

Travel Reliability in the Urban Area (Castle Rock to Denver South)

Travel delays on I-25 in the urban area from Castle Rock to Denver South follow a more typical peak period associated with commute travel and are most prevalent:

- Northbound: Weekday mornings
- Southbound: Weekday afternoons

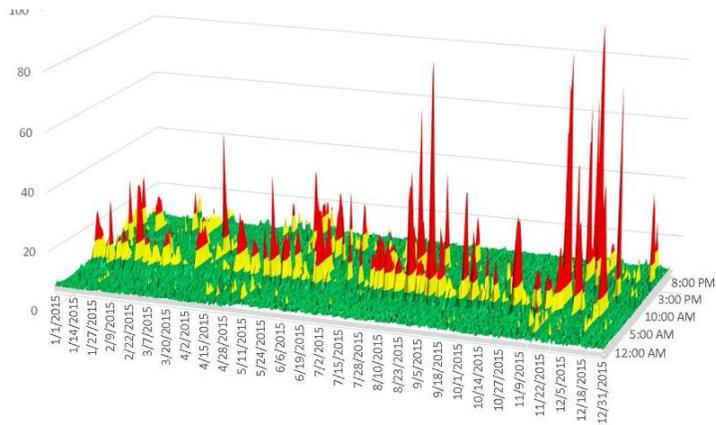

Travel delays were worse in 2015 than 2016

- 2015 construction likely affected travel times, particularly northbound
- 2016 opening of the lane balance widening project improved travel times

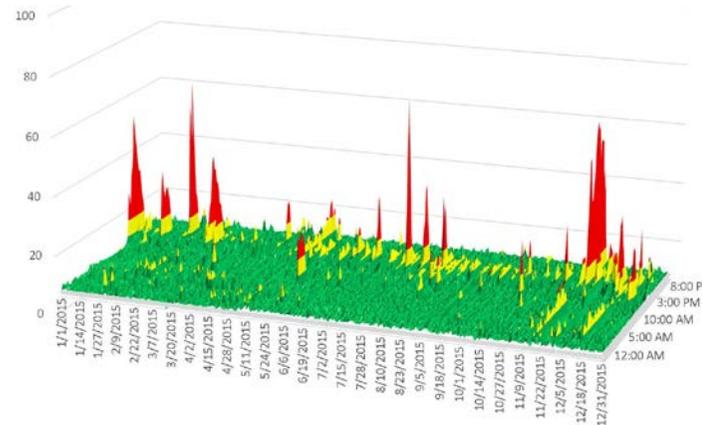

Weekday travel delays much more likely to be caused by crashes, weather, and special events

Rating of Travel Times Urban Area

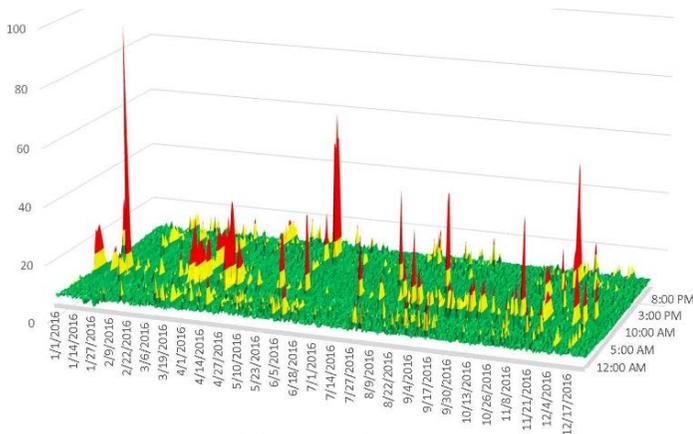

- Free flow travel time 9 min.
- Fair 12.5 to 18 min.
- Poor > 18 min.
