
- (iv) the ADR shall provide for completion of the ADR process within 180 Calendar Days of delivery of the disputed invoice; and
 - (v) the prevailing party shall be awarded its costs provided that the arbitrator has discretion to require an equal split of the costs if there is no clearly prevailing party; and
- (c) not include any monetary disincentive, payment deduction or other penalty related to any of the Small Business and Workforce Goals on the basis that, while a Subcontractor may assist the Developer in achieving any of the Small Business and Workforce Goals, the Developer is, pursuant to Schedule 15 (*Federal and State Requirements*), solely responsible for the achievement or failure to achieve such goals.

3. **Mandatory Terms for Principal Subcontracts**

In addition to complying with Section 1 of Part A of this Schedule 16, each Principal Subcontract shall:

- (a) include a certification from the Principal Subcontractor to Developer that it does not and shall not knowingly employ or contract with an illegal alien to perform work under the Principal Subcontract; and
- (b) provide that any action undertaken in breach of Section 17.1.3 of the Project Agreement shall be null and void.

Part B: Financing Terms

1. Consistency with Term Sheets

Each Financing Document entered into in connection with Financial Close shall be materially consistent with the relevant debt term sheets provided in the Proposer's Proposal.

2. Mandatory Terms for Financing Documents

Each Financing Document¹ shall:

- (a) include an acknowledgment and agreement as to Sections 27.3.1, 27.3.2, 27.4.2 through 27.4.4 and 33.3 of the Project Agreement;
- (b) provide that any grant, assignment, mortgage, pledge, encumbrance, lien, charge or security interest made or created in violation of Sections 27.3.1 and 27.3.2 of the Project Agreement shall be null and void;
- (c) not otherwise contain terms that are contrary to or inconsistent with the express terms of the Project Agreement; and
- (d) provide that any amendment or waiver of any such Financing Document's provisions that would result in a violation of this Part B of Schedule 16 shall be null and void unless Approved by the Enterprises.

3. Bond Recitals

Except in the case of PABs issued by the PABs Issuer, each bond, promissory note or other instrument evidencing Project Debt shall include conspicuous recitals on its face to the effect that payment of the principal and interest under such bond, note or instrument:

- (a) does not constitute a claim against the Enterprises', CDOT's or the State's title to or real property or other interest in this Agreement, the Project, any ROW Parcel or any Additional ROW Parcel or any part of any thereof;
- (b) is not an obligation, moral or otherwise, of any of the Enterprises, CDOT or the State, any other State Governmental Authority, or any of their respective officials, board members, officers, directors, agents, employees and representatives; and
- (c) neither the full faith and credit of the Enterprises, CDOT or the State, nor the taxing power of the State or of any other State Governmental Authority, is pledged to the payment of the principal of or the interest on such bond, note or instrument.

¹ The Procuring Authorities will, in consultation with the Preferred Proposer, determine which Financing Documents are required to comply with Sections 2(a), (b) and (d). All Financing Documents will be required to comply with Section 2(c).

Schedule 17 Environmental Requirements

1. GENERAL

[Note to Proposers: At the time that this draft RFP is being released, the Record of Decision (“ROD”) for the Project has not been issued. This draft RFP is based on the assumption the findings of the ROD will be similar to what has been published in the Final Environmental Impact Statement (“FEIS”) and that the ROD and other Environmental Approvals will be secured. The actual Environmental Requirements and required Environmental Mitigations will be finalized in the ROD. Proposers are advised that there may be changes in this Schedule 17 between this draft and the final RFP.

At the time that this draft RFP is being released, some Phase I Environmental Site Assessments have been completed while others are still in process. The final RFP will include as Reference Documents all Phase I Environmental Site Assessments and other environmental reports that have been completed by the Department at such time (see Section 2.2.6 of Schedule 18 (Right-of-Way) with respect to the Phase I Environmental Site Assessments).]

1.1. General Requirements

- 1.1.1. To the extent allowed by Law, subject only to the express provisions of this Agreement (including of this Schedule 17) and without limiting the Developer’s own obligations to comply with all other Environmental Requirements applicable to the Project and the Work, the Department hereby delegates to the Developer, and the Developer hereby accepts, all the Department’s obligations, commitments and responsibilities for environmental management and environmental compliance in accordance with the requirements identified in this Agreement and all applicable Environmental Law and Environmental Approvals. The Developer shall be responsible for creating environmental awareness among all Project personnel, ensuring completion of environmental tasks and mitigation, and documenting that the environmental aspects of the Construction Work and the O&M Work are completed in accordance with the foregoing delegation and all other applicable Environmental Law, Environmental Approvals and provisions of this Agreement. The Developer shall also assist the Department to implement any and all non-delegable obligations, commitments and responsibilities regarding applicable Environmental Law and Environmental Approvals. Unless specifically noted otherwise herein, the requirements of this Schedule 17 apply to all aspects of the Work, throughout both the Construction Period and the Operating Period.
- 1.1.2. Except as provided otherwise in this Agreement (including in this Schedule 17), the Developer shall in performing the Work:
 - a. Comply with all Environmental Law;
 - b. Comply with all conditions and requirements imposed by all Environmental Approvals;
 - c. Comply with all conditions and requirements imposed by all other Governmental Approvals (including all Department Provided Approvals) and Permits;
 - d. Perform all commitments and mitigation measures set out in all Environmental Approvals, all other Governmental Approvals (including all Department Provided Approvals) and all Permits; and
 - e. Pursuant to Section 8.4 of the Project Agreement, prepare all information and submissions required by, or necessary to maintain in full force and effect, all Department Provided Approvals and maintain in full force and effect all other Environmental Approvals.
- 1.1.3. For certainty, the provisions of this Schedule 17, including all obligations of the Developer hereunder, are (except to the extent otherwise expressly provided herein) without prejudice to the

Developer's rights and obligations arising as a result of the occurrence of any Supervening Event.

2. ENVIRONMENTAL COMPLIANCE WORK PLAN

2.1. General Requirements

2.1.1. The Developer shall prepare an Environmental Compliance Work Plan ("ECWP") that specifically identifies all of the environmental goals and compliance requirements for the Project and the Developer's detailed plan to meet or exceed those goals and requirements. The ECWP shall be submitted to the Department for Approval (or, in the case of certain of the discipline specific management plans listed in Section 2.1.2 of this Schedule 18 and incorporated in the ECWP, Acceptance as required by Table 17-5 (Deliverables)) prior to issuance of NTP2.

At a minimum, the ECWP shall comply with the requirements of Sections 14.8.1 and 14.8.2 of Section 14 (Landscaping and Aesthetics) of Schedule 10 (Design and Construction Requirements) and include the following:

- a. All environmental elements defined in table "Summary of Impacts and Mitigation for the Preferred Alternative" in the ROD;
 - b. All elements assigned to the Developer in the I-70 East Mitigation Measures Status as provided in the Reference Documents;
 - c. All elements required by Environmental Law and Environmental Approvals;
 - d. Description of the means and methods to meet all Environmental Requirements during both the Construction Period and the Operating Period. (To include, for example, detailed procedures that the Developer shall utilize to meet Environmental Requirements for dewatering in both the Construction Period and the Operating Period and any Government Approvals for removal, management, and disposal of RHMs the Developer shall seek.)
 - e. Description of the process for tracking and documenting the progress and completion of all Environmental Requirements throughout the Construction Period and the Operating Period;
 - f. Description of how the Developer's Process Control ("PC") and Independent Quality Control ("IQC") programs shall function to assure compliance with Environmental Requirements and this Agreement;
 - g. Description of how information related to progress, completion and compliance with Environmental Requirements will be communicated to the Department and recorded in the Developer's DCS;
 - h. Description of the roles, responsibilities and qualifications for all members of the Developer's environmental management team, including the Environmental Manager ("EM"); and
 - i. All discipline specific management plans as required pursuant to Section 2.1.2 of this Schedule 17.
- 2.1.2. For certainty, specific Environmental Requirements (for example requirements related to air quality) will be addressed in the ECWP through discipline specific management plans, including those listed in this Section 2.1.2. The ECWP shall incorporate these discipline specific management plans by reference and they shall be considered part of the ECWP. The ECWP shall include details of how each discipline specific management plan will be incorporated into the overall environmental management program. The plans listed below shall be submitted to the Department for Approval or Acceptance as required by Table 17-5 (Deliverables).

- a. Air Quality Monitoring, Maintenance, and Mitigation Plan;
 - b. Construction Noise Mitigation and Monitoring Plan;
 - c. Integrated Noxious Weed Management Plan;
 - d. Materials Management Plan;
 - e. Sampling and Analysis Plan;
 - f. Health and Safety Plan;
 - g. Spill Prevention Control Countermeasure Plan; and
 - h. BTPD Management Plan.
- 2.1.3. The Developer shall monitor and improve the effectiveness of its ECWP and resubmit the ECWP annually for Approval (or, in the case of certain of the discipline specific management plans listed in Section 2.1.2 of this Schedule 18 and incorporated in the ECWP, Acceptance as required by Table 17-5 (Deliverables)) upon the anniversary of the ECWP's initial Approval by the Department, or more frequently should any of the following conditions exist:
- a. A plan or procedure no longer adequately addresses the matters it was originally intended to address;
 - b. A plan or procedure does not conform with the Project Agreement;
 - c. An audit by the Developer or the Department identifies a deficiency in the ECWP requiring an update;
 - d. Organizational structure changes require revision to the ECWP; or
 - e. The Developer is undertaking, or about to undertake, activities that are not covered within the current ECWP.
- 2.1.4. For all ECWP updates submitted by the Developer to the Department (including updates to each discipline specific management plan) the Developer shall:
- a. clearly identify in a cover sheet what changes were made in the plan update in order to expedite the Department's review; and
 - b. submit to the Department a comparison ("redline") copy of the ECWP, or the relevant parts thereof, together with an unmarked revised ("clean") copy of the ECWP.

3. INDEPENDENT QUALITY CONTROL PROGRAM

The Developer's IQC program, as described in Schedule 8 (*Project Administration*), shall assure compliance with all Environmental Requirements. The Developer shall perform IQC inspections to assure that the Construction Work meets and is being performed in accordance with this Agreement and all Environmental Requirements.

4. ENVIRONMENTAL STATUS AND MITIGATION COMPLETION REPORTS

- 4.1.1. The Developer shall report on the status of activities undertaken in accordance with the Environmental Requirements on a regular basis. During the period beginning with NTP1 through the Substantial Completion Date, the EM shall submit an Environmental Status Report ("ESR") monthly for Acceptance. During the Operating Period the Developer shall submit an ESR quarterly for Acceptance. The ESR shall be submitted no later than 10 Working Days following the end of the reporting period. The ESR shall:
- a. Include the current status of compliance with the Environmental Requirements;

- b. Include a section devoted specifically to water quality. This section shall summarize the water quality protection activities that have occurred during the reporting period and shall include a statement certifying that the Developer is in compliance with the CDPS-SCP, CDOT's MS4 Permit, and the Construction Standards for Water Quality Control and Erosion Control. During the period beginning with the issuance of NTP1 through the second anniversary of Final Acceptance, the certification statement shall be signed by the Environmental Manager. After the second anniversary of Final Acceptance through the end of the Operating Period, the certification statement shall be signed by the Project Manager. If the certification statement cannot be signed, a separate Corrective Action Plan shall be submitted for Approval.
 - c. Document any pertinent environmental issues and include a narrative of the compliance actions and environmental activities which have occurred during the reporting period;
 - d. Include a summary of any stakeholder communications and Governmental Authority communications that have occurred during the reporting period;
 - e. Include a summary that lists the plan sets and submittals which have undergone environmental cross-disciplinary review since the last ESR;
 - f. Include dated photographs documenting environmental compliance and activities; and
 - g. Include any other content requirements specified in this Schedule 17 or other sections of the Project Agreement.
- 4.1.2. All narratives shall include enough detail to fully document the environmental activities. If the Department requests additional information be included in an ESR, the Developer shall revise the ESR and resubmit the report for Acceptance.
- 4.1.3. When all Environmental Requirements and environmental activities associated with the Construction Work that have been assigned to the Developer are complete, the Developer shall provide a Mitigation Completion Report. The Mitigation Completion Report shall document and certify the completion of all Environmental Requirements including environmental mitigation. The Developer shall submit the Mitigation Completion Report to, and obtain Acceptance thereof from, the Department prior to Final Acceptance.

5. ENVIRONMENTAL MANAGER, PROFESSIONALS AND TASK FORCE MEETINGS

5.1. Environmental Manager

- 5.1.1. At all relevant times required by Section 16.1 of the Project Agreement, the Developer shall employ an Environmental Manager ("EM") to be responsible for ensuring compliance with all Environmental Requirements and commitments. The Environmental Manager shall implement all the environmental design, construction and operational commitments, all Environmental Requirements, and all conditions of the Environmental Approvals for the Project. The EM shall have the authority to stop or redirect the Work at any time as needed. The EM shall be responsible for the following:
- a. Be the primary liaison between the Developer and the Department on environmental issues.
 - b. Be the lead responder to any non-compliance findings for Environmental Requirements issued by the Department or the Independent Quality Control Manager ("IQCM") for the Work.
 - c. Provide support to the IQCM to ensure compliance with Environmental Requirements is included in inspections.
 - d. The EM shall conduct a weekly field review of the entire Project. A summary of the field reviews shall be included in the ESR.

- e. Coordinate the implementation of procedures to meet all Environmental Requirements.
 - f. Ensure full compliance with all Environmental Requirements in the Work.
 - g. Ensure that environmental tasks are performed by qualified environmental professionals and provide the resources to perform the Work needed to meet the Environmental Requirements. Activities performed by environmental professionals shall be reported in the ESR and include the resumes of the individuals performing the Work.
 - h. Lead environmental cross-disciplinary reviews of all design submittals in order to confirm compliance with all Environmental Requirements and environmental design commitments. A summary of these reviews shall be included in the ESR.
 - i. Perform reviews of proposed Developer Changes prior to submittal to the Department of any related Developer Change Notice pursuant to Schedule 24 (Change Procedure). The submittal of a proposed Developer Change Notice by the Developer to the Department shall include documentation that the EM has performed due diligence and that the proposed Developer Change complies with the Environmental Requirements. A summary of these reviews shall be reported in the ESR.
 - j. Perform reviews equivalent to those described in Section 5.1.1.i of this Schedule 17 with respect to any Enterprise Change as required by the terms of an Enterprise Change Notice.
 - k. Measure the number and severity of non-conformances with the Environmental Requirements and include a summary of the findings in the ESR.
 - l. Implement improvement strategies to reduce the number and severity of non-conformances with the Environmental Requirements and include a summary of the findings in the ESR.
 - m. Monitor Work for conformance with Environmental Requirements and include a summary of the findings in the ESR.
 - n. Plan and implement the Environmental Compliance and Mitigation Training Program described in this Schedule 17.
 - o. Lead a field review with the Department to review the Project and environmental issues every month. This field review can be counted as a substitute for the EM's weekly field review for the relevant week.
 - p. The EM shall coordinate the participation of the appropriate members of the Developer's team for, and lead, environmental task force meetings as such meetings shall otherwise be conducted pursuant to Section 5.3 of this Schedule 17.
 - q. Attend all public and stakeholder meetings related to the Project and participate as needed.
 - r. Provide Mitigation Completion Reports documenting and certifying the completion of all Environmental Requirements.
- 5.1.2. The EM's responsibilities shall not be delegated to production staff or other Persons without Department Approval.
- 5.2. Other Environmental Professionals**
- 5.2.1. Where this Agreement requires work to be performed by a qualified environmental professional (e.g., a qualified wildlife biologist or a qualified highway noise specialist) the individual performing the work shall have the appropriate educational credentials and a minimum of two years' professional experience in the specific discipline, unless higher standards are specified. The

qualifications of the environmental professional(s) performing the work shall be submitted to the Department as part of the ESRs and Mitigation Completion Reports (for example, the resumes of the biologists used during the prior month for completing Migratory Bird Treaty Act (MBTA) surveys would be submitted with the ESR).

5.3. Environmental Task Force

- 5.3.1. The Developer shall conduct environmental task force meetings pursuant to Section 9.2.1 of Schedule 8 (*Project Administration*) and this Section 5.3.
- 5.3.2. Environmental task force meetings shall be held on a weekly basis during the Construction Period. During the Operating Period, the Department may require such meetings on an as needed basis.
- 5.3.3. The EM shall coordinate and lead the environmental task force meetings pursuant to Section 5.1.1.p of this Schedule 17. During the Operating Period, and after the required term for appointment of the EM set out in Schedule 27 (*Key Personnel*) has ended, the Developer's Project Manager (or, alternatively, an Approved designee) shall coordinate and lead such meetings.

6. ENVIRONMENTAL COMPLIANCE AND MITIGATION TRAINING PROGRAM

6.1. General Requirements

- 6.1.1. The Developer shall develop and implement an Environmental Compliance and Mitigation Training Program ("ECMTP") for the Developer's personnel, including those of Subcontractors who will enter within the Site boundaries to perform Construction Work and Renewal Work. All such personnel shall complete this training prior to performing Construction Work and any Renewal Work on the Project. In addition, IQC inspectors, IQC supervisory staff, and the IQCM shall participate in the ECMTP. The ECMTP shall cover the Environmental Requirements for the Project and train personnel to stay in compliance with the Environmental Requirements.
- 6.1.2. The ECMTP shall include the following elements:
 - a. Water quality requirements;
 - b. Wetlands and waters of the U.S.;
 - c. Maintaining approved limits of disturbance;
 - d. Tree and shrub protection;
 - e. Avoidance and minimization of impact to waterways and stormwater conveyances;
 - f. Seasonal work restrictions – trees, waterways, and migratory birds;
 - g. Pumping and dewatering operations;
 - h. Discovery of archaeological material or human remains;
 - i. Discovery of paleontological resources;
 - j. Hazardous Substances;
 - k. Historic property protection requirements;
 - l. Construction noise mitigation;
 - m. Dust and construction emissions mitigation;
 - n. Site general housekeeping measures;
 - o. Concrete and asphalt waste material management;

- p. Spill prevention, response, and cleanup;
- q. Protection and access requirements for parks and maintenance of trail detours;
- r. Impacts and consequences for departure from approved operating procedures;
- s. Additional topics as needed to maintain compliance with the Environmental Requirements; and
- t. Responsibilities of production supervisors and inspectors in connection with environmental compliance.

The EM shall implement the ECMTP and submit it to the Department for Acceptance prior to issuance of NTP2. After NTP2 the Developer shall not allow any personnel to begin Work on the Site without completing the training required by the ECMTP. Construction Work conducted on the Site prior to the issuance of NPT2 shall be conducted under the environmental requirements of the CDOT Special Use Permit and otherwise subject to the early access and use provisions set out in Section 1.2 of Schedule 18 (Right-of-Way). The Developer shall revise the ECMTP regularly to reflect the most current policies, rules, and regulations and provide annual updates to the ECMTP to the Department for Acceptance 30 Calendar Days after the end of each Contract Year. The Developer shall keep records of the number of sessions and staff who has completed the ECMTP (for example, through the use of sign-in sheets, employee-specific identification numbers, hard hat decals etc.) and report this information monthly in the ESR.

7. DEPARTMENT PROVIDED ENVIRONMENTAL APPROVALS

The Environmental Approvals listed in Table 17-1 were obtained prior to the Agreement Date by the Department. These represent a portion of the Department Provided Approvals. Subject to Section 8.4 of the Project Agreement, Law, the terms of the applicable Department Provided Approvals and, with respect to the Programmatic Agreement only, Section 12.1.5 of this Schedule 17, the Department hereby delegates to the Developer responsibility to perform all conditions, commitments and requirements contained in or arising out of these and all other Department Provided Approvals.

Table 17-1 Department Provided Approvals

Environmental Approvals	Permitting Agency/Approval Agency
Record of Decision and <u>Section 4(f)</u> Evaluation	Federal Highway Administration (“FHWA”)
Programmatic Agreement	State Historic Preservation Office (“SHPO”), CDOT and FHWA

8. REQUIRED ENVIRONMENTAL APPROVALS

- 8.1.1. Pursuant to Section 8.4.2.a of the Project Agreement, the Developer shall be responsible for obtaining all Environmental Approvals (other than the Department Provided Approvals) required to perform its obligations under this Agreement. A non-exhaustive list of the Environmental Approvals that the Developer shall be required to obtain pursuant to Section 8.4.2.a of the Project Agreement is found in Table 17-2. Table 17-2 is provided for convenience only.
- 8.1.2. For certainty, the Developer shall also obtain any additional Environmental Approvals not listed in Tables 17-1 or 17-2 as and when required pursuant to its obligations under this Agreement.
- 8.1.3. Pursuant to Section 8.4.3.b of the Project Agreement, and without limiting Developer's rights under the Project Agreement (including with respect to any Supervening Event), the Developer shall also be responsible for performing all necessary actions and shall bear all risk of delay and/or all risk of increased cost, in either case, associated with Governmental Approvals (including, for certainty, Department Provided Approvals) and with Permits to the extent provided for in such Section, including in certain circumstances by obtaining new, or modifications,

renewals and extensions of existing, Governmental Approvals (including, for certainty, Department Provided Approvals) and Permits.

Table 17-2 Required Environmental Approvals

Environmental Approvals	Permitting Agency/Approval Agency
Air Pollutant Emission Notice (“ <u>APEN</u> ”)	Colorado Division of Public Health and Environment (“ <u>CDPHE</u> ”) Air Pollution Control Division (“ <u>APCD</u> ”)
Stationary Source Air Quality Permit	CDPHE, APCD
Fugitive Dust Permit	CDPHE, APCD
Asbestos Abatement Permit	CDPHE, APCD
Demolition permits	CDPHE and all applicable Governmental Authorities
Historic Structures Demolition Permit	City and County of Denver Landmark Preservation Commission
Construction Noise Permit	All applicable Governmental Authorities
Temporary Noise Variance	All applicable Governmental Authorities
Clean Water Act Section 402 Construction Dewatering Permit	CDPHE Water Quality Control Division (“ <u>WQCD</u> ”)
Construction Activities Stormwater Discharge Permit (“ <u>CASDP</u> ”)	City and County of Denver (“ <u>CCD</u> ”) – Wastewater Management
Colorado Discharge Permit System (“ <u>CDPS</u> ”) Stormwater Construction Permit (“ <u>SCP</u> ”)	CDPHE WQCD
Municipal Separate Storm Sewer System (MS4) Discharge Permit (CDOT MS4 discharge requirements)	CDPHE WQCD
Municipal Separate Storm Sewer System (MS4) Discharge Permit (outside CDOT ROW)	All applicable Governmental Authorities
Subterranean Groundwater Permit	CDPHE WQCD
Construction Dewatering Permit	CDPHE WQCD
Remediation Activities Discharging to Surface Waters Permit	CDPHE WQCD
Remediation Activities Discharging to Groundwater	CDPHE WQCD
Individual Permit	CDPHE WQCD
Substitute Water Supply Plan	Colorado Division of Water Resources
Notice of Intent to Construct Dewatering Wells	Colorado Division of Water Resources
Well Construction and Test Reports	Colorado Division of Water Resources
Dewatering Systems Well Report	Colorado Division of Water Resources
Notification as Resource Conservation and Recovery Act (“ <u>RCRA</u> ”) Generator (when the Developer is the Generator as determined pursuant to <u>Section 23.6</u> of this <u>Schedule 17</u> ; if the Department is the Generator as determined pursuant to <u>Section 23.6</u> of this <u>Schedule 17</u> , the Department will submit this notification).	CDPHE Hazardous Materials and Waste Management Division
Stormwater Quality Discharge Permit for Construction Activities	City of Aurora
Sewer Use and Drainage Permit (“ <u>SUDP</u> ”)	CCD
Well Abandonment Report (GWS-09)	State of Colorado, Office of State Engineer

Environmental Approvals	Permitting Agency/Approval Agency
Black Tailed Prairie Dog Removal Permit	Colorado Parks and Wildlife (“CPW”) and City of Aurora
SB40 Certification/Approval	CPW
Nest Take Permit	The United States Fish and Wildlife Service (“USFWS”)
Clean Water Act Section 404 Permit	United States Army Corps of Engineers (“USACE”)
Special Use Permit	Colorado Department of Transportation

- 8.1.4. The Developer shall not pursue any new Environmental Approval, or seek to modify, renew or extend any existing Environmental Approval:
- a. that reflects any change to the Project not described in the Preferred Alternative and/or the Reference Documents without Department Approval of the proposed new, modified, renewed or extended Environmental Approval; and
 - b. where the Environmental Approval or possible changed element of the Project is subject to any agreements CDOT or the Enterprises has or have made with State and local Governmental Authorities in connection with the Project (for example, the Programmatic Agreement) without Department Approval of the proposed new, modified, renewed or extended Environmental Approval.
- 8.1.5. The Department may, at its discretion, require the Developer to submit the Colorado Department of Transportation’s Reevaluation Form (CDOT Form No.1399) in connection with the Developer obtaining any Environmental Approval, including any modification, renewal or extension thereof, and in connection with any Change made pursuant to Schedule 24 (*Change Procedure*) and documented in a Change Order or a Directive Letter.

9. ENVIRONMENTAL REQUIREMENTS FOR SPECIFIC ENVIRONMENTAL RESOURCES

9.1. General

- 9.1.1. The Environmental Requirements for specific environmental resources are set out in Schedule 10A (*Applicable Standards and Specifications*), including I-70 East Mitigation Measures Status, the FEIS, and the ROD. In addition, the Environmental Approvals and this Schedule 17 contain additional Environmental Requirements and/or clarifications of Environmental Requirements for specific individual environmental resources.
- 9.1.2. All environmental resources within and adjacent to the Site which are to be protected from disturbance during construction (for example wetlands and historic resources) shall be clearly shown on design Deliverables. The techniques and methods to be used for protection of the environmental resource (for example fencing and signage) shall be shown in the RFC Documents. The protective measures shall be put in place prior to work beginning in the area and maintained through the Construction Period.

10. AIR QUALITY

10.1. General Requirements

- 10.1.1. The Developer shall comply with all applicable air quality regulations and shall prepare and submit an Air Quality Monitoring, Maintenance, and Mitigation Plan (“AQ3MP”), for Acceptance, prior to issuance of NTP2.
- 10.1.2. The Developer shall be responsible for obtaining all air quality Permits necessary to complete the Work, including those listed in Table 17-2. The Developer shall have sole responsibility for compliance with all applicable air quality Environmental Approvals.
- 10.1.3. Air Quality Monitoring, Maintenance, and Mitigation Plan

- a. The Developer shall prepare and implement the AQ3MP using the CDOT Air Quality Monitoring, Maintenance, and Mitigation Template, which is included in the Reference Documents. All template section and subsection headings shall be used. If a Section or subsection is not applicable, the reason it is not applicable shall be specified. New sections or additional subsections shall be added as necessary to fully describe the AQ3MP, identify personnel responsibilities, describe technical methodologies, list assumptions, and present procedures and methods for documenting and reporting. The AQ3MP will include the following:
 - i. Fugitive Particulate Emission Control

The Developer shall implement Best Management Practices ("BMPs") to effectively control fugitive particulate emissions at all times on the Site, including during periods of inactivity. The Developer shall monitor Project fugitive particulate emissions including those from construction equipment and stationary sources. The Developer shall perform and document a daily visual inspection of active Work sites within the construction site boundary with the goal of preventing off-site transport of fugitive particulate emissions. If off-site transport of fugitive particulate emissions occurs and is observed by the Developer or is reported to the Developer, the observer or the Developer representative who received the report shall immediately inform the EM and the Construction Manager or, if not available, the next highest-ranking member of the construction team. The Construction Manager shall then ensure the implementation of appropriate additional BMPs to eliminate off-site transport of fugitive particulate emissions.
 - ii. Opacity Measurements

The Developer shall perform and document daily opacity readings from all stationary sources that are operated on the Site that are subject to opacity limits in Section II.A of Air Quality Control Commission Regulation No. 1 (5 CCR 1001-3) and any applicable Permit conditions. The Developer's personnel performing opacity readings shall be certified according to State and Federal standards and the certification status maintained throughout the duration of the Construction Work. The personnel performing the daily opacity readings on stationary sources may be the same personnel inspecting the Site for off-site transport of pollutants. If opacity readings exceed allowable limits, the inspector shall immediately inform the EM and the Construction Manager or, if not available, the next highest-ranking member of the construction team. The Construction Manager shall ensure the implementation of effective BMPs as described in the I-70 East Mitigation Measures Status to reduce opacity levels to allowable limits.
 - iii. PM-10 Monitoring

The Developer shall conduct continuous PM-10 monitoring during the Construction Period in accordance with 40 CFR Part 58 (*Ambient Air Quality Surveillance*) adequate to characterize PM-10 concentrations along the active construction corridor. The AQ3MP shall specify the number, type, and location of PM-10 monitors that will make up the network and shall provide for hourly logging. At each station a PM-10 sampler will be installed in a climate controlled facility. The stations shall be designed to meet all applicable Federal, United States Environmental Protection Agency ("EPA"), and Colorado APCD standards. The Developer shall select PM-10 monitoring locations consistent with EPA siting criteria for surface data collection and shall provide rationale for location selection. Locations of the PM-10 monitors shall be adjusted during the Construction Period to accommodate construction phasing. The Developer shall calibrate the PM-10 monitors twice per week with no more than 4 Calendar Days between calibrations. Proposed locations of the PM-10 monitors shall be

submitted to the Department for Acceptance at least two weeks prior to operating the monitor at the proposed location.

iv. Meteorological Data Collection

The Developer shall continuously monitor meteorological conditions including on-site wind-speed and wind gusts, wind azimuths, barometric pressure, relative humidity, and temperature, to assist in making decisions regarding mitigation of fugitive particulate emissions. This data may be collected at the PM-10 monitors or the Developer may obtain data from existing local data sources. If data is obtained from local sources, the sources being used shall be listed in the AQ3MP.

v. Project Independent Air Monitoring Data from Swansea Elementary

Air quality will be monitored at Swansea Elementary School as part of an independent research project that is not within the Developer's scope of Work. It is expected that the following criteria pollutants will be monitored: nitrogen dioxide (NO₂), PM-10, and PM-2.5 as part of such independent research project. Additional pollutants may be added to the monitoring list. Monitoring results will be made available to the Developer approximately one week after the data is collected. The Developer shall review such data as it becomes available to identify trends to help determine if BMPs are being used effectively.

vi. Automated PM-10 Alert System

The Developer shall implement an automated PM-10 alert system that will communicate via both text messaging and email when a PM-10 monitored level reaches a running eight hour average concentration of 135 µg/m³. This alert system will continuously monitor the real time data from the Project's PM-10 monitors. The level of 135 µg/m³ is specified in order to allow corrective actions to be implemented prior to exceeding the National Ambient Air Quality Standard ("NAAQS") of 150 µg/m³. The alert system shall inform the Construction Manager, EM, designated Department staff, and designated CDPHE Air Pollution Control Division staff of the PM-10 concentration and location of the alerting monitor. Upon receiving an alert, the Construction Manager shall respond immediately to identify the source of the PM-10 event and implement effective BMPs for dust control. This mitigation will continue until the next running 8-hour PM-10 concentration from the alerting monitor is below 135 µg/m³. All actions associated with responding to a 135 µg/m³ or greater reading shall be communicated with the EM, designated Department staff, and designated CDPHE Air Pollution Control Division staff via email within one hour of the event.

vii. Posting of PM-10 and Meteorological Data

The Developer shall collect and submit PM-10 and Meteorological data to the Department in an electronic format. This data submittal is for the purpose of posting on the Project website and is separate from the reporting requirements under Section 10.1.4 of this Schedule 17. Data for each 24 hour period shall be submitted to the Department prior to the end of the following Working Day. The data shall be submitted in a format that allows the Department to review the data and post selected data in a manner specified by the Department. The PM-10 data shall be submitted in the following formats: (1) actual data for each individual reading, (2) the 8-hour running average, and (3) the average for each 24 hour period. Meteorological Data shall include temperature, humidity, wind speed, and wind direction for each reading. The results of the PM-10 monitor calibration shall be included in the data submittal.

viii. Air Quality BMPs

The Developer shall provide a list of air quality BMPs that the Developer will use for Construction Work and a description of how each will be implemented. BMPs are listed in the FEIS, ROD, and other Environmental Approvals. Where feasible, the Developer shall use alternatives to diesel engines and/or diesel fuels, such as biodiesel, liquefied natural gas, compressed natural gas, fuel cells, and electric engines.

10.1.4. Air Quality Reporting

- a. The Developer shall maintain a daily log of air quality observations and mitigation measures during all phases of the Construction Work and shall provide a monthly report and the monthly log of data collected to the Department in the ESR. The log shall include a daily report of the following information:
 - i. A description and location of construction activities being conducted on that day that could negatively impact air quality, including, for example, excavation, clearing and grubbing, demolition, and utilizing unpaved staging areas and haul roads.
 - ii. A report on the daily visual inspection of the Site, including a description of any visible emissions.
 - iii. The results, time and location of all opacity readings.
 - iv. A report on any off-site transport of visible emissions, and any violation of any other emissions guideline in Regulation No. 1, Section III.D. The report shall describe the duration of the event, the mitigation measures deployed and actions taken, and the time it took to correct the problem.
 - v. A report on any violation and compliance deficiency of the AQ3MP or Environmental Approval relating to air quality. The report shall describe the duration, time, and location of the event; the mitigation measures deployed and actions taken; and the time it took to correct the problem.
 - vi. All hourly PM-10 and weather monitoring data and hourly eight-hour running average data from the PM-10 monitoring network and the meteorological monitoring station shall be recorded in a digital data logging unit and transmitted by a cellular or satellite system to an online data depository hourly managed by the Developer.

10.1.5. Diesel Nonroad Construction Equipment

- a. For the purposes of this Schedule 17, the term Diesel Nonroad Construction Equipment (“DNRCE”) shall refer to large (>50 hp), stationary and mobile, nonroad equipment, powered by compression-ignition (diesel) engines.
- b. All DNRCE that is on Site for more than 10 total Calendar Days must either 1) have engines meeting EPA Tier 4 standards or 2) be EPA rated Tier 2 or Tier 3 that have been retrofitted with diesel particulate control technology and engine preheaters. Retrofit systems and technology shall be selected to bring Tier 2 and Tier 3 DNRCE up to Tier 4 standards or as close to Tier 4 standards as practicable. DNRCE with Tier 0 and Tier 1 engines are not allowed on the Site.
- c. Emission control technology shall be operated, maintained, and serviced as recommended by the emission control technology manufacturer.
- d. All mobile DNRCE that is on Site shall comply with the idling restrictions and opacity requirements of the City and County of Denver’s Code of Ordinances, including *Chapter 4 Air Pollution Control, Article IV Mobile Sources*.

- e. The Developer shall ensure that all Subcontractors adhere to these requirements. The Developer shall maintain records of all DNRCE on Site at all times. The Developer shall submit a quarterly report to the Department summarizing the DNRCE present on the Site during the reporting period. The report shall include a table which lists: Equipment Type, Manufacturer, Model, Serial Number, Owner Information, Unique Identifier, Original Tier Level, and Retrofit Tier Level, Date brought on Site, Date removed from Site, and Number of Calendar Days on Site during the reporting period, and Total Number of Calendar Days on Site. The report shall also include a statement of certification by the Developer that all DNRCE on site during the reporting period have been listed in the Table. The quarterly report shall also include a list of DNRCE that the Developer plans to bring on to the Site during the next quarter.

10.1.6. Construction Equipment Emissions Retrofit Program

The Department has secured funding and a commitment from the Regional Air Quality Council (“RAQC”) to retrofit certain types of construction equipment to reduce emissions. The Developer shall review its fleet to determine if any its vehicles could benefit from this program and report to the Department the results of this review. The Developer is encouraged to participate in the retrofit program. To the extent that the Developer becomes entitled to participate in such program, any funding provided to it thereunder shall be independent of any payment obligations under, or payment provisions of, this Agreement.

11. NOISE

11.1. General Requirements

The Department has performed a noise impact analysis with abatement recommendations as part of the preliminary design for the FEIS. The Statement of Likelihood and recommendations of this analysis are included in Section 5.12 of the FEIS and in the Noise Technical Report (Attachment K) of the FEIS. The noise analysis was completed using the geometry assumptions documented in the FEIS.

11.2. Noise Analysis and Report

- 11.2.1. The Developer shall perform a noise analysis based on its final design. Results of the noise analysis shall be documented in a preliminary and final Noise Technical Report and submitted to the Department for Acceptance. For information, the FHWA Traffic Noise model (“TNM”) used in the FEIS analysis is available to the Developer as a Reference Document.
- 11.2.2. The preliminary and final design noise analysis and Noise Technical Report shall follow the format of the FEIS analysis referenced above and include the same receiver locations as well as any new receivers that exist due to land use changes. The preliminary and final design noise analysis shall utilize the same model used in the FEIS and shall be produced in accordance to the standards and procedures of the CDOT *Noise Analysis and Abatement Guidelines*.
- 11.2.3. The noise analysis and Noise Technical Report shall determine and document the noise effects of any changes to the vertical and horizontal alignment from the Reference Design. The noise analysis and Noise Technical Report shall include a detailed description of the locations where the horizontal and vertical roadway elevations have changed from the Reference Design. The noise analysis and Noise Technical Report shall determine if any new neighborhoods have become eligible for noise abatement. If any new areas become eligible for noise abatement due to changes to the vertical or horizontal alignment, the Developer shall include the analysis for recommended noise abatement in the noise analysis and report. The Developer shall assure proposed mitigation is consistent with mitigation standards identified in the FEIS and the ROD, as well as State and Federal guidelines. The Developer shall submit documentation with the noise analysis and Noise Technical Report verifying that the analysis was performed by a qualified individual with expertise in the field of highway noise analysis in Colorado.
- 11.2.4. Top of existing noise barrier elevations shall be documented before the removal of any existing structure. If final design noise analysis determines that top of barrier or structure elevations are

lower than their existing elevations, the Developer shall demonstrate that no new visual sight lines are created.

11.3. New Noise Abatement

- 11.3.1. New noise abatement is required in the areas identified in the FEIS and the ROD. The Developer shall optimize the design of the noise abatement infrastructure to maximize the number of receivers receiving a reduction of 5 dBA or greater per CDOT/FHWA guidelines.
- 11.3.2. The Developer shall submit a preliminary Noise Technical Report which contains the optimized design of the proposed noise abatement in the affected neighborhood. Acceptance of the preliminary Noise Technical Report is required before the Benefited Receptor Preference Survey can be conducted.
- 11.3.3. When the preliminary Noise Technical Report has been Accepted by the Department, the Developer shall conduct the Benefited Receptor Preference Survey as described in the CDOT *Noise Analysis and Abatement Guidelines*. The Developer shall provide all material necessary to conduct the survey including exhibits, flyers, door hangers, ballots and return mail envelopes. The Developer shall conduct a public meeting on the proposed noise abatement design. The Developer shall allow the Department the opportunity for ongoing over the shoulder review of all planning activities associated with the Benefited Receptor Preference Survey. The Developer shall submit for Approval the plan of the Benefited Receptor Survey, including the geographic limits of the survey, procedures for conducting the survey, and printed material and other media to be used for the survey at least 14 Calendar Days before completing the survey.
- 11.3.4. Additional new noise abatement will be required if changes to the final vertical or horizontal alignment, or any new Type I action, trigger eligibility as referenced in Section 11.2 of this Schedule 17. New noise abatement infrastructure requirements triggered by changes to the geometry shall be the responsibility of the Developer.
- 11.3.5. After the Benefited Receptor Preference Survey is completed, a Final Noise Technical Report shall be completed to document the final design noise analysis, final geometry and details of the noise barriers. This report shall be submitted to the Department for Acceptance prior to the issuance of RFC Documents. If any design changes are made that may affect eligible receivers, the Final Noise Technical Report shall be updated and resubmitted for Acceptance.

11.4. Existing Noise Abatement

- 11.4.1. All existing noise abatement structures that are removed, damaged, or otherwise impacted as a result of the Construction Work shall require full replacement. Replacement noise abatement structures shall be constructed to the structural and aesthetic requirements as set out in the Technical Requirements and Section 14 (*Landscaping and Aesthetics*) of Schedule 10 (*Design and Construction Requirements*). Noise abatement structures on the existing viaduct are excluded from this requirement.

11.5. Additional Noise Abatement Requirements

- 11.5.1. Proposed noise walls shall be placed in locations that will accommodate the Ultimate configuration.
- 11.5.2. Noise walls and other abatement measures shall follow the requirements set out in Section 14 (*Landscaping and Aesthetics*) of Schedule 10 (*Design and Construction Requirements*) and the Aesthetic Design Standards for Central 70 included in Schedule 10B Contract Drawings.
- 11.5.3. Noise walls shall be designed and constructed without open joints or gaps. Joints between noise wall Elements shall be minimized. Where joints are necessary, they will be designed in such a way that no light can pass through them. If a sealant is utilized to close any joint, it shall have a design life equal or greater than the wall. Emergency access doors and hatches shall comply with the finish requirements of the Aesthetic Design Standards for Central 70 included in Schedule 10B Contract Drawings. Proposed noise wall designs and location information shall be included in the Developer's public information program.

11.6. Construction Noise Mitigation and Monitoring

- 11.6.1. The Developer shall comply with all applicable local sound control and noise and vibration ordinances and regulations, including Chapter 36, Noise Control, of the Revised Municipal Code of the City of Denver. All required noise permits shall be acquired by the Developer prior to issuance of NTP2.
- 11.6.2. I-70 East Mitigation Measures Status contains mitigation measures for construction noise and vibration. The Developer shall implement a Construction Noise Mitigation and Monitoring Plan (“CNMMP”) that incorporates the mitigation measures outlined in the FEIS, the ROD, and the procedures identified in the FHWA Construction Noise Handbook. The Developer shall submit the CNMMP to the Department for Acceptance prior to issuance of NTP2. The CNMMP shall be comprehensive and provide accurate and detailed information to minimize, monitor and mitigate construction-related noise and include:
- a. Compliance procedures with mitigation measures outlined in the FEIS and the ROD.
 - i. Compliance procedures with applicable noise ordinances or variances granted for the Project;
 - ii. Methodology to establish baseline ambient conditions;
 - iii. Identification of construction methods (for example, location of stationary equipment, truck traffic through residential areas, use of vibratory equipment such as pile driving, crusher plants etc.) for the Project;
 - iv. Identification of sensitive receptors, for both day and night construction and other Project-related activities;
 - v. Procedures for monitoring and reporting noise levels for the Project;
 - vi. Methodology to prevent, minimize and mitigate noise impacts related to demolition, debris removal, hauling, construction equipment, and construction activities.
 - vii. Implementation plan to construct noise barriers prior to roadway construction;
 - viii. Implementation plan to replace noise barriers as they are removed in locations that have existing noise barriers; and
 - ix. Implementation plan to meet construction noise minimization requirements around the Swansea Elementary School.

12. HISTORIC RESOURCES

12.1. General Requirements

- 12.1.1. The Developer shall perform all mitigation measures assigned to the Developer in this Schedule 17, the Programmatic Agreement, and in the I-70 East Mitigation Measures Status.
- 12.1.2. The Developer shall include the line work showing the Area of Potential Effect (“APE”) boundary on all design drawings.
- 12.1.3. If the Developer’s Work results in any changes in effects to the historic resources described in the FEIS and the ROD or in changes to the APE, the Developer shall obtain all required Environmental Approvals. The Developer shall document those changes and provide the Department with all necessary information and reevaluations for coordination with SHPO under Section 106 of the National Historic Preservation Act and Section 4(f) of the Department of Transportation Act. This shall include the enlargement of existing easements (temporary or permanent), or any additional easements (temporary or permanent), property acquisitions, Utility Relocations or alterations from work that has obtained concurrence from SHPO as documented in the Reference Documents, or resources that were not previously cleared as part of the Section 106 consultation and Section 106 Determinations of Eligibility and Effects report

(Attachment I to the FEIS). The Developer shall not impact historic resources until the Section 106 consultation process is complete and Approved by the Department, FHWA, and SHPO. The Developer shall also be responsible for updating the Section 4(f) evaluation and obtaining Approval for any modifications to the Section 4(f) evaluation. Additionally (and without limiting Developer's obligations pursuant to the Project Agreement to obtain demolition permits as otherwise required from time to time to perform the Work), if the Developer purchases property in the Developer's name, the Developer shall obtain any required demolition permits for historic structures within the City and County of Denver from the Denver Landmark Preservation Commission.

- 12.1.4. The Developer shall protect in place all identified historic resources that are to remain through the Construction Period. Protection measures shall include fencing and additional measures referenced in I-70 East Mitigation Measures Status and/or the Programmatic Agreement. The Developer will maintain standard BMPs to minimize temporary impacts resulting in dust, debris, and auditory degradation.
- 12.1.5. The Programmatic Agreement is included in the Reference Documents and applies to this Project pursuant to Section 7 of this Schedule 17 and Section 8.1.1.d of the Project Agreement. The following paragraphs reference the stipulations in the Programmatic Agreement and allocate obligations under such stipulations as between the Department and the Developer (provided that, for certainty, all obligations under the stipulations not expressly referenced herein as having been retained by the Department have been delegated to the Developer pursuant to Section 7 of this Schedule 17):
- a. Stipulation I, Reduction of Impacts. The Developer shall commit to reduce impacts to historic resources where feasible.
 - b. Stipulation II, Section 106 Consultation Process. If necessary the Department will consult with the SHPO and other consulting parties as required pursuant to Section 8.4.4 of the Project Agreement. The Developer shall provide all support required for Section 106 consultation in compliance with its obligations under Section 12.1.3 of this Schedule 17 and Section 8.4 of the Project Agreement.
 - c. Stipulation III, Mitigation; 1. Archival Documentation. The Department will conduct the required archival documentation for the specific historic resources documented in the Record of Decision. The Developer shall complete the required documentation for any remaining resources, including those identified post-ROD. The Developer shall complete any required archival documentation required due to changes to the APE or changes to the Reference Design.
 - d. Stipulation III, Mitigation; 2. Aesthetic Design. The Department will conduct the necessary coordination with SHPO and the consulting parties during the development of the Aesthetic Design Standards for Central 70 included in Schedule 10B Contract Drawings as required pursuant to Section 8.4.4 of the Project Agreement. The Developer shall design and construct the Project in accordance with the Aesthetic Design Standards, the Contract Drawings and all relevant Reference Documents.
 - e. Stipulation III, Mitigation; 3. Brick-Lined Sewers. The Developer shall be responsible for any mitigation requirements for impacts to brick-lined sewers outside those identified in the FEIS and ROD.
 - f. Stipulation III, Mitigation; 4. Creative Mitigation. The Department has completed this creative mitigation requirement.
 - g. Stipulation III, Mitigation; 5 Creative Mitigation. [].¹

¹ **Note to Proposers:** The Department continues to consult with the SHPO regarding the terms of this stipulation. Details will be provided in a subsequent Addendum.

- h. Stipulation III, Mitigation; 6. Additional Projects. The Department shall consult with SHPO and the Consulting Parties as required pursuant to Section 8.4.4 of the Project Agreement if additional projects are required. The Developer shall provide all support required for Section 106 consultation in compliance with its obligations under Section 12.1.3 of this Schedule 17 and Section 8.4 of the Project Agreement.
- i. Stipulation III, Mitigation; 7. Historic Preservation Standards and Professional Qualifications. All work related to historic resources performed by Developer shall conform to the *Secretary of Interior's Standards and Guidelines for Archaeology and Historic Preservation* (48 FR 190:44716-44742).
- j. Stipulation IV, Coordination with the National Environmental Policy Act. Developer's and the Department's compliance with the Programmatic Agreement will fulfill this requirement.
- k. Stipulation V, Coordination with Section 4(f) of the Department of Transportation Act of 1966 (Section 4(f)). Developer's and the Department's compliance with the Programmatic Agreement will fulfill this requirement.
- l. Stipulation VI, Construction Phase Post-Review Discoveries. If Unexpected Historically Significant Remains are discovered, the Developer shall immediately stop work in the vicinity of the discovery and inform the Department. The Developer shall protect the Unexpected Historically Significant Remains from degradation. The Department will consult with the SHPO and consulting parties as required pursuant to Section 8.4.4 of the Project Agreement.
- m. Stipulation VII, Emergency Situations. The Developer is not responsible for management of this stipulation.
- n. Stipulation VIII, Administrative Provisions. The Developer is not responsible for management of this stipulation.

13. SWANSEA ELEMENTARY SCHOOL

13.1. General Requirements

- 13.1.1. Prior to beginning Construction Work in the Swansea Elementary School area, the Developer shall construct the temporary wall as described in Section 14 (*Landscaping and Aesthetics*) of Schedule 10 (*Design and Construction Requirements*).
- 13.1.2. The Developer shall minimize construction activities and construction impacts around Swansea Elementary School during school hours. The Developer shall include mitigation activities associated with Swansea Elementary School in the CNMMP, the AQ3MP and all other applicable plans. The Developer shall include the Swansea Elementary School Principal and appropriate Denver Public School District personnel in all relevant activities to be conducted by the Developer pursuant to Schedule 14 (*Strategic Communications*) and keep them fully informed of all activities adjacent to the school.
- 13.1.3. Construction staging shall not occur within 500 feet of Swansea Elementary School.

14. PALEONTOLOGY

14.1. General Requirements

- 14.1.1. The Developer shall retain a professional paleontologist, permitted through the Office of the State Archaeologist. During the Construction Period when the Denver and Arapahoe Formations are not exposed, the Developer's paleontologist shall spot check the Site weekly. During the Construction Period when bedrock of the Denver and Arapahoe Formations are exposed, the Developer's paleontologist shall provide continuous paleontological monitoring.

- 14.1.2. The Developer's paleontologist shall communicate with the Department to provide seven Calendar Days' notification to the Department's paleontologist informing them when work in the Denver and Arapahoe Formations is scheduled.
- 14.1.3. The Developer's paleontologist shall provide all reports required by the terms of their permits to the appropriate Governmental Authority and submit copies to the Department. The Developer's Paleontologist shall provide a monthly summary of their activity on the Site to be included in the ESR. The Developer's Paleontologist shall provide Paleontological Annual Reports to the Department for Acceptance detailing work completed and fossils collected and curated to the Department. When all earthwork is completed, the Developer's paleontologist shall provide an end of Project Paleontological Summary Report to the Department for Acceptance.
- 14.1.4. During the Construction Period, the Developer's Paleontologist shall communicate directly with the Department's Paleontologist and allow on going over the shoulder review of all field activities. The Developer shall immediately notify the Department in the event of any discovery.
- 14.1.5. Upon discovery of any paleontological resources, the Developer shall immediately cease Work in the vicinity of the discovery, fence off the area, and allow the Developer's Paleontologist to conduct sampling or excavation of specimens by hand or with mechanized equipment. If the Paleontologist collects any specimens, all materials shall be curated following guidance provided in 8 CCR 1504-7 – Historical, Prehistorical, and Archaeological Rules and Procedures. The Developer shall not resume Construction Work in the area until receiving formal notification from the Developer's Paleontologist allowing Construction Work to resume.

15. PARKS AND RECREATION

15.1. General Requirements

- 15.1.1. The Developer shall reconfigure the Swansea Elementary School site and replace all playground facilities as required by Section 14 (Landscaping and Aesthetics) of Schedule 10 (Design and Construction Requirements).
- 15.1.2. During the Construction Period, segments of the South Platte River Greenway Trail and the Sand Creek Greenway Trail may be subject to temporary detours. Pursuant to Section 2.11.19 (Trail and Pedestrian Impacts) of Schedule 10 (Design and Construction Requirements) the Developer shall provide trail detours that comply with the Americans with Disabilities Act of 1990 ("ADA"). The Developer shall provide trail detour signage that complies with the ADA and Part 6F of the FHWA *Manual on Uniform Traffic Control Devices*.
- 15.1.3. Any reconstructed trail segment shall be rebuilt at minimum to match the existing facility. Any reconstructed trail segment shall be built to the Local Agency's current design and construction standards. Trail surfacing on any rebuilt trail segments will be constructed with new material and have smooth transitions to the undisturbed segments.
- 15.1.4. The outfall and any additional visual Project Elements in Globeville Landing Park shall be as set out in Section 14 (Landscaping and Aesthetics) of Schedule 10 (Design and Construction Requirements). The Department will conduct the required Section 6(f) mitigation off-site. If impacts to the Globeville Landing Park exceed those identified in the FEIS and the ROD, the Developer shall be responsible for all Section 6(f) coordination and mitigation.

16. VEGETATION

The Developer shall minimize tree removal and disturbance to native plant communities, especially wetlands, prairie dog towns, riparian areas, and upland trees and shrubs. All native and non-native trees outside of Senate Bill 40 ("SB 40") jurisdictional areas that are removed that are over four inches diameter at breast height shall be replaced with native trees on a 1:1 basis. All riparian shrubs outside of SB 40 jurisdictional areas that are removed shall be replaced with native shrubs based on areal coverage on a 1:1 basis. The riparian areas are shown in the Reference Documents. New and replacement vegetation shall conform to Section 14 (Landscaping and Aesthetics) of Schedule 10 (Design and Construction Requirements).

Additional requirements to avoid, minimize, and mitigate for impacts to vegetation are found in the FEIS and the ROD.

