

TRAFFIC FACTS

- .US 24 was designed to handle 35,000-40,000 vehicles per day. The 2030 projected volumes exceed this threshold in every segment of the corridor.
- The daily capacity of a four-lane expressway type facility is approximately 42,000 vehicles and a six-lane expressway facility is approximately 54,000 vehicles.
- The projected 2030 volumes in the corridor exceed the four-lane capacity, dictating the need for more than two lanes per direction.
