

# SEA Document Flow and Submittal Expectations

## Project Development Phase

**Notes:** This is for a traditional Design-Bid-Build project with a technology element already in the scope. ITS & Network Service Branch is planning to not add technology to a project scope, unless the scope already contains technology. The time frame referenced below are the latest submittal expectations without impact to project schedule or budget. Documents can, and are encouraged, to be submitted earlier. Document preparation should start weeks to months prior to planned submittal and should be in coordination with the ITS & Network Services Branch.