17. SENATE BILL 40 WILDLIFE CERTIFICATION

17.1. General Requirements

- 17.1.1. The Developer shall evaluate the final design to determine if and how the SB 40 Application Criteria apply as defined by CDOT's *Guidelines for Senate Bill 40 Wildlife Certification*. The Developer shall not perform Construction Work within SB 40 jurisdictional areas until CPW issues a Programmatic or Formal SB 40 Certification.
- 17.1.2. If a Programmatic SB 40 Certification is required, the Developer shall prepare and submit to the Department a SB 40 Certification application package for Approval, with all documentation required by the CPW Regional Wildlife Manager.
- 17.1.3. If the Project requires Formal SB 40 Certification, the Developer shall be responsible for preparing the SB 40 Certification application package on the behalf of the Department. The Department will Approve the application package and submit it to CPW. Approval of the application package by the Department does not constitute approval by CPW.
- 17.1.4. In SB 40 jurisdictional areas, trees removed during construction, whether native or nonnative, shall be replaced with native trees at a 1:1 replacement ratio based on a stem count of all trees with a diameter at breast height of two inches or greater. Shrubs removed during construction, whether native or nonnative shall be replaced with native shrubs on a 1:1 ratio based on their pre-construction areal coverage.
- 17.1.5. Tree and shrub mitigation for SB 40 impacts shall also conform to the requirements set out in Section 14 (*Landscaping and Aesthetics*) of Schedule 10 (*Design and Construction Requirements*).

18. INTEGRATED NOXIOUS WEED MANAGEMENT PLAN

18.1. General Requirements

- 18.1.1. The Developer shall take actions as necessary to control all noxious weeds throughout the Construction Period and the Operating Period. The Developer shall implement proactive procedures to eradicate the occurrences of List A species on the Site. The Developer shall implement proactive procedures to eliminate the occurrences of List B species in areas of the Site where the ground has been disturbed by the Work, and reduce the occurrences of List B species on the remainder of the Site.
- 18.1.2. The Developer shall submit an Integrated Noxious Weed Management Plan ("INWMP") to the Department for Acceptance prior to the issuance of NTP2. The INWMP shall be implemented during the Construction Period and the Operating Period and will include identification of noxious weeds in the area, weed management goals and objectives (specific to levels of disturbance), and preventive and control methods. The INWMP shall convey that List A species are eradicated throughout the Project; management of List B species may vary based on disturbance activities and Colorado Department of Agriculture and local requirements (for example, elimination of List B species in disturbed areas and management for suppression in areas with no ground disturbing activities).
- 18.1.3. The INWMP shall also include a requirement for recurring Noxious Weed Surveys. During the Construction Period the Noxious Weed Survey shall be conducted monthly from March through October. During the Operating Period the Noxious Weed Survey shall be conducted three times per year spread evenly over the growing season. The Developer shall create a monthly Schedule of Planned Noxious Weed Management Activities based on the findings of the latest Noxious Weed Survey that shall be submitted to the Department for Information.
- 18.1.4. The Developer shall submit a Noxious Weed Survey and Summary of Treatment Activities Report to the Department for Acceptance for each month beginning with March and continuing through October during the Construction Period and three times per year during the Operating Period.

The Noxious Weed Survey and Summary of Treatment Activities Report shall include the Noxious Weed Survey that was completed during the reporting period and a summary of the treatment activities that were implemented.

- 18.1.5. The INWMP shall address the control methods (chemical, biological, cultural, etc.) that will be put in place to identify control methods for List C species, stop the continued spread of List B species and to eradicate the occurrences of any List A species.
- 18.1.6. The Developer shall assign a qualified representative to be responsible for implementing the INWMP. This representative shall be directly responsible for weed identification, mapping, scheduling herbicide application, noxious weed herbicide selection, and developing criteria for topsoil salvage (for example, topsoil inspection and/or sampling protocols) A resume documenting the representative's qualifications shall be included in the Noxious Weed Survey and Summary of Treatment Activities Report.
- 18.1.7. Noxious weeds observed in and near the construction area at the start of construction will be treated with herbicides or physically removed to prevent seeds blowing into disturbed areas during construction. Noxious weeds identified during construction shall be identified and treated.
- 18.1.8. Additional requirements of the INWMP shall include:
 - a. Initial identification and mapping of the baseline conditions for List A, List B, and List C noxious weed species present on the Site prior to the issuance of NTP2;
 - b. Schedule and procedures for mechanical and chemical practices prior to topsoil salvage and earthwork operations. Potential areas of topsoil salvage shall be assessed for presence and abundance of noxious weeds prior to salvage. Topsoil from infested areas, as defined in the INWMP, shall be treated by spraying, taking the topsoil off-site, or by burying the topsoil during construction;
 - c. Noxious weed management practices in sensitive areas (on-site wetlands and threatened and endangered species habitat);
 - d. Procedures for the inspection and washing of the Developer's vehicles before they are used for construction to ensure they are free of soil and debris capable of transporting noxious weed seeds or roots;
 - e. Areas of temporary disturbance shall be reclaimed in phases throughout the Project and seeded using a permanent native seed mixture. If areas are complete and permanent seeding cannot occur due to the time of year, mulch and mulch tackifier shall be used for temporary erosion control and weed prevention until seeding can occur;
 - f. Only certified weed-free mulch and bales shall be used;
 - g. Weed control will use the principles of integrated pest management to treat target weed species efficiently and effectively by using a combination of two or more management techniques (biological, chemical, mechanical and/or cultural). Weed-control methods shall be selected based on the management goal for the species, the nature of the existing environment and methods recommended by the Colorado Department of Agriculture. The presence of important wildlife habitat or threatened or endangered species habitat shall be considered when choosing control methods;
 - h. The Developer shall identify and delineate areas of noxious weed infestations and include written instructions in the INWMP detailing herbicide or other appropriate weed control measures required for weed infestations identified during the monitoring work;
 - i. Noxious weed management after earthwork operations and stabilizing has been completed shall require chemical and mechanical methods that do not disturb native seeding and mulching areas;

- j. Weed-infested staging areas shall not be allowed. Staging areas shall be mowed and cleared of noxious weeds and sprayed with the appropriate herbicide, or as referenced in the Colorado Department of Agriculture species fact sheets;
- k. If imported topsoil is used for any part of the Project, the topsoil shall be inspected and certified noxious weed free.

19. VISUAL

The Developer shall comply with the aesthetic Element requirements of the Technical Requirements and Section 14 (Landscaping and Aesthetics) of Schedule 10 (Design and Construction Requirements).

20. WATER QUALITY CONTROL AND WATER RESOURCES

20.1. General Requirements

- 20.1.1. The Developer shall retain and utilize a SWMP Administrator as required by the Project Special Provisions revision of Section 208 in this Schedule 17 (hereafter referred to as "Section 208"). The Developer's Process Control ("PC") and the Developer's Independent Quality Control ("IQC") programs shall each retain and utilize Erosion Control Inspector(s) as required by Section 208.
- 20.1.2. Water quality activities shall be conducted in accordance with Section 208.
- 20.1.3. The ECWP shall include an organization chart identifying the key personnel responsible for implementing the Developer's water quality compliance activities. The plan shall specifically identify the individuals and positions who shall serve in the roles referenced in Section 208. The plan shall include a detailed description of the roles that the PC and the IQC programs shall be assigned in the quality control and quality assurance of water quality activities. The plan shall provide details of how the Developer shall respond in the event of recurring nonconformance events.
- 20.1.4. The IQC Program shall include compliance with water quality requirements as part of all inspection and field reviews and shall issue Nonconformance Reports ("NCRs") if required to bring the Project into compliance with the CDPS-SCP, CDOT's MS4 permit, and the Construction Standards for water quality and erosion control.
- 20.1.5. The IQC Program shall audit the SWMP Notebook monthly during the period from the issuance of NTP2 until Final Acceptance. The material to be audited includes CDOT Form 1388 and all items required in Section 208.03(d)1. As part of this audit, all such items required in Section 208.03(d)1 (e.g. the Daily Inspection Forms (CDOT Form 1388), Form 1176 Inspection Reports, documentation of the corrective action for any findings, Form 105, all other correspondence relating to water quality, and any reports of reportable spills submitted to CDPHE) shall be scanned and entered into the DCS in electronic format. A summary of the audit, any audit findings, and the scanned material shall be submitted to the Department monthly.
- 20.1.6. The Developer shall determine the specific Governmental Approvals and Permits required for the Work. The Developer will be responsible for obtaining and will be the designated entity under all of the water quality permits related to construction activities.
- 20.1.7. The Developer shall immediately notify the Department of any suspected illicit or improper connections or discharges into any storm sewer system discovered during construction of the Project.
- 20.1.8. The Developer shall design, construct, and maintain temporary and permanent water quality elements in a manner that prevents or, to the fullest extent practicable, minimizes the creation of mosquito breeding habitat.
- 20.1.9. If during the Construction Period the Developer's dewatering practices result in a Consumptive Use of the water, the Developer shall obtain all applicable Permits and Governmental Approvals for such Consumptive Use. If required, the Developer shall also obtain a Substitute Water Supply Plan from the Colorado Division of Water Resources for all temporary dewatering

activities. The Developer shall document compliance with the foregoing requirements and submit such documentation with the ESR.

- 20.1.10. If any dewatering activities are required during the Operating Period, the Developer shall design, operate, and maintain the dewatering system so that no Consumptive Use of the water occurs. The Developer shall document compliance with the foregoing requirement and submit such documentation information with the ESR.

21. WETLANDS/WATERS OF THE U.S. AND SECTION 404 PERMIT

21.1.1. General Requirements

- 21.1.2. Impacts to jurisdictional wetlands shall not exceed those impacts described in the FEIS and the ROD and are shown in the Existing Wetland Delineation provided in the Reference Documents. The Developer shall further minimize impacts to wetlands as the design is finalized to the fullest practicable extent.

- 21.1.3. The Developer shall obtain a Clean Water Act, Section 404 Permit for impacts to wetlands and waters of the U.S. The Developer shall be responsible for mitigating unavoidable impacts to such wetlands and waters. It is anticipated that a Nationwide Permit 14 (Linear Transportation Projects) will apply to this Project because impacts to jurisdictional wetlands based on the Preferred Alternative are less than the 0.5 acre threshold. The actual Permit requirements are subject to the Developer's design and approval by the U.S. Army Corps of Engineers.

- 21.1.4. Concurrent with any mitigation requirements mandated by the Section 404 Permit, the Developer shall mitigate for both jurisdictional and non-jurisdictional permanent wetland impacts at a 1:1 ratio per CDOT policy. Mitigation in a wetland mitigation bank located in the South Platte River watershed is acceptable to the Department. The Developer shall comply with the requirements and special conditions outlined in the Section 404 Permit and 401 Certification.

- 21.1.5. If wetland impacts exceed the thresholds identified in the 2006 *Memorandum of Agreement between FHWA and CDOT Regarding the Programmatic Approval of Wetland Findings*, the Developer shall submit a Wetland Finding Report for Approval prior to impacting wetlands. A CDOT Functional Assessment of Colorado Wetlands ("FACWet") shall be performed if a Wetland Finding is required.

- 21.1.6. The Developer shall protect any wetlands within the Site or adjacent to it that are to remain undisturbed. Protected wetlands shall be fenced and marked with signs (and included on design drawings) to keep Project personnel and equipment out. Water quality BMPs shall be utilized to keep sediment out of any protected wetland. The Developer shall restore any wetlands that are temporarily impacted.

22. WILDLIFE

22.1. Black-tailed Prairie Dogs

- 22.1.1. There are existing Black-tailed prairie dog ("BTPD") colonies within the Site that could be impacted during the Construction Period. The CDOT *Impacted Black-tailed Prairie Dog Policy* applies if BTPD colonies are impacted. CPW also regulates certain activities associated with impacts to BTPD. Local Agencies for the Project may have regulating policies to address BTPD populations, as well. The Developer shall be responsible for complying with applicable Law associated with BTPD. When there are conflicting policies, the most stringent policy shall be followed.

- 22.1.2. Prior to conducting any activities that could potentially impact BTPD, the Developer shall submit a BTPD Management Plan for Department Acceptance. This plan will be submitted to Governmental Authorities for approval, as required by their policies. At a minimum, the plan shall comport with the obligations identified in Section 5.13.5 of the FEIS, CRS 35-7-203, and the CDOT *Impacted Black-Tailed Prairie Dog Policy*.

- 22.1.3. The plan shall outline the anticipated impacts and how the Developer shall comply with CDOT policies, Local Agency requirements and Environmental Requirements. If BTPDs are relocated or

removed during the burrowing owl nesting season (March 15 through October 31), the affected habitat shall be surveyed by a qualified wildlife biologist for the presence of burrowing owls no more than seven Calendar Days prior to initiating relevant construction activities.

22.2. Migratory Bird Treaty Act

The Developer shall comply with the Migratory Bird Treaty Act (“MBTA”) at all times. Protection of migratory birds under the MBTA shall be in accordance with the Project Special Provisions to this Schedule 17.

22.3. Colorado Butterfly Plant (*Gaura neomexicana*)

Suitable habitat for the Federally threatened Colorado butterfly plant occurs along the South Platte River and Sand Creek. The Developer shall have a qualified botanist conduct surveys for this species during the flowering season within and adjacent to the areas of disturbance at the South Platte River and Sand Creek prior to the commencement of construction activities in these areas. If these areas remain undisturbed between the initial survey and subsequent flowering seasons, the areas shall be re-surveyed each flowering season. Impacts to these areas shall not occur until surveys are complete and it is confirmed that the species is not present. If Colorado butterfly plants are found, the Developer shall notify the Department immediately. Prior to impacting the Colorado butterfly plant, the Developer shall obtain all required Environmental Approval(s) as required pursuant to this Agreement.

22.4. Ute Ladies'-tresses Orchid (*Spiranthes diluvialis*)

Suitable habitat for the Federally threatened Ute ladies'-tresses orchid may occur along the South Platte River and Sand Creek. The Developer shall have a qualified botanist conduct surveys for this species during the flowering season within and adjacent to the areas of disturbance at the South Platte River and Sand Creek prior to the commencement of construction activities in these areas. If these areas remain undisturbed between the initial survey and subsequent flowering seasons, the areas shall be re-surveyed each flowering season. Impacts to these areas shall not occur until surveys are complete and it is confirmed that the species is not present. If Ute ladies'-tresses orchid are found, the Developer shall notify the Department immediately. Prior to impacting the Colorado butterfly plant, the Developer shall obtain all required Environmental Approval(s) as required pursuant to this Agreement.

22.5. Burrowing Owl (*Athene cunicularia*)

High-quality habitat for the State-threatened burrowing owl occurs in association with BTPD colonies that are located throughout the Site area. The Developer shall have a qualified biologist perform burrowing owl surveys following CPW protocols no more than seven Calendar Days prior to the commencement of Construction activities. The survey shall occur during the burrowing owl nesting season (March 15 to October 31) prior to the removal of any BTPD within the Site. If nesting pairs are identified, the Developer shall notify the Department immediately and Construction Work shall not occur within 150 feet of an active nest site between March 15 and October 31, or as determined necessary by a Department wildlife biologist. If a nest becomes occupied after the start of construction activities in any part of the Site, a seasonal buffer zone shall be required during the burrowing owl nesting season to prevent violation of the Migratory Bird Treaty Act.

23. RECOGNIZED HAZARDOUS MATERIALS

23.1. General Requirements

23.1.1. “Recognized Hazardous Materials” (RHMs) are any Hazardous Substances (including soil or water contaminated with Hazardous Substances) present on, in or under any part of the Site (including on or in any building or structure, including any bridge), at concentration levels or in quantities that are required to be investigated, removed, treated, stored, transported, managed or remediated:

- a. pursuant to Law, provided that (for certainty) Developer's responsibility shall not extend to RHMs outside the Site except with respect to Developer Releases of Hazardous Substances; or
- b. Developer's obligations under this Agreement.

For certainty, RHMs may be naturally occurring or man-made, exist on the surface or subsurface, in groundwater or surface water, or structures to be demolished or modified as part of the Work, and may be mixed with soil, water, building materials, and/or other waste materials.

- 23.1.2. Except as provided otherwise in this Agreement (including in this Schedule 17), and without prejudice to the Parties' responsibilities under Section 23.6 of this Schedule 17, the Developer shall be responsible for the identification, investigation, removal, treatment, storage, transportation, management, and disposal of RHMs during the Term in compliance with Environmental Law, any applicable Governmental Approvals and Permits, the terms of this Agreement, and the Construction Standards, including Project Special Provisions revision of Section 250 in this Schedule 17 (hereafter referred to as "Section 250"). The Developer shall provide all qualified staff and equipment to respond to RHMs in accordance with and to the extent required by such requirements.
- 23.1.3. For certainty, if Developer's performance of its obligations pursuant to Section 23.1.2 of this Schedule 17 would entitle it to seek compensation pursuant to Section 15 of the Project Agreement as the result of the occurrence of a Compensation Event, Unexpected Hazardous Substance Event or Unexpected Groundwater Contamination Event, the Department may, pursuant to Section 14 of the Project Agreement and Schedule 24 (*Change Procedure*), require an Enterprise Change, to be documented in a Change Order or a Directive Letter, to the effect that the Department (or its designee) shall assume responsibility, in whole or in part, for the identification, management, removal and/or disposal of RHMs in connection with such Compensation Event, Unexpected Hazardous Substance Event or Unexpected Groundwater Contamination Event or any potential such event.

23.2. Background Information

- 23.2.1. The Department has completed environmental surveys within the Right-of-Way that have identified RHMs and potential RHMs. Information regarding RHMs are identified in a variety of documents, including the following:
 - a. The Hazardous Materials section of the FEIS and the Hazardous Materials Technical Report within Attachment H of the FEIS describes the results of an environmental records search for Hazardous Substances that was conducted by the Department;
 - b. The Limited Subsurface and Groundwater Investigation Report that summarizes the limited subsurface and groundwater investigations focused on the Preferred Alternative ground disturbance areas provided in the Reference Documents;
 - c. Sampling for asbestos containing building materials and lead-based paint on bridges, as documented in the Asbestos and Limited Lead-Based Paint Inspection reports provided in the Reference Documents and the removal and disposal of any asbestos or lead-containing paint shall be considered incidental and therefore shall not be included in any Supervening Event Submission;
 - d. Additionally, prior to the Setting Date, the Department obtained, and made available as Reference Documents, certain Phase I Environmental Site Assessments ("ESAs") as described in Section 2.2.6 of Schedule 18 (*Right-of-Way*). Pursuant to Section 2.2.6 of Schedule 18 (*Right-of-Way*), during the Construction Period the Department shall continue to obtain and make available additional Phase I ESAs for the remaining ROW Parcels for which it has agreed to obtain such ESAs pursuant to Schedule 18 (*Right-of-Way*);

- e. City and County of Denver Limited Phase II Environmental Site Assessment for the National Western Center Redevelopment Project; and
- f. EPA Record of Decision for the Vazquez Boulevard/Interstate 70 Superfund Site.

23.2.2. Without limiting its obligations under any other provision of this Agreement or its rights under this Agreement arising as a result of the occurrence of any Developer Change documented in a Change Order or any Supervening Event, the Developer shall read, conduct diligence of and be deemed to have knowledge of, all environmental due diligence materials referenced in Section 23.2.1.d of this Schedule 17 as and when available to it.

23.3. Supplemental RHM Diligence

If the Developer deems it prudent for planning, scheduling, regulatory or other purposes, the Developer may conduct investigations to identify and evaluate RHMs. Subject to the express terms of this Agreement, such additional investigations shall be at the sole cost and responsibility of the Developer.

23.4. Groundwater

23.4.1. The substances identified in the column headed "Chemical Name" in Appendix C to this Schedule 17 include substances documented in the Reference Documents as existing in the groundwater prior to the Setting Date. For certainty, Appendix C, including the concentration levels of such substances included in the "Value" Column of Appendix C:

- a. has been provided only for purposes of the definition of Unexpected Groundwater Contamination Conditions in Part A of Annex A (*Definitions and Abbreviations*), Section 8.4.4.f of Schedule 10 (*Design and Construction Requirements*) and Section 23.4.4.a.ii.A of this Schedule 17; and
- b. shall otherwise be treated as Project Information, including for purposes of Section 3.1 of the Project Agreement and Schedule 2 (*Representations and Warranties*).

23.4.2. Pursuant to Section 23.1.2 of this Schedule 17, the Developer is responsible for the identification, investigation, removal, treatment, storage, transportation, management and disposal of all RHMs in the groundwater during the Term (whether or not any such RHM involves a substance identified in Appendix C).

23.4.3. Developer shall maintain records of all costs and expenses incurred in connection with its and its Subcontractors' performance of the obligations described in Section 23.4.2, including records of all costs and expenses of the types specified in Paragraphs a., b. and c. of the definition of Excess Groundwater Costs in Part A of Annex A (*Definitions and Abbreviations*) of the Project Agreement (whether or not such costs and expenses are incurred in connection with any Unexpected Groundwater Contamination Condition).

23.4.4. In order for Developer to establish the existence of any Unexpected Groundwater Contamination Condition, the following conditions must be satisfied:

- a. Developer shall have provided notice to the Department of any such suspected Unexpected Groundwater Contamination Condition. Any delay in delivery of such notice shall be taken into account pursuant to Section 23.4.5 of this Schedule 17 for purposes of determining the duration of any Unexpected Groundwater Contamination Condition. In order to be valid, such notice shall include:
 - i. effluent sampling results from a groundwater discharge point that indicate one or more RHMs exceed the discharge limits applicable to such discharge point under the applicable dewatering permit (referred to in this Section 23.4.4 as the "Exceedance Chemicals");
 - ii. sample results that indicate, at the time of such exceedance, the Exceedance Chemicals at the pre-treatment effluent sample location (defined as the point in

the treatment process after which solids have been removed or at the initial dewatering point if total suspended solids (“TSS”) at such initial point are less than 30 milligrams per liter (“mg/L”) for such discharge point also:

- A. exceeded the applicable value set out in Appendix C to this Schedule 17 with respect to any RHM listed in such Appendix; or
 - B. indicated the presence of an RHM that is not listed in Appendix C to this Schedule 17; and
- iii. sample results that indicate TSS at the pre-treatment effluent sample location for such discharge point (collected at the same time as the pre-treatment sample) were less than 30 mg/L.
- b. After the Department’s receipt of any valid Developer notice that complies with Section 23.4.4.a of this Schedule 17, the Department shall have collected contamination confirmation samples from the same location as the pre-treatment effluent sample reported in such notice as follows. The Department shall collect:
- i. an initial sample within 24-hours of receipt of Developer’s notice; and
 - ii. follow-up samples every seven Calendar Days thereafter (or, at Department’s discretion, more frequently) until the condition is determined to not exist or to have ended pursuant to Section 23.4.5 of this Schedule 17.

In order to confirm the existence or continuation, as applicable, of either the condition set out in Section 23.4.4.a.ii.A or the condition set out in Section 23.4.4.a.ii.B, any sample collected by the Department pursuant to this Section 23.4.4.b must meet the standards for a valid sample set out in Sections 23.4.4.a.i (but only with respect to establishing the initial existence of a condition), 23.4.4.a.ii and 23.4.4.a.iii of this Schedule 17.

During the Department’s sampling process, the Department shall in all cases provide Developer an opportunity to collect split samples upon prior reasonable prior written request.

23.4.5. If the conditions in either Section 23.4.4.a.ii.A or Section 23.4.4.a.ii.B of this Schedule 17 have been satisfied as confirmed by at least an initial Department sample collected pursuant to Section 23.4.4.b.i of this Schedule 17, such Unexpected Groundwater Contamination Condition shall be considered to exist and be continuing from the date of the Developer’s initial notice pursuant to Section 23.4.4.a of this Schedule 17 to, and ending on, the earlier of:

- a. the date of the second consecutive sample collected pursuant to Section 23.4.4.b.ii of this Schedule 17 that fails to demonstrate the satisfaction of either the condition set out in Section 23.4.4.a.ii.A or the condition set out in Section 23.4.4.a.ii.B (other than due to a failure to meet the standard for a valid sample set out in Section 23.4.4.a.iii of this Schedule 17); and
- b. the date of the first sample collected pursuant to Section 23.4.4.b.ii of this Schedule 17 that fails to meet the standard for a valid sample set out in Section 23.4.4.a.iii of this Schedule 17.

23.4.6. The Developer shall reimburse the Department for all costs and expenses incurred by the Department in performing sample collection and analysis pursuant to Section 23.4.4.b of this Schedule 17, provided that the Department may, in its discretion, delegate the performance of all or any such activities to the Developer.

23.5. Coordination of with Governmental Authorities

23.5.1. State and Federally regulated facilities (e.g., sites listed on the National Priorities List, or otherwise under EPA order or agreement, leaking underground storage tanks, and other facilities under State or Federal regulatory jurisdiction) are located within the Project. The Developer is responsible for any notification and coordination with appropriate Governmental Authorities,

including CDPHE, EPA, CCD Department of Environmental Health, Division of Oil and Public Safety, Colorado Division of Water Resources, and Tri-County Health Department and for obtaining any Governmental Approvals and Permits required for the management and/or disposal of RHMs within or associated with such facilities.

23.5.2. The Department shall be invited to all meetings and copied in all communications to Government Authorities regarding the management or disposal of RHMs associated with the Project.

23.6. Generator Status and Hazardous Substance Liability and Cost Recovery

23.6.1. As between the Department and the Developer:

- a. the Developer shall be deemed the sole generator under 40 CFR Part 262 and arranger under CERCLA Section 107(a) with respect to any Developer Release of Hazardous Substances;² and
- b. the Department shall be deemed the sole generator under 40 CFR Part 262 and arranger under CERCLA Section 107(a) with respect to any Hazardous Substances for which the Developer is not identified as the generator and arranger pursuant to Section 23.6.1.a of this Schedule 17; provided that, to the extent that the Developer fails to utilize disposal sites or transporters of such Hazardous Substances in accordance with the Approved MMP, or to otherwise follow the requirements of the MMP pursuant to Section 23.8.2 of this Schedule 17 necessary to preserve the Department's generator and arranger status, the Developer shall be deemed to be the generator and arranger of such Hazardous Materials, notwithstanding this Section 23.6.1.b.

23.6.2. Notwithstanding Section 23.6.1 of this Schedule 17, and subject always to the Developer's rights arising as a result of the occurrence of a Supervening Event and to the Enterprises' responsibilities under Section 23.6.1.b of this Schedule 17, the Developer shall remain responsible for:

- a. RHM manifests (including generator signature only to the extent of the Developer's responsibilities under Section 23.6.1.a of this Schedule 17), transport, recordkeeping, handling and remediation pursuant to this Agreement, including Section 23.1.2 of this Schedule 17 as provided in the Approved MMP; and
- b. complying with all provisions set out in each of the Approved or Accepted MMP, SAP, HASP, CDOT's *Procedures for Hazardous Materials Spills That Occur on State and Federal Highways Within Colorado as a Result of a Highway Transportation Incident* for traffic incidents and the SPCC Plan, including in each case by maintaining documentation of all pertinent certifications required thereunder for all Subcontractors (which certifications shall be made available to the Department upon request).

23.6.3. To the extent the Department:

- a. assumes responsibility, in whole or in part, for the identification, management, removal and/or disposal of RHMs pursuant to Section 23.1.3 of this Schedule 17; or
- b. is otherwise liable for costs associated with RHMs in connection with a Supervening Event in accordance with Section 15 of the Project Agreement,

the Department may take such actions necessary to preserve its claims against other potentially responsible parties for any such costs, including actions necessary to assure that any such costs are incurred by the Department consistent with the National Contingency Plan, 40 C.F.R. Part 300, provided such actions do not adversely affect the Project Schedule or increase Developer's costs or liability (except to the extent such adverse effects, costs or liability are taken into account in connection with the resolution of such Supervening Event).

² **Note to Proposers:** See revisions to the definition of Developer Release of Hazardous Substances in this Addendum No. 5.

23.7. Traffic Incident and Construction-related Spills

The Developer shall comply with:

- a. the CDOT *Procedures for Hazardous Materials Spills that Occur on State and Federal Highways Within Colorado as a Result of a Highway Transportation Incident* with respect to traffic incident spills; and
- b. the SPCC Plan with respect to construction-related spills.

23.8. Materials Management Plan

23.8.1. The Developer shall prepare and implement a Materials Management Plan (“MMP”) for applicable handling, storage and suitable disposal of RHMs during the Term. The MMP shall be written to assure compliance with all Environment Requirements and shall comply with the Preliminary Draft Beneficial Reuse and Materials Management Plan provided in the Reference Documents. Any changes relative to the Preliminary Draft Beneficial Reuse and Materials Management Plan shall be submitted to the Department for Approval in advance and shall also require subsequent approval by CDPHE. All RHMs shall be tracked from identification to final disposition. Subject to Section 23.1.3 of this Schedule 17, the Developer shall identify, manage, remove and dispose of RHMs in accordance Section 23.1.2 of this Schedule 17.

23.8.2. The MMP shall identify potential RHMs, their locations, the extent of impact, proposed corrective actions, waste management procedures, avoidance measures, investigation measures, and a contingency plan for addressing unforeseen conditions. In addition, the MMP shall define the method for abating RHMs (e.g., lead-based paint, lead-containing paint, asbestos and universal wastes) in structures. The plan shall outline the approach to implementing the MMP and identify required personnel as detailed in item(s) below. In addition to meeting the requirements of Section 250, the MMP shall demonstrate that the Developer shall manage all RHMs, including soils, groundwater, surface water, and other contaminated substances, in a manner to prevent exposure to proposed Project personnel, the public, the Environment and Improvements, to prevent any contamination of non-contaminated areas, and in compliance with the Environmental Requirements. The Department shall:

- a. be responsible for designating storage facilities and disposal sites for RHMs that are to be removed from the Site (except in respect of RHMs that are the subject of a Developer Release of Hazardous Substances, in relation to which the Developer shall be so responsible);
- b. provide a list of sites Developer may use for disposal or treatment of, and of transporters the Developer may use for transport for disposal or treatment of, such RHMs, which list shall be incorporated into the MMP; and
- c. provide for execution by Department representatives of, or provide appropriate authorization to Developer to act as the Department’s agent with respect to execution of, manifests and other documentation as necessary to maintain the Department’s status as sole generator and arranger with respect to such RHMs pursuant to Section 23.6.1 of this Schedule 17.

Once storage facilities and disposal sites are located and selected (whether by the Enterprises or, with respect to Developer Releases of Hazardous Substances, by the Developer), the Developer shall ensure that all requirements of the transporter and the receiving disposal facility and all Environmental Requirements are complied with and are properly documented.

23.8.3. In the MMP, the Developer shall provide provisions to characterize and classify waste into categories as appropriate for the Project, including:

- a. Solid waste (hazardous and non-hazardous) as defined under the RCRA requiring off-site disposal and/or treatment;

- b. Contaminated soils requiring off-site disposal;
 - c. Soils to be stockpiled for further characterization;
 - d. Soils with concentrations of waste constituents below regulatory concern that can be reused without restriction;
 - e. Soils that can be reused for CCD projects in accordance with Section 4D of the Denver IGA and the CCOD Guidance for Third Party Reuse of Excess Soil From City Projects (April 29, 2015) that meet the US EPA Regional Screening Limits (“RSLs”) for the applicable receiving site (i.e. residential, commercial);
 - f. Wastewater requiring off-site disposal and/or treatment;
 - g. Impacted water to be held for further characterization;
 - h. ACM discovered during construction or demolition;
 - i. Lead-based paint associated with structures, signage, light posts, etc;
 - j. Waste material to be contained for further characterization;
 - k. Contaminated groundwater requiring on-site treatment or off-site disposal;
 - l. Circumstances in which a separate comprehensive plan for the long-term cleanup and monitoring of RHMs may be required in accordance with Section 23.9.1 of this Schedule 17; and
 - m. Identification of the location and method selected for any treatment or disposal of RHMs pursuant to this Schedule 17.
- 23.8.4. The MMP shall include a standard template to be used for the Monthly Statement of Recognized Hazardous Materials Management (see Section 23.15 of this Schedule 17) and the Recognized Hazardous Materials Management Completion Report (see Section 23.16 Schedule 17). These reports shall include a narrative description of all RHM-related activities conducted by the Developer (excluding those items for which the Department has retained responsibility under Section 23.1.3 of this Schedule 17) and tracking of all such RHMs including their point of origination, remediation activities, location of disposal (on or off-site) and completed waste profiles, manifest forms, and bill-of-lading forms for proper transportation and disposal of materials off-site. The work to complete the Monthly Statement of Recognized Hazardous Materials Management and the Recognized Hazardous Materials Management Completion Report shall be considered incidental and therefore shall not be included in any Supervening Event Submission. This information shall be available at all times for review by the Department. Without limiting the foregoing, the following information shall be included for all RHMs (e.g., soil, groundwater):
- a. GPS or survey information identifying the point of origination of the RHM and all sampling locations;
 - b. Field screening/monitoring results;
 - c. Laboratory analytical results;
 - d. Disposition including temporary stockpiling, use on-site, use off-site, disposal, etc.;
 - e. Management practices;
 - f. Transportation methods;
 - g. Disposal information, including manifests (hazardous and non-hazardous);

- h. Permits or Governmental Approvals;
- i. Required submittals to Governmental Authorities, Railroads and Utility Owners for Permits and Government Approvals;
- j. Import material source and sampling documentation;
- k. In the Monthly Statement of Recognized Hazardous Materials Management, the identification of any separate comprehensive plans for the long-term cleanup and monitoring of RHMs submitted for Acceptance in accordance with Section 23.9.1 of this Schedule 17 during the preceding month or under which response actions are being conducted during such month, and
- l. In the Recognized Hazardous Materials Management Completion Report, identification of all separate comprehensive plans for the long-term cleanup and monitoring of RHMs under which such RHMs were addressed.

23.8.5. The MMP shall be submitted for Approval by the Department prior to issuance of NTP2.

23.8.6. The Developer is responsible for all requirements associated with development and implementation (including administration, monitoring, sampling and reporting) of the MMP.

23.9. Long-Term Clean Up Plans

23.9.1. To the extent that the MMP (as amended and supplemented from time to time) does not address long-term cleanup and/or monitoring of any RHMs for which the Developer is responsible, the Developer shall develop and submit to the Department for Acceptance a comprehensive plan (including a completion schedule) for the long-term cleanup and monitoring of such RHMs through the end of the Operating Period.

23.9.2. Upon Acceptance of such a comprehensive plan, the Developer shall be responsible for completing any and all remediation, monitoring and/or related responsibilities related to the relevant RHMs in compliance with such plan through the end of the Operating Period.

23.10. Sampling and Analysis Plan

23.10.1. The Developer shall prepare a Sampling and Analysis Plan ("SAP") to identify and characterize potential RHMs that may be encountered during the Term, and to outline processes for monitoring/screening of RHM for storage, handling, and disposal during the Term. In addition to complying with Section 250, the SAP shall include, at a minimum:

- a. Data quality objectives;
- b. Sample collection procedures for all RHMs (e.g., soil, water, asbestos, paint, universal wastes), including field screening, borehole drilling, monitoring well construction, soil sampling and/or groundwater sampling methods, and decontamination;
- c. Quality control;
- d. Field equipment calibration procedures/frequency;
- e. Quality assurance objectives (data); and
- f. Provisions for corrective action, if needed.

23.10.2. The SAP shall be submitted for Approval by the Department prior to issuance of NTP2.

23.11. Health and Safety Plan

23.11.1. The Developer shall designate a Health and Safety Officer (HSO) to prepare and implement a Health and Safety Plan ("HASP") in compliance with 29 CFR 1910 and 1926. Since RHMs have been identified within the Right-of-Way, the HASP shall focus on 29 CFR 1910.120 or 29 CFR

1926.65, paragraph (b)(4). The Developer shall in the HASP furnish documentation to the Department that the requirements for the HSO specified in Section 23.21.2 of this Schedule 17 have been met. The HASP shall be submitted to the Department for Acceptance and distributed to all employees. The HASP shall be displayed or made available on-site at all times. The Developer shall develop and maintain on-site all industrial hygiene information, including "right-to-know" information. In addition to meeting the requirements of Section 250, the Developer shall maintain documentation and promptly provide information to the Department, as requested, regarding potential or actual exposure to workers and/or the public. The Developer shall maintain records of all related incidents and notify the Department and appropriate Governmental Authorities immediately. The HASP shall be considered a "living document" and, as such, be amended as construction and operation of the Project progresses during the Term. The HSO who prepares and implements the HASP shall at all times meet the requirements specified in Section 23.21.2 of this Schedule 17.

23.11.2. Due to the presence of solid waste landfills with the potential for asbestos containing building materials, all workers involved in soil disturbing activities within the solid waste landfills or areas with the possibility of encountering asbestos containing building materials, shall complete the 2-Hour Asbestos Awareness Training in accordance with OSHA 29 CFR 1926.1101. The Developer shall be responsible for completing and documenting OSHA training and implementing OSHA requirements for the Work.

23.11.3. The HASP shall be submitted for Acceptance by the Department prior to issuance of NTP2.

23.12. Spill Prevention Control Countermeasure Plan

23.12.1. The Developer shall prepare a SPCC Plan for Acceptance by the Department according to 40 CFR 112, and Section 208.06 (Materials Handling and Spill Prevention) of the CDOT Standard Specifications. The SPCC Plan shall be considered a "living document" and, as such, be amended as construction and operation of the Project progresses during the Term.

23.12.2. The SPCC Plan shall be submitted for Acceptance by the Department prior to issuance of NTP2.

23.13. Structure Surveys

23.13.1. Asbestos containing building materials ("ACBM"s), lead-containing paint ("LCP"), lead-based paint ("LBP"), and universal wastes or regulated materials that could not be disposed at a Subtitle D landfill (e.g., Hazardous Waste as defined by the Resource Conservation and Recovery Act; Universal Wastes as defined by the EPA and Part 273 of the Colorado Hazardous Waste Regulations; chlorofluorocarbons as defined by the Clean Air Act; and polychlorinated biphenyls as defined by the Toxic Substances Control Act) may be present on various components of the Project (e.g., residential and commercial building improvements, bridge girders, railings, light poles, abutments). Prior to performing any demolition or rehabilitation activities on any part of the Site of any structures, bridges, removal of Utility Service Lines or any other features that may contain these materials, the Developer shall submit to the Department for Acceptance a Site-wide Structure Survey Assessment Plan ("SSAP"). The SSAP shall be developed in accordance with Section 250.04 (Heavy Metal Based Paint Management), CDPHE Air Pollution Control Commission's Regulation 8 Part B, OSHA and other requirements of Environmental Law. The SSAP shall define the Developer's approach and methodology for completing the survey to document the presence of ACBMs, LBP, LCP, universal waste and regulated materials. In addition, the SSAP shall define the personnel qualifications including the Certified Asbestos Building Inspector. The Developer shall implement the SSAP prior to conducting any Work that could disturb ACBMs, LBP, LCP, universal waste and regulated materials.

23.13.2. Upon completion of each structure survey, and prior to the initiation of abatement or demolition activities, the Developer shall submit to the Department for Acceptance a Structure Survey Assessment Report ("SSAR") in respect of each survey that was completed (e.g., one report for each parcel or bridge). Each SSAR shall detail the methodology, results and conclusions of the relevant survey, including the abatement requirements, and at a minimum shall contain:

- a. Tables summarizing the quantities, friability and locations of ACBM; materials that do not contain asbestos; OSHA-regulated materials (from trace amounts up to one percent asbestos-containing materials); LBP and LCP quantities and locations and locations and quantities of universal waste or regulated materials;
 - b. Figures depicting the asbestos and paint sampling locations; locations of ACBM and OSHA-regulated materials; locations of LBP and LCP; and locations of universal waste or regulated materials, and;
 - c. Appropriate supporting materials such as photographic logs, scaled drawings, laboratory reports, and personnel and laboratory accreditations.
- 23.13.3. The Developer is responsible for the development of the SSAP, completion of the survey and development of the SSAR. These activities shall be considered incidental and therefore shall not be included in any Supervening Event Submission.
- 23.13.4. Subject to Section 23.1.3 of this Schedule 17 and Section 2 of Schedule 18 (*Right-of-Way*) the Developer shall, in accordance with the Environmental Requirements, properly remove, abate, segregate according to disposal requirements, and dispose of all waste generated as part of demolition of any buildings or other structures in accordance with Environmental Law. All abatement of ACBM shall be completed by a Certified General Abatement Contactor.
- 23.13.5. The Developer shall avoid sanding, cutting, burning, or otherwise causing the release of lead from paint on selected painted components. OSHA Regulation 1926.62 (29 CFR 1926.62) shall be consulted for worker protection prior to removal of painted components.
- 23.13.6. If painted metal components are to be removed and recycled, they must be recycled in accordance with CDOT Standard Specification 250.04. The recycling facility shall be notified of the potential presence of LCP/LBP.
- 23.13.7. The Developer shall comply with all requirements for containing flaked-off paint material and other residue and waste materials that may be generated during removal and transportation of painted structures, including wastewater from power washing operations. At no time will wastewater from power washing operations be allowed to discharge to the surface or any water body. Any encapsulate used to treat the lead-based paint shall render the coated paint non-leachable by not exceeding the threshold of 5 milligrams per liter as confirmed by the Toxicity Characteristic Leaching Procedure ("TCLP") for lead.
- 23.13.8. The Developer shall be responsible for the removal and disposal of OSHA-regulated materials as identified in 29 CFR 1926.1101. These activities shall be considered incidental and therefore shall not be included in any Supervening Event Submission.
- 23.13.9. Within 30 Calendar Days of completion of abatement activities the Developer shall submit to the Department for Acceptance a Structure Survey Completion Report (SSCR) for each parcel or structure (e.g., one report for each parcel or bridge). The SSCR shall include documentation detailing what abatement was completed including material types and quantities, clearance tests, disposal manifests for all material that was disposed at a permitted facility and any other relevant documentation.

23.14. Asbestos in Soils

A number of solid waste landfills, which have the potential to contain asbestos containing building materials, were identified at the Right-of-Way in the EIS. When any discarded material is encountered that contains or consists of any of the following: construction, renovation and demolition debris (regardless of how it was generated), building or facility components, components of building systems (HVAC, plumbing, electrical, control, fire protection, roofing), components of pavement or drainage systems, industrial or machinery components, and/or mechanical components from motorized vehicles, or where asbestos-contaminated soil is discovered, the Developer shall conduct inspections and/or abatement in accordance with CDPHE Section 5.5 of the Solid Waste Regulations, CDOT Regulated Asbestos Contaminated

Soil Management Standard Operating Procedure³ (provided in the Reference Documents), Section 250, and relevant OSHA, and other requirements of Environmental Law.

23.15. Monthly Statement of Recognized Hazardous Materials Management

The Developer shall submit Monthly Statements of Recognized Hazardous Materials Management to the Department for Acceptance summarizing all Developer activities associated with the management, removal and disposal of RHMs during the Construction Period, including applicable documentation from the Health and Safety Officer's daily diary as required in Section 250. During the Operating Period, the Monthly Statement of Recognized Hazardous Materials Management shall be submitted monthly, but only if RHMs were handled during that month.

23.16. Recognized Hazardous Materials Management Completion Report

Within 60 Calendar Days following Substantial Completion, the Developer shall submit a Recognized Hazardous Materials Management Completion Report for Acceptance documenting how the MMP and any plans prepared pursuant to Section 23.9 of this Schedule 17 were implemented and detailing how RHMs were identified, handled and disposed by the Developer.

23.17. Unexpected Hazardous Substances

23.17.1. In the event that an Unexpected Hazardous Substance is encountered or discovered, the Developer shall submit a Remedial Plan as part of any Detailed Supervening Event Submission. The Remedial Plan shall describe the Developer's approach including a sampling plan; means and methods of management, and the disposal facility; the required personnel for remediating the Unexpected Hazardous Substance; the estimated cost of implementing the Remedial Plan; and the required coordination with Governmental Authorities and associated Governmental Approvals and Permits. The Remedial Plan shall be subject to Department Acceptance and may, upon such Acceptance, be used to satisfy the Developer's applicable obligations under Section 23.9 of this Schedule 17. For certainty, the Department's Acceptance of a Remedial Plan shall not in any way bind or commit the Department with respect to the subject matter of the Detailed Supervening Event Submission.

23.17.2. Any Supervening Event Submission made with respect to any Unexpected Hazardous Substance Event shall be made pursuant to Section 15.1.2 of the Project Agreement and shall be subject to Developer, on and prior to the date of such submission, having complied with the Remedial Plan Accepted by the Department pursuant to Section 23.17.1 of this Schedule 17.

23.17.3. Notwithstanding the foregoing, for certainty, the Developer shall at all times be responsible for the field monitoring, sampling, tracking, and reporting of RHMs. These activities to the extent necessarily carried out prior to any reporting of encountering or discovery of any Unexpected Hazardous Substances pursuant to Section 23.21.1.d of this Schedule 17 shall be considered incidental and therefore shall not be included in any Remedial Plan or Supervening Event Submission.

23.18. Residential Properties Sampling Plan

To document that adjacent residential properties are not re-contaminated with heavy metals due to construction activities, the Developer shall prepare and implement a Residential Properties Sampling Plan that outlines the procedures for pre, during and post-construction lead and arsenic sampling at four residential properties. The Developer shall determine the properties in coordination with the USEPA, obtain permission to complete the sampling from the property owner, and shall submit the plan to the Department for Acceptance and USEPA and the CCOD for approval prior to issuance of NTP2.

23.19. Import Materials

23.19.1. For each source of imported fill material, the Developer shall obtain the Department's Acceptance prior to bringing the material on site and the identification of, and activities to

³ **Note to Proposers:** Revision to the CDOT Asbestos-Contaminated Soil Management Standard Operating procedure to be provided upon CDPHE approval.

remove, import materials containing any of the following constituents shall be considered incidental and therefore shall not be included in any Supervening Event Submission. The Developer is responsible for the sampling and testing of import materials and shall test the material at a minimum frequency of one sample for every 2,000 cubic yards from each source area for the following constituents:

- a. Volatile organic compounds (EPA Method 8260b);
- b. Semi-volatile organic compounds (EPA Method 8270);
- c. Total petroleum hydrocarbons (EPA Method 8015);
- d. RCRA 8 metals (EPA Method 6010 and 7471);
- e. Pesticides (EPA Method 8081);
- f. Polychlorinated biphenyls (EPA Method 8082); and,
- g. Asbestos (PLM).

23.20. Other Requirements

- 23.20.1. The Developer is responsible for any reporting or notification with respect to RHMs required by Governmental Authorities, including, CDPHE, EPA, CCD Department of Environmental Health, Division of Oil and Public Safety, and Tri-County Health Department.
- 23.20.2. The Developer is responsible for contacting the Colorado Division of Water Resources, CDPHE or the Division of Oil and Public Safety if groundwater monitoring or supply wells will be disturbed by the Construction Work in order to determine the status and any requirements for well protection, replacement or abandonment. Non-operational monitoring and supply wells shall be abandoned in accordance with Colorado Division of Water Resources well-abandonment requirements. The discovery of and abandonment or replacement (at the existing or new location) of a well is considered incidental and therefore shall not be included in any Supervening Event Submission.
- 23.20.3. The Developer shall conduct a preliminary survey of any private property or buildings that may be affected by dewatering to establish existing conditions and then shall monitor roadways for any settlement caused by dewatering. The Developer shall repair any damage to roadways, private property, or buildings caused by dewatering operations.
- 23.20.4. Except as provided otherwise in this Agreement (including in this [Schedule 17](#)), the Developer shall be responsible for all removal or management of RHMs encountered or discovered, and any backfill screening and placement required, in connection with Utility Work conducted pursuant to any URA or with another part of the Work conducted in connection with any other access or use agreement with a Utility Owner.

23.21. Required Personnel

- 23.21.1. The Developer shall designate a RHM Manager from the Agreement Date to the end of the Construction Period who has at least 10 years of experience managing RHMs and shall report to the EM. The RHM Manager is responsible for:
 - a. Implementing the MMP;
 - b. Ensuring the Developer follows all Environmental Requirements applicable to RHM;
 - c. Leading bi-weekly (every two weeks) meetings with the Department to review the status of RHMs; and,
 - d. Notifying the Department in writing within 8 hours of any encountering or discovery of Hazardous Substances (including Releases thereof) affecting the Site or the Work.

23.21.2. The Developer shall designate a Health and Safety Officer (“HSO”) in accordance with the requirements below and shall staff such position from the Agreement Date to the end of the Term. The HSO who prepares and implements the HASP shall possess the following minimum qualifications:

- a. Be a Certified Industrial Hygienist;
- b. Completed OSHA training in accordance with 29 CFR 1910.120(e) including 40-hour (1910.120(e)(3)(i)) and management and supervisor training (1910.120(e)(4));
- c. Completed the minimum training and medical surveillance requirements established by the Occupational Safety and Health Administration (OSHA) and the Environmental Protection Agency (EPA) for a supervisory Site Safety Official per 29 CFR 1962.65;
- d. Completed training and certification in accordance with the Air Quality Control Commission Regulation No. 8 Part B (State and EPA-Certified Asbestos Building Inspector (“CABI”));
- e. Have a thorough knowledge of all applicable OSHA, EPA, State, and local regulations as they pertain to the protection of the environment and the safety and health of the workers and public; and
- f. Have at least 10-years of experience working on and developing health and safety programs for projects that require the handling, treatment, storage and disposal of RHMs.

23.21.3. In addition, in accordance with Section 250.03(b), the Developer shall designate a Monitoring Technician(s) (“MT”) who has completed the 40 hour HAZWOPER and eight hour OSHA Supervisory training. The MT shall be responsible for the identification and monitoring of Hazardous Substances during the Term. The MT shall also be a State and EPA- CABI and shall meet the requirements outlined in the Preliminary Draft Beneficial Use and Materials Management Plan. The MT is required to be on-site during all activities that have the potential to encounter RHMs. In locations where RHMs are not anticipated to be encountered, the MT shall be on-call and available to respond to unexpected conditions. The designated MT can delegate activities to other MTs, who meet the qualifications of the MT.

23.21.4. The Developer shall certify that the procedures, health and safety precautions, and methods described in the MMP, SAP and HASP are in accordance with the OSHA, CDPHE, OPS and EPA standards and all other Environmental Requirements.

24. ENERGY

The Developer shall implement the energy mitigation measures referenced in the ROD to the fullest extent practicable. The Developer shall submit an update quarterly as part of the ECWP update which documents the Developer’s procedures and programs to save energy.

25. DELIVERABLES

At a minimum, the Developer shall submit the following Deliverables to the Department for Information, Acceptance, or Approval in accordance with the specified timeframes:

Table 17-5 Deliverables

Deliverable	Information, Acceptance or Approval	Schedule
-------------	-------------------------------------	----------

Deliverable	Information, Acceptance or Approval	Schedule
Environmental Compliance Work Plan (“ <u>ECWP</u> ”)	Approval (or Acceptance, but only with respect to any discipline specific management plan incorporated therein that requires Acceptance and not Approval in accordance with this Table 17-5)	Prior to issuance of NTP2 and annually thereafter in accordance with <u>Section 2.1.3</u> of this <u>Schedule 17</u>
Environmental Status Report (“ <u>ESR</u> ”)	Acceptance	10 Working Days following the end of the reporting period (Monthly during the Construction Periods; quarterly during the Operating Period)
Mitigation Completion Report	Acceptance	Prior to Final Acceptance
Environmental Compliance and Mitigation Training Program	Acceptance	60 Calendar Days following issuance of NTP1
Environmental Compliance and Mitigation Training Program Annual Update and Report	Acceptance	Prior to issuance of NTP2; annually, 30 Calendar Days after the end of the reporting period
Air Quality Monitoring, Maintenance, and Mitigation Plan (“ <u>AQ3MP</u> ”)	Acceptance	Prior to issuance of NTP2, updated annually
Proposed Locations of PM-10 Monitors	Acceptance	Two weeks prior to operating the monitor
Environmental Approvals (all)	Information	Per the requirements of Environmental Law and this Agreement
Migratory Bird Nest Survey	Information	Prior to impacting existing structures or vegetation that may contain active bird nests and prior to specific activities (e.g., clearing), consistent with CDOT and CPW guidance and policy
Preliminary Technical Noise Report	Acceptance	Prior to conducting Benefited Receptor Preference Survey
Benefited Receptor Preference Survey supporting material	Approval	14 Calendar Days prior to conducting Benefited Receptor Preference Survey
Final Noise Technical Report	Acceptance	Prior to issuance of RFC Documents and at the time of any update required pursuant to <u>Section 11.3.5</u> of this <u>Schedule 17</u>
Construction Noise Mitigation and Monitoring Plan (“ <u>CNMMP</u> ”)	Acceptance	Prior to issuance of NTP2, updated annually

Deliverable	Information, Acceptance or Approval	Schedule
Paleontological Annual Reports	Acceptance	Annually, 60 Calendar Days after the end of the reporting period
Paleontological Summary Report	Acceptance	60 Calendar Days after earthwork is completed
SB 40 Certification Application Package	Approval	Prior to construction work in SB 40 area
Integrated Noxious Weed Management Plan (“ <u>INWMP</u> ”)	Acceptance	Prior to issuance of NTP2, updated annually
Wetland Finding Report (if required)	Approval	Prior to impacting wetlands
BTPD Management Plan	Acceptance	Prior to impacting BTPD
Proposed method for abating all RHMs (e.g. regulated or universal wastes, including, without limitation, asbestos and LCP/LBP) from all structures	Approval	Prior to issuance of NTP2
Materials Management Plan (“ <u>MMP</u> ”), including any changes relative to the Preliminary Draft Beneficial Reuse and Materials Management Plan	Approval	Prior to issuance of NTP2, updated annually
Long-Term Clean Up Plan(s)	Acceptance	As and when required pursuant to <u>Section 23.9</u> of this Schedule 17
Sampling and Analysis Plan (“ <u>SAP</u> ”)	Approval	Prior to issuance of NTP2, updated annually
Residential Soils Sampling Plan	Acceptance	Prior to issuance of NTP2, updated annually
Health and Safety Plan (“ <u>HASP</u> ”)	Acceptance	Prior to issuance of NTP2, updated annually
Spill Prevention Control and Countermeasures Plan (“ <u>SPCC Plan</u> ”)	Acceptance	Prior to issuance of NTP2, updated annually
Structure Survey Assessment Plan (“ <u>SSAP</u> ”) (Project-wide document)	Acceptance	Prior to the demolition of any structure or other relevant components of the Project
Structure Survey Assessment Report (“ <u>SSAR</u> ”) (per parcel or structure)	Acceptance	Prior to the demolition of any structure
Structure Survey Completion Report (“ <u>SSCR</u> ”) (per parcel or structure)	Acceptance	Within 30 Calendar Days after completion of abatement activities.
Import Materials Documentation	Acceptance	Prior to bringing the materials onto the Site

Deliverable	Information, Acceptance or Approval	Schedule
Remedial Plan	Acceptance	As part of <u>Schedule 21 (Form of Supervening Event Submission)</u>
Environmental Approval	Approval	Prior to conducting Work where an Environmental Approval is required, including any Work that has not been approved in the ROD
Monthly Statement of Recognized Hazardous Materials Management	Acceptance	10 Working Days after the end of each month as per <u>Section 23.15</u> of this <u>Schedule 17</u>
Recognized Hazardous Materials Management Completion Report	Acceptance	60 Calendar Days after Substantial Completion
Schedule of Planned Noxious Weed Management Activities	Information	Monthly, five Calendar Days prior to the beginning of each month (March through October)
Noxious Weed Survey and Summary of Treatment Activities Report	Acceptance	Monthly, within 10 Working Days of the end of each month (March through October) during the Construction Period. Three times per year during the Operating Period.
Protected Environmental Resources shown in all Plan Sets	Acceptance	To be included with each plan set submittal
Asbestos, Lead-Based Paint and Regulated Materials Survey Report	Acceptance	15 Working Days prior to demolition
Dewatering or Remediation Plan	Acceptance	Prior to discharge as required by the permit
Summary Report of IQC Water Quality Documentation Audit	Information	Monthly, within 7 Calendar Days of the end of the month.
Diesel Nonroad Construction Equipment (“ <u>DNRCE</u> ”) Report	Information	Quarterly, within 10 Working Days of the end of the reporting period.
BTPD Management Plan	Acceptance	Prior to conducting activities that could potentially impact BTPD, updated annually.
Level II Historic Archival Photographs and Measured Drawings (One submission per resource)	Acceptance	10 Working Days prior to demolition or construction activities on affected parcels.
Level II Historic Documentation for Submittal to SHPO (One submission per resource)	Acceptance	Within 6 months of demolition of the resource.

