Oxeye Daisy

(Chrysanthemum leucanthemum)

The Colorado Noxious Weed Act requires every landowner to **eradicate, contain or suppress this weed** wherever it is found on his or her property. The Colorado Department of Transportation controls these weeds on its right-of-way.

Oxeye daisy is an erect, creeping perennial that grows 10 inches to 2 feet tall. The basal and lower leaves are lance shaped and toothed with long petioles (leaf stem) and the upper leaves are narrower and clasp the stem. The leaf size progressively decreases up the stem. Flower heads are mostly solitary at the end of the flower stalk. The head has 15 to 30 white ray flowers.

Oxeye Daisy has been included in many different seed mixes, thus consumers should carefully read the label prior to planting so called "native wildflower" mixes. More details about this species and herbicides to control it are available online at <http://www.colorado.gov/ag/weeds>.