26. APPENDICES

<u>Appendix A</u>	Project Special Provisions
<u>Appendix B</u>	Known Hazardous Substances Parcels
<u>Appendix C</u>	Groundwater Benchmark Concentrations

**Appendix A
Project Special Provisions**

The following specifications modify and take precedence over the Standard Specifications. The requirements of Schedule 10A (*Applicable Standards and Specifications*) apply to these Project Special Provisions.

PROJECT SPECIAL PROVISIONS

	<u>Pages</u>
Index	
<u>Section 208</u> – Erosion Control	17-40
<u>Section 240</u> – Protection of Migratory Birds	17-63
Biological Work Performed by the Contractor's Biologist	
<u>Section 250</u> – Environmental, Health, and Safety Management	17-66

**REVISION OF SECTION 208
 EROSION CONTROL**

Section 208 is hereby deleted from the Standard Specifications for this project and replaced with the following:

DESCRIPTION

208.01 This work consists of constructing, installing, maintaining, and removing when required, Best Management Practices (BMPs) during the life of the Contract, including the period during which final stabilization is achieved, to prevent or minimize erosion, sedimentation, and pollution of any State waters as defined in subsection 107.25, including wetlands.

The Contractor shall coordinate the construction of temporary BMPs with the construction of permanent BMPs to assure effective and continuous erosion and sediment control throughout the Construction Period.

When a condition of this Project Special Provision 208 or a Noncompliance Notice or Noncompliance Report by the Department or the Contractor requires that an action be immediate or taken immediately, it shall be understood that the Contractor shall at once begin effecting completion of the action and pursue it to completion in a manner acceptable to the Department, and in accordance with the Colorado Discharge Permit System Stormwater Construction Permit (CDPS-SCP) requirements.

MATERIALS

208.02 Erosion control materials are subject to acceptance in accordance with subsection 106.01. The IQC program shall verify that erosion control materials installed on Site have met the required acceptance criteria, including Certificates of Compliance (COC) and are on the Approved Products List (APL). Erosion control materials shall be subject to the following approval process:

Material	Approval Process	Notes:
Erosion Bales (Weed Free)	COC	The Contractor shall provide a transit certificate number or a copy of the transit certificate as supplied from the producer.
Silt Fence	COC	
Silt Berm	APL	
Erosion Log (Type 1 and 2)	COC	
Silt Dikes	COC	
Pre-fabricated Concrete Washout Structures (above ground)	APL	
Pre-fabricated Vehicle Tracking Pad	APL	
Aggregate Bag	COC	
Storm Drain Inlet Protection (Type I, II and III)	APL	

The material for BMPs shall conform to the following:

- (a) *Erosion Bales.* Material for erosion bales shall consist of Certified Weed Free hay or straw. The hay or straw shall be certified under the Colorado Department of Agriculture Weed Free Forage Certification Program and inspected as regulated by the Weed Free Forage Act, Title 35, Article 27.5, CRS. Each certified weed free erosion bale shall be identified by blue and orange twine binding the bales.

-2-
**REVISION OF SECTION 208
 EROSION CONTROL**

The Contractor shall not place certified weed free erosion bales or remove their identifying twine until the IQC has inspected and accepted them.

The Contractor may obtain a current list of Colorado Weed Free Forage Crop Producers who have completed certification by contacting the Colorado Department of Agriculture, Weed Free Forage Program, 305 Interlocken Pkwy, Broomfield, CO 80021, Contact: Weed Free Forage Coordinator at (303) 869-9038. Also available at www.colorado.gov/ag/csd.

Bales shall be approximately 5 cubic feet of material and weigh at least 35 pounds. Stakes shall be wood and shall be 2 inch by 2 inch nominal.

- (b) *Silt Fence*. Silt fence posts shall be wood with a minimum length of 42 inches. Wood posts shall be 1.5 inch by 1.5 inch nominal. Geotextile shall be attached to wood posts with three or more staples per post.

Silt fence geotextile shall conform to the following requirements:

Physical Requirements for Silt Fence Geotextiles

Property	Wire Fence Supported Requirements	Self-Supported Requirements Geotextile Elongation <50%	Test Method
Grab Strength, lbs	90 minimum	124 minimum	ASTM D 4632
Permittivity sec-1	0.05	0.05	ASTM D 4491
Ultraviolet Stability	Minimum 70% Strength Retained	Minimum 70% Strength Retained	ASTM D 4355

Silt Fence (Reinforced). Silt fence posts shall be metal "studded tee" T-post with a minimum length of 66 inches. Metal posts shall be "studded tee" with .095 inch minimum wall thickness. Wire fabric reinforcement for the silt fence geotextile shall be a minimum of 14 gauge, with a maximum mesh spacing of 6 inches. Geotextile shall be attached to welded wire fabric with ties or nylon cable ties 12 inch O.C. at top, mid and bottom wire. Welded wire fabric shall be attached to the post with a minimum three 12 gauge wire ties per post. Vinyl or rubber safety caps shall be installed on all T-post.

- (c) *Temporary Berms*. Temporary berms shall be constructed of compacted soil.
- (d) *Temporary Slope Drains*. Temporary slope drains shall consist of fiber mats, plastic sheets, stone, concrete or asphalt gutters, half round pipe, metal or plastic pipe, wood flume, flexible rubber or other materials suitable to carry accumulated water down the slopes. Outlet protection riprap shall conform to Section 506. Erosion control geotextile shall be a minimum Class 2, conforming to subsection 712.08.
- (e) *Silt Berm*. Silt berm shall consist of an ultraviolet (UV) stabilized high-density polyethylene, shall be triangular in shape, and shall have the following dimensions:

-3-

**REVISION OF SECTION 208
 EROSION CONTROL**

Width	6 – 11 inches
Height	6 – 10 inches
Weight	0.3 – 1.4 lbs./sq. ft.
Percent Open Area	30 – 50%

Securing spikes shall be 10 to 12 inch x 0.375 inch diameter (minimum).

- (f) *Rock Check Dam.* Rock Check dams shall be constructed of stone. Stone shall meet the requirements of Section 506.
- (g) *Sediment Trap.* In constructing an excavated Sediment Trap, excavated soil may be used to construct the dam embankment, provided the soil meets the requirements of subsection 203.03. Outlet protection riprap shall be the size specified in the Contract and shall conform to Section 506. Erosion control geotextile shall be a minimum Class 1, conforming to subsection 712.08.
- (h) *Erosion log.* Shall be one of the following types unless otherwise shown on the plans:
 - (1) Erosion Log (Type 1) shall be curled aspen wood excelsior with a consistent width of fibers evenly distributed throughout the log. The casing shall be seamless, photo-degradable tube netting and shall have minimum dimensions as shown in Table 208-1, based on the diameter of the log called for on the plans. The curled aspen wood excelsior shall be fungus free, resin free, and free of growth or germination inhibiting substances.
 - (2) Erosion Log (Type 2) shall consist of a blend of 30-40 percent weed free compost and 60-70 percent wood chips. The compost/wood blend material shall pass a 50 mm (2 inch) sieve with a minimum of 70 percent retained on the 9.5 mm (3/8 inch) sieve and comply to subsection 212.02 for the remaining compost physical properties. The compost/wood chip blend may be pneumatically shot into a geotextile cylindrical bag or be pre-manufactured. The geotextile bag shall consist of material with openings of 1/8 to 3/8 inches of HDPE or polypropylene mesh (knitted, not extruded), and contain the compost/wood chip material while not limiting water infiltration.

Erosion log (Type 1 and Type 2) shall have minimum dimensions as shown in Table 208-1, based on the diameter of the log.

**Table 208-1
 NOMINAL DIMENSIONS OF EROSION LOGS**

Diameter Type 1 (Inches)	Diameter Type 2 (Inches)	Length (feet)		Weight (minimum) (pounds/foot)	Stake Dimensions (Inches)
		Min.	Max.		
9	8	10	180	1.6	1.5 by 1.5 (nominal) by 18
12	12	10	180	2.5	1.5 by 1.5 (nominal) by 24
20	18	10	100	4.0	2 by 2 (nominal) by 30

Stakes to secure erosion logs shall consist of pinewood or hardwood.

**REVISION OF SECTION 208
 EROSION CONTROL**

- (i) *Silt Dikes.* Silt dikes shall be pre-manufactured triangular shaped urethane foam covered with a woven geotextile fabric. The fabric aprons shall extend a minimum of two feet beyond each side of the triangle.

Each silt dike shall have the following dimensions:

Dimension	Length
Center height	8 to 10 inches
Base 16 to 21 inches	
Section length	3 to 7 feet
Section width including fabric extensions	5.6 feet

Staples shall be 6 gauge and at least 8 inches long.

- (j) *Concrete Washout Structure.* The Contractor shall construct a washout structure that will contain washout from concrete placement and construction equipment cleaning operations. Embankment required for the concrete washout structure may be excavated material, provided that this material meets the requirements of Section 203 for embankment.

A pre-fabricated concrete washout structure can be used in lieu of the above specified concrete washout. It shall consist of a watertight container designed to contain liquid and solid waste from concrete washout. It shall not be placed in an area where a spill would reach a surface water or other drainage structure.

- (k) *Vehicle Tracking Pad.* Aggregate for the vehicle tracking pad shall be crushed natural aggregate with at least two fractured faces that meets the following gradation requirements:

Sieve size	Percent by weight Passing Square Mesh Sieves
75 mm (3 inch)	100
50 mm (2 inch)	0-25
19.0 mm (¾ inch)	0-15

Recycled crushed concrete or asphalt shall not be used for vehicle tracking pads.

Erosion Control Geotextile shall be Class 2 and conform to the requirements of subsection 712.08.

Pre-fabricated vehicle tracking pads can be used and shall have the following properties.

Minimum overall dimensions of the modular systems shall be:

Width of pad along edge of roadway	14 feet
Length of pad	30 feet

Weight (min.) (lbs./sq. ft.)	8
Crush strength (min.) (psi)	400

- (l) *Aggregate Bag.* Aggregate bags shall consist of crushed stone or recycled rubber filled fabric with the following properties:

-5-
**REVISION OF SECTION 208
 EROSION CONTROL**

Diameter (inches)	Weight (minimum) (pounds per foot)
6-8	6
10	10
12	15

Rubber used in bags shall be clean, 95 percent free of metal and particulates.

Crushed stone contained in the aggregate bags shall conform to subsection 703.09, Table 703-7 for Class C.

The aggregate bag shall consist of a woven geotextile fabric with the following properties:

Property	Requirement	Test Method
Grab Tensile Strength	90 lbs. min.	ASTM D 4632
Trapezoid Tear Strength	25 lbs. min.	ASTM D 4533
Mullen Burst	300 psi	ASTM D 3786
Ultraviolet Resistance	70%	ASTM D 4355

- (m) *Storm Drain Inlet Protection.* Storm drain inlet protection shall consist of aggregate filled fabric with the following dimensions:

Storm Drain Inlet Protection Properties	Protection Types		
	¹ Type I	² Type II	³ Type III
Diameter	4 in.	4 in.	N/A
Minimum Section Length	7 ft.	5 ft.	5 ft.
Apron Insert	---	30 in. or sized to grate	30 in. or sized to grate
¹ Type I protection shall be used with Inlet Type R. ² Type II protection shall be used with Combination Inlet. Option A or B ³ Type III protection Inlet Vane Grate only. Option A or B			

The storm drain inlet protection (Type I, II and III) shall consist of a woven geotextile fabric with the following properties:

Property	Test Method	Unit	Requirement
Grab tensile strength	ASTM D 4632	lbs.	minimum 350X280
Mullen Burst Strength	ASTM D 3786	lbs.	600
Trapezoid Tear Strength	ASTM D 4533	lbs.	minimum 110X95
Percent Open Area	COE-22125-86	%	28
Water Flow Rate	ASTM D 4491	gal./min./sq. ft.	250
Ultraviolet Resistance	ASTM D 4355	%	70

-6-

REVISION OF SECTION 208 EROSION CONTROL

Curb roll for storm drain inlet protection (Type I and II) shall have an approximate weight of 7 to 10 pounds per linear foot of device. The device shall be capable of conforming to the shape of the curb. Aggregate contained in the storm drain inlet device shall consist of gravel or crushed stone conforming to Table 703-7 for Class C.

Storm drain inlet protection (Type III) shall have insert containment (option A) or insert without storage capacity (option B).

CONSTRUCTION REQUIREMENTS

208.03 Project Review, Schedule, and Transportation Erosion Control Supervisor. Prior to NTP2 and following approval of SWMP RFC documents, an on-site Environmental Pre-Construction Conference shall be held. The conference shall be led by the Contractors Environmental Manager and SWMP Administrator. In addition the following people shall attend:

- (1) Independent Quality Control Manager (IQCM),
- (2) Independent Quality Program Inspector(s),
- (3) The Superintendent,
- (4) Supervisors or Foremen of subcontractors working on the project,
- (5) The Department's Region Water Pollution Control Manager (RWPCM),
- (6) The Department Project Environmental Representative(s),
- (7) Local Governmental representatives as designated by the Department.
- (8) Local Governmental representatives as designated by the Department.

At this conference, the attendees shall discuss the SWMP, CDPS-SCP, CDOT and local Municipal Separate Storm Sewer (MS4) requirements, sensitive habitats on site, wetlands, other vegetation to be protected, and the enforcement mechanisms for not meeting the requirements of the Project Agreement.

Prior to beginning construction the Contractor shall evaluate the project site for storm water draining into or through the site. When such drainage is identified, BMPs (i.e., Control Measures) shall be used if possible to divert stormwater from running on-site and becoming contaminated with sediment or other pollutants. The diversion may be accomplished with a temporary pipe or other conveyance to prevent water contamination or contact with pollutants. Run-on water that cannot be diverted shall be treated as construction runoff and adequate BMPs shall be employed.

The SWMP Administrator shall evaluate all non-stormwater coming onto the site, such as springs, seeps, and landscape irrigation return flow. If such flow is identified, BMPs shall be used to protect off-site water from becoming contaminated with sediment or other pollutants.

The SWMP Administrator shall review existing inlets and culverts to determine if inlet protection is needed due to water flow patterns. Prior to beginning construction, inlets and culverts needing protection shall be protected and the location of the implemented BMP added to the SWMP site map.

-7-

**REVISION OF SECTION 208
EROSION CONTROL**

Prior to construction, the Contractor shall implement appropriate BMPs for protection of wetlands, sensitive habitat and existing vegetation from ground disturbance and other pollutant sources, in accordance with the approved project schedule as described in subsection 208.03(b).

When additional BMPs are required and approved by the SWMP Administrator, the Contractor shall implement the additional BMPs and the SWMP Administrator shall record and describe them on the SWMP site map.

- (a) *Erosion and Sediment Control Activities.* The erosion and sediment control activities shall be included in the weekly meeting update. The project schedule shall specifically indicate the sequence of clearing and grubbing, earthwork operations, and construction of temporary and permanent erosion control features and stabilization. Project schedule shall include erosion and sediment control work for haul roads, borrow pits, storage and asphalt or concrete batch sites, and all areas within the project limits. If necessary, the SWMP Administrator shall update proposed sequencing of major activities in the SWMP.
- (b) *Erosion Control Management (ECM).* Erosion Control Management for this project shall consist of Erosion Control Inspection and the Administration of the Stormwater Management Plan (SWMP). All ECM staff shall have working knowledge and experience in construction, and shall have successfully completed the Transportation Erosion Control Supervisory Certificate Training (TECS) as provided by the Department. The Superintendent will not be permitted to serve in an ECM role. The Contractor's Erosion Control Inspector and the SWMP Administrator may be the same person in projects involving less than 40 acres of disturbed area.
 1. Stormwater Management Plan (SWMP) Administration. The SWMP shall be maintained by a SWMP Administrator. The SWMP Administrator shall have completed the TECS certification training as provided by the Department. In the case of a project requiring only one TECS, the SWMP Administrator may also be the Erosion Control Inspector for the project. The name of the SWMP Administrator shall be recorded on SWMP Plan Section 3.B. The SWMP Administrator shall have full responsibility to maintain and update the SWMP Plan and identify to the Superintendent critical action items needed to conform to the CDPS-SCP as follows:
 - (1) Complete the SWMP Notebook as described in subsection 208.03 (d).
 - (2) Participate in the Environmental Pre-construction Conference
 - (3) Attend Weekly Water Quality Meetings (WWQM)
 - (4) Attend all Department water quality control inspections. The Contractor and the Contractor's SWMP Administrator will be notified a minimum of five days in advance of each inspection by the Department water quality staff.
 - (5) Coordinate with the Superintendent to implement necessary actions to reduce anticipated or presently existing water quality or erosion problems resulting from construction activities.
 - (6) Coordinate with the Superintendent to ensure that all labor, material, and equipment needed to install, maintain, and remove BMPs are available as needed.

-8-

**REVISION OF SECTION 208
EROSION CONTROL**

- (7) During construction, update and record the following items on the SWMP site map as changes occur:
 - (i) Limits of Construction (LOC)
 - (ii) Areas of Disturbance (AD)
 - (iii) Limits of Disturbance (LDA)
 - (iv) Limits of cut and fill.
 - (v) Areas used for storage of construction materials, equipment, soils, or wastes.
 - (vi) Location of any dedicated asphalt or concrete batch plants.
 - (vii) Location of construction offices and staging areas.
 - (viii) Location of work access routes during construction.
 - (ix) Location of borrow and waste.
 - (x) Location of temporary, interim and permanent stabilization.
 - (xi) Location of outfall(s)
 - (xii) Arrows showing direction of surface flow
 - (xiii) Structural and non-structural BMPs
 - (xiv) LDA and LOC lines as defined in subsection 107.25
- (8) Amend the SWMP whenever there are: additions, deletions, or changes to BMPs. SWMP revisions shall be recorded immediately. Items shall be dated and initialed by the SWMP Administrator. Specifically, amendments shall include the following:
 - (i) A change in design, construction, operation, or maintenance of the site which would require the implementation of new or revised BMPs; or
 - (ii) Changes when the SWMP proves to be ineffective in achieving the general objectives of controlling pollutants in stormwater discharges associated with construction activity.
 - (iii) Changes when BMPs are no longer necessary and are removed.
- (9) Complete vegetative survey transects as required in accordance with CDOT Erosion Control and Stormwater Quality Guide.
- (10) Start a new site map before the current one becomes illegible. All site maps shall remain in the SWMP notebook.

-9-

**REVISION OF SECTION 208
EROSION CONTROL**

- (11) Document all inspection and maintenance activities. The SWMP and documentation shall be kept on the project site.
 - (12) When adding or revising BMPs on the SWMP, add a narrative explaining what, when, where, why, and how the BMP is being used, and add a detail to the SWMP notebook.
 - (i) How to install and inspect the BMP
 - (ii) Where to install the BMP
 - (iii) When to maintain the BMP
 - (13) If using existing topography, vegetation, etc. as a BMP, label it as such on the SWMP site map; add a narrative as to when, where, why, and how the BMP is being used.
 - (14) Indicate BMPS in use or not in use by recording on Standard Plans M-208-1, M-216-1, and M-615-1 in the SWMP notebook.
 - (15) Record on the SWMP, the approved Method Statement for Containing Pollutant Byproducts.
 - (16) Update the potential pollutants list in the SWMP notebook and Spill Response Plan throughout construction.
2. Erosion Control Inspection.

Erosion control inspection shall be performed by TECS certified staff assigned as Erosion Control Inspector (ECI) to the project. One ECI is required for every 40 acres of total disturbed area which is currently receiving temporary and interim stabilization measures as defined in subsection 208.04 (e). An ECI shall not be responsible for more than 40 acres in the project. Accepted permanent stabilization methods as defined in subsection 208.04 (e) will not be included in the 40 acres.

ECI duties shall be as follows:

- (1) Coordinate with the SWMP Administrator on reporting the results of inspections.
- (2) Review the construction site for compliance with the Stormwater Construction Permit.
- (3) Inspect with the Superintendent and the IQC Manager (or their designated representatives) the stormwater management system at least every seven calendar days. Post storm event inspections shall be conducted within 24 hours after the end of any precipitation or snow melt event that may cause surface erosion. If no construction activities will occur following a storm event, post-storm event inspections shall be conducted prior to commencing construction activities, but no later than 72 hours following the storm event. The occurrence of delay in inspections shall be documented in the inspection report. Form 1176 shall be used for all 7 day inspections and inspections following storm events. The Contractor shall notify the Erosion Control Inspector when a storm event occurs. The Contractor shall notify the EM and the

-10-
**REVISION OF SECTION 208
EROSION CONTROL**

Department when post-storm event inspections and 7-day inspections are scheduled. The Department and the EM may attend at their discretion. The Contractor shall communicate findings to the Independent Quality Control (IQC) team and EM. Failure to perform inspections on time will result in non-compliance points in accordance with subsection 208.09.

Inspections are not required at sites when construction activities are temporarily halted, when snow cover exists over the entire site and melting conditions do not pose a risk of surface erosion. This exception shall be applicable only during the period where melting conditions do not exist, and applies to the routine 7 day inspections and the post-storm event inspections. The following information shall be documented on Form 1176 for use of this exclusion: dates when snow cover occurred, date when construction activities ceased, and date melting conditions began.

The order of precedence for required inspections shall be as follows:

- (i) Headquarter water quality inspections
- (ii) Region water quality inspections
- (iii) Post-storm event inspections
- (iv) 7 day inspections

When one of the listed inspections is performed, the inspections listed below it need not be performed on that day if the required personnel participated in the inspection.

For example: A 7 day inspection is not required on the same day a headquarters or Region inspection is conducted. A sheet shall be placed in the inspections area of the SWMP Notebook to refer to the date inspection performed.

- (4) Follow all other agency Stormwater requirements and inspections unless a waiver or other agreement has been made.
- (5) The ECI shall immediately report to the Contractor's Superintendent and the SWMP Administrator the following instances of noncompliance:
 - (i) Noncompliance which may endanger health or the environment.
 - (ii) Spills or discharge of hazardous substance or oil which may cause pollution of waters of the State.
 - (iii) Discharge of stormwater which may cause an exceedance of a water quality standard.
 - (iv) Upset conditions that occur on site.
- (6) Spills, leaks, or overflows that result in the discharge of pollutants shall be documented on the Form 1176 by the ECI. The ECI shall record the time and date, weather conditions, reasons for spill, and how it was remediated.

-11-

**REVISION OF SECTION 208
EROSION CONTROL**

- (d) *Documentation Available on the Project.* The following Contract documents and references will be made available for reference at the project field office during construction:
1. SWMP Notebook. The Contractor will provide a SWMP Notebook at the Preconstruction Conference, which is and shall become and remain the property of the Department. The Contractor shall provide the contents required for the entire notebook, as detailed below. The notebook shall be stored in the Contractor's field office or at another on-site location approved by the Department. The SWMP Administrator shall modify and update the notebook when changes occur in site conditions to reflect current conditions; except when changes to the notebook cannot be reasonably achieved at the time of field condition changes, such as when obtaining specifications from the manufacturer or engineering design for a retention structure. In such cases, the Contractor will make revisions as soon as practicable, but in no case more than 72 hours after the change(s) in control measure installation and/or implementation occur at the site. In such cases, a notation must also be included with the SMWP that includes the date, type and location of the change(s) in the field. The following Contract documents and reports shall be kept, maintained, and updated in the notebook under the appropriate items by the SWMP Administrator:
 - (1) SWMP Plan Sheets - Notes, tabulation, sequence of major activities, area of disturbance, existing soil data, existing vegetation percent cover, potential pollutant sources, receiving water, non-stormwater discharges and environmental impacts.
 - (2) Site Map and Plan Title Sheet - Construction site boundaries, ground surface disturbance, limits of cut and fill, flow arrows, structural BMPs, non-structural BMPs, Springs, Streams, Wetlands and surface water. Also included on the sheets is the protection of trees, shrubs and cultural resources.
 - (3) Specifications - Standard and Project special provisions related to Stormwater and Erosion Control.
 - (4) Standard Plans M-208-1, M-216-1 and M-615-1.
 - (5) BMP Details not in Standard Plan M-208-1 - Non-standard details.
 - (6) Weekly meeting sign in sheet.
 - (7) Calendar of Inspections -Calendar of inspections marking when all inspections take place.
 - (8) Form 1176 – Weekly meeting notes and inspection report.
 - (9) Region and Headquarter Water Quality Reports, Non-conformance Notice (NCNs) Non-conformance Records (NCRs) relating to Water Quality.
 - (10) Description of Inspection and Maintenance Methods - Description of inspection and maintenance methods implemented at the site to maintain all BMPs identified in the SWMP and Items not addressed in the design.
 - (11) Spill Response Plan - Reports of reportable spills submitted to CDPHE

-12-

**REVISION OF SECTION 208
EROSION CONTROL**

- (12) List and Evaluation of Potential Pollutants - List of potential pollutants as described in subsection 107.25 and approved Method Statement for Containing Pollutant Byproducts.
- (13) Other Correspondence e.g., agreements with other MS4s, approved deferral request, CDPHE audit documentation, and other miscellaneous documentation.
- (14) TECS Certifications of the SWMP Administrator and all of the Contractor's ECIs, keep current through the life of the project.
- (15) Environmental Pre-construction Conference – Conference agenda with a certification of understanding of the terms and conditions of the CDPS-SCP and SWMP. The certification shall be signed by all attendees. A certification shall also be signed by all attendees of meetings held for new subcontractors beginning work on the project that could adversely affect water quality after the Environmental Pre-construction Conference has been held.
- (16) All Project Environmental Permits - All project environmental permits and associated applications and certifications, including, CDPS-SCP, Senate Bill 40, USACE 404, temporary stream crossings, dewatering, biological opinions and all other permits applicable to the project, including any separate CDPS-SCP obtained by the Contractor for staging area on private property, asphalt or concrete plant, etc.
- (17) Photographs Documenting Existing Vegetation – Project photographs shall be time stamped on paper with a maximum of four colored images per 8 ½ inch by 11 inch sheet and/or a digital copy of all photographs on CD-ROM/Flash Drive in (JPG format), documenting existing vegetation prior to construction commencing. On the bottom of each photograph shall be a description using Station Number or Mile Post of where the photograph was taken.
- (18) Permanent Water Quality Plan Sheets - Plan sheets and specifications for permanent water quality structures, riprap.

The Contractor will provide and insert permanent water quality plan sheets once released for construction. The Contractor shall also provide and insert all other documents and reports as they become available during construction.

The Contractor shall submit a complete electronic copy of the SWMP notebook to the Department prior to commencement of construction and monthly SWMP notebook electronic updates throughout the duration of construction.

The SWMP Administrator shall finalize the SWMP for delivery to the Department within 30 days of close out of the CDPS-SCP. SWMP completeness shall be approved by the Department, corrections to the SWMP shall be at the Contractor's expense. The following Reference materials shall be used:

- (1) CDOT Erosion Control and Stormwater Quality Guide.
- (2) CDOT Erosion Control and Stormwater Quality Field Guide.
- (3) CDOT Specifications and Standards.

-13-
**REVISION OF SECTION 208
EROSION CONTROL**

(e) *Weekly Meetings.* The Environmental Manager and SWMP Administrator shall conduct a Weekly Water Quality Review ("WWQR") meeting. The Superintendent and IQC water quality staff shall attend and participate. Supervisors involved in construction activities that could adversely affect water quality shall attend. The Department shall be notified in advance of this meeting and may attend at their discretion. The meeting shall follow an agenda prepared by the SWMP Administrator and have a sign in sheet on which the names of all attendees shall be recorded. The Developer shall take minutes of the meeting including notes of water quality comments and action items at each weekly meeting. Meeting minutes shall be provided to the Department. The agenda and sign in sheets shall be placed in the SWMP notebook. The Department and IQC staff may add items to the agenda at their discretion. At this meeting the following shall be discussed and documented on Form 1176:

- (1) Requirements of the SWMP.
- (2) Problems that may have arisen in implementing the site specific SWMP or maintaining BMPs.
- (3) Unresolved issues from inspections and concerns from last inspection
- (4) BMPS that are to be installed, removed, modified, or maintained.
- (5) Planned activities that will effect stormwater in order to proactively phase BMPs.
- (6) Recalcitrant inspection findings

All subcontractors who were not in attendance at the Environment Pre-construction conference shall be briefed on the project by the Engineer, Superintendent, and the SWMP Administrator prior to start of work. The SWMP Administrator shall record the names of these subcontractors as an addendum to the list of attendees, and added the SWMP Notebook.

(f) *Items to Be Completed Prior to SW Permit Close Out.*

- (1) Reclamation of Washout Areas. After concrete operations are complete, washout areas shall be reclaimed in accordance with subsection 208.05(n).
- (2) Upon completion of final stabilization the Department will perform a final site inspection of the project area to confirm final stabilization requirements have been met. The Department will issue approval in writing to the Contractor. The Contractor shall not close-out the CDPS-SCP until receipt of this approval.

208.04 Best Management Practices (BMPs) for Stormwater.

The SWMP Administrator shall modify the SWMP to clearly describe and locate all BMPs implemented at the site to control potential sediment discharges.

Vehicle tracking control shall be used at all vehicle and equipment exit points from the site to prevent sediment exiting the Limits of Construction (LOC) of the project site. Access shall be provided only at locations approved by the IQC. The SWMP Administrator shall record vehicle tracking control pad locations on the SWMP site map.

-14-

**REVISION OF SECTION 208
EROSION CONTROL**

New inlets and culverts shall be protected during their construction. Appropriate protection of each culvert and inlet shall be installed immediately. When riprap is called for at the outlet of a culvert, it shall be installed within 24 hours of completion of each pipe. The Contractor shall remove sediment, millings, debris, and other pollutants from within the newly constructed drainage system in accordance with the CDPS-SCP, prior to use, at the Contractor's expense. All removed sediment shall be disposed of outside the project limits in accordance with all applicable regulations.

Concrete products wasted on the ground during construction shall include, but shall not be limited to: excess concrete removed from forms, spills, slop, and all other unused concrete are potential pollutants that shall be contained or protected by an approved BMP at a pre-approved containment area. The concrete shall be picked up and recycled in accordance with 6 CCR 1007-2 (CDPHE Regulations Pertaining to Solid Waste Sites and Facilities) at regular intervals, as directed. The uses of recycled concrete from approved recycling facilities shall be in accordance with Section 203.

- (a) *Unforeseen Conditions.* The Contractor shall design and implement erosion and sediment BMPs for correcting conditions unforeseen during the design of the project, or for emergency situations, that develop during construction. The Department's "Erosion Control and Stormwater Quality Guide" shall be used as a reference document for the purpose of designing erosion and sediment BMPs. The Contractor may install non-standard measures and methods without prior approval; however, the IQC, EM and/or the Department reserves the right to require the Contractor to modify and/or replace the non-standard measures and methods if found unsuitable or ineffective. All non-standard BMPs shall be documented in Section 5 of the SWMP Notebook.
- (b) *Other Agencies.* If City and County of Denver, City of Aurora, CDPHE, US Army Corps of Engineers (USACE), or the Environmental Protection Agency (EPA) reviews the project site and requires additional measures to prevent and control erosion, sediment, or pollutants, the Contractor shall cease and desist activities resulting in pollutant discharge and immediately implement these measures. If the work may negatively affect another MS4, the Contractor shall cease and desist activities resulting in the discharge and shall implement appropriate measures to protect the neighboring MS4, including installing additional measures.
- (c) *Work Outside the Right of Way.* Disturbed areas, including staging areas, which are outside CDOT ROW and outside easements acquired by CDOT for construction, are the responsibility of the Contractor. These areas may be subject to a separate CDPS-SCP, additional environmental clearance and/or other permits. The Contractor shall acquire these permits and submit copies to the Department prior to any disturbance. These permits, shall be acquired and all erosion and sediment control work performed at the Contractor's expense. These areas are subject to inspections by CDOT or any other agency, as agreed upon in writing.
- (d) *Construction Implementation.* The Contractor shall incorporate BMPs into the project as outlined in the accepted schedule.
- (e) *Stabilization.* Once earthwork has started, the Contractor shall continue erosion BMPs until permanent stabilization of the area has been completed and accepted. Clearing, grubbing and slope stabilization measures shall be performed regularly to ensure final stabilization. Failure to properly maintain erosion control and stabilization methods, either through improper phasing or sequencing will require the Contractor to repair or replace sections of earthwork. The Contractor shall schedule and implement the following stabilization measures during the course of the project:

-15-
**REVISION OF SECTION 208
EROSION CONTROL**

- (1) **Temporary Stabilization.** At the end of each day, the Contractor shall stabilize disturbed areas by surface roughening, vertical tracking, or a combination thereof. Disturbed areas are locations where actions have been taken to alter the existing vegetation and/or underlying soil of a site, such as clearing, grading, road bed preparation, soil compaction, and movement and stockpiling of top soils. Other stabilization measures may be implemented, as approved. The maximum area of temporary stabilization shall not exceed 20 acres.
- (2) **Interim Stabilization.** Stockpiles and disturbed areas as soon as known with reasonable certainty that work will be temporarily halted for 14 days or more shall be stabilized using one or more of the specified following methods:
 - (i) Application of 1.5 tons of mechanically crimped certified weed free hay or straw in combination with an approved organic mulch tackifier.
 - (ii) Placement of bonded fiber matrix in accordance with Section 213.
 - (iii) Placement of mulching (hydraulic) wood cellulose fiber mulch with tackifier, in accordance with Section 213.
 - (iv) Application of spray-on mulch blanket in accordance with Section 213. Magnesium Chloride, Potassium Chloride and Sodium Chloride, or other salt products, will not be permitted as a stabilization method.

Protection of the interim stabilization method is required. Reapplication may be required as approved.

- (3) **Summer and Winter Stabilization.** Summer and winter stabilization is defined as months when seeding will not be permitted. As soon as the Contractor knows shutdown is to occur, interim stabilization shall be applied to the disturbed area. Protection of the interim stabilization method is required. Reapplication of interim stabilization may be required as directed.
 - (4) **Permanent Stabilization.** Permanent stabilization is defined as the covering of disturbed areas with seeding, mulching with tackifier, soil retention coverings, and such non-erodible methods such as riprap, road shouldering, etc., or a combination thereof as required by the Contract. Other permanent stabilization techniques may be proposed by the Contractor, in writing, and shall be used when approved in writing by IQC. Permanent stabilization shall begin within 48 hours after topsoil placement, soil conditioning, or combination thereof starts and shall be pursued to completion.
 - (5) **Final Stabilization.** Final stabilization is defined as when all ground disturbing activities at the site have been completed, and uniform vegetative cover has been established with an individual plant density of at least 70 percent of pre-disturbance levels, or equivalent permanent physical erosion reduction methods have been employed. The Department will perform a final site inspection of the project area to confirm final stabilization has been met. The Department will issue approval in writing to the Contractor. The Contractor shall not close-out the CDPS-SCP until receipt of this approval.
- (f) **Maintenance.** Erosion and sediment control practices and other protective measures identified in the SWMP as BMPs for stormwater pollution prevention shall be maintained in effective operating condition until the CDPS-SCP has been closed-out. BMPs shall be continuously maintained in

-16-
**REVISION OF SECTION 208
EROSION CONTROL**

accordance with good engineering, hydrologic and pollution control practices, including removal of collected sediment when silt depth is 50 percent or more of the height of the erosion control device. When possible, the Contractor shall use equipment with an operator rather than labor alone to remove the sediment.

Maintenance of erosion and sediment control devices shall include replacement of such devices upon the end of their useful service life as recommended by the Contractor. Maintenance of rock check dams and vehicle tracking pads shall be limited to removal and disposal of sediment or addition of aggregate. Damages resulting from failure to maintain BMPs shall be paid at the contractor's expense.

Complete site assessment shall be performed as part of comprehensive inspection and maintenance procedures, to assess the adequacy of BMPs at the site and the necessity of changes to those BMPs to ensure continued effective performance. Where site assessment results in the determination that new or replacement BMPs are necessary, the BMPs shall be installed to ensure continuous effectiveness. When identified, BMPs shall be maintained, added, modified or replaced as soon as possible, immediately in most cases.

New or replaced BMPs will be paid for by the Contractor. Devices damaged due to the Contractor's negligence shall be replaced at Contractor's expense.

From the time seeding and mulching work begins until the date the Contract work is accepted, the Contractor shall maintain all seeded areas. Damage to seeded areas or to mulch materials shall be immediately restored. Damage to seeded areas or to mulch materials due to Contractor negligence shall be immediately restored at the Contractor's expense. Restoration of other damaged areas will be paid for by the Contractor.

Temporary BMPs may be removed upon completion of the project, as determined by the Water Quality Partial Acceptance walk-through. If removed, the area in which these BMPs were constructed shall be returned to a condition similar to that which existed prior to its disturbance. Removed BMPs shall become the property of the Contractor.

If a project delay occurs, the Contractor shall be responsible to continue erosion and sediment control operations beyond the original contract time.

Sediment removed during maintenance of BMPs and material from street sweeping may be used in or on embankment, provided it meets conditions of Section 203 and is distributed evenly across the embankment.

Whenever sediment collects on the paved surface, the surface shall be cleaned. Street washing will not be allowed. Storm drain inlet protection shall be in place prior to shoveling, sweeping, or vacuuming. Sweeping shall be completed with a pickup broom or equipment capable of collecting sediment. Sweeping with a kick broom will not be allowed.

Material from pavement saw cutting operations shall be cleaned from the roadway surface during operations using a vacuum. A BMP, such as a berm, shall be placed to contain slurry from joint flushing operations until the residue can be removed from the soil surface. Aggregate bags, erosion

-17-
**REVISION OF SECTION 208
EROSION CONTROL**

logs or other permeable BMPs shall not be used. Residue shall not flow into driving lanes. It shall be removed and disposed of in accordance with subsection 107.25(b) 13. Material containment and removal will not be paid for separately, but shall be included in the work.

208.05 Construction of BMPs. BMPs shall be constructed in accordance with Standard Plans M-208-1, M-216-1 and with the following.

- (a) *Seeding, Mulching, Sodding, Soil Retention Blanket.* Seeding, mulching, sodding, and soil retention blanket shall be performed in accordance with Sections 212, 213, and 216.
- (b) *Erosion Bales.* The bales shall be anchored securely to the ground with wood stakes.
- (c) *Silt Fence.* Silt fence shall be installed in locations specified in the Contract prior to any grubbing or grading activity.
- (d) *Temporary Berms.* Berms shall be constructed to the dimensions shown in the Contract, and sufficiently compacted to prevent erosion or failure. If the berm erodes or fails, it shall be immediately repaired or replaced at the Contractor's expense.
- (e) *Temporary Diversion.* Diversions shall be constructed to the dimensions shown in the Contract, and graded to drain to a designated outlet. The berm shall be sufficiently compacted to prevent erosion or failure. If the diversion erodes or fails, it shall be immediately repaired or replaced at the Contractor's expense.
- (f) *Temporary Slope Drains.* Temporary slope drains shall be installed prior to installation of permanent facilities or growth of adequate ground cover on the slopes. All temporary slope drains shall be securely anchored to the slope. The inlets and outlets of temporary slope drains shall be protected to prevent erosion.
- (g) *Silt Berm.* Prior to installation of silt berms, the Contractor shall prepare the surface of the areas in which the berms are to be installed such that are they free of materials greater than 2 inches in diameter and are suitably smooth for the installation of the silt berms, as approved. Silt berms shall be secured with spikes. The Contractor shall install the silt berm in a manner that will prevent water from going around or under the silt berm. Silt berms shall be installed on top of soil retention blanket.
- (h) *Rock Check Dam.* Rock shall be installed at locations shown on the plans. Rock check dams shall conform to the dimensions shown on the plans.
- (i) *Riprap Outlet Protection.* Geotextile used shall be protected from cutting or tearing. Overlaps between two pieces of geotextile shall be 1 foot minimum. Riprap size shall be as shown on the plans.
- (j) *Storm Drain Inlet Protection.* Prior to installation, the Contractor shall sweep the surface of the area in which the storm drain inlet protection devices are to be installed such that the pavement is free of sediment and debris. The ends of the inlet protection Type 1 and Type 2 shall extend a minimum of 1 foot past each end of the inlet.

The Contractor shall remove all accumulated sediment and debris from the surface surrounding all storm drain inlet protection devices after each rain event or as directed. The Contractor shall remove accumulated sediment from Type II and III containment area when it is more than a maximum one third full of sediment, or as directed.

-18-
**REVISION OF SECTION 208
EROSION CONTROL**

The Contractor shall protect storm drain facilities adjacent to locations where pavement cutting operations involving wheel cutting, saw cutting, sand blasting, or abrasive water jet blasting are to take place.

- (k) *Sediment Trap.* Sediment traps shall be installed to collect sediment laden water and to minimize the potential of pollutants leaving the project site. Locations shall be as shown on the plans or as directed.

Sediment traps shall be constructed prior to disturbance of upslope areas and shall be placed in locations where runoff from disturbed area can be diverted into the trap.

The area under the embankment shall be cleared, grubbed and stripped of any vegetation and roots.

Fill material for the embankment shall be free of roots or other vegetation, organic material, large stones, and other objectionable material.

Sediment shall be removed from the trap when it has accumulated to one half of the wet storage depth of the trap and shall be disposed of in accordance with subsection 208.04(f).

- (l) *Erosion Logs.* Erosion logs shall be embedded 2 inches into the soil. Stakes shall be embedded to a minimum depth of 12 inches. At the discretion of the IQC, a shallower depth may be permitted if rock is encountered.

The Contractor shall maintain the erosion logs during construction to prevent sediment from passing over or under the logs.

- (m) *Silt Dikes.* Prior to installation of silt dikes, the Contractor shall prepare the surface of the areas in which the silt dikes are to be installed such that they are free of materials greater than two inches in diameter and are suitably smooth for the installation of the silt dikes.

- (n) *Concrete Washout Structure.* The concrete washout structure shall meet or exceed the dimensions shown on the plans or be used in accordance with manufacturer's recommendations.

Concrete washout structure shall conform to standard plan M-208-1 and shall meet the following requirements:

- (1) Structure shall contain all washout water.
- (2) Stormwater shall not carry wastes from washout and disposal locations.
- (3) The site shall be located a minimum of 50 horizontal feet from State waters and shall meet all requirements for containment and disposal as defined in subsection 107.25.
- (4) The site shall be signed as "Concrete Washout".
- (5) The site shall be accessible to appropriate vehicles.
- (6) Freeboard capacity shall be included into structure design to reasonably ensure the structure will not overtop during or because of a precipitation events.

-19-
**REVISION OF SECTION 208
EROSION CONTROL**

- (7) The Contractor shall prevent tracking of washout material out of the washout structure.
- (8) Solvents, flocculents, and acid shall not be added to wash water.
- (9) The structure shall be surrounded on three sides by a compacted berm.
- (10) The structure shall be fenced with orange plastic construction fencing to provide a barrier to construction equipment and to aid in identification of the concrete washout area.
- (11) Concrete waste, liquid and solid, shall not exceed 2/3 the storage capacity of the washout structure.

Pre-fabricated concrete washout structures shall meet the following requirements:

- (1) Structure shall contain all washout water.
- (2) Structure shall be located 50 horizontal feet away from State waters, and shall be confined so that no potential pollutants will enter State waters and other sensitive areas as defined in the Contract. The site shall be delineated with orange plastic fence or other means and signed as "Concrete Washout".
- (3) The site shall be accessible to appropriate vehicles.
- (4) Freeboard capacity shall be included into structure design to reasonably ensure the structure will not overtop during or because of a precipitation event.
- (5) Solvents, flocculants, and acid shall not be added to wash water.
- (6) Concrete waste, liquid and solid, shall not exceed 2/3 the storage capacity of the washout structure.
- (7) Prefabricated structures cannot be moved when they contain liquid, unless otherwise approved.
- (8) The concrete washout structure shall be completed and ready for use prior to concrete placement operations.
- (9) Washout areas shall be checked and maintained as required. On site permanent disposal of concrete washout waste is not allowed.

All liquid and solid wastes, including contaminated sediment and soils generated from concrete washout shall be hauled away from the site and disposed of properly at the Contractor's expense.

- (o) *Vehicle Tracking Pad (VTP)*. Vehicle tracking pads shall be constructed to the minimum dimensions shown in the Contract, unless otherwise directed by the IQC. Construction of approved vehicle tracking pads shall be completed before any disturbance of the area.

-20-
**REVISION OF SECTION 208
EROSION CONTROL**

The Contractor shall maintain each vehicle tracking pad during the entire time that it is in use for the project. The vehicle tracking pad shall be removed at the completion of the project unless otherwise directed by the IQC. Additional aggregate may be required for maintenance and will be paid for by the Contractor.

- (p) *Detention Pond.* Permanent detention ponds shown on the construction plans may be used as temporary BMPs if all the following conditions are met:
 - (1) The pond is designated as a construction BMP in the SWMP.
 - (2) The pond outfall and outlet are designed and implemented for use as a BMP during construction in accordance with good engineering, hydrologic, and pollution control practices. The stormwater discharges from the outfall shall not cause degradation or pollution of State waters, and shall have BMPs, as appropriate.
 - (3) All silt shall be removed and the pond returned to the design grade and contour prior to project acceptance
- (q) *Aggregate Bag.* Aggregate bags shall be placed on a stable surface, consisting of pavement, grass or gravel. Aggregate bags shall be placed to conform to the surface without gaps. Discharge water shall not cause erosion.
- (r) *Surface Roughening.* Surface roughening creates horizontal grooves along the contour of the slope. Roughening may be accomplished by furrowing, scarifying, ripping or disking the soil surface to create a 2 to 4 inch minimum variation in soil surface. Surface roughening will not be paid for separately, but shall be included in the work.
- (s) *Vertical Tracking.* Vertical tracking involves driving a tracked vehicle up and down the soil surface and creating horizontal grooves and ridges along the contour of the slope. Sandy soils or soils that are primarily rock need not be tracked. Vertical tracking will not be paid for separately, but shall be included in the work.

208.06 Materials Handling and Spill Prevention. The SWMP Administrator shall clearly describe and record on the SWMP, all practices implemented at the site to minimize impacts from procedures or significant material that could contribute pollutants to runoff. Areas or procedures where potential spills can occur shall have a Spill Response Plan in place as specified in subsections 107.25(b) 6 or 208.06(c). Construction equipment, fuels, lubricants, and other petroleum distillates shall not be stored or stockpiled within 50 horizontal feet of any State waters or more if the Contractor determines necessary. Equipment fueling and servicing shall occur only within approved designated areas.

- (a) *Bulk Storage Structures.* Bulk storage structures for petroleum products and other chemicals shall have impervious secondary containment or equivalent adequate protection so as to contain all spills and prevent any spilled material from entering State waters. Secondary containment shall be capable of containing the combined volume of all the storage containers plus at least 10 percent freeboard. For secondary containment that is used and may result in accumulation of stormwater within the containment, a plan shall be implemented to properly manage and dispose of all accumulated stormwater which is deemed to be contaminated (e.g., has an unusual odor or sheen).

-21-
**REVISION OF SECTION 208
EROSION CONTROL**

- (b) *Lubricant Leaks.* The Contractor shall inspect equipment, vehicles, and repair areas daily to ensure petroleum, oils, and lubricants (POL) are not leaking onto the soil or pavement. Absorbent material or containers approved by the IQC shall be used to prevent leaking POL from reaching the soil or pavement. The Contractor shall have onsite approved absorbent material or containers of sufficient capacity to contain any POL leak that can reasonably be foreseen. The Contractor shall inform all Spill Response Coordinators in accordance with the Spill Response Plan if unforeseen leakage is encountered. All materials resulting from POL leakage control and cleanup shall become the property of the Contractor and shall be removed from the site. Control, cleanup, and removal of by-products resulting from POL leaks shall be performed at the Contractor's expense.
- (c) *Spill Response Plan.* A spill Response Plan shall be developed and implemented to establish operating procedures for handling potential pollutants and preventing spills.

The Response Plan shall contain the following information:

- (1) Identification and contact information of each Spill Response Coordinator
- (2) Locations of areas on project site where equipment fueling and servicing operations are permitted.
- (3) Location of cleanup kits.
- (4) Quantities of chemicals and locations stored on site.
- (5) Label system for chemicals and Safety Data Sheets (SDS) for products.
- (6) Clean up procedures to be implemented in the event of a spill that does not enter State waters or ground water.
- (7) Procedures for spills of any size that enter surface waters or ground water, or have the potential to do so. CDOT's Erosion Control and Stormwater Quality Guide contains Spill notification contacts and phone numbers required in the Spill Response Plan.
- (8) A summary of the employee training provided.

Information in items (1) through (8) shall be updated in the SWMP Notebook when they change.

208.07 Stockpile Management. Material stockpiles shall be located 50 horizontal feet away from State waters, and shall be confined so that no potential pollutants will enter State waters and other sensitive areas as defined in the Contract

Erodible stockpiles (including topsoil) shall be contained with acceptable BMPs at the toe (or within 20 feet of the toe) throughout construction. The SWMP Administrator shall describe, detail, and record the sediment control devices on the SWMP.

208.08 Limits of Disturbance. The Contractor shall limit construction activities to those areas within the limits of disturbance shown on the plans and cross-sections. Construction activities, in addition to the Contract work, shall include the on-site parking of vehicles or equipment, on-site staging, on-site batch plants, haul roads or work access, and all other action which would disturb existing soil conditions.

-22-

**REVISION OF SECTION 208
EROSION CONTROL**

Construction activities beyond the limits of disturbance due to Contractor negligence shall be restored to the original condition by the Contractor at the Contractor's expense. The SWMP Administrator shall tabulate additional disturbances not identified in the CDPS-SCP application and indicate changes to locations and quantities on the SWMP. The Contractor shall report the changes and additional disturbances to the IQC, EM, the Department, Water Quality Control Division of CDPHE and all other involved agencies.

The Contractor shall pursue and stabilize all disturbances to completion.

208.09 Failure to Perform Erosion Control. Failure to implement the Stormwater Management Plan is a violation of the CDPS-SCP and CDOT specifications. The Department is obligated to implement enforcement mechanisms in accordance with CDOT's MS4 Permit COS000005 for Stormwater Management and erosion control Best Management Practices. Penalties may be assessed to the Contractor by the appropriate agencies. Penalties will be assessed by the Department as Noncompliance Points in accordance with Schedule 6 (Performance Mechanism). All fines assessed to the Department for the Contractor's failure to implement the SWMP will be deducted from moneys due the Contractor in accordance with Schedule 6 (Performance Mechanism)..

Noncompliance Points will be applied for failure to comply with the CDPS-SCP and the Construction Standards, including the following:

- (1) Failure to include erosion control in the project schedule or failure to include erosion control in each schedule update as specified in subsection 208.03(b).
- (2) Failure of the Contractor to perform the inspections required by subsection 208.03(c) 2.
- (3) Failure of the Contractor to implement necessary actions required by the Engineer as required by subsection 208.03(c).
- (4) Failure to amend the SWMP and implement BMPs as required by subsection 208.04.
- (5) Failure to keep documentation and records current.
- (6) Failure to construct or implement erosion control or spill containment measures required by the Contract, or failure to construct or implement them in accordance with the Contractor's approved schedule as required by subsection 208.06(c).
- (7) Failure to limit temporary stabilization to 20 or fewer acres as required by subsection 208.04 (e).
- (8) Failure to replace or perform maintenance on an erosion control feature after notice from the Department or from a water quality inspection as required by subsection 208.04(f).
- (9) Failure to remove and dispose of sediment from BMPs as required.
- (10) Failure to install and properly utilize a concrete washout structure for containing washout from concrete placement operations.
- (11) Failure to perform stabilization as required by subsection 208.04 (e).

-23-

**REVISION OF SECTION 208
EROSION CONTROL**

- (12) Failure of the Superintendent or designated representative to attend inspections as required by subsection 208.03(c) and record findings in the appropriate form.
- (13) Failure to prevent discharges not composed entirely of stormwater from leaving the Construction Site.
- (14) Failure to provide the survey of Permanent Water Quality BMPs when required on the project in accordance with 208.10.

If systemic Nonconforming Work associated with failure to perform erosion control is identified by the Developer or identified by the Department by the issuance of a corrective action request (CAR) notice to the Developer, the Developer shall submit a Corrective Action Plan for Approval to the Department as required by Schedule 8 (*Project Administration*).

**REVISION OF SECTION 240
PROTECTION OF MIGRATORY BIRDS
BIOLOGICAL WORK PERFORMED BY THE CONTRACTOR'S BIOLOGIST**

Section 240 is hereby added to the Standard Specifications as follows:

DESCRIPTION

240.01 The Contractor shall schedule clearing and grubbing operations and Work on structures to avoid taking (pursue, hunt, take, capture or kill; attempt to take, capture, kill or possess) migratory birds protected by the Migratory Bird Treaty Act ("MBTA"). The Contractor shall retain a qualified wildlife biologist for this Project. The wildlife biologist shall have a minimum of three years of experience conducting migratory bird surveys and implementing the requirements of the MBTA. The Contractor shall submit documentation of the biologist's education and experience.

The wildlife biologist shall survey the location of each protected nest, bird species, the protection method used, and the date installed. A copy of these records shall be submitted to the Department for acceptance.

(a) *Vegetation Removal.*

When possible, vegetation shall be cleared prior to the time when active nests are present. Vegetation removal activities shall be timed to avoid the migratory bird breeding season which begins on April 1 and runs to August 31. All areas scheduled for clearing and grubbing between April 1 and August 31 shall first be surveyed within the Work limits for active migratory bird nests. The Contractor's wildlife biologist shall also survey for active migratory bird nests within 50 feet outside work limits. The Contractor's personnel shall enter areas outside the Right-of-Way in accordance with (e) Permission to Enter Property. The Contractor shall avoid all active migratory bird nests. The Contractor shall avoid the area within 50 feet of the active nests or the area within the distance recommended by the wildlife biologist until all nests within that area have become inactive. Inactive nest removal and other necessary measures shall be incorporated into the Work as follows:

1. Tree and Shrub Removal or Trimming. Tree and shrub removal or trimming shall occur before April 1 or after August 31 if possible. If tree and shrub removal or trimming must occur between April 1 and August 31, a survey for active nests shall be conducted by the wildlife biologist within the seven Calendar Days immediately prior to the beginning of Work in each area of tree and shrub removal or trimming. The survey shall be conducted for each phase of tree and shrub removal or trimming.
2. If an active nest containing eggs or young birds is found, the tree or shrub containing the active nest shall remain undisturbed and protected until the nest becomes inactive. The nest shall be protected by placing fence (plastic) a minimum distance of 50 feet from each nest to be undisturbed. This buffer dimension may be changed if determined appropriate by the wildlife biologist and Approved by the Department. Work shall not proceed within the fenced buffer area until the young have fledged or the nests have become inactive. If the fence is knocked down or destroyed by the Contractor, the Department will suspend the Work, wholly or in part, until the fence is satisfactorily repaired at the Contractor's expense. Time lost due to such suspension will not be considered a basis for adjustment of time charges, but will be charged as contract time.

-2-

**REVISION OF SECTION 240
PROTECTION OF MIGRATORY BIRDS
BIOLOGICAL WORK PERFORMED BY THE CONTRACTOR'S BIOLOGIST**

(b) *Surveys*

1. Due to the potential for encountering ground nesting birds' habitat, if Work occurs between April 1 and August 31, the area shall be surveyed by the Contractor's wildlife biologist within the seven Calendar Days immediately prior to ground disturbing activities.
2. The wildlife biologist shall conduct dusk and dawn surveys of Bald Eagle roosts within seven Calendar Days prior to the start of any Construction during the winter season, November 15 to March 15. If a Bald Eagle roost is identified, Construction activity shall not proceed within 0.25 mile of active nocturnal roost sites between November 15 and March 15.
3. The wildlife biologist shall conduct raptor nest surveys within 0.5 mile of the Site prior to the start of Construction and prior to each Construction phase. This survey can be done with binoculars. If Construction activities are located within the CPW recommended buffer zone for specific raptors, "NO WORK" zones shall be established around active sites during Construction according to the CPW standards or as recommended by the wildlife biologist in consultation with the CPW. The "NO WORK" zone shall be marked with either fencing or signing. Work shall not proceed within a "NO WORK" zone until the wildlife biologist has determined that the young have fledged or the nest is unoccupied.

(c) *Work on structures*

1. The Contractor shall prosecute Work on structures in a manner that does not result in a taking of migratory birds protected by the Migratory Bird Treaty Act ("MBTA"). The Contractor shall not prosecute the Work on structures during the primary breeding season, April 1 through August 31, unless he takes the following actions:
 - A. The Contractor shall remove existing nests after August 31 and prior to April 1 of the following year.
 - B. During the time that the birds are trying to build or occupy their nests, between April 1 and August 31, the Contractor shall monitor the structures at least once every three Calendar Days for any nesting activity.
 - C. If the birds have started to build any nests, they shall be removed before the nest is completed. Water shall not be used to remove the nests if nests are located within 50 feet of any surface waters.
 - D. Installation of netting may be used to prevent nest building. The netting shall be monitored and repaired or replaced as needed. Netting shall consist of a mesh with openings that are $\frac{3}{4}$ inch by $\frac{3}{4}$ inch or less.
2. If an active nest become established, i.e., there are eggs or young in the nest, all Work that could result in abandonment or destruction of the nest shall be avoided until the young have fledged or the nest is unoccupied as determined by the wildlife biologist and Approved by the

-3-

**REVISION OF SECTION 240
PROTECTION OF MIGRATORY BIRDS
BIOLOGICAL WORK PERFORMED BY THE CONTRACTOR'S BIOLOGIST**

Department. The Contractor shall prevent construction activity from displacing birds after they have laid their eggs and before the young have fledged.

3. If the Project continues into the following spring, this cycle shall be repeated. When Work on the structure is complete, the Contractor shall remove and properly dispose of netting used on the structure.

(d) *Taking of a Migratory Bird*

The taking of a migratory bird shall be reported to the USFWS and the Department. The Contractor shall be responsible for all penalties levied by the USFWS for the taking of a migratory bird.

(e) *Permission to Enter Property*

CDOT Form 730, *Permission to Enter Property*, shall be obtained by the Contractor to facilitate the wildlife biologist's ground surveys within adjacent property within 50 ft. of Work limits, where the Contractor's wildlife biologist has determined ground nesting bird habitat may be present. If Permission to Enter Property is denied by a property owner, the Contractor shall record the denial and place the record in the Project file to document that due diligence was pursued.

**SECTION 250
ENVIRONMENTAL, HEALTH AND SAFETY MANAGEMENT**

Section 250 of the Standard Specifications is hereby deleted for this project and replaced with the following:

DESCRIPTION

250.01 This work consists of protection of the environment, persons, and property from contaminants that may be encountered on the Project. This includes monitoring the work for encounters with contaminants or suspected soil and groundwater contaminants; the management of solid, special, and hazardous waste; and management of visual emissions associated with hazardous waste, when encountered on the project.

250.02 The Contractor shall furnish all personnel, materials, equipment, laboratory services and traffic control necessary to perform the contamination monitoring, testing, and site remediation when required. Traffic control shall be in accordance with the requirements of Section 630.

Monitoring equipment used to detect flammable gas, oxygen level, and toxic gas shall be capable of detection to meet the following standards:

Instrument Detection		
Constituent	Threshold Limit	Increments
Flammable Gas	1% LEL	1%
Oxygen	19%	0.1%
Toxic Gas	1 PPM	1 PPM

LEL = lower explosive limit
PPM = parts per million

CONSTRUCTION REQUIREMENTS

250.03 General. Prospective bidders, including subcontractors, are required to review the environmental documents available for this project included in Schedule 29 (*Reference Documents*). .

This project is in the vicinity of property associated with petroleum products, heavy metal based paint, landfill, buried foundations, abandoned utility lines, industrial area or other sites which can yield Hazardous Substances or produce dangerous gases. These Hazardous Substances or gases can migrate within or into the construction area and could create hazardous conditions. The Contractor shall use appropriate methods to reduce and control known landfill materials, industrial gases, and visible emissions from asbestos encounters and hazardous substances which exist or migrate into the construction area. The Contractor shall follow CDOT's *Regulated Asbestos Contaminated Soil Management Standard Operating Procedure, dated October XX, 2016* for proper handling of asbestos-contaminated soil, and follow all applicable Solid and Hazardous Waste Regulations for proper handling of soils encountered that contain any other substance mentioned above.

Encountering suspected contaminated material, including groundwater, old foundations, building materials, demolition debris, or utility lines that may contain asbestos or be contaminated by asbestos, is possible at some point during the construction of this project. When suspected contaminated material, including groundwater, is encountered or brought to the surface, the procedures under subsection 250.03(d) and 250.05 shall be followed.

-2-

**SECTION 250
ENVIRONMENTAL, HEALTH AND SAFETY MANAGEMENT**

Transportation of waste materials on public highways, streets and roadways shall be done in accordance with Title 49, Code of Federal Regulations (CFR). All labeling, manifesting, transportation, etc. of waste materials generated on this project shall be coordinated with the Department. All hazardous waste manifests for waste materials generated on this project shall list the Colorado Department of Transportation as the generator of the waste materials except as otherwise noted. If the Contractor contaminates the site, the Contractor shall be listed as the generator on the hazardous waste manifests, permits, and other documents for such material.

If waste materials must be handled in a permitted treatment, storage and disposal (TSD) facility, the facility shall be coordinated with the Department. The hazardous waste transportation phase of the work involves insurance required by law and regulations. If the waste materials are determined to be hazardous, the Contractor must submit proof that the transportation company is covered by the appropriate type and amount of insurance required by laws and regulations governing the transportation of hazardous waste.

The Contractor alone bears the responsibility for determining that the work is accomplished in strict accordance with all applicable federal, state and local laws, regulations, standards, and codes governing special waste, petroleum and hazardous substance encounters and releases.

The Contract will list known or suspected areas of contamination. A Health and Safety Officer, Monitoring Technician, and Health and Safety Plan (HASP) are required in accordance with Section 23.21.2, 23.1.2 and 23.11.1 of Schedule 17, respectively.

- (a) *Health and Safety Officer (HSO)*. The Contractor shall designate a HSO in accordance with Section 23.21.1 of Schedule 17. The HSO can delegate task to their designee as long as the designee meets the training and certification requirements stated above for the HSO.

The HSO shall *be* equipped with the following:

1. Communication equipment as required in subsection 250.03(d)2.A. and a vehicle.
2. Monitoring and detection equipment for flammable gas, oxygen sufficiency, toxic gas, radiological screening and other hazards. This includes, as required, a combustible gas indicator, flame ionization or photo ionization detector, oxygen meter, radiation monitor with Geiger Mueller detector and other foreseeable equipment.
3. Depth gauging equipment, sampling equipment and sampling containers.
4. Personal protective equipment (PPE), when required. PPE must be selected which will provide protection from the specific hazards which are likely to be encountered during work on the project.

The HSO shall recommend and supervise those actions which will minimize the risk of Hazardous Substance related injury to the workers, Department personnel, the general public, property and the environment. The HSO shall prepare written procedures for the monitoring of confined space entry and working in or near excavations, including but not limited to trenches and drill holes associated with this project. The HSO shall ensure that all hazardous substance and solid waste related testing, sampling, monitoring and handling for this project to ensure compliance with applicable statutes and regulations, and other applicable environmental requirements under subsections 107.01 and 107.02.

-3-

**SECTION 250
ENVIRONMENTAL, HEALTH AND SAFETY MANAGEMENT**

The HSO shall be available for consultation and assistance with contaminated materials related testing, sampling, and field monitoring as required on the project.

The HSO shall prepare a daily diary which shall be submitted to the Department on a monthly basis in the Monthly Statement of Recognized Hazardous Materials Management. The diary shall contain a chronological log of activities on the project including: dates and times on site, equipment used and calibrations, field monitoring results, visual observations, conversations, directives both given and received related to health and safety.

- (b) *Monitoring Technician (MT)*. The Contractor shall designate monitoring technicians to be responsible for monitoring of Hazardous Substances during work on the project. The MT shall have a minimum of two years of actual field experience in assessment and remediation of hazardous substances that may be encountered during highway construction projects. The MT shall be experienced in the operation of monitoring devices, identifying substances based upon experience and observation, and field sampling (for testing) of all media that may be found on the site. Completion of the 40 hour hazardous waste and 8 hour supervisory training required by OSHA and U.S. EPA rules and regulations which complies with the accreditation criteria under the provisions of the proposed 29 CFR 1910.121 is required prior to beginning work. The Contractor shall furnish documentation at the Preconstruction Conference that demonstrates these requirements have been met.

The MT shall be equipped with the following:

1. Communication equipment as required in subsection 250.03(d)2.A. and a vehicle.
2. Monitoring and detection equipment for flammable gas, oxygen sufficiency, toxic gas, radiological screening and other hazards. This includes, as required, a combustible gas indicator, flame ionization or photo ionization detector, oxygen meter, radiation monitor with Geiger Mueller detector and other foreseeable equipment.
3. Personal protective equipment, when required. PPE must be selected which will provide protection from the specific hazards which are likely to be encountered during work on the project.

The MT shall be present on site and perform monitoring as required by 250.03(d) when work is being performed in areas of suspected Hazardous Substances.

The MT shall monitor for compliance with regulations, the project Health and Safety Plan and the Materials Management Plan, the Contract, and the environmental documents for the project. The MT shall immediately notify the Environmental Manager and the HSO of any hazardous condition.

- (c) *Health and Safety Plan (HASP)*. The HSO shall prepare a written HASP for the project focused on Hazardous Substances, formatted as shown in Appendix B, *Occupational Safety and Health Guidance Manual for Hazardous Waste Site Activities*, DHHS (NIOSH) Publication Number 85-115, available from the Superintendent of Documents, U.S. Government Printing Office, including all applicable sections from 29 CFR 1910 and 29 CFR 1926.

Within five calendar days after Acceptance by the Department, the HSO shall distribute signed and stamped (or sealed) copies of the accepted HASP to each emergency response agency servicing the project area and the HASP designated emergency hospital. Earth or demolition work

-4-

**SECTION 250
ENVIRONMENTAL, HEALTH AND SAFETY MANAGEMENT**

shall not occur until after the HASP is accepted and the HASP has been distributed. The HASP shall also be available to the Contractor's employees, their representatives, and officials of OSHA, EPA, Colorado Department of Public Health and Environment (CDPHE), local government health department, Federal Highway Administration, and other appropriate agencies, as requested. The Contractor will distribute the accepted HASP to appropriate Department personnel. The HASP shall be kept current and shall be revised by the HSO as warranted by changes in the field conditions.

All on-site workers (Contractor's, Department's, Utilities', and others) shall be briefed by the HSO on the contents of the HASP and any revisions thereof. The HSO shall conduct briefings (group or individual) to inform all new employees, subcontractors, utility companies and other on-site workers of the HASP contents prior to their entry on site. All personnel involved in excavation or other soil disturbing activities shall receive the required two-hour Asbestos Awareness training by a Certified Asbestos Inspector, when asbestos discoveries are anticipated, or discoveries are made.

A signature log of all briefing attendees shall be kept and provided in the Environmental Status Report (see Schedule 17, Section 6).

The Contractor shall provide, as required, eye wash equipment and stations, emergency showers, hand and face washing facilities and first aid equipment.

The Contractor shall provide, as required, decontamination facilities for personnel and equipment employed in the work. The exact procedure for decontamination and frequency shall be included in the accepted HASP. Decontamination facilities shall meet the criteria set forth in the Code of Federal Regulations (29 CFR and 40 CFR).

- (d) *Precautions and Procedures.* The following minimum precautions and procedures shall be followed during the construction of the project:
1. General construction precautions:
 - A. All monitoring and piezometer wells and test borings shall be established or abandoned by the Contractor as regulated by the State Engineer's Office. Copies of all required permits, notification, and abandonment documents shall be submitted to the Department as part of the Monthly Statement of Recognized Hazardous Materials Management.
 - B. The Contractor shall properly handle all investigation derived waste generated by this project. Documentation shall be submitted to the Department as part of the Monthly Statement of Recognized Hazardous Materials Management of all tests performed for Treatment, Storage and Disposal (TSD) determination; classification of waste; hauling records; TSD acceptance; manifest (if required); etc. in accordance with applicable laws and regulations.
 2. For construction on a known or potentially contaminated site, the following conditions shall apply, in addition to those listed in subsection 250.03(d)1:
 - A. The HSO, or their designee identified in the HASP, shall be on site or readily available by radio, telephone or pager at all times during the work. When on site, the HSO, or their designee identified in the HASP, shall have an operational portable or mobile

-5-

**SECTION 250
ENVIRONMENTAL, HEALTH AND SAFETY MANAGEMENT**

cellular telephone available for immediate use in areas where such service is available. When on site in cellular telephone non-service areas, the HSO, or their designee identified in the HASP, shall have available, for immediate use, radio access to a site with telephone service. The HSO shall be notified at least 24 hours prior to the start of confined space entry, storage tank removal, drilling, excavation, trenching, or dewatering operations.

- B. The HSO shall designate the onsite monitoring equipment for flammable gases, oxygen deficient or enriched atmosphere, and toxic gases, such as but not limited to, a flame ionization detector, photoionization detector, combustible gas indicator, and oxygen meter. This designated equipment shall be on site during all construction operations and be utilized during trenching, drilling, excavating, confined space entry, underground storage tank removal, and other appropriate construction operations. The exact equipment to fulfill this requirement shall be specified in the accepted HASP. The HSO, or their designee identified in the HASP, shall conduct or supervise the monitoring. The monitoring equipment shall be calibrated as recommended by the manufacturer.
- C. When drilling, trenching, or excavating in the presence of detectable concentrations of explosive gases, the soil shall be wetted and the operating equipment shall be provided with spark proof exhausts.
- D. The Contractor, through the HSO, is responsible for ensuring that 29 CFR 1926 is fully complied with during the construction of the project.
- E. Affected excavation operations shall be discontinued and personnel shall be removed from the affected excavation sites where any of the following levels are detected:
 - (1) 20.0 percent or more LEL flammable gas, or 10.0 percent in an underground or confined space,
 - (2) Permissible Exposure Limit (PEL) of any toxic gas,
 - (3) 19.5 percent or less oxygen,
 - (4) 25.0 percent or more oxygen,
 - (5) Greater than 2 mrem/hr. (Beta particle & photon radioactivity),
 - (6) Greater than 15 pCi/L (Gross alpha particle activity), or
 - (7) Other action levels as determined by the HSO.
 - (8) Uncovering of suspect Asbestos Containing Material (ACM), including but not limited to, buried facility components, active or abandoned utility lines, buried foundations and demolition debris, or miscellaneous ACM dispersed in the soil. The Contractor shall follow the procedures outlined in the HASP and 29 CFR 1926 to address these conditions.
- F. Personnel shall be issued and utilize appropriate Health and Safety equipment as determined by the HSO.

-6-

**SECTION 250
ENVIRONMENTAL, HEALTH AND SAFETY MANAGEMENT**

- G. Personnel shall avoid the area immediately downwind of any excavation unless the excavation is monitored and declared safe.
 - H. The operators of excavating, trenching, or drilling equipment shall wear appropriate PPE as required in the HASP.
 - I. Exhaust blowers shall be present at the location where required in the accepted HASP.
 - J. The Contractor shall accomplish the work with employees who have been trained and equipped as required by the HASP and applicable provisions of 29 CFR 1910 and 29 CFR 1926.
 - K. Fire extinguishers, electrical equipment and wiring shall conform to the applicable requirements of 29 CFR 1926 and 49 CFR.
 - L. Smoking shall not be permitted within 50 feet of any excavation.
3. For construction within 1000 feet of a known or potentially contaminated site, the following conditions, in addition to those listed in subsection 250.03(d) 1. shall apply:
- A. The areas under construction shall be checked with a combustible gas indicator before excavation begins to determine if flammable or combustible gas is in the area.
 - B. Excavations, trenches and drill holes shall be monitored by the HSO, or their designee identified in the HASP, for flammable gas, toxic gas and oxygen deficiency or enrichment. This shall be carried out continuously unless the presence of flammable, combustible or toxic gas, or oxygen deficiency or enrichment in the area can be ruled out by the HSO, or their designee identified in the HASP.
 - C. When flammable or toxic gas is found in the area, those precautions and procedures in subsection 250.03(d)2 shall apply.

250.04 Heavy Metal Based Paint Management. When the work includes the removal of paint or items covered with paint which may contain lead, chromium or other heavy metals, the requirements of this subsection shall apply in addition to the requirements of subsection 250.03.

The requirements of the HASP shall be in accordance with OSHA Publication Number 3142, *Working with Lead in the Construction Industry*.

Paint Removal and Waste Disposal work shall be performed in accordance with 29 CFR 1926.62, State and local air quality regulations, the Steel Structures Painting Council (SSPC) Guide for Containing Debris Generated During Paint Removal Operations, the *Industrial Lead Paint Removal Handbook* (SSPC 91-18), and the references contained therein.

The following minimum precautions and procedures shall be followed unless modified in the approved HASP or its updates:

- (a) The Contractor shall contact the CDPHE, Air Pollution Control Division to ascertain if an air pollution permit is required for the cleaning or demolition work. If an air pollution permit is required, the Contractor shall obtain the permit. The Contractor shall furnish the Department with a copy of

-6-

**SECTION 250
ENVIRONMENTAL, HEALTH AND SAFETY MANAGEMENT**

the permit application and the permit issued prior to starting cleaning or demolition activities. A copy of the Air Pollution Emission Notice [APEN] shall be provided to the Department, if such notice is required under the Colorado Air Quality Control Commission's regulations. The processing of air pollution permits in non-attainment areas, or where public hearings are required, likely will take more than 90 days.

- (b) The Contractor shall contain paint chips, corrosion residues, and spent abrasives, herein referred to as waste materials, resulting from the cleaning or demolition operations. The Contractor shall not deposit or release waste material into the water, air or onto the ground below or adjacent to the structure. The Contractor shall conduct cleaning operations to minimize the waste materials produced. Prior to beginning the work, the Contractor shall submit to the Department for acceptance, a detailed methods statement for capturing, testing, and disposing of the removed materials.
- (c) Abrasives utilized for blast cleaning shall be low-dusting and low waste. Unless approved otherwise, vacuum blasting or wheel blasting shall be used.
- (d) The Contractor shall sample and test the waste material for lead, chromium, and other paint associated heavy metals using the Toxicity Characteristic Leaching Procedure (TCLP) Test, Method 1311 of the EPA publication, Test Methods for Evaluating Solid Waste 846. Sample collection methodology and frequency shall be defined in the Sampling and Analysis Plan with an adequate number of samples taken to be representative of all waste material collected. If the waste material does not pass the TCLP test, it shall be disposed of in a permitted TSD facility as designated in writing by the Department. The waste materials handling, including a description of sample collection methodology, testing performed, test results and comparison of test results with hazardous waste requirements shall be documented in the Monthly Statement of Regulated Hazardous Materials Management and Recognized Hazardous Materials Completion Report. The waste material shall not be held at an unpermitted TSD facility site in excess of Resource Conservation and Recovery Act (RCRA) temporary storage time limits.
- (e) When an item coated with paint is removed, all loose paint shall be removed and collected from the item within 24 hours of the time it is removed or placed onto the ground. All loose paint shall be removed and collected from a painted item before it is removed from the site. The Contractor shall contain loose paint until it is removed and collected. Loose paint is defined as that which can be removed by manual scraping methods. Over waterways, the Contractor shall capture all paint debris by the method specified in the methods statement. The paint debris shall be collected on a daily basis and shall be stored in a properly labeled, tightly sealed container and placed in a secured location at the end of each working day.
- (f) All painted steel components which are not designated to be salvaged shall be recycled. Contractor possession of the steel for future use shall be considered a form of recycling. Prior to transport of the components off-site, the Contractor shall obtain a letter from the recipients of the painted steel components stating that they have been fully informed of the contents of the paint and are capable of handling the paint. If the Contractor is to maintain future possession of the steel, the Contractor shall supply this letter. If there will be more than one recipient of the painted material, one letter shall be obtained from each recipient. The Contractor shall provide a copy of each letter to the Department. If the painted steel components will be recycled by melting, the letter from the recipient is not required. The Contractor shall submit a letter stating the destination of the painted steel components and that they will be melted.

-7-

SECTION 250
ENVIRONMENTAL, HEALTH AND SAFETY MANAGEMENT

- (g) When the work consists of the removal of a bridge or components of a bridge coated with paint which has been assumed to contain lead, chromium, other heavy metals, or a combination thereof the Contractor shall capture paint debris which is dislodged during removal operations. The Contractor may choose any method for dismantling the bridge, subject to the following required construction sequence limitations:
1. The concrete deck shall be removed prior to removal of the steel superstructure.
 2. If the methods statement indicates that girders will be dropped to the ground during dismantling, all debris from the concrete deck removal operation shall be removed from the area below the bridge before any girders are dropped into this area.
 3. Girders may be cut and dropped only if the span is located entirely over land.

250.05 Material Handling. This work consists of the additional handling of groundwater and soils to be excavated for construction of the project which are suspected or known to be contaminated. This work also includes stockpiling or containerization, analytical sampling and testing, and final disposition of contaminated groundwater and soils requiring special handling.

There is the potential of encountering contaminated groundwater and soil, which has not been summarized in the plans or specifications, at unknown locations on the site. Suspected contaminated soil and groundwater shall be handled by one of three methods as follows:

- (a) *Materials Handling (Stockpile & Containerization).* The Beneficial Use and Materials Management Plan defines the requirements for reusing soils on site. Health and safety monitoring and strict fugitive dust control shall be conducted during the placement of these soils. If analysis indicates that groundwater samples are designated as uncontaminated, as determined by the criteria shown in the Contract or as determined by the CDPHE, the groundwater shall be handled in accordance with subsection 107.25.

Stockpiled and containerized materials shall be secured in compliance with the following provisions until they are determined to be uncontaminated:

1. The Contractor shall not store the material for more than 90 days.
2. The Contractor shall prevent any runoff from infiltrating the ground or running out of the containment area.
3. Soils and groundwater containing different contaminants shall be placed in separate containers or stockpiles.
4. The Contractor shall prevent the dispersion of materials or the dilution or mixing of containers and stockpiles.
5. The ground surface on which the contaminated soils will be placed shall be covered with plastic sheeting which will withstand the placement and removal of stockpiled materials without breaching. Alternatively, the Developer may place impacted soils, that are not saturated with any contaminant or water, on six inches of clean fill to eliminate the plastic sheeting. Upon final disposition of the stockpile, the six inches must be removed with the stockpile in accordance with the stockpile disposition; however, the disposal of the six inches

-8-

**SECTION 250
ENVIRONMENTAL, HEALTH AND SAFETY MANAGEMENT**

of soil is considered incidental since it is a means and methods decision and shall not be included in any Supervening Event Submission.

6. The ground surface shall be graded to drain toward the edge of the soil piles and the berm or trench around them shall be covered by plastic sheeting.
 7. Proper security shall be provided in accordance with 40 CFR.
- (b) *Solid Waste Disposal.* Soils determined to be contaminated and not allowed to be reused on the project, but not hazardous, as established by criteria in the Contract or as determined by CDPHE or other regulatory agencies having jurisdiction, shall be handled and disposed of in accordance with all applicable Environmental Laws. The Contractor shall haul this material to a solid waste disposal facility.
- (c) *Contaminated Groundwater Disposal.* Groundwater determined to be contaminated as established by CDPHE or other regulatory agencies having jurisdiction, shall be handled and disposed of in accordance with all applicable Environmental Law.
- (d) *Hazardous Waste Disposal.* Soils and groundwater that are designated or suspected to be hazardous shall be containerized *immediately* upon excavation or upon discovery. Hazardous material shall be labeled and transported to a permitted treatment, storage and disposal (TSD) facility or to a hazardous waste disposal facility approved by the Department.
- (e) *Additional Requirements.* Stockpiled or containerized material characterized as uncontaminated, contaminated or hazardous shall be stored and disposed of in a manner consistent with current established federal, state, and local regulations for waste materials.

Materials with contaminants not specifically regulated shall be disposed of by the Contractor as directed, in consultation with CDPHE. All areas where wastes are generated shall be reviewed by the Environmental Manager and HSO to identify potential contaminant sources that may result in a contaminated waste stream.

Contaminated groundwater and soils, which have been identified as solid waste or hazardous waste, requiring disposal according to federal, state, and local regulations, shall be transported in accordance with 49 CFR by the Contractor to an appropriately permitted treatment facility, landfill, incinerator or asphalt plant or other facility approved to accept the waste. CDPHE and the landfill or other treatment or disposal facility shall be notified by the Environmental Manager or HSO of the material to be disposed of and the corresponding analytical test results prior to shipment. Potentially contaminated water collected from the lined trench of a stockpile shall be treated as required by Colorado Wastewater Discharge Permit System (CDPS) permits, 29 CFR and 40 CFR.

250.06 Sample delivery. This work consists of the collection, containerization and delivery of material samples for analysis to the testing facility designated in the Contract.

Environmental Protection Agency (EPA) protocol and standards shall be followed in the collection, containerization and transport of samples to be analyzed, including the documentation of the proper chain of custody of all samples. The Contractor shall collect sufficient sample material to perform the required analysis and is responsible for ensuring that appropriate climate control has been provided for sample

-9-

**SECTION 250
ENVIRONMENTAL, HEALTH AND SAFETY MANAGEMENT**

transport. Sample delivery shall be made within the maximum allowable holding time for each sample type, not to exceed 24 hours, excluding weekends. The time period required for sample collection and delivery to the testing facility will not be considered an excusable delay.

The Contractor shall provide the Department with a copy of documentation indicating that proper chain of custody requirements have been followed for all samples.

The Department may request splits of samples, in advance of collection, which shall be provided at no additional cost by the Contractor.

250.07 Asbestos-Containing Material Management. Known or suspected locations that could involve encounters with ACM during excavation and other soil disturbing construction activities are identified in the (Reference Documents) (Schedule 29). Unexpected discoveries of ACM may be made during excavation and soil disturbing construction activities. Asbestos contaminated soil, shall be properly managed or remediated, in accordance with subsection 250.07(a).

All asbestos related activities shall be performed by Colorado certified asbestos professionals, contractors, or consultants. Certifications are issued by the Colorado Department of Public Health and Environment (CDPHE), Indoor Air Quality Unit. A Colorado Certified Asbestos professional shall manage the management and disposal of asbestos contaminated soil and other ACM. The Indoor Air Quality Unit within CDPHE is the only unit that certifies such professionals. The Contractor shall furnish a copy of the license to the Department in the Environmental Status Report.

- (a) *Regulatory Compliance.* Asbestos-contaminated soil management is governed by 6 CCR 1007-2, Section 5, which includes and references regulatory compliance with Asbestos Hazard Emergency Response Act (AHERA) Colorado *Regulation 8*; Inspection and reporting protocol and demolition standards are governed by AHERA; Demolition and notification standards are governed by National Emission Standards for Hazardous Air Pollutants (NESHAPS); Colorado Regulation 8 governs all asbestos activities, demolition, permitting, and certification of Certified Asbestos Professionals in the State of Colorado. Colorado Regulation 8 is more stringent than AHERA and NESHAPS and supersedes federal regulations. Conflicting regulatory requirements between AHERA and NESHAPS, if not specifically addressed in Colorado Regulation 8, shall be addressed and approved protocol negotiated with CDPHE. The Contractor shall conform to all current regulations, policy directives, or both, issued by the EPA, CDPHE, and the Department.
- (b) *Asbestos Management and Visual Inspections* Asbestos management must be performed by a certified asbestos professional. Final Inspections of the area of asbestos-contaminated soil removal shall be performed by an Asbestos Consultant to determine what, if any, controls must be instituted to allow future activity in the excavation area. All final visual inspections shall be conducted only when soil is dry.
- (c) *Permitting and Notification.* The CDPHE requires notification of any soil disturbing activity where asbestos is known, suspected, or discovered. A 24-hour notification to CDPHE is required within 24-hours of any unexpected discovery. A 10 working day notification to CDPHE is required prior to any soil disturbing activity in an area with known or potential material suspected of containing asbestos in or on the soil or asbestos-contaminated soil. Removal of asbestos-containing material on a facility component, that is located on or in soil that will be disturbed, with asbestos quantities above the following trigger levels must be permitted and abated in accordance with the requirements of Air Quality Control Commission Regulation No. 8 (5 CCR 1001-10, Part B):

- 1. 260 linear feet on pipes,

-10-

**SECTION 250
ENVIRONMENTAL, HEALTH AND SAFETY MANAGEMENT**

2. 160 square feet on other surfaces, or
3. The volume of a 55-gallon drum.

All permit applications shall be submitted to the Colorado Department of Public Health and Environment a minimum of 10 days prior to start of work for approval. The permit application and notification shall be submitted simultaneously. The Contractor shall obtain all required State and local permits and shall be responsible for all associated fees. Permit application, notification, and waiver request forms shall be submitted to:

Colorado Department of Public Health and Environment Permit Coordinator/APCD - SS - B1 4300
Cherry Creek Drive South Denver, CO 80246-1530 Phone: (303) 692-3100 Fax: (303) 782-0278

Application and waiver forms are available on the CDPHE website: asbestos@state.co.us

- (d) *CDOT's Regulated Asbestos Contaminated Soil Management Standard Operating Procedure, dated October 2016.* Asbestos contaminated soil shall be managed in accordance with 6 CCR 1007-2, Section 5, Asbestos Waste Management Regulations. Regulations apply only upon discovery of asbestos materials during excavation and soil disturbing activities on construction projects, or when asbestos encounters are expected during construction. The Contractor shall comply with procedures detailed in the CDPHE regulations as specified in 250.07 (a), CDPHE's Asbestos Contaminated Soil Guidance Document, and CDOT's approved *Regulated Asbestos Contaminated Soil Management Standard Operating Procedure, dated October 2016*, including the following minimum requirements:

1. Immediate actions and implementation of interim controls to prevent visible emissions, exposure, and asbestos contamination in surrounding areas.
2. Soil Characterization.
3. Training required for all personnel involved in excavation and other soil disturbing activities, when asbestos discoveries are anticipated, or discoveries are made. Asbestos Awareness Training shall be given by a qualified and certified Asbestos Building Inspector with a minimum of six months experience inspecting asbestos contaminated soil.
4. Assessment for the presence and extent, within the proposed area of disturbance, of asbestos discoveries, whether expected or unexpected, by a Certified Asbestos Inspector.
5. Investigation and sampling required for risk assessment and management. Investigation, if required, shall be conducted by a Certified Asbestos Inspector.
6. Risk assessment and determinations for further management or abatement.
 - A. Risk assessment and determinations must be made by a Certified Asbestos Inspector.
 - B. Soil remediation is not necessarily required, depending on the circumstances.
7. Submit 24-hour Notification of Unplanned Asbestos Discovery.
8. Submit 10-day Notification of Planned Asbestos Management.

-11-

**SECTION 250
ENVIRONMENTAL, HEALTH AND SAFETY MANAGEMENT**

9. Submit 24-hour Notification of Unplanned Asbestos Discovery.
 10. Submit 10-day Notification of Planned Asbestos Management.
- (e) *Risk Assessment and Determinations for Further Management Or Remediation.* Risk assessment and determinations for further management or remediation must be closely coordinated with the Department.

250.08 Methamphetamine Lab Sites. Demolition of former Methamphetamine (meth) labs is enforced by the Governing Authority, which varies from county to county. The Contractor shall demolish all buildings that are identified as former meth labs, as listed in public listings by the Governing Authority. The Contractor shall provide evidence of demolition to the Governing Authority, obtain receipt of such evidence by the Governing Authority, and shall submit these to Department immediately following demolition.

Septic tank removal at known meth lab sites shall undergo preliminary assessment by an Industrial Hygienist or Certified Industrial Hygienist to determine proper removal and disposal. Work shall proceed in accordance with the recommendations of the Hygienist.

	Nitrate (as N)	50,000			
	TSS	NL			

Notes:

PL = Value set at the maximum permissible level (from time to time) under the applicable Environmental Approval.

µg/L = Concentrations in micrograms per liter.

NL = No Limit, Developer responsible for meeting discharge standard regardless of influent concentrations.

SU = pH values to be measured in standard units.

Schedule 18 Right-of-Way

1. General

1.1. Possession of the Right-of-Way

- 1.1.1. The Department shall provide Developer with Possession of each ROW Parcel, and any Additional ROW Parcels, pursuant to Section 7.2.1.b of the Project Agreement.
- 1.1.2. Set out in Appendix A to this Schedule 18 are all the ROW Parcels that the Department will acquire pursuant to the terms of this Schedule 18 and this Agreement. For certainty, Appendix A does not include any ROW Parcel that comprises part of the Existing CDOT Right-of-Way.
- 1.1.3. Developer shall be responsible for acquiring any Additional ROW Parcels, any Temporary Properties, any Temporary Easements and any Permit Areas, subject to the terms of this Schedule 18 with respect to any Additional ROW Parcels and any Temporary Easements and to Section 8.4 of the Project Agreement with respect to any Permit Areas.
- 1.1.4. Except to the extent expressly provided in this Agreement, including in this Schedule 18, the Department shall not have any obligation, liability or responsibility with respect to the acquisition, Property Management, maintenance or disposition of, or otherwise with respect to any part of the Site.

1.2. Early Access and Use

- 1.2.1. Prior to the Project License Start Date for any ROW Parcel or any Additional ROW Parcel, Developer may from time to time submit written requests for the Department's Acceptance to visit and inspect any such parcel for purposes of facilitating, and preparing for, Developer's performance of the Work. Developer shall submit any request pursuant to this Section 1.2.1 in such form, and accompanied by such materials (including a Permission to Enter Property Form), as the Department may require.
- 1.2.2. Developer may also from time to time submit written requests for the Department's Approval to enter any other property:
 - a. to which the Department is entitled to grant such permission to enter; and
 - b. that is not or will not be within a ROW Parcel or an Additional ROW Parcel,for surveying, non-intrusive environmental investigation and appraisal purposes, and no other purposes, in each case using a Permission to Enter Property Form.
- 1.2.3. Developer shall submit any request pursuant to either Section 1.2.1 or Section 1.2.2 of this Schedule 18 no later than five Working Days prior to the proposed date of entry.
- 1.2.4. The Department's Acceptance or Approval, as applicable, of any Developer request submitted pursuant to either Section 1.2.1 or Section 1.2.2 of this Schedule 18 shall be subject to such conditions as the Department may require (in the case of an Acceptance, acting reasonably and, in the case of an Approval, in its discretion), and Developer having provided (or having procured that a Subcontractor has provided) satisfactory evidence to the Department that there is in place all necessary insurance coverage required by the Department in connection with such access and the activities Developer proposes to conduct during such early access and, as applicable, use. Developer, and not the Department, shall be responsible for any costs and expenses associated with Developer's satisfaction of the conditions required by the Department pursuant to this Section 1.2.4.
- 1.2.5. Developer shall be solely responsible for any and all damages and claims resulting from its access to any property pursuant to Sections 1.2.1 and 1.2.2 of this Schedule 18 and any activities performed during such access and, as applicable, use.

1.3. Partial Acquisitions

- 1.3.1. The ROW Parcels set out in Appendix A to this Schedule 18 include certain partial acquisitions from the total ownership of properties depicted in the Right-of-Way Exhibits in Schedule 10B (Contract Drawings). The Right-of-Way Exhibits for private ownerships and the Onsite Outfall System in Schedule 10B Contract Drawings depict entire ownerships of properties from which a partial acquisition will be needed. The maximum entire ownership has been identified simply for identification purposes and the Department's provided partial acquisition shall be the construction limits identified in the Reference Design.
- 1.3.2. With respect to such partial acquisitions identified in Appendix A to this Schedule 18 (for certainty, each of which shall be with respect to a specific ROW Parcel as set out in Appendix A to this Schedule 18) that are required by Developer for purposes of its design and performance of the Construction Work, the following will apply:
- a. If Developer elects to have the Department acquire and deliver as a ROW Parcel any such partial acquisition, Developer shall give the Department notice to commence such acquisition.
 - b. If Developer gives any such notice, the Department will be responsible for acquiring the relevant partial acquisition as identified in the Reference Design. For such acquisitions, the Department will either compensate the property owner for existing site improvements that are impacted, or otherwise move or relocate them. According to the design requirements of CCD, the right-of-way boundary of the maximum partial acquisition will be 6 inches from the back of the sidewalk, where applicable.
 - c. In the event that:
 - i. any differences between Developer's design and the Reference Design;
 - ii. any differences between the design, construction, operations and/or maintenance means and methods Developer chooses for any portion of the Project and those set out, referred to or contemplated in any Governmental Approval (including, for certainty, any Department Provided Approval) or the application for the same;
 - iii. the prior acquisition of any Additional ROW Parcel, Developer-risk Permit Area or any Temporary Property Rights; and/or
 - iv. any breach of Law, Governmental Approval, Permit or this Agreement, fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence by or of any Developer-Related Entity,requires the acquisition of additional property, such property shall be acquired by Developer as Additional ROW Parcels, Developer-risk Permit Areas and/or Temporary Property Rights.
 - d. Special provisions for ROW Parcel RW-103
 - i. As an additional condition precedent to the Department's commencement of any partial acquisition of the ROW Parcel identified as RW-103 in Appendix A to this Schedule 18 (the "Safeway Parcel"):
 - A. any notice given by Developer pursuant to Section 1.3.2.a of this Schedule 18 shall be accompanied by a CAD file of the design and proposed line work;
 - B. Developer shall have prepared its design in compliance with Section 9.4.15 of Schedule 10 (Design and Construction Requirements) as it relates to design exception DE-3 as listed in Table 9-1 of Schedule 10 (Design and Construction Requirements) (a copy of which is in the Reference Documents); and

- C. in addition, the Department shall be reasonably satisfied that Developer's design with respect to the Safeway Parcel shall result in: (1) the elimination of impacts to property occupant Safeway's security building; (2) avoidance of any impacts to property occupant Safeway's queuing operations for incoming and outgoing transport vehicles at the northeast corner of the property near Dahlia Street; (3) minimization of the loss of parking along the north boundary of the Safeway Parcel; (4) reduction in the total area of ROW acquisition required; and (5) reduction in all other private use impacts of the Project in respect of the Safeway Parcel.
- ii. Following any partial acquisition of the Safeway Parcel, from the Project License Start Date with respect to the same, Developer shall be responsible, as part of the Construction Work, for the rectification of the following resultant property impacts to the Safeway Parcel:
 - A. removal of the existing on-site drainage facilities including a separate detention pond and containment pond in the northwest portion of the Safeway Parcel. The containment pond shall be replaced separately from and adjacent to the detention pond southeast of the Colorado Boulevard interchange;
 - B. removal of property occupant Safeway's parking lot and all other private improvements located within the partially acquired portion of the Safeway Parcel;
 - C. replacement of driveways and access; and
 - D. removal and replacement of any landscape/irrigation systems.
- iii. Subject to Developer's compliance with the foregoing, the Department will be responsible for compensating the owner of the Safeway Parcel for the replacement of the loss of parking spaces as a result of the Construction Work.

1.4. ROW Manager

A ROW Manager shall be retained by Developer if Approval of Additional Right-of-Way or Temporary Easement acquisition by Developer is requested of the Department pursuant to Section 3.4 of this Schedule 18. Developer's ROW Manager shall be responsible for all of Developer's acquisition and relocation coordination and compliance requirements pursuant to Sections 3.4 and 3.5 of this Schedule 18. Developer's ROW Manager shall be qualified and Approved by the Department for both acquisition and relocation activities.

1.5. Tracking of Developer Responsibilities

- 1.5.1. For Additional Right-of-Way and Temporary Easement acquisitions and Property Management Activities that are the responsibility of Developer pursuant to this Schedule 18, Developer must establish, and provide the Department with, a project tracking and Quality Control/Quality Assurance system, the form and substance of which is subject to the Department's Acceptance, provided that, at Developer's discretion, such system may be either in the form of specialized spreadsheets or a proprietary software program.
- 1.5.2. The project tracking and Quality Control/Quality Assurance system must show the status of field survey, ROW plans, appraisal and appraisal review, acquisition, relocation, property management and Quality Control/Quality Assurance status for all ROW Parcels, Additional ROW Parcels and Temporary Easements.

2. Property Management

2.1. Property Management – General

- 2.1.1. Property Management activities include responsibility for acquired properties after acquisition and relocation has been completed and possession has been obtained, as such responsibilities are described in Chapter 7 of the CDOT Right of Way Manual, including:
- a. Regular inspection and securing of properties to prevent and/or detect damage or unauthorized occupancy;
 - b. Installation of security fencing;
 - c. Investigation, removal, treatment, storage, transportation, management or remediation of Hazardous Substances present on or in any building or structure (including basements or foundations), including those defined in Section 23.13.1 of Schedule 17 (Environmental Requirements), which Hazardous Substances shall not, for certainty, at any time constitute Unexpected Hazardous Substances;
 - d. Preparing Structure Survey Assessment Reports (“SSAR”) as defined in Section 23.13.2 of Schedule 17 (Environmental Requirements);
 - e. Disconnecting Utilities;
 - f. Boarding-up properties;
 - g. Preparation of a Stormwater Management Plan (“SWMP”);
 - h. Installation of the SWMP improvements as required by the SWMP;
 - i. Building or other structural demolition; and
 - j. Miscellaneous maintenance if temporarily necessary,
- (all such activities and responsibilities, “Property Management”).

2.2. Property Management Activities and Responsibilities

- 2.2.1. Subject to Section 2.2.2 of this Schedule 18 and the terms of this Agreement:
- a. Developer shall be responsible for all Property Management activities for:
 - i. all ROW Parcels and any Additional ROW Parcels, with effect from the applicable Project License Start Date;¹ and
 - ii. any Temporary Easements, with effect from the Calendar Day on which Developer first has the benefit of such easement; and
 - b. to the extent Chapter 7 of the CDOT Right of Way Manual identifies CDOT as the responsible party for specified Property Management activities, Developer shall take the place of CDOT in performing, and being fully responsible for, such activities to the extent Developer is responsible for such activities pursuant to Section 2.2.1.a of this Schedule 18.
- 2.2.2. To help expedite the early availability to Developer of ROW Parcels set out in Appendix A to this Schedule 18 that the Department intends to acquire before the date of issuance of NTP1, the Department will assist Developer by undertaking, subject to Section 2.2.3 of this Schedule 18, Property Management activities for those parcels that are identified in Appendix A to this Schedule 18 as being subject to Department Property Management. The Department shall complete Property Management activities for which it is responsible pursuant to this Section 2.2.2 no later than the Project License Start Date with respect to each such ROW Parcel. For certainty, completion of such activities shall include completion of Property Management comprised of building or other structural demolition.

¹ **Note to Proposers:** Note that the requirement for Developer to perform Property Management activities applies to both (a) the ROW Parcels set out in Appendix A and (b) the Existing CDOT ROW.

- 2.2.3. The Department's obligations under Section 2.2.2 of this Schedule 18 shall not include:
- a. without prejudice to Developer's rights and obligations arising as a result of the occurrence of any Supervening Event, any responsibility or liability for investigation, removal, treatment, storage, transportation, management or remediation of any subsurface storage tanks or other subsurface Hazardous Substances (including in groundwater); or
 - b. any Property Management activities that are required as a result of:
 - i. any differences between Developer's design and the Reference Design;
 - ii. any differences between the design, construction, operations and/or maintenance means and methods Developer chooses for any portion of the Project and those set out, referred to or contemplated in any Governmental Approval (including, for certainty, any Department Provided Approval) or the application for the same;
 - iii. the acquisition of any Additional ROW Parcel, Developer-risk Permit Area or any Temporary Property Rights; and/or
 - iv. any breach of Law, Governmental Approval, Permit or this Agreement, fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence by or of any Developer-Related Entity.
- 2.2.4. For acquisitions by Developer, Developer shall prepare and submit to the Department for Acceptance its own SWMP plans. Developer shall obtain the appropriate permit from the Colorado Department of Public Health and Environment ("CDPHE") and/or the City of Denver for all SWMP improvements and install and maintain such improvements for the entire Construction Period.
- 2.2.5. Developer shall also prepare and submit to the Department for Acceptance a Property Management Plan, which plan shall comply with the Materials Management Plan ("MMP") as defined in Section 23.8 of Schedule 17 (*Environmental Requirements*). The Property Management Plan shall establish administrative and technical means for Property Management, including the security, Hazardous Substances assessment, demolition, debris removal, site clearing, storm water management improvements, and clean-up of building structures and property improvements acquired as part of any ROW Parcel set out in Appendix A to this Schedule 18, any Additional ROW Parcel or any Temporary Easement. The Property Management Plan shall specify how Developer's Property Management activities will conform to Chapter 7, Property Management, of the CDOT Right of Way Manual. The Property Management Plan shall reference the Structure Survey Assessment Plan ("SSAP") (as defined in Section 23.13.2 of Schedule 17 (*Environmental Requirements*)) with respect to the procedures for completing building and structure surveys for asbestos containing building materials ("ACBM"), lead-containing paint ("LCP"), lead-based paint ("LBP"), and universal wastes or regulated materials that could not be disposed at a Subtitle D landfill (e.g., "Hazardous Waste" as defined by the Resource Conservation and Recovery Act; "Universal Wastes" as defined by the EPA and Part 273 of the Colorado Hazardous Waste Regulations; chlorofluorocarbons as defined by the Clean Air Act; and polychlorinated biphenyls as defined by the Toxic Substances Control Act). The Property Management Plan shall be submitted to the Department for Acceptance no later than 60 Calendar Days after the date of issuance of NTP1. In addition, when Developer receives Approval from the Department to acquire Additional ROW Parcels or Temporary Easements pursuant to Section 3.4 of this Schedule 18, the Property Management Plan will be updated by Developer, subject to the Department's Acceptance, to include any such Additional ROW Parcels and/or Temporary Easements in the plan.
- 2.2.6. Environmental Site Assessments
- a. The Department has obtained, and made available as Reference Documents, Phase I Environmental Site Assessments ("ESAs") for each parcel set out in Appendix A to this Schedule 18.

- b. For any such ESA that was marked as “preliminary” when made available as a Reference Document, the Department shall prepare and deliver to Developer an updated “final” ESA with respect to the relevant parcel(s) set out in Appendix A to this Schedule 18 promptly after the Department has obtained sufficient access from the property owner of such parcel(s) to perform the necessary inspection required for a “final” ESA.

2.3. Property Management – Demolition

2.3.1. Demolition by Developer as part of its Property Management activities or the Construction Work shall not commence until:

- a. The Project License Start Date occurs with respect to the relevant ROW Parcel or Additional ROW Parcel;
- b. Structure Survey Assessment Reports (“SSAR”s) as defined in Section 23.13.2 of Schedule 17 (Environmental Requirements) and historic Level II documentation as defined in Section 12 of Schedule 17 (Environmental Requirements) has been completed and all abatement of identified Hazardous Substances in and on such buildings or structures has been completed including the submittal of the Structure Survey Completion Report (“SSCR”) as defined in Section 23.13.9 of Schedule 17 (Environmental Requirements), improvements have been boarded up, all Utilities have been disconnected, all SWMP improvements are in place, and all necessary Governmental Approvals and Permits have been obtained from the City of Denver (including a demolition permit from the City of Denver, the process to obtain which includes coordination with multiple parties and departments, including the Denver Landmark Preservation Commission, the city’s forestry department, formal notification of adjoining property owners, disconnection of utilities by city approved contractors, written verification of termination of utility service by such contractors, and proof of receipt of a demolition permit from CDPHE) and/or the CDPHE, as applicable, all in accordance with the Environmental Requirements.
- c. Should newly identified impacts to historic resources result in a determination of adverse effect pursuant to 36 CFR 800.5, Developer has completed historic Level II documentation as defined in Section 12 of Schedule 17 (Environmental Requirements).

2.3.2. All such demolition must be completed prior to commencing any Construction Work (other than preparatory activities for such demolition, the demolition itself, and non-intrusive inspections of the relevant buildings or structures) on the property. If such demolition is not immediately completed for any reason, Developer shall be responsible for all ongoing Property Management for any existing improvements until demolition is completed.

2.3.3. Developer shall, as part of its Property Management activities and in accordance with Law and the Environmental Requirements, properly abate, remove and/or dispose of, at its own cost, all Hazardous Substances that are the subject of such activities, including those items defined in Section 23.13.1 of Schedule 17 (Environmental Requirements), other than solid waste prior to demolition of any buildings or other structures. Developer shall also obtain all permits or other approval documents required by Governmental Authorities including, but not limited to, a Demolition Plan Accepted by the Department in accordance with the Occupational Health and Safety Administration (OSHA) demolition regulations 1926.850, prior to demolition of any buildings or other structures. Such documentation shall be submitted to the Department for Acceptance at least 15 Working Days prior to proposed demolition.

3. Additional Right-of-Way, Temporary Easements, and Permits

3.1. Acquisition and Relocation Standards

3.1.1. To the extent permitted by this Schedule 18, all activities related to acquisition of Additional ROW Parcels, Temporary Easements and Permit Areas and the relocation of displaced occupants or personal property shall be performed by Developer in accordance with Law and applicable procedures, including (as applicable):

- a. The Federal Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended (the "Uniform Act"), including regulations promulgated pursuant to such Act, which appear at 49 CFR Part 24;
 - b. Right-of-Way Requirements for Design/Build Projects, 23 CFR 710.313;
 - c. The Colorado Relocation Assistance and Land Acquisition Policies Act, 24-56-101, et seq., C.R.S.;
 - d. The Colorado Eminent Domain Act, Section 38-1-101, et seq., C.R.S.;
 - e. The most recent CDOT Right of Way Manual; and
 - f. The requirements of Appendices B and C to this Schedule 18.
- 3.1.2. In relation to any acquisition of Additional ROW Parcels, Temporary Easements and Permit Areas, and the relocation of displaced occupants or personal property, all appraisal, acquisition, negotiation, and relocation activities shall be performed as applicable by consultants or Developer staff or Subcontractors that have been Approved by the Department for such purpose, subject to the Department's Acceptance of Developer's support documentation for such activities.

3.2. Acquisition of Right of Way by the Department

- 3.2.1. In the event Developer requests parcels of land in addition to the ROW Parcels for any reason, including to accommodate its design (including, for certainty, of the Onsite Outfall System), and the Department Approves such request, Developer shall be responsible for such acquisitions and such parcels, as acquired, shall be Additional ROW Parcels. All Additional Right-of-Way shall be held or acquired pursuant to Section 7.3.1 of the Project Agreement and this Section 3 of this Schedule 18.
- 3.2.2. Set out in Appendix A to this Schedule 18 are all the ROW Parcels that the Department will acquire, exclusive of Temporary Property and Additional ROW Parcels which are, for certainty, the responsibility of Developer to acquire. The ROW Parcels that the Department will acquire include:
- a. Selected total acquisitions of residential and commercial properties;
 - b. Partial acquisitions (including acquisitions in fee or for permanent easements);
 - c. Acquisitions of fee interests, permits, permanent easements, and/or temporary easement acquisitions from the Union Pacific Railroad (UPRR), Nestle Purina Petcare, NK Sharma, Paul and Maria Cristina Arrieta, Denver Rock Island Railroad (DRIRR), F.C. Equities, Inc., and Burlington Northern Railway Company (BNSF), along with properties adjoining the BNSF tracks, including Weakland Investments LLC, Manna Pro West, and Farmers Marketing Association; and
 - d. Right-of-way interests from the City of Denver.
- 3.2.3. Certain ROW Parcels to be acquired by the Department as set out in Appendix A to Schedule 18 specify under the column titled "Date First Available for Possession" that the date of Possession shall follow a notice from Developer. For such ROW Parcels, Developer shall, pursuant to Section 3.4 of this Schedule 18, provide the Department with a written request that the Department proceed with the acquisition of the identified ROW Parcel. The Department shall have no obligation to proceed with the acquisition and delivery of Possession of any such ROW Parcel unless and until it receives such a request (such request to be submitted no later than 18 months prior to the anticipated Substantial Completion Date (as determined by reference to the Project Schedule)) together with Developer's design as available at the time of the notice or such other information with respect to such ROW Parcel supporting any such request as the Department may reasonably require.

3.3. General Requirements Before Developer Can Initiate Acquisition of Additional Right-of-Way

If Developer identifies any:

- a. Additional ROW Parcel that is permanently needed to construct or maintain the Project;
- b. Additional ROW otherwise necessary to meet the Technical Requirements; or
- c. Additional rights beyond those which Developer otherwise has or will have under the Project License in relation to any part of the Right-of-Way or any previously acquired Additional ROW Parcel; or
- d. Permits to be issued, granted or entered into by or with any Railroad or the Regional Transportation District to provide Developer with a Developer-risk Permit Area,

then it shall only take any action to secure or acquire access to or any interest in any such Additional ROW Parcel, Permits, or additional rights with the Department's Approval (and, in the case of any such Permits, otherwise pursuant to Section 8.4 of the Project Agreement) and also:

- e. Ensuring that any Additional ROW Parcels or additional rights shall be held or acquired, as applicable, pursuant to Section 7.3.1 of the Project Agreement;
- f. Paying or committing to pay all the Department's and the State's costs and expenses, provided that, in paying all such costs and expenses, Developer is not acquiring, and shall not be deemed to be acquiring, any interest in real property for Developer; and
- g. Agreeing to bear the risk of any time and cost impacts to the Work related to securing or acquiring access to or any interest in such Additional ROW Parcel or additional rights.

3.4. Request for Additional Right-of-Way and Temporary Easements

3.4.1. In accordance with 23 CFR §710.313(d)(1)(i), Developer must submit written acquisition and relocation procedures to the Department for Approval prior to commencing right-of-way activities for the acquisition of Additional ROW Parcels and Temporary Easements. These procedures shall contain a prioritized appraisal, acquisition and relocation strategy as well as check points for the Department's Acceptance, such as the Department's determination of just compensation, replacement housing payment calculations, replacement housing payment and moving cost claims, appraisals, administrative and stipulated settlements that exceed determined thresholds based on a risk management analysis, etc.

3.4.2. Each such request shall include the following documentation:

- a. Copies of Developer's latest design files;
- b. Identification of each Additional ROW Parcel, identification of each Additional ROW Parcel as being a total acquisition or partial acquisition either in fee or for a permanent easement, or Temporary Easement (where an illustration of each parcel superimposed on an aerial photograph with approximate area of the parcel will be sufficient), and an explanation of a justification for its need; and
- c. Identification of Developer-risk Permit Areas for which Developer must obtain Permits from Railroads or the Regional Transportation District.

3.4.3. A preliminary cost estimate for each parcel that includes separate values for land, improvements, damages or benefits (if any), relocation (if applicable), and survey, Right of Way Plan preparation, appraisal, and acquisition costs. This information is not applicable to, or necessary for, Permits.

3.5. Acquisitions of Additional Right-of-Way and Temporary Easements

3.5.1. If written Approval is obtained from the Department pursuant to Section 3.4 of this Schedule 18, Developer may begin the process for the acquisition of the proposed Additional ROW Parcel and/or Temporary Easement at its own cost and expense. Such process includes the activities

required to be performed pursuant to this Section 3.5 and as set out in Appendix B to this Schedule 18.

- 3.5.2. All aspects of Developer's process for property acquisitions under this Schedule 18 shall be conducted in compliance with Appendix B to this Schedule 18 and the CDOT Right of Way Manual, including Right of Way Plan preparation, appraisal and acquisition. The appraisal review function pursuant to the CDOT Right of Way Manual, including the issuance of a Determination of Fair Market Value (FMV), is solely the Department's responsibility. Upon issuance of an FMV by the Department, in its discretion, Developer may proceed with acquisition negotiations and relocation, if needed. For any fee parcels acquired as Additional Right-of-Way, Developer shall obtain and provide appropriate release documents for any encumbrances affecting the acquisition parcels, including but not limited to releases of deeds of trust, mortgages, easements, and liens. If liens or encumbrances affect permanent easement parcels being acquired as Additional Right-of-Way, the Department will be notified of such liens and encumbrances and Developer will be required to take the action requested by the Department with respect to such liens and encumbrances, including subordination or release of the liens and encumbrances. An appropriate environmental clearance, as specified in Schedule 17 (Environmental Requirements), shall be required as a prerequisite for Approval of Right of Way Plans for any Additional ROW Parcel.
- 3.5.3. If the proposed Additional ROW Parcel or Temporary Easement is to be acquired from a landowner with whom the Department has an unsettled condemnation case, Developer shall ensure that, to the extent possible, the same appraiser that prepared the appraisal for the Department's condemnation case shall value the proposed Additional ROW Parcel or Temporary Easement. The Department is responsible to review such additional appraisal and issue a FMV in its discretion. No offer can be made to such property owner until such FMV has been issued. Developer must obtain the Approval of the Department's ROW Manager of certain administrative settlements as described in Appendix B to this Schedule 18. Administrative settlements are settlements over the amount of the Department's Approved offer to purchase that are made to the landowner.
- 3.5.4. If authorization is obtained from the Department for the purchase of any Additional ROW Parcel and/or Temporary Easement, Developer's ROW Manager shall meet with the Department, every two weeks, to review the status of the acquisition and relocations and confirm that Quality Control/Quality Assurance measures have been followed. Such periodic reviews will continue until the completion of the acquisition, any related relocation, and Department's Approval of the acquisition and relocations. At such periodic status meetings, Developer shall provide the Department with up-to-date reports from Developer's tracking and Quality Control / Quality Assurance system as established pursuant to Section 1.5 of this Schedule 18 on the status of ROW plan preparation, appraisal and appraisal review, acquisition, relocation and property management activities.

3.6. Relocation

- 3.6.1. For Additional ROW Parcels and any Temporary Easements that may be necessary for total and partial acquisitions, either in fee or for permanent easement, acquired by Developer pursuant to this Schedule 18, Developer shall relocate any occupants and personal property in accordance with the Uniform Act and the CDOT Right of Way Manual.
- 3.6.2. If the acquisition of any Additional ROW Parcel or Temporary Easement requires occupant or personal property relocation, such relocation shall be conducted in compliance with Appendix C of this Schedule 18 and Chapter 5 of the CDOT Right of Way Manual. Developer shall also comply with the requirements of 23 CFR §710.313(d)(1)(i) as well as 23 CFR §710.313(d)(1)(ii), which specifies that Developer's written relocation plan must provide reasonable time frames for the orderly relocation of residents and businesses as provided at 49 CFR §24.205. These time frames will be based on best estimates of the time it will take to acquire such Additional ROW Parcel or Temporary Easement and relocate families in accordance with certain legal requirements and time frames, which may not be violated. Accordingly, the time frame estimates

in Developer's relocation plan for the acquisition shall not be compressed in the event that other necessary actions preceding acquisition miss their assigned due dates.

- 3.6.3. Without limiting Developer's obligations to comply with Chapter 5 of the CDOT Right of Way and 23 CFR §710.313(d), Developer shall follow the procedures set out in Appendix C to this Schedule 18 with respect to any occupant or personal property relocation conducted in connection with any acquisition under Section 3.4 of this Schedule 18.

3.7. Condemnation

- 3.7.1. If Developer cannot reach an agreement with a landowner for the acquisition of an Additional ROW Parcel or a Temporary Easement, Developer may submit in writing a request for Approval from the Department that it acquire the Additional ROW Parcel or Temporary Easement through condemnation proceedings by the Department. Any exercise by the Department of its condemnation rights shall be in Department's discretion. If the Department agrees to exercise such rights, the State Attorney General's Office will file and prosecute all condemnations needed for any such acquisition.
- 3.7.2. Any request by Developer pursuant to Section 3.7.1 of this Schedule 18 shall include the submission to the Department for Approval of a properly completed "Condemnation Memorandum" and "Check List Form" in accordance with the instructions contained in the CDOT Right of Way Manual. The condemnation request shall include a certified check payable to the Clerk of the District Court of the appropriate county in the amount of any required condemnation filing fee and the determination of fair market value or value finding.
- 3.7.3. Developer shall work with the Department to establish a realistic schedule for filing condemnations, and setting and holding immediate possession hearings, which schedule must be Approved by the Department. If a settlement is negotiated with a property owner after the filing of a condemnation, Developer will be consulted on the settlement, provided that the Department shall have discretion to decide whether to Accept the settlement. If a settlement is Accepted by the Department, Developer shall pay the full amount of the settlement. If a valuation trial is held, Developer shall be responsible for payment of the full amount of the valuation trial award, including, if any, all interest, costs and attorneys' fees per CRS 38-1-122, expert witness fees, court reporter, compensation for commission members, court costs, and any other associated costs not identified herein. The Department may require Developer to provide personnel for pre-trial and court testimony for any condemnation request made by it pursuant to Section 3.7.1 of this Schedule 18.
- 3.7.4. Notwithstanding the foregoing, Developer does not and shall not have any power to file or prosecute condemnations or otherwise exercise any power of eminent domain, and neither the Enterprises nor the Department shall have any obligation to exercise, or to seek or secure the exercise, by any other Governmental Authority (including the State Attorney General's Office) of the same.
- 3.7.5. If there are any time delays as a result of condemnation proceedings, regardless of whether the Department or Developer was responsible for the particular acquisition, all costs and schedule implications associated with such time delays shall be borne by Developer.

3.8. Developer Possession of Acquired Properties

No later than five Working Days prior to the tender of payment to the property owner of the acquisition price in respect of any Additional ROW Parcel or Temporary Easement, Developer shall submit for the Department's Acceptance a complete parcel acquisition file, which shall include copies of offer letters, FMV determinations or value findings, fully executed easement documents and/or agreements, the negotiator's signed diary, a statement signed by the property owner acknowledging receipt of payment in full and, if relocation was applicable, all required relocation forms. The submittal of a parcel acquisition file shall also include a confirmation that a Quality Control/Quality Assurance review was completed on the file before submittal to the Department. Developer shall not access or take possession of any Additional ROW Parcel or Temporary Easement until the Department provides written authorization.

3.9. Delegations to Department

- 3.9.1. Notwithstanding any other provision of this Schedule 18, and subject always to compliance with Law, Developer and Department may, in their individual discretion, agree that the Department shall perform, at Developer's cost and expense, any of Developer's obligations under this Schedule 18 with respect to Additional ROW Parcel and Temporary Easement acquisition activities, including Right of Way Plan preparation, appraisal, acquisition, and relocation activities.
- 3.9.2. If the Parties agree that the Department shall undertake any such Additional ROW Parcel and Temporary Easement activities on Developer's behalf, the Department will provide Developer with an estimated cost to perform the work and anticipated approximate delivery schedule. Developer shall be responsible for any increased costs that may result from a delay in obtaining possession and completion of relocation for any Additional ROW Parcel or Temporary Easement acquired by the Department at the request of Developer pursuant to this Section 3.9.
- 3.9.3. Notwithstanding the foregoing, in the event that the Department undertakes any activities on behalf of Developer pursuant to this Section 3.9, Developer shall remain responsible for all Property Management activities in relation to any relevant Additional ROW Parcels or Temporary Easements.

3.10. Reinstatement

- 3.10.1. At the applicable Project License End Date, each ROW Parcel, Additional ROW Parcel and Temporary Easement shall be returned by Developer to the owner or interest holder in the condition required pursuant to the Technical Requirements, and otherwise in the same condition it was in prior to taking Possession (after taking into account required Property Management activities).
- 3.10.2. Developer shall, at its sole cost and expense:
 - a. Undertake all activities necessary to comply with Section 3.10.1 of this Schedule 18 (including, with respect to the ROW Parcels (or any part thereof) on which the Maintenance Yard is located, demolition of any structures built by Developer (except to the extent the Enterprises waive such requirement in writing) and remediation of any Hazardous Substance contamination resulting from Developer's use and occupancy of the Maintenance Yard); and²
 - b. Repair and/or replace or restore any damage to such properties that may occur as a result of Developer's occupancy, to a condition reasonably equal to that existing prior to the damage.
- 3.10.3. Restoration activities undertaken pursuant to Section 3.10.2 of this Schedule 18:
 - a. May include repair, replacing in kind, rebuilding, or replanting; and
 - b. Must be completed by the Project License End Date with respect to the relevant property.

4. ACCESS PERMITS

4.1. Developer to become member of Notification Association

Developer shall become a member of the applicable notification association (as defined in CRS 9-1.5) for the geographical area of the Project.

4.2. Operation of the permitting procedure

- 4.2.1. The Department will ensure that, in the operation of its procedure for issuing Access Permits in relation to the Project, CDOT will act pursuant to this Section 4.
- 4.2.2. The Department will promptly notify Developer of any application for an Access Permit that it receives and provide a copy of the application and all supporting documentation and will consult with Developer in relation to the issue of the Access Permit.

² The language referencing the Maintenance Yard will only be included if Developer elects to use the Maintenance Yard.

- 4.2.3. The Department will impose a special condition on each Access Permit in substantially the following terms:
- a. Permittee shall coordinate with Developer of the Project for work that encroaches on the highway managed lanes, and traffic control plans are to be reviewed and accepted by Developer before construction.
 - b. Permittee shall coordinate with the following Developer representative:
 - i. Name
 - ii. Address
 - iii. Phone
 - c. Any indemnification requirement contained in the permit's standard or other special provisions shall be amended to read as follows:
 - d. To the extent authorized by law, Permittee hereby assumes, releases, and agrees to indemnify, defend, protect, and save the State of Colorado and Developer from and against any loss and/or damages to the property of the State of Colorado, Developer, third parties or the Permittee's facilities, and all loss and/or damage on account of injury to or death of any person whomsoever, arising at any time, caused by or growing out of the occupation of Colorado State Highway rights of way by Permittee's facilities or any part thereof, including but not limited to installation, adjustment, relocation, maintenance or operation, or removal of existing facilities, unless such loss and/or damage arises from the sole negligence of willful conduct of the State of Colorado, Developer or their employees or agents.
 - e. Permittee shall also name Developer as an additional insured on their Commercial General Liability, Auto Liability, Pollution Legal Liability and Umbrella or Excess Liability insurance policies in addition to naming the Department as an additional insured as required by Standard Term 3.H.
- 4.2.4. The Department shall use its Reasonable Efforts to address any reasonable requirements of Developer, including in relation to scheduling, in relation to any other special condition to be included in the Access Permit.
- 4.2.5. For certainty, it shall be the responsibility of Developer, and not the Department, to verify to its satisfaction that any Person exercising a right of access pursuant to an Access Permit has complied with its obligation to have insurance cover as required by the special condition referred to in Section 4.2.3 of this Schedule 18.

5. Miscellaneous

5.1. Prohibition Against Coercion, Impairment of Safety, and Inconvenience of Displaced Occupants Still in Occupancy

- 5.1.1. Developer acknowledges and agrees that, in compliance with 23 CFR §710.313(d)(3), the Department may establish hold off zones around occupied properties whose occupants are being displaced by any ROW Parcel, Additional ROW Parcel or Temporary Easement acquisition, but have not vacated the premises. If such zones are established, no construction-related activity will be allowed within the hold off zone until the Department provides written authorization.
- 5.1.2. Developer agrees to comply with, and take all necessary steps to ensure that Department is able to comply with, 23 CFR §710.313(d)(4)-(6) with respect to any ROW Parcel, Additional ROW Parcel or Temporary Easement being acquired pursuant to this Schedule 18.

6. Deliverables

At a minimum, Developer shall submit the following to the Department for Information, Acceptance, or Approval as indicated in accordance with the specified time frames.

Table 1 Deliverables

Deliverable	Information, Acceptance, or Approval	Schedule
Property Management Plan	Acceptance	60 Calendar Days after issuance of NTP1
Certification of review of CDOT Right of Way Manual	Information	Prior to the issuance of NTP1
Parcel acquisition files	Acceptance	No later than five Working Days prior to the tender of payment to land owner
Condemnation memorandum and check list form	Approval	Concurrent with the request to the Department for property condemnation
Written notification by Developer to commence partial acquisitions	Information / Acceptance (with respect to Safeway Parcel only)	Per Developer's Project Schedule
Written request by Developer to acquire ROW Parcels that require prior notice as indicated in <u>Appendix A</u>	Acceptance	No later than 18 months prior to the anticipated Substantial Completion Date (as determined by reference to the Project Schedule).
Written request by Developer to acquire Additional ROW Parcel, including required accompanying documents	Approval	As required
Submit written acquisition and relocation procedures	Acceptance	Concurrent with Developer request to acquire Additional ROW Parcel
Permission to Enter Property Form	Acceptance	At least five Working Days prior to entering private property
Structure Survey Assessment Report ("SSAR") (per parcel structure)	Acceptance	15 Working Days prior to demolition
Demolition Plan	Acceptance	15 Working Days prior to demolition
Appraisals	Acceptance	Prior to issuance of FMV by Department
Value Findings	Approval	Prior to offer being made
Relocation Plan	Approval	With request for additional ROW
Administrative settlement	Approval	Prior to execution of MOA

7. Appendices

- Appendix A Right-of-Way Schedule
- Appendix B Steps to be followed by Developer in the Right-of-Way Acquisition Process
- Appendix C Steps to be followed by Developer in the Relocation Process

Appendix B

**Steps to be followed by Developer in the Acquisition Process for
 Additional Right-of-Way and Temporary Easements**

Note that all time frames in this table are approximations and not binding obligations upon, or assurances from, the Department.

Description of ROW Task	Entity Responsible for Completion of ROW Task	Approximate Time Frame for Completion of ROW Task	Entity Responsible for Acceptance or Approval of ROW Task	Approximate Time Frame for Acceptance or Approval of ROW Task	Comments
Survey	Developer	Variable depending on scope, 2-4 weeks for smaller surveys, 2-4 months for larger surveys	Department's Survey Unit	2-3 weeks from submission	This is only survey of property boundary and topography needed for development of Right of Way Plans.
Delivery of engineering design of improvements requiring ROW completed to a sufficient level to ensure that location, size and shape of ROW parcels will not change as design is advanced	Developer	Variable depending on scope of improvements to be designed	Developer's design review team and Department's ROW Manager	Variable depending on scope of improvements designed	Completion of sufficient design to this level is a common cause of delay in the Right of Way Plans development process
Appraisal and Appraisal review	Appraisal: Developer Appraisal review: Department	6-12 weeks per appraisal per landowner 2-4 weeks to review an appraisal	Department	2-4 weeks to review an appraisal	If the estimated value of the acquisition is \$10,000 or less, a value finding can be prepared by a real estate specialist and an appraisal review of the value estimate is not needed. All requests for valuation by a value finding vs. an appraisal must be Approved by Department.

Description of ROW Task	Entity Responsible for Completion of ROW Task	Approximate Time Frame for Completion of ROW Task	Entity Responsible for Acceptance or Approval of ROW Task	Approximate Time Frame for Acceptance or Approval of ROW Task	Comments
Acquisition negotiation	Developer	4-6 weeks for the initial negotiation. 2 weeks for a final offer letter. 2 weeks for a last and final offer letter, if given. At least 4 months from submission of request for condemnation to completing immediate possession hearing.	Department must review and Approve certain administrative settlements. Developer shall be delegated the same administrative settlement authority as the "Region" as set out in <u>Section 10.2.1</u> of CDOT Right of Way Manual. Department's Region 1 shall be delegated the same administrative settlement authority as "Central Office" as set out in <u>Section 10.2.1</u> of the CDOT Right of Way Manual.	2-4 Calendar Days to review and Approve backup documentation of completed acquisition negotiations	Developer cannot use duress or coercion in acquisition negotiations
Condemnation	Colorado Attorney General's Office	At least four months to file a condemnation petition, serve it on the parties, set and hold an immediate possession hearing. Valuation trials can take a year or more from the date of filing the condemnation petition.			All offers to purchase must be made in the Department's name, so the Attorney General's Office is properly authorized to represent the Department as the condemning authority in the condemnation proceeding.

Description of ROW Task	Entity Responsible for Completion of ROW Task	Approximate Time Frame for Completion of ROW Task	Entity Responsible for Acceptance or Approval of ROW Task	Approximate Time Frame for Acceptance or Approval of ROW Task	Comments
Certification that acquisition was completed in compliance with state and federal requirements	Developer		Department's ROW Manager		

Appendix C

Steps to be followed by Developer in the Relocation Process for Additional Right-of-Way

Note that all time frames in this table are approximations and not binding obligations upon, or assurances from, the Department.

Description of ROW Task	Entity Responsible for Completion of ROW Task	Approximate Time Frame for Completion of ROW Task	Entity Responsible for Acceptance or Approval of ROW Task	Approximate Time Frame for Completion of Acceptance or Approval of ROW Task	Comments
Relocation Planning Studies Required by 49 CFR §24.205	Developer	Variable depending on scope; 1-2 weeks for smaller studies; 60-90 Calendar Days for larger studies	Department's Headquarter ROW Unit	1-3 weeks from submission, depending on size of the study	
Relocation Advisory Services Required by 49 CFR §24.205	Developer	Variable. Typically continuous throughout relocation process.	Department's Acquisition / Relocation Supervisor. Note: Approval of a specific Deliverable is not required. Rather this is general oversight by the Department.	Generally continuous throughout relocation process.	Department's Acquisition / Relocation personnel can assist with advisory services, as needed.
Provide displaced occupants with notice that they have 90 Calendar Days to vacate the premises and, additionally, later notice that they have 30 Calendar Days to vacate the premises 49 CFR §24.203	Developer	The 90 Day notice is provided at the time the written offer to purchase the property is provided to the landowner	Department's Acquisition / Relocation Supervisor. Note: Approval of a specific Deliverable is not required. Rather this is general oversight by the Department.		90 Calendar Days for a displaced occupant to find a replacement property and move into it is the minimum required by law. As a practical matter, that is too short, especially for displaced businesses. It is desirable to lengthen this minimum time frame as much as possible. At least 6 months

Description of ROW Task	Entity Responsible for Completion of ROW Task	Approximate Time Frame for Completion of ROW Task	Entity Responsible for Acceptance or Approval of ROW Task	Approximate Time Frame for Completion of Acceptance or Approval of ROW Task	Comments
					is a better expectation. The 30 Calendar Day notice cannot be provided until possession of the underlying property is obtained.
<p><u>Business Relocation</u> Prepare and submit requests for reimbursement of all available business relocation monetary benefits, including expenses incurred searching for a replacement property, 49 CFR §24.301, moving expenses, 49 CFR §24.301, reestablishment 49 CFR §24.304, or single "in lieu" payment, 49 CFR §24.305</p>	Developer	Variable	Department's Headquarter ROW Unit	2-5 Calendar Days per submittal	Since these are reimbursable expenses, the displaced occupant must actually incur the expenses before a request for reimbursement can be prepared.

Schedule 19
Forms of Direct Agreements

Part A: Form of Lenders Direct Agreement

This Direct Agreement (this "Agreement") is dated as of [] and made among:

- (1) Colorado High Performance Transportation Enterprise ("HPTE"), a government-owned business within, and a division of, the Colorado Department of Transportation ("CDOT");
- (2) Colorado Bridge Enterprise, a government-owned business within CDOT ("BE" and, together with HPTE, each individually an "Enterprise" and, together, the "Enterprises");
- (3) [], a [describe type of legal entity and reference state of incorporation/organization] ("Developer"); and
- (4) [] as collateral agent (the "Collateral Agent") for the benefit of the Lenders (as defined below).

RECITALS

Whereas:

- (A) The Enterprises and Developer have entered into a Project Agreement for the Central 70 Project dated as of [] (as the same may be amended, modified or supplemented from time to time in accordance with its terms, the "Project Agreement"), in connection with the design, construction, financing, operation and maintenance of a portion of the I-70 East corridor in Greater Denver (the "Project") as more fully described in the Project Agreement.
- (B) Pursuant to the Financing Documents listed in Annex A, the Collateral Agent is the agent for the various providers of Project Debt to Developer (collectively, the "Lenders"), the proceeds of which will be used by Developer to finance the Project.
- (C) It is a condition precedent to both Financial Close under Schedule 1 (Financial Close) to the Project Agreement and to closing and funding of the Project Debt under the Financing Documents that the parties hereto execute this Agreement.

Now, therefore, in consideration of their mutual undertakings and agreements hereunder, and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties undertake and agree as follows:

1. DEFINITIONS, INTERPRETATION AND RELATIONSHIP TO PROJECT AGREEMENT

1.1 Definitions

- (a) Capitalized terms used but not defined in this Agreement shall have the meanings given to them in Part A of Annex A (Definitions and Abbreviations) of the Project Agreement. For certainty, uncapitalized terms used but not defined in this Agreement shall, subject to Section 1.2, be construed in accordance with their plain meaning and shall not have the meanings (if any) given to them in Part A of Annex A (Definitions and Abbreviations) of the Project Agreement.
- (b) Except as otherwise specified herein, or as the context may otherwise require, the following terms have the respective meanings set out below for all purposes of this Agreement:

"Collateral Agent" has the meaning given to it in the Preamble.

"Collateral Agent Notice" has the meaning given to it in Section 3.2(a).

“Cure Period” means, with respect to any Developer Default, the period commencing on the Enterprise Notice Date and ending on the earliest of:

- (a) the relevant Cure Period Completion Date;
- (b) any subsequent Step-out Date;
- (c) any subsequent Substitution Effective Date; and
- (d) the Expiry Date or the Termination Date, as applicable.

“Cure Period Completion Date” means, with respect to any Developer Default, the date which is:

- (a) in the case of each of the Developer Defaults numbered (9) and (19) in Section 32.1.1 of the Project Agreement, 60 Calendar Days after the relevant Cure Period Measurement Date;
- (b) in the case of each of the Developer Defaults numbered (1), (2), (3) and (26) in Section 32.1.1 of the Project Agreement, 120 Calendar Days after the relevant Cure Period Measurement Date; and
- (c) in the case of any other Developer Default, 90 Calendar Days after the relevant Cure Period Measurement Date, subject to extension for up to (I) an additional 180 Calendar Days, in the case of the Developer Default numbered (5) in Section 32.1.1 of the Project Agreement, or (II) an additional 90 Calendar Days, in the case of all other such Developer Defaults, in the case of each of (I) and (II) to the extent, and only to the extent, that:
 - (i) within such initial 90 Calendar Day period, the Collateral Agent and the Enterprises agree (each acting reasonably) to a plan specifying the remedial action to be taken in respect of the relevant Developer Default during such extended period; and
 - (ii) the period of extension requested by the Collateral Agent represents, in the reasonable opinion of the Enterprises, the period of time necessary to cure the relevant Developer Default in accordance with such plan,

provided that, notwithstanding the foregoing, if:

- (d) the Collateral Agent is prohibited by any Governmental Authority or court order, or by any bankruptcy or insolvency proceedings or other similar proceedings, from curing the relevant Developer Default; or
- (e) the Collateral Agent has commenced and is continuing to pursue all reasonably necessary processes and steps to obtain possession, custody and control of the Project and/or Developer, but despite such efforts the Collateral Agent is unable to obtain such possession, custody and control,

then the Cure Period Completion Date applicable to the relevant

Developer Default (including, for certainty, as extended in accordance with paragraph (c) of this definition) shall be extended by a period of time equal to:

- (f) in the case of paragraph (d), the period of such prohibition or inability, provided that, if the relevant bankruptcy or insolvency proceedings or other similar proceedings were commenced by the Collateral Agent acting on behalf of the Lenders, such period shall instead be the shorter of the period of:
 - (i) such prohibition or inability; and
 - (ii) 270 Calendar Days; and
- (g) in the case of paragraph (e), the shorter of the period of:
 - (i) such prohibition or inability; and
 - (ii) 180 Calendar Days.

“Cure Period Measurement Date”

means, with respect to any Developer Default, the later of:

- (a) the Enterprise Notice Date; and
- (b) the date of expiration of the relevant Developer Default Cure Period pursuant to Sections 32.1.1 and 32.1.2 of the Project Agreement.

“Default”

any event or circumstance that would (with the expiration of a grace period, the giving of notice, the lapse of time, the making of any determination or any combination of any of the foregoing) result in an Event of Default.

“Designated Account”

means [].¹

“Developer”

has the meaning given to it in the Preamble.

“Enterprises”

has the meaning given to it in the Preamble.

“Enterprise Notice”

has the meaning given to it in Section 3.1(a).

“Enterprise Notice Date”

means the date on which the Collateral Agent receives the Enterprise Notice with respect to a Developer Default as determined pursuant to Section 15.5(b).

“Event of Default”

means any “Event of Default” as defined in the Financing Documents.²

“Lenders”

has the meaning given to it in the Recitals.

“Lenders’ Subcontract Direct Agreements”

means [].³

“Private Sector Parties”

means Developer and the Collateral Agent.

“Project Agreement”

has the meaning given to it in the Recitals.

¹ See Section 2.3 below. Revise to reflect Developer’s financing plan and Lenders’ secured account requirements.

² Modify as needed to conform to the Financing Documents.

³ Define by reference to the relevant direct agreements listed in Annex A.

“ <u>Step-in Date</u> ”	has the meaning given to it in <u>Section 5.3</u> .
“ <u>Step-in Entity</u> ”	has the meaning given to it in <u>Section 5.1</u> .
“ <u>Step-in Entity Accession Agreement</u> ”	means any agreement entered into by a Step-in Entity pursuant to <u>Section 5.3</u> .
“ <u>Step-in Notice</u> ”	has the meaning given to it in <u>Section 5.1(a)</u> .
“ <u>Step-in Period</u> ”	means any period from and including the relevant Step-in Date until the earliest of: (a) the Cure Period Completion Date with respect to the relevant Developer Default; (b) any subsequent Substitution Effective Date; (c) the relevant Step-out Date; and (d) the Expiry Date or the Termination Date, as applicable.
“ <u>Step-out Date</u> ”	means the date upon which any Step-out Notice is served by a Step-in Entity pursuant to <u>Section 5.5(a)</u> .
“ <u>Step-out Notice</u> ”	has the meaning given to it in <u>Section 5.5(a)</u> .
“ <u>Subordination Date</u> ”	has the meaning given to it in <u>Section 12.2(b)</u> .
“ <u>Substitute</u> ”	has the meaning given to it in <u>Section 6.1</u> .
“ <u>Substitute Accession Agreement</u> ”	means any agreement entered into by a Substitute pursuant to <u>Section 7.1</u> .
“ <u>Substitution Effective Date</u> ”	has the meaning given to it in <u>Section 7.1</u> .
“ <u>Substitution Notice</u> ”	has the meaning given to it in <u>Section 6.1(a)</u> .

1.2 Interpretation

- (a) Headings and other internal references
 - (i) Headings are inserted for convenience only and shall not affect interpretation of this Agreement.
 - (ii) Except as the context may otherwise provide, the words “herein”, “hereof” and “hereunder”, and words of similar import, shall be construed to refer to this Agreement in its entirety and not to any particular provision of it.
 - (iii) Except as otherwise expressly provided or as the context may otherwise provide, a reference to any Section or Annex within this Agreement is a reference to such Section of, or Annex to, this Agreement.
- (b) Common terms and references
 - (i) The singular includes the plural and vice versa.
 - (ii) Words preceding “include”, “includes”, “including” and “included” shall be construed without limitation by the words that follow.
 - (iii) The word “promptly” means as soon as reasonably practicable in light of then-prevailing circumstances.

(c) References to agreements, documents and Persons

Except as otherwise expressly provided in this Agreement, a reference:

- (i) to an agreement or other document shall be construed to be a reference to such agreement or other document (including any schedules, annexes or exhibits thereto) as it may be amended, modified or supplemented from time to time in accordance with its terms and the terms of the Project Agreement and of the Financing Documents, as applicable; and
- (ii) to a Person includes such Person's successors and permitted assigns and transferees.

(d) Deadlines occurring on Calendar Days

Whenever this Agreement requires any party hereto to make any payment, or provide or deliver any Acceptance, Approval, consent, approval or like assent, notice, comment or any information or material, or otherwise complete any action or performance, in each case on or no later than a date that is a Calendar Day that is not also a Working Day, then such deadline shall automatically be extended to the next Working Day to occur after such Calendar Day.

1.3 Relationship to Project Agreement

- (a) In the event of any conflict, ambiguity or inconsistency between the provisions of the Project Agreement and the provisions of this Agreement, the provisions of this Agreement shall prevail.
- (b) Notwithstanding the foregoing Section 1.3(a), nothing in this Agreement amends or modifies any of Developer's obligations under the Project Agreement.

2. CONSENT TO SECURITY; ETC.

2.1 Enterprises' Acknowledgement of and Consent to Security

- (a) The Enterprises acknowledge notice and receipt of, and consent to:
 - (i) the collateral assignment by Developer to the Collateral Agent of any or all of Developer's rights, title and interests in, to or under or derived from, the Project Agreement (including any such rights, title and interests in, to or derived from payments made by the Enterprises to Developer thereunder), the Subcontracts, the Contractor Bonds (to the extent Developer is an obligee (or beneficiary) thereunder), the Insurance Policies and the Supplemental Indenture, in each case excluding, for certainty, any rights or interests to or in the Handback Reserve Account or the Physical Damage Proceeds Reserve; and
 - (ii) the grant by each of the Equity Members to the Collateral Agent of a security interest in its respective equity interest in Developer,in each case pursuant to the Financing Documents.
- (b) The Enterprises acknowledge and agree that none of the security interests referred to in Section 2.1(a) nor the foreclosure or enforcement of any thereof:
 - (i) constitutes (or with the giving of notice or lapse of time, or both, could constitute) either a breach of the Project Agreement or a Developer Default; or
 - (ii) requires any consent of the Enterprises that is either additional or supplemental to that granted pursuant to this Section 2.1.
- (c) For so long as any amount of Project Debt is outstanding, the Enterprises shall not, without the prior written consent of the Collateral Agent, consent to any assignment, transfer, pledge or hypothecation of the Project Agreement or any interest therein by Developer, other than as specified in this Agreement.

2.2 Payments to Designated Account

- (a) Unless directed otherwise by the Collateral Agent, the Enterprises shall pay all amounts payable by them to Developer under the Project Agreement into the Designated Account.
- (b) Developer and the Collateral Agent both agree that any payment made by the Enterprises in accordance with Section 2.2(a) shall constitute a complete discharge of the Enterprises' relevant payment obligations under the Project Agreement, in the case of any partial payment to the extent of such payment.

2.3 Limitations on Collateral Agent's Rights and Interests

- (a) The Collateral Agent acknowledges and agrees that neither it nor the Lenders shall, by virtue of the security interests referred to in Section 2.1(a), acquire any greater rights to or under the Project Agreement, the Subcontracts, the Contractor Bonds (to the extent Developer is an obligee (or beneficiary) thereunder) or Insurance Policies than Developer itself has at any particular time therein.
- (b) In the event that there are amounts (as determined pursuant to Section 17.5.1 or Section 17.5.2 of the Project Agreement, subject always to Section 17.5.3 of the Project Agreement) then past due and owing to any of the Developer's or Principal Subcontractor's, as the case may be, direct or indirect Subcontractors and laborers on account of any unpaid charges, liens, supplies, claims or invoices for work performed or materials supplied by such Subcontractors and laborers to the Project, then:
 - (i) the Enterprises; or
 - (ii) the Collateral Agent, with the prior written consent of Enterprises (such consent not to be unreasonably withheld, conditioned or delayed),

shall each be entitled to call upon any Contractor Bond to satisfy any such payment obligations; provided that, during a Cure Period or a Step-in Period, the Enterprises shall only be entitled to take such action if (A) the relevant Person has filed a verified statement of the amounts owing and unpaid with the Enterprises in accordance with C.R.S. § 38-26-107 and (B) the Collateral Agent has not called upon such Contractor Bond to satisfy such payment obligations and the Collateral Agent does not call upon such Contractor Bond within 15 Working Days after written notice from the Enterprises of the Enterprises' intent to take such action. Neither the Collateral Agent nor the Enterprises shall be entitled to call on such Contractor Bond or to use any proceeds of any call on any such Contractor Bond to satisfy performance obligations of Developer or any Principal Subcontractor (as applicable) under the Project Agreement or relevant Principal Subcontract (as applicable) until any such outstanding payment obligations have been fully satisfied.

2.4 Collateral Agent Response to Project Agreement Amendment and Waiver Requests

To the extent that any Developer consent to the amendment to, or any waiver of the requirements of any provision of, the Project Agreement requires the Lenders' and/or the Collateral Agent's consent pursuant to the Financing Documents, the Collateral Agent agrees that in response to any written request from Developer for such a consent it shall:

- (a) promptly seek instructions from the Lenders in accordance with the Financing Documents; and
- (b) once instructed, promptly respond in writing to any such request.

2.5 Agreement to Act Reasonably

The Collateral Agent acknowledges and agrees that it shall act reasonably in responding to any Developer request to the Collateral Agent made under the Financing Documents to take any action, including the giving or withholding of any consent, approval or like assent, under the Project Agreement to the extent that Developer is required to act reasonably under such circumstances by the terms of the Project Agreement, provided that the Collateral Agent shall not

be liable for breach of this provision to the extent it cannot comply due to the express and contrary instructions of the Lenders.

3. NOTICES

3.1 Enterprise Notices

- (a) The Enterprises shall give the Collateral Agent notice (any such notice, an "Enterprise Notice") promptly upon becoming aware of the occurrence of any Developer Default (and shall provide a copy of such notice to Developer), and shall specify in the Enterprise Notice:
- (i) the unperformed obligations of, and uncured breaches by, Developer under the Project Agreement of which the Enterprises are aware (having made reasonable inquiry) and the resulting potential grounds for termination of the Project Agreement in sufficient detail to enable Developer and the Collateral Agent to assess the scope and amount of any liability of Developer resulting therefrom;
 - (ii) all amounts due and payable by Developer to the Enterprises under the Project Agreement, if any, on or before the date of the Enterprise Notice and which remain unpaid at such date and the nature of Developer's obligation to pay such amounts; and
 - (iii) the amount of any payments that the Enterprises reasonably foresee shall become due and payable from Developer to the Enterprises under the Project Agreement during the relevant Cure Period.
- (b) The Enterprises:
- (i) may give the Collateral Agent multiple concurrently effective Enterprise Notices (and shall provide copies thereof to Developer);
 - (ii) may, in their discretion and without waiving their right to deliver a subsequent and contrary notice, expressly provide in any Enterprise Notice that such notice shall not constitute a notice of Developer Default for purposes of determining the start of any applicable Developer Default Cure Period pursuant to Section 32.1.1 of the Project Agreement; and
 - (iii) shall provide to the Collateral Agent (with copies thereof to Developer) updates to any Enterprise Notice given pursuant to Section 3.1(a) as and when they become aware of any unperformed obligations of, or any uncured breaches by, Developer (including non-payment of amounts that have become due) under the Project Agreement of the kind referenced in Sections 3.1(a)(i) and 3.1(a)(ii) that were not specified in the relevant Enterprise Notice or any prior updates thereto.

3.2 Collateral Agent Notices

The Collateral Agent shall:

- (a) promptly upon becoming aware of any Event of Default, give the Enterprises notice of such event (a "Collateral Agent Notice") specifying the circumstances and nature of such event (and shall provide a copy of any such notice to Developer); and
- (b) notify the Enterprises of any decision to accelerate any portion of the Project Debt or to exercise any enforcement remedies under the Financing Documents promptly upon the taking of such decision.

4. RIGHTS AND OBLIGATIONS DURING THE CURE PERIOD

4.1 No Termination during the Cure Period

At any time during a Cure Period, the Enterprises shall not, subject to the terms of this Agreement:

- (a) deliver a Termination Notice for Developer Default;
- (b) directly or indirectly, take any action to initiate, or join in or support the initiation of, any Insolvency Event in respect of Developer, provided that, for certainty, if any Insolvency Event has occurred with respect to Developer (other than as a result of the Enterprises' breach of this Section 4.1(b)), this Section 4.1(b) shall not restrict or impair the ability of the Enterprises to participate in any related proceedings in order to preserve or protect their rights under the Project Agreement and/or their interests in the Project;
- (c) suspend their performance under the Project Agreement, (including in connection with any Insolvency Event in respect of Developer) unless the grounds for suspension of performance arose during the Cure Period, provided that, for certainty, the Enterprises may exercise their rights to suspend the Work pursuant to Section 23.3 of the Project Agreement;
- (d) notwithstanding anything to the contrary in Section 9.3.4 of the Project Agreement, but subject to Section 2.3(b) of this Agreement, exercise its remedies as obligee or additional obligee (or beneficiary) under a Contractor Bond; or
- (e) fail to pay any amount that becomes due and payable from them to Developer under the Project Agreement during such period into the Designated Account in accordance with Section 2.2(a).

4.2 Collateral Agent Rights

- (a) At any time during the continuation of an Event of Default or a Developer Default (in the case of a Developer Default only, for so long as the Cure Period has not expired), without giving a Step-in Notice, the Collateral Agent may (but shall have no obligation to), at any time and at its discretion, perform or arrange for the performance of any act, duty or obligation required of Developer under the Project Agreement, or cure any breach of Developer thereunder or any Developer Default, which performance or cure by or on behalf of the Collateral Agent the Enterprises agree to accept in lieu of performance or cure by Developer (without prejudice to Developer's continued right to perform the relevant act, duty or obligation or cure the relevant breach or Developer Default) and in satisfaction of Developer's corresponding obligations. For certainty, to the extent that any breach of Developer under the Project Agreement is cured and/or any payment liabilities or obligations of Developer are performed by the Collateral Agent under this Section 4.2(a), such action shall discharge the relevant liabilities or obligations of Developer to the Enterprises.
- (b) Subject to the terms of this Agreement, no performance or cure by or on behalf of the Collateral Agent in accordance with Section 4.2(a) shall be construed as an assumption by the Collateral Agent, or any person acting on the Collateral Agent's behalf, of any of the covenants, agreements or other obligations of Developer under the Project Agreement.
- (c) The Collateral Agent may:
 - (i) give a Step-in Notice in accordance with the requirements of Section 5.1; or
 - (ii) give a Substitution Notice in accordance with the requirements of Section 6.1;provided that the Collateral Agent delivers any such notice:
 - (iii) during a Cure Period; or
 - (iv) following the occurrence of an ongoing Event of Default that is not also a Developer Default.

5. STEP-IN ARRANGEMENTS

5.1 Step-in Notice

If at any time the Collateral Agent proposes that any Person become a joint and several obligor with Developer under the Project Agreement and this Agreement in accordance with the terms hereof (any such Person, a "Step-in Entity"), the effectiveness of such arrangement shall be conditional upon:

- (a) the Collateral Agent giving a notice ("Step-in Notice") to the Enterprises, at any time that such notice delivery is permitted pursuant to Section 4.2(c), requesting the Enterprises' consent to the proposed Step-in Entity;
- (b) the Enterprises' approval (or deemed approval) of the identity of the proposed Step-in Entity pursuant to Section 5.2; and
- (c) the proposed Step-in Entity executing a Step-in Entity Accession Agreement in accordance with Section 5.3.

5.2 Grounds for Refusing Approval of Proposed Step-in Entity

- (a) The Enterprises shall not be entitled to withhold their approval of any proposed Step-in Entity that is the subject of a Step-in Notice unless:
 - (i) the proposed Step-in Entity is disqualified, suspended or debarred, or subject to a proceeding to suspend or debar it, from bidding, proposing or contracting with any state-level, interstate or Federal Governmental Authority;
 - (ii) the proposed step-in is prohibited by statute, law or regulation; or
 - (iii) there is any outstanding Developer Default numbered (20) in Section 32.1.1 that has not been remedied or waived on or prior to the date of the Step-in Notice.
- (b) The Enterprises shall be deemed to have approved any proposed Step-in Entity that is the subject of a Step-in Notice:
 - (i) in the case of any entity that is the Collateral Agent, a Lender or any of their respective Affiliates (including an entity wholly owned by a Lender or group of Lenders), on the fifth Working Day after the date on which the Enterprises receive the relevant Step-in Notice if the Enterprises have not responded to such notice within such period of time; and
 - (ii) in all other cases, on the 15th Working Day after the date on which the Enterprises receive the relevant Step-in Notice if the Enterprises have not responded to such notice within such period of time.

5.3 Step-in Date

If the Enterprises approve (or, pursuant to Section 5.2(b), are deemed to approve) a Step-in Entity pursuant to Section 5.2, the Step-in Entity shall be deemed to become a party to the Project Agreement and this Agreement on and from the date it executes a duly completed Step-in Entity Accession Agreement, substantially in the form attached hereto as Exhibit A, and submits it to Enterprises (the "Step-in Date").

5.4 Rights and Obligations on Step-in

- (a) On and from the Step-in Date and during the Step-in Period, the Step-in Entity shall be:
 - (i) jointly and severally entitled to exercise and enjoy the rights and powers expressed to be assumed by or granted to Developer under the Project Agreement;
 - (ii) entitled to exercise and enjoy the rights and powers expressed to be assumed by or granted to a Step-in Entity under this Agreement; and

- (iii) jointly and severally liable with Developer for the payment of all sums due from Developer under or arising out of the Project Agreement on or after the Step-in Date and for the performance of all of Developer's obligations (including payment obligations) under or arising out of the Project Agreement on or after the Step-in Date.
- (b) Without prejudice to Section 8, during the Step-in Period:
 - (i) the Enterprises undertake:
 - (A) not to deliver a Termination Notice for Developer Default, unless the grounds for the termination arose during the Step-in Period as a result of the occurrence of a new Developer Default (subject to the expiry of the Cure Period applicable to such new Developer Default without such Developer Default having been cured);
 - (B) not to, directly or indirectly, take any action to initiate, or join in or support the initiation of, any Insolvency Event in respect of Developer, provided that, for certainty, if any Insolvency Event has occurred with respect to Developer (other than as a result of the Enterprises' breach of this Section 5.4(b)(i)(B)), this Section 5.4(b)(i)(B) shall not restrict or impair the ability of the Enterprises to participate in any related proceedings in order to preserve or protect their rights under the Project Agreement and/or their interests in the Project;
 - (C) not to suspend their performance under the Project Agreement, (including in connection with any Insolvency Event in respect of Developer) unless the grounds for suspension of performance arose during the Step-in Period, provided that, for certainty, the Enterprises may exercise their rights to suspend the Work pursuant to Section 23.3 of the Project Agreement;
 - (D) notwithstanding anything to the contrary in Section 9.3.4 of the Project Agreement, but subject to Section 2.3(b) of this Agreement, not to exercise its remedies as obligee or additional obligee (or beneficiary) under a Contractor Bond; and
 - (E) to continue to make payments required to be made to Developer under the Project Agreement to the Designated Account;
 - (ii) the Enterprises shall owe their obligations under the Project Agreement to Developer and any Step-in Entity jointly, provided, that:
 - (A) subject to Section 5.4(b)(ii)(B), the performance of such obligations by the Enterprises in favor of either Developer or such Step-in Entity shall be a good and effective discharge of such obligations under the Project Agreement or this Agreement, as the case may be; and
 - (B) the Collateral Agent shall be entitled at any time by notice to the Enterprises to direct (such direction being binding on the Collateral Agent, the Enterprises and Developer) that, at all times thereafter while such Step-in Entity is deemed to be a party to the Project Agreement and this Agreement and subject to any further notice from the Collateral Agent, such Step-in Entity shall be solely entitled to make any decisions, to give any directions, approvals or consents, to receive any payments or otherwise to deal with the Enterprises in the place of Developer under the Project Agreement and this Agreement.
- (c) Developer shall not be relieved from any of its obligations under the Project Agreement, whether arising before or after the Step-in Date, by reason of the Step-in Entity becoming a party to the Project Agreement pursuant to a Step-in Entity Accession Agreement.

5.5 Step Out

- (a) A Step-in Entity may, at any time, by giving not less than 30 Calendar Days' prior notice ("Step-out Notice") to the Enterprises, terminate its obligations to the Enterprises under the Project Agreement and this Agreement. Upon the expiry of such notice, the Step-in Entity shall no longer be deemed to be a party to the Project Agreement and this Agreement and shall (subject to Section 5.5(b)) be released from all such obligations. The obligations of the Enterprises to the Step-in Entity in such capacity under the Project Agreement and this Agreement shall also terminate upon the expiry of such notice.
- (b) Nothing in this Section 5.5 shall have the effect of releasing a Step-in Entity from any liability that relates to the performance or non-performance of the Project Agreement or this Agreement by Developer or such Step-in Entity during the Step-in Period.

6. SUBSTITUTION PROPOSALS

6.1 Notice of Proposed Substitute

If at any time the Collateral Agent proposes to require Developer to assign its rights and transfer its obligations under the Project Agreement and this Agreement to a Person (a "Substitute") designated by the Collateral Agent (whether by mutual agreement or enforcement of rights under the Financing Documents), the effectiveness of such assignment and transfer shall be conditional upon:

- (a) the Collateral Agent giving a notice (a "Substitution Notice") to the Enterprises, at any time that such notice delivery is permitted pursuant to Section 4.2(c), requesting their approval of the proposed Substitute;
- (b) the Enterprises' approval of the identity of the proposed Substitute pursuant to Section 6.2 to the extent required thereunder; and
- (c) the proposed Substitute executing a Substitute Accession Agreement in accordance with Section 7.1.

6.2 Grounds for Refusing Approval

- (a) The Enterprises shall not be entitled to withhold, or (where the Enterprises are otherwise entitled to withhold approval) make subject to the condition of the provision of additional security or other arrangements, their approval of any proposed Substitute that is the subject of a Substitution Notice, unless:
 - (i) the proposed Substitute is disqualified, suspended or debarred, or subject to a proceeding to suspend or debar it, from bidding, proposing or contracting with any state-level, interstate or Federal Governmental Authority;
 - (ii) the proposed substitution is prohibited by statute, law or regulation;
 - (iii) after the proposed substitution, the Substitute's ability to perform its obligations as Developer under the Project Agreement (including through the use of Subcontractors) would be insufficient to ensure performance of such obligations under the Project Agreement, a determination as to which the Enterprises may base upon or take into account (A) the legal capacity, power and authority of the Substitute to become a party to, and perform the obligations of Developer under the Project Agreement and (B) the resources (including committed financial resources), past performance, relevant experience and proposed subcontracting arrangements of the proposed Substitute and, if applicable, of its proposed Subcontractors, in light of the then current performance requirements under the Project Agreement; or
 - (iv) subject to Section 7.4, there are outstanding Developer Defaults or breaches of the Project Agreement that have been previously notified by the Enterprises to the Collateral Agent, that either:

- (A) have not, to the reasonable satisfaction of the Enterprises, been remedied or waived prior to the 30th Calendar Day after the date on which the Enterprises receive the information required pursuant to Section 6.3; or
- (B) if not so remedied or waived, are not the subject of a plan approved by the Enterprises (such approval not to be unreasonably withheld, conditioned or delayed) specifying:
 - (I) subject to Section 6.2(a)(iv)(B)(II), the remedial action that the Substitute shall take after the Substitution Effective Date in order to remedy each such Developer Default or breach; and
 - (II) with respect to any such Developer Default or breach that is incapable of being cured by the proposed Substitute, the action(s) the Substitute shall take after the Substitution Effective Date in order to mitigate the material adverse effects (if any) of such Developer Default or breach on or in relation to the Project and to prevent such Developer Default or breach (if capable of repetition) from occurring in the future.
- (b) The Enterprises shall be deemed to have approved any proposed Substitute that is the subject of a Substitution Notice on the 30th Calendar Day after the date on which the Enterprises receive the information required pursuant to Section 6.3 if the Enterprises have not responded to such notice within such period of time.

6.3 Provision of Information

The Collateral Agent shall promptly provide to the Enterprises such information in relation to (i) a proposed Substitute and (ii) any Person who it is proposed shall enter into a material Subcontract with the proposed Substitute in relation to the Project, as the Enterprises shall reasonably require to enable them to make their determination whether or not to provide their approval of the Substitute pursuant to Section 6.2, including:

- (a) the name and address of the proposed Substitute;
- (b) unless such proposed Substitute is a publicly traded entity, the names of the proposed Substitute's shareholders or members together with the share capital or partnership or membership interests, as the case may be, held by each of them;
- (c) the manner in which the proposed Substitute will be financed and the extent to which such financing is committed (to the extent relevant);
- (d) copies of the proposed Substitute's financial statements (audited, if available) for its three most recent financial years (or such shorter period as such entity has been in existence) or, in the case of a special purpose company, its opening balance sheet;
- (e) a copy of the proposed Substitute's organizational documents; and
- (f) details of the resources available to the proposed Substitute and the proposed Substitute's qualifications, experience and technical competence to perform the obligations of Developer under the Project Agreement, including the names, qualifications, experience and technical or other professional competence of the proposed Substitute's directors and any key personnel who will have responsibility for the day-to-day management of its participation in the Project.

7. SUBSTITUTION

7.1 Substitution Effective Date

If the Enterprises approve (or, pursuant to Section 6.2(b), are deemed to approve) a proposed Substitute pursuant to Section 6.2, the Substitute shall execute a duly completed Substitute Accession Agreement substantially in the form set out in Exhibit B to this Agreement and submit it

to the Enterprises (with a copy to the Colorado State Controller and the other parties to this Agreement). Such agreement shall become effective on and from the earlier of (a) the date on which the Colorado State Controller countersigns the Substitute Accession Agreement and (b) the date that is 10 Calendar Days after the date on which the Colorado State Controller receives the completed Substitute Accession Agreement from Developer (the "Substitution Effective Date").

7.2 Effectiveness of Substitution

On and from the Substitution Effective Date:

- (a) the Substitute shall become a party to the Project Agreement and this Agreement in place of Developer;
- (b) Developer shall be immediately released from its obligations arising under, and cease to be a party to, the Project Agreement and this Agreement;
- (c) the Substitute shall exercise and enjoy the rights and perform the obligations of Developer under the Project Agreement and this Agreement, including, without limitation, any and all undischarged obligations of Developer that were the subject of any plan approved by the Enterprises pursuant to Section 6.2(a)(iv)(B)(II); and
- (d) the Enterprises shall owe their obligations (including any undischarged obligations of the Enterprises that were otherwise required to be performed by the Enterprises prior to the Substitution Effective Date) under the Project Agreement and this Agreement to such Substitute in place of (i) Developer and (ii) if a Step-in Date has previously occurred, any Step-in Entity.

7.3 Facilitation of Transfer

The Enterprises shall use Reasonable Efforts to facilitate the transfer to the Substitute of Developer's obligations under the Project Agreement and this Agreement.

7.4 Settlement of Outstanding Financial Liabilities

- (a) The Substitute shall pay to the Enterprises any amount due from Developer to the Enterprises under the Project Agreement and this Agreement as of the Substitution Effective Date within 30 Calendar Days after such Substitution Effective Date (or, if later, within 30 Calendar Days after the date of notice from the Enterprises to the Substitute of such amount).
- (b) If the Substitute fails to satisfy its obligations pursuant to Section 7.4(a), the Enterprises shall be entitled to exercise their rights under the Project Agreement in respect of the amount so due and unpaid.

7.5 Consequences of Substitution

On and from the Substitution Effective Date:

- (a) subject to Section 7.4 and the Substitute's obligation to perform any and all undischarged obligations of Developer that were the subject of any plan approved by the Enterprises pursuant to Section 6.2(a)(iv)(B)(II), any right of termination under the Project Agreement or this Agreement or any other right under the Project Agreement or this Agreement previously suspended by virtue of Section 4.1 and/or Section 5.4 shall be of no further effect and the Enterprises shall not be entitled to terminate either the Project Agreement or this Agreement by virtue of any act, omission or circumstance (including any breach, Developer Default, Noncompliance Points, Construction Closure Deductions or Operating Period Closure Deductions) that occurred or accrued prior to the Substitution Effective Date;
- (b) if any Step-in Entity is a party to or has any obligations under the Project Agreement or this Agreement on the Substitution Effective Date, such Step-in Entity shall cease to be a

party thereto and hereto and shall be discharged from all obligations thereunder and hereunder; and

- (c) the Enterprises, the Collateral Agent and the Substitute (replacing Developer as a party) (each acting reasonably) shall enter into a direct agreement on substantially the same terms as this Agreement.

8. REINSTATEMENT OF REMEDIES

If:

- (a) an Enterprise Notice has been given;
- (b) the Developer Default that is the subject-matter of such notice is continuing and has not been remedied or waived by the Enterprises; and
- (c) either:
 - (i) no Step-in Entity or Substitute becomes a party to the Project Agreement and this Agreement pursuant to Section 5.3 or 7.2(a), as applicable, prior to the relevant Cure Period Completion Date; or
 - (ii) a Step-in Entity becomes a party to the Project Agreement and this Agreement pursuant to Section 5.3, as applicable, prior to the relevant Cure Period Completion Date, but the Step-in Period relating to such Step-in Entity ends without a Substitute becoming a party thereto and hereto,

then, on and from the relevant Cure Period Completion Date, the Enterprises shall be entitled to:

- (iii) act upon any and all grounds for termination available to it in relation to the Project Agreement in respect of any Developer Defaults that have not been remedied or otherwise waived by the Enterprises;
- (iv) pursue any and all available claims and exercise any and all available remedies against Developer; and
- (v) if and to the extent that they are then entitled to do so under the Project Agreement, take, initiate, join in or support any action of the type referred to in Section 4.1(b).

9. REJECTION OF THE PROJECT AGREEMENT IN BANKRUPTCY OR INSOLVENCY PROCEEDINGS

- (a) If the Project Agreement is rejected by a trustee or debtor-in-possession, or terminated, as a result of any Insolvency Event involving Developer and, within 150 Calendar Days after such rejection or termination, the Collateral Agent shall so request and shall certify in writing to the Enterprises that the Collateral Agent or the Collateral Agent's Substitute intends to perform the obligations of Developer as and to the extent required under the Project Agreement, the Enterprises shall execute and deliver to the Collateral Agent (or, subject to prior compliance with the provisions of, and procedures set out in, Sections 6 and 7, any permitted Substitute) a new project agreement. Such new project agreement shall be on the same terms and conditions as the Project Agreement, except with respect to any obligations that have been fulfilled by Developer or by any party acting on behalf of or stepping-in for Developer prior to such rejection or termination. References in this Agreement to the "Project Agreement" shall be deemed also to refer to any such new project agreement as executed.
- (b) The effectiveness of any new project agreement referred to in Section 9(a) shall be conditional upon the Collateral Agent first reimbursing the Enterprises in respect of their costs incurred in connection with the execution and delivery of such new project agreement.

10. TERMINATION OF THIS AGREEMENT

This Agreement shall remain in effect until the earliest to occur of:

- (a) the date on which all of the obligations of Developer under the Financing Documents have been irrevocably discharged in full to the satisfaction of the Collateral Agent;
- (b) the date on which all of the parties' respective obligations and liabilities under the Project Agreement and this Agreement have expired or have been satisfied in accordance with the terms of the same; and
- (c) any assignment and transfer to a Substitute has occurred pursuant to Sections 6 and 7 and the Enterprises, the Collateral Agent and the Substitute shall have entered into a direct agreement pursuant to Section 7.5(c).

11. PRESERVATION OF FUNDS

The Collateral Agent acknowledges the provisions of Section 25.5 (Reinstatement) of, and Section 4 of Schedule 12 (Handback Requirements) to, the Project Agreement.

12. COMPETING STEP-IN RIGHTS

12.1 Forbearance

Notwithstanding any provision in any Principal Subcontractor Direct Agreement to the contrary, the Enterprises agree that they shall not exercise any rights of step-in, novation or other similar rights they may have under any such Principal Subcontractor Direct Agreement until:⁴

- (a) the Project Agreement has been terminated (other than pursuant to an assignment or transfer to a Substitute pursuant to Sections 6 and 7) or expired;
- (b) any relevant period under any Lenders' Subcontract Direct Agreement during which the Collateral Agent is entitled to either exercise or procure the exercise of rights of step-in, novation, transfer or any similar right thereunder has expired; or
- (c) if the Collateral Agent has exercised or procured the exercise of any such rights of step-in, novation, transfer or any similar right, the date of any step-out or similar event (howsoever defined) under the relevant Lenders' Subcontract Direct Agreement has occurred pursuant to which the Collateral Agent (on behalf of the Lenders) has voluntarily ceased to exercise such novation, transfer or similar rights.

12.2 Expiry of Lender Rights

- (a) The Collateral Agent shall notify the Enterprises promptly after the date on which the Collateral Agent either:
 - (i) has determined (and the Collateral Agent shall so certify in such notice) that the Collateral Agent and the Lenders have exhausted; or
 - (ii) has determined (A) not to exercise (or to cease exercising) or (B) that, as a result of a release in full of the security interests referred to in Section 2.1(a), it and the Lenders are no longer entitled to exercise,

their direct or indirect legal rights and remedies pursuant to the Financing Documents or a Principal Subcontract against the related Principal Subcontractor, any guarantor of such Principal Subcontractor's obligations under the relevant Principal Subcontract and any provider of any Contractor Bond that has been provided by such Principal Subcontractor in favor of Developer in accordance with Section 9.3.2.b. of the Project Agreement, it being acknowledged that any determination to exercise, not to exercise or to cease exercising any such legal rights and remedies shall be in the sole discretion of the Collateral Agent acting in accordance with the Financing Documents.

⁴ These provisions will be adjusted as needed to reflect the terms of the Lenders' Subcontract Direct Agreement(s), e.g., if there is no cure period thereunder.

- (b) Following receipt by the Enterprises of a notice from the Collateral Agent pursuant to Section 12.2(a) (the date of such receipt, the “Subordination Date”), all of the right, title and interest of the Collateral Agent (and each Lender) against:
- (i) the relevant Principal Subcontractor;
 - (ii) any guarantor of such Principal Subcontractor’s obligations under the relevant Principal Subcontract; and
 - (iii) any provider of any Contractor Bond that has been provided by such Principal Subcontractor in favor of Developer in accordance with Section 9.3.2.b. of the Project Agreement,
- pursuant to the Financing Documents or any relevant Principal Subcontract, guaranty or Contractor Bond shall be subject and subordinated in all respects to all right, title and interest of the Enterprises pursuant to the relevant Principal Subcontractor Direct Agreement.
- (c) Notwithstanding any provision in any Principal Subcontractor Direct Agreement to the contrary, the Enterprises agree that, prior to the Subordination Date, they shall not exercise any rights or remedies against any Principal Subcontractor under the related Principal Subcontractor Direct Agreement (other than rights of step-in, novation or other similar rights they are permitted to exercise pursuant to Section 12.1).

13. REPRESENTATIONS AND WARRANTIES

13.1 Representations and Warranties of Collateral Agent

- (a) Each undersigned signatory for the Collateral Agent hereby represents and warrants that he or she has been duly authorized to execute and deliver this Agreement on behalf of the Collateral Agent.
- (b) The Collateral Agent hereby represents and warrants that the Collateral Agent has full power and authority to execute, deliver and perform this Agreement.
- (c) The Collateral Agent represents and warrants that this Agreement constitutes a legal, valid and binding obligation of it, enforceable against it in accordance with its terms, except to the extent limited by applicable bankruptcy, insolvency, reorganization, moratorium or other similar laws affecting the enforceability of the rights of creditors generally and by general principles of equity.
- (d) The representations and warranties in Sections 13.1(a), (b) and (c) are made for the benefit of the Enterprises and Developer for the purpose of inducing the Enterprises and Developer to enter into this Agreement.

13.2 Representations and Warranties of Developer

- (a) The undersigned signatory for Developer hereby represents and warrants that he or she has been duly authorized to execute and deliver this Agreement on behalf of Developer.
- (b) Developer hereby represents and warrants that Developer has the [corporate] power and authority to execute, deliver and perform this Agreement.
- (c) Developer represents and warrants that this Agreement constitutes a legal, valid and binding obligation of it, enforceable against it in accordance with its terms, except to the extent limited by applicable bankruptcy, insolvency, reorganization, moratorium or other similar laws affecting the enforceability of the rights of creditors generally and by general principles of equity.
- (d) The representations and warranties in Sections 13.2(a) to (c) are made for the benefit of the Enterprises and the Collateral Agent for the purpose of inducing the Enterprises and the Collateral Agent to enter into this Agreement.

13.3 Representations and Warranties of the Enterprises

- (a) Each undersigned signatory for each Enterprise hereby represents and warrants that he or she has been duly authorized to execute and deliver this Agreement on behalf of such Enterprise.
- (b) Each Enterprise represents and warrants that it has the full power, right and authority to execute, deliver and perform each and all of its obligations under this Agreement.
- (c) Each Enterprise represents and warrants that this Agreement constitutes a legal, valid and binding obligation of the Enterprises, enforceable against them in accordance with its terms, except to the extent limited by applicable bankruptcy, insolvency, reorganization, moratorium or other similar laws affecting the enforceability of the rights of creditors generally, by general principles of equity, by the exercise by the State and its governmental bodies of the police power inherent in the sovereignty of the State and by the exercise by the United States of the powers delegated to it by the Constitution of the United States.
- (d) The representations and warranties in Sections 13.3(a) to (c) are made for the benefit of the Collateral Agent for the purpose of inducing the Collateral Agent to enter into this Agreement.

14. CHOICE OF LAW; JURISDICTION AND VENUE; DISPUTE RESOLUTION

14.1 Choice of Law

Colorado law, and rules and regulations issued pursuant thereto, shall be applied in the interpretation, execution, and enforcement of this Agreement. Any provision included or incorporated herein by reference which conflicts with said laws, rules, and regulations shall be null and void. Any provision incorporated herein by reference which purports to negate this provision or any other Special Provision set out in Section 15.14 in whole or in part shall not be valid or enforceable or available in any action at law, whether by way of complaint, defense, or otherwise. Any provision rendered null and void by the operation of this provision shall not invalidate the remainder of this Agreement, to the extent capable of execution.

14.2 Jurisdiction and Venue

All suits or actions related to this Agreement shall be filed and proceedings held in the State and exclusive venue shall be in State or Federal court in the City of Denver, and each party hereto irrevocably waives:

- (a) any objection which it may have at any time to the laying of venue of any such suit, action or proceeding brought in any such court;
- (b) any claim that any such suit, action or proceeding has been brought in an inconvenient forum; and
- (c) the right to object that such court does not have any jurisdiction with respect to such suit, action or proceeding.

15. GENERAL PROVISIONS

15.1 Amendments and Waivers

- (a) This Agreement may only be amended by a written amendment duly executed by all parties together with, to the extent required by Law, the Colorado State Controller or its designee.
- (b) Except to the extent otherwise expressly provided in this Agreement:
 - (i) any waiver of, or consent to any departure from, the requirements of any provision of this Agreement shall be approved in the discretion of the party giving it and shall be effective only if it is in writing by such party, and only in the specific

instance, for the specific time, subject to the specific conditions and for the specific purpose for which it has been given;

- (ii) no failure on the part of any party to exercise, and no delay in exercising, any right or power under this Agreement shall operate as a waiver of such right or power; and
 - (iii) no single or partial exercise of any right or power under this Agreement, including any right to give or withhold any consent or approval, nor any abandonment or discontinuance of steps to enforce such a right or power, shall preclude or render unnecessary any other or further exercise of such right or the exercise of any other right.
- (c) For certainty, any waiver of any provision of this Agreement made by a party other than the Enterprises that would result in a violation of Part B of Schedule 16 (*Mandatory Terms*) to the Project Agreement shall be null and void unless approved by the Enterprises (in their discretion).

15.2 Successors and Assigns

- (a) Except to the extent expressly provided hereunder, no party to this Agreement may assign or transfer any part of its rights or obligations hereunder without the prior written consent of the other parties, provided that the Collateral Agent may assign or transfer its rights and obligations hereunder in accordance with the terms of this Agreement to a successor Collateral Agent in accordance with the Financing Documents (in connection with which, the Enterprises agree to enter into a new direct agreement with the successor Collateral Agent on terms that are substantially the same as those of this Agreement).
- (b) This Agreement shall be binding upon and inure to the benefit of the parties hereto and their respective successors and permitted assigns.

15.3 Severability

- (a) If any provision (or part of any provision) of this Agreement is ruled invalid by a court having proper jurisdiction, then the parties shall:
 - (i) promptly meet and negotiate a substitute for such provision or part thereof which shall, to the greatest extent legally permissible, effect the original intent of the parties; and
 - (ii) if necessary or desirable, and to the extent the parties agree to do so, apply to the court which declared such invalidity for an interpretation of the invalidated provision (or part thereof) to guide the negotiations.
- (b) If any provision (or part of any provision) of this Agreement shall, for any reason, be held to be invalid, illegal, or unenforceable in any respect, such provision (or part thereof) shall not affect the validity, legality and enforceability of any other provision of (or the other part of such provision) or any other documents referred to in this Agreement, and this Agreement shall be construed as if such invalid, illegal, or unenforceable provision (or part thereof) had never been contained herein.

15.4 Entire Agreement

Subject to Section 1.3(b), this Agreement constitutes the entire agreement among the Enterprises, Developer and the Collateral Agent concerning the subject matter hereof and supersedes all prior negotiations, representations, and agreements, either oral or written, among the parties with respect to their subject matter.

15.5 Notices and Communications

- (a) Any notice shall be given in writing by means of physical (including delivery by courier and postage pre-paid certified or registered mail), digital or electronic communication, but

excluding the use of social media, messaging, broadcast and equivalent services, to the relevant party at the following addresses, as applicable:

<u>Developer</u>		<u>Enterprises</u>		<u>Collateral Agent</u>		<u>Colorado State Controller</u>	
Attention:	[]	Attention:	[]	Attention:	[]	Attention:	[]
[Address]		[Address]		[Address]		[Address]	
Phone:	[]	Phone:	[]	Phone:	[]	Phone:	[]
Email:	[]	Email:	[]	Email:	[]	Email:	[]

- (b) A notice shall be deemed to have been delivered and received:
- (i) upon receipt (confirmed by automatic answer back, read receipt or equivalent evidence of receipt), if validly transmitted by digital or electronic distribution before 3:00 p.m. (local time at the place of receipt) on a Working Day;
 - (ii) on the next Working Day following receipt (confirmed by automatic answer back, read receipt or equivalent evidence of receipt), if validly transmitted by digital or electronic distribution on or after 3:00 p.m. (local time at the place of receipt) on a Working Day;
 - (iii) upon receipt, if physically delivered in person; or
 - (iv) if delivered by courier or postage pre-paid certified or registered mail, on the date of receipt as shown by the addressee's registry or certification receipt or on the date receipt at the appropriate address is refused, as shown on the records or manifest of the United States Postal Service or independent courier.
- (c) The parties will notify each other in writing of any change of address and/or contact information, such notification to become effective five Working Days after notification.

15.6 Effect of Breach

Without prejudice to any rights a party may otherwise have, a breach of this Agreement shall not of itself give rise to a right to terminate the Project Agreement.

15.7 Counterparts

This Agreement (or an amendment or waiver in respect to this Agreement) may be executed in one or more counterparts (including by electronic signature and/or scanned or digital transmission). Any single counterpart or a set of counterparts executed, in either case, by each of the parties and, to the extent required by Law, the Colorado State Controller or its designee, shall constitute a full and original instrument for all purposes.

15.8 No Third Party Beneficiaries

It is not intended by any of the provisions of this Agreement to create any third party beneficiary rights hereunder. Notwithstanding the foregoing, the duties, obligations and responsibilities of the parties with respect to third parties shall remain as imposed by Law.

15.9 No Partnership

Nothing in this Agreement is intended or shall be construed to create any partnership, joint venture or similar relationship or among the parties. None of the parties shall hold itself out contrary to the terms of this Section 15.9.

15.10 No Interference

Developer joins in this Agreement to acknowledge and consent to the arrangements set out and agrees not to knowingly do or omit to do anything that may prevent any party from enforcing its rights under this Agreement.

15.11 Collateral Agent Liability

- (a) Notwithstanding anything to the contrary in this Agreement, but subject to Sections 3.2, 5 (but solely to the extent the Collateral Agent or any of its Affiliates is the Step-In Entity), 13.1 and 15.14(e) the Collateral Agent shall not have any liability to the Enterprises under this Agreement, unless:
- (i) the Collateral Agent expressly assumes such liability in writing; or
 - (ii) such liability arises as a result of or is made in response to any breach of Law or fraud, willful misconduct, criminal conduct, recklessness, bad faith or gross negligence by or of the Collateral Agent.
- (b) The Enterprises acknowledge and agree that the Collateral Agent shall not be obligated or required to perform any of Developer's obligations under the Project Agreement, except during any Step-in Period and then solely to the extent the Collateral Agent or any of its Affiliates is the Step-In Entity.

15.12 No Personal Liability

Each Enterprise's authorized representatives, including the Enterprise Representative, are acting solely as agents and representatives of the Enterprises when carrying out the provisions of or exercising the power or authority granted to them under this Agreement, and, as such, none of them shall not be liable either personally or as employees of the Enterprises for actions in their ordinary course of employment.

15.13 Costs and Expenses of the Parties

Except as otherwise expressly provided in this Agreement or the Project Agreement, each party shall bear its own costs and expenses in connection with the preparation, negotiation, execution and performance of this Agreement and all other related agreements.

15.14 Special Provisions

- (a) **Controller's Approval**
This Agreement shall not be valid until it has been approved by the Colorado State Controller or its designee.
- (b) **Governmental Immunity**
No term or condition of this Agreement shall be construed or interpreted as a waiver, express or implied, of any of the immunities, rights, benefits, protections, or other provisions, of the Colorado Governmental Immunity Act, C.R.S. §§24-10-101 *et seq.*, or the Federal Tort Claims Act, 28 U.S.C. §§1346(b) and 2671 *et seq.*, as applicable now or hereafter amended.
- (c) **Compliance with Law**
The Private Sector Parties shall strictly comply with all applicable Federal and State laws, rules, and regulations in effect or hereafter established, including, without limitation, laws applicable to discrimination and unfair employment practices.
- (d) **Binding Arbitration Prohibited**
The State does not agree to binding arbitration by any extra-judicial body or person. Any provision to the contrary in this Agreement or incorporated herein by reference shall be null and void.
- (e) **Software Piracy Prohibition**
State or other public funds payable under this Agreement shall not be used for the acquisition, operation, or maintenance of computer software in violation of federal copyright laws or applicable licensing restrictions. Each of the Private Sector Parties hereby certifies and warrants that, during the term of this Agreement and any extensions,

such Private Sector Party has and shall maintain in place appropriate systems and controls to prevent such improper use of public funds. If the State determines that a Private Sector Party is in violation of this provision, the State may exercise any remedy available at law or in equity or under this Agreement, including, without limitation, termination of this Agreement, as well as any remedy consistent with Federal copyright laws or applicable licensing restrictions.

(f) Employee Financial Interest / Conflict of Interest

The signatories aver that, to their knowledge, no employee of the State has any personal or beneficial interest whatsoever in the service or property described in this Agreement. Neither Private Sector Party has any interest and shall acquire any interest, direct or indirect, that would conflict in any manner or degree with the performance of such Private Sector Party's services and no Private Sector Party shall employ any person having such known interests.

(g) Vendor Offset (C.R.S. §§24-30-202 (1) and 24-30-202.4)

Subject to C.R.S. §24-30-202.4 (3.5), the Colorado State Controller, or the Enterprises, may withhold payment under the State's vendor offset intercept system for debts owed to State agencies for:

- (i) unpaid child support debts or child support arrearages;
- (ii) unpaid balances of tax, accrued interest, or other charges specified in C.R.S. §39-21-101, *et seq.*;
- (iii) unpaid loans due to the Student Loan Division of the Department of Higher Education;
- (iv) amounts required to be paid to the Unemployment Compensation Fund pursuant to Article 70-82 of Title 8 of the C.R.S.; and
- (v) other unpaid debts owing to the State as a result of final agency determination or judicial action.

(h) Public Contracts for Services

Each Private Sector Party certifies, warrants, and agrees that it does not knowingly employ or contract with an illegal alien who will perform work under this Agreement and will confirm the employment eligibility of all employees who are newly hired for employment in the United States to perform work under this Agreement, through participation in the E-Verify Program or the CDOT program established pursuant to C.R.S. §8-17.5-102(5)(c). Neither Private Sector Party shall knowingly employ or contract with an illegal alien to perform work under this Agreement or enter into a contract with a subcontractor that fails to certify to such Private Sector Party that the subcontractor shall not knowingly employ or contract with an illegal alien to perform work under this Agreement. Each Private Sector Party:

- (i) shall not use E-Verify Program or CDOT program procedures to undertake pre-employment screening of job applicants while this Agreement is being performed;
- (ii) shall notify the subcontractor and the contracting State agency within three Calendar Days if such Private Sector Party has actual knowledge that a subcontractor is employing or contracting with an illegal alien for work under this Agreement;
- (iii) shall terminate the subcontract if a subcontractor does not stop employing or contracting with the illegal alien within three Calendar Days of receiving the notice; and

- (iv) shall comply with reasonable requests made in the course of an investigation, undertaken pursuant to C.R.S. § 8-17.5-102(5), by the Colorado Department of Labor and Employment.

If a Private Sector Party participates in the CDOT program, such Private Sector Party shall deliver to the contracting State agency, institution of higher education or political subdivision a written, notarized affirmation, affirming that such Private Sector Party has examined the legal work status of such employee, and shall comply with all of the other requirements of the CDOT program. If a Private Sector Party fails to comply with any requirement of this provision or C.R.S. § 8-17.5-101, *et seq.*, the contracting State agency may terminate this Agreement for breach and, if so terminated, such Private Sector Party shall be liable for damages.

Exhibit B
Form of Substitute Accession Agreement

[on Substitute letterhead]

[Date]

**To: Colorado High Performance Transportation Enterprise
Colorado Bridge Enterprise**

Cc: []

From: [Substitute]

Ladies and Gentlemen:

Reference is made to: (a) the Project Agreement for the Central 70 Project dated as of [] (as the same may be amended, modified or supplemented from time to time in accordance with its terms, the "Project Agreement") among the Colorado High Performance Transportation Enterprise and Colorado Bridge Enterprise (together, the "Enterprises") and [] (the "Developer"); and (b) the Direct Agreement dated as of [] (as the same may be amended, modified or supplemented from time to time in accordance with its terms, the "Direct Agreement"), among the Enterprises, Developer and [] as Collateral Agent (as defined therein).

Capitalized terms used but not defined in this Substitute Accession Agreement shall have the meanings given to them in in the Direct Agreement.

1. We hereby confirm that: (a) we are a Substitute pursuant to Sections 6 and 7 of the Direct Agreement; and (b) this is a Substitute Accession Agreement for purposes of the Direct Agreement.
2. We acknowledge and agree that, pursuant to Section 7.1 of the Direct Agreement, we shall become a party as a Substitute to the Project Agreement and the Direct Agreement on and from the earlier of the date on which the Colorado State Controller countersigns this Substitute Accession Agreement and the date on which this Substitute Accession Agreement is otherwise deemed to be effective pursuant to Section 7.1 of the Direct Agreement and, accordingly, shall have the rights and powers and assume the obligations of Developer under the Project Agreement and the Direct Agreement in accordance with the terms of the Direct Agreement.
3. We hereby represent and warrant to the Enterprises that each representation and warranty made by Developer set out in Part 1 of Schedule 2 (Representations and Warranties) to the Project Agreement is true and correct as of the date hereof, except that, for such purposes, each reference to "Developer" shall be deemed to be a reference to us in our capacity as Substitute.
4. Our notice address and contact details for purposes of Section 15.5 of the Direct Agreement as follows:
[Substitute name]
Attention: []
[Address]
Phone: []
Email: []
5. Colorado law, and rules and regulations issued pursuant thereto, shall be applied in the interpretation, execution, and enforcement of this Substitute Accession Agreement. Any provision included or incorporated herein by reference which conflicts with said laws, rules, and regulations shall be null and void. Any provision incorporated herein by reference which purports to negate this provision in whole or in part shall not be valid or enforceable or available in any action at law, whether by way of complaint, defense, or otherwise. Any provision rendered null and void by the operation of this provision shall not invalidate the remainder of this Substitute Accession Agreement, to the extent capable of execution.

6. All suits or actions related to this Substitute Accession Agreement shall be filed and proceedings held in the State and exclusive venue shall be in State or Federal court in the City of Denver, and each party hereto irrevocably waives:
- (a) any objection which it may have at any time to the laying of venue of any such suit, action or proceeding brought in any such court;
 - (b) any claim that any such suit, action or proceeding has been brought in an inconvenient forum; and
 - (c) the right to object that such court does not have any jurisdiction with respect to such suit, action or proceeding.

The terms set out herein are hereby agreed to:

[To insert signature block for Substitute.]

Agreed for and on behalf of:

[To insert signature blocks for BE, HPTE and State Controller.]

Part B: Form of Principal Subcontractor Direct Agreement

This [Construction / O&M]⁵ Contractor Direct Agreement (this "Agreement") is dated as of [] and made among:

- (1) Colorado High Performance Transportation Enterprise ("HPTE"), a government-owned business within, and a division of, the Colorado Department of Transportation ("CDOT");
- (2) Colorado Bridge Enterprise, a government-owned business within CDOT ("BE" and, together with HPTE, each individually an "Enterprise" and, together, the "Enterprises");
- (3) [], a [describe type of legal entity and reference state of incorporation/organization] ("Developer");
- (4) [], a [describe type of legal entity and reference state of incorporation/organization] ("Principal Subcontractor"); [and]
- (5) [[], a [describe type of legal entity and reference state of incorporation/organization] and [], a [describe type of legal entity and reference state of incorporation/organization] ("Guarantors")]⁶.

RECITALS

Whereas:

- (A) The Enterprises and Developer have entered into a Project Agreement for the Central 70 Project dated as of [] (as the same may be amended, modified or supplemented from time to time in accordance with its terms, the "Project Agreement"), in connection with the design, construction, financing, operation and maintenance of a portion of the I-70 East corridor in Greater Denver, Colorado (the "Project") as more fully described in the Project Agreement.
- (B) The Principal Subcontractor, Developer [and the Guarantors] have entered into a [Construction / O&M] Contract for the Project dated as of [] (as the same may be amended, modified or supplemented from time to time in accordance with its terms, the "Principal Subcontract"), in connection with the [design and construction / operation and maintenance] of the Project as more fully described in the Principal Subcontract.⁷
- (C) [The Guarantors have provided to Developer a [payment and performance] guaranty dated as of [] (as the same may be amended, modified or supplemented from time to time in accordance with its terms, the "Guaranty") of the Principal Subcontractor's obligations under the Principal Contract.]
- (D) It is a condition precedent to Financial Close under Schedule 1 (*Financial Close*) to the Project Agreement that the parties hereto execute this Agreement.

Now, therefore, in consideration of their mutual undertakings and agreements hereunder, and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties undertake and agree as follows:

1. DEFINITIONS, INTERPRETATION AND RELATIONSHIP TO PROJECT AGREEMENT

1.1 Definitions

- (a) Capitalized terms used but not defined in this Agreement shall have the meanings given to them in Part A of Annex A (*Definitions and Abbreviations*) of the Project Agreement.
- (b) Except as otherwise specified herein, or as the context may otherwise require, the following terms have the respective meanings set out below for all purposes of this Agreement:

⁵ Form to be modified throughout where indicated to reflect execution by the Construction Contractor or the O&M Contractor. If necessary (depending on Developer's approach to Subcontracting the Work), refer to another type of Principal Subcontractor.

⁶ To be modified as necessary to reflect the inclusion or absence of a Guarantor.

⁷ To be modified as necessary to reflect any Guaranty arrangements.

“ <u>Enterprise Step-in</u> ”	has the meaning given to it in <u>Section 2.2(c)(iii)</u> of this Agreement.
“ <u>Enterprise Step-in Rights Period</u> ”	has the meaning given to it in <u>Section 2.2(c)</u> of this Agreement.
[“ <u>Guaranty</u> ”]	[has the meaning given to it in the Recitals.]
“ <u>Principal Subcontract</u> ”	has the meaning given to it in the Recitals.
“ <u>Private Sector Parties</u> ”	means Developer[,] [and] the Principal Subcontractor [and the Guarantors].
“ <u>Subcontractor Bond</u> ”	means any Contractor Bond provided by the Principal Subcontractor in favor of Developer in accordance with <u>Section 9.3.2.b.</u> of the Project Agreement.
“ <u>Subordination Date</u> ”	means the date on which the Enterprises are first entitled to exercise rights of step-in, novation or other similar rights under this Agreement in accordance with <u>Section 12.1</u> of the Lenders Direct Agreement.

1.2 Interpretation

- (a) Headings and other internal references
- (i) Headings are inserted for convenience only and shall not affect interpretation of this Agreement.
 - (ii) Except as the context may otherwise provide, the words “herein”, “hereof” and “hereunder”, and words of similar import, shall be construed to refer to this Agreement in its entirety and not to any particular provision of it.
 - (iii) Except as otherwise expressly provided or as the context may otherwise provide, a reference to any Section within this Agreement is a reference to such Section of this Agreement.
- (b) Common terms and references
- (i) The singular includes the plural and vice versa.
 - (ii) Words preceding “include”, “includes”, “including” and “included” shall be construed without limitation by the words that follow.
 - (iii) The word “promptly” means as soon as reasonably practicable in light of then-prevailing circumstances.
- (c) References to agreements, documents and Persons
- Except as otherwise expressly provided in this Agreement, a reference:
- (i) to an agreement or other document shall be construed to be a reference to such agreement or other document (including any schedules, annexes or exhibits thereto) as it may be amended, modified or supplemented from time to time in accordance with its terms;
 - (ii) to a Person includes such Person’s permitted successors, assigns and transferees; and
 - (iii) where the Principal Subcontractor is at any time a consortium, partnership, joint venture or any other unincorporated grouping acting together for a common purpose, to the “Principal Subcontractor” shall be deemed to include reference to each and every member or partner of the same and the liability of each and

every such member or partner under this Agreement shall be deemed to be joint and several.

(d) Discretion

Except as otherwise expressly provided in this Agreement, where this Agreement provides that any consent, approval or like assent is to be made or given in the "discretion" of a Person, it shall be made or given only in the sole and absolute discretion of such Person (which discretion includes the ability to refrain from giving, or to impose conditions on, such consent, approval or like assent), which discretionary decision regarding any consent, approval or like assent shall be final and binding and not subject to dispute other than with respect to:

- (i) a good faith dispute concerning whether the consent, approval or like assent was discretionary; or
- (ii) a breach of the implied covenant of good faith and fair dealing.

1.3 Relationship to Project Agreement

- (a) In the event of any conflict, ambiguity or inconsistency between the provisions of (i) [either][any of] the Project Agreement[, the Guaranty] or the Principal Subcontract and (ii) the provisions of this Agreement, the provisions of this Agreement shall prevail.
- (b) Notwithstanding the foregoing, nothing in this Agreement amends or modifies (i) any of Developer's obligations under the Project Agreement, (ii) any of the Principal Subcontractor's obligations under the Principal Subcontract [or (iii) any of the Guarantor's obligations under the Guaranty].

2. UNDERTAKINGS

2.1 Performance Standards

- (a) The Principal Subcontractor [represents and warrants to the Enterprises that it has performed, and]⁸ hereby undertakes to perform[,] such portion of the Work that is the subject of the Principal Subcontract pursuant to and in compliance with the terms, conditions and requirements of:
 - (i) the Principal Subcontract; and
 - (ii) the Project Agreement, to the extent applicable in accordance with its terms or the terms of the Principal Subcontract,

provided that, without prejudice to Section 12.2(c) of the Lenders Direct Agreement, the Enterprises shall not be entitled to exercise against the Principal Subcontractor any rights or remedies to which they become entitled as a result of a breach of any of [the representations and warranties or] undertakings made pursuant to this Section 2.1(a) until the earliest of:

- (iii) the Subordination Date; and
 - (iv) following the release in writing of all right, title and interest of the Collateral Agent (and each Lender) against the Principal Subcontractor[, the Guarantors] and the provider of the Subcontractor Bond, the occurrence of [the Expiry Date (or, if earlier, the Termination Date)]⁹ [the Termination Date].¹⁰
- (b) The Enterprises agree that the Principal Subcontractor [and the Guarantors] shall:

⁸ Delete representations and warranties if any Principal Subcontractor Direct Agreement is delivered simultaneously with the execution of the relevant Principal Subcontract.

⁹ Delete with respect to the Construction Contract.

¹⁰ Delete with respect to the O&M Contract.

- (i) be entitled in any action or proceedings by the Enterprises in connection with, or as a result of having exercised their rights pursuant to, this Agreement to raise equivalent rights of defense of liability (except for set off or counterclaim) as [it / they] would have against Developer under[, respectively,] the Principal Subcontract [and the Guarantee]; and
- (ii) have no liability under, or as a result of the Enterprises exercising their rights pursuant to, this Agreement that is of greater severity or of longer duration than [it / they] would have had if the Enterprises had been[, respectively,] a party to the Principal Subcontract as joint employer together with Developer [and a joint beneficiary of the Guaranty together with Developer].

2.2 Step-in Rights

- (a) The Principal Subcontractor shall not exercise, or seek to exercise, any right which may be or becomes available to it to:
 - (i) terminate, or treat as terminated or repudiated, the Principal Subcontract or its engagement thereunder; or
 - (ii) discontinue or suspend the performance of any of its obligations under the Principal Subcontract,

without first giving to the Enterprises at least 60 Calendar Days' (or, in the case of a payment default, 45 Calendar Days') prior notice in accordance with Section 2.2(b), provided that, if the expiry period of such notice occurs prior to the expiry of the Enterprise Step-in Rights Period, the Principal Subcontractor shall not be entitled to exercise, or seek to exercise, its relevant right(s) unless and until:
 - (iii) the Enterprises deliver a notice to the Principal Contractor pursuant to Section 2.2(c) during the Enterprise Step-in Rights Period initiating an Enterprise Step-in and subsequently fail to remedy the circumstances that gave rise to the delivery of the notice from the Principal Subcontractor by the date which is 30 Calendar Days after the specified date referred to in Section 2.2(c)(iii); or
 - (iv) the Enterprise Step-in Rights Period has expired without the Enterprises having given any notice to the Principal Contractor pursuant to Section 2.2(c).
- (b) Any notice given by the Principal Subcontractor to the Enterprises pursuant to Section 2.2(a) shall specify:
 - (i) the potential grounds for the Principal Subcontractor to exercise any right described in Sections 2.2(a)(i) or 2.2(a)(ii), together with details regarding any other unperformed obligations of, and uncured breaches by, Developer under the Principal Subcontract of which the Principal Subcontractor is aware;
 - (ii) all amounts due and payable by Developer to the Principal Subcontractor under the Principal Subcontract, if any, on or before the date of such notice and which remain unpaid at such date, and the nature of Developer's obligation to pay such amounts; and
 - (iii) the amount of any payments that the Principal Subcontractor reasonably foresees shall become due and payable from Developer to the Principal Subcontractor under the Principal Subcontract prior to the expiry of the Enterprise Step-in Rights Period.
- (c) At any time during the period:
 - (i) on and from the earlier of:
 - (A) the date of the Enterprises' receipt of a notice (if any) from the Principal Subcontractor pursuant to Section 2.2(a); and
 - (B) the Subordination Date;

- (ii) to and including the later of:
 - (A) the 60th Calendar Day (or, in the case of a payment default, the 45th Calendar Day) after the Enterprises' receipt of a notice (if any) from the Principal Subcontractor pursuant to Section 2.2(a); and
 - (B) the 30th Calendar Day after the Subordination Date,(the "Enterprise Step-in Rights Period"), the Enterprises shall give notice to the Principal Subcontractor [and the Guarantors] as to whether the Enterprises (or their designee):
 - (iii) shall from the date specified in such notice (which specified date shall be no later than the last Calendar Day of such Enterprise Step-in Rights Period) assume all rights and obligations of, and succeed to the interests of, Developer under the Principal Subcontract[, the Guaranty] and any Subcontractor Bond to the exclusion and in place of Developer (an "Enterprise Step-in"), provided that, following any such assumption and succession, each of the Principal Subcontract [and the Guaranty] and any Subcontractor Bond shall remain in full force and effect; or
 - (iv) waive their rights to effect an Enterprise Step-in pursuant to Section 2.2(c)(iii).
- (d) [Each of] the Principal Subcontractor [and the Guarantors] acknowledges and agrees that the Enterprises, in their discretion, shall have the right to require [it] [them]:
 - (i) following the occurrence of both:
 - (A) the release in writing of all right, title and interest of the Collateral Agent (and each Lender) against the Principal Subcontractor[, the Guarantors] and the provider of the Subcontractor Bond; and
 - (B) [the Expiry Date (or, if earlier, the Termination Date)]¹¹ [the Termination Date],¹²to consent to any assignment and transfer of the benefit of this Agreement[, the Guaranty] and the Principal Subcontract (including the benefit of all warranties and guarantees, express or implied, provided under the Principal Subcontract) pursuant to Section 34.2.1 of the Project Agreement;
 - (ii) to enter into a novation agreement to effect any Enterprise Step-in or any assignment and transfer referred to in Section 2.2(d)(i); and
 - (iii) to cause the issuer of any Subcontractor Bond to enter into such agreements or other documents as reasonably necessary to grant the Enterprises the benefits previously available to Developer under such Subcontractor Bond following any Enterprise Step-in or any assignment and transfer referred to in Section 2.2(d)(i).
- (e) [Each of] the Principal Subcontractor [and the Guarantors] acknowledges and agrees [it] [they] shall not take any action (or refrain from taking any action) in a manner that is calculated or intended to directly or indirectly prejudice or frustrate any of the activities contemplated under Section 34.1 of the Project Agreement or any transfer or assignment contemplated under Section 34.2 of the Project Agreement and this Section 2.2(d).
- (f) If an Enterprise Step-in occurs, the Enterprises shall accept liability for Developer's obligations under the Principal Subcontract and shall as soon as practicable thereafter cure any outstanding breach by Developer which is capable of cure by Enterprises, in each case subject to Developer's rights under the terms of the Principal Subcontract; provided that, with respect to any such breach that is incapable of being cured by the Enterprises, the Enterprises shall promptly following Enterprise Step-in provide a plan with respect to such breach specifying the action(s) they have taken or shall take in order

¹¹ Delete with respect to the Construction Contract.

¹² Delete with respect to the O&M Contract.

to mitigate the material adverse effects (if any) of such breach on the Principal Subcontractor or in relation to the Principal Subcontractor and to prevent such breach (if capable of repetition) from occurring in the future.

- (g) For certainty, but without prejudice to the Principal Subcontractor's rights and remedies under this Agreement, the Enterprises shall not be under any obligation to the Principal Subcontractor, nor shall the Principal Subcontractor have any claim or cause of action against the Enterprises, unless and until an Enterprise Step-in occurs.
- (h) Developer acknowledges and agrees that the Principal Subcontractor [and the Guarantors] shall [each] be entitled to rely on any notice or instruction given to it by the Enterprises' exercising their Enterprise Step-in rights under this Agreement as conclusive evidence that the Enterprises are entitled to exercise such rights.

3. ENTERPRISES' REMEDIES

The rights and benefits conferred upon the Enterprises by this Agreement are in addition to: (a) any other rights and remedies they may have against Developer, the Principal Subcontractor [and/or the Guarantors]; and (b) any other rights and benefits they may have with respect to any Subcontractor Bond or any other Contractor Bond.

4. CHOICE OF LAW; JURISDICTION AND VENUE; DISPUTE RESOLUTION

4.1 Choice of Law

Colorado law, and rules and regulations issued pursuant thereto, shall be applied in the interpretation, execution, and enforcement of this Agreement. Any provision included or incorporated herein by reference which conflicts with said laws, rules, and regulations shall be null and void. Any provision incorporated herein by reference which purports to negate this provision or any other Special Provision set out in Section 5.12 in whole or in part shall not be valid or enforceable or available in any action at law, whether by way of complaint, defense, or otherwise. Any provision rendered null and void by the operation of this provision shall not invalidate the remainder of this Agreement, to the extent capable of execution.

4.2 Jurisdiction and Venue

All suits or actions related to this Agreement shall be filed and proceedings held in the State and exclusive venue shall be in State or Federal court in the City of Denver, and each party hereto irrevocably waives:

- (a) any objection which it may have at any time to the laying of venue of any such suit, action or proceeding brought in any such court;
- (b) any claim that any such suit, action or proceeding has been brought in an inconvenient forum; and
- (c) the right to object that such court does not have any jurisdiction with respect to such suit, action or proceeding.

5. GENERAL PROVISIONS

5.1 Amendments and Waivers

- (a) This Agreement may only be amended by a written amendment duly executed by all parties together with, to the extent required by Law, the Colorado State Controller or its designee, unless the amendment to this Agreement is expressly allowed or required to be made in any other manner pursuant to this Agreement and Law.
- (b) Except to the extent otherwise expressly provided in this Agreement:
 - (i) any waiver of, or consent to any departure from, the requirements of any provision of this Agreement shall be approved (in the discretion) of the party giving it and shall be effective only if it is in writing by such party, and only in the

specific instance, for the specific time, subject to the specific conditions and for the specific purpose for which it has been given;

- (ii) no failure on the part of any party to exercise, and no delay in exercising, any right or power under this Agreement shall operate as a waiver of such right or power; and
- (iii) no single or partial exercise of any right or power under this Agreement, including any right to give or withhold any consent or approval, nor any abandonment or discontinuance of steps to enforce such a right or power, shall preclude or render unnecessary any other or further exercise of such right or the exercise of any other right.

5.2 Successors and Assigns

- (a) No party to this Agreement may assign or transfer any part of its rights or obligations hereunder without the prior written consent of the other parties.
- (b) This Agreement shall be binding upon and inure to the benefit of the parties hereto and their respective successors and permitted assigns.

5.3 Severability

- (a) If any provision (or part of any provision) of this Agreement is ruled invalid by a court having proper jurisdiction, then the parties shall:
 - (i) promptly meet and negotiate a substitute for such provision or part thereof which shall, to the greatest extent legally permissible, effect the original intent of the parties; and
 - (ii) if necessary or desirable, and to the extent the parties agree to do so, apply to the court which declared such invalidity for an interpretation of the invalidated provision (or part thereof) to guide the negotiations.
- (b) If any provision (or part of any provision) of this Agreement shall, for any reason, be held to be invalid, illegal, or unenforceable in any respect, such provision (or part thereof) shall not affect the validity, legality and enforceability of any other provision of (or the other part of such provision) or any other documents referred to in this Agreement, and this Agreement shall be construed as if such invalid, illegal, or unenforceable provision (or part thereof) had never been contained herein.

5.4 Entire Agreement

Subject to Section 1.3(b), this Agreement constitutes the entire agreement among the parties hereto concerning the subject matter hereof and supersedes all prior negotiations, representations, and agreements, either oral or written, among the parties with respect to their subject matter.

5.5 Notices and Communications

- (a) Any notice shall be given in writing by means of physical (including delivery by courier and postage pre-paid certified or registered mail), digital or electronic communication, but excluding the use of social media, messaging, broadcast and equivalent services, to the relevant party at the following addresses, as applicable:

<u>Developer</u>	<u>Enterprises</u>	<u>Principal Subcontractor</u>	<u>Guarantor</u>	<u>Colorado State Controller</u>
Attention: []	Attention: []	Attention: []	Attention: []	Attention: []
[Address]	[Address]	[Address]	[Address]	[Address]
Phone: []	Phone: []	Phone: []	Phone: []	Phone: []
Email: []	Email: []	Email: []	Email: []	Email: []

- (b) A notice shall be deemed to have been delivered and received:

- (i) upon receipt (confirmed by automatic answer back, read receipt or equivalent evidence of receipt), if validly transmitted by digital or electronic distribution before 3:00 p.m. (local time at the place of receipt) on a Working Day;
 - (ii) on the next Working Day following receipt (confirmed by automatic answer back, read receipt or equivalent evidence of receipt), if validly transmitted by digital or electronic distribution on or after 3:00 p.m. (local time at the place of receipt) on a Working Day;
 - (iii) upon receipt, if physically delivered in person; or
 - (iv) if delivered by courier or postage pre-paid certified or registered mail, on the date of receipt as shown by the addressee's registry or certification receipt or on the date receipt at the appropriate address is refused, as shown on the records or manifest of the United States Postal Service or independent courier.
- (c) The parties shall notify each other in writing of any change of address and/or contact information, such notification to become effective five Working Days after notification.

5.6 Counterparts

This Agreement (or an amendment or waiver in respect to this Agreement) may be executed in one or more counterparts (including by electronic signature and/or scanned or digital transmission). Any single counterpart or a set of counterparts executed, in either case, by each of the parties and, to the extent required by Law, the Colorado State Controller or its designee, shall constitute a full and original instrument for all purposes.

5.7 No Third Party Beneficiaries

It is not intended by any of the provisions of this Agreement to create any third party beneficiary rights hereunder. Notwithstanding the foregoing, the duties, obligations and responsibilities of the parties with respect to third parties shall remain as imposed by Law.

5.8 No Partnership

Nothing in this Agreement is intended or shall be construed to create any partnership, joint venture or similar relationship or among the parties. None of the parties shall hold itself out contrary to the terms of this Section 5.8.

5.9 No Interference

Developer joins in this Agreement to acknowledge and consent to the arrangements set out and agrees not to knowingly do or omit to do anything that may prevent any party from enforcing its rights under this Agreement.

5.10 No Personal Liability

Each Enterprise's authorized representatives, including the Enterprise Representative, are acting solely as agents and representatives of the Enterprises when carrying out the provisions of or exercising the power or authority granted to them under this Agreement, and, as such, none of them shall not be liable either personally or as employees of the Enterprises for actions in their ordinary course of employment.

5.11 Costs and Expenses of the Parties

Except as otherwise expressly provided in this Agreement, the Project Agreement, the Principal Subcontract [or the Guaranty], each party shall bear its own costs and expenses in connection with the preparation, negotiation, execution and performance of this Agreement and all other related agreements.

5.12 Special Provisions

(a) Controller's Approval

This Agreement shall not be valid until it has been approved by the Colorado State Controller or its designee.

(b) Governmental Immunity

No term or condition of this Agreement shall be construed or interpreted as a waiver, express or implied, of any of the immunities, rights, benefits, protections, or other provisions, of the Colorado Governmental Immunity Act, C.R.S. §§24-10-101 *et seq.*, or the Federal Tort Claims Act, 28 U.S.C. §§1346(b) and 2671 *et seq.*, as applicable now or hereafter amended.

(c) Compliance with Law

The Private Sector Parties shall strictly comply with all applicable Federal and State laws, rules, and regulations in effect or hereafter established, including, without limitation, laws applicable to discrimination and unfair employment practices.

(d) Binding Arbitration Prohibited

The State does not agree to binding arbitration by any extra-judicial body or person. Any provision to the contrary in this Agreement or incorporated herein by reference shall be null and void.

(e) Software Piracy Prohibition

State or other public funds payable under this Agreement shall not be used for the acquisition, operation, or maintenance of computer software in violation of federal copyright laws or applicable licensing restrictions. Each of the Private Sector Parties hereby certifies and warrants that, during the term of this Agreement and any extensions, such Private Sector Party has and shall maintain in place appropriate systems and controls to prevent such improper use of public funds. If the State determines that a Private Sector Party is in violation of this provision, the State may exercise any remedy available at law or in equity or under this Agreement, including, without limitation, termination of this Agreement, as well as any remedy consistent with Federal copyright laws or applicable licensing restrictions.

(f) Employee Financial Interest / Conflict of Interest

The signatories aver that, to their knowledge, no employee of the State has any personal or beneficial interest whatsoever in the service or property described in this Agreement. Neither Private Sector Party has any interest and shall acquire any interest, direct or indirect, that would conflict in any manner or degree with the performance of such Private Sector Party's services and no Private Sector Party shall employ any person having such known interests.

(g) Vendor Offset (C.R.S. §§24-30-202 (1) and 24-30-202.4)

Subject to C.R.S. §24-30-202.4 (3.5), the Colorado State Controller, or the Enterprises, may withhold payment under the State's vendor offset intercept system for debts owed to State agencies for:

(i) unpaid child support debts or child support arrearages;

(ii) unpaid balances of tax, accrued interest, or other charges specified in C.R.S. §39-21-101, *et seq.*;

(iii) unpaid loans due to the Student Loan Division of the Department of Higher Education;

- (iv) amounts required to be paid to the Unemployment Compensation Fund pursuant to Article 70-82 of Title 8 of the C.R.S.; and
 - (v) other unpaid debts owing to the State as a result of final agency determination or judicial action.
- (h) Public Contracts for Services

Each Private Sector Party certifies, warrants, and agrees that it does not knowingly employ or contract with an illegal alien who will perform work under this Agreement and will confirm the employment eligibility of all employees who are newly hired for employment in the United States to perform work under this Agreement, through participation in the E-Verify Program or the CDOT program established pursuant to C.R.S. §8-17.5-102(5)(c). None of the Private Sector Parties shall knowingly employ or contract with an illegal alien to perform work under this Agreement or enter into a contract with a subcontractor that fails to certify to such Private Sector Party that the subcontractor shall not knowingly employ or contract with an illegal alien to perform work under this Agreement. Each Private Sector Party:

- (i) shall not use E-Verify Program or CDOT program procedures to undertake pre-employment screening of job applicants while this Agreement is being performed;
- (ii) shall notify the subcontractor and the contracting State agency within three Calendar Days if such Private Sector Party has actual knowledge that a subcontractor is employing or contracting with an illegal alien for work under this Agreement;
- (iii) shall terminate the subcontract if a subcontractor does not stop employing or contracting with the illegal alien within three Calendar Days of receiving the notice; and
- (iv) shall comply with reasonable requests made in the course of an investigation, undertaken pursuant to C.R.S. § 8-17.5-102(5), by the Colorado Department of Labor and Employment.

If a Private Sector Party participates in the CDOT program, such Private Sector Party shall deliver to the contracting State agency, institution of higher education or political subdivision a written, notarized affirmation, affirming that such Private Sector Party has examined the legal work status of such employee, and shall comply with all of the other requirements of the CDOT program. If a Private Sector Party fails to comply with any requirement of this provision or C.R.S. § 8-17.5-101, *et seq.*, the contracting State agency may terminate this Agreement for breach and, if so terminated, such Private Sector Party shall be liable for damages.

TERMS:

- Section 1.** The [Project Agreement] [Subcontract] [is] incorporated herein by reference.¹⁰ All terms that are not defined in this Bond shall have the meaning ascribed to them in the [Project Agreement] [Subcontract].
- Section 2.** Principal and Surety, jointly and severally, bind themselves and their successors and assigns to the Oblige[e]s]:
- (a) to pay for labor, laborers, materials, rental machinery, tools and equipment, and all other items that are described in C.R.S. §§ 38-26-101 through and including 38-26-110 (the “Contractor’s Bonds Statute”) furnished for use in the performance of the [Project Agreement] [the Subcontract]; and
 - (b) to perform the [Project Agreement] [the Subcontract].
- Section 3.** Surety’s liability under this Bond shall not exceed:
- (a) the Bond Amount specified above; and
 - (b) any costs or expenses payable under Section 8 below and any interest payable under the Contractor’s Bonds Statute,
- the aggregate amounts referred to in this Section 3(a) and (b) are referred to as the “Maximum Amount”.
- Section 4.** No change, alteration, addition, omission, modification, supplement or extension of time to the Project Agreement [or to the Subcontract]¹¹, or to the nature of the work to be performed thereunder including, without limitation, any extension of time for performance or any change of any terms of or extension of time for any payment pertaining or relating to the [Project Agreement]¹² [Subcontract or to the Project Agreement]¹³, nor any fraud practiced by any other Person (other than any Oblige[e] or any Additional Oblige[e]), shall in any way affect the obligations of Surety under this Bond. Surety waives notice of any change, alteration, addition, omission, modification, supplement or extension of time.
- Section 5.** This Bond is intended for the benefit of all Persons named in the Contractor’s Bond Statute including, without limitation, all direct and indirect Subcontractors of the Principal.
- Section 6.**
- (a) Whenever Principal and Surety are notified by the Oblige[e]s] that Principal is in default in the performance of the [Project Agreement] [Subcontract] (other than with respect to payment obligations), Surety shall promptly:
 - (i) remedy such default;
 - (ii) arrange for Principal, with the prior written consent of the Oblige[e]s], to perform and complete the work in accordance with the [Project Agreement] [Subcontract];
 - (iii) itself, through its agents or through independent contractors, perform and complete the work in accordance with the [Project Agreement] [Subcontract]; or
 - (iv) select a subcontractor or subcontractors to complete all applicable portions of the work for which a notice to proceed has been issued in

¹⁰ Modify references to Project Agreement or Subcontract as needed throughout the Bond.

¹¹ Delete reference to the Subcontract if the Contractor Bond is delivered pursuant to Section 9.3.2.a of the Project Agreement; delete square brackets if the Contractor Bond is delivered pursuant to Section 9.3.2.b of the Project Agreement.

¹² Delete if Contractor Bond is delivered pursuant to Section 9.3.2.b.

¹³ Delete if Contractor Bond is delivered pursuant to Section 9.3.2.a.

accordance with the [Project Agreement] [Subcontract] and, using a procurement methodology provided by the Oblige[e]s], arrange for a contract between such subcontractor or subcontractors and the Oblige[e]s], and make available as work progresses (even if there is a default or a succession of defaults under such contract or contracts of completion arranged under this Section 6(a)(iv)) sufficient funds to pay the cost of completion, such funds not to exceed in aggregate, including, without limitation, other costs and damages for which Surety is liable hereunder, the Maximum Amount. Any new contract(s) entered into in fulfillment of this Section 6(a)(iv) may provide for a new bond for each new subcontractor, provided that the amount of any such bond (in aggregate with the amount of any other such bonds) will be the Maximum Amount under this Bond, less amounts paid under this Bond and less amounts paid under any successive bonds for substitute contractors authorized by the Enterprises. Each new subcontractor shall be required to tender its bond to the Enterprises in accordance with Section 9.3.1 of the Project Agreement for such amount.

- (b) Whenever Principal and Surety are notified by the Oblige[e]s] that Principal is in default in its payment obligations under any Subcontract, which notice shall be given only for undisputed amounts as described in Section 2(b) to Schedule 16 to the Project Agreement, Surety shall either:
- (i) promptly pay for the same in an amount not exceeding the Maximum Amount; or
 - (ii) promptly (and, in any event, within 15 Calendar Days of receipt of such notification from the Oblige[e]s]) file a declaratory judgment action against [the Enterprises, Principal or both]¹⁴, [Developer, Principal or both]¹⁵ in the federal or state courts in the City and County of Denver, Colorado to have its liability for payment determined. In the event Surety chooses to file a declaratory judgment action, in addition to its payment liability as determined by the courts, it shall indemnify the Oblige[e]s] as set forth in Section 8 below, including in respect of any interest accruing as a result of any delayed payment and any costs and expenses incurred by the Oblige[e]s] in connection with the litigation by the Surety.

Section 7. Correspondence or claims relating to this Bond shall be sent to Surety at the address listed above for Surety. Surety shall promptly notify the Oblige[e]s] of any claims relating to this Bond at the address[es] listed above for the Oblige[e]s].

Section 8. Surety agrees to indemnify, defend and hold the Oblige[e]s] harmless from and against all loss, damage, cost, or expense incurred by the Oblige[e]s] as a result of any claims made against or related to this Bond arising out of the bad faith actions of the Surety. If Surety is in breach of its obligations under this Bond, the Oblige[e]s] shall be entitled to all remedies available at law or in equity. Should the Oblige[e]s] commence litigation to enforce Surety's obligations under this Bond, Surety agrees to pay all costs and expenses of litigation, including, without limitation, the Oblige[e]s]'s] reasonable attorneys' fees (including those of the Colorado Attorney General's Office). Surety agrees that venue and jurisdiction for any litigation relating to this Bond shall be in the federal or state courts in the City and County of Denver, Colorado.

¹⁴ Delete if Contractor Bond is delivered pursuant to Section 9.3.2.b.

¹⁵ Delete if Contractor Bond is delivered pursuant to Section 9.3.2.a.

Section 9. This Bond has been furnished by Surety on behalf of Principal to comply with the Contractor's Bond Statute and any provision in this Bond conflicting with said statutory requirements shall be deemed deleted and provisions conforming to such statutory requirements shall be deemed incorporated herein. Principal and Surety acknowledge and agree that the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

Section 10.[The Additional Obligee Rider attached hereto is incorporated fully herein.]¹⁶

ADDITIONAL OBLIGEE RIDER¹⁷

ADDITIONAL OBLIGEE[S]:¹⁸ [name], a [legal status]
[address]

DATE: [date]

RELATED BOND: This additional obligee rider is executed concurrently with and shall be attached to and form a part of the Payment and Performance Bond No. [] dated as of [date] (the “Bond”) by and among [name] a [legal status] as Principal and [name] a [legal status] as Surety in the Bond Amount of \$[amount].

TERMS:

- Section 1.** All terms that are not defined herein shall have the meaning ascribed to them in the Bond.
- Section 2.** The undersigned agree and stipulate that the above named “Additional Obligees[s]” shall be added to the Bond as named obligee[s], subject to the terms herein.
- Section 3.** The Additional Obligees[s] shall have the right to notify Surety and Principal that Principal is in default under the [Project Agreement] [Subcontract]. Upon such notice by an Additional Obligee, Surety shall promptly act as if such notice was provided by the Obligees[s] and shall act in accordance with Section 6 of the Bond. Surety shall promptly notify the Obligees[s] of any claims by Additional Obligees relating to this Bond at the address listed in the Bond for the Obligees[s].
- Section 4.** The aggregate liability of Surety under this Bond, to any or all of the obligees, as their interests may appear, is limited to the Maximum Amount of said Bond.
- Section 5.** Additional Obligees’ rights hereunder are subject to the same defenses Principal and/or Surety have against the Obligees[s].
- Section 6.** Except as modified herein, the Bond shall be and remains in full force and effect.

[remainder of page left intentionally blank; signature page follows]

¹⁷ Refer to footnote on Section 10 of the Bond.

¹⁸ If the Contractor Bond is delivered pursuant to Section 9.3.2.b of the Project Agreement: (i) the Additional Obligees will be the Enterprises and (ii) the Collateral Agent/Lender(s) may also be Additional Obligees as required by the Financing Documents.

IN WITNESS WHEREOF, Principal and Surety have caused this bond to be executed and delivered as of [date].

Schedule 21
Forms of Supervening Event Notices and Submissions

Instructions

Please generally see Section 15 of the Project Agreement and the italicized and footnoted instructions in the forms that follow.¹ In addition:

- (1) Developer shall submit:
 - (a) each Supervening Event Notice in the form of Part A to this Schedule 21; and
 - (b) each Supervening Event Submission in the form of Part B to this Schedule 21.
- (2) Each Supervening Event Notice and each Supervening Event Submission shall relate to an individual Supervening Event, although references can be made (as necessary) to other Supervening Events (e.g. to differentiate the effect of multiple events on the Critical Path).
- (3) Bracketed items in Parts A and B to this Schedule 21 include instructions (*in italics*) and drafting alternatives (with multiple options separated by forward slashes "/"). Developer shall modify or delete such bracketed items as the context and any additional instruction notes may require.
- (4) Each Supervening Event Notice and each Supervening Event Submission shall include a "SE Tracking Number" in the format of "X.Y" as follows:
 - (a) "X" shall be the sequential number of the Supervening Event for which a notice or submission (of any type) is submitted by Developer; and
 - (b) "Y" shall be the number of the submission made with respect to a particular Supervening Event, where:
 - (i) "0" shall be reserved to refer to the initial Supervening Event Notice; and
 - (ii) each Supervening Event Submission, including any update or amendment to a previously made submission, shall be numbered in sequence "1", "2", "3" etc.
- (5) Developer may attach supporting materials to any Supervening Event Notice or Supervening Event Submission, provided that the relevance and nature of such attachments are described in the main body of the submission.

¹ For certainty, Developer shall delete this instruction box and any instructional footnotes in the relevant form prior to submission.

Part A: Form of Supervening Event Notice

[on Developer letterhead]

[date]

From: [Developer]

To: Enterprise Representative

Re: Central 70 Project: Supervening Event Notice

SE Tracking No: [].0

I am submitting this Supervening Event Notice on behalf of Developer pursuant to Section 15.1.2.a of the Project Agreement for the Central 70 Project (the "Agreement") dated as of [date]. For ease of reference, all capitalized terms used in this notice have the same meaning given to them in the Agreement.

Please be advised of the following:

1. Type of Supervening Event

This notice relates to [a / an]:²

- Force Majeure Event³ (as defined in paragraph [] of the definition of Force Majeure Event)
- Delay Relief Event⁴ (as defined in paragraph a.[] of the definition of Relief Event)
- Relief Event (as defined in paragraph [] of the definition of Relief Event)
- Compensation Event (as defined in paragraph [] of the definition of Compensation Event)
- Unexpected Hazardous Substances Event (which [is / is not] with respect to [an / any] Appendix B Parcel)
- Unexpected Groundwater Contamination Event

2. Occurrence and Duration

The [Force Majeure Event / Delay Relief Event / Relief Event / Compensation Event / Unexpected Hazardous Substances Event / Unexpected Groundwater Contamination Event] occurred on [or about] [date]. This event [concluded on [or about] [date] / is continuing].⁵

3. Description

[Insert narrative description of Supervening Event.]⁶

4. Mitigation

[Insert narrative description of steps taken, or expected to be taken, by Developer to avoid and/or mitigate the effects of the Supervening Event.]

5. Next Steps

[Identify any proposed next steps, such as requests for calls, meetings etc., or otherwise indicate "None proposed at this time."]

² References to the relevant paragraph within a definition should identify the specific relevant subparagraph.

³ For a "Force Majeure Event", check both "Force Majeure Event" and "Relief Event".

⁴ For a "Delay Relief Event", check "Delay Relief Event" but not "Relief Event".

⁵ Developer may modify this statement to account for particular circumstances. In addition, if a Supervening Event is anticipated in advance, replace this form of statement with the following (or the equivalent): "[Developer] has determined that a [Force Majeure Event / Delay Relief Event / Relief Event / Compensation Event / Unexpected Hazardous Substances Event / Unexpected Groundwater Contamination Event] is [likely imminent]. Developer first made this determination on [or about] [date] based on [explanation]."

⁶ The narrative description should, to the extent reasonably possible and in addition to any other information that Developer deems relevant, describe or identify: (a) the event; (b) such event's source/origin/cause; (c) affected location(s); and (d) such event's anticipated or actual effect on the Work.

Part B: Form of Supervening Event Submission

[on Developer letterhead]

[date]

From: [Developer]

To: Enterprise Representative

Re: Central 70 Project: [Preliminary / Detailed] Supervening Event Submission

SE Tracking No: [].[]

I am submitting this [Preliminary / Detailed] Supervening Event Submission on behalf of Developer pursuant to Section 15.1.2.b of the Project Agreement for the Central 70 Project (the "Agreement") dated as of [date]. For ease of reference, all capitalized terms used in this submission shall have the same meaning given to them in the Agreement.

Please be advised of the following⁷:

A. Background Information

1. Type of Supervening Event

This submission relates to [a / an]:⁸

- Force Majeure Event⁹ (as defined in paragraph [] of the definition of Force Majeure Event)
- Delay Relief Event¹⁰ (as defined in paragraph a.[] of the definition of Relief Event)
- Relief Event (as defined in paragraph [] of the definition of Relief Event)
- Compensation Event (as defined in paragraph [] of the definition of Compensation Event)
- Unexpected Hazardous Substances Event (which [is / is not] with respect to [an / any] Appendix B Parcel)
- Unexpected Groundwater Contamination Event

2. Occurrence and Duration

The [Force Majeure Event / Delay Relief Event / Relief Event / Compensation Event / Unexpected Hazardous Substances Event / Unexpected Groundwater Contamination Event] occurred on [or about] [date]. This event [concluded on [or about] [date] / is continuing].¹¹

3. Description

[Insert narrative description of Supervening Event.]¹²

4. Mitigation

[Insert narrative description of steps taken, or expected to be taken, by Developer to avoid and/or mitigate the effects of the Supervening Event.]

⁷ In each Detailed Supervening Event Submission, and in any revised or amended Supervening Event Submission, Developer shall include the following statement immediately under the relevant headings below and prior to any narrative text inserted by Developer relating to the specific Supervening Event: "The following [has / has not] been amended since the prior related submission no. [X].[X]."

⁸ References to the relevant paragraph within a definition should identify the specific relevant subparagraph, if applicable.

⁹ For a "Force Majeure Event", check both "Force Majeure Event" and "Relief Event".

¹⁰ For a "Delay Relief Event", check "Delay Relief Event" but not "Relief Event".

¹¹ Developer may modify this statement to account for particular circumstances.

¹² The narrative description should, to the extent reasonably possible and in addition to any other information that Developer deems relevant (and that is not required to be provided in a separate part of this form), describe or identify: (a) the event; (b) such event's source/origin/cause; and (c) affected location(s).

B. Developer's Request¹³

5. Requested Resolution

[Insert summary description of relief, deadline extension and/or compensation sought with specific references to: (a) each relevant sub-Section within Sections 15.3, 15.6 and 15.7; and (b) the detailed supporting analysis below.]

6. Compliance Analysis

[Insert analysis of the Supervening Event's effect (if any) on Developer's performance of its obligations.]¹⁴

7. Time Impact Analysis¹⁵

[Insert a time impact analysis¹⁶ of the effect (if any) of the Supervening Event on the Critical Path or, with respect to any such event affecting completion of a Payment Milestone, on the expected time for completion of such Payment Milestone.]¹⁷

8. Change in Costs and Financing Costs

[Insert good faith estimate of compensable Change in Costs¹⁸, Milestone Payment Delay Costs and/or Delay Financing Costs, if any, together with the methodology for calculating such estimate in accordance with the terms of the Agreement.]¹⁹

C. Supporting Information

9. Documentation and Communications

[Insert description of (and, if appropriate, attach) all materially relevant available documentation and / or communications, if any, related to the Supervening Event, or otherwise indicate "None."]

10. Additional Information

[Insert any additional information Developer believes is relevant to the Enterprises' consideration of the Supervening Event, and / or which the Enterprises have previously requested in connection with such event, or otherwise indicate "None."]

¹³ Completion of B. is optional in a Preliminary Supervening Event Submission.

¹⁴ Identify any actual or potential Noncompliance Events and/or Closures that were, or are expected to be, directly attributable to the occurrence of such Supervening Event absent relief pursuant to Section 15.

¹⁵ Indicate "Not applicable." for (a) any Unexpected Hazardous Substances Event or any Unexpected Groundwater Contamination Event and (b) any other Supervening Event to the extent occurring after Final Acceptance.

¹⁶ This analysis should be made by reference to a Revised Baseline Schedule (or, in the case of a Preliminary Supervening Event Submission, the then current Project Schedule to the extent that a Revised Baseline Schedule reflecting the impact of the relevant Supervening Event is not yet available).

¹⁷ The narrative description should, to the extent applicable:

(a) identify the impact on the achievement of Milestone Completion of any Payment Milestone and, given such impact, the basis for determining the resulting period of delay in achieving such Milestone Completion; and

(b) identify the impact on the anticipated actual Substantial Completion Date or, if the Substantial Completion Date has already occurred, the Final Acceptance Date and, given such impact, the basis for determining the requested extension to the Baseline Substantial Completion Date, the Longstop Date or the Final Acceptance Deadline Date (as applicable).

¹⁸ Which, for certainty, shall be limited to Excess Costs and Excess Groundwater Costs with respect to, respectively, Unexpected Hazardous Substances Events and Unexpected Groundwater Contamination Events.

¹⁹ This should include: (a) information as to the type and amount of Available Insurance; (b) consideration of applicable deductions (pursuant to Section 15.3.1.g) and compensation exclusions (pursuant to Section 15.7); and (c) reference to accompanying supporting documentation (which is required for a Detailed Supervening Event Submission and optional for a Preliminary Supervening Event Submission).

Under penalty of perjury, the undersigned certifies on behalf of Developer that, to the best of Developer's knowledge (after due inquiry), the requests, claims, representations, statements, disclosures and information contained in this Supervening Event Submission are correct, complete (other than as expressly indicated herein) and not materially misleading.

Schedule 22
Forms of Legal Opinions

Part A: Form of Enterprises' Legal Opinion¹²

Ladies and Gentlemen:

We have served, in a limited role, as advisory counsel (but not as bond counsel or disclosure counsel) to the Colorado High Performance Transportation Enterprise ("HPTE") and the Colorado Bridge Enterprise ("BE" and, together with HPTE, the "Enterprises") in connection with the execution and delivery of the Project Agreement for the Central 70 Project (the "Project Agreement") between the Enterprises and [], a [] (the "Developer"), the other Enterprise Closing Agreements (as defined in the Project Agreement), and the Interagency Agreement by and among the Enterprises and the Colorado Department of Transportation for the Central 70 Project (the "IAA"). Capitalized terms used but not defined in this Opinion Letter shall have the meanings given to them in Part A of Annex A (Definitions and Abbreviations) of the Project Agreement.

In this connection we have examined: (1) the Project Agreement; (2) the Project Agreement Amendment; (3) the Lenders Direct Agreement; (4) each Principal Subcontractor Direct Agreement; (5) each other Enterprise Closing Agreement; (6) the IAA; and (7) the Supplemental Indenture. The documents referred to in (1) through (7), together, are referred to in this Opinion Letter as the "Enterprise Opinion Documents".

We have also examined originals or copies, certified or otherwise identified to our satisfaction, of such other documents, public records and other instruments and have conducted such other investigations as we have deemed necessary for the purposes of this Opinion Letter. As to questions of fact material to our Opinion Letter, we have relied upon such certified proceedings and certifications of public officials furnished to us, without undertaking to verify the same by independent investigation.

We have relied on the representations of Developer contained in the Project Agreement.

We have assumed that:

- (i) Developer has complied with all legal requirements pertaining to its status as such status relates to its right to enforce and comply with the Enterprise Opinion Documents against, as applicable, the Enterprises, the Lenders and any other parties thereto;
- (ii) Each Enterprise Opinion Document submitted to us for review is accurate and complete, each such document that is an original is authentic, each such document that is a copy conforms to an authentic original, and all signatures on each such document are genuine; and
- (iii) The form and content of all Enterprise Opinion Documents submitted to us as unexecuted final drafts do not differ in any respect relevant to this Opinion Letter from the form and content of such Enterprise Opinion Documents as executed and delivered.

Whenever an opinion expressed herein is stated to be to our knowledge (or other words of similar import are used), it means, without (except to the extent expressly set forth therein) investigation, analysis, or review of court or other public records or our files, or inquiry of persons, the conscious awareness of facts or other information by the lawyers within the Colorado Attorney General's Office who have had active involvement in negotiating and preparing the Enterprise Opinion Documents.

All opinions expressed herein regarding compliance with law are limited to the laws of the State of Colorado, in each case, as in effect on the date of this Opinion Letter.

We are of the opinion that:

¹ **Note to Proposers:** The form of legal opinion set out in this Part A remains under internal review by the Enterprises and the AG's Office and therefore is subject to amendment.

² **Note to Proposers:** Please also see the revisions in Section 2.3 of Schedule 1.

1. The Enterprises are both government-owned businesses within CDOT and enterprises within the meaning of Article X, Section 20(2)(d) of the Colorado Constitution, duly created, organized and existing under the laws of the State, and specifically Part 8 of Article 4 of Title 43 of the Colorado Revised Statutes.
2. The Enterprises have the legal power, right and authority to execute, deliver and perform the Enterprise Opinion Documents, subject to the terms and conditions of each such document.
3. The Enterprises have duly authorized by all necessary action the execution, delivery and performance of, and have duly and validly executed and delivered, the Enterprise Opinion Documents to which each is a party.
4. The Enterprise Opinion Documents constitute legal, valid and binding obligations of the Enterprises or, in relation to any Enterprise Opinion Document to which only one of the Enterprises is a party, of the relevant Enterprise enforceable against them or it, respectively, in accordance with its terms, except to the extent limited by applicable bankruptcy, insolvency, reorganization, moratorium or other similar laws affecting the enforceability of the rights of creditors generally, by general principles of equity, by the exercise by the State and its governmental bodies of the police power inherent in the sovereignty of the State and by the exercise by the United States of the powers delegated to it by the Constitution of the United States.
5. [Except as disclosed in writing by the Enterprises to Developer (a copy of which disclosure is attached to this Opinion Letter),]³ no action, suit, proceeding, investigation or litigation is pending or, to the best of our knowledge, overtly threatened in writing that challenges: (a) the creation, organization or existence of either Enterprise; (b) the authority of either Enterprise to execute, deliver or perform any of the Enterprise Opinion Documents to which it is a party; (c) the legality, validity or enforceability of any of the Enterprise Opinion Documents as against either Enterprise, as applicable; or (d) the authority of any representative of either Enterprise executing any of the Enterprise Opinion Documents.
6. [Except as disclosed in writing by the Enterprises to Developer (a copy of which disclosure is attached to this Opinion Letter),]⁴ all required consents and approvals have been obtained with respect to the execution, delivery and performance by the Enterprises of the Enterprise Opinion Documents.
7. The execution and delivery of the Enterprise Opinion Documents has not resulted in, and the performance thereof will not result in, a breach of, default under or violation of any other agreement, judgment or decree to which the relevant Enterprise is a party or is bound and of which we are aware, after due inquiry.
8. The execution and delivery by the Enterprises of the Enterprise Opinion Documents has not resulted in, and the performance thereof by the Enterprises will not result in, any violation of any Law applicable to the Enterprises; provided, however, that no opinion is given as to whether the Enterprise Opinion Documents comply with or are excepted from the provisions of Sections 24-91-101 through 24-91-110 and Sections 38-26-106 through 38-26-109 of the Colorado Revised Statutes.

³ **Note to Proposers:** The bracketed language would be included if, pursuant to [Schedule 1](#), conditions precedent to Financial Close (other than delivery of this opinion) are satisfied (or waived) notwithstanding such disclosed action, suit, proceeding, investigation or litigation.

⁴ **Note to Proposers:** The bracketed language would be included if, pursuant to [Schedule 1](#), conditions precedent to Financial Close (other than delivery of this opinion) are satisfied (or waived) notwithstanding any disclosed action, suit, proceeding, investigation or litigation contemplated by the previous opinion.

FOR THE ATTORNEY GENERAL OF THE STATE OF COLORADO

Office of the Attorney General

Part B: Form of CDOT Legal Opinion⁵

Ladies and Gentlemen:

We have served, in a limited role, as advisory counsel (but not as bond counsel or disclosure counsel) to the Colorado Department of Transportation ("CDOT") in connection with the execution and delivery of the Interagency Agreement by and among the Colorado High Performance Transportation Enterprise ("HPTE"), the Colorado Bridge Enterprise ("BE" and, together with HPTE, the "Enterprises") and CDOT for the Central 70 Project (the "IAA"). Capitalized terms used but not defined in this Opinion Letter shall have the meanings given to them in Part A of Annex A (Definitions and Abbreviations) of the Project Agreement.

We have also examined originals or copies, certified or otherwise identified to our satisfaction, of such other documents, public records and other instruments and have conducted such other investigations as we have deemed necessary for the purposes of this Opinion Letter. As to questions of fact material to our Opinion Letter, we have relied upon such certified proceedings and certifications of public officials furnished to us, without undertaking to verify the same by independent investigation.

We have relied on the representations of Developer contained in the Project Agreement.

We have assumed that:

- (i) The IAA submitted to us for review is accurate and complete, such document that is an original is authentic, such document that is a copy conforms to an authentic original, and all signatures on such document are genuine; and
- (ii) The form and content of the IAA submitted to us as unexecuted final draft does not differ in any respect relevant to this Opinion Letter from the form and content of the IAA as executed and delivered.

Whenever an opinion expressed herein is stated to be to our knowledge (or other words of similar import are used), it means, without (except to the extent expressly set forth therein) investigation, analysis, or review of court or other public records or our files, or inquiry of persons, the conscious awareness of facts or other information by the lawyers within the Colorado Attorney General's Office who have had active involvement in negotiating and preparing the IAA.

All opinions expressed herein regarding compliance with law are limited to the laws of the State of Colorado, in each case, as in effect on the date of this Opinion Letter.

We are of the opinion that:

1. CDOT is an agency of the State and has the legal power, right and authority to execute, deliver and perform the IAA, subject to the terms and conditions of such document.
2. CDOT has duly authorized by all necessary action the execution, delivery and performance of, and has duly and validly executed and delivered, the IAA.
3. The IAA constitutes legal, valid and binding obligations of CDOT, enforceable against it in accordance with its terms, except to the extent limited by applicable bankruptcy, insolvency, reorganization, moratorium or other similar laws affecting the enforceability of the rights of creditors generally, by general principles of equity, by the exercise by the State and its governmental bodies of the police power inherent in the sovereignty of the State and by the exercise by the United States of the powers delegated to it by the Constitution of the United States.
4. [Except as disclosed in writing by the CDOT to Developer (a copy of which disclosure is attached to this Opinion Letter),]⁶ no action, suit, proceeding, investigation or litigation is pending or, to the

⁵ **Note to Proposers:** The form of legal opinion set out in this Part B remains under internal review by CDOT and the AG's Office and therefore is subject to amendment.

best of our knowledge, overtly threatened in writing that challenges: (a) the creation, organization or existence of CDOT; (b) the authority of CDOT to execute, deliver or perform the IAA; (c) the legality, validity or enforceability of the IAA as against CDOT; or (d) the authority of any representative of CDOT executing the IAA.

5. [Except as disclosed in writing by the CDOT to Developer (a copy of which disclosure is attached to this Opinion Letter),]⁷ all required consents and approvals have been obtained with respect to the execution, delivery and performance by CDOT of the IAA.
6. The execution and delivery of the IAA has not resulted in, and the performance thereof will not result in, a breach of, default under or violation of any other agreement, judgment or decree to which CDOT is a party or is bound and of which we are aware, after due inquiry.

FOR THE ATTORNEY GENERAL OF THE STATE OF COLORADO

Office of the Attorney General

⁶ **Note to Proposers:** The bracketed language would be included if, pursuant to Schedule 1, conditions precedent to Financial Close (other than delivery of this opinion) are satisfied (or waived) notwithstanding such disclosed action, suit, proceeding, investigation or litigation.

⁷ **Note to Proposers:** The bracketed language would be included if, pursuant to Schedule 1, conditions precedent to Financial Close (other than delivery of this opinion) are satisfied (or waived) notwithstanding any disclosed action, suit, proceeding, investigation or litigation contemplated by the previous opinion.

Part C: Form of Developer Legal Opinion

Developer shall provide the following opinions pursuant to Section 2.2(e) of Schedule 1 (*Financial Close*) with respect to Developer, each Principal Subcontractor and any Guarantor (each, an “Opinion Party”)⁸ and, to the extent applicable to each such Opinion Party, each of the documents listed in Annex A to this Part C of this Schedule 22 (the “Opinion Documents”).

With respect to Developer as an Opinion Party, each opinion shall be given by external and not internal counsel. With respect to each other Opinion Party, each opinion may be given by either internal or external counsel: (a) except that the opinions specified in paragraphs 4 and 8 below shall be required to be given by external counsel, unless, with respect to any Guarantor incorporated outside of the United States, the Lenders approve of such opinions being given by internal counsel; and (b) subject to the Enterprises’ right to require delivery of an opinion of external counsel to the extent Lenders shall receive the same or an equivalent opinion from external counsel in connection with Financial Close.

1. Opinion regarding organization or formation and existence of each Opinion Party and each Opinion Party’s possession of the corporate or organizational power to own its properties and assets, carry on its business, enter into and perform its obligations under the Opinion Documents to which it is a party.
2. Opinion regarding Developer’s and each Principal Subcontractor’s good standing and qualification to do business in the State of Colorado.
3. Opinion that each of the Opinion Documents to which any Opinion Party is a party has been duly authorized by all necessary corporate action on the part of such Opinion Party and that each of the Opinion Documents to which such Opinion Party is a party has been duly executed and delivered by such Opinion Party.
4. Opinion that each of the Opinion Documents to which any Opinion Party is a party constitutes a legal, valid and binding obligation of such Opinion Party enforceable against such Opinion Party in accordance with its terms.
5. Opinion that there is no action, suit, proceeding, investigation or litigation pending and served on any Opinion Party, or overtly threatened in writing against any Opinion Party, which challenges such Opinion Party’s authority to execute, deliver or perform, or the legality, validity or enforceability of any of the Opinion Documents to which it is a party, or which challenges the authority of such Opinion Party’s representative executing any of the Opinion Documents to which it is a party.
6. Opinion that all required consents and approvals have been obtained with respect to execution, delivery and performance by each Opinion Party of each of the Opinion Documents to which it is a party, and that none of the Opinion Documents to which any such Opinion Party is a party conflicts with any other agreements to which such Opinion Party is a party or with any orders, judgments or decrees by which such Opinion Party is bound.
7. Opinion that execution, delivery and performance of all obligations by each Opinion Party under each of the Opinion Documents to which it is a party do not conflict with, and are authorized by, the organizational or formation documents of such Opinion Party.
8. Opinion that execution and delivery by each Opinion Party of the Opinion Documents to which it is a party does not, and such Opinion Party’s performance of its obligations under the Opinion Documents to which it is a party shall not, violate any statute, rule or regulation applicable to such Opinion Party or to transactions of the type contemplated by any of the Opinion Documents to which such Opinion Party is a party.

⁸ The following opinions shall be modified, in the Enterprises’ reasonable discretion, as necessary in the event that any Opinion Obligor is a joint venture or partnership.

Annex A
Opinion Documents

1. With respect to Developer as an Opinion Party:
 - (a) Project Agreement;
 - (b) Project Agreement Amendment;
 - (c) Lenders' Direct Agreement;
 - (d) each Principal Subcontract;
 - (e) each Principal Subcontractor Direct Agreement; and
 - (f) Financial Model Escrow Agreement.
2. With respect to each Principal Subcontractor as an Opinion Party, the applicable:
 - (a) Principal Subcontract; and
 - (b) Principal Subcontractor Direct Agreement.
3. With respect to any Guarantor as an Opinion Party, the applicable:
 - (a) Guarantee; and
 - (b) Principal Subcontractor Direct Agreement.

Schedule 23
Form of Financial Model Escrow Agreement

This Escrow Agreement (this "Agreement") is dated as of [] and made among:

- (1) Colorado High Performance Transportation Enterprise ("HPTE"), a government-owned business within, and a division of, the Colorado Department of Transportation ("CDOT");
- (2) Colorado Bridge Enterprise, a government-owned business within CDOT ("BE" and, together with HPTE, each individually an "Enterprise" and, together, the "Enterprises");
- (3) [], a [*describe type of legal entity and reference state of incorporation/organization*] ("Developer"); and
- (4) [] as escrow agent (the "Escrow Agent").

RECITALS

Whereas:

- (A) Simultaneously with the execution of this Agreement, the Enterprises and Developer have entered into a Project Agreement for the Central 70 Project dated as of [] (as the same may be amended, modified or supplemented from time to time in accordance with its terms, the "Project Agreement"), in connection with the design, construction, financing, operation and maintenance of a portion of the I-70 East corridor in Greater Denver (the "Project") as more fully described in the Project Agreement.
- (B) It is a condition precedent to the execution of the Project Agreement that the parties hereto execute this Agreement.

Now, therefore, in consideration of the mutual covenants and agreements described below and other good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, the parties hereto hereby agree as follows:

1. DEFINITIONS AND INTERPRETATION

1.1 Definitions

Capitalized terms used but not defined in this Agreement shall have the meanings given to them in Part A of Annex A (Definitions and Abbreviations) of the Project Agreement.

1.2 Interpretation

- (a) Headings and other internal references
 - (i) Headings are inserted for convenience only and shall not affect interpretation of this Agreement.
 - (ii) Except as the context may otherwise provide, the words "herein", "hereof" and "hereunder", and words of similar import, shall be construed to refer to this Agreement in its entirety and not to any particular provision of it.
 - (iii) Except as otherwise expressly provided or as the context may otherwise provide, a reference to any Section within this Agreement is a reference to such Section of this Agreement.
- (b) Common terms and references
 - (i) The singular includes the plural and vice versa.
 - (ii) Words preceding "include", "includes", "including" and "included" shall be construed without limitation by the words that follow.
 - (iii) The word "promptly" means as soon as reasonably practicable in light of then-prevailing circumstances.
- (c) References to agreements, documents and Persons

Except as otherwise expressly provided in this Agreement, a reference:

- (i) to an agreement or other document shall be construed to be a reference to such agreement or other document (including any schedules, annexes or exhibits thereto) as it may be amended, modified or supplemented from time to time in accordance with its terms; and
- (ii) to a Person includes such Person's permitted successors, assigns and transferees.

2. DEPOSIT

2.1 Initial Deposit

- (a) Developer hereby deposits with the Escrow Agent:
 - (i) an unrestricted electronic version of the Base Financial Model;
 - (ii) the "Assumptions Book" submitted by the Preferred Proposer pursuant to Section 6.9.2 of the "Financial Proposal Submission Requirements" in the ITP;¹ and
 - (iii) the audit report submitted by the Preferred Proposer pursuant to Section 6.9.3 of the "Financial Proposal Submission Requirements" in the ITP,

((i) through (iii), together with any supplements or amendments thereto or replacements thereof, the "Escrow Documents").
- (b) The Escrow Agent hereby acknowledges receipt of the Escrow Documents specified in Sections 2.1(a)(i) through (iii), and agrees that such Escrow Documents shall be held in escrow pursuant to this Agreement.

2.2 Supplements, Amendments and Replacements

The Escrow Agent agrees to accept and hold in escrow pursuant to this Agreement any supplements, amendments or replacements to the Escrow Documents jointly delivered to it by Developer and the Enterprises from time to time.

3. ESCROW DOCUMENTS

3.1 Holding of Escrow Documents

- (a) The Escrow Agent shall hold the Escrow Documents in escrow in a designated area on the premises located at []², or at such other equivalent location in the State as may be approved in writing by the Enterprises (acting reasonably), on a confidential and secure basis. Such designated area shall be locked at all times when such documents are not otherwise being accessed pursuant to this Agreement.
- (b) The Escrow Agent shall provide the Enterprises and Developer with joint access to the Escrow Documents at the designated location during Working Days subject to at least two Working Days' prior notice. Furthermore, with notice to Developer at least five Working Days in advance, the Enterprises shall be entitled to access (but not supplement, amend or replace) the Escrow Documents. Developer, but not the Enterprises, shall be deemed to waive its joint access right.
- (c) Other than each Party's professional advisors and consultants (which may accompany such Party when, or act on behalf of such Party for the purpose of, accessing the Escrow Documents), no third party, including the employees of the Escrow Agent, shall be allowed access to any of the Escrow Documents, provided that employees of the Escrow Agent shall have access to the designated area for other necessary purposes subject to

¹ Add reference to any other documentation necessary or reasonably requested by the Enterprises to operate the Financial Model.

² Location must be in Colorado.

prior notice to the Enterprises and Developer of the policies and procedures governing such access.

3.2 Release of Escrow Documents

The Escrow Agent shall release the applicable Escrow Documents to either of the Enterprises or Developer upon delivery of joint instructions to the Escrow Agent by the Enterprises and Developer.

4. REPRESENTATION AND WARRANTY

As of the date of this Agreement and as of each date the Enterprises and Developer deposit with the Escrow Agent a supplement, amendment or replacement to or of any Escrow Document, Developer represents and warrants to the Escrow Agent and the Enterprises that:

- (a) it lawfully possesses each such Escrow Document provided to the Escrow Agent;
- (b) no agreements, liens or encumbrances prohibit, limit, or alter the rights and obligations of the Enterprises or the Escrow Agent under this Agreement;
- (c) it possesses all rights necessary with respect to each such Escrow Document to permit the Escrow Agent to perform its obligations, and the Enterprises to exercise their rights, under this Agreement in accordance with the terms hereof;
- (d) each such Escrow Document is readable and useable in its then current form and, if any portion of any such Escrow Document is encrypted, the necessary decryption tools and keys to read such material have been deposited with the Escrow Agent contemporaneously; and
- (e) such Escrow Documents (together with any such documents already in escrow) constitute a complete and correct set of the Escrow Documents required to be deposited pursuant to Sections 2.1 and 2.2.

5. TERM AND TERMINATION

- (a) This Agreement shall continue in full force and effect until the earlier of the Expiry Date and the date on which Developer and the Enterprises provide the Escrow Agent with joint notice of their intent to terminate this Agreement.
- (b) Upon termination of this Agreement, the Escrow Agent shall promptly return the Escrow Documents to Developer.

6. RIGHTS OF ESCROW AGENT

- (a) If conflicting demands are made or notices served upon the Escrow Agent with respect to this escrow, the parties hereto expressly agree that the Escrow Agent shall have the absolute right at its election to do any of the following:
 - (i) suspend access to the Escrowed Documents;
 - (ii) file a suit in interpleader and obtain an order from the court requiring the parties to interplead and litigate in such court their several claims and rights amongst themselves;
 - (iii) deliver all Escrow Documents with seals intact to another location to be selected by the Enterprises within 30 days after the Escrow Agent delivers notice thereof to Developer and the Enterprises.
- (b) Notwithstanding Section 6(a), after the Enterprises deliver to the Escrow Agent a notice that a Developer Default has occurred and is continuing (and until such notice is withdrawn by a subsequent notice from the Enterprises to the Escrow Agent), the Escrow Agent shall accept instructions pursuant to this Agreement solely from the Enterprises, including with respect to matters that otherwise would require joint action or instruction pursuant to this Agreement.

7. GENERAL PROVISIONS

7.1 Fees and expenses

- (a) Developer shall be responsible for all fees and expenses of the Escrow Agent in connection with this Agreement.
- (b) Except as otherwise expressly provided in Section 7.1(a) or, as between the Enterprises and Developer, pursuant to the Project Agreement, each party shall bear its own costs and expenses (including legal and other advisers' fees and expenses) in connection with the preparation, negotiation, execution and performance of this Agreement.

7.2 Choice of Law

Colorado law, and rules and regulations issued pursuant thereto, shall be applied in the interpretation, execution, and enforcement of this Agreement. Any provision included or incorporated herein by reference which conflicts with said laws, rules, and regulations shall be null and void. Any provision incorporated herein by reference which purports to negate this provision in whole or in part shall not be valid or enforceable or available in any action at law, whether by way of complaint, defense, or otherwise. Any provision rendered null and void by the operation of this provision shall not invalidate the remainder of this Agreement, to the extent capable of execution.

7.3 Jurisdiction and Venue

All suits or actions related to this Agreement shall be filed and proceedings held in the State and exclusive venue shall be in State or Federal court in the City of Denver, and each party hereto irrevocably waives:

- (a) any objection which it may have at any time to the laying of venue of any such suit, action or proceeding brought in any such court;
- (b) any claim that any such suit, action or proceeding has been brought in an inconvenient forum; and
- (c) the right to object that such court does not have any jurisdiction with respect to such suit, action or proceeding.

7.4 Amendments and Waivers

- (a) This Agreement may only be amended by a written amendment duly executed by all parties' designees, unless the amendment to this Agreement is expressly allowed or required to be made in any other manner pursuant to this Agreement and Law.
- (b) Except to the extent otherwise expressly provided in this Agreement:
 - (i) any waiver of, or consent to depart from, the requirements of any provision of this Agreement shall be approved in the discretion of the party giving it and shall be effective only if it is in writing by such party, and only in the specific instance, for the specific time, subject to the specific conditions and for the specific purpose for which it has been given;
 - (ii) no failure on the part of any party to exercise, and no delay in exercising, any right or power under this Agreement shall operate as a waiver of such right or power; and
 - (iii) no single or partial exercise of any right or power under this Agreement, including any right to give or withhold any consent or approval, nor any abandonment or discontinuance of steps to enforce such a right or power, shall preclude or render unnecessary any other or further exercise of such right or the exercise of any other right.

7.5 Successors and Assigns

- (a) Except to the extent expressly provided hereunder, no party to this Agreement may assign or transfer any part of its rights or obligations hereunder without the prior written consent of the other parties.
- (b) This Agreement shall be binding upon and inure to the benefit of the parties hereto and their respective successors and permitted assigns.

7.6 Severability

- (a) If any provision (or part of any provision) of this Agreement is ruled invalid by a court having proper jurisdiction, then the parties shall:
 - (i) promptly meet and negotiate a substitute for such provision or part thereof which shall, to the greatest extent legally permissible, effect the original intent of the parties; and
 - (ii) if necessary or desirable, apply to the court which declared such invalidity for an interpretation of the invalidated provision (or part thereof) to guide the negotiations.
- (b) If any provision (or part of any provision) of this Agreement shall, for any reason, be held to be invalid, illegal, or unenforceable in any respect, such provision (or part thereof) shall not affect the validity, legality and enforceability of any other provision of (or the other part of such provision) or any other documents referred to in this Agreement, and this Agreement shall be construed as if such invalid, illegal, or unenforceable provision (or part thereof) had never been contained herein.

7.7 Entire Agreement

This Agreement constitutes the entire agreement among the Enterprises, Developer and the Escrow Agent concerning the subject matter hereof and supersedes all prior negotiations, representations, and agreements, either oral or written, among the parties with respect to their subject matter.

7.8 Notices and Communications

- (a) Any notice shall be given in writing by means of physical, digital or electronic communication, but excluding the use of social media, messaging, broadcast and equivalent services, to the relevant party at the following addresses, as applicable:

<u>Developer</u>		<u>Enterprises</u>		<u>Escrow Agent</u>	
Attention:	[]	Attention:	[]	Attention:	[]
[Address]		[Address]		[Address]	
Phone:	[]	Phone:	[]	Phone:	[]
Email:	[]	Email:	[]	Email:	[]

- (b) A notice shall be deemed to have been submitted:
 - (i) upon receipt (confirmed by automatic answer back, read receipt or equivalent evidence of receipt), if validly transmitted by digital or electronic distribution before 3:00 p.m. (local time at the place of receipt) on a Working Day;
 - (ii) on the next Working Day following receipt (confirmed by automatic answer back, read receipt or equivalent evidence of receipt), if validly transmitted by digital or electronic distribution on or after 3:00 p.m. (local time at the place of receipt) on a Working Day;
 - (iii) upon receipt, if physically delivered in person or by courier; or
 - (iv) three Working Days after deposit with postage prepaid and properly addressed, if delivered by United States certified or registered mail.

- (c) The parties will notify each other in writing of any change of address and/or contact information, such notification to become effective five Working Days after notification.

7.9 Counterparts

This Agreement (or an amendment or waiver in respect to this Agreement) may be executed in one or more counterparts (including by electronic signature and/or scanned or digital transmission). Any single counterpart or a set of counterparts executed, in either case, by each of the parties shall constitute a full and original instrument for all purposes.

7.10 No Third Party Beneficiaries

It is not intended by any of the provisions of this Agreement to create any third party beneficiary rights hereunder. Notwithstanding the foregoing, the duties, obligations and responsibilities of the parties with respect to third parties shall remain as imposed by Law.

7.11 No Partnership

Nothing in this Agreement is intended or shall be construed to create any partnership, joint venture or similar relationship or among the parties. None of the parties shall hold itself out contrary to this Section 7.11.

7.12 No Personal Liability

Each Enterprise's authorized representatives, including the Enterprise Representative, are acting solely as agents and representatives of the Enterprises when carrying out the provisions of or exercising the power or authority granted to them under this Agreement, and, as such, none of them shall not be liable either personally or as employees of the Enterprises for actions in their ordinary course of employment.

[remainder of page left intentionally blank; signature page follows]

IN WITNESS WHEREOF, the parties hereto, each intending to be legally bound by this writing, have caused this Agreement to be executed the date first above written.

[To insert signature blocks.]

**Schedule 24
Change Procedure**

1. ENTERPRISE CHANGES AND DIRECTIVE LETTERS

1.1. Delivery of and Response to Enterprise Change Notices

- a. The Enterprises shall be entitled to (and, when required to do so pursuant to Section 8.6.2.b of the Project Agreement, shall) submit Enterprise Change Notices to Developer pursuant to Section 14.1.a of the Project Agreement.
- b. Any Enterprise Change Notice:
 - i. shall:
 - A. set out the Enterprises' requirements for the relevant Enterprise Change in reasonably sufficient detail to enable Developer to prepare and timely submit a Developer's Enterprise Change Response; and
 - B. include any specific directions or requirements as to the contents of the Developer's Enterprise Change Response (which may be in addition to the content requirements specified in Sections 1.1.c.i.A through J of this Schedule 24, or to the effect that any such content requirement is not relevant to the proposed Enterprise Change); and
 - ii. may, in the Enterprises' discretion, require the Developer to:
 - A. participate in a preliminary meeting regarding the proposed Enterprise Change at such time and location as the Enterprises may reasonably request; and
 - B. at or before such preliminary meeting, deliver to the Enterprises a written preliminary, non-binding order of magnitude cost estimate for the proposed Enterprise Change which shall be prepared by Developer on a Reasonable Efforts basis and shall include each of the following elements (or a statement to the effect that such element is not relevant to the proposed Enterprise Change):
 - I. an introductory summary of the contents of such response;
 - II. a preliminary scope of work for such Enterprise Change, together with:
 - a. a preliminary schedule for implementation of such scope of work; and
 - b. identification of any adjustments to the Baseline Schedule anticipated to be required to implement such Enterprise Change;
 - III. a preliminary analysis of any extension of time and/or relief to which Developer may be entitled pursuant to Section 15 of the Project Agreement as a result of such Enterprise Change, including a preliminary time impact analysis (made by reference to the Baseline Schedule subject to adjustment as indicated by Developer pursuant to Section 1.1.b.ii.B.II.b of this Schedule 24) of the effect (if any) of such Enterprise Change on achievement of any Key Milestone;
 - IV. a preliminary estimate of any Change in Costs, Delay Financing Costs and/or Milestone Payment Delay Costs to which Developer may be entitled pursuant to Section 15 of the Project Agreement as a result of such Enterprise Change; and

- V. a preliminary identification and assessment of any other reasonably anticipated material impact on the Work of such Enterprise Change.
- c. Promptly after, and in any event within 20 Working Days after, the later of Developer's receipt of an Enterprise Change Notice and any preliminary meeting held pursuant to Section 1.1.b.ii.A of this Schedule 24 (or, if later, by the date specified in any Enterprise Change Notice, or such date as is otherwise agreed at any such meeting), Developer shall submit to the Enterprises either:
- i. Developer's written response to the Enterprise Change Notice ("Developer's Enterprise Change Response"), which response shall be signed by the Developer's Representative and include each of the following elements (or a statement to the effect that such element is not relevant to the proposed Enterprise Change):
 - A. an introductory summary of the contents of such response;
 - B. a detailed scope of work for such Enterprise Change, together with:
 - I. a schedule for implementation of such scope of work; and
 - II. a Revised Baseline Schedule reflecting adjustments required to implement such Enterprise Change;
 - C. the proposed method(s) for certification of completion of any aspects of the work required by such Enterprise Change, where such methods shall, to the extent possible, follow procedures already set out in this Agreement;
 - D. any new Governmental Approvals, Permits or third-party consents, and/or any amendments to existing Governmental Approvals, Permits or third-party consents, required to implement such Enterprise Change;
 - E. any amendments to this Agreement required to implement such Enterprise Change;
 - F. an analysis of any extension of time and/or relief to which Developer may be entitled pursuant to Section 15 of the Project Agreement as a result of such Enterprise Change, including a time impact analysis (made by reference to the Revised Baseline Schedule referred to in Section 1.1.c.i.B.II of this Schedule 24) of the effect (if any) of such Enterprise Change on achievement of any Key Milestone;
 - G. the estimated Change in Costs, Delay Financing Costs and/or Milestone Payment Delay Costs to which Developer may be entitled, pursuant to Section 15 of the Project Agreement, as a result of such Enterprise Change, including a detailed breakdown of each element of the same;
 - H. identification and analysis of any other reasonably anticipated impact on the Work of such Enterprise Change;
 - I. such supporting information and documentation as the Enterprises may reasonably require in such Enterprise Change Notice; and
 - J. the following certification: "Under penalty of perjury, the undersigned certifies on behalf of Developer that, to the best of Developer's knowledge (after due inquiry), as of the date hereof, the requests, claims, representations, statements, disclosures and information contained in this Developer's Enterprise Change Response are correct, complete (other than as expressly indicated herein) and not materially misleading."; or

- ii. Developer's written rejection of the proposed Enterprise Change (or any part thereof) on the basis that it is a Restricted Change, including a supporting analysis.

1.2. Processing of Enterprise Change Notices

- a. The Parties shall arrange to meet, at such time and location as the Enterprises may reasonably request, to review and discuss Developer's Enterprise Change Response or Developer's written rejection submitted pursuant to Section 1.1.c of this Schedule 24.
- b. At any meeting arranged pursuant to Section 1.2.a of this Schedule 24, or otherwise upon written notice, the Enterprises may in their discretion request or require modifications to Developer's Enterprise Change Response, including to require Developer to solicit competitive bids for all or part of the work that would result from the proposed Enterprise Change, provided that such modifications shall not result in a Restricted Change.
- c. Developer shall promptly after, and in any event within 15 Working Days after, Developer's receipt of any notice from the Enterprises pursuant to Section 1.2.b of this Schedule 24, notify the Enterprises of any consequential changes to its prior Developer's Enterprise Change Response.
- d. Promptly after, and in any event within 15 Working Days after, the latest of the date of:
 - i. the Enterprises' receipt of Developer's Enterprise Change Response;
 - ii. any meeting referenced in Section 1.2.a of this Schedule 24; and
 - iii. any Developer response to the Enterprises pursuant to Section 1.2.c of this Schedule 24,the Enterprises shall:
 - iv. Accept Developer's Enterprise Change Response (as updated pursuant to Section 1.2.c of this Schedule 24);
 - v. without prejudice to their right to issue a Directive Letter pursuant to Section 1.4.a of this Schedule 24, request or require additional modifications (including modifications as to estimated Change in Costs (including any such modifications made to the methodology for calculating Change in Costs pursuant to Section 3 of Appendix A of this Schedule 24, Delay Financing Costs or Milestone Payment Delay Costs)) to Developer's Enterprise Change Response (if applicable, as previously updated pursuant to Section 1.2.c of this Schedule 24), in which case the procedures set out in Sections 1.2.b and 1.2.c and this Section 1.2.d of this Schedule 24 shall be repeated; or
 - vi. other than with respect to an Enterprise Change Notice that the Enterprises are required to issue pursuant to Section 8.6.2.b of the Project Agreement, withdraw the Enterprise Change Notice and thereafter promptly reimburse Developer for all reasonable and documented external professional costs and expenses (and for any equivalent internal costs and expenses, but only to the extent Developer demonstrates to the Enterprises' reasonable satisfaction that such costs and expenses were incurred in lieu of and at a savings relative to external professional costs and expenses) incurred by it in preparing Developer's Enterprise Change Response pursuant to Section 1.1.c.i of this Schedule 24 (or any update thereto pursuant to Section 1.2.b and 1.2.c of this Schedule 24).
- e. Following the Enterprises' Acceptance of any Developer's Enterprise Change Response pursuant to Section 1.2.d.iv of this Schedule 24, the Parties shall promptly execute a written memorandum (a "Change Order"), in a form to be prepared by the Enterprises, and on terms agreed by the Parties (acting reasonably, including by taking into account (i) the substance of the Accepted Developer's Enterprise Change Response and (ii) the

treatment of Enterprise Changes as Compensation Events pursuant to Section 1.3 of this Schedule 24), definitively stating (or, at Enterprises' reasonable discretion, confirming by way of attachment and reference to the Enterprise Change Notice and/or Developer's Enterprise Change Response) all details of the relevant Enterprise Change, including as to:

- i. any extension of time, relief and/or compensation (including the payment terms of, and supporting documentation required for, any such compensation);
- ii. any sharing of savings with the Enterprises pursuant to Section 3 of this Schedule 24; and
- iii. the agreed commencement date and schedule for the relevant work.

1.3. Implementation of Enterprise Changes

- a. Developer shall begin to implement the relevant Enterprise Change on the commencement date set out in the relevant Change Order.
- b. Subject to the terms of the relevant Change Order, from the date on which a Change Order implementing an Enterprise Change is effective (or, with respect to an Enterprise Change initiated pursuant to Section 8.6.2 of the Project Agreement, such earlier date as is specified in the relevant Change Order):
 - i. the relevant Enterprise Change shall constitute a Compensation Event;
 - ii. the Change Order shall constitute an agreed memorandum for purposes of Section 15.3.2 of the Project Agreement, for certainty without any obligation for Developer to submit a Supervening Event Notice or Supervening Event Claim pursuant to Section 15.1 of the Project Agreement;
 - iii. Developer shall be entitled to extensions of time, relief and/or compensation pursuant to Sections 15.3 through 15.6 of the Project Agreement, for certainty without Section 15.7 of the Project Agreement applying to the calculation of any such compensation; and
 - iv. the Enterprises shall be entitled to share in any savings resulting from the implementation of the relevant Enterprise Change pursuant to Section 3 of this Schedule 24.

1.4. Directive Letters

- a. At any time after the Enterprises' submission of an Enterprise Change Notice to Developer, and for so long as the Parties have not reached a final agreement and executed a Change Order in relation thereto, the Enterprises may (in their discretion) deliver to Developer a notice (a "Directive Letter") directing Developer to implement and perform the work as set out in such Enterprise Change Notice (as may be modified by such Directive Letter). Subject to the terms of any agreed Change Order that supersedes such Directive Letter, the Enterprises' delivery of a Directive Letter shall constitute a Compensation Event in respect of which Developer shall be entitled to submit a Supervening Event Submission pursuant to Section 15.1.2.b of the Project Agreement and all relevant provisions of Section 15 of the Project Agreement shall apply (except that, for certainty, Section 15.7 of the Project Agreement shall not apply to the calculation of any resulting compensation).
- b. Any Directive Letter shall:
 - i. state that it is issued pursuant to Section 1.4.a of this Schedule 24;
 - ii. describe the work in question and any limits thereon to the extent not otherwise provided in the relevant Enterprise Change Notice; and

- iii. specify the required commencement date of the relevant work together with any other implementation schedule and completion requirements.
- c. Promptly upon receipt of any Directive Letter, Developer shall implement and perform the work in question as directed by the Enterprises, provided that Developer shall be entitled to give notice to the Enterprises (including a supporting analysis) if it refuses to perform any part of such work on the basis that it constitutes a Restricted Change.

2. DEVELOPER CHANGES

2.1. Delivery of Developer Change Notices

- a. Developer shall be entitled to submit Developer Change Notices to the Enterprises for Approval pursuant to Section 14.1.b of the Project Agreement.
- b. Any Developer Change Notice shall be signed by the Developer's Representative and include each of the following elements (or a statement to the effect that such element is not relevant to the proposed Developer Change):
 - i. an introductory summary of the contents of such notice;
 - ii. a statement as to Developer's reasons for proposing the Developer Change, including as to whether such Developer Change is being proposed by Developer as an alternative to a Nonconforming Work Remedy (a "Nonconforming Work Change");
 - iii. reasonably sufficient detail regarding the proposed Developer Change to enable the Enterprises to evaluate Developer's proposal in full, including:
 - A. other than with respect to a Nonconforming Work Change:
 - I. a detailed scope of work for such proposed Developer Change, together with:
 - a. a schedule for implementation of such scope of work; and
 - b. a Revised Baseline Schedule reflecting adjustments required to implement such Developer Change; and
 - II. the proposed method(s) for certification of completion of any aspects of the work required by such Developer Change, where such methods shall, to the extent possible, follow procedures already set out in this Agreement;
 - B. any new Governmental Approvals, Permits or third-party consents, and any amendments to existing Governmental Approvals, Permits or third-party consents, required to implement such Developer Change;
 - C. any amendments to this Agreement required to implement such Developer Change; and
 - D. identification and analysis of any other reasonably anticipated impact on the Work of such Developer Change;
 - iv. the estimated Change in Costs (which, for certainty, may be positive (other than with respect to any Nonconforming Work Change) or negative) that may result from such Developer Change, including a detailed breakdown of each element of the same, provided that, with respect to any Nonconforming Work Change, Developer shall, to the extent such methodology is applicable to the relevant Nonconforming Work Change, calculate relevant elements of the estimated Change in Costs (including the resulting reduction in the value of the Work performed) by reference to the methodology set out in the provisions of the

- CDOT Standard Specifications relating to price adjustments relating to Nonconforming Work;
- v. Developer's proposed methods of financing or funding any such positive Change in Costs and/or details regarding proposed payments by or to the Enterprises, including changes to the Milestone Payments and/or Performance Payments, if any, being requested or proposed by Developer (including as a result of the application of Section 3 of this Schedule 24), provided that no payments may be proposed to be made by the Enterprises to Developer in connection with any Nonconforming Work Change;
 - vi. any dates by which a response by the Enterprises to such notice is critical;
 - vii. such supporting information and documentation as the Enterprises may reasonably require; and
 - viii. the following certification: "Under penalty of perjury, the undersigned certifies on behalf of Developer that, to the best of Developer's knowledge (after due inquiry), as of the date hereof, the requests, claims, representations, statements, disclosures and information contained in this Developer Change Notice are correct, complete (other than as expressly indicated herein) and not materially misleading."

2.2. Processing of Developer Change Notices

- a. Any Developer Change Notice shall be subject to the Enterprises' Approval, provided that the Enterprises agree to evaluate any Developer Change Notice in good faith, taking into account all issues that are relevant to the Enterprises, including whether, with respect to the proposed Developer Change:
 - i. a change in the Milestone Payments and/or Performance Payments has been proposed by Developer;
 - ii. such Developer Change would or may affect the quality of the Work or the likelihood of successful or timely delivery of the Work;
 - iii. such Developer Change would or may interfere with the relationship of the Enterprises and/or CDOT with third parties (including any Governmental Authority);
 - iv. the financial strength of Developer is sufficient to perform the Work (as modified by such Developer Change);
 - v. the value of the Work and/or the residual value of the Project would or may be affected, including as a result of a Nonconforming Work Change; and
 - vi. such Developer Change would or may materially affect the risk, costs or liabilities to which the Enterprises will or may be exposed.
- b. As part of the Enterprises' evaluation of a Developer Change Notice, the Parties shall, at the Enterprises' discretion, arrange to meet at such time and location as the Enterprises may reasonably request to review and discuss the proposed Developer Change.
- c. Following the Enterprises' Approval of any Developer Change Notice (including with such conditions or modifications (including modifications as to estimated Change in Costs) as may be required by the terms of such Approval) the Parties shall promptly execute a written Change Order in a form to be prepared by the Enterprises definitively stating (or, at Enterprises' discretion, confirming by way of attachment and reference to the Developer Change Notice) all details of the relevant Approved Developer Change, including as to:
 - i. any extension of time, relief and/or compensation (including the payment terms of, and supporting documentation required for, any such compensation);

- ii. any sharing of savings with the Enterprises pursuant to Section 3 of this Schedule 24; and
- iii. the agreed commencement date and schedule for the relevant work.
- d. Developer shall begin to implement the relevant Developer Change on the commencement date set out in the agreed Change Order (or such other date as may be agreed by the Parties).
- e. Subject to the terms of the relevant Change Order, from the date on which a Change Order implementing a Developer Change is effective:
 - i. Developer shall be, and shall only be, entitled to such extensions of time, relief and/or compensation in connection with such Developer Change as may be set out in the relevant Change Order; and
 - ii. the Enterprises shall be entitled to:
 - A. share, pursuant to Section 3 of this Schedule 24, in any savings resulting from the implementation of the relevant Developer Change; and
 - B. reimbursement by Developer for any external fees and expenses incurred by the Enterprises and/or CDOT in connection with reviewing and Approving the Developer Change Notice and associated Change Order.

3. Cost Savings

- 3.1. If in connection with any Change documented in a Change Order or a Directive Letter:
 - a. Developer's Change in Costs reflects a net saving to Developer; and/or
 - b. with respect to any Nonconforming Work Change, the value of the Work performed, or of the Project, has been reduced,then, subject to the terms of any relevant Change Order and, with respect to a Directive Letter, any written memorandum executed pursuant to Section 15.3.2 of the Project Agreement:
 - c. with respect to any Enterprise Change (whether documented in a Change Order or a Directive Letter) or any Nonconforming Work Change, the Enterprises shall be entitled to 100% of such net saving and/or such reduction in value; and
 - d. with respect to any Developer Change (other than any Nonconforming Work Change), Developer and the Enterprises shall each be entitled to 50% of any such net saving.
- 3.2. The Enterprises shall be entitled, at their discretion, to elect to receive their share of any saving and/or reduction in value pursuant to Section 3.1 of this Schedule 24:
 - a. as a lump sum payment (or series of payments) from Developer within 30 Calendar Days after;
 - i. such saving (or a portion thereof) is realized; or
 - ii. with respect to any reduction in value as a result of a Nonconforming Work Change, the date of the relevant Change Order;
 - b. by way of an adjustment to the "Base CPP" and/or the "Base OMRP" set out in Section 2(f) of Part 2 of Schedule 6 (*Performance Mechanism*); or
 - c. by way of set-off pursuant to Section 5 of Part 3 of Schedule 4 (*Payment*) against amounts otherwise payable by them to Developer.

Appendix A Change in Cost Calculation Methodology

1. Calculating Change in Cost

Subject to:

- a. the exceptions set out in the definitions of Change in Costs, Excess Costs and Excess Groundwater Costs in Part A of Annex A (Definitions and Abbreviations) to the Project Agreement; and
- b. Section 3 of this Appendix A to this Schedule 24,

the methodology set out in Section 2 of this Appendix A to this Schedule 24 shall be used for calculating Change in Costs, Excess Costs and Excess Groundwater Costs in accordance with the definitions thereof.

2. Calculation Methodology

2.1. Labor Costs

- a. General

The cost of labor shall be separately calculated with respect to construction labor and non-construction labor (such categories to be applied without reference to whether the relevant work is performed during the Construction Period or the Operating Period) pursuant to Sections 2.1.b and 2.1.c of this Appendix A to this Schedule 24. The cost of labor shall in all cases be calculated based on straight time for all hours worked, unless the Enterprises' Approve overtime in advance. The use of a labor classification that would increase the resulting Change in Cost shall not be permitted without the Enterprises' Approval.

- b. Construction labor

The cost of construction labor shall equal the sum of the following in respect of each relevant worker:

- i. actual wages (i.e. the base wage paid to the worker exclusive of any non-cash fringe benefits) for every hour that the relevant worker is actually engaged in the relevant work, as documented by certified payrolls; *plus*
- ii. actual costs paid to, or on behalf of, such worker by reason of subsistence and travel allowances, health and welfare benefits, pension fund benefits, or other benefits, but only when such amounts are required to be paid by a collective bargaining agreement; *plus*
- iii. a labor surcharge of 67% of the wages referred to in Section 2.1.b.i of this Appendix A to this Schedule 24, which shall constitute full compensation for all state and Federal payroll, unemployment and other Taxes, insurance, non-cash fringe benefits (including health insurance, retirement plans, vacation, sick leave, and bonuses) and overhead to the extent not included in the costs falling within Section 2.1.b.ii of this Appendix A to this Schedule 24.

- c. Non-construction labor

The cost of non-construction labor shall equal the sum of the following in respect of each relevant worker:

- i. actual wages (i.e. the base wage paid to the worker exclusive of any non-cash fringe benefits) paid for every hour that the relevant worker is actually engaged in the relevant work as documented by a method agreed by the Enterprises and Developer (or, absent agreement, determined by the Enterprises (acting reasonably)); *plus*

- ii. a labor surcharge of 140% of the wages referred to in Section 2.1.c.i of this Appendix A to this Schedule 24, which shall constitute full compensation for all state and Federal payroll, unemployment and other Taxes, insurance, non-cash fringe benefits (including health insurance, retirement plans, vacation, sick leave, and bonuses) and overhead.
- d. Design labor
The cost of design labor shall equal the sum of the following in respect of each relevant worker:
 - i. actual wages (i.e. the base wage paid to the worker exclusive of any non-cash fringe benefits) paid for every hour that the relevant worker is actually engaged in the relevant work, as documented by a method agreed by the Enterprises and Developer (or, absent agreement, by the Enterprises (acting reasonably)); *plus*
 - ii. a labor surcharge equal to the designer's audited overhead rate as presented in the designer's master pricing agreement shall be applied to wages referred to in Section 2.1.c.i of this Appendix A to this Schedule 24, which shall constitute full compensation for all state and Federal payroll, unemployment and other Taxes, insurance, non-cash fringe benefits (including health insurance, retirement plans, vacation, sick leave, and bonuses) and overhead; *plus*
 - iii. an allocation for profit of 10% applied to the sum of actual wages (Section 2.1.c.i of this Appendix A to this Schedule 24) plus labor surcharge (Section 2.1.c.ii of this Appendix A to this Schedule 24); *plus*
 - iv. if the designer does not have an approved master pricing agreement, a labor surcharge of 140% of the wages referred to in Section 2.1.c.i of this Appendix A to this Schedule 24, which shall constitute full compensation for all state and Federal payroll, unemployment and other Taxes, insurance, non-cash fringe benefits (including health insurance, retirement plans, vacation, sick leave, and bonuses), overhead and profit.

2.2. Materials Costs

- a. General
 - i. Material costs shall be the actual cost (supported by valid quotes and invoices from Suppliers) of all materials to be used in the performance of the relevant work including normal wastage allowance as determined by reference to Good Industry Practice, subject to the requirements set out in this Section 2.2 of this Appendix A to this Schedule 24. The cost may include applicable local (within the State) sales and use taxes (but not State Sales Tax or any other Taxes), freight and delivery charges and any allowable discounts (exclusive of machinery rentals).
 - ii. The resulting price allowed for materials as determined pursuant to Section 2.2.a.i of this Appendix A to this Schedule 24 shall be subject to adjustment pursuant to Sections 2.2.b and 2.2.c of this Appendix A to this Schedule 24.
- b. Affiliated Source of Supply
If materials are obtained from a supply or source owned in whole or in part by Developer or any other Developer-Related Entity:
 - i. the cost of such materials shall not exceed the lowest of (A) the lowest price charged by Developer or any such Developer-Related Entity, as applicable, for similar materials furnished to other projects, (B) the lowest price charged by Developer or any such Developer-Related Entity, as applicable, for similar

materials otherwise furnished to the Project and (C) the current available wholesale price for such materials; and

- ii. to the extent such materials were not specifically purchased for the relevant work, Developer shall furnish an affidavit from itself, or from such other Developer-Related Entity that owns the supply or source of such materials, in either case certifying that such materials were taken from Developer's or such other Developer-Related Entity's stock, that the quantity claimed was actually used, and that the price and transportation costs claimed represent actual costs to Developer.

c. Excessive and Undocumented Materials Cost

If:

- i. the cost of materials as otherwise as determined pursuant to Section 2.2.a of this Appendix A to this Schedule 24 is, in the Enterprises' reasonable opinion, excessive relative to what the Enterprises consider to be the lowest current available wholesale price, in the quantities needed and delivered to the Site; or
- ii. Developer does not furnish to the Enterprises reasonably satisfactory evidence of the actual cost of materials from the Supplier thereof within 60 Calendar Days after the date of delivery of the materials,

for the purposes of calculating the Change in Costs, the cost of such materials shall be deemed to be the lowest current wholesale price, as determined by the Enterprises (acting reasonably), at which such materials are available, in the quantities needed and delivered to the Site.

2.3. **Equipment**

a. Blue Book

The cost of the use of equipment owned or rented by Developer or any Subcontractor for use in the relevant work shall be equal to the lesser of (x) the actual cost charged for use of such equipment and (y) an amount calculated, pursuant to this Section 2.3 of this Appendix A to this Schedule 24, at an hourly rate derived from the most recent Rental Rate Blue Book for Construction Equipment published by Dataquest, Inc. (the "Blue Book") (or any equivalent successor publication as reasonably determined by the Enterprises), which is in effect at the time of commencement of the relevant work resulting in a Change in Costs. The total hourly rates (comprised of the Operating Rate and the Standby Rate, as calculated in accordance with Section 2.3.b of this Appendix A to this Schedule 24) derived from the Blue Book:

- i. shall be computed from equipment costs currently in effect;
- ii. shall not include costs for operating personnel; and
- iii. shall be adjusted by each applicable "Regional Factor" and "Depreciation Factor" found in the front of each chapter in the Blue Book.

Notwithstanding the foregoing, in no circumstances shall the equipment costs for pickup trucks used solely for transportation be considered eligible for inclusion as a Change in Costs.

b. Rate Categories

Subject to Section 2.3.a of this Appendix A to this Schedule 24, equipment use rates shall be comprised of the following two categories (in each case where "BBMR" equals the relevant Blue Book monthly rate adjusted for year of manufacture):

- i. Operating Rate: This rate applies to those hours equipment is actually in use, includes ownership and operating costs, and shall equal:

(BBMR / (176 times 1.06)) + Estimated Hourly Operating Costs from the Blue Book

- ii. Standby Rate: This rate applies to equipment required to be at the Site but not operating, includes ownership costs only, and shall equal

(BBMR / (176 times 1.06)) x 0.5

The duration of allowable standby time is subject to Acceptance by the Enterprises with a maximum of eight hours per day or 40 hours in a normal week.

When the "manufacturer's rated capacity" falls between those shown in the Blue Book, the closest rated capacity will be used, without interpolation, for purposes of determining the BBMR.

c. Specialized Equipment

- i. In cases where the equipment to be used is specialized in nature, is not available in Developer's or any other Developer-Related Entity's inventory and is rented or leased from an outside agency, a 10% allowance will be added on the first \$5,000 (indexed with respect to any such cost incurred in connection with a Compensation Event or a Developer Change that occurs during the Operating Period) *plus* 5% of the balance in excess of such first amount for overhead for all rented or leased equipment paid for by invoices.
- ii. Where the rate charged for equipment that is specialized in nature by such outside agency exceeds the rate determined by the Blue Book, the rental or lease agreement shall be subject to the Enterprises' Acceptance.
- iii. The operating costs from the Blue Book shall be paid for rented or leased equipment that is specialized in nature for each hour the equipment was actually used.

d. Rented Equipment

- i. In those cases where the required equipment is in Developer's or any other Developer-Related Entity's available inventory but not on the Site, the equipment may be rented from a local source.
- ii. The Enterprises may Accept rental rates for such equipment obtained from local sources when such rates are within 10% of rates in the Blue Book.
- iii. When such equipment use is of short duration (i.e., less than a calendar week) "move-in" and "move-out" costs for equipment owned by Developer or any other Developer-Related Entity may be considered when comparing rental costs of equipment obtained from local sources. This option will only be allowed when the cost of locally rented equipment would be less than using owned equipment, including such "move-in" and "move-out" charges, and supported by a cost analysis indicating the method used was the least expensive.
- iv. Should equipment be rented even though it is of a type that is in Developer's or any other Developer-Related Entity's inventory and the rental costs exceed that allowed by this provision, Developer will be reimbursed for such equipment based on the rates in the Blue Book.

e. Small Tools

The rates paid pursuant to this Section 2.3 of Appendix A to this Schedule 24 shall be deemed in all cases to include compensation for the cost of fuel, oil, lubricants, supplies, small tools, necessary attachments, repairs and maintenance of all kinds, depreciation, storage, insurance and all incidentals. Individual pieces of equipment or tools not listed in the Blue Book and having an individual replacement value of \$1,000 (indexed with respect to any such cost incurred in connection with a Compensation Event or a

Developer Change that occurs during the Operating Period) or less, whether or not consumed by use, shall be considered to be "small tools". Equipment rental rates for such pieces of equipment or tools not listed in the Blue Book must be Accepted by the Enterprises before the relevant work is begun.

f. Equipment Operators

Equipment operators will be paid for pursuant to Section 2.1 of this Appendix A to this Schedule 24.

g. Classification of Equipment

Unless otherwise specified, manufacturer's ratings and manufacturer-approved modifications shall be used to classify equipment for the determination of applicable rental rates.

h. Computation of Time

The time to be paid for use of equipment on the Site shall be the time the equipment is in operation on the relevant portion of the work being performed in connection with the calculation of Change in Costs. The time shall include the reasonable time required to move the equipment to the location of the relevant work and return it to the original location or to another location requiring no more time than that required to return it to its original location. Moving time will not be paid for if the equipment is also used at the Site other than in connection with the event for which Change in Costs are calculated. Loading and transporting costs will be allowed, in lieu of moving time, when the equipment is moved by means other than its own power. No payment for loading and transporting will be made if the equipment is also used at the Site other than in connection with the event for which Change in Costs are calculated. Time will be computed in half and full hours. In computing the time for use of equipment, less than 30 minutes shall be considered one-half hour.

2.4. Governmental Approval and Permit Fees

Developer shall be entitled to reimbursement for the cost of any additional Governmental Approval and Permit fees payable as the result of the Change in Costs.

2.5. Other Direct Costs

For certainty, Developer shall be reimbursed for any direct costs not otherwise included in Sections 2.1 through 2.4 of this Appendix A to this Schedule 24 to the extent such direct costs are included in paragraphs a.iv. and a.v. of the definition of Change in Costs in Part A of Annex A (*Definitions and Abbreviations*) to the Project Agreement.

2.6. Mark-Ups

a. Mark-Ups Generally

In addition to any element of any Change in Costs as otherwise calculated pursuant to this Appendix A to Schedule 24, pursuant to Section 2.6.c of this Appendix A to this Schedule 24 the following mark-ups ("Permitted Mark-Ups") shall apply:

- i. 15% for labor costs calculated in accordance with Section 2.1.b of this Appendix A to this Schedule 24;
- ii. 10% for labor costs calculated in accordance with Section 2.1.c of this Appendix A to this Schedule 24;
- iii. 15% for material costs calculated in accordance with Section 2.2 of this Appendix A to this Schedule 24 (provided that no mark-up shall be permitted on any materials or equipment furnished by the Enterprises);
- iv. 10% for equipment use costs calculated in accordance with Section 2.3 of this Appendix A to this Schedule 24;

- v. 5% for Governmental Approval and Permit fees calculated in accordance with Section 2.4 of this Appendix A to this Schedule 24;
 - vi. 5% for other direct costs calculated in accordance with Section 2.5 of this Appendix A to this Schedule 24; and
 - vii. 5% for Developer's subcontracting of the relevant work as calculated in accordance with Section 2.6.c.ii of this Appendix A to this Schedule 24.
- b. Items Included in Mark-Ups
- i. Permitted Mark-Ups are full and complete compensation for:
 - A. all overhead;
 - B. small tools (as described in Section 2.3.e of this Appendix A to this Schedule 24);
 - C. consumables (items which are consumed in the performance of the work which are not a part of the finished product); and
 - D. other indirect costs of the relevant work,in each case, including (x) profit thereon and (y) any and all costs and expenses incurred due to any delay in connection with the relevant work (to the extent not expressly included in paragraphs a.vii. and a.viii. of the definition of Change in Costs in Part A of Annex A (*Definitions and Abbreviations*) to the Project Agreement or as Delay Financing Costs or Milestone Payment Delay Costs).
 - ii. Permitted Mark-Ups shall be considered to include:
 - A. bond premiums;
 - B. incidental job burdens;
 - C. bonuses not otherwise covered;
 - D. field, jobsite and general home office expenses of all types (e.g. timekeepers, bookkeepers and other general office help);
 - E. supervisory expenses of all types (excluding only direct supervision of force account work); and
 - F. all other overhead, general condition and indirect costs and expenses,provided that, with respect to non-construction work related labor costs (as determined pursuant to Section 2.1.c of this Appendix A to this Schedule 24), overhead is included as part of the labor surcharge calculated pursuant to Section 2.1.c of this Appendix A to this Schedule 24, and includes accessories such as computer-assisted drafting and design (CADD) systems, computers, facsimile transmission machines, scanners, paper, etc.
- c. Payment of Mark-Ups
- i. With respect to any relevant work that Developer self-performs, the Permitted Mark-Ups shall apply to Developer (excluding, for certainty, the mark-up referred to in Section 2.6.a.vii of this Appendix A to this Schedule 24).
 - ii. With respect to any relevant work that Developer subcontracts, the Permitted Mark-Ups shall apply to the Subcontractor that performs the relevant work (excluding, for certainty, the mark-up referred to in Section 2.6.a.vii of this Appendix A to this Schedule 24, which shall apply to Developer).

2.7. Savings

When in connection with any Change documented in a Change Order or a Directive Letter, the resulting Change in Costs involves results in a net aggregate saving to Developer or a net aggregate reduction in value of the work performed or of the Project (or any individual element of the calculation of the Change in Costs, whatever the net aggregate result, involves such a saving or such a reduction in value), Change in Costs shall be calculated to take into account all Developer's (and, without double-counting, each relevant Subcontractor's) (a) otherwise increased profits and (b) avoided or avoidable overhead.

3. Unit Price Change Orders

- a. The Enterprises may, in their discretion, in an Enterprise Change Notice, require Developer to calculate Change in Costs both by reference to the methodology set out in Section 2 of this Appendix A to this Schedule 24 and on an alternative "unit price" basis (on which basis prices shall be deemed to include all costs for labor, material, overhead, and profit, and shall not be subject to adjustment regardless of any change in the estimated quantities).
- b. Subject to the specific directions or requirements set out in the relevant Enterprise Change Notice, the Developer shall use both methodologies to calculate Change in Costs in any preliminary cost estimate delivered pursuant to Section 1.1.b.ii.B of this Appendix A to this Schedule 24 and in the Developer's Enterprise Change Response.
- c. The Enterprises and Developer may thereafter agree to calculate Change in Costs in any resulting Change Order on a unit price basis, with measurement of unit-priced quantities to be as specified in the Change Order. Absent agreement as to the method of calculation, the Enterprises may in their discretion require any resulting Change Order to calculate Change in Costs on a unit price basis instead of the methodology set out in Section 2 of this Appendix A to this Schedule 24, provided that the calculation of such basis has itself been previously agreed with Developer.

Schedule 25 Dispute Resolution Procedure¹

1. Amicable Dispute Settlement

- a. The Parties shall attempt to reach an amicable settlement of any Dispute prior to referring such Dispute for resolution pursuant to Section 2 of this Schedule 25; provided that either Party may at any time elect in its discretion to directly refer such Dispute for resolution pursuant to Section 2 if it determines that such a settlement is unlikely to occur. Any such attempt may be made by any representatives of the Parties, regardless of their level of seniority or position, provided that:
 - i. such representatives have the authority, capacity and competency to make such attempt; and
 - ii. any resulting written memorandum or similar document referenced in Section 1.b of this Schedule 25 is duly executed by such other representatives of the Parties as may be necessary with respect to such a written agreement.
- b. Upon agreement on any such amicable settlement, the Parties shall execute a written memorandum or similar document in a form to be prepared by the Enterprises (unless the Enterprises otherwise delegate such preparation to Developer, in which case Developer shall prepare such memorandum or document) setting out the details of such settlement, and such document shall be considered a binding settlement agreement.

2. Designated Senior Representatives

- a. Upon referral by either Party pursuant to Section 1.a of this Schedule 25, the Designated Senior Representatives shall confer and otherwise use all Reasonable Efforts to resolve the Dispute for a period of at least 15 Working Days (or such longer period as is mutually agreed by the Parties in writing).
- b. If the Parties succeed in resolving a Dispute following referral to their Designated Senior Representatives, they shall memorialize the resolution by executing a written memorandum or similar document in a form to be prepared by the Enterprises (unless the Enterprises otherwise delegate such preparation to Developer, in which case Developer shall prepare such memorandum or document) setting out the details of such resolution, and such document shall be considered a binding settlement agreement.
- c. If the Designated Senior Representatives are unable to resolve the Dispute within such 15 Working Day period (or such longer period as is mutually agreed by the Parties), either Party may refer the Dispute for resolution by the Dispute Resolution Panels in accordance with Section 5 of this Schedule 25.

3. Advisory Opinions

- a. Notwithstanding Section 2 of this Schedule 25, the Parties, acting jointly, may, at any time prior to formally referring a Dispute for resolution by the Dispute Resolution Panels pursuant to Section 5 of this Schedule 25, seek an advisory opinion regarding such Dispute from one or both Dispute Resolution Panels. The Parties shall do so by submitting a written request to the applicable Panel(s) containing:
 - i. a concise summary of the nature and background of the Dispute and of the facts relevant to the Dispute;
 - ii. a statement of the question or issue on which the Parties are seeking an advisory opinion; and
 - iii. copies of any correspondence, reports or other documents to which the Parties wish to refer.

¹ **Note to Proposers:** For policy and legal reasons the Enterprises will not agree to a dispute resolution procedure that provides for arbitration.

- b. Any advisory opinion shall:
 - i. be given in writing (unless otherwise requested by both Parties);
 - ii. be non-binding; and
 - iii. not prejudice any further resolution of such Dispute.

4. Treatment of Settlement Negotiations and Settlement Agreements

- a. Statements made by the Parties, including by their Representatives and Designated Senior Representatives, during any meetings or in any communications related to efforts to amicably settle or resolve a Dispute pursuant to Sections 1 and 2 of this Schedule 25 (including by seeking an advisory opinion from the Dispute Resolution Panels pursuant to Section 3 of this Schedule 25) and documents containing statements or opinions specifically prepared in connection with the same shall be considered part of settlement negotiations and shall not be admissible as evidence in any proceeding between the Parties of any kind (including any subsequent referral to the Dispute Resolution Panels) without the mutual written consent of the Parties, provided that any Party that prepares demonstrative exhibits or summary exhibits of evidence shall be entitled to submit or otherwise use such work product in any subsequent proceeding.
- b. Unless otherwise agreed in writing by both Parties, neither Party may submit a settlement agreement entered into by the Parties pursuant to Sections 1.b, 2.b or 5.g of this Schedule 25 to a Dispute Resolution Panel in connection with any subsequent proceeding.

5. Dispute Resolution Panels

- a. Two separate Dispute Resolution Panels shall be created pursuant to the Project Agreement and this Schedule 25: a “Technical Panel” and a “Commercial Panel”. Subject to Sections 1 and 2 of this Schedule 25, any Dispute may be referred by either Party in accordance with this Section 5:
 - i. to the extent such Dispute is of a technical nature, for resolution by the Technical Panel; or
 - ii. to the extent such Dispute is of a financial, commercial and/or legal nature, for resolution by the Commercial Panel;provided that the Parties shall not refer Disputes with respect to the existence or legal validity of the Project Agreement to either Panel for determination nor shall either Panel make any determination relating to any such matter.
- b. Either Party, acting reasonably, may initially refer any Dispute (or a relevant part thereof, with the remainder to be considered by a single Panel) to the Commercial Panel and the Technical Panel jointly. Alternatively, if a Dispute was initially referred to a single Panel, such Panel or either Party, acting reasonably, may subsequently request the other Panel to jointly consider such Dispute (or relevant part thereof, with the remainder to be considered by the Panel to which the Dispute was initially referred).
- c.
 - i. Each Panel shall consist of three persons who shall be and remain independent of the Parties, impartial and without any conflict of interest or any appearance of a conflict of interest.
 - ii. No later than the date provided in Section 5.d of this Schedule 25 and otherwise, if the relevant Panel is not then in existence, no later than 15 Working Days after a Dispute is referred to a Panel, each Party shall appoint one person as a member of each Panel. If either Party fails to appoint a person as a member of either Panel, the relevant member of the Panel shall be appointed by the International Institute for Conflict Prevention and Resolution, upon the request of the other Party. Any person appointed pursuant to this Section 5.c.ii of this Schedule 25 shall have relevant experience on Similar Projects and:

- A. if appointed to the Commercial Panel, shall be an expert in financial and commercial matters relevant to the Project; and
 - B. if appointed to the Technical Panel, shall be, if appointed during the Construction Period, an expert in engineering and construction matters relevant to the Project and, if appointed during the Operating Period, an expert in operations and maintenance matters relevant to the Project (including in relation to Renewal Work and Handback Work).
- iii. A third person (the “Chairperson”) (which person, with respect to the Commercial Panel only, shall be a lawyer barred and in good standing in the State of Colorado and shall have been so for not less than eight years, shall be jointly appointed by agreement of the two members of the Panel as previously appointed pursuant to Section 5.c.ii of this Schedule 25 no later than 10 Working Days following their appointment. In the event of a failure to agree on the appointment of the Chairperson of the relevant Panel, such Chairperson shall be appointed by the International Institute for Conflict Prevention and Resolution, upon the request of either Party.
 - iv. Subject to the following, the costs and expenses payable to the members of each Panel shall be agreed by the Parties and, absent agreement, shared equally between the Parties. Responsibility for the fees of the Panel members incurred in connection with a Dispute referred to such Panel pursuant to this Section 5 shall be determined by such Panel and shall be aligned with the determination of the Dispute by such Panel.
 - v. In the event of death, resignation, disqualification, inability or refusal to act by one of the members of either Panel, a new member of the Panel shall be appointed by the Person(s) who appointed the original member within 10 Working Days of the occurrence of such event.
- d. The Parties shall initially establish each Panel by each appointing a member pursuant to Section 5.c.ii of this Schedule 25 no later than 15 Working Days following NTP1.
 - e. The Persons initially selected to comprise the Technical Panel shall comprise such Panel until such panel is re-established following the Final Acceptance Date pursuant to Section 5.f of this Schedule 25 unless such Panel is dissolved or reconstituted earlier in accordance with Section 5.l of this Schedule 25.
 - f. Promptly following the Final Acceptance Date, the Parties shall re-establish the Technical Panel by each appointing a member pursuant to Section 5.c.ii of this Schedule 25 no later than 60 Calendar Days following the Final Acceptance Date. Following completion of this appointment process, the previously existing Technical Panel shall be automatically dissolved (provided that such dissolution shall be delayed until it renders its decision on any Dispute then pending before it).
 - g. A Dispute is referred to an appropriate Dispute Resolution Panel by, and on the date of, service of a notice of reference to such Dispute Resolution Panel by the referring Party upon the other Party. Such service of notice shall include:
 - i. an initial concise summary of the nature and background of the Dispute, of the facts relevant to the Dispute and of the issues to be decided;
 - ii. an initial statement of the relief which the referring Party is seeking; and
 - iii. any reasonable request for the Dispute Resolution Panel to consider, or not consider, such Dispute together with any other previously or simultaneously submitted Dispute.
 - h. A copy of such notice of reference shall also be served by the referring Party or, as applicable, the referring Panel (where a Panel makes a reference in accordance with Section 5.b of this Schedule 25) upon the Chairperson of the applicable Dispute

Resolution Panel. Each Party shall be entitled within 10 Working Days following the notice of reference, to deliver to the applicable Panel:

- i. a concise summary of the nature and background of the Dispute, of the facts relevant to the Dispute and of the issues to be decided;
 - ii. if applicable, a statement of the relief which such Party is seeking;
 - iii. copies of correspondence, reports and such other documents to which the Party wishes to refer or upon which it relies; and
 - iv. any reasonable request for the Dispute Resolution Panel to consider, or not consider, such Dispute together with any other previously or simultaneously submitted Dispute.
- i. Each Party shall promptly deliver such other information as the Dispute Resolution Panel(s) may from time to time reasonably require for the purposes of resolving the Dispute.
- j. Subject to Section 5.k of this Schedule 25, each Dispute Resolution Panel shall fix its own rules of procedure, either generally or on an ad hoc basis, and shall notify the Parties of such rules of procedure.
- k. Each Dispute Resolution Panel shall have the following powers:
- i. the Chairperson of the Dispute Resolution Panel shall decide whether or not to convene a hearing or otherwise to take oral evidence or whether the Panel shall determine the Dispute on a documents-only basis;
 - ii. the Chairperson may order the evidence of a witness to be presented in written form by way of a signed statement and may order the production of any drawing, certificate, specification, report, study, written information and data and any other document (including a record of such document in digital form) (or copies thereof) in the possession of any Party; and
 - iii. the Chairperson of the Technical Panel may request any samples of materials to be taken and analyzed or tests to be made on site by experts.
- l. Unless a Dispute Resolution Panel decides otherwise, the Chairperson shall fix the date, time and place of any hearing (which shall be in the State) before such Dispute Resolution Panel and the rules of procedure of the hearing, identify the Dispute(s) (or relevant parts thereof) to be considered at such hearing (taking into consideration any Party's request made pursuant to Sections 5.b, 5.g.iii or 5.h.iii of this Schedule 25) and shall require the attendance of the Parties. Each Party may appear before such Dispute Resolution Panel accompanied by or represented by technical, financial or other relevant consultants (excluding, for certainty, representation before such Panel by legal counsel).
- m. In determining any Dispute referred to it, each Dispute Resolution Panel shall act fairly and impartially as between the Parties, giving each Party a reasonable opportunity of presenting its case and responding to the case of the other Party, and shall adopt procedures appropriate to the circumstances of the particular case avoiding unnecessary delay, so as to provide a fair and expeditious means for determination of the Dispute.
- n. All decisions of each Dispute Resolution Panel shall be made, and notified in writing (with reasons for the decision) to the Parties, as soon as possible but in any event no later than 60 Calendar Days (or such other period of time as the Parties may agree in writing) following the later of (i) the Dispute being referred and (ii) the constitution of the relevant Dispute Resolution Panel(s) pursuant to Section 5.c.ii and Section 5.c.iii of this Schedule 25. Every Dispute Resolution Panel decision shall identify the specific issues to which it relates and the bases for such decision, and state whether it is a unanimous decision of the Dispute Resolution Panel. In the event of lack of unanimity, reasons for any dissenting opinion shall be given. Unless subsequently incorporated into a

settlement agreement entered into by the Parties pursuant to Section 5.r of this Schedule 25, a Dispute Resolution Panel decision shall not toll any statute of limitations or otherwise limit the time within which any Party may avail itself of any remedy under Law or contract.

- o. Within 10 Working Days of being notified of such decision, Developer shall notify the Enterprises if it intends to accept or reject such decision (in whole or in part), and the Enterprises shall, within 10 Working Days after receipt of Developer's notification, likewise notify Developer if they intend to accept or reject such decision (in whole or in part). Any such notice of intention by either Party shall be considered a non-binding indication of intent with respect to potential settlement or further Dispute resolution proceedings.
 - p. If a Dispute Resolution Panel fails to notify its decision to the Parties within the 60 Calendar Day (or such other) period referred to in Section 5.n of this Schedule 25, such Dispute Resolution Panel shall be deemed to have failed to reach a decision in the matter. Any decision of a Dispute Resolution Panel notified to the Parties after the expiry of such 60 Calendar Day (or such other) period shall be ineffective unless the Parties mutually agree otherwise in writing.
 - q. Upon the earliest of:
 - i. expiry of such 60 Calendar Day (or such other) period without a notification of a decision by a Dispute Resolution Panel to the Parties;
 - ii. the Enterprises' delivery of a notice to Developer pursuant to Section 5.o of this Schedule 25; and
 - iii. the expiry of the relevant time period set out in Section 5.o of this Schedule 25 without the Enterprises having delivered a notification to Developer pursuant thereto,
- either Party may refer the Dispute for court resolution in accordance with Section 37 of the Project Agreement.
- r. The Parties may, at any time following notification of a decision by a Dispute Resolution Panel or otherwise, memorialize settlement of the Dispute by executing a written memorandum or similar document in a form to be prepared by the Enterprises (unless the Enterprises otherwise delegate such preparation to Developer, in which case Developer shall prepare such memorandum or document) setting out the details of such settlement, and such document shall be considered a binding settlement agreement.
 - s. Subject to Section 4.b of this Schedule 25, decisions of a Dispute Resolution Panel are admissible in subsequent proceedings but shall be prefaced with the following statement:

"This decision may be taken under consideration with the understanding that: (1) The Dispute was a mediation proceeding based on presentations by the Parties. (2) The Parties were not represented by legal counsel in front of the Dispute Resolution Panel(s). (3) No fact or expert witnesses presented sworn testimony or were subject to cross-examination. (4) The Parties to the Dispute Resolution Panel(s) were not provided with the right to any discovery, such as production of documents or depositions. (5) There is no record of any Dispute Resolution Panel hearing other than the written decision."
 - t. Each of the Technical Panel and the Commercial Panel shall be dissolved on mutual agreement between the Parties, provided that new Dispute Resolution Panel(s) may be constituted by the Parties at any time thereafter (and shall be constituted pursuant to Section 5.c.ii and Section 5.c.iii of this Schedule 25 in the event of a Dispute), in which case the provisions of this Schedule 25 shall apply as to its or their appointment, constitution and functioning (except in relation to the period of its or their appointment, which shall be decided in each case by the Parties).

- u. Neither Dispute Resolution Panel shall be deemed to be arbitrators, but both shall render their decisions as experts.

6. **No Joinder**

No proceedings to resolve any Dispute arising out of or relating to the Project Agreement shall include, by consolidation or joinder or in any other manner, any additional Person, including any Principal Subcontractor or Subcontractor, not a Party to the Project Agreement, except with the written consent of each Party and any other Person sought to be so joined.

7. **Equitable Relief**

Subject to Section 37.1.a of the Project Agreement, either Party shall be entitled to seek equitable relief in respect of any Dispute before the State District Court of Colorado for the City and County of Denver at any time after the conclusion of the 15 Working Day period referred to in Section 2.a of this Schedule 25 (or such longer period as is mutually agreed by the Parties).

8. **Continuation of Work**

During the course of any Dispute resolution process pursuant to this Schedule 25 and the Project Agreement, Developer will continue with the Work (including any Work that is the subject of the Dispute) in accordance with the Project Agreement.

9. **Costs of Dispute Resolution**

Each Party shall bear its own costs and expenses, including attorneys' fees, in any Dispute arising out of the Project Agreement, except as expressly provided therein or pursuant to the terms of any binding Dispute resolution.

Schedule 26
Base Case Model

[To be inserted based on Preferred Proposer's Proposal]

Schedule 27
Key Personnel¹

Project Manager

Position Description: Responsible for overall execution and administration of Developer's responsibilities for the Project, with authority to bind Developer on all matters delegable pursuant to Law and Developer's governing documents affecting Project execution and administration, including: (i) with respect to design, construction, commissioning, operations, and maintenance; and (ii) authority to suspend Work.

Qualifications: The Project Manager shall have demonstrated experience and expertise on a similar role in the delivery of projects similar in scope, value, nature, and complexity to the Project.

Minimum Period of Availability: From Agreement Date to the end of the Term.

To be seconded to/employed by: Developer

Name: *[To fill in prior to execution of this Agreement.]*

Construction Manager

Position Description: Responsible for ensuring that the Project is constructed in accordance with all requirements of this Agreement. Responsible for managing Construction Contractor's construction personnel, scheduling of the construction quality assurance personnel, and administering compliance with all Technical Requirements applicable to the Construction Work. The Construction Manager shall have the authority to suspend Construction Work.

Qualifications: The Construction Manager shall have a minimum of 15 years' experience in construction and management of construction on highway projects similar in scope, value, nature, and complexity to the Project, with an emphasis on design-build experience and experience with interstate highways and interstate bridges.

Minimum Period of Availability: From Agreement Date to Final Acceptance.

To be seconded to/employed by: Construction Contractor

Name: *[To fill in prior to execution of this Agreement.]*

¹ Schedule to be completed prior to execution with the identities of the approved Key Personnel as described in the ITP.

Design-Build Manager

Position Description: Responsible for the overall design and construction of the Project and for managing Developer's design-build team. The Design-Build Manager shall: (i) ensure that the Project is designed and constructed in accordance with the Technical Requirements; and (ii) have authority to suspend Construction Work.

Qualifications: The Design-Build Manager shall have a minimum of 20 years' experience, including a minimum of 15 years' design-build experience, in construction and management of design and construction on highway projects that included work of a similar scope, value, nature, and complexity as included in the Project.

Minimum Period of Availability: From Agreement Date to Final Acceptance.

To be seconded to/employed by: Construction Contractor

Name: *[To fill in prior to execution of this Agreement.]*

Design Manager

Position Description: Responsible for: (i) ensuring that the overall Project design is completed and design criteria requirements are met; (ii) managing the design team's personnel; and (iii) administering all design requirements in this Agreement. The Design Manager shall have authority to suspend design Work.

Qualifications: The Design Manager shall be a professional engineer licensed in the State no later than the date of issuance of NTP1. The Design Manager shall have a minimum of 15 years' experience in managing design for multidisciplinary highway projects with similar scope, value, nature, and complexity to the Project, with emphasis on design-build experience and experience with interstate highway, interstate bridges, and projects of similar scope, value, nature, and complexity to the Project.

Minimum Period of Availability: From Agreement Date to Final Acceptance.

To be seconded to/employed by: Principal Design Work Subcontractor to the Construction Contractor

Name: *[To fill in prior to execution of this Agreement.]*

O&M Manager

Position Description: Responsible for ensuring that all O&M Work and (at Developer's election) Renewal Work requirements of this Agreement are met.

Qualifications: The O&M Manager shall have demonstrated experience and expertise in a similar role on managing the operations, maintenance and (at Developer's election) rehabilitation work on highway projects of similar scope, value, nature, and complexity to the Project.

Minimum Period of Availability: From Agreement Date to the end of the Term.

To be seconded to/employed by: O&M Contractor

Name: *[To fill in prior to execution of this Agreement.]*

Project Quality Manager

Position Description: Responsible for overall quality management of the Project. The Project Quality Manager shall have the authority to suspend Work and shall provide monthly certification that Work is being performed in compliance with Law and the Project design.

Qualifications: The Project Quality Manager shall be a professional engineer licensed in the State no later than the date of issuance of NTP1, and shall have a minimum of eight years' experience in infrastructure transportation project design and construction, including at least five years' experience in quality assurance activities, including the preparation and implementation of quality plans and procedures for design, construction, and operations on transportation projects that included work of a similar scope, value, nature, and complexity to the Project.

Minimum Period of Availability: From Agreement Date to the end of the Term.

To be seconded to/employed by: The Project Quality Manager shall be employed by Developer. The Project Quality Manager can hold only this Key Personnel position.

Name: *[To fill in prior to execution of this Agreement.]*

Independent Design Quality Manager

Position Description: Responsible for ensuring quality management on all Design Work carried out on the Project, the Independent Design Quality Manager shall have the authority to suspend Work.

Qualifications: The Independent Design Quality Manager shall be a professional engineer licensed in the State no later than the date of issuance of NTP1, and shall have a minimum of eight years' experience in highway design, including at least five years' experience in quality assurance activities, including the preparation and implementation of quality plans and procedures for design on highway projects that included work of a similar scope, value, nature, and complexity to the Project.

Minimum Period of Availability: From Agreement Date to Final Acceptance.

To be seconded to/employed by: The Independent Design Quality Manager shall be employed by the Independent Quality Control Firm.

Name: *[To fill in prior to execution of this Agreement.]*

Construction Process Control Manager

Position Description: Responsible for ensuring all methods and procedures contained in the approved Stage 2 QMP are carried out on the Project, the Construction Process Control Manager shall have authority to suspend Work.

Qualifications: The Construction Process Control Manager shall be a professional engineer licensed in the State or possess a National Institute for Certification of Engineering Technologies (NICET) Level III Certificate in Highway Materials or Construction Materials with the soil, concrete, and asphalt sub-fields, as well as have or obtain the American Society for Quality (ASQ) certification as a quality inspector, quality engineer, or manager of quality, in each case prior to the date of issuance of NTP2. The Construction Process Control Manager shall have a minimum of eight years' highway construction experience on projects that included work of a similar scope, value, nature, and complexity to the Project.

Minimum Period of Availability: From Agreement Date to the second anniversary of Final Acceptance.

To be seconded to/employed by: Construction Contractor

Name: *[To fill in prior to execution of this Agreement.]*

Independent Quality Control Manager

Position Description: Responsible for managing all independent Quality Control aspects contained in the approved Stage 2 QMP that are carried out on the Project, including having authority to suspend Work.

Qualifications: The Independent Quality Control Manager shall be a professional engineer licensed in the State no later than the date of issuance of NTP1, and shall have a minimum of eight years' experience in transportation construction on projects that included work of a similar scope, value, nature, and complexity to the Project, five years of which shall be experience in developing and implementing similar quality control programs on transportation projects. The Independent Quality Control Manager shall have or obtain the American Society for Quality (ASQ) certification as a quality inspector, quality engineer, or manager of quality prior to the date of issuance of NTP2.

Minimum Period of Availability: From Agreement Date to the second anniversary of Final Acceptance.

To be seconded to/employed by: The Independent Quality Control Manager shall be employed by the Independent Quality Control Firm.

Name: *[To fill in prior to execution of this Agreement.]*

Environmental Manager

Position Description: The Environmental Manager is responsible for ensuring compliance with all Environmental Requirements and commitments. The Environmental Manager shall have authority to suspend Work.

Qualifications: The Environmental Manager shall have a minimum of seven years' progressive experience working on projects of similar scope, value, nature, and complexity to the Project. The Environmental Manager shall also demonstrate the ability to work effectively with both design and construction staff.

Minimum Period of Availability: From Agreement Date to the second anniversary of Final Acceptance.

To be seconded to/employed by: Developer

Name: *[To fill in prior to execution of this Agreement.]*

Utilities Manager

Position Description: Responsible for managing all required Utility Work and coordinating the same with Utility Owners.

Qualifications: The Utilities Manager is a management role with a minimum of five years' relevant experience on major infrastructure projects of similar scope, value, nature and complexity to the Project.

Minimum Period of Availability: From Agreement Date to Final Acceptance.

To be seconded to/employed by: Construction Contractor

Name: *[To fill in prior to execution of this Agreement.]*

Project Communications Manager

Position Description: Responsible for overseeing all Developer communications efforts during construction, operations, and maintenance.

Qualifications: The Project Communications Manager shall have: (i) a minimum of seven years' professional experience working on design-build construction projects and a practical understanding of construction schedules, MOT plans, and work performance processes; (ii) experience with, and understanding of, complexities and importance of maintaining good relationships between the Project and government, businesses, residents, the general public, and other stakeholders; and (iii) experience with implementing communication and public involvement plans on projects of similar scope, value, nature, and complexity to the Project.

Minimum Period of Availability: From Agreement Date to the end of the Term.

To be seconded to/employed by: Developer

Name: *[To fill in prior to execution of this Agreement.]*
